Hello Adria,

Attached is a picture with a general layout of things. The 3 corrals are all 100' wide, 120' long. These will have a RCC liner.

The covered shelter will be around 260' long by 48' wide. Hopes to have a RCC liner, covered building.

The portable shelters are all covered shelters, for the time being just plan to move them every 3-4 months to a new spot.

The catch basin would be located behind the corrals, either constructed of packed clay, or synthetic liner. Unsure of size.

As for pumping it into my existing lagoon, if I were to get a large pump, I could maybe go with a smaller catch basin, and if a big rain storm comes, I could pump into my existing lagoon, which is a distance of 140'. I'll try send you a second drawing of that later today.

Thanks for your time!

Arie
