I have some concerns with this feeding operation

The water table in this area is going to be affected by the number of calves been fed. They feed a fairly large number now probably close to a 1000 hd and by adding another 2000 this is going to affect our water if the water table drops and we have to drill new wells, they should be liable for the cost also. They are producing a lot of manure and ~~putting~~ stock piling it away from their feedlot.

They have one pile against my south fence which is going to affect my land, and the stockpile is like a hay pile its getting very hot and going to start a fire.

I don't feel they should be allowed any bigger of a feeding operation as they

have now, its affecting our  
land and our lifestyle

I have some concerns with the  
feeding operation  
The water table in this area  
is going to be affected by the number  
of holes that have been drilled a fairly  
large number now probably close to  
a 1000 and by adding another 2000  
this is going to affect our water  
at the hotel table tops and we  
have to drill new wells, they  
should be little for the water  
also they are producing a lot of  
mud and ~~water~~ mud being  
pumped from the holes  
They have one big operation my  
sister have which is going to affect  
our land, and the operation is like a  
large site its getting very hot and going  
to start a fire  
I dont feel they should be allowed any  
kinds of a feeding operation or they
