1.0 INTRODUCTION

1.1 PURPOSE

This Structural Design Report (SDR) describes stability assessment, structural analyses and design of the Diversion Inlet, which is part of the Springbank Off-stream Storage Project (SR1). The SDR consolidates and documents the design philosophy, relevant criteria, primary design parameters, and reference source of data used for design. The Diversion Inlet was sized to meet stability requirements and major structural members were designed for conformance with structural criteria.

1.2 PROJECT OVERVIEW

SR1 is a flood diversion system comprised of a diversion structure, a diversion channel and off-stream dry storage reservoir (no permanent pool). When in operation, SR1 will divert and temporarily store excess flood water from the Elbow River and release it back into the river system in a controlled manner. SR1 will work in tandem with the downstream Glenmore Reservoir to limit flood flows downstream of Glenmore to less than 170 m^3/s for up to SR1's design event - the 2013 flood or its equivalent.

Elements of the project are:

- Diversion Structure on the Elbow River consisting of, from left to right when looking downstream, gated Diversion Inlet structure leading to a Diversion Channel, gated Service Spillway located on the Elbow River, adjacent Auxiliary Spillway and a Floodplain Berm. A Debris Deflection Barrier is in the headwater of the Diversion Structure to protect the Diversion Inlet from flood debris.

- Diversion Channel leading from the Elbow River at the Diversion Inlet to the Off-stream Storage Reservoir with an Emergency Spillway along the channel and Channel Outlet at end of the channel.

- Off-stream Storage Dam with Low-Level Outlet Works.

1.3 DESIGN OBJECTIVES

The primary objective of the Diversion Inlet is to prevent flow from entering the Diversion Channel except during flood events when the operation plan calls for diversion flows. The fixed crest at Elevation 1211.5 m is designed to be above the typical 1:2-year peak discharge water surface in the Elbow River and acts as a control weir during flood operation. The inlet gates will normally remain in the closed position.

Since the Diversion Channel and Storage Reservoir have limited capacities, the Diversion Inlet must also be capable of restricting Diversion Channel inflow during extreme events including the IDF for the Off-stream Storage Dam-(OSSD), emergency conditions, and unplanned operations. To achieve this, the breast wall and head wall provide a permanent physical barrier from Elevation 1215.5 m to Elevation 1219.0 m to prevent overtopping of the Diversion Structure when the inlet gates are closed.

The Diversion Inlet abutment and training walls retain embankment fills, serve as water barriers, and prevent overtopping during flood events. For this reason, the walls were designed as concrete hydraulic structures to address stability, strength, and serviceability considerations for multiple operating conditions.

Gate operation requires hoist equipment to be positioned directly above the lift gates with sufficient clearance to raise the bottom of the gate above Elevation 1215.5 m. The gate hoist bridge serves as a mounting surface for the hoist equipment platform and deck grating. The hoist bridge is designed with sufficient stiffness to control deflection within the range of equipment tolerance and personnel comfort during hoist operations. The hoist bridge consists of steel plate girders spanning 20 m from pier to abutment with infill bracing to provide lateral stability and deck grating support. The girders have been sized for normal operating loads as well as hoist overload conditions with bottom of steel located at Elevation 1220.25 m to provide adequate clearance for the lift gate in the fully raised position. Steel bar grating was provided to facilitate pedestrian access and maintenance activities for hoist equipment.

To effectively operate and maintain lift gates and hoist equipment, vehicle and pedestrian access is required to the gates An access bridge spanning from breast wall to head wall consisting of precast deck panels has been included to provide a 6 m wide travel lane for vehicle access. The panels were designed for heavy equipment wheel loads, and the breast wall and head wall were designed to carry crane outrigger loads anticipated during construction and maintenance activities. Steel bar grating was incorporated in the deck design to improve visibility to areas below the bridge deck, and individual panels will be removable (with appropriate equipment), if necessary, for maintenance activities.

1.4 GENERAL ARRANGEMENT

The Diversion Inlet is a gated concrete structure located on the left bank of the Elbow River at the entrance to the Diversion Channel. The primary elements of the Diversion Inlet include:

- Left abutment retaining walls and embankment transitions;
- Concrete monoliths with two 20 m wide gate bays with a center pier divider and fixed crest at Elevation 1211.5 m;

- Two 20 m wide by 4 m tall vertical lift gates with dual wire rope drum and hoist supported by a hoist bridge spanning the full 20 m bay width;
- Access bridge comprised of bridge deck, breast wall, and head wall, which provides access to gate equipment, vehicle access across the Diversion Channel entrance, and serves as a debris and overtopping barrier during extreme flood events;
- Stilling basin concrete monoliths with chute blocks, baffle piers, and end sill to provide energy dissipation; and
- Right abutment retaining walls and embankment transitions.

An isometric view of the Diversion Inlet is shown in Figure 1, a general arrangement is shown on Drawing S-150 and detailed drawings of the monoliths and retaining walls are depicted on Drawings S-300 to S-369.

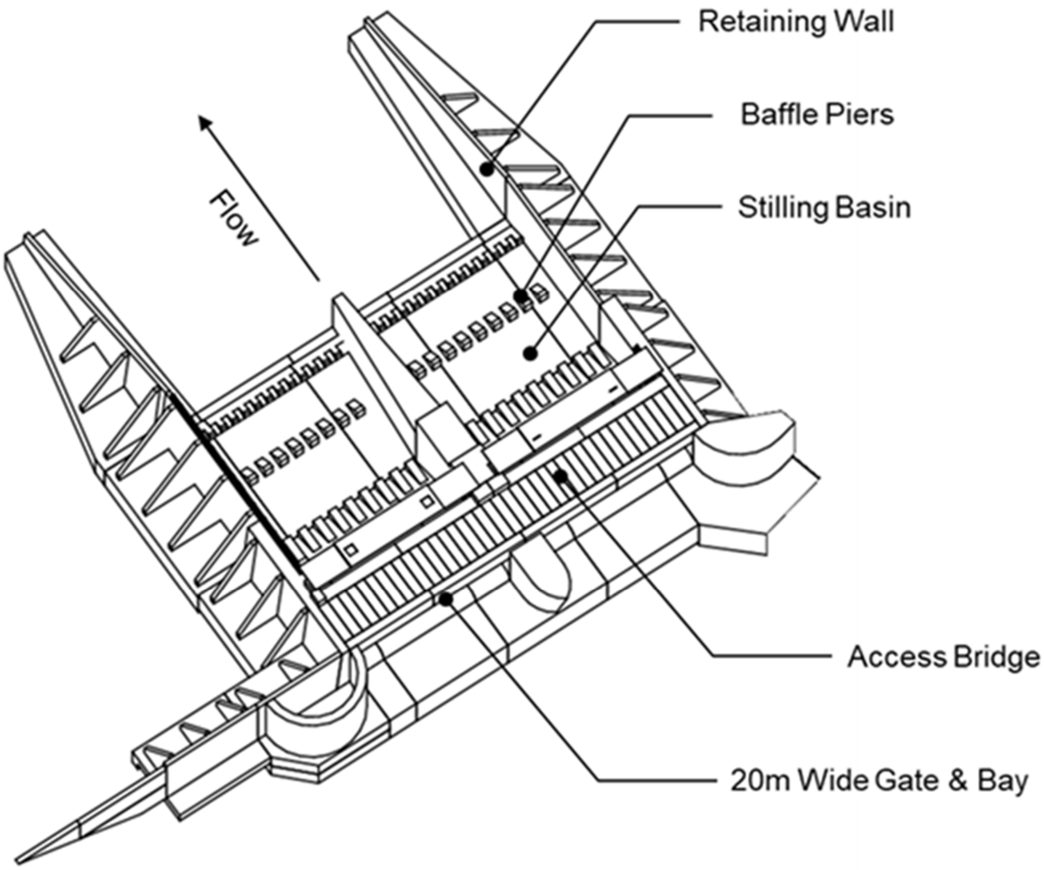

Figure 1. Diversion Inlet General Arrangement

1.5 BASIS FOR STRUCTURE LAYOUT

The Diversion Inlet layout and sizing were based on hydrotechnical evaluation to establish overall geometry, top of dam elevation, and hydraulic profiles to set crest elevation, stilling basin floor and blocks, and sizing of the gates.

The base elevation for each monolith or retaining wall was selected based on existing bedrock profile, stability requirements, and constructability considerations. At the Diversion Inlet, estimated top of rock is well above the hydraulic profile, so there is no upper bound on concrete/rock interface. The lower bound was based on concrete mass needed to provide stability. The concrete/rock interface was identified as a uniform bench to define the limit of excavation and simplify foundation preparation.

Lateral limits of individual monoliths and possible joint locations were selected to maintain base mat aspect ratios between 1:1 and 1.75:1, provide adequate toe for retaining wall and abutment segments, and satisfy stability requirements.

The abutments, approach walls, and training walls are concrete gravity structures using either counterfort or cantilever retaining walls depending on wall height. In general, walls with stem heights more than 6.5 m required counterforts to provide adequate stiffness and lateral load path.

2.0 CODES AND STANDARDS

In accordance with "Terms of Reference" for this project, the design complies with current Alberta Transportation (AT) Design Standards and current AT Design and Construction Bulletins. By reference in AT Standards, Canadian Dam Association (CDA) Dam Safety Guidelines and Technical Bulletin Nos. 1 through 9 provided primary guidance for design of the project including the hydraulic structures. Other recognized industry standards referenced in the AT/CDA Guidelines were used to supplement aspects of the design that the AT/CDA Guidelines do not address. Such references include the US Army Corps of Engineers (USACE) Engineering Manuals and US Bureau of Reclamation (USBR) Design Standards. In case of conflicting criteria, AT provisions were used unless a "more stringent" requirement was deemed appropriate based on engineering judgement.

Where referenced by AT and CDA, the National Building Code of Canada (NBCC) and Alberta Building Code (ABC) were used to obtain certain design loads (wind, snow, live, vehicle), and develop load combinations associated with strength and serviceability. NBCC and ABC provisions were used primarily for evaluation of individual elements such as gratings, ladders, and other ancillary structures.

The following codes, guidelines, and standards were identified for use on this project:

2.1 PROJECT STANDARDS

- Alberta Government, Terms of Reference (TOR0015997) for "Flood Mitigation Works, Springbank Off-Stream Storage Project (SR1) (WAC0078983), Addendum No. 2," August 1, 2014.
- AT's "Engineering Consultant Guidelines for Highway Bridge and Water Projects, Volume 1- Design & Tender" - 2011.
- AT's "Engineering Consultant Guidelines for Highway Bridge and Water Projects, Volume 2- Design & Tender" - 2011.
- AT's Civil Works Master Specifications for Construction of Provincial Water Management Projects.

2.2 DAM DESIGN AND SAFETY

- Province of Alberta Water Act – Water (Ministerial) Regulation - Regulation 205/98 (consolidated up to 185/2015).
- AT's "Water Control Structures Selected Design Guidelines" – Nov. 2004

- Canadian Dam Association Dam Safety Guidelines (CDA) 2007 with 2013 Revisions.
- CDA – Technical Bulletins:
    1. Inundation, Consequences, and Classification for Dam Safety, 2007
    2. Surveillance of Dam Facilities, 2007
    3. Flow Control Equipment for Dam Safety, 2007
    4. Retracted & Replaced by "Guidelines for Public Safety Around Dams," 2011
    5. Dam Safety Analysis and Assessment, 2007
    6. Hydrotechnical Considerations for Dam Safety, 2007
    7. Seismic Hazard Considerations for Dam Safety, 2007
    8. Geotechnical Considerations for Dam Safety, 2007
    9. Structural Considerations for Dam Safety, 2007

- USBR – Design of Gravity Dams, 1976
- FEMA – Best Practices Technical Manuals

2.3 BUILDING CODE & PERSONNEL SAFETY

- Alberta Building Code (ABC) 2014
- National Building Code of Canada (NBCC) 2015
- Alberta Occupational Health and Safety Code (OHS code).

2.4 STRUCTURAL ANALYSIS, DESIGN AND MATERIAL SPECIFICATIONS

- Concrete Materials and Methods of Concrete Construction, CSA A23.1-14 & A23.2 -14
- Design of Concrete Structures, CSA A23.3-14
- Design of Steel Structures, CSA S16-14
- Welded Steel Construction, CSA W59-13
- Canadian Foundation Engineering Manual, Canadian Geotechnical Society – 4th Ed., 2006
- Canadian Highway Bridge Design Code
- Alberta Transportation Bridge Design Criteria
- Reinforcing Steel Institute of Canada, Standards Practice Manual

3.0 PROJECT DATA

3.1 LOCATION

The project is located in the Springbank area of Rocky View County, Alberta, CA, southwest of the City of Calgary in Township 24 (Range 04/03, W5M).

Latitude	51.050504 N
Longitude	114.401436 W
Elevation	1180 to 1220 m

3.2 FOUNDATION PARAMETERS

Site characterization is based on geologic assessment of the project site, exploratory borings, laboratory testing of project samples, and geotechnical engineering judgment. The following foundation parameters, derived from Brazeau formation data, are described in Preliminary Design Report, Appendix D - Geotechnical Assessment Report, Chapter 10,

Rock Classification sandstone/mudstone/shale/claystone

Recommended Concrete/Bedrock Interface	EL. 1207 or lower	
Bedrock Unit Weight	25.6 kN/m^3	
Bedrock Friction Angle (Rock/Rock Interface) (φ)	26 Deg.	
Concrete/Rock Interface Friction Angle (φ)	26 Deg.	
Cross Bed Friction Angle (φ) – Passive Wedge	24 Deg.	
Ultimate Bearing Capacity (σ_{ult})	1915 kPa	
Allowable Bearing Capacity – Usual	1270 kPa	(σ_{ult}/1.5 $_{SF}$)
Allowable Bearing Capacity – Unusual	1470 kPa	(σ_{ult}/1.3 $_{SF}$)
Allowable Bearing Capacity – Extreme	1740 kPa	(σ_{ult}/1.1 $_{SF}$)

Cohesion: In accordance with CDA Guidelines Technical Bulletin No. 7 (Geotechnical) and Technical Bulletin No. 8 (Structural), cohesion was not included in the sliding stability analysis, and acceptance criteria is based on sliding factors for friction only resistance.

3.3 HYDROTECHNICAL PARAMETERS

Performance of the Diversion Structure and Diversion Channel was assessed using numerical and physical modeling. Hydraulic calculations and detailed modeling used in the design of individual hydraulic structures and other components are presented in the Preliminary Design Report, Appendices C and F. The various operating scenarios to be assessed for the Diversion Inlet were based on an Extreme Dam Hazard Classification with the separation between the Usual and Unusual Conditions being the 100-year flood and the 1000-year frequency flood dividing the Unusual and Extreme conditions. Table 1 provides a summary of the hydrotechnical parameters for selected operating scenarios used in the design and stability analyses of the Diversion Inlet.

Table 1. Diversion Inlet Hydrotechnical Parameters

Operating Scenario	Diversion Inlet Discharge (m^3/s)	Headwater Elevation (m)	Tailwater Elevation (m)
Usual Condition			
Normal Operation (No Diversion) *160 m^3/s inflow*	0	1212.1	1207.5 (basin floor)
Diversion Operation *100-Year Flood*	600	1215.8	1213.1
Unusual Condition			
Diversion Operation *2013 Flood*	600	1215.8	1213.1
No Diversion *2013 Flood*	0	1216.2	1207.5 (basin floor)
Emergency Closure No Diversion *1000-Year Flood*	0	1217.0	1207.5 (basin floor)
Maintenance *100-Year Flood*	272 (one bay)	1215.8	1211.0
Extreme - Flood			
PMF without Diversion	0	1217.8	1207.5 (basin floor)
PMF with Uncontrolled Diversion	872	1216.6	1214.4
Extreme – Seismic (Post-Seismic Condition)			
EDGM – Normal Operation *160 m^3/s inflow*	0	1212.1	1207.5 (basin floor)
EDGM – Diversion Operation *100-Year Flood*	600	1215.8	1213.1

3.4 CLIMATE DATA

3.4.1 Snow

Snow Load data for this project was obtained from Ontario Climate Centre – Environment Canada.

- Ground snow load, snow component (S_s) =1.7 kPa
- Ground snow load, rain component (S_r) =0.1 kPa
- Snow load, Importance factor (I_s) =1.25

3.4.2 Frost Considerations

Frost depth was determined in accordance with ABC and is shown in PDR, Appendix D - Geotechnical Assessment Report.

- Minimum design frost depth of 2.0 m
- Non-frost susceptible backfill - Gravel and clean sands

3.4.3 Temperature Variations

Monthly temperature data for use in the evaluation was obtained from the Calgary International Airport records, which is considered representative of typical temperature ranges at project site.

3.4.4 Wind

A wind load of 0.48 kPa was determined for use at the site based on the Alberta Building Code.

4.0 CONSTRUCTION MATERIALS

4.1 CONCRETE AND CONCRETE ACCESSORIES

- **Structural Concrete – Class A1**
  30 MPa @ 28 days, (AT Civil Works Specifications)
  General use reinforced concrete where thermal control and volume change are not a concern.

- **Structural Concrete – Class B1**
  30 MPa @ 90 days, (AT Civil Works Specifications)
  General use reinforced concrete where thermal control and volume change need to be considered (typically thickness > 600 mm)

- **High Performance Concrete – Class HPC**
  45 MPa @ 28 days (AT Bridge Construction Specifications)
  Reinforced concrete elements needing high strength, durability or in corrosive environment. Typical elements include precast concrete and bridge parapets.

- **Mass Concrete – Class M**
  20 MPa @ 90 days, 30 MPa @ 180 days (New mixture to be specified)
  Unreinforced concrete for monoliths, slabs, piers and retaining walls where thermal control and volume change need to be considered (typically thickness >1500 mm).

- **Foundation Concrete - Class F**
  15 MPa @ 28 days, (AT Civil Works Specifications)
  For use in foundation preparation such as mud mats and low strength fill.

- **Grout**
  Premixed structural non-shrink grout for equipment bases.

- **Preformed Expansion Joint Filler**
  ASTM D1752, Type I, Closed-cell sponge rubber.

- **Bond Breaker**
  Bituminous paint conforming to CGSB 37.2-88.

- **Waterstops**
  PVC ribbed profile with minimum rated hydrostatic head of 373 KPa based on joint type.

4.2 METALS

- **Steel Reinforcement** - CAN/CSA-G30.18, Grade 400W deformed bars
- **Structural Steel** - CSA-G40.21, Grade 300W or 350W
- **Stainless Steel** - ASTM A276
- **Miscellaneous Metals** (stairs, ladders, handrails) - Galvanized steel
- **Grating** - Galvanized steel – serrated bar grating

4.3 EARTHWORK MATERIALS

The Diversion Inlet structure will be constructed on a rock foundation. Soil backfill parameters are based on terminology in AT's Civil Works Master Specification 02330 – Earthwork Materials and described in the PDR, Appendix D - Geotechnical Assessment Report.

Design values for specified material include:

Impervious Fill

Unit Weight (-)	21 kN/m^3
Internal Friction Angle (-)	18 deg

Granular Fill

Unit Weight (-)	21 kN/m^3
Internal Friction Angle (-)	34 deg

Glacial Till

Unit Weight (-)	20 kN/m^3
Internal Friction Angle (-)	27 deg

Rock Fill

Unit Weight (-)	22 kN/m^3
Internal Friction Angle (-)	20 deg

Siltation (Equivalent Fluid)

Unit Weight Vertical (-)	19 kN/m^3
Unit Weight Horizontal (-)	13 kN/m^3

5.0 STRUCTURAL ANALYSIS APPROACH

For the purposes of analysis, the Diversion Structures was divided into individual monoliths based on geometry, size, joint location, and loading considerations. The monoliths were analyzed as either concrete gravity sections (gate structures, piers, and stilling basin) or retaining walls (wing walls, training walls, and abutments). Each monolith is evaluated for global stability, strength, and serviceability.

Global stability was assessed using the rigid body analysis method and application of unfactored loads. This method uses the summation of forces applied to the monolith to determine resultant location, foundation bearing pressures, and sliding resistance along identified potential failure plane(s). Analysis methodology and acceptance criteria are described in further detail in later sections of this report.

Reinforced concrete design of members, except for bridge components, was performed according to Design of Concrete Structures, CSA A23.3-14 with the additional requirements of the CSA's SEED Document – *Structural Design of Wastewater Treatment Plants-2018* for revisions addressing service load conditions, water tightness, shrinkage and temperature reinforcement, and crack control. The Seed Document contains references to ACI 350M-06 for modifying CSA A23.3-14. For bridge components, such as the Diversion Inlet access bridge, reinforced concrete design was performed according to Alberta Transportation Bridge Design Criteria supplemented by the Canadian Highway Bridge Design Code.

Finite Element Models (FEMs) were used to validate manual calculations, identify potential stress concentrations, and assess additional serviceability concerns such as localized deflection, need for thermal stress relief, and stress redistribution not captured in manual calculations. Mitigation of alkali-aggregate reaction (AAR) potential and thermal crack control for mass concrete placements were addressed through design detailing and material specifications.

5.1 DESIGN TOOLS AND SOFTWARE

Microsoft Excel - 2010 - version: 14.0.7166.5000

Mathcad 15.0 - 2013 - version: MC15_M030_20131216

SAP2000 v21 version: 21.0.2

Revit 2019.2.1 version/build: 19.2.10.7

6.0 LOADS

6.1 DEAD LOADS (D)

Permanent loads on the structure include concrete structure weight, fixed equipment, backfill, and water. Unit weights for principal materials are included in Table 2.

Table 2. Dead Load Unit Weights

Material	Unit Weight	Source
Water	9.81 kN/m^3	CSA S6-14, Table 3.4
Concrete	23.5 kN/m^3	AT WCS Design Guide 4.2
Steel	77.0 kN/m^3	AT WCS Design Guide 4.2
Backfill – Glacial Till	20.0 kN/m^3 (moist unit weight)	4.3 - Earthwork Materials
"	22.0 kN/m^3 (saturated unit weight)	4.3 - Earthwork Materials
"	12.2 kN/m^3 (buoyant unit weight)	4.3 - Earthwork Materials

6.2 HYDROSTATIC LOADS (H)

Both horizontal and vertical components of water load were used based on water surface elevation for the load condition considered. Upstream and downstream water surface elevations are described in Hydrotechnical Parameters, Section 3.3. The water surface elevations were considered to be hydrostatic pressures without kinematic effects. Headwater was considered the water surface elevation at the upstream face of the structure. Tailwater was either maximum tailwater elevation indicated on tailwater rating curves, or a reduced tailwater elevation to account for hydraulic jump depending on load condition considered and which condition produced a more adverse effect on the structure.

6.3 UPLIFT PRESSURE (U)

The following uplift pressures were considered for analysis of sliding, floatation, bearing capacities and resultant location. For the overflow weir monoliths and stilling basins, uplift was assumed to vary from 100 percent of headwater pressure at upstream edge of slab to 100 percent of tailwater pressure at downstream edge of slab applied over 100 percent of the base. For retaining walls, the uplift was assumed to vary from 100 percent of water pressure at face of the foundation heel to 100 percent of water pressure at face of the foundation toe applied over 100% of the base.

For analysis of overturning capacity and floatation for gravity structures, stilling basins and retaining walls, uplift pressure was considered to vary proportionally along the length of concrete structure/rock contact surface. For sliding and bearing capacity analysis of gravity structures and retaining walls, uplift was assumed to vary along the length of the linear sliding failure plane under consideration (horizontal concrete/rock contact, or through rock if structure contact with rock was keyed or sloped)

The foundation interface was assumed to have zero tensile capacity. For bases where stability calculations indicated bearing pressures less than zero, the foundation interface was assumed to crack, and 100 percent of the hydrostatic pressure was applied over the area of the cracked foundation, then vary linearly to 100 percent of tailwater pressure. For seismic evaluations, uplift loading remained unchanged from the pre-earthquake condition to the post-earthquake evaluation unless seismic loading resulted in a cracked foundation, in which case full hydrostatic pressure was applied to the entire area of the cracked foundation during the post-earthquake evaluation.

6.3.1 Seepage Reduction Measures

The underlying rock was identified as highly weathered and fractured. To minimize uplift potential, seepage reduction measures included using an upstream apron, cut-off keys, and drainage piping below the stilling basin slab that discharges to the downstream Diversion Channel.

Where seepage reduction measures were provided, such as drains, a reduced uplift pressure was used for stability analyses for the Usual Load Condition only. For stability analyses of other load conditions, the seepage reduction measures were conservatively neglected.

6.4 EARTH PRESSURE (E)

Soil loads include both vertical and horizontal forces due to backfill, sediment, and siltation. Physical Model Sedimentation Studies indicate there is little accumulation of sediment adjacent to the structures so loads associated with Sediment/Siltation are excluded from the structural analysis.

Vertical force associated with soil mass above the structure is included with Dead Load based on vertical projection of footing or structure below the soil. Soil mass was based on moist unit weight for material above the waterline and buoyant unit weight for material below the waterline. Vertical force associated with water above the structure are calculated separate from the soil mass.

Horizontal force associate with soil were based on at-rest condition represented by the empirical relationship:

$K_o = 1 - \sin\theta$ where: K_o = At-rest lateral pressure coefficient(*)
θ = Soil friction angle

**In accordance with EM 1110-2-2100 and EM 1110-2-2502 to use At-Rest Coefficient (K_o)*

6.5 LIVE LOADS (V)

The principal loads on the Diversion Inlet Structure include Vehicle Load on the access deck between gate piers, Vehicle or Heavy Equipment Loads adjacent to retaining walls, and Hoist/Equipment Loads associated with gate operation. Live Loads described in this section were considered transitory loads.

Transitory loads were used for strength design of individual structure elements but were not included in stability analyses. Parameters below are general guidance however; bridge elements will be designed in accordance with AT Bridge Design Criteria and CSA S-6.

Table 3. Vehicle, Hoist, and Surcharge Live Loads

Description	Live Load	Source
Vehicle (Vertical Application)	CL-625	CSA-S6-14, Section 3.8.3
Vehicle (Horizontal Application)	CL-625	CSA-S6-14, Section 3.8.3
Dynamic Load Allowance (Increase)	0.5	CSA-S6-14, Section 3.8.4.5.3
Traffic Barrier Load (TL-2 Performance)	50 kN Transverse, 20 kN Longitudinal, 10 kN Vertical	CSA-S6-14 Section 12
Vehicle Guardrails	22 kN @ 500 mm above grade	2014 ABC, 4.1.5.15
Bracing Force (Equivalent Static Force)	180 kN applied at deck surface	Minimum CL-W loading x 1.25
Crane Surcharge	CL-800	CSA-S6-14 & AT Bridge Provisions
Gate Hoist & Equipment	Refer to Appendix E - Structural for DI, SS and LLOW	Appendices E.1, E.2 and E.5
Heavy Equipment Surcharge	15.0 kPa (Equivalent 0.75 m soil)	AT WCS, Section 4.9

Heavy Equipment Surcharge was applied to retaining wall design as a separate load condition to account for future modifications such as building additions, long-term material storage, or top-of-wall modifications. This load is not applied simultaneously with Vehicle Loads.

6.6 HYDRODYNAMIC LOADS (HD)

Hydrodynamic loads include wave action, sub-atmospheric pressure at the fixed crest, and hydraulic dissipater forces. For the Diversion Inlet, these forces have been excluded from stability analysis since they are considered insignificant or of a localized nature.

- Wave action is not included due to the short-term duration and relatively short fetch.
- Sub-atmospheric pressure is not included since there is insufficient head to develop sub-atmospheric pressure on the fixed crest.
- Hydraulic dissipater forces are localized forces addressed in the hydraulic design of stilling basin and chute blocks.

6.7 DEBRIS AND IMPACT LOADS (I_M)

Impact loads associated with debris flows were based on geometry of the Diversion Structure conservatively assuming the Debris Deflection Barrier was not in place. Debris impact and drift loads were derived from 2D hydraulic modelling of the Diversion Inlet based on various flood events as described in PDR, Appendix C – Hydraulics.

6.8 ICE LOADS (I)

Three types of ice load to consider for the Diversion Inlet structure design include Static Ice Load (I_s), Dynamic Ice Loading (I_d), and Ice Accretion Load (I_v).

Static Ice Load (I_s) is a result of water surface freezing with application of horizontal load as an ice sheet expands and confinement increases. Static Ice Loading has the potential to occur at low flow conditions, particularly within the stilling basin. Static ice loading is applied in Usual Load Cases that address winter operating conditions.

Dynamic Ice Loading (I_d) is a result of moving ice floe impacting the structure. Dynamic Ice Loading was not considered as a design load case because the Diversion Structures do not have a permanent pool.

Ice Accretion Load (I_v) occurs when ice bonds to the structure and must be broken as water level rises. Ice Accretion Load associated with water level rise was not considered for the Diversion Structures due to small order of magnitude relative to hydrostatic loading and low probability of occurring simultaneous with spring and summer flooding.

Frost Heave. Vertical ice loading associated with "frost heave" is a realistic consideration. The structures are normally in a dewatered or low-water state with freeze/thaw action tending to open rock joints and concrete/rock interface and subject the structure to increased uplift potential. To minimize frost heave loading potential and remove this condition from the analysis, foundation interfaces will be located below the identified frost depth of 2.0 m for this site and drainage provided to reduce the formation of ice in the foundation.

Table 4. Ice Loads

Ice Condition	Load	Source
Static Ice (applied to structure)	150 kN/m @ 0.3 m below WS	AT WCS Design Guide 4.5.1.1
Static Ice (applied to gates)	75 kN/m @ 0.3 m below WS	AT WCS Design Guide 4.5.1.1
Ice Accretion	Per requirements of ABC for affected structures	ABC

6.9 SEISMIC – EARTHQUAKE LOADS (Q)

The seismic classification for the Diversion Inlet is based on Stantec's *Seismic Hazard Assessment - Springbank Off-Stream Dam and Reservoir Report* dated November 28, 2016. Since the hazard classification for this structure is Extreme (Diversion Channel and Off-stream Storage Dam) the seismic parameters are based on an Earthquake Design Ground Motion (EDGM) with an Annual Exceedance Probability (AEP) of 1/10,000 resulting in Peak Ground Acceleration (PGA) of 0.26 g for horizontal application and PGA of 0.15 for vertical application.

This project site is situated in an area of low to moderate seismic activity. Consequently, CDA Guidelines, Section 6.5 allow for the seismic stability analysis of concrete gravity structures to be completed using a pseudo-static approach (coefficient method). This method applies a seismic force to a rigid body with the objective of determining sliding and overturning response of the structure. Since the pseudo-static method does not recognize the oscillatory nature of seismic loads, accepted practice is to perform the stability calculations using sustained acceleration values equivalent to 2/3 of the peak acceleration values.

When performing concrete stress analyses, the objective is to determine the tensile crack length induced by the inertia forces applied to the structure, so peak acceleration is used to calculate seismic coefficients. This approach assumes an instantaneous acceleration spike can induce cracking but is not sustained long enough to develop significant displacement along the crack plane. If no significant displacement occurs, the dynamic stability is maintained.

6.9.1 Seismic Effects on Concrete Mass

The horizontal force required to accelerate the concrete mass is calculated as:

$Q_h = k_h \times W$ where:

Q_h = Horizontal seismic load (kN)
k_h = Horizontal seismic coefficient
W = Structure mass (kg)
PGA = Peak ground acceleration= 0.26g

For Stability Analysis (Table 5): k_h = 2/3 x 0.26 = 0.17
For Member Analysis (Table 6): k_h = 1.0 x 0.26 = 0.26

The vertical force required to accelerate the concrete mass is calculated as:

$Q_v = k_v \times W$ where:

Q_v = Vertical seismic load (kN)
k_v = Horizontal seismic coefficient = 0.56*k_h
W = Structure mass (kg)

For Stability Analysis (Table 5): k_v = 2/3 x (0.56*k_h) = 0.10
For Member Analysis (Table 6): k_v = 1.0 x (0.56*k_h) = 0.15

Since an earthquake produces oscillating forces, the horizontal PGA and vertical PGA cannot occur at the same time. To account for this in the stability calculations, three separate combinations of vertical and horizontal seismic combinations were considered, but only the maximum value was reported. The three combinations of vertical and horizontal seismic load are as follows:

Table 5. Stability Analysis – Seismic Coefficients

Seismic Combination	Horizontal	Vertical
100% Horiz., No Vert.	1.0*k_h = 0.17	-
100% Horiz., 30% Vert.	1.0*k_h = 0.17	0.3*k_v = 0.03
30% Horiz., 100% Vert.	0.3*k_h = 0.05	1.0*k_v = 0.10

Table 6. Stress Analysis – Seismic Coefficients

Seismic Combination	Horizontal	Vertical
100% Horiz., No Vert.	1.0*k_h = 0.26	-
100% Horiz., 30% Vert Horiz.	1.0*k_h = 0.26	0.3*k_v = 0.05
30% Horiz., 100% Vert.	0.3*k_h = 0.08	1.0*k_v = 0.15

6.9.2 Seismic Effects on Water (H_E)

Using a pseudo-static method, hydrodynamic effects on water were approximated by using the Westergaard method to calculate the seismic water force (H_E). The calculated hydrodynamic force is additive to the hydrostatic water pressure force. The distribution is parabolic with the line of action for the force H_E at 0.4h above the base of the water column. Detailed explanation of method can be found in Section 4-7.e, EM 1110-2-2100.

$$H_E = \left(\frac{7}{12}\right) * k_{h/v} * \gamma_w * h^2$$

where:
H_E = Seismic water force (kN)
$k_{h/v}$ = horizontal/vertical seismic coefficient
γ_w= unit weight of water (kN/m^3)
h = depth of water (m)

Note: The Westergaard method assumes an infinite waterbody length in the horizontal direction, which is a reasonable simplifying assumption for most conditions. For the unique case where seismic acceleration of water in the cross-stream direction is considered to evaluate divider walls and training walls, the Westergaard method will conservatively overestimate the hydrodynamic force.

6.9.3 Seismic Effect on Soils

Dynamic soil pressures and associated forces were analyzed assuming non-yielding backfills and an elastic response using the Wood's method. As referenced in Section 5-5.a.1, EM 1110-2-2100, and verified by project specific calculation (Appendix D), this method can be expected to have dynamic soil pressures greater than those predicted by the Mononobe-Okabe method for yielding backfills.

The use of Wood's method is considered reasonable and was used for analysis of gate bays that have relatively short backfills (<4 m) consisting primarily of rock fill for erosion protection. The use of Wood's method may be overly conservative for taller retaining walls with height ranging above 4 m with backfill consisting of granular fills and/or glacial till materials.

For conditions where seismic load cases control the wall design, dynamic soil pressures and associated forces were analyzed assuming yielding backfills and an elastic response using the Mononobe-Okabe method. This method uses active soil pressure during seismic conditions to assess stability.

Mononobe-Okabe Method for Yielding Backfill: This method assumes a wedge of soil bounded by the structure and an assumed soil failure plane moves as a rigid body with the same horizontal acceleration. The driving (active) wedge force is calculated based on a combined static and dynamic pressure coefficient (K_{AE}) but must then be divided into static and dynamic components for cases where the water table is above the backfill. Detailed explanation of this method can be found in Appendix G, EM 1110-2-2100.

$$P_{PE} = \frac{1}{2} K_{PE} \gamma (1 - k_v) h^2 \tag{G-3}$$

$$K_{PE} = \frac{\cos^2(\phi - \psi - \theta)}{\cos\psi \cos^2\theta \cos(\psi - \theta + \delta)\left[1 - \sqrt{\frac{\sin(\phi + \delta)\sin(\phi - \psi + \beta)}{\cos(\beta - \theta)\cos(\psi - \theta + \delta)}}\right]^2} \tag{G-4}$$

γ = unit weight of soil
k_v = vertical acceleration in g's
h = height of structure
ϕ = internal friction angle of soil
$\psi = \tan\left(\frac{k_h}{1-k_v}\right)$ = seismic inertia angle
k_h = horizontal acceleration in g's
θ = inclination of interface with respect to vertical (this definition of θ is different from θ in Coulomb's equations)
δ = soil-structure friction angle
β = inclination of soil surface (upward slopes away from the structure are positive)

(c) Simplifying Conditions. For the usual case where k_v, δ, and θ are taken to be zero, the equations reduce to:

$$K_{AE} = \frac{\cos^2(\phi - \psi)}{\cos^2\psi\left[1 + \sqrt{\frac{\sin\phi \sin(\phi - \psi - \beta)}{\cos\beta \cos\psi}}\right]^2} \tag{G-5}$$

6.10 CLIMATIC CONDITIONS

6.10.1 Snow Loads (S)

Snow loads were considered insignificant compared to hydrostatic loads and were not considered for stability of the Diversion Inlet structures. Snow loads were included in load combinations for component design of the head wall, breast wall, bridge deck, hoist support and access platforms. Snow Load data is listed in Section 3.4.1 above.

6.10.2 Thermal Loads (T)

Temperature changes will influence the overflow weir monoliths and retaining walls. Thermal effects will be evaluated during Final Design to determine joint condition, concrete mixture, monolith sizing, and lift heights for concrete structures.

6.10.3 Wind (W)

Wind loads were considered insignificant compared to hydrostatic loads and were not considered for stability of the Diversion Inlet structure. Wind loads were included in load combinations for component design of the head wall, breast wall, bridge deck, gate hoist bridge and access platforms. Additionally, wind loads during construction (prior to placement of backfill), will be included for retaining walls and divider pier components. Wind Load data is listed in Section 3.4.4 above.

7.0 STABILITY ANALYSIS

Representative monoliths and retaining walls were analyzed for load conditions applicable to the Diversion Inlet as identified in Section 7.3. Analysis methodology is as follows:

7.1 METHODOLOGY

7.1.1 Overturning and Bearing Stress

The Rigid Body Method (conventional gravity method) was used for the analysis of overturning and bearing stress criteria. Overturning was evaluated as a percentage of base that remains in compression and not a safety factor. This method is outlined in Section 7.2 of CDA Technical Bulletin No. 9 and further described in USACE EM 1110-2-2100. It uses a vector summation of all forces, including uplift, acting on the monolith to determine the vector resultant force (V), resultant force eccentricity (e) within the base, and moment (Ve/S) based on an elastic and homogeneous rectangular beam analogy. Stresses were calculated as indicated below and stability was assured by maintaining the resultant force eccentricity within acceptance criteria limits for various loading conditions.

$$\sigma = \frac{V}{A} \pm \frac{Ve}{S}$$

Where: σ = Applied bearing pressure at each end of base (kN/m^2)
V = Summation of forces normal to base (kN)
A = Base area in compression (m^2)
e = Eccentricity of normal load about centroid of base in compression (m)
S = Section modulus of base area in compression (m^3)

7.1.2 Sliding

The sliding factor of safety was calculated for each load case using the limit equilibrium method as outlined in Section 7.2 of CDA Technical Bulletin No. 9. This method reduces to the equation shown below for a single wedge system with a horizontal sliding plane, along the concrete/rock interface (CRI) or through rock/rock failure plane as identified for each hydraulic structure. For inclined sliding planes projecting from the base of shear key to bottom base slab at the toe, vertical and horizontal forces are resolved into components normal and parallel to the sliding plane. Rock mass between the inclined plane and structure base is included in the dead load summation (EM 1110-2-2100). For this project, cohesion was conservatively assumed to be zero and sliding acceptance criteria for sliding were based only friction angle.

$$SSF = \frac{(V tan\varphi + c\ A)}{H}$$

Where: SSF = Sliding Safety Factor
V = Summation of vertical loads including uplift (kN)
$tan\ \varphi$ = Coefficient along sliding plane being considered
c = Cohesion at concrete/rock or rock/rock interface (assumed as 0) (kN/m^3)
A = Base area in compression (m^2)
H = Summation of horizontal forces (kN)

7.1.3 Floatation

The floatation factor of safety was determined for components of the project such as stilling basins and apron slabs as outlined in Section 8.5, AT WCS. The factor of safety against floatation is defined as ratio of resisting gravity force to driving uplift force. The possible resistance due to friction between adjacent structures or between structure and backfill was neglected unless shear provisions were provided.

$$FSF = \frac{\Sigma N}{\Sigma U}$$

Where: FSF = Factor of Safety against Floatation
ΣN = Summation of normal forces
ΣU = Summation of uplift forces

7.2 ACCEPTANCE CRITERIA

The following acceptance criteria are based on AT WCS Chapter 8, CDA Table 6-4, and CDA Technical Bulletin No. 8, Section 6.0. The load cases to be evaluated are divided into five categories as listed in Table 5.

Usual Condition: Those conditions under which the structure is intended to serve during normal operations and further defined as a condition that has a high likelihood of occurring within the design life of the structure. For the Diversion Inlet, this includes flood events up to the 100-year frequency flood for the extreme dam hazard classification.

Unusual Condition: Those conditions that occur infrequently and may stress the structure more, under certain aspects, than normal conditions and may occur within the design life of the structure. Unusual load conditions include construction conditions, maintenance conditions, flood events between the 100-year and 1000-year frequency, infrequent earthquake events other than the MDE, and plugged drain conditions for Usual Load Cases.

Extreme – Flood: Extreme Load Conditions have a very remote likelihood of occurring with the design life of the structure. For the SR1 project, it is defined as those floods that occur from the 1000-year frequency event up to the structure's IDF. For the Diversion Inlet, the PMF is considered the IDF with the Diversion Inlet gates open or closed.

Extreme – Earthquake: For the SR1 project, the Extreme - Earthquake load condition to be assessed is the MDE as it has a very remote likelihood of occurring with the design life of the structure. The MDE is applied to the Usual Condition load cases. The Extreme – Earthquake condition is used to establish Post-Earthquake condition of the hydraulic structure. Thus, there are no stability acceptance criteria for this condition.

Post-Earthquake: The Post-Earthquake condition assesses the stability of the hydraulic structure following the applied seismic event based on earthquake induced cracking at the foundation/ structural interface and within the structure so that it is still capable of resisting the Usual Loading.

Table 7. Acceptance Criteria for Hydraulic Structures

Loading Combination	Position of Resultant Force (Percent of Base in Compression)[1]	Normal Compression Stress[2]	Sliding Safety Factor (Friction Only)	Floatation Safety Factor
Usual	Middle third of the base: 100% compression	<0.3 x f_c	≥1.5	≥1.5
Unusual	Middle third of the base: 100% compression	<0.5 x f_c	≥1.3	≥1.3
Extreme Flood	Within middle half of the base, and all other acceptance criteria must be met	<0.5 x f_c	≥1.1	≥1.1
Extreme Earthquake	Within the base, except where an instantaneous occurrence of resultant outside the base may be acceptable	<0.9 x f_c	Note [3]	
Post-Earthquake	Within middle half of the base	<0.5 x f_c	≥1.0	≥1.1

[1] Foundation bearing stress is compared to allowable stress determined from Geotechnical Investigation

[2] Where f_c = compressive strength of concrete

[3] The earthquake load case is used to establish post-earthquake condition of the structure

7.3 LOAD CONDITIONS

Load conditions varied for various Diversion Inlet structures based on configuration and location of applied load. The following sections summarize load conditions for various structures.

7.3.1 Diversion Inlet – Gate Structure

Table 8. Gate Structure – Load Conditions

Usual Load Cases		
U1	Usual Condition – Normal Operation Prior to Initiation of Diversion (Winter) Design inflow 160 m³/s with DI gates closed (no diversion) + Ice Accretion Headwater: EL 1212.1 Tailwater: EL 1207.5 (stilling basin top of concrete)	D+H+E+U+I
U2	Usual Condition – Diversion Operation – 100 Year Frequency Flood Inflow 765 m³/s with DI gates open diverting 600 m³/s + Debris Impact Headwater: EL 1215.8 Tailwater: EL 1213.1 (at 600 m³/s)	D+H+E+U+I
Unusual Load Cases		
UN1	Unusual Condition – Diversion Operation – 2013 Design Flood Inflow 1240 m³/s with DI gates open diverting 600 m³/s + Debris Impact Headwater: EL 1215.8 Tailwater: EL 1213.1 (at 600 m³/s)	D+H+E+U+I
UN2	Unusual Condition – No Diversion – 2013 Design Flood Inflow 1240 m³/s with DI gates closed (no diversion) + Debris Impact Headwater: EL 1216.2 Tailwater: EL 1207.5 (stilling basin top of concrete)	D+H+E+U
UN3	Unusual Condition – Emergency Closure – 1000 Year Frequency Flood Inflow 1930 m³/s with DI gates closed (no diversion) Headwater: EL 1217.0 Tailwater: EL 1207.5 (stilling basin top of concrete)	D+H+E+U
UN4	Unusual Condition – Maintenance / single DI gate bay dewatered 100 Year Frequency Flood – Inflow 765 m³/s diversion of 275 m³/s though one gate Headwater: EL 1215.8 Tailwater: EL 1211.0	D+H+E+U
Extreme - Flood		
E1	Extreme Condition – PMF Inflow 2770 m³/s with DI gates closed (no diversion) Headwater: EL 1217.8 Tailwater: EL 1207.5 (stilling basin top of concrete)	D+H+E+U
E2	Extreme Condition – PMF with DI gates remaining open Inflow 2770 m³/s with diversion of +/-870 m³/s through two gates Headwater: EL 1216.6 Tailwater: EL 1214.1	D+H+E+U+I
Extreme – Earthquake used to develop Post-Seismic Condition		
Post-Seismic		
E3*	Extreme Condition – EDGM applied to U1 Load Case If E3 loading results in cracked base modify structure to prevent cracked base. Headwater: EL 1212.1 Tailwater: EL 1207.5 (stilling basin top of concrete)	Load Case$_{U1}$ + Q
E4*	Extreme Condition – EDGM applied to U2 Load Case If E4 loading results in cracked base modify structure to prevent cracked base. Headwater: EL 1215.8 Tailwater: EL 1213.1 (at 600 m³/s)	Load Case$_{U2}$ + Q
Notes		
D	Dead Load: Includes weight of concrete (C), water (H), and gates (G)	
H	Hydrostatic Loads: See each load case for various Headwater and Tailwater conditions.	
E	Earth / Sediment / Siltation Loads: Include horizontal and vertical loads	
U	Uplift Load: Varies linearly from Headwater to Tailwater pressure across plane of analysis	
I	Static Ice Load <u>or</u> Impact Load: Apply one or the other depending on load case	
Q	Seismic Load: Design Earthquake load * Seismic evaluation to consider simultaneous vertical and horizontal for three combinations.	

7.3.2 Diversion Inlet - Stilling Basins

Table 9. Stilling Basin – Load Conditions

F1 Usual (U2)	Usual Condition – Diversion Flow 600 m³/s Water Weight based on: TWEL = 1213.1 Linear Uplift based on: HWEL = 1215.8, TWEL = 1213.1 and drains effective	(D+H) / U
F2 Unusual (UN4)	Unusual Condition – Construction /Maintenance/ single gate bay dewatered Water Weight based on: Not Included for this condition Linear Uplift based on: HWEL = 1215.8 , TWEL = 1211.0 and drains effective (275 m³/s one gate diversion)	D / U
F3 - Extreme	Extreme Condition – 2013 Design Flood with Drain Failure and DI Gates Closed Water Weight based on: Not Included for this condition Linear Uplift based on: HWEL = 1215.8 (at upstream end of gate block) TWEL = 1207.5	D / U
Notes		
D	Dead Load: Includes concrete (C), water (H)	
H	Hydrostatic Loads: See each load case for various Headwater and Tailwater conditions.	
U	Uplift Load	

7.3.3 Diversion Inlet – Retaining Walls

Table 10. Retaining Walls – Load Conditions

Usual Load Cases		
U1	Usual Condition – At-Rest Soil Loading Groundwater at 0.5 m above drain centerline	D+H+U+E
Unusual Load Cases		
UN1	Unusual Condition – At-Rest Soil Loading + Equipment Surcharge Groundwater at 0.5 m above drain centerline	D+H+U+E+L
UN2	Unusual Condition – At-Rest Soil Loading – Ineffective Drain Groundwater and uplift at 2013 Design Flood HWEL or TWEL depending on location of wall Section being analyzed.	D+H+U+E
Seismic		
E1	Extreme Condition – Seismic Load Groundwater at 0.5 m above drain centerline	D+H+U+E+Q
Notes		
D	Dead Load: Includes concrete (C), backfill (E),	
H	Hydrostatic Load: Groundwater 0.5 m above drain centerline, use buoyant weight of soil on heel.	
U	Uplift Load	
E	Earth / Backfill / Sediment / Siltation: Include horizontal and vertical loads	
I	Static Ice Load <u>or</u> Impact Load: Apply one or the other depending on load case	
L	Live Loads: Equipment Surcharge	
Q	Seismic Load: Design Earthquake load * Seismic evaluation to consider simultaneous vertical and horizontal for three combinations.	

7.4 SUMMARY OF STABILITY ANALYSES

Stability analyses for the Diversion Inlet gate structures, stilling basins and retaining walls were performed in accordance with criteria and procedures outlined in the CDA Technical Bulletin No. 9, "Structural Considerations for Dam Safety", and the USACE EM 1110-2-2100 "Stability Analysis of Concrete Structures." Each section was evaluated for Usual, Unusual, Extreme, and Post-Seismic loading conditions representing potential conditions the structure will experience during its design life. Summaries of the stability calculation results are presented in the sections that follow. Refer to the Appendices for stability calculations and results.

7.4.1 Gate Structures

The Diversion Inlet Gate Structures were analyzed as two distinct monoliths encompassing, Gate Crest Blocks (DI-2A/2B & DI-4A/4B) and Center Pier Blocks (DI-3A/3B).

The Gate Crest Blocks consist of an apron slab at Elevation 1210.0 m, with a foundation key extending down to Elevation 1204.0 m. The apron slab is monolithic with the gate crest at Elevation 1211.5 m with underside of concrete at Elevation 1207.0 m. Downstream of the gate, the gate slab slopes down to the stilling basin at Elevation 1207.5 m. The minimum slab thickness of the block is 2 m, and the total block length is 24.2 m, including the apron slab. Downstream limit of the gate blocks is located at joint between gate bay and stilling basin. An upstream key is provided primarily for erosion protection. It was not considered effective for uplift reduction but was used to provide additional sliding resistance.

The Center Pier Blocks are supported on a foundation with the same geometry as the Gate Crest Blocks, but include a 4.0 m wide center pier extending to Elevation 1218.0 m. The Center Pier supports the head wall/breast wall and associated bridge deck, as well as the hoist bridge. The breast wall/head wall sections extend from Elevation 1215.5 m (underside of concrete) to Elevation 1219.0 m (top of bridge deck, not considering curb or guardrail). The Center Pier extends to support the hoist bridge at Elevation 1220.25 m. The analysis included loads from breast wall, head wall, access deck, and vertical lift gates. Gate load applied to the center pier includes ½ of gate span on either side of pier.

The stability analyses for the structures were performed using a Mathcad spreadsheet. Results of the analyses are summarized in Tables 11 and 12 and calculations are included in Appendix E.1-1.

Table 11. Gate Crest Blocks (DI-2A/2B & DI-4A/4B) – Stability Analysis Summary

Notes:

4. See Appendix E.1 for definition of monolith description, analysis methodology, and stability calculations.
5. Analysis assumes inclined sliding plane, interface friction angle Φ = 26 degrees, and no cohesion.
6. Reported seismic results are controlling values for the three combinations of vertical and horizontal seismic load considered.

7.4.2 Stilling Basins

The Diversion Inlet stilling basin consists of a 2.0 m thick by 18.0 m long concrete slab with 1.5 m high baffle piers and 1.0 m high end sill. The stilling basin slab is at Elevation 1207.5 m with underside of slab at Elevation 1205.5 m. A 1.0 m thick downstream cutoff wall extends to Elevation 1203.5 m. The upstream end of the slab supports the downstream end of the gate blocks and center pier block.

When the minimum Floatation Safety Factor was unable to be met through the dead weight of the structure, anchors were required to resist the uplift pressure. The required anchor force was calculated when anchors were needed to resist uplift pressure. The floatation analyses for the structure were performed using a Mathcad spreadsheet.

Floatation analysis results indicate a need for anchorage of the stilling basin into the foundation bedrock. The required anchor force is within the capability of conventional active or passive ground anchors. The controlling Load Case for the stilling basin anchors is F1 (Usual - Diversion Flow). Results of the analyses are summarized in Table 13 and calculations are included in Appendix E.1-2.

Table 13. Stilling Basin – Floatation Analysis Summary

Load Case	Headwater/ Tailwater Elevation (m)	Vertical Force Down (kN)	Uplift Force (kN)	Floatation Safety Factor (FSF)		Anchor Force Required
				Required	Calculated	
F1 Usual Diversion Flow	1215.8 / 1213.1	18322	17534	1.50	1.04	36.9
F2 Unusual Const./Dewatered	1215.8 / 1211.0	10152	11654	1.30	0.87	23.1
F3 Extreme Ineffective Drain	1215.8 / 1207.5	10152	7989	1.10	1.27	0

7.4.3 Gate Abutment and Retaining Walls

Retaining walls serve as the left and right gate abutment walls enclosing the gate and stilling basin blocks. The gate abutment walls consist of Blocks 1A through 1E (Right Abutment) and 5A through 5E (Left Abutment). Each retaining wall consists of a counterforted or cantilever wall with varying thickness and stepped top of footing elevation.

Blocks 1A/1B and 5A/5B retaining walls serve as the gate abutments and support the breast wall, head wall, access bridge deck, and the hoist bridge. The counterfort walls extend from top of footing Elevation 1208.5 m to top of wall Elevation 1219.0 m. The gate monoliths were detailed as half-width piers with fixed crest base mat. Only 50% of the gate load is applied to each wall.

Separate stability calculations in the direction of flow were not prepared since stability in the upstream-downstream direction is proportional to the Diversion Inlet center pier. The gate abutments were analyzed as counterfort retaining walls to resist embankment loads in the cross-stream direction with fixed crest base mat acting as the toe. FEM of these monoliths was used to consider simultaneous hydraulic and embankment loading to evaluate interaction in two orthogonal directions.

Blocks 1C/1D/1E and 5C/5D/5E retaining walls enclose the Diversion Inlet stilling basin and extend 27.2 m downstream of the stilling basin, providing transition to the Diversion Channel. The wall extends from top of footing Elevation 1207.5 m varying from top of wall Elevation 1219.0 m to 1209.5 m. The footing is 2.0 m thick with a stepped heel key varying from 4.0 m deep to 2.5 m deep. Block 1C/1D and 5C/5D retaining walls vary between 0.8 m thick and 0.5 m thick and have 0.5 m thick counterforts at 4.0 m spacing. The downstream retaining walls do not include counterforts at shorter sections . Due to the variation in geometry, Blocks 1D/1E and 5D/5E were analyzed at 3 sections (upstream end, midsection and downstream end). Blocks 1E and 5E were considered to be part of Blocks 1D and 5D (downstream end) during analysis.

The transition from the gated structure to the left abutment consists of Blocks 6 through 9 to form a water barrier. Block 6 retaining wall extends from top of footing Elevation 1210.0 m to top of wall Elevation 1219.0 m. The wall varies in thickness between 1.0 m to 0.5 m thick. The footing is 1.5 m thick, with a 2.5 m deep heel key. The wall has 0.5 m thick counterforts at 3.5 m spacing.

Four representative sections were identified to capture the range of retaining wall geometry and loading conditions for the overall structure. These representative sections are indicated on Figure 2 and described as follows.

- Section DI-6: Counterfort wall serving as part of left abutment. This section was selected to determine point at which counterforts are required due to increasing differential fill heights.
- Section DI-5B (DI-1B similar, opposite): Counterfort wall serving as the part of the Diversion Inlet Gate Structure training wall. Compared to other wall sections, this section has a thicker stem to carry access bridge and gate loads, reduce deflection, and thicker footing to match the gate bay concrete profile.
- Section DI-5C (DI-1C similar, opposite): Counterfort wall integral with stilling basin. This is one of the tallest wall sections and subjected to potential unbalance water load when Diversion Inlet gates are closed and diversion flow is terminated.

- Section DI-5D (DI-1D similar, opposite): Counterfort wall or cantilever wall serving as a downstream training wall and slope protection. This section was selected to determine wall height where counterforts were no longer required. Section DI-5D was analyzed at 3 sections to account for the geometric variability of the retaining wall. Section DI-1D and DI-5D (downstream), also known as DI-1E and DI-5E, respectively, were selected to determine wall height where counterforts are no longer required.

Section DI-7 shown in **Error! Reference source not found.** is a concrete core wall acting as a seepage barrier between head pond and Diversion Channel. It is surrounded and supported by embankment fill on both sides. Structural stability analysis of this wall was not needed due to the embankment support.

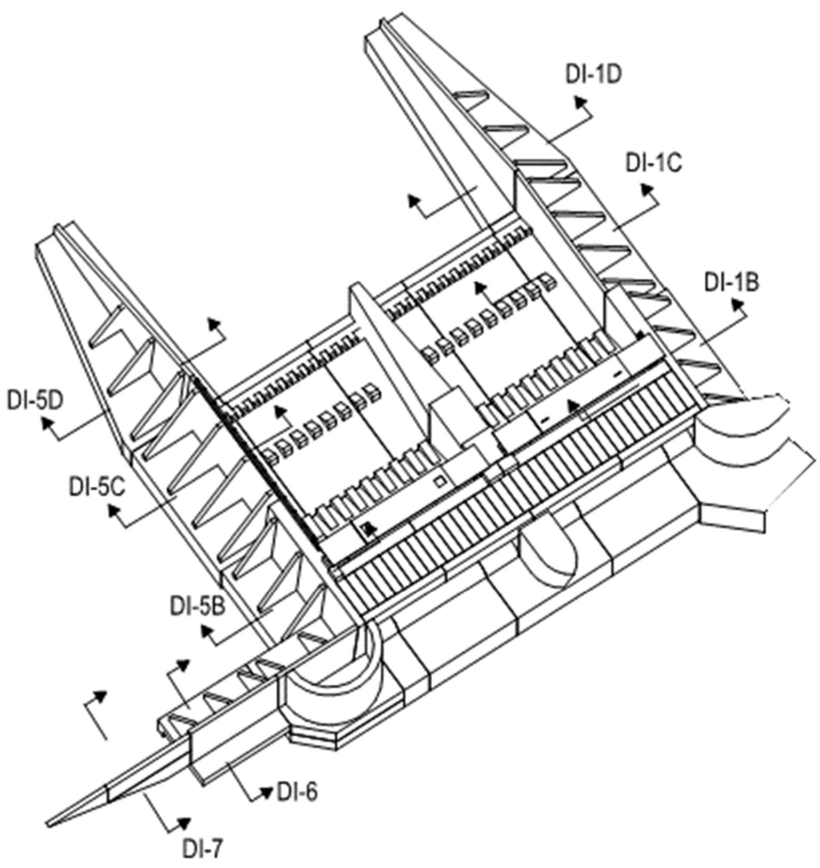

Figure 2. Diversion Inlet Retaining Wall Key Plan

Stability analyses were performed in accordance with the structural design criteria outlined previously using a Mathcad spreadsheet. Each of the four representative wall sections was evaluated for Usual, Unusual, and Extreme loading conditions representing the potential range of conditions the structure will be exposed to during its design life. In accordance with guidelines for hydraulic structures, at-rest soil pressures were used for all Load Case calculations except active soil pressures were used when considering Seismic Load Cases.

The principal factors affecting the structural design of the walls include significant driving force associated with high groundwater conditions; poor rock quality along the foundation interface; relatively weak material (glacial till) anticipated in the backfill zone of influence; and potential for significant uplift pressure when water levels recede faster than pore pressure can dissipate. Design calculations indicate that retaining walls are most sensitive to groundwater conditions, concrete shear capacity of stem walls, and sliding stability provided by foundation shear keys.

For all loading conditions considered, floatation factors of safety are above required, 100 percent of the base is in compression, and sliding factors of safety are above required. Stability results indicate that sliding stability is the primary concern due to the low friction angle at the concrete/rock interface and rock/rock bedding planes. To achieve stability results within the limits of acceptance criteria, a shear key at the heel of footing, and a wall drain system are required. The structural shear key ensures an inclined base sliding analysis is valid, and the wall drain system significantly reduces load associated with groundwater. The controlling load case is Load Case UN2 (high groundwater due to ineffective drain).

Results of analyses are summarized in Table 14 and calculations are included in Appendix E.1-3.

Notes:
1. See Appendix E.1 for definition of wall section description, analysis methodology, and stability calculations.
2. Analysis assumes inclined sliding plane, interface friction angle Φ = 26 degrees, and no cohesion.
3. Seismic results utilize active soil pressure coefficients for stability values reported.

8.0 STRENGTH EVALUATION AND DESIGN

Strength evaluation of individual elements or members of structures and monoliths was used to verify member sizes based on application of factored loads as described in ABC with some adjustments for more severe conditions or loads not included in the ABC.

Reinforced concrete design, except for bridge components, was performed according to Design of Concrete Structures, CSA A23.3-14 with the additional requirements of the CSA's SEED Document – *Structural Design of Wastewater Treatment Plants-2018* for revisions addressing service load conditions, water tightness, shrinkage and temperature reinforcement, and crack control. The Seed Document contains references to ACI 350M-06 for modifying CSA A23.3-14. For bridge components, such as the Diversion Inlet access bridge, reinforced concrete design was performed according to Alberta Transportation Bridge Design Criteria supplemented by the Canadian Highway Bridge Design Code.

Structural steel design was performed according to Design of Steel Structures, CSA S16-14, and codes for welding, materials, and other pertinent references.

In general, structural analysis and design was performed manually using Mathcad or Excel spreadsheets. For complex structures, a commercial Three-Dimensional Finite Element Model (FEM) was used to evaluate multiple load combinations, identify stress concentrations, and generate shear and moment values for design of individual elements. The FEM was supplemented with manual calculations to verify/validate model results and where necessary, refine the analysis of individual elements. Based on model output, a combination of manual calculation and commercial software were used for strength design. Additional elements evaluated as part of strength design included joint detailing, equipment anchorage, and embedded parts.

The Diversion Inlet is designed as a mass concrete gravity structure sized primarily for stability. Most elements exceed 2 m in thickness and are surface reinforced for crack control and durability rather than strength. Each element is checked to confirm calculated stress from factored loads do not exceed member capacity. Some elements which are subjected to higher stress and controlled by strength design include:

- Head wall/breast wall which is designed as a beam spanning 20 m from abutment to pier and subjected primarily to dead load, vehicle load, and lateral hydraulic load
- Access deck panels which span 4.5 m from breastwall to headwall and subjected primarily to vehicle and equipment loading
- Gate hoist bridge spanning 20 m and subjected primarily to dead load and hoist load

- Concrete gate slots, gate hoist bridge end supports, and head wall/breast wall end supports which are subjected to concentrated bearing forces

For each of these elements, preliminary strength calculations were performed to acquire order-of-magnitude stress and establish basis for preliminary member sizing. Strength calculations to develop reinforcement sizing and steel detailing will be performed during Final Design.

The retaining wall monoliths will be detailed during Final Design using commercially available finite element software with beam, shell, and solid elements where appropriate.

Footings are designed as a structural slab on an elastic foundation as the stability analysis concluded that the foundations are in compression based on the value of the subgrade modulus. The critical sections considered for evaluation of shear and moment are at half the footing thickness as measured from the face of the wall for the toe and at the face of the wall for the heel. In general, footing geometry was dictated by the gate bay limit of excavation, and desired hydraulic profile resulting in footing thicknesses exceeding 1.5 to 2.0 m with relatively low stress at the critical sections.

Cantilever stem walls are designed as a cantilever beam fixed at the footing interface. The critical sections considered for evaluation were at base of stem, 1/3 of the stem height, and 2/3 of the stem height. Wall thickness increases from top to bottom with thickness ranging from 0.5 to 2.0 m, respectively. Due to increased thickness and increased load near the base of walls, shear strength becomes a controlling factor, and transverse shear reinforcement (cross ties) will be required.

Counterfort stem walls are designed as continuous beams spanning horizontally between counterforts, with only the lower portions of the stem exhibiting plate (2-way spanning) action and designed as a cantilever from the footing to a height approximately half of the counterfort spacing.

Counterfort heels are designed with a similar load path as the stem. The portion of footing closest to the stem acts as a cantilever beam, and the portion which is further from the stem by more than half of counterfort spacing, is designed as a continuous beam spanning between counterforts.

Counterforts are designed as cantilever deep beams fixed at the footing interface. The wall serves as the beam flange, and the flange width is calculated as the lesser of 12 times the thickness of the wall or half the distance between the counterforts using equation 10.3.3 of CSA 23.3 (2018). The counterfort is considered to act as the stem of tee beam and is fixed at its base. The tee beam is sized so that the neutral axis of the tee beam is located within the flange. The depth of the tee beam is the perpendicular distance between the sloping face of the counterfort and the vertical face of the retaining wall. Critical sections for evaluation of counterfort shear and moments include the foundation interface and the third points of the counterfort.

9.0 SERVICEABILITY

Structural serviceability concerns with the Diversion Inlet relate primarily to concrete durability, shrinkage control, relief of internal stresses associated with volume changes, and deflection of access deck and gate hoist bridge.

Shrinkage control and volume changes are addressed primarily with placement sequence, mix design, surface reinforcement, and material specifications. The preliminary design includes joint locations that define monoliths with balanced aspect ratios and placements less than 12 m to 18 m in any one direction. Expanded guidance related to placement sequence and horizontal joint locations will be addressed will be addressed during Final Design.

Allowance for thermal expansion/contraction is critical for gate operation These affects are addressed primarily through second stage concrete placements occurring after initial concrete shrinkage has occurred and detailing of clearance within the gate slot.

Gate hoist bridge stiffness and member size are controlled by deflection limits established for hoist equipment. Hoist support deflection must be uniform to minimize secondary loads on shaft and gears and within limits of comfort of personnel working on the gate hoist platform. Lateral deflection of the gate itself and head wall must be controlled to maintain integrity and contact of gate seals.

Serviceability criteria for the bridge deck will be in accordance with AT Bridge Standards and sized for heavy equipment loading.

Serviceability concerns for the retaining walls relate to concrete durability, shrinkage, crack control, volume changes, and wall deflections. Durability, shrinkage, and crack control are achieved primarily through reinforcement placement, high reinforcement ratios, and use of high load factors that account for both strength and serviceability in accordance with CSA SEED document. Volume changes are addressed primarily with placement sequence, mix design, surface reinforcement, and material specifications. The retaining walls include vertical joints at locations of footing geometry change, and at locations needed to maintain horizontal wall lengths less than 12 m to 18 m. Expanded guidance related to placement sequence and horizontal joint locations will be addressed as part of constructability review during Final Design.

Wall deflections are controlled using counterforts to provide rigidity by reducing wall and footing spans and using at-rest soil pressure when sizing wall elements. Locations where wall deflection is critical includes walls serving as gate bay abutments, walls adjacent to access roads and control building foundation, and walls along the upstream face that must maintain tight joints for water retention. Wall deflections will be addressed during Final Design.

10.0 CONSTRUCTION CONSIDERATIONS

Construction specifications and details for the Diversion Inlet will be furthered during Final Design. The following items have been identified as construction considerations for the Diversion Inlet:

- Dewatering of excavated areas will be required to sufficiently enable construction of the Diversion Inlet. The services of a specialist dewatering contractor may be needed.
- Excavation will be in competent bedrock. All soil, including alluvium, talus and other unconsolidated deposits should be removed to expose unweathered or slightly weathered bedrock. Excavation should be performed by mechanical means only; blasting will not be permitted.
- Foundation preparation will require special care in cleaning and preparation of concrete/rock interface. Care must be taken during excavation of the foundation to identify unsuitable rock conditions or weak bedding planes that could impact stability. Loose material and rock overhangs will need to be removed. Small voids will be filled with dental concrete. Once ready, foundation protection will be placed over exposed rock.
- If extensive jointing/fracturing is observed after excavation of the foundation, consolidation grouting may be required.
- Shear keys are required to maintain adequate sliding stability for gate monoliths and retaining walls. Care should be taken during excavation of the shear key trenches to identify unsuitable rock conditions or weak bedding planes that could compromise capacity of the shear key.
- Anchors, along with a foundation underdrain to relieve uplift pressures, will be required to maintain adequate factors of safety against floatation in the stilling basin. Static anchors drilled and grouted in a grid pattern prior to placement of the stilling basin concrete are proposed.
- Lift joints in the base mats and footings will be required to reduce placement thickness, control heat of hydration, reduce crack potential, and develop hydraulic profile. Changes in mix design will be required to provide lower cement ratio and larger aggregate in mass concrete placements, with higher strength and smaller aggregate mix placed as part of the reinforced "surface skin".
- Vertical joints in gate bays and stilling basins will be spaced and detailed so that "closure grouting" needed to accommodate shrinkage during initial curing is not needed.
- Horizontal joints in the retaining wall stems will be required to reduce placement height to avoid potential for aggregate separation, improve access for adequate vibration, reduce

potential for form bulging, and allow for fill placement to progress in stages with wall construction.

- Joint preparation will require attention to proper installation of water stops, shear keys, dowels, and reinforcement. Joint alignment and water-tight integrity are critical for reducing water levels on the back side of retaining walls.

- Gate slots, access bridge, and gate hoist beams at the Diversion Inlet will require combinations of concrete block outs, anchor bolts, and embedded parts in first and second stage concrete placements. Placement tolerance for some of these items are tighter than typical heavy construction tolerance due to fit and operating clearance requirements.

- Procurement lead-time for gate components will likely be driven by steel availability and fabrication schedules. An allowance of 12 to 18 months is recommended to account for design, shop drawing review/approval, fabrication, testing, and delivery.

- Placement of free draining backfill, filter material, and drain systems are critical for minimizing groundwater levels behind the walls. Material selection and installation methods will require strict quality control and monitoring.

- Fill placement and compaction methods must be reviewed and monitored to ensure wall movement does not occur during construction.

- Construction sequencing will be required to ensure the Diversion Inlet and gates are fully functional before a tie-in with Diversion Channel is made.

Appendix E.1-1 GATE BLOCKS AND CENTER PIER

Calculation Section I

Results Summary Table (overview)

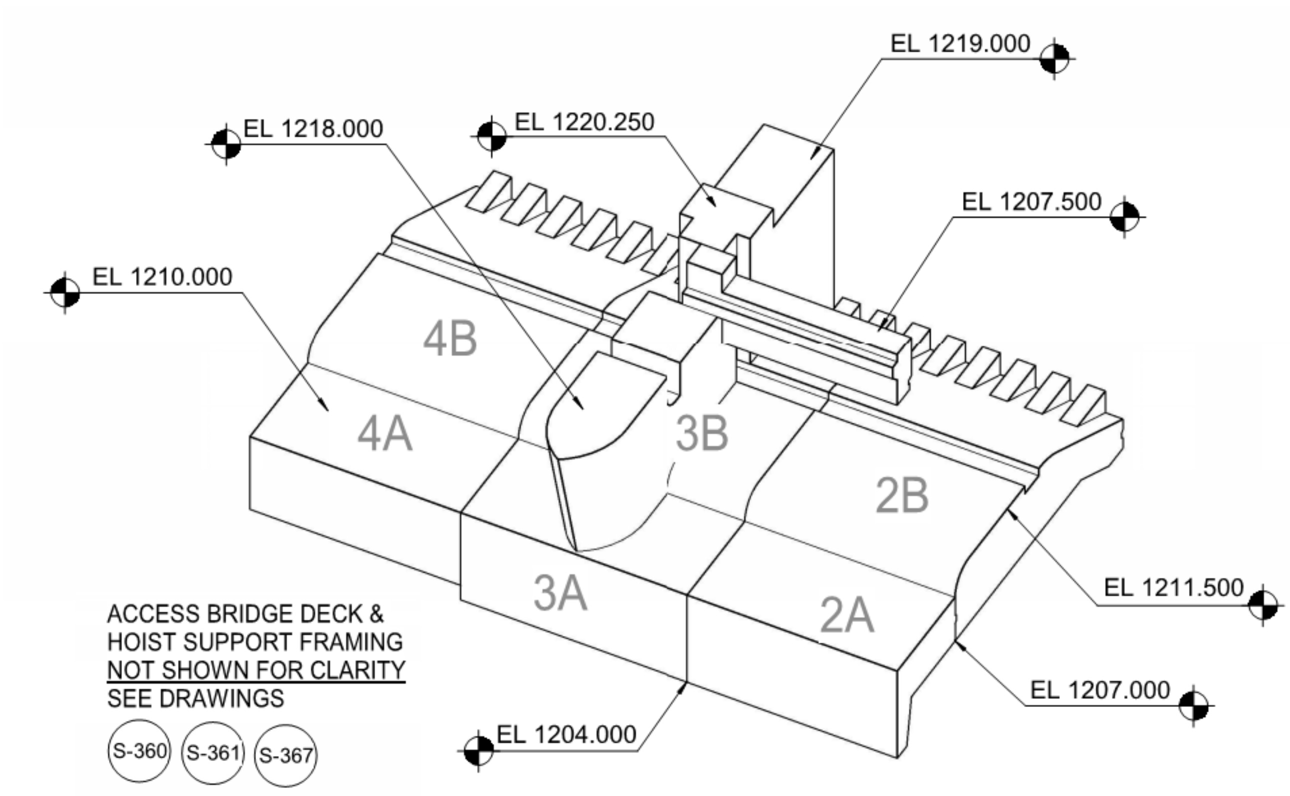
Calculation Section III

DI-3A/3B Center Pier Stability Calculations

Project Number: 110773396
Project Title: SR1 Project
Client: Alberta Transportation
Engineer: Dave Crawford, Derek Cheuk Date: 2018/12/17
Checker: Sean Xiao Date: 2019/01/08

Sliding Stability, Bearing Capacity and Overturning Stability Analysis for: Diversion Inlet Monolith (3A+3B) Center Pier

Structure Isometric:



BLOCKS 2A, 2B,3A, 3B, 4A & 4B 3D VIEW

DIVERSION INLET - MONOLITHS (3A+3B) - CENTER PIER

REGION COLOR CONVENTION	User Input	Calculation Highlights	Results

DIVERSION INLET DEIMENSIONAL INPUT PARAMETERS

BASE SECTION PROPERTIES

Base Length: $L_b := 24.20m$ $\quad Kern := \frac{L_b}{6} = 4.03\,m$

Stilling Basin Length: (Effective Drain at Toe Point O, except UN2) $L_{sb} := 0m$ $\quad Ecc_{midhalf} := \frac{L_b}{4} = 6.1\,m$

Base Width: $W_b := 13.00m$

Area of Base: $A_b := L_b \cdot W_b = 314.6\,m^2$

Section Modulus of Base: $S_b := \frac{W_b \cdot L_b^2}{6} = 1268.9\,m^3$

PIERS

Pier Nose Height: $h_{pn} := 8.00m$

Area of Curved Pier Nose Section: $A_{pnc} := 9.71m^2$ (From Bluebeam Area Measurement)

Pier Nose Width and Uniform Section: $w_{pn} := 4.00m$

Pier Nose Area at Top: $A_{pnt} := A_{pnc} + \left(w_{pn} \cdot 4.43m\right) = 27.4\,m^2$

Pier Nose Area at Bottom: $A_{pnb} := A_{pnc} + \left(w_{pn} \cdot 2.43m\right) = 19.4\,m^2$

Total Pier Nose Volume: $V_{pn} := \frac{A_{pnt} + A_{pnb} + \sqrt{A_{pnt} \cdot A_{pnb}}}{3} \cdot h_{pn} = 186.5 \cdot m^3$

Pier Height Upstream of Gates: $h_{pug} := 8.0m$

Pier Plan Area Upstream of Gates: $A_{pug} := w_{pn} \cdot 7.50m = 30\,m^2$

Total Pier Volume Upstream of Gates: $V_{pug} := A_{pug} \cdot h_{pug} = 240.0 \cdot m^3$

Pier Height at Gate Slot: $h_{pgs} := 8.00m$

Pier Plan Area at Gate Slot: $A_{pgs} := 1.50m \cdot 2.5m = 3.75\,m^2$

Total Pier Volume at Gate Slot: $V_{pgs} := A_{pgs} \cdot h_{pgs} = 30.0 \cdot m^3$

Pier Width Downstream of Gates: $w_{pdg} := 4.00m$

Pier Elevation Area Downstream of Gates: $A_{pdg} := 86.7m^2$ (From Bluebeam Area Measurement)

Total Pier Volume Downstream of Gates: $V_{pdg} := A_{pdg} \cdot w_{pdg} = 346.8 \cdot m^3$

BRIDGE DECK

Bridge Deck Width:	$w_{bd} := 5.00m$	
Bridge Deck Section Area	$A_{bd} := (22 - 5 \cdot 1.2) \cdot 0.51 \cdot m^2 - 13 \cdot 3\pi \frac{0.28^2}{4} m^2$	(AT SL-510 Void Slab Arrangement See A-S360)
Total Bridge Deck Volume:	$V_{bd} := w_{bd} \cdot A_{bd} = 28.8 \cdot m^3$	$A_{bd} = 5.8\,m^2$
Breastwall Elevation Area:	$A_{bw} := 4.789m^2$	(From Bluebeam Area Measurement)
Breastwall Length:	$L_{bw} := \frac{20.00}{2} \cdot 2m$	(2 Beastwalls simply supported by Center Pier)
Total Breastwall Volume:	$V_{bw} := A_{bw} \cdot L_{bw} = 95.8 \cdot m^3$	
Headwall Elevation Area:	$A_{hw} := 5.58m^2$	(From Bluebeam Area Measurement)
Headwall Length:	$L_{hw} := \frac{20.00}{2} \cdot 2m$	(2 Beastwalls simply supported by Center Pier)
Total Headwall Volume:	$V_{hw} := A_{hw} \cdot L_{hw} = 111.6 \cdot m^3$	
Hoist Bridge supports on Center Pier	(conservatively ignored for Stability checks)	

FOOTINGS (BOF_{base} EL = 1207.0)

Bottom of Key (Footing Heel) Elevation:	$BOF_{elev} := 1204.00m$	<========== *(Critical Design Parameter)*
Apron Slab Top of Concrete Elevation at Edge of Slab:	$TOC_{as} := 1210.00m$	
Fixed Crest Top of Concrete Elevation at Downstream Face:	$TOC_{fce} := 1207.50m$	(TOC Elevation of DI Stilling Basin)
Fixed Crest Top of Concrete Elevation at Center of Footing:	$TOC_{fcc} := 1211.50m$	
Bottom of Footing Elevation @ Toe:	$BOF_{toe} := 1205.50m$	<============= *(Critical Design Parameter)* *(Point O @ TOE: BOFtoe = EL.1205.5)*
Footing Concrete Base Elevation (typ,, Except Heel Key and Toe):	$BOF_{base} := 1207.0 \cdot m$	
Fixed Crest Footing Elevation Area:	$A_{fc} := 68.5m^2$	(From Bluebeam Area Measurement)
Fixed Crest Footing Width:	$w_{fc} := 13.00m$	
Total Fixed Crest Footing Volume:	$V_{fc} := A_{fc} \cdot w_{fc} = 890.5 \cdot m^3$	
Apron Slab Footing Dimensions:	$w_{as} := 13.00m$ $L_{as} := 6.20m$	
Apron Slab Elevation Area:	$A_{as} := L_{as} \cdot (TOC_{as} - BOF_{base}) = 18.6\,m^2$	
Total Apron Slab Footing Volume:	$V_{as} := A_{as} \cdot w_{as} = 241.8 \cdot m^3$	
Shear Key Depth (below Toe EL):	$Key_d := BOF_{toe} - BOF_{elev} = 1.5\,m$	
Shear Key Dimensions:	$Key_{w.t} := 1.5m$ $Key_l := 13m$ $Key_{w.b} := 1.0m$	$Key_w := \frac{Key_{w.t} + Key_{w.b}}{2}$
Total Shear Key Volume:	$V_{key} := (Key_d + BOF_{base} - BOF_{toe}) \cdot Key_w \cdot Key_l = 48.8 \cdot m^3$	

FOUNDATION PARAMETERS

Granular Fill Internal Angle of Friction: $\phi := 34 \cdot \frac{\pi}{180} = 0.593$ (Section 5.3, Design Criteria)

Friction Angle at Base Concrete / Rock Interface: $\phi_{rock} := 26$ (Section 5.2, Design Criteria)

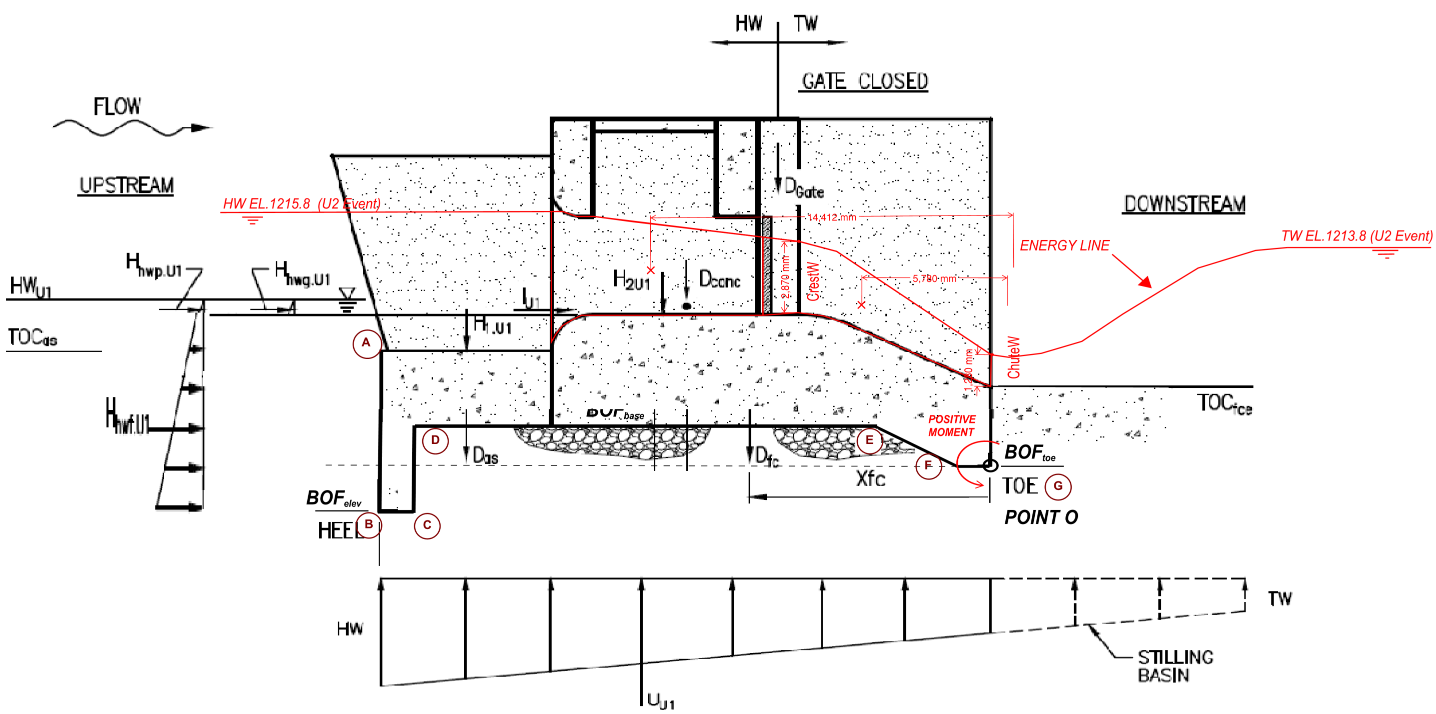
Base Friction Coefficient: $\tan_{\phi} := \tan\left(\phi_{rock} \frac{\pi}{180}\right) = 0.488$ radians

Line-of-Seepage Parameters $L_{AB} := 0$ $L_{BC} := 1 \cdot m$ $L_{CD} := 3.04 \cdot m$ (Assuming Cracking for Overturning)

Seepage Line:
A-B-C-D-E-F-G-End of Stilling Basin

$L_{DE} := 18.22 \cdot m$ $L_{EF} := 3.35 \cdot m$

$X_{EF} := 2.99 \cdot m$ $L_{FG} := 1.5 \cdot m$ $L_{sb} = 0$



MATERIAL PROPERTIES

Unit Weight of Concrete: $\gamma_c := 23.5 \frac{kN}{m^3}$ (Section 7.1, Design Criteria)

Unit Weight of Rock Fill: $\gamma_r := 22.0 \frac{kN}{m^3}$ (Section 5.3, Design Criteria)

Rip Rap Backfill, Refer Dwg. C-214 $\phi_{backfill} := \left(20 \frac{\pi}{180}\right) = 0.3$ radians

Unit Weight of Water: $\gamma_w := 9.81 \frac{kN}{m^3}$ (Section 7.2, Design Criteria)

CONCRETE DEAD LOADS

Pier Nose: $D_{pn} := V_{pn} \cdot \gamma_c = 4383.3 \cdot kN$

Pier Upstream of Gates: $D_{pug} := V_{pug} \cdot \gamma_c = 5640.0 \cdot kN$

Gate Slot: $D_{pgs} := V_{pgs} \cdot \gamma_c = 705.0 \cdot kN$

Pier Downstream of Gates: $D_{pdg} := V_{pdg} \cdot \gamma_c = 8149.8 \cdot kN$

Bridge Deck: $D_{bd} := V_{bd} \cdot \gamma_c = 676.6 \cdot kN$

Breastwall: $D_{bw} := V_{bw} \cdot \gamma_c = 2250.8 \cdot kN$

Headwall: $D_{hw} := V_{hw} \cdot \gamma_c = 2622.6 \cdot kN$

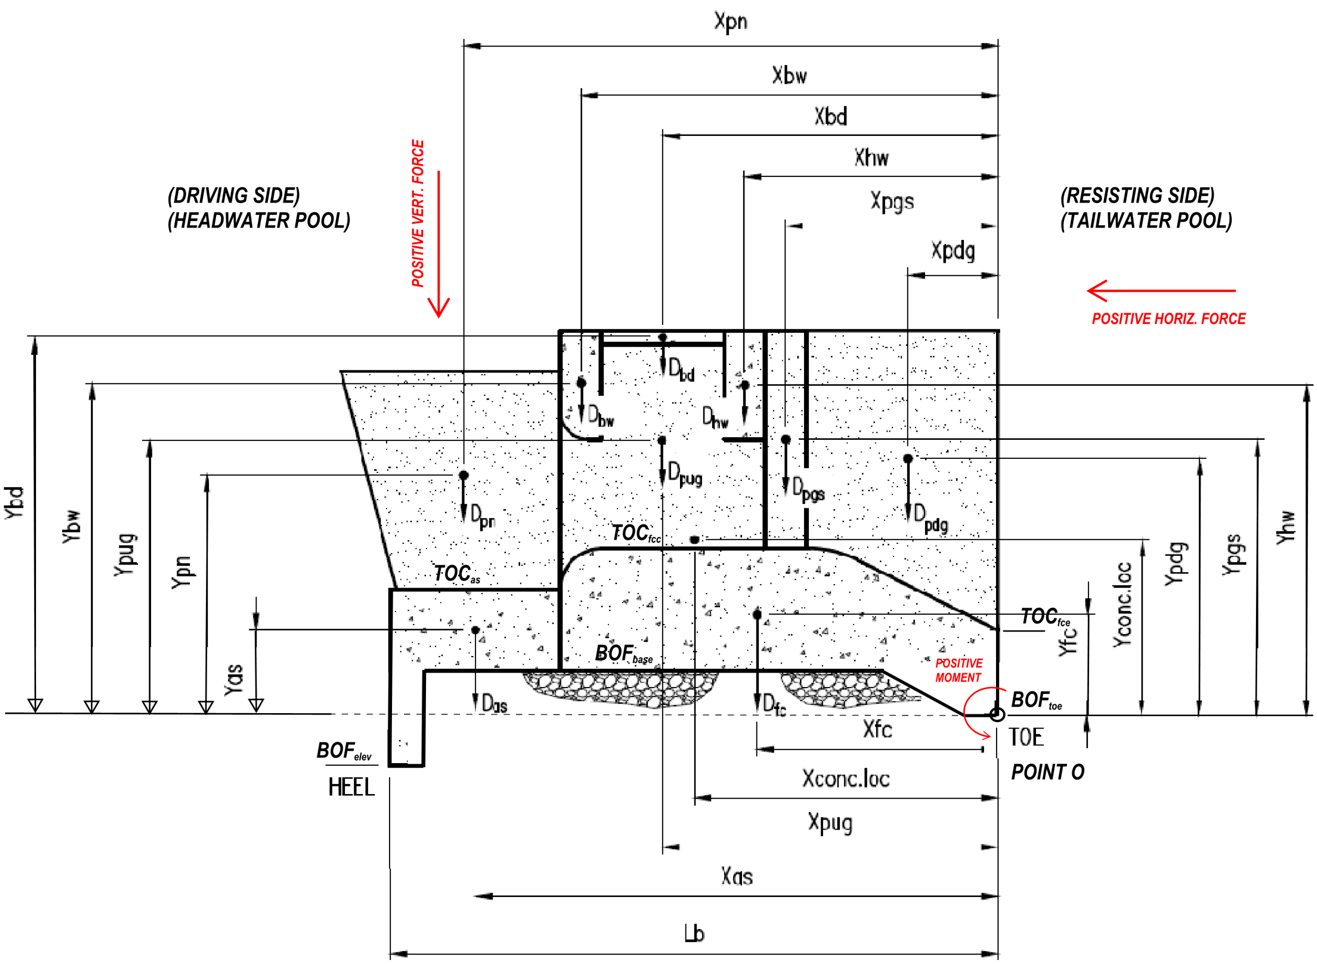
Fixed Crest Footing: $D_{fc} := V_{fc} \cdot \gamma_c = 20926.8 \cdot kN$

Apron Slab Footing: $D_{as} := V_{as} \cdot \gamma_c = 5682.3 \cdot kN$

Key: $D_{key} := V_{key} \cdot \gamma_c = 1145.6 \cdot kN$

Total Concrete Dead Loads:

$$D_{conc} := D_{pn} + D_{pug} + D_{pgs} + D_{pdg} + D_{bd} + D_{bw} + D_{hw} + D_{fc} + D_{as} + D_{key} = 52182.8 \cdot kN$$



VARIABLES AND SIGN CONVENTION

MOMENT ARM FROM TOE TO CENTROID OF COMPONENT

Distance from Toe to COG Pier Nose: $X_{pn} := 21.52m$ (From Bluebeam Measurements)

Dist. from Toe to COG Pier U/S of Gates: $X_{pug} := 14.25m$

Distance from Toe to COG of Gate Slot: $X_{pgs} := 9.75m$

Dist. from Toe to COG Pier D/S of Gates: $X_{pdg} := 4.15m$

Dist. from Toe to COG of Bridge Deck: $X_{bd} := 14.5m$

Dist. from Toe to COG of Breastwall: $X_{bw} := 17.23m$

Distance from Toe to COG of Headwall: $X_{hw} := 11.25m$

Dist. from Toe to COG of Fixed Crest: $X_{fc} := 9.948m$

Dist. from Toe to COG of Apron Slab: $X_{as} := 21.10m$

Dist. from Toe to COG of Heel Key: $X_{key} := \left(L_b - \frac{Key_w}{2}\right) = 23.6\,m$

MOMENT ARM FROM BASE OF FOOTING TO CENTROID OF COMPONENT

Dist. from Base to COG of Pier Nose: $Y_{pn} := 8.69m$

Dist. from Base to COG Pier U/S of Gates: $Y_{pug} := 9.713m$ (From Bluebeam Measurements, TYP.)

Dist. from Base to COG of Gate Slot: $Y_{pgs} := 10.38m$

Dist. from Base to COG Pier D/S of Gates: $Y_{pdg} := 8.77m$

Dist. from Base to COG of Bridge Deck: $Y_{bd} := 13.25m$

Dist. from Base to COG of Breastwall: $Y_{bw} := 11.49m$

Dist. from Base to COG of Headwall: $Y_{hw} := 11.62m$

Dist. from Base to COG of Fixed Crest: $Y_{fc} := 3.35m$

Dist. from Base to COG of Apron Slab: $Y_{as} := 3.0m$

Dist. from Base to COG of Heel Key: $Y_{key} := \frac{BOF_{base} + BOF_{elev}}{2} - BOF_{toe} = 0.00\,m$

Distance From Toe to COG of Concrete Dead Loads:

$$X_{conc.loc} := \frac{\left(\left(\begin{array}{l} X_{pn} \cdot D_{pn} + X_{pug} \cdot D_{pug} + X_{pgs} \cdot D_{pgs} + X_{pdg} \cdot D_{pdg} + X_{bd} \cdot D_{bd} \cdots \\ + X_{bw} \cdot D_{bw} + X_{hw} \cdot D_{hw} + X_{fc} \cdot D_{fc} + X_{as} \cdot D_{as} + X_{key} \cdot D_{key} \end{array}\right)\right)}{D_{conc}} = 12.43\,m$$

Distance Above Base to COG of Concrete Dead Loads:

$$Y_{conc.loc} := \frac{\left(Y_{pn} \cdot D_{pn} + Y_{pug} \cdot D_{pug} + Y_{pgs} \cdot D_{pgs} + Y_{pdg} \cdot D_{pdg} + Y_{bd} \cdot D_{bd} + Y_{bw} \cdot D_{bw} + Y_{hw} \cdot D_{hw} + Y_{fc} \cdot D_{fc} + Y_{as} \cdot D_{as} + Y_{key} \cdot D_{key}\right)}{D_{conc}}$$

ROCK SECTION MOBILIZED FOR INCLINDED SLIDING FAILURE

Area of Rock Section Mobilized: $A_{rs} := 46.22m^2$ (From Bluebeam Measurement)

Rock Mass Mobilized: $V_{rs} := A_{rs} \cdot \gamma_r \cdot W_b = 13218.9 \cdot kN$

(Pore pressure taken along assumed inclined sliding plane)

Distance from Toe to COG of Rock Section: $L_{rs} := 13.96m$ (From Bluebeam Measurement)

VERTICAL LIFT GATE

Dead Load of Vertical Lift Gate: $D_{Gate} := 580 \cdot \frac{2}{2} kN$ (Drawing Q-202 dated 03-31-2017 Gate Load on Monolith 3A3B pending Gate position of individual Load Case)

Distance from Toe to COG of Gate: $X_{gate} := X_{pgs} = 9.75\,m$

Distance from Base to Centroid of Vertical Lift Gate:

$$Y_{gate} := \left[\left(TOC_{fcc} - BOF_{toe} \right) + \frac{1215.5 \cdot m - TOC_{fcc}}{2} \right] = 8\,m$$

(Distance from base to halfway between the bottom of the headwall and the top of the Fixed Crest.)

Diversion Structure 2D Hydraulic Model Results

Tabular Summary of Diversion Structure 2D Hydraulic Model Results
Applicable or Relevant Scenarios: Diversion Inlet (DI) - Gate Structure
Prepared: 17 October 2018

Water Surface Over DI Gate Bay - Gate Open

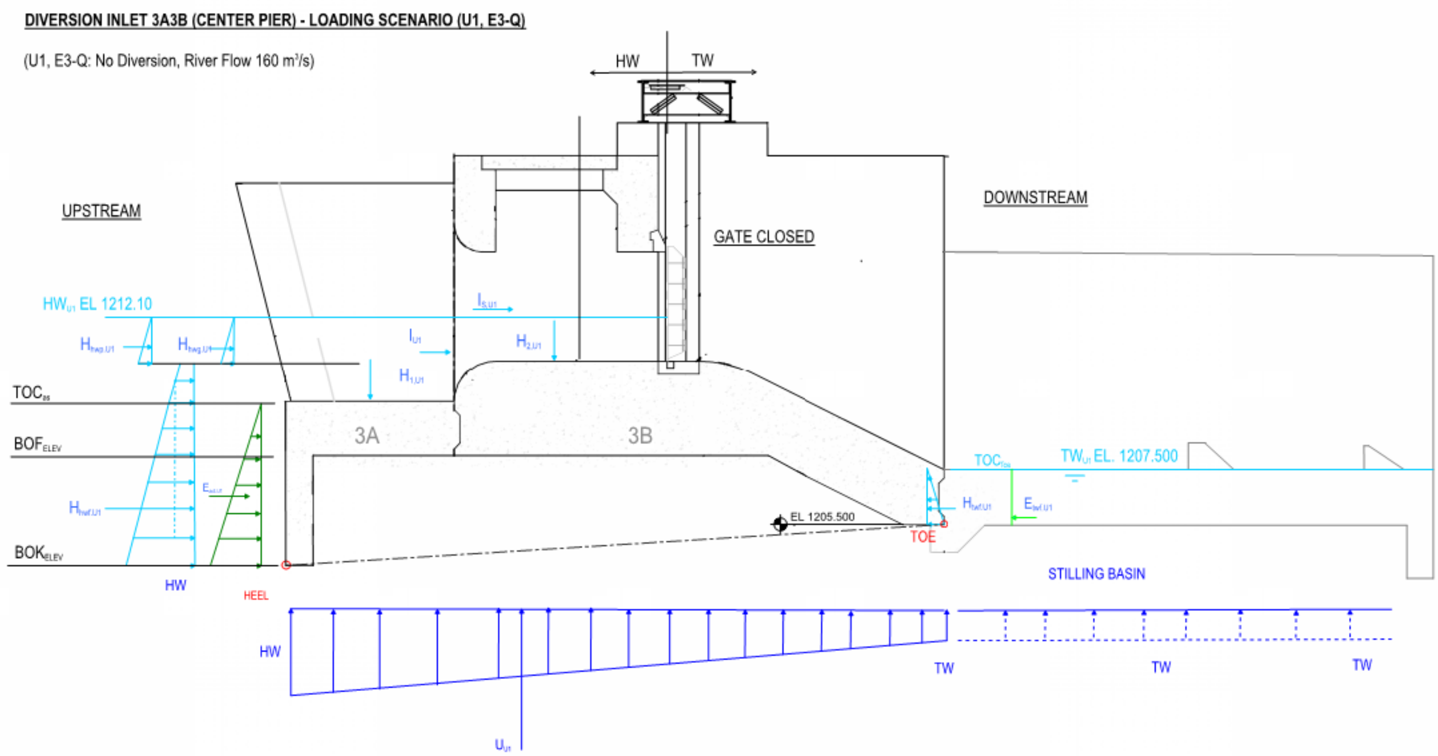
U1 DESIGN CASE



ACCEPTANCE PARAMETERS

Required Factor of Safety for Sliding:	$FS_{req.U1.sl} := 1.5$	(Without Cohesion) (Section 8.1, Design Criteria)
Resultant Within Middle Third of Base:	$e \le \frac{L_b}{6} \wedge e \ge \frac{-L_b}{6}$	(100% Base in Compression, Design Criteria)
Allowable Rock Bearing Pressure:	$\sigma_{allow.U1} := 1270 \cdot \frac{kN}{m^2}$	(Section 5.2, Design Criteria)
Required Factor of Safety for Flotation:	$FS_{req.U.flt} := 1.5$	
Overturning Min Required Resultant Ratio:	$\frac{X_{R.U}}{Horizontal\_Width\_of\_Base} > 0.33$	(100% Base in Compression, EM 1110-2-2502)

INPUT PARAMETERS **U1 CASE**

Headwater Elevation: $HW_{U1} := 1212.10m$

Tailwater Elevation: $TW_{U1} := 1207.50m$

(Water Elevations based on Diversion Structure 2D Hydraulic Model Results. See page 7 and Section 8.2, Design Criteria)

Crest Water Elevation (No Diversion)

Chute Block Water Elevation (No Diversion)

Bottom of Key (Footing Heel) Elevation: $BOF_{elev} = 1204\,m$ <============= *(Critical Design Parameter)*

Apron Slab Top of Concrete Elevation at Edge of Slab: $TOC_{as} = 1210\,m$

Fixed Crest Top of Concrete Elevation at Downstream Face: $TOC_{fce} = 1207.5\,m$

Fixed Crest Top of Concrete Elevation at Center of Footing: $TOC_{fcc} = 1211.5\,m$

Bottom of Footing Elevation @ Toe: $BOF_{toe} = 1205.5\,m$ <============= *(Critical Design Parameter)*
(Point O @ TOE: BOFtoe = EL.1205.5)

VERTICAL LIFT GATE

Lift Gate Position per Hydraulic Criteria $poss_{U1} := 1$

(poss = 1 if gate is closed
0 if gate is open)

(When Gate is Closed, it sits on Sill, tributary weight 4.5m*2/20m = 45% of Unit Assembly ; when Gate is Open, simply supported on Center Pier)

DEAD LOAD SUMMATION:

$$Gate_{R.U1} := \begin{cases} 1 & \text{if } poss_{U1} = 0 \\ 0.45 & \text{otherwise} \end{cases}$$

(Monolith Reaction for Wheel Gate)

$$\Sigma V_{DL.U1} := D_{conc} + Gate_{R.U1}\, D_{Gate} = 52443.8 \cdot kN$$

$$\Sigma M_{DL.U1} := D_{conc} \cdot X_{conc.loc} + Gate_{R.U1} \cdot D_{Gate} \cdot X_{gate} = 651119.6 \cdot kN \cdot m$$

LATERAL WATER LOADS

U1 CASE

HEADWATER (DRIVING):

Water Depth on Pier at Heel: $D_{hwp.U1} := HW_{U1} - TOC_{as} = 2.10\,m$

Water Load Unit Width on Pier: $w_{hwp.U1} := w_{pn} = 4.00\,m$

Total Horizontal Water Load on Pier: $H_{hwp.U1} := \dfrac{-\left(\gamma_w \cdot D_{hwp.U1}{}^2\right)}{2} \cdot w_{hwp.U1} = -86.5 \cdot kN$

Apply Total Pier Water Load at: $H_{hwp.U1.loc} := \dfrac{D_{hwp.U1}}{3} + \left(TOC_{as} - BOF_{toe}\right) = 5.20\,m$

(Point O @ TOE: BOFtoe = EL.1205.5)

Water Depth Above Fixed Crest at Gate: $D_{hwg.U1} := HW_{U1} - TOC_{fcc} = 0.6\,m$

Water Load Unit Width on Gate $w_{hwg.U1} := 2 \cdot \dfrac{20.00}{2}\,m = 20.00\,m$

Apply Load to Gate?: $poss_{U1} = 1$

poss = 1 if gate is closed
0 if gate is open

Total Horizontal Water Load on Gate: $H_{hwg.U1} := \dfrac{-\left(\gamma_w \cdot D_{hwg.U1}{}^2\right)}{2} \cdot w_{hwg.U1} \cdot poss_{U1} = -35.3 \cdot kN$

Apply Total Gate Water Load at: $H_{hwg.U1.loc} := \dfrac{D_{hwg.U1}}{3} + \left(TOC_{fcc} - BOF_{toe}\right) = 6.20\,m$

Water Depth at Heel: $D_{hwf.U1} := HW_{U1} - BOF_{elev} = 8.10\,m$

Water Load Unit With on Footing: $w_{hw.U1} := W_b = 13.00\,m$

Water Load at Bottom of Footing: $H_{hwf.U1.1} := -\left(\gamma_w \cdot D_{hwf.U1}\right) \cdot w_{hw.U1} = -1033\,\dfrac{1}{m} \cdot kN$

Water Load at Top of Footing: $H_{hwf.U1.2} := -\left(\gamma_w \cdot D_{hwg.U1}\right) \cdot w_{hw.U1} = -76.5\,\dfrac{1}{m} \cdot kN$

Total Horizontal Water Load on Footing: $H_{hwf.U1} := \dfrac{\left(H_{hwf.U1.1} + H_{hwf.U1.2}\right) \cdot \left(D_{hwf.U1} - D_{hwg.U1}\right)}{2} = -4160.7 \cdot kN$

Apply Total Footing Water Load at:

$$H_{hwf.U1.loc} := \frac{H_{hwf.U1.2} \cdot \dfrac{\left(TOC_{fcc} - BOF_{elev}\right)^2}{2} + \dfrac{\left(H_{hwf.U1.1} - H_{hwf.U1.2}\right)}{2} \dfrac{\left(TOC_{fcc} - BOF_{elev}\right)^2}{3}}{\dfrac{\left(H_{hwf.U1.2} + H_{hwf.U1.1}\right) \cdot \left(TOC_{fcc} - BOF_{elev}\right)}{2}} - \left(BOF_{toe} - BOF_{elev}\right) = 1.17\,m$$

(Converting horizontal force resultant from HEEL calculation to Point-O@TOE)

LATERAL WATER LOADS (cont.)

U1 CASE

TAILWATER (RESISTING):

Water Depth at toe: $D_{tw.U1} := TW_{U1} - BOF_{elev} = 3.50\,m$

Water Load Unit Width: $W_{twf.U1} := W_b = 13.00\,m$

Total Horizontal Tailwater Load on Footing under Gate Openings, i.e., excluding Pier

Resisting Water on Rear Face of Monolith, i.e., bottom of heel elevation

$COND_{U1} := poss_{U1} = 0 \wedge TW_{U1} \geq TOC_{fcc}$

$$H_{twf.U1} := \begin{cases} \dfrac{\gamma_w \cdot D_{tw.U1}^{\,2}}{2} \cdot \left(W_{twf.U1} - w_{pdg}\right) & \text{if } poss_{U1} = 1 \\ \dfrac{\gamma_w \cdot D_{tw.U1}^{\,2}}{2} \cdot \left(W_{twf.U1} - w_{pdg}\right) & \text{if } poss_{U1} = 0 \wedge TW_{U1} \leq TOC_{fcc} \\ \gamma_w \cdot \left[\dfrac{D_{tw.U1}}{2} + \dfrac{\left(TW_{U1} - TOC_{fcc}\right)}{2}\right] \cdot \left(TOC_{fcc} - BOF_{elev}\right) \cdot \left(W_{twf.U1} - w_{pdg}\right) & \text{if } COND_{U1} \end{cases} = 540.8 \cdot kN$$

Apply Footing Tailwater Load within Gate Openings at:

$$H_{twf.U1.loc} := \begin{cases} \dfrac{D_{tw.U1}}{3} - \left(BOF_{toe} - BOF_{elev}\right) & \text{if } poss_{U1} = 1 \\ \dfrac{D_{tw.U1}}{3} - \left(BOF_{toe} - BOF_{elev}\right) & \text{if } poss_{U1} = 0 \wedge TW_{U1} \leq TOC_{fcc} \\ \dfrac{\left(TOC_{fcc} - BOF_{elev}\right)^2 \cdot \left[\dfrac{\left(TW_{U1} - TOC_{fcc}\right)}{2} + \dfrac{\left(\left(TOC_{fcc} - BOF_{elev}\right)\right)}{6}\right]}{\left(TOC_{fcc} - BOF_{elev}\right)\left[\left(TW_{U1} - TOC_{fcc}\right) + \dfrac{\left(TOC_{fcc} - BOF_{elev}\right)}{2}\right]} - \left(BOF_{toe} - BOF_{elev}\right) & \text{if } COND_{U1} \end{cases} = -0.33 \cdot m$$

Total Horizontal Tailwater Load on Pier:

$$H_{twp.U1} := \frac{\gamma_w \cdot D_{tw.U1}^{\,2}}{2} \cdot w_{pdg} = 240.3 \cdot kN$$

Apply Horizontal Tailwater Load on Pier at:

$$H_{twp.U1.loc} := \frac{D_{tw.U1}}{3} - \left(BOF_{toe} - BOF_{elev}\right) = -0.33 \cdot m$$

MONOLITH OVERTURNING STABILITY ANALYSIS

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stability of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1 $Ratio_{overturning.allow.Usual} := 0.333$

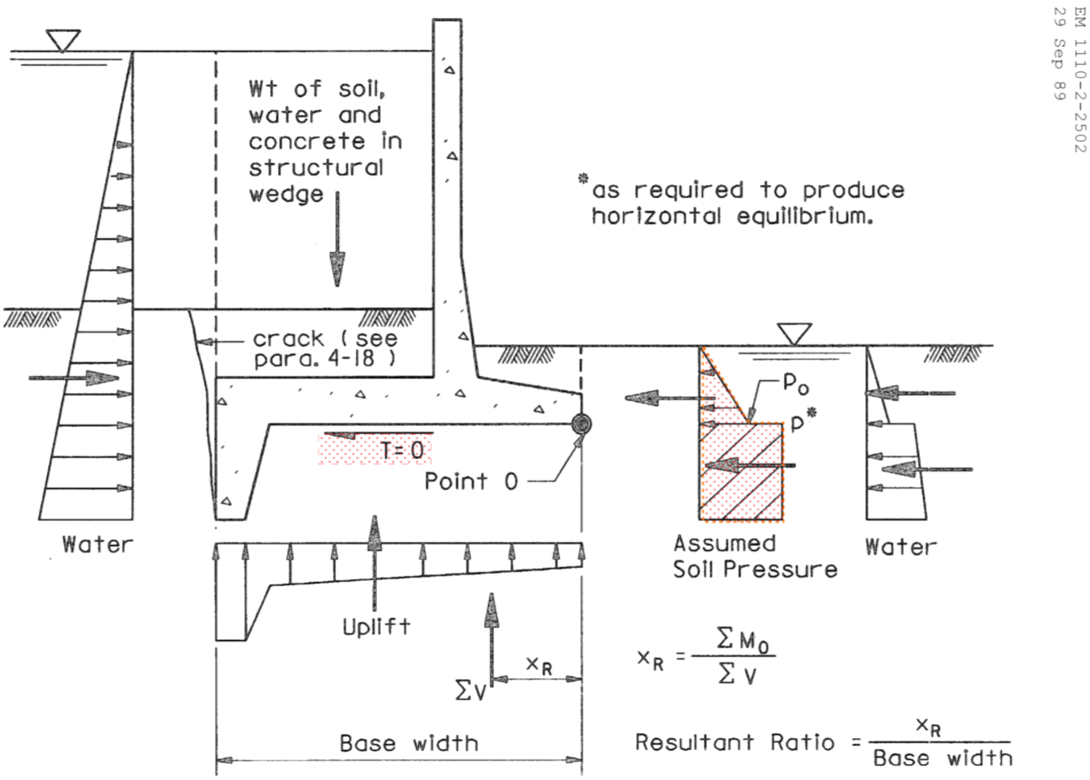

Figure 4-5. Forces for overturning analysis for wall with horizontal base and key

All Vertical Loads Applicable to Overturning Stability Analysis

Total Concrete Dead Loads:	$D_{conc} = 52182.8 \cdot kN$	at:	$X_{conc.loc} = 12.4\,m$
Dead Load of Gate:	$D_{Gate} = 580.0 \cdot kN$		$X_{gate} = 9.75\,m$
Water Weight (HW) on Apron Slab:	$H_{1.U1} = 1238.5 \cdot kN$		$H_{1.U1.loc} = 21.10\,m$
Water Weight (HW) on Fixed Crest:	$H_{2.U1} = 439.7 \cdot kN$		$H_{2.U1.loc} = 14.25\,m$
Water Weight (TW) on Fixed Crest:	$H_{3.U1} = 0.0 \cdot kN$		$H_{3.U1.loc} = 0.00\,m$

Uplift Force from Sliding Analysis. Line of Creep Method applied at presumed inclined sliding line, and subtraction gravity effect to Base of Concrete by Archimedes Principle

$$U_{U1.loc.sliding} := \frac{U_{A.U1} \cdot L_{A.U1} + U_{B.U1} \cdot L_{B.U1} - A_{rs} \cdot w_{as} \cdot \gamma_w \cdot L_{rs}}{U_{A.U1} + U_{B.U1} - A_{rs} \cdot w_{as} \cdot \gamma_w} = 13.76\,m$$

$$U_{U1.sliding} := U_{U1} + A_{rs} \cdot w_{as} \cdot \gamma_w = -12005.7 \cdot kN$$

U1 CASE

Uplift for Overturning Analysis, Line of Creep Method. Pore pressure at base of Concrete $Uplift_{pore.U1} = -11398 \cdot kN$

$$Uplift_{pore.U1.loc} := \frac{\left(Uplift_{BC.U1} \cdot Uplift_{BC.U1.loc} + Uplift_{DE.U1} \cdot Uplift_{DE.U1.loc} + Uplift_{EF.U1} \cdot Uplift_{EF.U1.loc} + Uplift_{FG.U1} \cdot Uplift_{FG.U1.loc}\right)}{Uplift_{pore.U1}}$$

$Uplift_{pore.U1.loc} = 13.1\ m$

Sum of All Water Load for Overturning Analysis

$$\Sigma V_{water.U1.OT} := H_{1.U1} + H_{2.U1} + H_{3.U1} + Uplift_{pore.U1} = -9719.8 \cdot kN$$

All Lateral Loads Applicable to Overturning Stability Analysis

Apply Load to Gate?: $poss_{U1} = 1$ poss = 1 if gate is closed 0 if gate is open

Headwater Lateral Load on Pier: $H_{hwp.U1} = -86.5 \cdot kN$ $H_{hwp.U1.loc} = 5.20\ m$

Headwater Lateral Load on Gate: $H_{hwg.U1} = -35.3 \cdot kN$ $H_{hwg.U1.loc} = 6.20\ m$

Headwater Lateral Load on Footing: $H_{hwf.U1} = -4160.7 \cdot kN$ $H_{hwf.U1.loc} = 1.17\ m$

Total Horizontal Tailwater Load on Pier: $H_{twp.U1} = 240.3 \cdot kN$ $H_{twp.U1.loc} = -0.33\ m$

Total Horizontal Tailwater Load on Footing under Gate Openings, i.e., excluding Pier $H_{twf.U1} = 540.8 \cdot kN$ $H_{twf.U1.loc} = -0.33\ m$

Resisting Water on Rear Face of Monolith, i.e., bottom of heel elevation: *(Point O @ TOE: BOFtoe = EL.1205.5)*

Ice / Impact Load: $I_{U1} = -2100.0 \cdot kN$ at: $I_{U1.loc} = 6.30\ m$

Depth of Fill at Heel Side for Overturning Analysis: $t_{hf.U1} := TOC_{as} - BOF_{toe} = 4.50\ m$

Driving Soil Load for overturning: $$E1_{drive.U1} := \frac{K_o \cdot t_{hf.U1}^{\,2}}{2} \cdot \left(\gamma_r - \gamma_w\right) \cdot W_b \cdot -1 = -1055.7 \cdot kN$$

Acting at: $$E1_{drive.loc.U1} := \frac{t_{hf.U1}}{3} = 1.50\ m$$

Downstream (resisting) Lateral Soil Load as required to produce horizontal equilibrium:

$$E2_{resistU1} := -1 \cdot \left(H_{hwp.U1} + H_{hwg.U1} + H_{hwf.U1} + H_{twp.U1} + H_{twf.U1} + I_{U1} + E1_{drive.U1}\right)$$

$E2_{resistU1} = 6657.1 \cdot kN$

Assumed Resisting Bedrock at middle of Key, passive soil pressure or lateral bearing contract joint at end of Monolith 3A3B $$E2_{resistlocU1} := \frac{-\left(BOF_{toe} - BOF_{elev}\right)}{2} = -0.75\ m$$

Overturning moment by Dead Loads about Point O @ Toe $\Sigma M_{DL.U1} = 651119.6 \cdot kN \cdot m$

Overturning moment by Vertical Water Loads and Uplift, about Point O @ Toe

$$\Sigma M_{Vwater.U1.OT} := H_{1.U1} \cdot H_{1.U1.loc} + H_{2.U1} \cdot H_{2.U1.loc} + H_{3.U1} \cdot H_{3.U1.loc} + Uplift_{pore.U1} \cdot Uplift_{pore.U1.loc} = -117014.3 \cdot kN \cdot m$$

U1 CASE

Overturning moment by Lateral Hydrostatic Forces of Headwater Pool and Tailwater Pool, about Point O @ Toe

$\Sigma M_{HWater.U1} = -5807.3 \cdot kN \cdot m$

Overturning Moment by Impact/Ice Load, about Point O@ Toe

$\Sigma M_{I.U1} = -13230 \cdot kN \cdot m$

Overturning moment by Lateral Soil Forces about Point O @ Toe

$\Sigma M_{soil.U1} := E1_{drive.U1} \cdot E1_{drive.loc.U1} + E2_{resistU1} \cdot E2_{resistlocU1} = -6576.4 \cdot kN \cdot m$

Sum of the Overturning Moments about Point O @ Toe:

$\Sigma M_{U1.OT} := \Sigma M_{DL.U1} + \Sigma M_{HWater.U1} + \Sigma M_{Vwater.U1.OT} + \Sigma M_{I.U1} + \Sigma M_{soil.U1} = 508492 \cdot kN \cdot m$

Sum of Vertical Forces:

$\Sigma V_{U1.OT} := \Sigma V_{DL.U1} + \Sigma V_{water.U1.OT} = 42724.0 \cdot kN$

Distance X_R: EM 1110-2-2502 Eq.4-1

$$X_{R.U1} := \frac{\Sigma M_{U1.OT}}{\Sigma V_{U1.OT}} = 11.9\,m$$

Overturning Resultant Ratio

$$Ratio_{Overturning.U1} := \frac{X_{R.U1}}{L_b} = 0.49$$

EM 1110-2-2502

MONOLITH OVERTURNING STABILITY ANALYSIS

U2 CASE

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stability of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1 $Ratio_{overturning.allow.Usual} = 0.33$

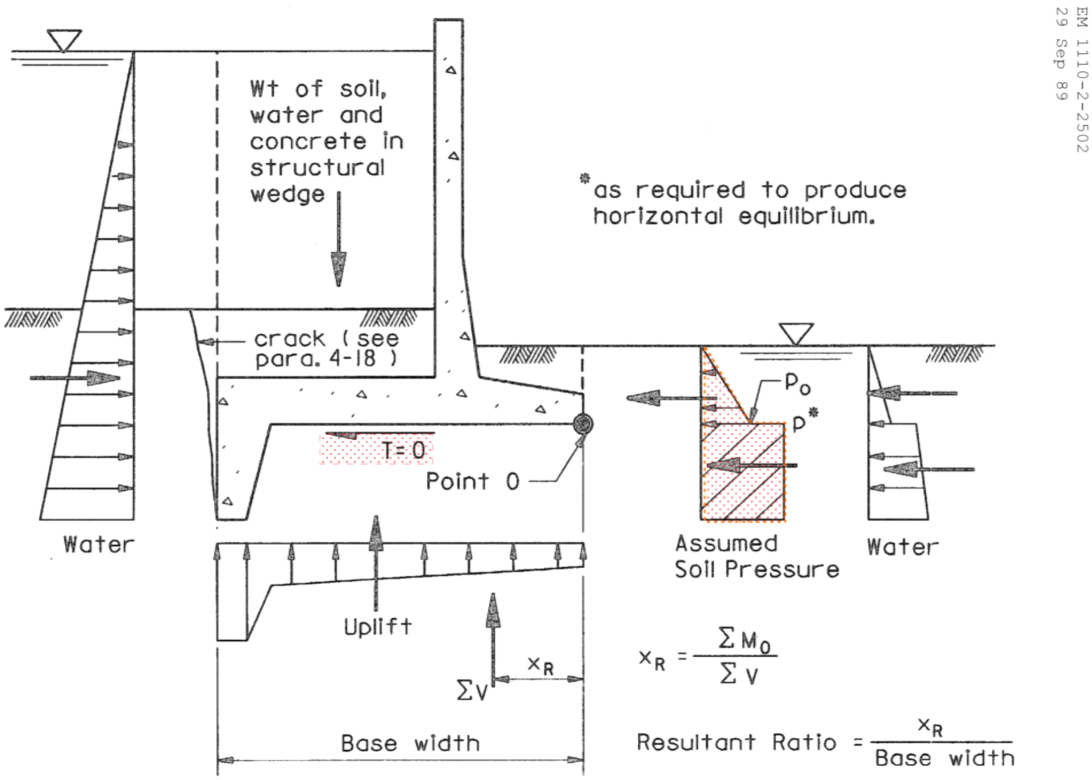

Figure 4-5. Forces for overturning analysis for wall with horizontal base and key

All Vertical Loads Applicable to Overturning Stability Analysis

Total Concrete Dead Loads:	$D_{conc} = 52182.8 \cdot kN$	at:	$X_{conc.loc} = 12.4\,m$
Dead Load of Gate:	$D_{Gate} = 580.0 \cdot kN$		$X_{gate} = 9.75\,m$
Water Weight (HW) on Apron Slab:	$H_{1.U2} = 3320.9 \cdot kN$		$H_{1.U2.loc} = 21.10\,m$
Water Weight (HW) on Fixed Crest:	$H_{2.U2} = 2569.2 \cdot kN$		$H_{2.U2.loc} = 14.41\,m$
Water Weight (TW) on Fixed Crest:	$H_{3.U2} = 2106.6 \cdot kN$		$H_{3.U2.loc} = 5.78\,m$

Uplift Force from Sliding Analysis. Line of Creep Method applied at presumed inclined sliding line, and subtraction gravity effect to Base of Concrete by Archimedes Principle

$$U_{U2.loc.sliding} := \frac{U_{A.U2} \cdot L_{A.U2} + U_{B.U2} \cdot L_{B.U2} - A_{rs} \cdot w_{as} \cdot \gamma_w \cdot L_{rs}}{U_{A.U2} + U_{B.U2} - A_{rs} \cdot w_{as} \cdot \gamma_w} = 13.84\,m$$

$$U_{U2.sliding} := U_{U2} + A_{rs} \cdot w_{as} \cdot \gamma_w = -19705.8 \cdot kN$$

Uplift for Overturning Analysis, Line of Creep Method. Pore pressure at base of Concrete

$Uplift_{pore.U2} = -18673.3 \cdot kN$

$$Uplift_{pore.U2.loc} := \frac{\left(Uplift_{BC.U2} \cdot Uplift_{BC.U2.loc} + Uplift_{DE.U2} \cdot Uplift_{DE.U2.loc} + Uplift_{EF.U2} \cdot Uplift_{EF.U2.loc} + Uplift_{FG.U2} \cdot Uplift_{FG.U2.loc}\right)}{Uplift_{pore.U2}}$$

$Uplift_{pore.U2.loc} = 13.3\,m$

Sum of All Water Load for Overturning Analysis

$\Sigma V_{water.U2.OT} := H_{1.U2} + H_{2.U2} + H_{3.U2} + Uplift_{pore.U2} = -10676.6 \cdot kN$

All Lateral Loads Applicable to Overturning Stability Analysis

Apply Load to Gate?:	$poss_{U2} = 0$	poss = 1 if gate is closed 0 if gate is open
Headwater Lateral Load on Pier:	$H_{hwp.U2} = -662.3 \cdot kN$	$H_{hwp.U2.loc} = 6.44\,m$
Headwater Lateral Load on Gate:	$H_{hwg.U2} = 0.0 \cdot kN$	$H_{hwg.U2.loc} = 7.44\,m$
Headwater Lateral Load on Footing:	$H_{hwf.U2} = -7709.2 \cdot kN$	$H_{hwf.U2.loc} = 1.67\,m$
Total Horizontal Tailwater Load on Pier:	$H_{twp.U2} = 448.3 \cdot kN$	$H_{twp.U2.loc} = 0.09\,m$
Total Horizontal Tailwater Load on Footing under Gate Openings, i.e., excluding Pier	$H_{twf.U2} = 1008.6 \cdot kN$	$H_{twf.U2.loc} = 0.09\,m$

Resisting Water on Rear Face of Monolith, i.e., bottom of heel elevation:

(Point O @ TOE: BOFtoe = EL.1205.5)

Ice / Impact Load: $I_{U2} = -2100.0 \cdot kN$ at: $I_{U2.loc} = 10.01\,m$

Depth of Fill at Heel Side for Overturning Analysis:

$t_{hf.U2} := TOC_{as} - BOF_{toe} = 4.50\,m$

Driving Soil Load for overturning:

$$E1_{drive.U2} := \frac{K_o \cdot t_{hf.U2}^{\,2}}{2} \cdot \left(\gamma_r - \gamma_w\right) \cdot W_b \cdot -1 = -1055.7 \cdot kN$$

Acting at:

$$E1_{drive.loc.U2} := \frac{t_{hf.U2}}{3} = 1.50\,m$$

Downstream (resisting) Lateral Soil Load as required to produce horizontal equilibrium:

$$E2_{resistU2} := -1 \cdot \left(H_{hwp.U2} + H_{hwg.U2} + H_{hwf.U2} + H_{twp.U2} + H_{twf.U2} + I_{U2} + E1_{drive.U2}\right)$$

$E2_{resistU2} = 10070.3 \cdot kN$

Assumed Resisting Bedrock at middle of Key, passive soil pressure or lateral bearing contract joint at end of Monolith 3A3B

$E2_{resistlocU2} := E2_{resistlocU1} = -0.75\,m$

Overturning moment by Dead Loads about Point O @ Toe

$\Sigma M_{DL.U2} = 654229.9 \cdot kN \cdot m$

Overturning moment by Vertical Water Loads and Uplift, about Point O @ Toe

$$\Sigma M_{Vwater.U2.OT} := H_{1.U2} \cdot H_{1.U2.loc} + H_{2.U2} \cdot H_{2.U2.loc} + H_{3.U2} \cdot H_{3.U2.loc} + Uplift_{pore.U2} \cdot Uplift_{pore.U2.loc} = -129095.9 \cdot kN \cdot m$$

U2 CASE

Downstream (resisting) Lateral Soil Load:	$E2_{resistUN1} = 0 \cdot kN$	$E2_{resistlocUN1} = 0.67\,m$
Ice / Impact Load:	$I_{UN1} = -2100.0 \cdot kN$	$I_{UN1.loc} = 10.00\,m$

STABILITY ASSESSMENT (SLIDNG, OVERTURNING AND BEARING):

UN1 CASE

CHECK SLIDING ALONG HORIZONTAL PLANE THRU TOE,
IGNORING BEDROCK MOBILIZED BY STRUCTURAL HEEL KEY, OR VOID BEHIND KEY

Sum of Vertical Forces:

$\Sigma V_{UN1} := \Sigma V_{DL.UN1} + \Sigma V_{water.UN1} = 35169.3 \cdot kN$

Sum of Horizontal Forces:

$\Sigma H_{UN1} := \Sigma H_{Water.UN1} + \Sigma H_{soil.UN1} + \Sigma H_{I.UN1} = -10879.6 \cdot kN$

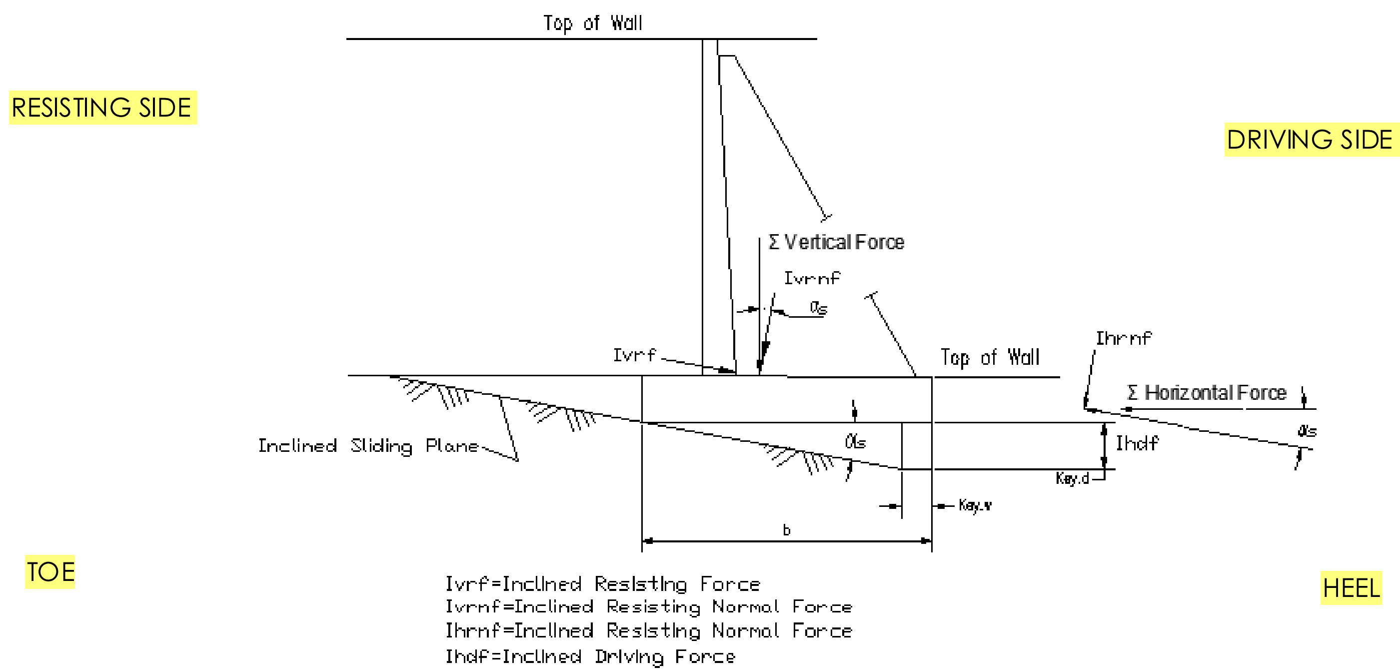
Sliding Factor of Safety:

$$FS_{HorizSliding.UN1} := \frac{\tan_{\phi} \cdot \Sigma V_{UN1}}{\left|\Sigma H_{UN1}\right|} = 1.58$$

$$FS_{HorizSliding.UN1.Check} := \begin{cases} \text{"OKAY"} & \text{if } FS_{HorizSliding.UN1} \geq FS_{req.UN1.sl} \\ \text{"Horizontal Sliding (No Key or Void Behind Key) Fail ! Revise Structure !"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

$FS_{HorizSliding.UN1.Check} = \text{"OKAY"}$

CHECK SLIDING ALONG INCLINED SLIDING PLANE FROM HEEL KEY TO TOE,
WITH BEDROCK MASS MOBILIZED BY REINFOCREDE CONCRETE KEY)



$$\alpha s := \operatorname{atan}\left(\frac{BOF_{toe} - BOF_{elev}}{L_b - Key_l}\right) = 0.13$$

as degrees= $\alpha s \cdot \left(\frac{180}{\pi}\right) = 7.63$

Resolve $\Sigma Vert_{UN1}$ & $\Sigma Horiz_{UN1}$

$$\Sigma V_{InclinedUN1} := \cos(\alpha s) \cdot \left(\Sigma V_{UN1} + V_{rs}\right) + \sin(\alpha s) \cdot \left|\Sigma H_{UN1}\right| = 49404.2 \cdot kN$$

$$\Sigma H_{InclinedUN1} := \cos(\alpha s) \cdot \left|\Sigma H_{UN1}\right| - \sin(\alpha s) \cdot \left(\Sigma V_{UN1} + V_{rs}\right) = 4360.1 \cdot kN$$

(With properly engineered reinforced concrete Key, horizontal sliding plane thru Toe is protected, critical sliding plane is relocated to the INCLINED SLIDING PLANE FROM HEEL KEY To TOE, Bedrock Mass above this examing plane is mobilized by reinforced concrete key and combined into Structural Wedge.)

Inclined Sliding Plane Length $L_{incline} = 24.2\,m$

Safety Factor for Sliding
Inclined Failure Plane

$$FS_{InclinedISlidingUN1} := \frac{\Sigma V_{InclinedUN1} \cdot \tan\left(\phi_{rock} \cdot \frac{\pi}{180}\right)}{\left|\Sigma H_{InclinedUN1}\right|} = 5.53$$

$$FS_{InclinedSliding.UN1.check} := \begin{cases} \text{"OKAY "} & \text{if } FS_{InclinedISlidingUN1} > FS_{req.U1.sl} \\ \text{"Revise Structure""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

$FS_{InclinedSliding.UN1.check} = \text{"OKAY "}$

CHECK ECCENTRICITY ON INCLINED PLANE

UN1 CASE

Sum of the Moments:

$$\Sigma M_{rs.UN1} := \Sigma M_{DL.UN1} + \Sigma M_{HWater.UN1} + \Sigma M_{Vwater.UN1} + \Sigma M_{I.UN1} + \Sigma M_{soil.UN1} + V_{rs} \cdot L_{rs} = 565769 \cdot kN \cdot m$$

Eccentricity:

$$e_{UN1} := \frac{L_{incline}}{2} - \frac{\Sigma M_{rs.UN1}}{\Sigma V_{InclinedUN1}} = 0.67\,m$$

Eccentricity Check:

$$e_{check.UN1} := \begin{cases} \text{"Okay"} & \text{if } |e_{UN1}| \le Kern \\ \text{"Revise Structure"} & \text{otherwise} \end{cases}$$

$e_{check.UN1} = \text{"Okay"}$

Foundation Bearing Pressures on Inclined Plane:

Bearing Pressure at Heel:

$$\sigma_{heel.UN1} := \frac{\Sigma V_{InclinedUN1}}{\frac{A_b}{\cos(\alpha s)}} - \frac{\Sigma V_{InclinedUN1} \cdot e_{UN1}}{\frac{S_b}{\cos(\alpha s)^2}} = 130 \cdot \frac{kN}{m^2}$$

$$\sigma_{heel.UN1.check} := \left(\begin{cases} \text{"Okay"} & \text{if } \sigma_{heel.UN1} \le \sigma_{allow.UN1} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} \right)$$

$\sigma_{heel.UN1.check} = \text{"Okay"}$

Bearing Pressure at Toe:

$$\sigma_{toe.UN1} := \frac{\Sigma V_{InclinedUN1}}{\frac{A_b}{\cos(\alpha s)}} + \frac{\Sigma V_{InclinedUN1} \cdot e_{UN1}}{\frac{S_b}{\cos(\alpha s)^2}} = 181.3 \cdot \frac{kN}{m^2}$$

$$\sigma_{toe.UN1.check} := \begin{cases} \text{"Okay"} & \text{if } \sigma_{toe.UN1} \le \sigma_{allow.UN1} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases}$$

$\sigma_{toe.UN1.check} = \text{"Okay"}$

CHECK FLOTATION

$Uplift_{sliding.UN1} := U_{UN1} = -25584.8 \cdot kN$

$Uplift_{pore.UN1} = -18659.5 \cdot kN$

(For conservative, taking maximum values)

$$\left(Uplift_{UN1}\right) := \min\left(Uplift_{pore.UN1}, Uplift_{sliding.UN1}\right)$$

$$FS_{Flotation.UN1} := \frac{D_{conc} + D_{Gate} + H_{1.UN1} + H_{2.UN1} + H_{3.UN1}}{|Uplift_{UN1}|} = 2.4$$

MONOLITH OVERTURNING STABILITY ANALYSIS

UN1 CASE

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stability of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1 $Ratio_{overturning.allow.Unusual} := 0.333$

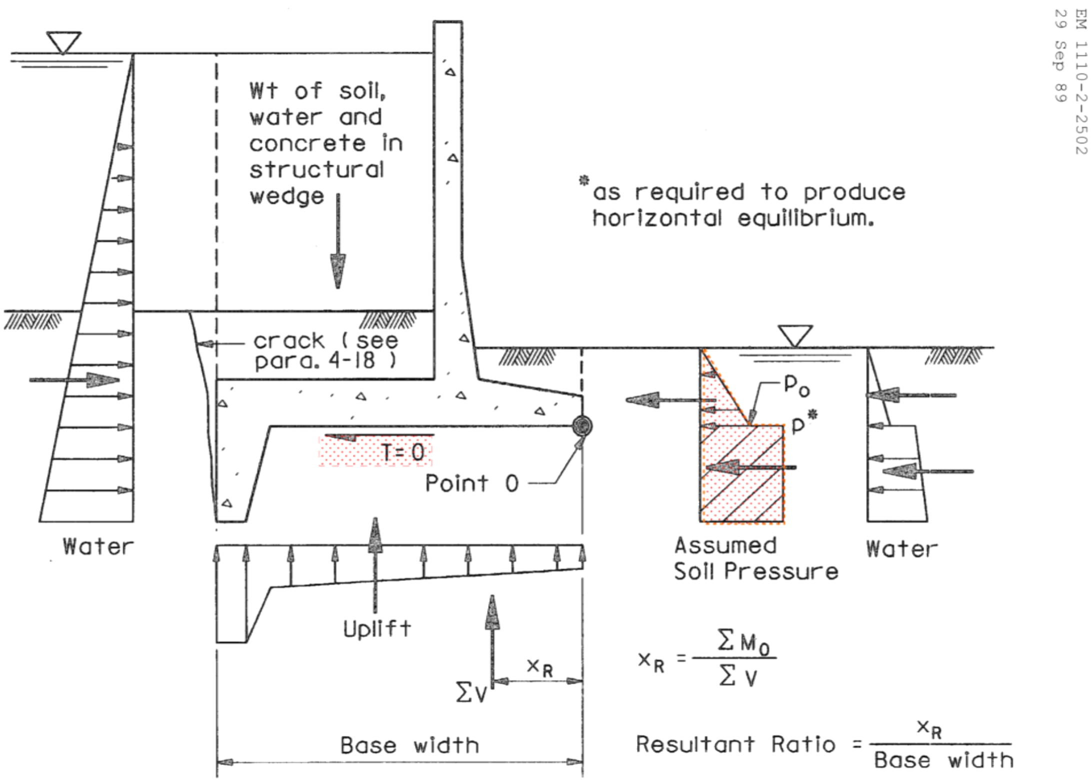

Figure 4-5. Forces for overturning analysis for wall with horizontal base and key

<u>All Vertical Loads Applicable to Overturning Stability Analysis</u>

Total Concrete Dead Loads:	$D_{conc} = 52182.8 \cdot kN$	at:	$X_{conc.loc} = 12.4\,m$
Dead Load of Gate:	$D_{Gate} = 580.0 \cdot kN$		$X_{gate} = 9.75\,m$
Water Weight (HW) on Apron Slab:	$H_{1.UN1} = 3315.4 \cdot kN$		$H_{1.UN1.loc} = 21.10\,m$
Water Weight (HW) on Fixed Crest:	$H_{2.UN1} = 2569.2 \cdot kN$		$H_{2.UN1.loc} = 14.41\,m$
Water Weight (TW) on Fixed Crest:	$H_{3.UN1} = 2106.6 \cdot kN$		$H_{3.UN1.loc} = 5.78\,m$

Uplift Force from Sliding Analysis. Line of Creep Method applied at presumed inclined sliding line, and subtraction gravity effect to Base of Concrete by Archimedes Principle

$$U_{UN1.loc.sliding} := \frac{U_{A.UN1} \cdot L_{A.UN1} + U_{B.UN1} \cdot L_{B.UN1} - A_{rs} \cdot w_{as} \cdot \gamma_w \cdot L_{rs}}{U_{A.UN1} + U_{B.UN1} - A_{rs} \cdot w_{as} \cdot \gamma_w} = 13.84\,m$$

$$U_{UN1.sliding} := U_{UN1} + A_{rs} \cdot w_{as} \cdot \gamma_w = -19690.4 \cdot kN$$

UN1 CASE

Uplift for Overturning Analysis, Line of Creep Method. Pore pressure at base of Concrete

$Uplift_{pore.UN1} = -18659.5 \cdot kN$

$$Uplift_{pore.UN1.loc} := \frac{Uplift_{BC.UN1} \cdot Uplift_{BC.UN1.loc} + Uplift_{DE.UN1} \cdot Uplift_{DE.UN1.loc} + Uplift_{EF.UN1} \cdot Uplift_{EF.UN1.loc} + Uplift_{FG.UN1} \cdot Uplift_{FG.UN1.loc}}{Uplift_{pore.U2}}$$

$Uplift_{pore.UN1.loc} = 13.3\,m$

Sum of All Water Load for Overturning Analysis

$\Sigma V_{water.UN1.OT} := H_{1.UN1} + H_{2.UN1} + H_{3.UN1} + Uplift_{pore.UN1} = -10668.2 \cdot kN$

All Lateral Loads Applicable to Overturning Stability Analysis

Apply Load to Gate?: $poss_{UN1} = 0$ — poss = 1 if gate is closed, 0 if gate is open

Headwater Lateral Load on Pier: $H_{hwp.UN1} = -660.0 \cdot kN$ $H_{hwp.UN1.loc} = 6.43\,m$

Headwater Lateral Load on Gate: $H_{hwg.UN1} = 0.0 \cdot kN$ $H_{hwg.UN1.loc} = 7.43\,m$

Headwater Lateral Load on Footing: $H_{hwf.UN1} = -7699.6 \cdot kN$ $H_{hwf.UN1.loc} = 1.67\,m$

Total Horizontal Tailwater Load on Pier: $H_{twp.UN1} = 448.3 \cdot kN$ $H_{twp.UN1.loc} = 0.09\,m$

Total Horizontal Tailwater Load on Footing under Gate Openings, i.e., excluding Pier: $H_{twf.UN1} = 1008.6 \cdot kN$ $H_{twf.UN1.loc} = 0.09\,m$

Resisting Water on Rear Face of Monolith, i.e., bottom of heel elevation: *(Point O @ TOE: BOFtoe = EL.1205.5)*

Ice / Impact Load: $I_{UN1} = -2100.0 \cdot kN$ at: $I_{UN1.loc} = 10.00\,m$

Depth of Fill at Heel Side for Overturning Analysis: $t_{hf.UN1} := TOC_{as} - BOF_{toe} = 4.50\,m$

Driving Soil Load for overturning: $E1_{drive.UN1} := \frac{K_o \cdot t_{hf.UN1}^2}{2} \cdot (\gamma_r - \gamma_w) \cdot W_b \cdot -1 = -1055.7 \cdot kN$

Acting at: $E1_{drive.loc.UN1} := \frac{t_{hf.UN1}}{3} = 1.50\,m$

Downstream (resisting) Lateral Soil Load as required to produce horizontal equilibrium:

$E2_{resistUN1} := -1 \cdot (H_{hwp.UN1} + H_{hwg.UN1} + H_{hwf.UN1} + H_{twp.UN1} + H_{twf.UN1} + I_{UN1} + E1_{drive.UN1})$

$E2_{resistUN1} = 10058.4 \cdot kN$

Assumed Resisting Bedrock at middle of Key, passive soil pressure or lateral bearing contract joint at end of Monolith 3A3B: $E2_{resistlocUN1} := E2_{resistlocU1} = 0.67\,m$

Overturning moment by Dead Loads about Point O @ Toe: $\Sigma M_{DL.UN1} = 654229.9 \cdot kN \cdot m$

Overturning moment by Vertical Water Loads and Uplift, about Point O @ Toe

$$\Sigma M_{Vwater.UN1.OT} := H_{1.UN1} \cdot H_{1.UN1.loc} + H_{2.UN1} \cdot H_{2.UN1.loc} + H_{3.UN1} \cdot H_{3.UN1.loc} + Uplift_{pore.UN1} \cdot Uplift_{pore.UN1.loc} = -128810.2 \cdot kN \cdot m$$

UN1 CASE

Overturning moment by Lateral Hydrostatic Forces of Headwater Pool and Tailwater Pool,about Point O @ Toe

$\Sigma M_{HWater.UN1} = -16950.8 \cdot kN \cdot m$

Overturning Moment by Impact/Ice Load, about Point O@ Toe

$\Sigma M_{I.UN1} = -21000 \cdot kN \cdot m$

Overturning moment by Lateral Soil Forces about Point O @ Toe

$\Sigma M_{soil.UN1} := E1_{drive.UN1} \cdot E1_{drive.loc.UN1} + E2_{resistUN1} \cdot E2_{resistlocUN1} = 5122 \cdot kN \cdot m$

Sum of the Overturning Moments about Point O @ Toe:

$$\Sigma M_{UN1.OT} := \Sigma M_{DL.UN1} + \Sigma M_{HWater.UN1} + \Sigma M_{Vwater.UN1.OT} + \Sigma M_{I.UN1} + \Sigma M_{soil.UN1} = 492591 \cdot kN \cdot m$$

Sum of Vertical Forces: $\Sigma V_{UN1.OT} := \Sigma V_{DL.UN1} + \Sigma V_{water.UN1.OT} = 42094.6 \cdot kN$

Distance X_R: EM 1110-2-2502 Eq.4-1 $X_{R.UN1} := \dfrac{\Sigma M_{UN1.OT}}{\Sigma V_{UN1.OT}} = 11.7\,m$

Overturning Resultant Ratio $Ratio_{Overturning.UN1} := \dfrac{X_{R.UN1}}{L_b} = 0.48$

EM 1110-2-2502

Table 4-1

Retaining Wall Stability Criteria

Loading Condition	Sliding Factor of Safety, FS	Shear Strength Test Required: Soil Foundation	Shear Strength Test Required: Rock Foundation[3]	Overturning Criteria Minimum Base Area in Compression: Soil Foundation	Overturning Criteria Minimum Base Area in Compression: Rock Foundation
Usual	1.5	(Q &/or S)[2,1]	Direct shear	100%[4]	75%[4]
Unusual	1.33	(Q &/or S)[2,1]	Direct shear	75%[4]	50%[4]
Earthquake	1.1	(Q)	Direct shear	Resultant within base	Resultant within base

Overturning Stability Check

$$Ratio_{Overturning.UN1.check} := \begin{cases} \text{"Okay"} & \text{if } Ratio_{Overturning.UN1} \ge Ratio_{overturning.allow.Unusual} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases}$$

$Ratio_{Overturning.UN1.check} = \text{"Okay"}$

Summary of Extreme Flood Results (Only Report Controlling Load Case)

UN1 CASE

UN1 Event: Diversion Operation, 2013 Flood

Horiz Sliding Factor of Safety:	$FS_{HorizSliding.UN1} = 1.58$
Horiz Sliding Factor of Safety Check:	$FS_{HorizSliding.UN1.Check}$ = "OKAY"

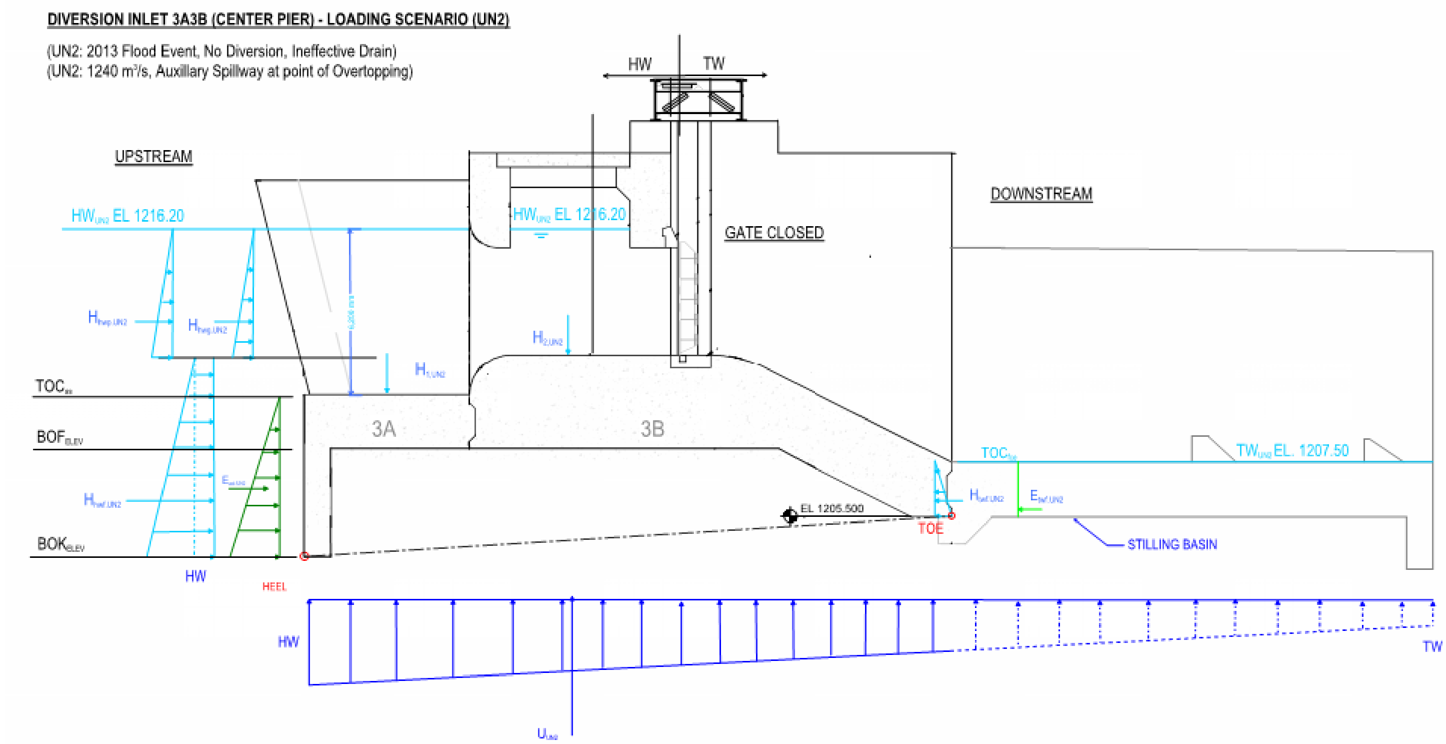
UN2 DESIGN CASE



ACCEPTANCE PARAMETERS

Required Factor of Safety for Sliding: $FS_{req.UN2.sl} := 1.3$ (Without Cohesion) (Section 8.1, Design Criteria)

Resultant Within Middle Third of Base: $e \le \frac{L_b}{6} \wedge e \ge \frac{-L_b}{6}$

Allowable Rock Bearing Pressure: $\sigma_{allow.UN2} := 1470 \cdot \frac{kN}{m^2}$ (Section 5.2, Design Criteria)

Required Factor of Safety for Flotation: $FS_{req.UN.flt} = 1.3$

Overturning Min Required Resultant Ratio: $\frac{X_{R.UN}}{Horizontal\_Width\_of\_Base} > 0.33$

UN2 CASE

INPUT PARAMETERS

Headwater Elevation: $HW_{UN2} := 1216.20m$

Tailwater Elevation: $TW_{UN2} := 1207.50m$

(Water Elevations based on Diversion Structure 2D Hydraulic Model Results. See page 7 and Section 8.2, Design Criteria)

Crest Water Elevation (No Diversion)

Chute Block Water Elevation (No Diversion)

Bottom of Key (Footing Heel) Elevation: $BOF_{elev} = 1204.00\, m$

Apron Slab Top of Concrete Elevation at Edge of Slab: $TOC_{as} = 1210.00\, m$

Fixed Crest Top of Concrete Elevation at Downstream Face: $TOC_{fce} = 1207.50\, m$

Fixed Crest Top of Concrete Elevation at Center of Footing: $TOC_{fcc} = 1211.50\, m$

VERTICAL LIFT GATE

Lift Gate Position per Hydraulic Criteria: $poss_{UN2} := 1$

poss = 1 if gate is closed
0 if gate is open

DEAD LOAD SUMMATION:

$$Gate_{R.UN2} := \begin{cases} 1 & \text{if } poss_{UN2} = 0 \\ 0.45 & \text{otherwise} \end{cases}$$

Monolith Reaction for Wheel Gate

$$\Sigma V_{DL.UN2} := D_{conc} + Gate_{R.UN2} D_{Gate} = 52443.8 \cdot kN$$

$$\Sigma M_{DL.UN2} := D_{conc} \cdot X_{conc.loc} + Gate_{R.UN2} \cdot D_{Gate} \cdot X_{gate} = 651119.6 \cdot kN \cdot m$$

LATERAL WATER LOADS

UN2 CASE

HEADWATER (DRIVING):

Water Depth on Pier at Heel: $D_{hwp.UN2} := HW_{UN2} - TOC_{as} = 6.20\,m$

Water Load Unit Width on Pier: $W_{hwp.UN2} := w_{pn} = 4.00\,m$

Total Horizontal Water Load on Pier: $H_{hwp.UN2} := \frac{-\left(\gamma_w \cdot D_{hwp.UN2}{}^2\right)}{2} \cdot W_{hwp.UN2} = -754.2 \cdot kN$

Apply Total Pier Water Load at: $H_{hwp.UN2.loc} := \frac{D_{hwp.UN2}}{3} + \left(TOC_{as} - BOF_{toe}\right) = 6.57\,m$

Point O @ TOE: BOFtoe = EL.1205.5

Water Depth Above Fixed Crest at Gate: $D_{hwg.UN2} := HW_{UN2} - TOC_{fcc} = 4.7\,m$

Water Load Unit Width on Gate $W_{hwg.UN2} := 2 \cdot \frac{20.00}{2} m = 20.00\,m$

Apply Load to Gate?: $poss_{UN2} = 1$

poss = 1 if gate is closed
0 if gate is open

Total Horizontal Water Load on Gate: $H_{hwg.UN2} := \frac{-\left(\gamma_w \cdot D_{hwg.UN2}{}^2\right)}{2} \cdot W_{hwg.UN2} \cdot poss_{UN2} = -2167 \cdot kN$

Apply Total Gate Water Load at: $H_{hwg.UN2.loc} := \frac{D_{hwg.UN2}}{3} + \left(TOC_{fcc} - BOF_{toe}\right) = 7.57\,m$

Water Depth at Heel: $D_{hwf.UN2} := HW_{UN2} - BOF_{elev} = 12.20\,m$

Water Load Unit With on Footing: $W_{hw.UN2} := W_b$

Water Load at Bottom of Footing: $H_{hwf.UN2.1} := -\left(\gamma_w \cdot D_{hwf.UN2}\right) \cdot W_{hw.UN2} = -1555.9 \frac{1}{m} \cdot kN$

Water Load at Top of Footing: $H_{hwf.UN2.2} := -\left(\gamma_w \cdot D_{hwg.UN2}\right) \cdot W_{hw.UN2} = -599.4 \frac{1}{m} \cdot kN$

Total Horizontal Water Load on Footing: $H_{hwf.UN2} := \frac{\left(H_{hwf.UN2.1} + H_{hwf.UN2.2}\right) \cdot \left(D_{hwf.UN2} - D_{hwg.UN2}\right)}{2} = -8082.2 \cdot kN$

Apply Total Footing Water Load at:

$$H_{hwf.UN2.loc} := \frac{\left[H_{hwf.UN2.2} \cdot \frac{\left(TOC_{fcc} - BOF_{elev}\right)^2}{2} + \frac{\left(H_{hwf.UN2.1} - H_{hwf.UN2.2}\right)}{2} \frac{\left(TOC_{fcc} - BOF_{elev}\right)^2}{3}\right]}{\left[\frac{\left(H_{hwf.UN2.2} + H_{hwf.UN2.1}\right) \cdot \left(TOC_{fcc} - BOF_{elev}\right)}{2}\right]} - \left(BOF_{toe} - BOF_{elev}\right) = 1.70\,m$$

(Converting horizontal force resultant from HEEL calculation to Point-O@TOE)

LATERAL WATER LOADS (cont.)

TAILWATER (RESISTING):

Water Depth at toe: $D_{tw.UN2} := TW_{UN2} - BOF_{elev} = 3.50\,m$

Water Load Unit Width: $W_{twf.UN2} := W_b$

Total Horizontal Tailwater Load on Footing under Gate Openings, i.e., excluding Pier

Resisting Water on Rear Face of Monolith, i.e., bottom of heel elevation

$COND_{UN2} := poss_{UN2} = 0 \wedge TW_{UN2} \geq TOC_{fcc}$

$$H_{twf.UN2} := \begin{cases} \dfrac{\gamma_w \cdot D_{tw.UN2}^{\,2}}{2} \cdot \left(W_{twf.UN2} - w_{pdg}\right) & \text{if } poss_{UN2} = 1 \\ \dfrac{\gamma_w \cdot D_{tw.UN2}^{\,2}}{2} \cdot \left(W_{twf.UN2} - w_{pdg}\right) & \text{if } poss_{UN2} = 0 \wedge TW_{UN2} \leq TOC_{fcc} \\ \gamma_w \cdot \left[\dfrac{D_{tw.UN2}}{2} + \dfrac{\left(TW_{UN2} - TOC_{fcc}\right)}{2}\right] \cdot \left(TOC_{fcc} - BOF_{elev}\right) \cdot \left(W_{twf.UN2} - w_{pdg}\right) & \text{if } COND_{UN2} \end{cases} = 540.8 \cdot kN$$

Apply Footing Tailwater Load within Gate Openings at:

$$H_{twf.UN2.loc} := \begin{cases} \dfrac{D_{tw.UN2}}{3} - \left(BOF_{toe} - BOF_{elev}\right) & \text{if } poss_{UN2} = 1 \\ \dfrac{D_{tw.UN2}}{3} - \left(BOF_{toe} - BOF_{elev}\right) & \text{if } poss_{UN2} = 0 \wedge TW_{UN2} \leq TOC_{fcc} \\ \dfrac{\left(TOC_{fcc} - BOF_{elev}\right)^2 \cdot \left[\dfrac{\left(TW_{UN2} - TOC_{fcc}\right)}{2} + \dfrac{\left(TOC_{fcc} - BOF_{elev}\right)}{6}\right]}{\left(TOC_{fcc} - BOF_{elev}\right)\left[\left(TW_{UN2} - TOC_{fcc}\right) + \dfrac{\left(TOC_{fcc} - BOF_{elev}\right)}{2}\right]} - \left(BOF_{toe} - BOF_{elev}\right) & \text{if } COND_{UN2} \end{cases} = -0.33 \cdot m$$

Total Horizontal Tailwater Load on Pier:

$$H_{twp.UN2} := \frac{\gamma_w \cdot D_{tw.UN2}^{\,2}}{2} \cdot w_{pdg} = 240.3 \cdot kN$$

Apply Horizontal Tailwater Load on Pier at:

$$H_{twp.UN2.loc} := \frac{D_{tw.UN2}}{3} - \left(BOF_{toe} - BOF_{elev}\right) = -0.33 \cdot m$$

$$\Sigma H_{Water.UN2} := H_{hwp.UN2} + H_{hwg.UN2} + H_{hwf.UN2} + H_{twf.UN2} + H_{twp.UN2} = -10222.3 \cdot kN$$

$$\Sigma M_{HWater.UN2} := H_{hwp.UN2} \cdot H_{hwp.UN2.loc} + H_{hwg.UN2} \cdot H_{hwg.UN2.loc} + H_{hwf.UN2} \cdot H_{hwf.UN2.loc} \cdots + H_{twf.UN2} \cdot H_{twf.UN2.loc} + H_{twp.UN2} \cdot H_{twp.UN2.loc} = -35311.6 \cdot kN \cdot m$$

VERTICAL WATER LOADS

UN2 CASE

HEADWATER:

Water Depth on top of fixed crest: $d_{hw.UN2} := HW_{UN2} - TOC_{as} = 6.20\,m$

Subtract Pier Volume: $S_{pn.UN2} := \left[\frac{(A_{pnt} - A_{pnb})}{h_{pn}}\right] = 1.00 \cdot \frac{m^2}{m}$

$V_{pn.UN2} := \frac{\left[(S_{pn.UN2} \cdot d_{hw.UN2} + A_{pnb}) + A_{pnb}\right]}{2} \cdot d_{hw.UN2} = 139.7 \cdot m^3$

Weight of Water (H1) on Approach Slab: $H_{1.UN2} := (W_{hw.UN2} \cdot d_{hw.UN2} \cdot L_{as} - V_{pn.UN2}) \cdot \gamma_w = 3531.9 \cdot kN$

Horiz. Moment Arm for H1 (from toe): $H_{1.UN2.loc} := L_b - \frac{L_{as}}{2} = 21.10\,m$

Cross-sectional Area of Headwater Above Fixed Crest: $A_{fc.hw.UN2} := 35.85m^2$ (From Bluebeam Measurement)

Volume of water Above Fixed Crest: $V_{fc.hw.UN2} := \left[A_{fc.hw.UN2} \cdot (W_{hw.UN2} - w_{pn})\right] = 322.7 \cdot m^3$

Weight of Water (H2) on Fixed Crest: $H_{2.UN2} := (V_{fc.hw.UN2}) \cdot \gamma_w = 3165.2 \cdot kN$

Horiz. Moment Arm for H2 (from toe): $H_{2.UN2.loc} := X_{pug} = 14.25\,m$

TAILWATER:

Slope of Crest from D/S of Gate to edge of Stilling Basin: $S_{f.UN2} := \frac{(TOC_{fcc} - TOC_{fce})}{8.00m} = 0.500$

Height of Tailwater Above Stilling Basin:

$$y_{UN2} := \begin{cases} (TW_{UN2} - TOC_{fce}) & \text{if } TW_{UN2} \le TOC_{fcc} \\ (TOC_{fcc} - TOC_{fce}) & \text{otherwise} \end{cases}$$

$y_{UN2} = 0.00\,m$

Horizontal Distance of Tailwater Above Sloped Portion of Crest: $x_{UN2} := \frac{y_{UN2}}{S_{f.UN2}} = 0.00\,m$

Cross Sectional Area of Tailwater Above Sloped Portion of Crest: $A_{tw.UN2} := \frac{x_{UN2} \cdot y_{UN2}}{2} = 0\,m^2$

$= 0.00m^2$ if TW_{UN2} is less than or equal to TOC_{fce}

Weight of Water (H3) Above Slope Portion of Crest:

$$H_{3.UN2} := \begin{cases} (0.0kN) & \text{if } TW_{UN2} \le TOC_{fce} \\ \left[A_{tw.UN2} \cdot (W_{twf.UN2} - w_{pdg})\right] \cdot \gamma_w & \text{if } TOC_{fcc} \ge TW_{UN2} > TOC_{fce} \\ \left[A_{tw.UN2} + Dist_{gate} \cdot (TW_{UN2} - TOC_{fcc})\right] \cdot (W_{twf.UN2} - w_{pdg}) \cdot \gamma_w & \text{if } TW_{UN2} > TOC_{fcc} \end{cases}$$

$H_{3.UN2} = 0.0 \cdot kN$

Horiz. Moment Arm for H3 (from toe):

$$H_{3.UN2.loc} := \begin{cases} (0.00m) & \text{if } TW_{UN2} \le TOC_{fce} \\ \left(\frac{1}{3} \cdot x_{UN2}\right) & \text{if } TOC_{fcc} \ge TW_{UN2} > TOC_{fce} \\ \dfrac{\left[\frac{1}{2} \cdot x_{UN2} \cdot y_{UN2} \cdot \left(\frac{1}{3}\right) x_{UN2} + (TW_{UN2} - TOC_{fcc}) \cdot Dist_{gate} \cdot \left(\frac{Dist_{gate}}{2}\right)\right]}{\left(\frac{1}{2} x_{UN2} \cdot y_{UN2}\right) + (TW_{UN2} - TOC_{fcc}) \cdot Dist_{gate}} & \text{if } TW_{UN2} > TOC_{fcc} \end{cases}$$

$H_{3.UN2.loc} = 0.00\,m$

UPLIFT AT INCLINED SLIDING PLANE

UN2 CASE

Uplift pressure at Headwater: $U_{HW.UN2} := D_{hwf.UN2} \cdot \gamma_w = 119.68 \cdot \frac{kN}{m^2}$

Uplift pressure at D/S end of Stilling Basin: $U_{TW.UN2} := D_{tw.UN2} \cdot \gamma_w = 34.3 \cdot \frac{kN}{m^2}$

Length from U/S Face of Gate Structure to Toe of Stilling Basin (UN2: Ineffective Drain) $L_{sb.UN2} := 18 \cdot m + 2 \cdot 2 \cdot m$ $L_{overall.UN2} := L_{overall} + L_{sb.UN2} = 46.20\,m$

MONOLITH OVERTURNING STABILITY ANALYSIS

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stability of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1 $Ratio_{overturning.allow.Unusual} = 0.33$

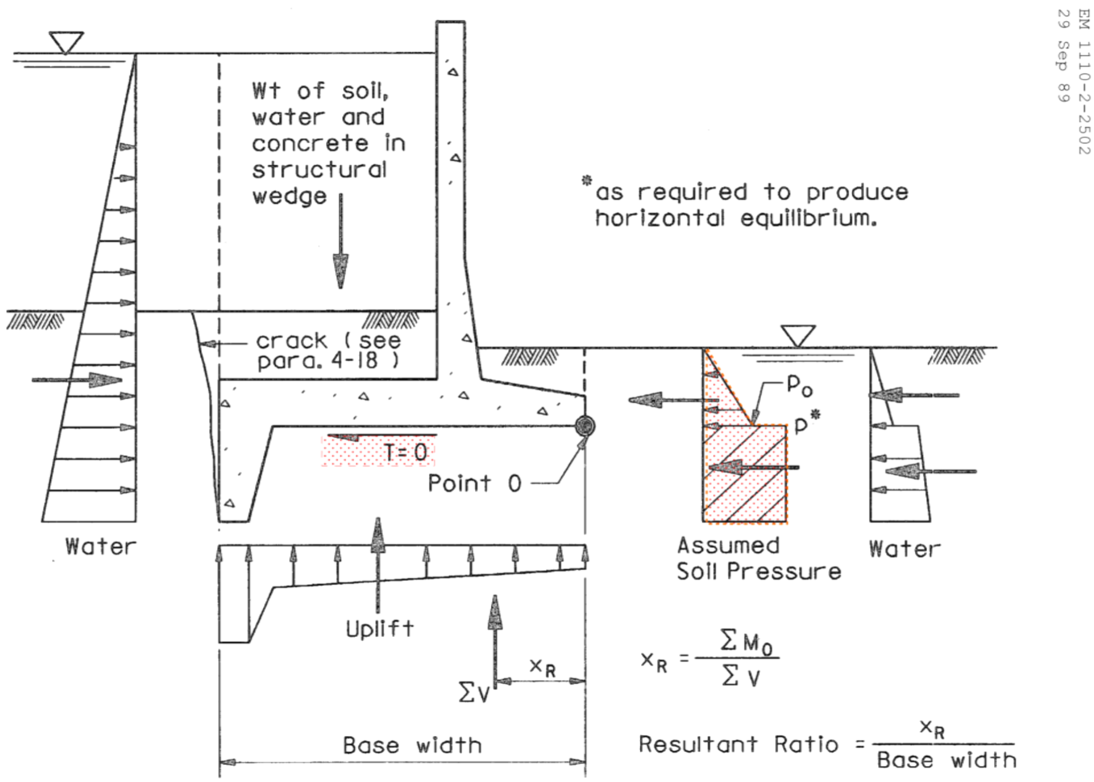

Figure 4-5. Forces for overturning analysis for wall with horizontal base and key

<u>All Vertical Loads Applicable to Overturning Stability Analysis</u>

Total Concrete Dead Loads:	$D_{conc} = 52182.8 \cdot kN$	at:	$X_{conc.loc} = 12.4\,m$
Dead Load of Gate:	$D_{Gate} = 580.0 \cdot kN$		$X_{gate} = 9.75\,m$
Water Weight (HW) on Apron Slab:	$H_{1.UN2} = 3531.9 \cdot kN$		$H_{1.UN2.loc} = 21.10\,m$
Water Weight (HW) on Fixed Crest:	$H_{2.UN2} = 3165.2 \cdot kN$		$H_{2.UN2.loc} = 14.25\,m$
Water Weight (TW) on Fixed Crest:	$H_{3.UN2} = 0.0 \cdot kN$		$H_{3.UN2.loc} = 0.00\,m$

Uplift Force from Sliding Analysis. Line of Creep Method applied at presumed inclined sliding line, and subtraction gravity effect to Base of Concrete by Archimedes Principle

$$U_{UN2.loc.sliding} := \frac{U_{A.UN2} \cdot L_{A.UN2} + U_{B.UN2} \cdot L_{B.UN2} - A_{rs} \cdot w_{as} \cdot \gamma_w \cdot L_{rs}}{U_{A.UN2} + U_{B.UN2} - A_{rs} \cdot w_{as} \cdot \gamma_w} = 13.34\,m$$

$$U_{UN2.sliding} := U_{UN2} + A_{rs} \cdot w_{as} \cdot \gamma_w = -23623.1 \cdot kN$$

UN2 CASE

Uplift for Overturning Analysis, Line of Creep Method. Pore pressure at base of Concrete

$Uplift_{pore.UN2} = -22503.2 \cdot kN$

$$Uplift_{pore.UN2.loc} := \frac{Uplift_{BC.UN2} \cdot Uplift_{BC.UN2.loc} + Uplift_{DE.UN2} \cdot Uplift_{DE.UN2.loc} + Uplift_{EF.UN2} \cdot Uplift_{EF.UN2.loc} + Uplift_{FG.UN2} \cdot Uplift_{FG.UN2.loc}}{Uplift_{pore.UN2}}$$

$Uplift_{pore.UN2.loc} = 12.7\,m$

Sum of All Water Load for Overturning Analysis

$\Sigma V_{water.UN2.OT} := H_{1.UN2} + H_{2.UN2} + H_{3.UN2} + Uplift_{pore.UN2} = -15806.1 \cdot kN$

All Lateral Loads Applicable to Overturning Stability Analysis

Apply Load to Gate?: $poss_{UN2} = 1$ — poss = 1 if gate is closed, 0 if gate is open

Headwater Lateral Load on Pier: $H_{hwp.UN2} = -754.2 \cdot kN$ — $H_{hwp.UN2.loc} = 6.57\,m$

Headwater Lateral Load on Gate: $H_{hwg.UN2} = -2167.0 \cdot kN$ — $H_{hwg.UN2.loc} = 7.57\,m$

Headwater Lateral Load on Footing: $H_{hwf.UN2} = -8082.2 \cdot kN$ — $H_{hwf.UN2.loc} = 1.70\,m$

Total Horizontal Tailwater Load on Pier: $H_{twp.UN2} = 240.3 \cdot kN$ — $H_{twp.UN2.loc} = -0.33\,m$

Total Horizontal Tailwater Load on Footing under Gate Openings, i.e., excluding Pier: $H_{twf.UN2} = 540.8 \cdot kN$ — $H_{twf.UN2.loc} = -0.33\,m$

Resisting Water on Rear Face of Monolith, i.e., bottom of heel elevation:

(Point O @ TOE: BOFtoe = EL.1205.5)

Ice / Impact Load: $I_{UN2} = 0.0 \cdot kN$ at: $I_{UN2.loc} = 10.40\,m$

Depth of Fill at Heel Side for Overturning Analysis:

$t_{hf.UN2} := TOC_{as} - BOF_{toe} = 4.50\,m$

Driving Soil Load for overturning:

$$E1_{drive.UN2} := \frac{K_o \cdot t_{hf.UN2}^{\,2}}{2} \cdot \left(\gamma_r - \gamma_w\right) \cdot W_b \cdot -1 = -1055.7 \cdot kN$$

Acting at:

$$E1_{drive.loc.UN2} := \frac{t_{hf.UN2}}{3} = 1.50\,m$$

Downstream (resisting) Lateral Soil Load as required to produce horizontal equilibrium:

$$E2_{resistUN2} := -1 \cdot \left(H_{hwp.UN2} + H_{hwg.UN2} + H_{hwf.UN2} + H_{twp.UN2} + H_{twf.UN2} + I_{UN2} + E1_{drive.UN2}\right)$$

$E2_{resistUN2} = 11278 \cdot kN$

Assumed Resisting Bedrock at middle of Key, passive soil pressure or lateral bearing contract joint at end of Monolith 3A3B

$E2_{resistlocUN2} := E2_{resistlocU1} = 0.67\,m$

Overturning moment by Dead Loads about Point O @ Toe

$\Sigma M_{DL.UN2} = 651119.6 \cdot kN \cdot m$

Overturning moment by Vertical Water Loads and Uplift, about Point O @ Toe

$$\Sigma M_{Vwater.UN2.OT} := H_{1.UN2} \cdot H_{1.UN2.loc} + H_{2.UN2} \cdot H_{2.UN2.loc} + H_{3.UN2} \cdot H_{3.UN2.loc} + Uplift_{pore.UN2} \cdot Uplift_{pore.UN2.loc} = -165099.2 \cdot kN \cdot m$$

Overturning moment by Lateral Hydrostatic Forces of Headwater Pool and Tailwater Pool,about Point O @ Toe

$\Sigma M_{HWater.UN2} = -35311.6 \cdot kN \cdot m$

Overturning Moment by Impact/Ice Load, about Point O@ Toe

$\Sigma M_{I.UN2} = 0$

Overturning moment by Lateral Soil Forces about Point O @ Toe

$\Sigma M_{soil.UN2} := E1_{drive.UN2} \cdot E1_{drive.loc.UN2} + E2_{resistUN2} \cdot E2_{resistlocUN2} = 5935.1 \cdot kN \cdot m$

Sum of the Overturning Moments about Point O @ Toe:

$\Sigma M_{UN2.OT} := \Sigma M_{DL.UN2} + \Sigma M_{HWater.UN2} + \Sigma M_{Vwater.UN2.OT} + \Sigma M_{I.UN2} + \Sigma M_{soil.UN2} = 456644 \cdot kN \cdot m$

Sum of Vertical Forces: $\Sigma V_{UN2.OT} := \Sigma V_{DL.UN2} + \Sigma V_{water.UN2.OT} = 36637.8 \cdot kN$

Distance X_R: EM 1110-2-2502 Eq.4-1

$$X_{R.UN2} := \frac{\Sigma M_{UN2.OT}}{\Sigma V_{UN2.OT}} = 12.5 m$$

Overturning Resultant Ratio

$$Ratio_{Overturning.UN2} := \frac{X_{R.UN2}}{L_b} = 0.52$$

EM 1110-2-2502

Table 4-1

Retaining Wall Stability Criteria

Loading Condition	Sliding Factor of Safety, FS	Shear Strength Test Required: Soil Foundation	Shear Strength Test Required: Rock Foundation[3]	Overturning Criteria Minimum Base Area in Compression: Soil Foundation	Overturning Criteria Minimum Base Area in Compression: Rock Foundation
Usual	1.5	(Q &/or S)[2,1]	Direct shear	100%[4]	75%[4]

UN3 CASE

MONOLITH OVERTURNING STABILITY ANALYSIS

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stability of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1

$Ratio_{overturning.allow.Unusual} = 0.333$

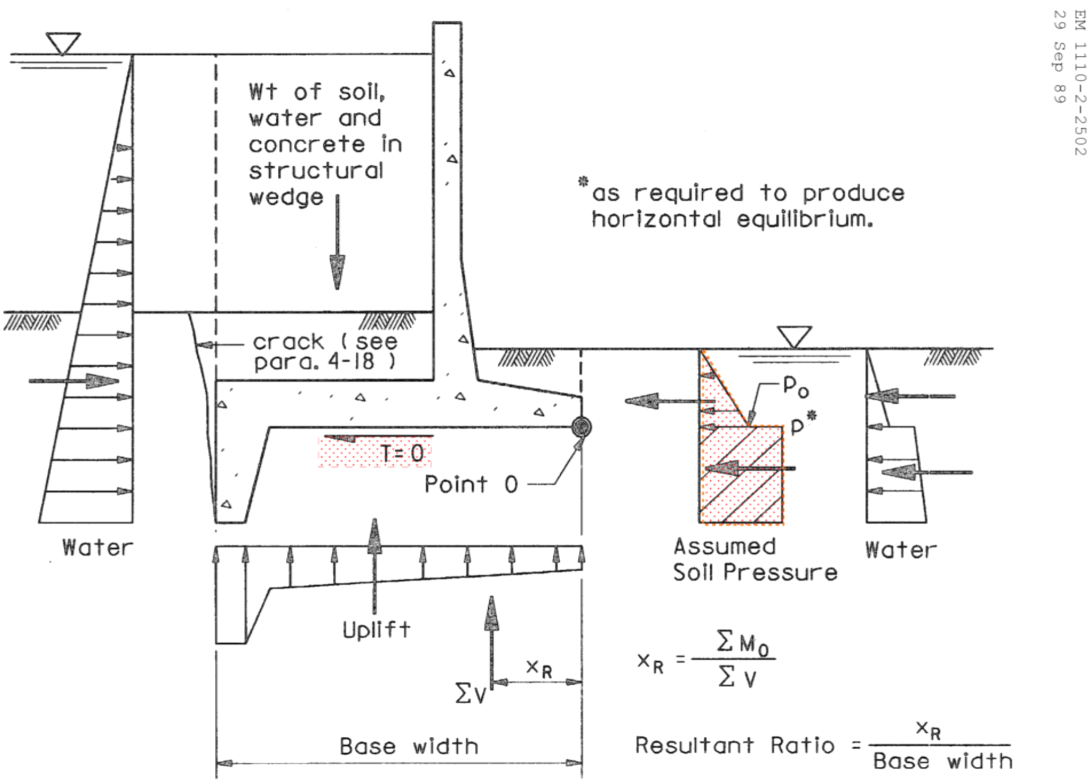

Figure 4-5. Forces for overturning analysis for wall with horizontal base and key

<u>All Vertical Loads Applicable to Overturning Stability Analysis</u>

Total Concrete Dead Loads:	$D_{conc} = 52182.8 \cdot kN$	at:	$X_{conc.loc} = 12.4\,m$
Dead Load of Gate:	$D_{Gate} = 580.0 \cdot kN$		$X_{gate} = 9.75\,m$
Water Weight (HW) on Apron Slab:	$H_{1.UN3} = 3960.2 \cdot kN$		$H_{1.UN3.loc} = 21.10\,m$
Water Weight (HW) on Fixed Crest:	$H_{2.UN3} = 3682.6 \cdot kN$		$H_{2.UN3.loc} = 14.25\,m$
Water Weight (TW) on Fixed Crest:	$H_{3.UN3} = 0.0 \cdot kN$		$H_{3.UN3.loc} = 0.00\,m$

Uplift Force from Sliding Analysis. Line of Creep Method applied at presumed inclined sliding line, and subtraction gravity effect to Base of Concrete by Archimedes Principle

$$U_{UN3.loc.sliding} := \frac{U_{A.UN3} \cdot L_{A.UN3} + U_{B.UN3} \cdot L_{B.UN3} - A_{rs} \cdot w_{as} \cdot \gamma_w \cdot L_{rs}}{U_{A.UN3} + U_{B.UN3} - A_{rs} \cdot w_{as} \cdot \gamma_w} = 14.34\,m$$

$$U_{UN3.sliding} := U_{UN3} + A_{rs} \cdot w_{as} \cdot \gamma_w = -19566.9 \cdot kN$$

Uplift for Overturning Analysis, Line of Creep Method. Pore pressure at base of Concrete $Uplift_{pore.UN3} = -18145.4 \cdot kN$

$$Uplift_{pore.UN3.loc} := \frac{Uplift_{BC.UN3} \cdot Uplift_{BC.UN3.loc} + Uplift_{DE.UN3} \cdot Uplift_{DE.UN3.loc} + Uplift_{EF.UN3} \cdot Uplift_{EF.UN3.loc} + Uplift_{FG.UN3} \cdot Uplift_{FG.UN3.loc}}{Uplift_{pore.UN3}}$$

$Uplift_{pore.UN3.loc} = 14.1\,m$

Sum of All Water Load for Overturning Analysis $\Sigma V_{water.UN3.OT} := H_{1.UN3} + H_{2.UN3} + H_{3.UN3} + Uplift_{pore.UN3} = -10502.6 \cdot kN$

All Lateral Loads Applicable to Overturning Stability Analysis

Apply Load to Gate?: $poss_{UN3} = 1$ poss = 1 if gate is closed, 0 if gate is open

Headwater Lateral Load on Pier: $H_{hwp.UN3} = -961.4 \cdot kN$ $H_{hwp.UN3.loc} = 6.83\,m$

Headwater Lateral Load on Gate: $H_{hwg.UN3} = -2967.5 \cdot kN$ $H_{hwg.UN3.loc} = 7.83\,m$

Headwater Lateral Load on Footing: $H_{hwf.UN3} = -8847.4 \cdot kN$ $H_{hwf.UN3.loc} = 1.74\,m$

Total Horizontal Tailwater Load on Pier: $H_{twp.UN3} = 240.3 \cdot kN$ $H_{twp.UN3.loc} = -0.33\,m$

Total Horizontal Tailwater Load on Footing under Gate Openings, i.e., excluding Pier $H_{twf.UN3} = 540.8 \cdot kN$ $H_{twf.UN3.loc} = -0.33\,m$

Resisting Water on Rear Face of Monolith, i.e., bottom of heel elevation: *(Point O @ TOE: BOFtoe = EL.1205.5)*

Ice / Impact Load: $I_{UN3} = 0.0 \cdot kN$ at: $I_{UN3.loc} = 11.20\,m$

Depth of Fill at Heel Side for Overturning Analysis: $t_{hf.UN3} := TOC_{as} - BOF_{toe} = 4.50\,m$

Driving Soil Load for overturning: $E1_{drive.UN3} := \frac{K_o \cdot t_{hf.UN3}^2}{2} \cdot (\gamma_r - \gamma_w) \cdot W_b \cdot -1 = -1055.7 \cdot kN$

Acting at: $E1_{drive.loc.UN3} := \frac{t_{hf.UN3}}{3} = 1.50\,m$

Downstream (resisting) Lateral Soil Load as required to produce horizontal equilibrium:

$$E2_{resistUN3} := -1 \cdot \left(H_{hwp.UN3} + H_{hwg.UN3} + H_{hwf.UN3} + H_{twp.UN3} + H_{twf.UN3} + I_{UN3} + E1_{drive.UN3}\right)$$

$E2_{resistUN1} = 10058.4 \cdot kN$

Assumed Resisting Bedrock at middle of Key,passive soil pressure or lateral bearing contact joint at end of Monolith 3A3B $E2_{resistlocUN3} := E2_{resistlocU1} = 0.67\,m$

Overturning moment by Dead Loads about Point O @ Toe $\Sigma M_{DL.UN1} = 654229.9 \cdot kN \cdot m$

Overturning moment by Vertical Water Loads and Uplift, about Point O @ Toe

$$\Sigma M_{Vwater.UN3.OT} := H_{1.UN3} \cdot H_{1.UN3.loc} + H_{2.UN3} \cdot H_{2.UN3.loc} + H_{3.UN1} \cdot H_{3.UN3.loc} + Uplift_{pore.UN3} \cdot Uplift_{pore.UN3.loc} = -119844.6 \cdot kN \cdot m$$

UN3 CASE

Overturning moment by Lateral Hydrostatic Forces of Headwater Pool and Tailwater Pool,about Point O @ Toe

$\Sigma M_{HWater.UN3} = -45498.6 \cdot kN \cdot m$

Overturning Moment by Impact/Ice Load, about Point O@ Toe

$\Sigma M_{I.UN3} = 0$

Overturning moment by Lateral Soil Forces about Point O @ Toe

$\Sigma M_{soil.UN3} := E1_{drive.UN3} \cdot E1_{drive.loc.UN3} + E2_{resistUN3} \cdot E2_{resistlocUN3} = 7117 \cdot kN \cdot m$

Sum of the Overturning Moments about Point O @ Toe:

$\Sigma M_{UN3.OT} := \Sigma M_{DL.UN3} + \Sigma M_{HWater.UN3} + \Sigma M_{Vwater.UN3.OT} + \Sigma M_{I.UN3} + \Sigma M_{soil.UN3} = 492893 \cdot kN \cdot m$

Sum of Vertical Forces:

$\Sigma V_{UN3.OT} := \Sigma V_{DL.UN3} + \Sigma V_{water.UN3.OT} = 41941.2 \cdot kN$

Distance X_R: EM 1110-2-2502 Eq.4-1

$$X_{R.UN3} := \frac{\Sigma M_{UN3.OT}}{\Sigma V_{UN3.OT}} = 11.8 m$$

Overturning Resultant Ratio

$$Ratio_{Overturning.UN3} := \frac{X_{R.UN3}}{L_b} = 0.49$$

EM 1110-2-2502

Table 4-1

Retaining Wall Stability Criteria

Loading Condition	Sliding Factor of Safety, FS	Shear Strength Test Required: Soil Foundation	Shear Strength Test Required: Rock Foundation[3]	Overturning Criteria Minimum Base Area in Compression: Soil Foundation	Overturning Criteria Minimum Base Area in Compression: Rock Foundation
Usual	1.5	(Q &/or S)[2,1]	Direct shear	100%[4]	75%[4]
Unusual	1.33	(Q &/or S)[2,1]	Direct shear	75%[4]	50%[4]
Earthquake	1.1	(Q)	Direct shear	Resultant within base	Resultant within base

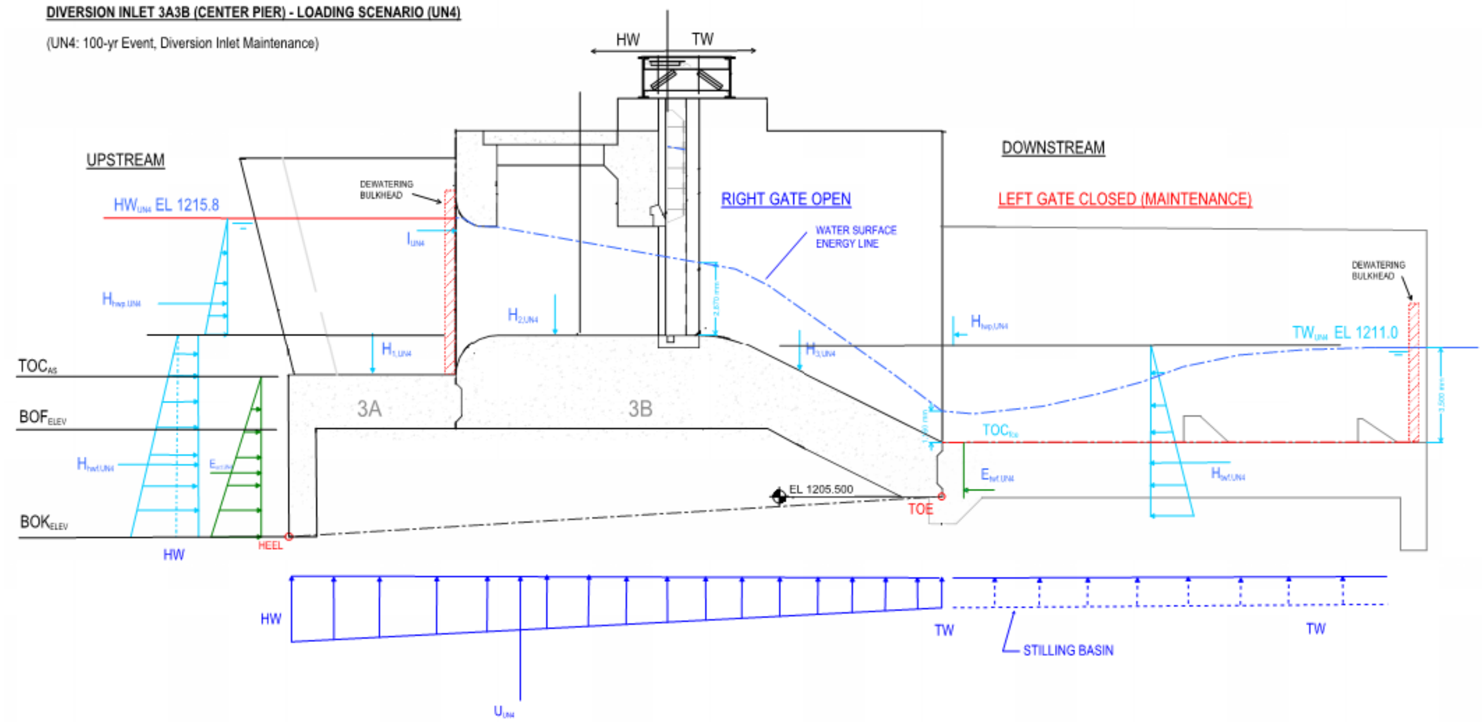
UN4 DESIGN CASE



This load case is the Construction / Maintenance / Single Gate Bay De-watered Load Case. One vertical lift gate is open, while the other has been removed for maintenance, and bulkheads in place to dewater one gate bay at a time. Calculation highlighted in Orange where calculation which differ from Load Case UN1 procedures.

ACCEPTANCE PARAMETERS

Required Factor of Safety for Sliding: $FS_{req.UN4.sl} := 1.3$ (Without Cohesion) (Section 8.1, Design Criteria)

Resultant Within Middle Third of Base: $e \le \frac{L_b}{6} \wedge e \ge \frac{-L_b}{6}$

Allowable Rock Bearing Pressure: $\sigma_{allow.UN4} := 1470.0 \cdot \frac{kN}{m^2}$ (Section 5.2, Design Criteria)

Required Factor of Safety for Flotation: $FS_{req.UN.flt} = 1.3$

Overturning Min Required Resultant Ratio: $\frac{X_{R.UN}}{Horizontal\_Width\_of\_Base} > 0.33$

INPUT PARAMETERS

UN4 CASE

Headwater Elevation: $HW_{UN4} := 1215.80m$

Tailwater Elevation: $TW_{UN4} := 1211.10m$

(Water Elevations based on Diversion Structure 2D Hydraulic Model Results. See page 7 and Section 8.2, Design Criteria)

Crest Water Elevation, EL.1215.81 $CrestW_{UN4} := 2.87 \cdot m$

Chute Block Water Elevation EL.1208.78 $ChuteW_{UN4} := 1.28 \cdot m$ $TW_{UN4} := TOC_{fce} + ChuteW_{UN4} = 1208.8\,m$

Bottom of Key (Footing Heel) Elevation: $BOF_{elev} = 1204.00\,m$

Apron Slab Top of Concrete Elevation at Edge of Slab: $TOC_{as} = 1210.00\,m$

$$H_{hwf.UN4.2} := -\left(\gamma_w \cdot D_{hwg.UN4}\right) \cdot W_{hw.UN4} = -548.4 \frac{1}{m} \cdot kN$$

Total Horizontal Water Load on Footing:

$$H_{hwf.UN4} := \frac{\left(H_{hwf.UN4.1} + H_{hwf.UN4.2}\right) \cdot \left(D_{hwf.UN4} - D_{hwg.UN4}\right)}{2} = -7699.6 \cdot kN$$

Apply Total Footing Water Load at:

$$H_{hwf.UN4.loc} := \frac{\left[H_{hwf.UN4.2} \cdot \frac{\left(TOC_{fcc} - BOF_{elev}\right)^2}{2} + \frac{\left(H_{hwf.UN4.1} - H_{hwf.UN4.2}\right)}{2} \cdot \frac{\left(TOC_{fcc} - BOF_{elev}\right)^2}{3}\right]}{\frac{\left(H_{hwf.UN4.2} + H_{hwf.UN4.1}\right) \cdot \left(TOC_{fcc} - BOF_{elev}\right)}{2}} - \left(BOF_{toe} - BOF_{elev}\right) = 1.67\,m$$

Converting horizontal force resultant from HEEL calculation to Point-O@TOE

UN4 CASE

LATERAL WATER LOADS (cont.)

TAILWATER (RESISTING):

Water Depth at toe: $D_{tw.UN4} := TW_{UN4} - BOF_{elev} = 4.78\,m$

Water Load Unit Width: $W_{twf.UN4} := W_b$

Total Horizontal Tailwater Load on Footing under Gate Openings, i.e., excluding Pier

Resisting Water on Rear Face of Monolith, i.e., bottom of heel elevation

$$COND_{UN4} := poss_{UN4} = 0 \wedge TW_{UN4} \geq TOC_{fcc}$$

$$H_{twf.UN4} := \begin{cases} \dfrac{\gamma_w \cdot D_{tw.UN4}^{\,2}}{2} \cdot \left(W_{twf.UN4}\right) & \text{if } poss_{UN4} = 1 \\ \dfrac{\gamma_w \cdot D_{tw.UN4}^{\,2}}{2} \cdot \left(W_{twf.UN4}\right) & \text{if } poss_{UN4} = 0 \wedge TW_{UN4} \leq TOC_{fcc} \\ \gamma_w \cdot \left[\dfrac{D_{tw.UN4}}{2} + \dfrac{\left(TW_{UN4} - TOC_{fcc}\right)}{2}\right] \cdot \left(TOC_{fcc} - BOF_{elev}\right) \cdot \left(W_{twf.UN4} - w_{pdg}\right) & \text{if } COND_{UN4} \end{cases} = 1456.9 \cdot kN$$

Apply Footing Tailwater Load within Gate Openings at:

$$H_{twf.UN4.loc} := \begin{cases} \dfrac{D_{tw.UN4}}{3} - \left(BOF_{toe} - BOF_{elev}\right) & \text{if } poss_{UN4} = 1 \\ \dfrac{D_{tw.UN4}}{3} - \left(BOF_{toe} - BOF_{elev}\right) & \text{if } poss_{UN4} = 0 \wedge TW_{UN4} \leq TOC_{fcc} \\ \dfrac{\left(TOC_{fcc} - BOF_{elev}\right)^2 \cdot \left[\dfrac{D_{tw.UN4}}{2} + \dfrac{\left(\left(TOC_{fcc} - BOF_{elev}\right)\right)}{6}\right]}{\left(TOC_{fcc} - BOF_{elev}\right)\left[\left(TW_{UN4} - TOC_{fcc}\right) + \dfrac{\left(TOC_{fcc} - BOF_{elev}\right)}{2}\right]} - \left(BOF_{toe} - BOF_{elev}\right) & \text{if } COND_{UN4} \end{cases} = 0.09 \cdot m$$

Total Horizontal Tailwater Load on Pier: $Bulkhead_{width} := 2 \cdot 4.5m$

Load on de-watered bulkhead at Stilling Basin end, from width of Monolith up to half of DI Channel

$$H_{twp.UN4} := \frac{\gamma_w \cdot D_{tw.UN4}^{\,2}}{2} \cdot \left(w_{pdg} + Bulkhead_{width}\right) = 1456.9 \cdot kN$$

Apply Horizontal Tailwater Load on Pier at:

$$H_{twp.UN4.loc} := \frac{D_{tw.UN4}}{3} - \left(BOF_{toe} - BOF_{elev}\right) = 0.09 \cdot m$$

$$\Sigma H_{Water.UN4} := H_{hwp.UN4} + H_{hwg.UN4} + H_{hwf.UN4} + H_{twf.UN4} + H_{twp.UN4} = -7259.7 \cdot kN$$

$$\Sigma M_{HWater.UN4} := H_{hwp.UN4} \cdot H_{hwp.UN4.loc} + H_{hwg.UN4} \cdot H_{hwg.UN4.loc} + H_{hwf.UN4} \cdot H_{hwf.UN4.loc} \cdots + H_{twf.UN4} \cdot H_{twf.UN4.loc} + H_{twp.UN4} \cdot H_{twp.UN4.loc} = -30297.9 \cdot kN \cdot m$$

VERTICAL WATER LOADS

UN4 CASE

HEADWATER:

Water Depth on top of fixed crest: $d_{hw.UN4} := HW_{UN4} - TOC_{as} = 5.80\,m$

Subtract Pier Volume:

$$S_{pn.UN4} := \left[\frac{(A_{pnt} - A_{pnb})}{h_{pn}}\right] = 1.00 \cdot \frac{m^2}{m}$$

$$V_{pn.UN4} := \frac{\left[(S_{pn.UN4} \cdot d_{hw.UN4} + A_{pnb}) + A_{pnb}\right]}{2} \cdot d_{hw.UN4} = 129.5 \cdot m^3$$

Weight of Water (H1) on Approach Slab: $H_{1.UN4} := (W_{hw.UN4} \cdot d_{hw.UN4} \cdot L_{as} - V_{pn.UN4}) \cdot \gamma_w = 3315.4 \cdot kN$

Horiz. Moment Arm for H1 (from toe): $H_{1.UN4.loc} := L_b - \frac{L_{as}}{2} = 21.10\,m$

Cross-sectional Area of
Headwater Above Fixed Crest: $A_{fc.hw.UN4} := 29.10m^2$

(From Bluebeam Measurement, Bound by Energy Line through Crest Water Elevation Crest and Chute Block Water Elevation Chute as defined above)

Volume of water Above Fixed Crest: $V_{fc.hw.UN4} := \left[A_{fc.hw.UN4} \cdot (W_{hw.UN4} - w_{pn})\right] = 261.9 \cdot m^3$

Weight of Water (H2) on Fixed Crest: $H_{2.UN4} := (V_{fc.hw.UN4}) \cdot \frac{\gamma_w}{2} = 1284.6 \cdot kN$ *Divide by 2 since one one side of pier is de-watered*

Horiz. Moment Arm for H2 (from toe): $H_{2.UN4.loc} := 14.412 \cdot m = 14.41\,m$ (From Bluebeam Measurement)

TAILWATER:

Slope of Crest from
D/S of Gate to edge of Stilling Basin: $S_{f.UN4} := S_{f.U1} = 0.500$

Height of Tailwater Above Stilling Basin: $y_{UN4} := TW_{UN4} - TOC_{fce} = 1.3\,m$

Cross Sectional Area of Tailwater
Above Sloped Portion of Crest: $A_{tw.UN4} := 23.86 \cdot m \cdot m = 23.9\,m^2$

(From Bluebeam Measurement, Bound by Energy Line through Crest Water Elevation CrestW and Chute Block Water Elevation ChuteW as defined above)

Weight of Water (H3)
Above Slope Portion of Crest: $H_{3.UN4} := \left[A_{tw.UN4} \cdot (W_{twf.UN4} - w_{pdg})\right] \cdot \gamma_w$ $H_{3.UN4} = 2106.6 \cdot kN$

Horiz. Moment Arm for H3 (from Toe): $H_{3.UN4.loc} := 5.780 \cdot m$ (From Bluebeam Measurement)

UPLIFT AT INCLINED SLIDING PLANE

Uplift pressure at Headwater:

$$U_{HW.UN4} := D_{hwf.UN4} \cdot \gamma_w = 115.76 \cdot \frac{kN}{m^2}$$

Uplift pressure at D/S end of Stilling Basin:

$$U_{TW.UN4} := D_{tw.UN4} \cdot \gamma_w = 46.9 \cdot \frac{kN}{m^2}$$

Length from U/S Face of Gate Structure to Toe of Block: effective drain, Lsb = 0*m

$L_{overall} = 24.20\,m$ $\quad L_{sb} = 0$

Length of Seepage per Line of Creep

$L_{seepage} = 27.1\,m$

Difference between Uplift pressure at Headwater and Uplift Pressure at Toe of Stilling Basin:

$$U_{diffUN4} := U_{HW.UN4} - U_{TW.UN4} = 68.9 \cdot \frac{kN}{m^2}$$

Slope of difference between Uplift pressure at Headwater and Uplift Pressure at Toe of Stilling Basin:

$$U_{slopeUN4} := \frac{U_{diffUN4} - Key_d \cdot \gamma_w}{L_{overall}} = 2.24 \cdot \frac{kN}{m^2 \cdot m}$$

$$U_{seepageslopeUN4} := \frac{U_{diffUN4} - Key_d \cdot \gamma_w}{L_{seepage}}$$

Tailwater Pressure at toe of Gate Structure:

$$U_{press.toe.gsUN4} := U_{TW.UN4} + L_{sb} \cdot U_{slopeUN4} = 46.9 \cdot \frac{kN}{m^2}$$

$$U_{pore.toe.UN4} := U_{TW.UN4} + U_{seepageslopeUN4} \cdot L_{sb} = 46.9 \cdot \frac{kN}{m^2}$$

$$U_{pore.F.UN4} := U_{pore.toe.UN4} + U_{seepageslopeUN4} \cdot L_{FG} = 49.9 \cdot \frac{kN}{2}$$

$$U_{pore.E.UN4} := U_{pore.F.UN4} - \left(BOF_{base} - BOF_{toe}\right) \cdot \gamma_w + U_{seepageslopeUN4} \cdot L_{EF} = 41.9 \cdot \frac{kN}{m^2}$$

$$U_{pore.D.UN4} := U_{pore.E.UN4} + U_{seepageslopeUN4} \cdot L_{DE} = 78.3 \cdot \frac{kN}{m^2}$$

$$U_{pore.C.UN4} := U_{pore.D.UN4} + \left(BOF_{base} - BOF_{elev}\right) \cdot \gamma_w + U_{seepageslopeUN4} \cdot L_{CD} = 113.8 \cdot \frac{kN}{m^2}$$

Uniform uplift due to Tailwater: (rectangular portion)

$$U_{A.UN4} := U_{press.toe.gsUN4} \cdot L_b \cdot W_b \cdot -1 = -14752.2 \cdot kN$$

Moment Arm for Uplift UA from Toe of Gate Structure:

$$L_{A.UN4} := \frac{L_b}{2} = 12.10\,m$$

Uplift - Linear Decrease from HW to TW: (triangular portion)

$$U_{B.UN4} := \frac{1}{2} \cdot \left(U_{HW.UN4} - U_{press.toe.gsUN4}\right) \cdot L_b \cdot W_b \cdot -1 = -10832.7 \cdot kN$$

Moment Arm for Uplift UB from Toe of Gate Structure:

$$L_{B.UN4} := \frac{2}{3} \cdot L_b = 16.13\,m$$

Total Resultant Uplift force:

$$U_{UN4} := U_{A.UN4} + U_{B.UN4} = -25584.8 \cdot kN$$

Resultant Location from Toe:

MONOLITH OVERTURNING STABILITY ANALYSIS

UN4 CASE

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.

Assumptions are made in order to compute overturning stability of indetermine forces on monolith with key;

(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.

(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium

(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1 $Ratio_{overturning.allow.Unusual} = 0.333$

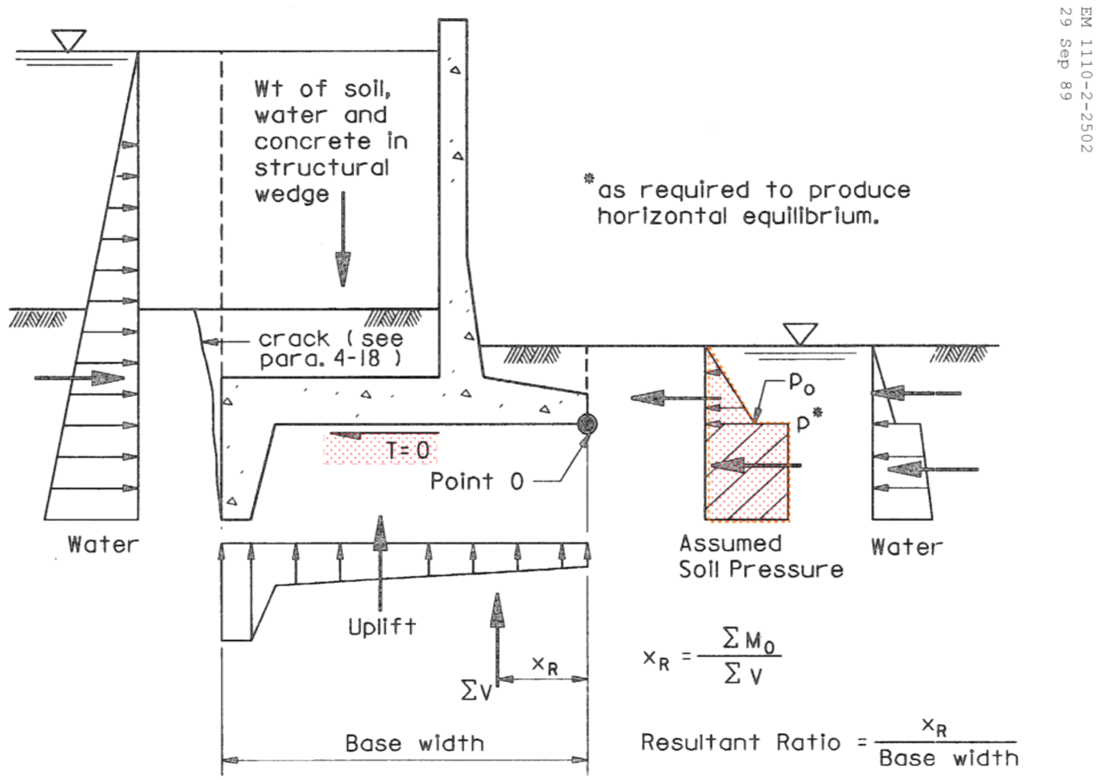

Figure 4-5. Forces for overturning analysis for wall with horizontal base and key

All Vertical Loads Applicable to Overturning Stability Analysis

Total Concrete Dead Loads:	$D_{conc} = 52182.8 \cdot kN$	at:	$X_{conc.loc} = 12.4\,m$
Dead Load of Gate:	$D_{Gate} = 580.0 \cdot kN$		$X_{gate} = 9.75\,m$
Water Weight (HW) on Apron Slab:	$H_{1.UN4} = 3315.4 \cdot kN$		$H_{1.UN4.loc} = 21.10\,m$
Water Weight (HW) on Fixed Crest:	$H_{2.UN4} = 1284.6 \cdot kN$		$H_{2.UN4.loc} = 14.41\,m$
Water Weight (TW) on Fixed Crest:	$H_{3.UN4} = 2106.6 \cdot kN$		$H_{3.UN4.loc} = 5.78\,m$

Uplift Force from Sliding Analysis. Line of Creep Method applied at presumed inclined sliding line, and subtraction gravity effect to Base of Concrete by Archimedes Principle

$$U_{UN4.loc.sliding} := \frac{U_{A.UN4} \cdot L_{A.UN4} + U_{B.UN4} \cdot L_{B.UN4} - A_{rs} \cdot w_{as} \cdot \gamma_w \cdot L_{rs}}{U_{A.UN4} + U_{B.UN4} - A_{rs} \cdot w_{as} \cdot \gamma_w} = 13.84\,m$$

$$U_{UN4.sliding} := U_{UN4} + A_{rs} \cdot w_{as} \cdot \gamma_w = -19690.4 \cdot kN$$

UN4 CASE

Uplift for Overturning Analysis, Line of Creep Method. Pore pressure at base of Concrete $\quad Uplift_{pore.UN4} = -18659.5 \cdot kN$

$$Uplift_{pore.UN4.loc} := \frac{Uplift_{BC.UN4} \cdot Uplift_{BC.UN4.loc} + Uplift_{DE.UN4} \cdot Uplift_{DE.UN4.loc} + Uplift_{EF.UN4} \cdot Uplift_{EF.UN4.loc} + Uplift_{FG.UN4} \cdot Uplift_{FG.UN4.loc}}{Uplift_{pore.UN4}}$$

$Uplift_{pore.UN4.loc} = 13.3\,m$

Sum of All Water Load for Overturning Analysis $\quad \Sigma V_{water.UN4.OT} := H_{1.UN4} + H_{2.UN4} + H_{3.UN4} + Uplift_{pore.UN4} = -11952.9 \cdot kN$

All Lateral Loads Applicable to Overturning Stability Analysis

Apply Load to Gate?: $\quad poss_{UN4} = 0 \quad$ poss = 1 if gate is closed
0 if gate is open

Headwater Lateral Load on Pier: $\quad H_{hwp.UN4} = -660.0 \cdot kN \quad H_{hwp.UN4.loc} = 6.43\,m$

Headwater Lateral Load on Gate: $\quad H_{hwg.UN4} = -1813.9 \cdot kN \quad H_{hwg.UN4.loc} = 7.43\,m$

Headwater Lateral Load on Footing: $\quad H_{hwf.UN4} = -7699.6 \cdot kN \quad H_{hwf.UN4.loc} = 1.67\,m$

Total Horizontal Tailwater Load on Pier: $\quad H_{twp.UN4} = 1456.9 \cdot kN \quad H_{twp.UN4.loc} = 0.09\,m$

Total Horizontal Tailwater Load on Footing under Gate Openings, i.e., excluding Pier $\quad H_{twf.UN4} = 1456.9 \cdot kN \quad H_{twf.UN4.loc} = 0.09\,m$

Resisting Water on Rear Face of Monolith, i.e., bottom of heel elevation: *(Point O @ TOE: BOFtoe = EL.1205.5)*

Ice / Impact Load: $\quad I_{UN4} = 0.0 \cdot kN \quad$ at: $\quad I_{UN4.loc} = 10.00\,m$

Depth of Fill at Heel Side for Overturning Analysis: $\quad t_{hf.UN4} := TOC_{as} - BOF_{toe} = 4.50\,m$

Driving Soil Load for overturning: $\quad E1_{drive.UN4} := \dfrac{K_o \cdot t_{hf.UN4}^{\,2}}{2} \cdot (\gamma_r - \gamma_w) \cdot W_b \cdot -1 = -1055.7 \cdot kN$

Acting at: $\quad E1_{drive.loc.UN4} := \dfrac{t_{hf.UN4}}{3} = 1.50\,m$

Downstream (resisting) Lateral Soil Load as required to produce horizontal equilibrium:

$$E2_{resistUN4} := -1 \cdot \left(H_{hwp.UN4} + H_{hwg.UN4} + H_{hwf.UN4} + H_{twp.UN4} + H_{twf.UN4} + I_{UN4} + E1_{drive.UN4}\right)$$

$E2_{resistUN4} = 8315.4 \cdot kN$

Assumed Resisting Bedrock at middle of Key, passive soil pressure or lateral bearing contract joint at end of Monolith 3A3B $\quad E2_{resistlocUN4} := E2_{resistlocU1} = 0.67\,m$

Overturning moment by Dead Loads about Point O @ Toe $\quad \Sigma M_{DL.UN4} = 651119.6 \cdot kN \cdot m$

Overturning moment by Vertical Water Loads and Uplift, about Point O @ Toe

$$\Sigma M_{Vwater.UN4.OT} := H_{1.UN4} \cdot H_{1.UN4.loc} + H_{2.UN4} \cdot H_{2.UN4.loc} + H_{3.UN4} \cdot H_{3.UN4.loc} + Uplift_{pore.UN4} \cdot Uplift_{pore.UN4.loc} = -147507.1 \cdot kN \cdot m$$

Overturning moment by Lateral Hydrostatic Forces of Headwater Pool and Tailwater Pool,about Point O @ Toe

$\Sigma M_{HWater.UN4} = -30297.9 \cdot kN \cdot m$

Overturning Moment by Impact/Ice Load, about Point O@ Toe

MONOLITH OVERTURNING STABILITY ANALYSIS

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stability of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1 $Ratio_{overturning.allow.Extreme} := 0.167$ Resultant within Middle Half

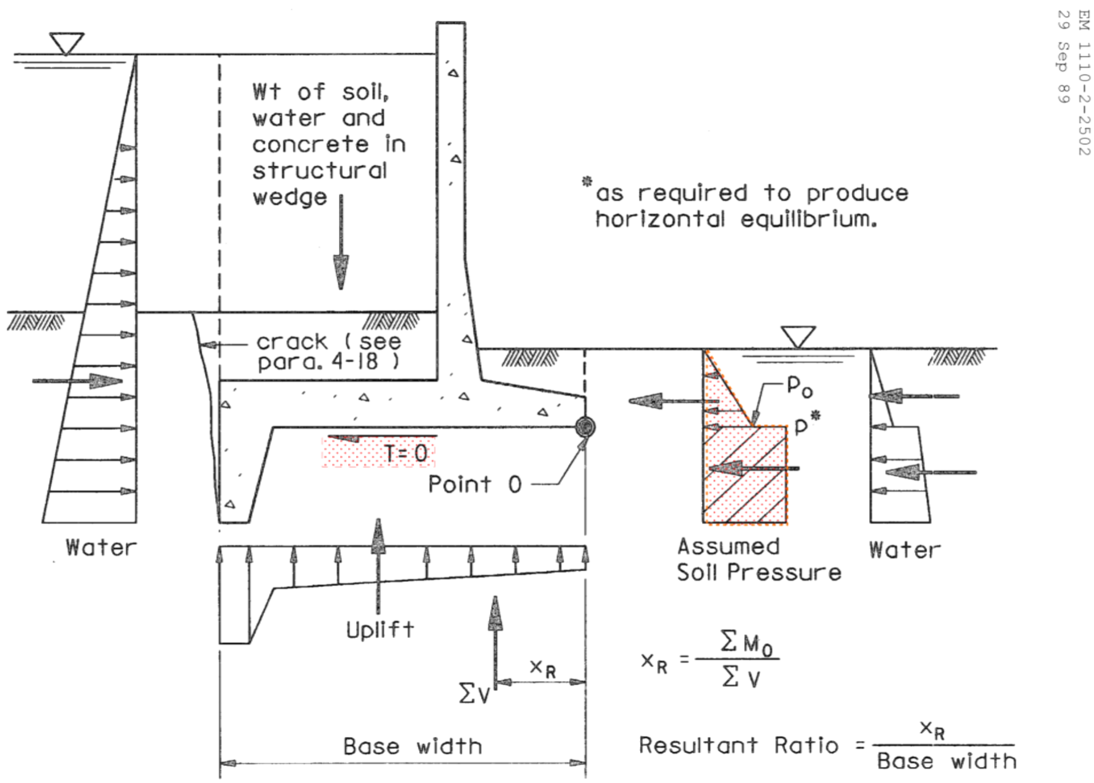

Figure 4-5. Forces for overturning analysis for wall with horizontal base and key

All Vertical Loads Applicable to Overturning Stability Analysis

Total Concrete Dead Loads:	$D_{conc} = 52182.8 \cdot kN$	at:	$X_{conc.loc} = 12.4\,m$
Dead Load of Gate:	$D_{Gate} = 580.0 \cdot kN$		$X_{gate} = 9.75\,m$
Water Weight (HW) on Apron Slab:	$H_{1.E1} = 4382.2 \cdot kN$		$H_{1.E1.loc} = 21.10\,m$
Water Weight (HW) on Fixed Crest:	$H_{2.E1} = 4198.2 \cdot kN$		$H_{2.E1.loc} = 14.25\,m$
Water Weight (TW) on Fixed Crest:	$H_{3.E1} = 0.0 \cdot kN$		$H_{3.E1.loc} = 0.00\,m$

Uplift Force from Sliding Analysis. Line of Creep Method applied at presumed inclined sliding line, Hand subtraction gravity effect to Base of Concrete by Archimedes Principle

$$U_{E1.loc.sliding} := \frac{U_{A.E1} \cdot L_{A.E1} + U_{B.E1} \cdot L_{B.E1} - A_{rs} \cdot w_{as} \cdot \gamma_w \cdot L_{rs}}{U_{A.E1} + U_{B.E1} - A_{rs} \cdot w_{as} \cdot \gamma_w} = 14.40\,m$$

$$U_{E1.sliding} := U_{E1} + A_{rs} \cdot w_{as} \cdot \gamma_w = -20801.4 \cdot kN$$

E1 CASE

Uplift for Overturning Analysis, Line of Creep Method. Pore pressure at base of Concrete

$Uplift_{pore.E1} = -19247 \cdot kN$

$$Uplift_{pore.E1.loc} := \frac{Uplift_{BC.E1} \cdot Uplift_{BC.E1.loc} + Uplift_{DE.E1} \cdot Uplift_{DE.E1.loc} + Uplift_{EF.E1} \cdot Uplift_{EF.E1.loc} + Uplift_{FG.E1} \cdot Uplift_{FG.E1.loc}}{Uplift_{pore.E1}}$$

$Uplift_{pore.E1.loc} = 14.2\,m$

Sum of All Water Load for Overturning Analysis

$\Sigma V_{water.E1.OT} := H_{1.E1} + H_{2.E1} + H_{3.E1} + Uplift_{pore.E1} = -10666.6 \cdot kN$

All Lateral Loads Applicable to Overturning Stability Analysis

Apply Load to Gate?: $poss_{E1} = 1$

poss = 1 if gate is closed
0 if gate is open

Headwater Lateral Load on Pier: $H_{hwp.E1} = -1193.7 \cdot kN$ $H_{hwp.E1.loc} = 7.10\,m$

Headwater Lateral Load on Gate: $H_{hwg.E1} = -3893.6 \cdot kN$ $H_{hwg.E1.loc} = 8.10\,m$

Headwater Lateral Load on Footing: $H_{hwf.E1} = -9612.6 \cdot kN$ $H_{hwf.E1.loc} = 1.78\,m$

Total Horizontal Tailwater Load on Pier: $H_{twp.E1} = 240.3 \cdot kN$ $H_{twp.E1.loc} = -0.33\,m$

Total Horizontal Tailwater Load on Footing under Gate Openings, i.e., excluding Pier: $H_{twf.E1} = 540.8 \cdot kN$ $H_{twf.E1.loc} = -0.33\,m$

Resisting Water on Rear Face of Monolith, i.e., bottom of heel elevation:

(Point O @ TOE: BOFtoe = EL.1205.5)

Ice / Impact Load: $I_{E1} = 0.0 \cdot kN$ at: $I_{E1.loc} = 12.00\,m$

Depth of Fill at Heel Side for Overturning Analysis:

$t_{hf.E1} := TOC_{as} - BOF_{toe} = 4.50\,m$

Driving Soil Load for overturning:

$$E1_{drive.E1} := \frac{K_o \cdot t_{hf.E1}^{\,2}}{2} \cdot (\gamma_r - \gamma_w) \cdot W_b \cdot -1 = -1055.7 \cdot kN$$

Acting at:

$$E1_{drive.loc.E1} := \frac{t_{hf.E1}}{3} = 1.50\,m$$

Downstream (resisting) Lateral Soil Load as required to produce horizontal equilibrium:

$$E2_{resistE1} := -1 \cdot \left(H_{hwp.E1} + H_{hwg.E1} + H_{hwf.E1} + H_{twp.E1} + H_{twf.E1} + I_{E1} + E1_{drive.E1}\right)$$

$E2_{resistE1} = 14974.5 \cdot kN$

Assumed Resisting Bedrock at middle of Key, passive soil pressure or lateral bearing contract joint at end of Monolith 3A3B

$E2_{resistlocE1} := E2_{resistlocU1} = 0.67\,m$

Overturning moment by Dead Loads about Point O @ Toe

$\Sigma M_{DL.E1} = 651119.6 \cdot kN \cdot m$

Overturning moment by Vertical Water Loads and Uplift, about Point O @ Toe

$$\Sigma M_{Vwater.E1.OT} := H_{1.E1} \cdot H_{1.E1.loc} + H_{2.E1} \cdot H_{2.E1.loc} + H_{3.E1} \cdot H_{3.E1.loc} + Uplift_{pore.E1} \cdot Uplift_{pore.E1.loc} = -120975.8 \cdot kN \cdot m$$

E1 CASE

Overturning moment by Lateral Hydrostatic Forces of Headwater Pool and Tailwater Pool,about Point O @ Toe

$\Sigma M_{HWater.E1} = -57418.4 \cdot kN \cdot m$

Overturning Moment by Impact/Ice Load, about Point O@ Toe

$\Sigma M_{I.E1} = 0$

Overturning moment by Lateral Soil Forces about Point O @ Toe

$\Sigma M_{soil.E1} := E1_{drive.E1} \cdot E1_{drive.loc.E1} + E2_{resistE1} \cdot E2_{resistlocE1} = 8399.4 \cdot kN \cdot m$

Sum of the Overturning Moments about Point O @ Toe:

$$\Sigma M_{E1.OT} := \Sigma M_{DL.E1} + \Sigma M_{HWater.E1} + \Sigma M_{Vwater.E1.OT} + \Sigma M_{I.E1} + \Sigma M_{soil.E1} = 481125 \cdot kN \cdot m$$

Sum of Vertical Forces:

$$\Sigma V_{E1.OT} := \Sigma V_{DL.E1} + \Sigma V_{water.E1.OT} = 41777.2 \cdot kN$$

Distance X_R: EM 1110-2-2502 Eq.4-1

$$X_{R.E1} := \frac{\Sigma M_{E1.OT}}{\Sigma V_{E1.OT}} = 11.5 m$$

Overturning Resultant Ratio

$$Ratio_{Overturning.E1} := \frac{X_{R.E1}}{L_b} = 0.48$$

EM 1110-2-2502

Table 4-1

Retaining Wall Stability Criteria

Loading Condition	Sliding Factor of Safety, FS	Shear Strength Test Required: Soil Foundation	Shear Strength Test Required: Rock Foundation[3]	Overturning Criteria Minimum Base Area in Compression: Soil Foundation	Overturning Criteria Minimum Base Area in Compression: Rock Foundation
Usual	1.5	(Q &/or S)[2,1]	Direct shear	100%[4]	75%[4]
Unusual	1.33	(Q &/or S)[2,1]	Direct shear	75%[4]	50%[4]
Earthquake	1.1	(Q)	Direct shear	Resultant within base	Resultant within base

Overturning Stability Check

$$Ratio_{Overturning.E1.check} := \begin{cases} \text{"Okay"} & \text{if } Ratio_{Overturning.E1} \ge Ratio_{overturning.allow.Extreme} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases}$$

$$Ratio_{Overturning.E1.check} = \text{"Okay"}$$

MONOLITH OVERTURNING STABILITY ANALYSIS

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stability of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1 $Ratio_{overturning.allow.Extreme} = 0.167$

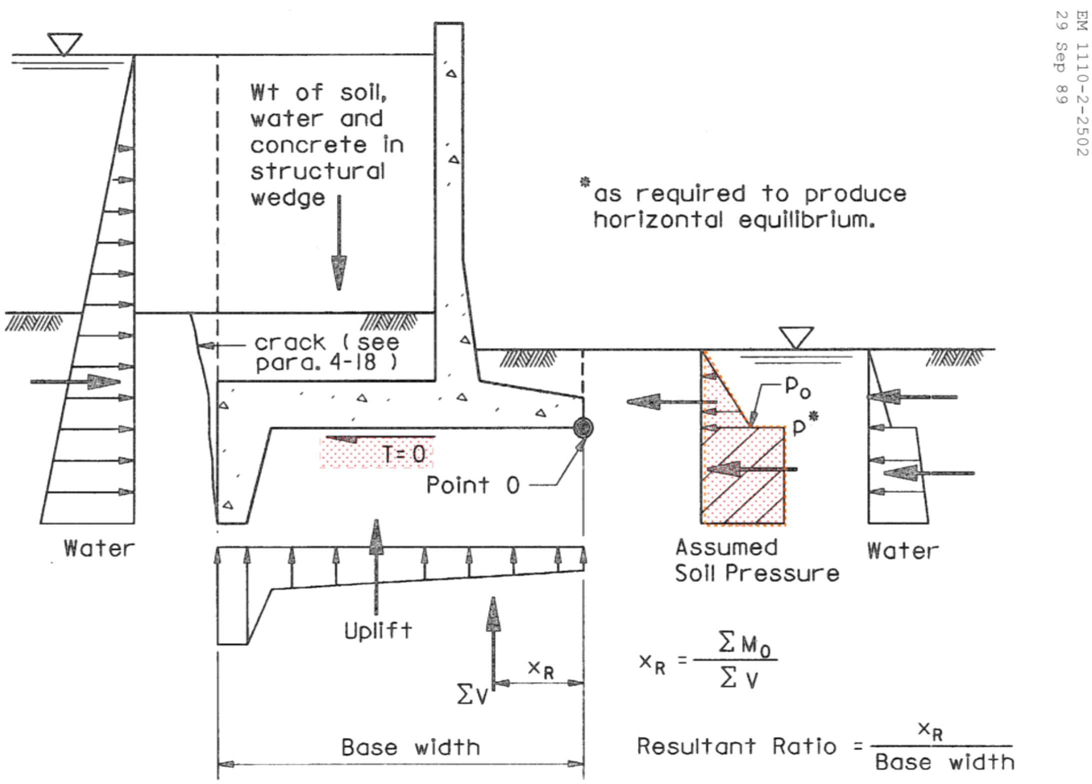

Figure 4-5. Forces for overturning analysis for wall with horizontal base and key

All Vertical Loads Applicable to Overturning Stability Analysis

Total Concrete Dead Loads:	$D_{conc} = 52182.8 \cdot kN$	at:	$X_{conc.loc} = 12.4\,m$
Dead Load of Gate:	$D_{Gate} = 580.0 \cdot kN$		$X_{gate} = 9.75\,m$
Water Weight (HW) on Apron Slab:	$H_{1.E2} = 3746.9 \cdot kN$		$H_{1.E2.loc} = 21.10\,m$
Water Weight (HW) on Fixed Crest:	$H_{2.E2} = 2687.5 \cdot kN$		$H_{2.E2.loc} = 14.34\,m$
Water Weight (TW) on Fixed Crest:	$H_{3.E2} = 2579.8 \cdot kN$		$H_{3.E2.loc} = 5.69\,m$

Uplift Force from Sliding Analysis. Line of Creep Method applied at presumed inclined sliding line, and subtraction gravity effect to Base of Concrete by Archimedes Principle

$$U_{E2.loc.sliding} := \frac{U_{A.E2} \cdot L_{A.E2} + U_{B.E2} \cdot L_{B.E2} - A_{rs} \cdot w_{as} \cdot \gamma_w \cdot L_{rs}}{U_{A.E2} + U_{B.E2} - A_{rs} \cdot w_{as} \cdot \gamma_w} = 13.79\,m$$

$$U_{E2.sliding} := U_{E2} + A_{rs} \cdot w_{as} \cdot \gamma_w = -21665.6 \cdot kN$$

E2 CASE

Uplift for Overturning Analysis, Line of Creep Method. Pore pressure at base of Concrete

$Uplift_{pore.E1} = -19247 \cdot kN$

$$Uplift_{pore.E2.loc} := \frac{Uplift_{BC.E2} \cdot Uplift_{BC.E2.loc} + Uplift_{DE.E2} \cdot Uplift_{DE.E2.loc} + Uplift_{EF.E2} \cdot Uplift_{EF.E2.loc} + Uplift_{FG.E2} \cdot Uplift_{FG.E2.loc}}{Uplift_{pore.E2}}$$

$Uplift_{pore.E2.loc} = 13.2\,m$

Sum of All Water Load for Overturning Analysis

$\Sigma V_{water.E2.OT} := H_{1.E2} + H_{2.E2} + H_{3.E2} + Uplift_{pore.E2} = -11559.4 \cdot kN$

<u>All Lateral Loads Applicable to Overturning Stability Analysis</u>

Apply Load to Gate?: $poss_{E2} = 0$ — poss = 1 if gate is closed, 0 if gate is open

Headwater Lateral Load on Pier: $H_{hwp.E2} = -854.6 \cdot kN$ — $H_{hwp.E2.loc} = 6.70\,m$

Headwater Lateral Load on Gate: $H_{hwg.E2} = 0.0 \cdot kN$ — $H_{hwg.E2.loc} = 7.70\,m$

Headwater Lateral Load on Footing: $H_{hwf.E2} = -8464.8 \cdot kN$ — $H_{hwf.E2.loc} = 1.72\,m$

Total Horizontal Tailwater Load on Pier: $H_{twp.E2} = 542.8 \cdot kN$ — $H_{twp.E2.loc} = 0.25\,m$

Total Horizontal Tailwater Load on Footing under Gate Openings, i.e., excluding Pier: $H_{twf.E2} = 1221.4 \cdot kN$ — $H_{twf.E2.loc} = 0.25\,m$

Resisting Water on Rear Face of Monolith, i.e., bottom of heel elevation: *(Point O @ TOE: BOFtoe = EL.1205.5)*

Ice / Impact Load: $I_{E2} = -2100.0 \cdot kN$ at: $I_{E2.loc} = 10.80\,m$

Depth of Fill at Heel Side for Overturning Analysis:

$t_{hf.E1} := TOC_{as} - BOF_{toe} = 4.50\,m$

Driving Soil Load for overturning:

$$E1_{drive.E2} := \frac{K_o \cdot t_{hf.E2}^{\,2}}{2} \cdot (\gamma_r - \gamma_w) \cdot W_b \cdot -1 = -1055.7 \cdot kN$$

Acting at:

$$E1_{drive.loc.E2} := \frac{t_{hf.E2}}{3} = 1.50\,m$$

Downstream (resisting) Lateral Soil Load as required to produce horizontal equilibrium:

$$E2_{resistE2} := -1 \cdot \left(H_{hwp.E2} + H_{hwg.E2} + H_{hwf.E2} + H_{twp.E2} + H_{twf.E2} + I_{E2} + E1_{drive.E2}\right)$$

$E2_{resistE2} = 10711 \cdot kN$

Assumed Resisting Bedrock at middle of Key, passive soil pressure or lateral bearing contract joint at end of Monolith 3A3B

$E2_{resistlocE2} := E2_{resistlocU1} = -0.75\,m$

Overturning moment by Dead Loads about Point O @ Toe

$\Sigma M_{DL.E2} = 654229.9 \cdot kN \cdot m$

Overturning moment by Vertical Water Loads and Uplift, about Point O @ Toe

$$\Sigma M_{Vwater.E2.OT} := H_{1.E2} \cdot H_{1.E2.loc} + H_{2.E2} \cdot H_{2.E2.loc} + H_{3.E2} \cdot H_{3.E2.loc} + Uplift_{pore.E2} \cdot Uplift_{pore.E2.loc} = -140143.4 \cdot kN \cdot m$$

Overturning moment by Lateral Hydrostatic Forces of Headwater Pool and Tailwater Pool,about Point O @ Toe

$\Sigma M_{HWater.E1} = -57418.4 \cdot kN \cdot m$

Overturning Moment by Impact/Ice Load, about Point O@ Toe

$\Sigma M_{I.E2} = -22680 \cdot kN \cdot m$

Overturning moment by Lateral Soil Forces about Point O @ Toe

$\Sigma M_{soil.E2} := E1_{drive.E2} \cdot E1_{drive.loc.E2} \cdots + E2_{resistE2} \cdot E2_{resistlocE2} = -9616.8 \cdot kN \cdot m$

Sum of the Overturning Moments about Point O @ Toe:

$$\Sigma M_{E2.OT} := \Sigma M_{DL.E2} + \Sigma M_{HWater.E2} + \Sigma M_{Vwater.E2.OT} + \Sigma M_{I.E2} + \Sigma M_{soil.E2} = 461948 \cdot kN \cdot m$$

Sum of Vertical Forces:

$$\Sigma V_{E2.OT} := \Sigma V_{DL.E2} + \Sigma V_{water.E2.OT} = 41203.5 \cdot kN$$

Distance X_R: EM 1110-2-2502 Eq.4-1

$$X_{R.E2} := \frac{\Sigma M_{E2.OT}}{\Sigma V_{E2.OT}} = 11.2 m$$

Overturning Resultant Ratio

$$Ratio_{Overturning.E2} := \frac{X_{R.E2}}{L_b} = 0.46$$

EM 1110-2-2502

Table 4-1

Retaining Wall Stability Criteria

Loading Condition	Sliding Factor of Safety, FS	Shear Strength Test Required: Soil Foundation	Shear Strength Test Required: Rock Foundation[3]	Overturning Criteria Minimum Base Area in Compression: Soil Foundation	Overturning Criteria Minimum Base Area in Compression: Rock Foundation

MONOLITH OVERTURNING STABILITY ANALYSIS

E3.1 CASE

Seismic Case $Q_{E3.1}$: 100% Horizontal Seismic Force, No Vertical

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.

Assumptions are made in order to compute overturning stability of indetermine forces on monolith with key;

(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.

(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium

(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1

$Ratio_{overturning.allow.Extreme} := 0.167$

Resultant within Middle Half

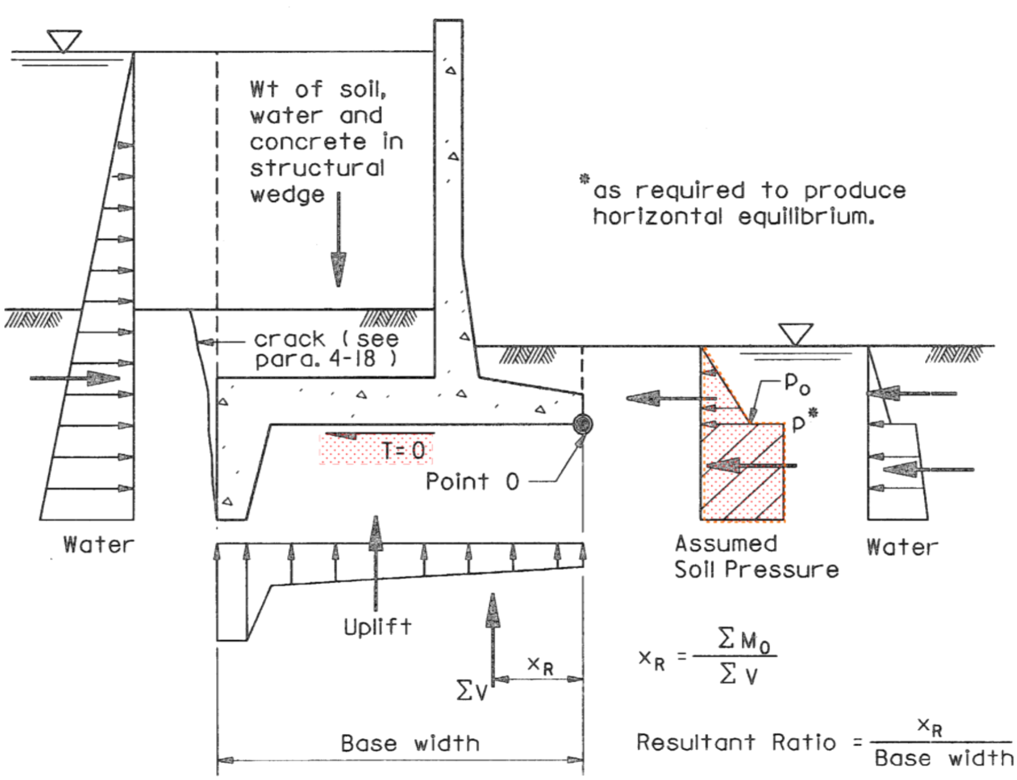

Figure 4-5. Forces for overturning analysis for wall with horizontal base and key

All Vertical Loads Applicable to Overturning Stability Analysis

Total Concrete Dead Loads:	$D_{conc} = 52182.8 \cdot kN$	at:	$X_{conc.loc} = 12.43\,m$
Dead Load of Gate:	$D_{Gate} = 580.0 \cdot kN$		$X_{gate} = 9.75\,m$
Water Weight (HW) on Apron Slab:	$H_{1.U1} = 1238.5 \cdot kN$		$H_{1.U1.loc} = 21.10\,m$
Water Weight (HW) on Fixed Crest:	$H_{2.U1} = 439.7 \cdot kN$		$H_{2.U1.loc} = 14.25\,m$
Water Weight (TW) on Fixed Crest:	$H_{3.U1} = 0.0 \cdot kN$		$H_{3.U1.loc} = 0.00\,m$
Vertical Seismic Component of Concrete Structure:	$Q_{conc.E3.EQv.1} = 0$	at:	$X_{conc.loc} = 12.43\,m$
Vertical Seismic Component of Vertical Lift Gate:	$Q_{Gate.E3.EQv.1} = 0$		$X_{gate} = 9.75\,m$
Vertical Seismic Component of Headwater over Apron Slab:	$Q_{H1.E3.EQv.1} = 0$		$H_{1.U1.loc} = 21.10\,m$
Vertical Seismic Component of Headwater over Fixed Crest Slab:	$Q_{H2.E3.EQv.1} = 0$		$H_{2.U1.loc} = 14.25\,m$

E3.1 CASE

Uplift for Overturning Analysis, Line of Creep Method. Pore pressure at base of Concrete, first calculation to presumed inclined straight line from Heel to Toe, thereafter by Archimedes Principle.

$$U_{E3.1.loc.sliding} := \frac{U_{A.U1} \cdot L_{A.U1} + U_{B.U1} \cdot L_{B.U1} - A_{rs} \cdot w_{as} \cdot \gamma_w \cdot L_{rs}}{U_{A.U1} + U_{B.U1} - A_{rs} \cdot w_{as} \cdot \gamma_w} = 13.76\,m$$

$$U_{E3.1.sliding} := U_{U1} + A_{rs} \cdot w_{as} \cdot \gamma_w = -12005.7 \cdot kN$$

Uplift for Overturning Analysis, Line of Creep Method. Pore pressure at base of Concrete $\quad Uplift_{pore.U1} = -11398 \cdot kN$

$$Uplift_{pore.E3.1.loc} := \frac{Uplift_{BC.U1} \cdot Uplift_{BC.U1.loc} + Uplift_{DE.U1} \cdot Uplift_{DE.U1.loc} + Uplift_{EF.U1} \cdot Uplift_{EF.U1.loc} + Uplift_{FG.U1} \cdot Uplift_{FG.U1.loc}}{Uplift_{pore.U1}}$$

$$Uplift_{pore.E3.1.loc} = 13.1\,m$$

Sum of All Water Load for Overturning Analysis $\quad \Sigma V_{water.E3.1.OT} := H_{1.U1} + H_{2.U1} + H_{3.U1} + Uplift_{pore.U1} = -9719.8 \cdot kN$

<u>All Lateral Loads Applicable to Overturning Stability Analysis</u>

Apply Load to Gate?: $\quad poss_{U1} = 1 \quad$ poss = 1 if gate is closed; 0 if gate is open

Headwater Lateral Load on Pier: $\quad H_{hwp.U1} = -86.5 \cdot kN \quad$ at: $\quad H_{hwp.U1.loc} = 5.20\,m$

Headwater Lateral Load on Gate: $\quad H_{hwg.U1} = -35.3 \cdot kN \quad H_{hwg.U1.loc} = 6.20\,m$

Headwater Lateral Load on Footing: $\quad H_{hwf.U1} = -4160.7 \cdot kN \quad H_{hwf.U1.loc} = 1.17\,m$

Total Horizontal Tailwater Load on Pier: $\quad H_{twp.U1} = 240.3 \cdot kN \quad H_{twp.U1.loc} = -0.33\,m$

Total Horizontal Tailwater Load on Footing under Gate Openings, i.e., excluding Pier $\quad H_{twf.U1} = 540.8 \cdot kN \quad H_{twf.U1.loc} = -0.33\,m$

Resisting Water on Rear Face of Monolith, i.e., bottom of heel elevation:

(Point O @ TOE: BOFtoe = EL.1205.5)

Horizontal Seismic Component of Concrete Structure: $\quad Q_{conc.E3.EQh.1} = -9045 \cdot kN \quad$ AT $\quad Y_{conc.loc} = 6.21\,m$

Horizontal Seismic Component of Vertical Lift Gate: $\quad Q_{Gate.E3.EQh.1} = -100.5 \cdot kN \quad Y_{gate} = 8.00\,m$

Horizontal Seismic Component of Headwater on Pier: $\quad Q_{hwp.E3.EQh.1} = -17.5 \cdot kN \quad Y_{HWp.E3} = 5.3\,m$

Horizontal Seismic Component of Headwater on Gate: $\quad Q_{hwg.E3.EQh.1} = -7.1 \cdot kN \quad Y_{HWg.E3} = 6.2\,m$

Horizontal Seismic Component of Headwater on Footing: $\quad Q_{hwf.E3.EQh.1} = -846 \cdot kN \quad Y_{HWf.E3} = 2.4\,m$

Horizontal Seismic Component of Active Soil: (Section 5-5, USACE EM_1110-2-2100) $\quad Q_{act.E3.EQh.1} = -1784.6 \cdot kN \quad Y_{E.act.E3} = 2.8\,m$

Ice / Impact Load: $\quad I_{U1} = -2100.0 \cdot kN \quad$ at: $\quad I_{U1.loc} = 6.30\,m$

Depth of Fill at Heel Side for Overturning Analysis (neglecting resistance by driving below Point O): $\quad t_{hf.E3.1} := TOC_{as} - BOF_{toe} = 4.50\,m$

Driving Soil Load for overturning:

$$E1_{drive.E3.1} := \frac{K_o \cdot t_{hf.U1}^{\,2}}{2} \cdot \left(\gamma_r - \gamma_w\right) \cdot W_b \cdot -1 = -1055.7 \cdot kN$$

Acting at:

$$E1_{drive.loc.E3.1} := \frac{t_{hf.E3.1}}{3} = 1.50\,m$$

Downstream (resisting) Lateral Soil Load as required to produce horizontal equilibrium:

$$E2_{resistE3.1} := -1\cdot\left(H_{hwp.U1} + H_{hwg.U1} + H_{hwf.U1} + H_{twp.U1} + H_{twf.U1} + I_{U1} + E1_{drive.U1}\right) = 6657.1\cdot kN$$

Assumed Resisting Bedrock at middle of Key, passive soil pressure or lateral bearing contract joint at end of Monolith 3A3B

$$E2_{resistlocE3.1} := E2_{resistlocU1} = -0.75\,m$$

Overturning moment by Dead Loads about Point O @ Toe

$$\Sigma M_{DL.U1} = 651119.6\cdot kN\cdot m$$

Overturning moment by Vertical Water Loads and Uplift, about Point O @ Toe

$$\Sigma M_{Vwater.U1} = -212822.7\cdot kN\cdot m$$

Overturning moment by Lateral Hydrostatic Forces of Headwater Pool and Tailwater Pool,about Point O @ Toe

$$\Sigma M_{HWater.U1} = -5807.3\cdot kN\cdot m$$

Overturning Moment by Impact/Ice Load, about Point O@ Toe

$$\Sigma M_{I.U1} = -13230\cdot kN\cdot m$$

Overturning moment by Lateral Soil Forces about Point O @ Toe

$$\Sigma M_{soil.E3.1} := E1_{drive.E3.1}\cdot E1_{drive.loc.E3.1} + E2_{resistE3.1}\cdot E2_{resistlocE3.1} = -6576.4\cdot kN\cdot m$$

Sum of the Overturning Moments about Point O @ Toe:

$$\Sigma M_{E3.1.OT} := \Sigma M_{DL.U1} + \Sigma M_{HWater.U1} + \Sigma M_{Vwater.U1.OT} + \Sigma M_{I.U1} + \Sigma M_{soil.E3.1} + \Sigma M_{Q.E3.1} = 444279\cdot kN\cdot m$$

Sum of Vertical Forces:

$$\Sigma V_{E3.1.OT} := \Sigma V_{DL.U1} + \Sigma V_{water.U1.OT} + \left|\Sigma V_{Q.E3.EQv.1}\right| = 42724.0\cdot kN$$

Distance X_R: EM 1110-2-2502 Eq.4-1

$$X_{R.E3.1} := \frac{\Sigma M_{E3.1.OT}}{\Sigma V_{E3.1.OT}} = 10.4\,m$$

Overturning Resultant Ratio

$$Ratio_{Overturning.E3.1} := \frac{X_{R.E3.1}}{L_b} = 0.43$$

EM 1110-2-2502

Table 4-1

MONOLITH OVERTURNING STABILITY ANALYSIS

E4.1 CASE

Seismic Case $Q_{E3.1}$: 100% Horizontal Seismic Force, No Vertical

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stability of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1 $Ratio_{overturning.allow.Extreme} = 0.167$ Resultant within Base

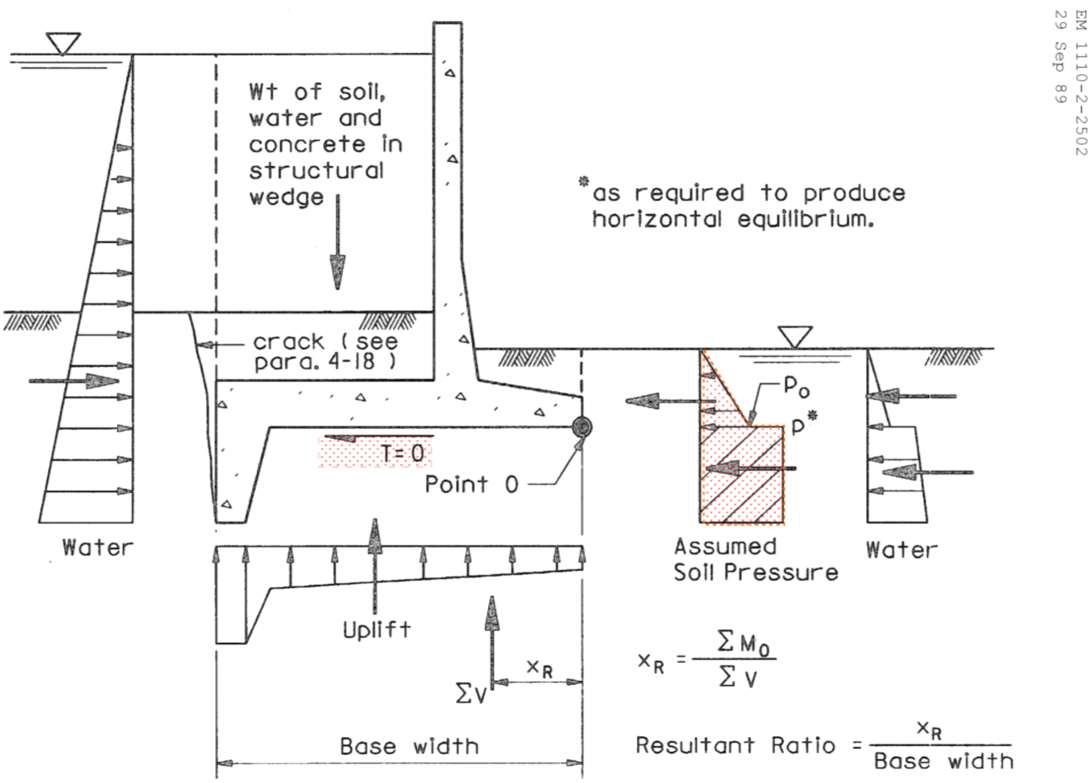

Figure 4-5. Forces for overturning analysis for wall with horizontal base and key

All Vertical Loads Applicable to Overturning Stability Analysis

Total Concrete Dead Loads:	$D_{conc} = 52182.8 \cdot kN$	at:	$X_{conc.loc} = 12.43\,m$
Dead Load of Gate:	$D_{Gate} = 580.0 \cdot kN$		$X_{gate} = 9.75\,m$
Water Weight (HW) on Apron Slab:	$H_{1.U2} = 3320.9 \cdot kN$		$H_{1.U2.loc} = 21.10\,m$
Water Weight (HW) on Fixed Crest:	$H_{2.U2} = 2569.2 \cdot kN$		$H_{2.U2.loc} = 14.41\,m$
Water Weight (TW) on Fixed Crest:	$H_{3.U2} = 2106.6 \cdot kN$		$H_{3.U2.loc} = 5.78\,m$
Vertical Seismic Component of Concrete Structure:	$Q_{conc.E4.EQv.1} = 0$	at:	$X_{conc.loc} = 12.43\,m$
Vertical Seismic Component of Vertical Lift Gate:	$Q_{Gate.E4.EQv.1} = 0$		$X_{gate} = 9.75\,m$
Vertical Seismic Component of Headwater over Apron Slab:	$Q_{H1.E4.EQv.1} = 0$		$H_{1.U2.loc} = 21.10\,m$
Vertical Seismic Component of Headwater over Fixed Crest Slab:	$Q_{H2.E4.EQv.1} = 0$		$H_{2.U2.loc} = 14.41\,m$

E4.1 CASE

Uplift for Overturning Analysis, Line of Creep Method. Pore pressure at base of Concrete, first calculation to presumed inclined straight line from Heel to Toe, thereafter by Archimedes Principle.

$$U_{E4.1.loc.sliding} := \frac{U_{A.U2} \cdot L_{A.U2} + U_{B.U2} \cdot L_{B.U2} - A_{rs} \cdot w_{as} \cdot \gamma_w \cdot L_{rs}}{U_{A.U2} + U_{B.U2} - A_{rs} \cdot w_{as} \cdot \gamma_w} = 13.84\,m$$

$$U_{E4.1.sliding} := U_{U2} + A_{rs} \cdot w_{as} \cdot \gamma_w = -19705.8 \cdot kN$$

Uplift for Overturning Analysis, Line of Creep Method. Pore pressure at base of Concrete $\quad Uplift_{pore.U1} = -11398 \cdot kN$

$$Uplift_{pore.E4.1.loc} := \frac{Uplift_{BC.U2} \cdot Uplift_{BC.U2.loc} + Uplift_{DE.U2} \cdot Uplift_{DE.U2.loc} + Uplift_{EF.U2} \cdot Uplift_{EF.U2.loc} + Uplift_{FG.U2} \cdot Uplift_{FG.U2.loc}}{Uplift_{pore.U2}}$$

$$Uplift_{pore.E4.1.loc} = 13.3\,m$$

Sum of All Water Load for Overturning Analysis $\quad \Sigma V_{water.E4.1.OT} := H_{1.U1} + H_{2.U1} + H_{3.U1} + Uplift_{pore.U2} = -16995.1 \cdot kN$

All Lateral Loads Applicable to Overturning Stability Analysis

Apply Load to Gate?: $\quad poss_{U1} = 1 \quad$ poss = 1 if gate is closed, 0 if gate is open

Headwater Lateral Load on Pier: $\quad H_{hwp.U2} = -662.3 \cdot kN \quad$ at: $\quad H_{hwp.U2.loc} = 6.44\,m$

Headwater Lateral Load on Gate: $\quad H_{hwg.U2} = 0.0 \cdot kN \quad H_{hwg.U2.loc} = 7.44\,m$

Headwater Lateral Load on Footing: $\quad H_{hwf.U2} = -7709.2 \cdot kN \quad H_{hwf.U2.loc} = 1.67\,m$

Total Horizontal Tailwater Load on Pier: $\quad H_{twp.U2} = 448.3 \cdot kN \quad H_{twp.U2.loc} = 0.09\,m$

Total Horizontal Tailwater Load on Footing under Gate Openings, i.e., excluding Pier $\quad H_{twf.U2} = 1008.6 \cdot kN \quad H_{twf.U2.loc} = 0.09\,m$

Resisting Water on Rear Face of Monolith, i.e., bottom of heel elevation: $\quad$ *(Point O @ TOE: BOFtoe = EL.1205.5)*

Horizontal Seismic Component of Concrete Structure: $\quad Q_{conc.E4.EQh.1} = -9045 \cdot kN \quad$ AT $\quad Y_{conc.loc} = 6.21\,m$

Horizontal Seismic Component of Vertical Lift Gate: $\quad Q_{Gate.E4.EQh.1} = -100.5 \cdot kN \quad Y_{gate} = 8.00\,m$

Horizontal Seismic Component of Headwater on Pier: $\quad Q_{hwp.E4.EQh.1} = -133.9 \cdot kN \quad Y_{HWp.E4} = 6.8\,m$

Horizontal Seismic Component of Headwater on Gate: $\quad Q_{hwg.E4.EQh.1} = 0 \quad Y_{HWg.E4} = 7.7\,m$

Horizontal Seismic Component of Headwater on Footing: $\quad Q_{hwf.E4.EQh.1} = -1798.5 \cdot kN \quad Y_{HWf.E4} = 2.4\,m$

Horizontal Seismic Component of Active Soil: (Section 5-5, USACE EM_1110-2-2100) $\quad Q_{act.E4.EQh.1} = -1784.6 \cdot kN \quad Y_{E.act.E4} = 2.8\,m$

Ice / Impact Load: $\quad I_{U2} = -2100.0 \cdot kN \quad$ at: $\quad I_{U2.loc} = 10.01\,m$

Depth of Fill at Heel Side for Overturning Analysis (neglecting resistance by driving below Point O): $\quad t_{hf.E4.1} := TOC_{as} - BOF_{toe} = 4.50\,m$

Driving Soil Load for overturning: $\quad E1_{drive.E4.1} := \frac{K_o \cdot t_{hf.U2}^{\ 2}}{2} \cdot (\gamma_r - \gamma_w) \cdot W_b \cdot -1 = -1055.7 \cdot kN$

Acting at: $\quad E1_{drive.loc.E4.1} := \frac{t_{hf.E4.1}}{3} = 1.50\,m$

E4.1 CASE

Downstream (resisting) Lateral Soil Load as required to produce horizontal equilibrium:

$$E2_{resistE4.1} := -1 \cdot \left(H_{hwp.U2} + H_{hwg.U2} + H_{hwf.U2} + H_{twp.U2} + H_{twf.U2} + I_{U2} + E1_{drive.U2}\right) = 10070.3 \cdot kN$$

Assumed Resisting Bedrock at middle of Key, passive soil pressure or lateral bearing contract joint at end of Monolith 3A3B

$$E2_{resistlocE4.1} := E2_{resistlocU2} = -0.75\,m$$

Overturning moment by Dead Loads about Point O @ Toe

$$\Sigma M_{DL.U2} = 654229.9 \cdot kN \cdot m$$

Overturning moment by Vertical Water Loads and Uplift, about Point O @ Toe

$$\Sigma M_{Vwater.U2} = -234242.4 \cdot kN \cdot m$$

Overturning moment by Lateral Hydrostatic Forces of Headwater Pool and Tailwater Pool,about Point O @ Toe

$$\Sigma M_{HWater.U2} = -16989.2 \cdot kN \cdot m$$

Overturning Moment by Impact/Ice Load, about Point O@ Toe

$$\Sigma M_{I.U2} = -21021 \cdot kN \cdot m$$

Overturning moment by Lateral Soil Forces about Point O @ Toe

$$\Sigma M_{soil.E4.1} := E1_{drive.E4.1} \cdot E1_{drive.loc.E4.1} \ldots + E2_{resistE4.1} \cdot E2_{resistlocE4.1} = -9136.3 \cdot kN \cdot m$$

Sum of the Overturning Moments about Point O @ Toe:

$$\Sigma M_{E4.1.OT} := \Sigma M_{DL.U2} + \Sigma M_{HWater.U2} + \Sigma M_{Vwater.U2.OT} + \Sigma M_{I.U2} + \Sigma M_{soil.E4.1} + \Sigma M_{Q.E4.1} = 410713 \cdot kN \cdot m$$

Sum of Vertical Forces:

$$\Sigma V_{E4.1.OT} := \Sigma V_{DL.U2} + \Sigma V_{water.U2.OT} + \left|\Sigma V_{Q.E4.EQv.1}\right| = 42086.2 \cdot kN$$

Distance X_R: EM 1110-2-2502 Eq.4-1

$$X_{R.E4.1} := \frac{\Sigma M_{E4.1.OT}}{\Sigma V_{E4.1.OT}} = 9.8\,m$$

Overturning Resultant Ratio

$$Ratio_{Overturning.E4.1} := \frac{X_{R.E4.1}}{L_b} = 0.40$$

EM 1110-2-2502

MONOLITH OVERTURNING STABILITY ANALYSIS

Seismic Case $Q_{E3.2}$: 100% Horizontal Seismic Force, 30% Vertical

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.

Assumptions are made in order to compute overturning stability of indetermine forces on monolith with key;

(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.

(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium

(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1 $Ratio_{overturning.allow.Extreme} := 0.167$ Resultant within Middle Half

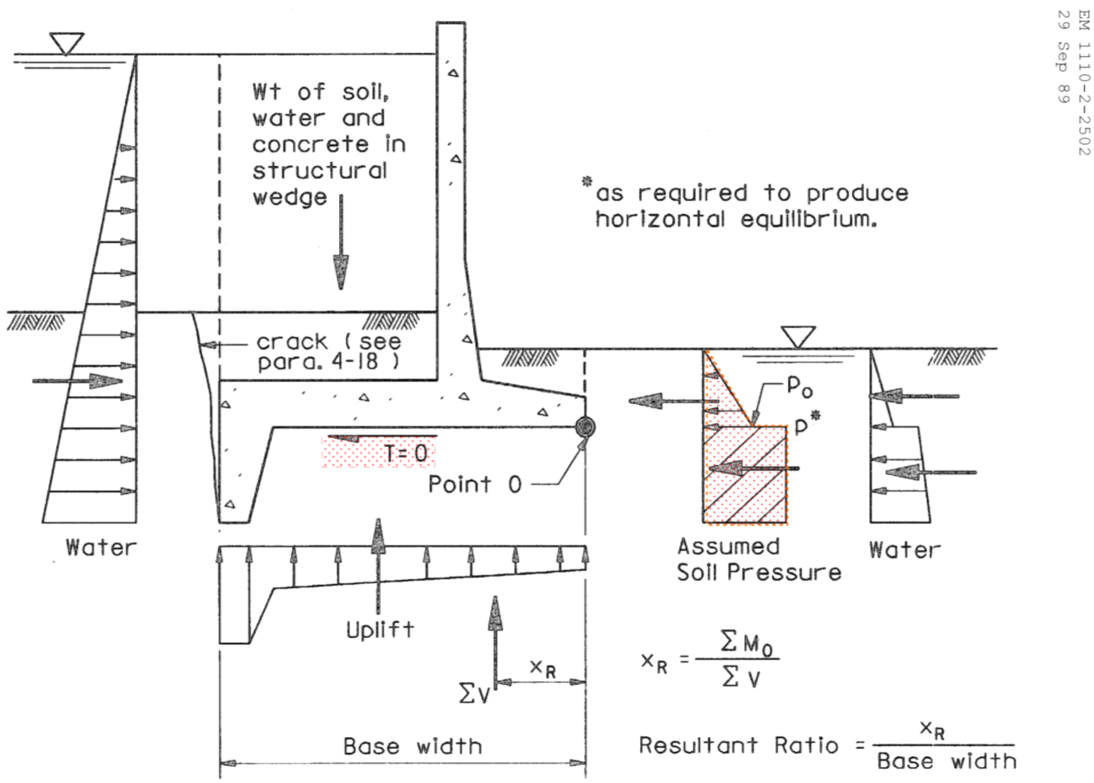

Figure 4-5. Forces for overturning analysis for wall with horizontal base and key

All Vertical Loads Applicable to Overturning Stability Analysis

Total Concrete Dead Loads:	$D_{conc} = 52182.8 \cdot kN$	at:	$X_{conc.loc} = 12.43\,m$
Dead Load of Gate:	$D_{Gate} = 580.0 \cdot kN$		$X_{gate} = 9.75\,m$
Water Weight (HW) on Apron Slab:	$H_{1.U1} = 1238.5 \cdot kN$		$H_{1.U1.loc} = 21.10\,m$
Water Weight (HW) on Fixed Crest:	$H_{2.U1} = 439.7 \cdot kN$		$H_{2.U1.loc} = 14.25\,m$
Water Weight (TW) on Fixed Crest:	$H_{3.U1} = 0.0 \cdot kN$		$H_{3.U1.loc} = 0.00\,m$

Vertical Seismic Component of Concrete Structure:	$Q_{conc.E3.EQv.2} = -1519.6 \cdot kN$	at:	$X_{conc.loc} = 12.43\,m$
Vertical Seismic Component of Vertical Lift Gate:	$Q_{Gate.E3.EQv.2} = -16.9 \cdot kN$		$X_{gate} = 9.75\,m$
Vertical Seismic Component of Headwater over Apron Slab:	$Q_{H1.E3.EQv.2} = -36.1 \cdot kN$		$H_{1.U1.loc} = 21.10\,m$
Vertical Seismic Component of Headwater over Fixed Crest Slab:	$Q_{H2.E3.EQv.2} = -12.8 \cdot kN$		$H_{2.U1.loc} = 14.25\,m$

E3.2 CASE

Uplift for Overturning Analysis, Line of Creep Method. Pore pressure at base of Concrete, first calculation to presumed inclined straight line from Heel to Toe, thereafter by Archimedes Principle.

$$U_{E3.2.loc.sliding} := \frac{U_{A.U1} \cdot L_{A.U1} + U_{B.U1} \cdot L_{B.U1} - A_{rs} \cdot w_{as} \cdot \gamma_w \cdot L_{rs}}{U_{A.U1} + U_{B.U1} - A_{rs} \cdot w_{as} \cdot \gamma_w} = 13.76\,m$$

$$U_{E3.2.sliding} := U_{U1} + A_{rs} \cdot w_{as} \cdot \gamma_w = -12005.7 \cdot kN$$

Uplift for Overturning Analysis, Line of Creep Method. Pore pressure at base of Concrete $\quad Uplift_{pore.U1} = -11398 \cdot kN$

$$Uplift_{pore.E3.2.loc} := \frac{Uplift_{BC.U1} \cdot Uplift_{BC.U1.loc} + Uplift_{DE.U1} \cdot Uplift_{DE.U1.loc} + Uplift_{EF.U1} \cdot Uplift_{EF.U1.loc} + Uplift_{FG.U1} \cdot Uplift_{FG.U1.loc}}{Uplift_{pore.U1}}$$

$$Uplift_{pore.E3.2.loc} = 13.1\,m$$

Sum of All Water Load for Overturning Analysis $\quad \Sigma V_{water.E3.2.OT} := H_{1.U1} + H_{2.U1} + H_{3.U1} + Uplift_{pore.U1} = -9719.8 \cdot kN$

All Lateral Loads Applicable to Overturning Stability Analysis

Apply Load to Gate?:	$poss_{U1} = 1$		poss = 1 if gate is closed 0 if gate is open
Headwater Lateral Load on Pier:	$H_{hwp.U1} = -86.5 \cdot kN$	at:	$H_{hwp.U1.loc} = 5.20\,m$
Headwater Lateral Load on Gate:	$H_{hwg.U1} = -35.3 \cdot kN$		$H_{hwg.U1.loc} = 6.20\,m$
Headwater Lateral Load on Footing:	$H_{hwf.U1} = -4160.7 \cdot kN$		$H_{hwf.U1.loc} = 1.17\,m$
Total Horizontal Tailwater Load on Pier:	$H_{twp.U1} = 240.3 \cdot kN$		$H_{twp.U1.loc} = -0.33\,m$
Total Horizontal Tailwater Load on Footing under Gate Openings, i.e., excluding Pier	$H_{twf.U1} = 540.8 \cdot kN$		$H_{twf.U1.loc} = -0.33\,m$
Resisting Water on Rear Face of Monolith, i.e., bottom of heel elevation:			*(Point O @ TOE: BOFtoe = EL.1205.5)*
Horizontal Seismic Component of Concrete Structure:	$Q_{conc.E3.EQh.2} = -9045 \cdot kN$	AT	$Y_{conc.loc} = 6.21\,m$
Horizontal Seismic Component of Vertical Lift Gate:	$Q_{Gate.E3.EQh.2} = -100.5 \cdot kN$		$Y_{gate} = 8.00\,m$
Horizontal Seismic Component of Headwater on Pier:	$Q_{hwp.E3.EQh.2} = -17.5 \cdot kN$		$Y_{HWp.E3} = 5.3\,m$
Horizontal Seismic Component of Headwater on Gate:	$Q_{hwg.E3.EQh.2} = -7.1 \cdot kN$		$Y_{HWg.E3} = 6.2\,m$
Horizontal Seismic Component of Headwater on Footing:	$Q_{hwf.E3.EQh.2} = -846 \cdot kN$		$Y_{HWf.E3} = 2.4\,m$
Horizontal Seismic Component of Active Soil: (Section 5-5, USACE EM_1110-2-2100)	$Q_{act.E3.EQh.2} = -1784.6 \cdot kN$		$Y_{E.act.E3} = 2.8\,m$
Ice / Impact Load:	$I_{U1} = -2100.0 \cdot kN$	at:	$I_{U1.loc} = 6.30\,m$

Depth of Fill at Heel Side for Overturning Analysis (neglecting resistance by driving below Point O): $\quad t_{hf.E3.2} := TOC_{as} - BOF_{toe} = 4.50\,m$

Driving Soil Load for overturning:

$$E1_{drive.E3.2} := \frac{K_o \cdot t_{hf.U1}^{\,2}}{2} \cdot \left(\gamma_r - \gamma_w\right) \cdot W_b \cdot -1 = -1055.7 \cdot kN$$

Acting at:

$$E1_{drive.loc.E3.2} := \frac{t_{hf.E3.2}}{3} = 1.50\,m$$

Downstream (resisting) Lateral Soil Load as required to produce horizontal equilibrium:

$$E2_{resistE3.2} := -1\cdot\left(H_{hwp.U1} + H_{hwg.U1} + H_{hwf.U1} + H_{twp.U1} + H_{twf.U1} + I_{U1} + E1_{drive.U1}\right) = 6657.1\cdot kN$$

Assumed Resisting Bedrock at middle of Key, passive soil pressure or lateral bearing contract joint at end of Monolith 3A3B

$$E2_{resistlocE3.2} := E2_{resistlocU1} = -0.75\,m$$

Overturning moment by Dead Loads about Point O @ Toe

$$\Sigma M_{DL.U1} = 651119.6\cdot kN\cdot m$$

Overturning moment by Vertical Water Loads and Uplift, about Point O @ Toe

$$\Sigma M_{Vwater.U1} = -212822.7\cdot kN\cdot m$$

Overturning moment by Lateral Hydrostatic Forces of Headwater Pool and Tailwater Pool,about Point O @ Toe

$$\Sigma M_{HWater.U1} = -5807.3\cdot kN\cdot m$$

Overturning Moment by Impact/Ice Load, about Point O@ Toe

$$\Sigma M_{I.U1} = -13230\cdot kN\cdot m$$

Overturning moment by Lateral Soil Forces about Point O @ Toe

$$\Sigma M_{soil.E3.2} := E1_{drive.E3.3}\cdot E1_{drive.loc.E3.3} \cdots + E2_{resistE3.2}\cdot E2_{resistlocE3.2} = -6576.4\cdot kN\cdot m$$

Sum of the Overturning Moments about Point O @ Toe:

$$\Sigma M_{E3.2.OT} := \Sigma M_{DL.U1} + \Sigma M_{HWater.U1} + \Sigma M_{Vwater.U1.OT} + \Sigma M_{I.U1} + \Sigma M_{soil.E3.2} + \Sigma M_{Q.E3.2} = 424284\cdot kN\cdot m$$

Sum of Vertical Forces:

$$\Sigma V_{E3.2.OT} := \Sigma V_{DL.U1} + \Sigma V_{water.U1.OT} + \left|\Sigma V_{Q.E3.EQv.2}\right| = 44309.4\cdot kN$$

Distance X_R: EM 1110-2-2502 Eq.4-1

$$X_{R.E3.2} := \frac{\Sigma M_{E3.2.OT}}{\Sigma V_{E3.2.OT}} = 9.6\,m$$

Overturning Resultant Ratio

$$Ratio_{Overturning.E3.2} := \frac{X_{R.E3.2}}{L_b} = 0.4$$

EM 1110-2-2502

Table 4-1

E4.2 CASE

MONOLITH OVERTURNING STABILITY ANALYSIS

Seismic Case $Q_{E4.2}$: 100% Horizontal Seismic Force, 30% Vertical

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stability of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1 $Ratio_{overturning.allow.Extreme} = 0.167$

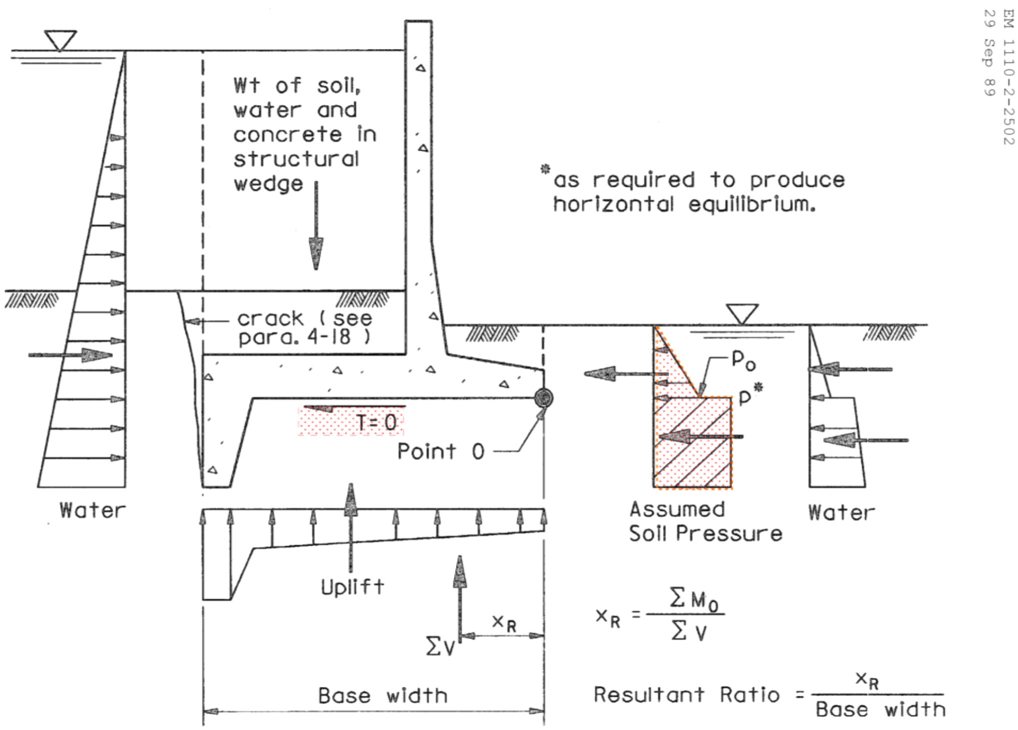

Figure 4-5. Forces for overturning analysis for wall with horizontal base and key

All Vertical Loads Applicable to Overturning Stability Analysis

Total Concrete Dead Loads:	$D_{conc} = 52182.8 \cdot kN$	at:	$X_{conc.loc} = 12.43\ m$
Dead Load of Gate:	$D_{Gate} = 580.0 \cdot kN$		$X_{gate} = 9.75\ m$
Water Weight (HW) on Apron Slab:	$H_{1.U2} = 3320.9 \cdot kN$		$H_{1.U2.loc} = 21.10\ m$
Water Weight (HW) on Fixed Crest:	$H_{2.U2} = 2569.2 \cdot kN$		$H_{2.U2.loc} = 14.41\ m$
Water Weight (TW) on Fixed Crest:	$H_{3.U2} = 2106.6 \cdot kN$		$H_{3.U2.loc} = 5.78\ m$

Vertical Seismic Component of Concrete Structure:	$Q_{conc.E4.EQv.2} = -1519.6 \cdot kN$	at:	$X_{conc.loc} = 12.43\ m$
Vertical Seismic Component of Vertical Lift Gate:	$Q_{Gate.E4.EQv.2} = -16.9 \cdot kN$		$X_{gate} = 9.75\ m$
Vertical Seismic Component of Headwater over Apron Slab:	$Q_{H1.E4.EQv.2} = -96.7 \cdot kN$		$H_{1.U2.loc} = 21.10\ m$
Vertical Seismic Component of Headwater over Fixed Crest Slab:	$Q_{H2.E4.EQv.2} = -74.8 \cdot kN$		$H_{2.U2.loc} = 14.41\ m$

Uplift for Overturning Analysis, Line of Creep Method. Pore pressure at base of Concrete, first calculation to presumed inclined straight line from Heel to Toe, thereafter by Archimedes Principle.

E4.2CASE

$$U_{E4.2.loc.sliding} := \frac{U_{A.U2} \cdot L_{A.U2} + U_{B.U2} \cdot L_{B.U2} - A_{rs} \cdot w_{as} \cdot \gamma_w \cdot L_{rs}}{U_{A.U2} + U_{B.U2} - A_{rs} \cdot w_{as} \cdot \gamma_w} = 13.84\,m$$

$$U_{E4.2.sliding} := U_{U2} + A_{rs} \cdot w_{as} \cdot \gamma_w = -19705.8 \cdot kN$$

Uplift for Overturning Analysis, Line of Creep Method. Pore pressure at base of Concrete

$$Uplift_{pore.U2} = -18673.3 \cdot kN$$

$$Uplift_{pore.E4.2.loc} := \frac{Uplift_{BC.U2} \cdot Uplift_{BC.U2.loc} + Uplift_{DE.U2} \cdot Uplift_{DE.U2.loc} + Uplift_{EF.U2} \cdot Uplift_{EF.U2.loc} + Uplift_{FG.U2} \cdot Uplift_{FG.U2.loc}}{Uplift_{pore.U2}}$$

$$Uplift_{pore.E4.2.loc} = 13.3\,m$$

Sum of All Water Load for Overturning Analysis

$$\Sigma V_{water.E4.2.OT} := H_{1.U1} + H_{2.U1} + H_{3.U1} + Uplift_{pore.U2} = -16995.1 \cdot kN$$

All Lateral Loads Applicable to Overturning Stability Analysis

Apply Load to Gate?: $poss_{U1} = 1$ — poss = 1 if gate is closed, 0 if gate is open

Headwater Lateral Load on Pier: $H_{hwp.U2} = -662.3 \cdot kN$ at: $H_{hwp.U2.loc} = 6.44\,m$

Headwater Lateral Load on Gate: $H_{hwg.U2} = 0.0 \cdot kN$ $H_{hwg.U2.loc} = 7.44\,m$

Headwater Lateral Load on Footing: $H_{hwf.U2} = -7709.2 \cdot kN$ $H_{hwf.U2.loc} = 1.67\,m$

Total Horizontal Tailwater Load on Pier: $H_{twp.U2} = 448.3 \cdot kN$ $H_{twp.U2.loc} = 0.09\,m$

Total Horizontal Tailwater Load on Footing under Gate Openings, i.e., excluding Pier: $H_{twf.U2} = 1008.6 \cdot kN$ $H_{twf.U2.loc} = 0.09\,m$

Resisting Water on Rear Face of Monolith, i.e., bottom of heel elevation: *(Point O @ TOE: BOFtoe = EL.1205.5)*

Horizontal Seismic Component of Concrete Structure: $Q_{conc.E4.EQh.2} = -9045 \cdot kN$ AT $Y_{conc.loc} = 6.21\,m$

Horizontal Seismic Component of Vertical Lift Gate: $Q_{Gate.E4.EQh.2} = -100.5 \cdot kN$ $Y_{gate} = 8.00\,m$

Horizontal Seismic Component of Headwater on Pier: $Q_{hwp.E4.EQh.2} = -133.9 \cdot kN$ $Y_{HWp.E4} = 6.8\,m$

Horizontal Seismic Component of Headwater on Gate: $Q_{hwg.E4.EQh.2} = 0$ $Y_{HWg.E4} = 7.7\,m$

Horizontal Seismic Component of Headwater on Footing: $Q_{hwf.E4.EQh.2} = -1798.5 \cdot kN$ $Y_{HWf.E4} = 2.4\,m$

Horizontal Seismic Component of Active Soil: (Section 5-5, USACE EM_1110-2-2100) $Q_{act.E4.EQh.2} = -1784.6 \cdot kN$ $Y_{E.act.E4} = 2.8\,m$

Ice / Impact Load: $I_{U2} = -2100.0 \cdot kN$ at: $I_{U2.loc} = 10.01\,m$

Depth of Fill at Heel Side for Overturning Analysis (neglecting resistance by driving below Point O):

$$t_{hf.E4.2} := TOC_{as} - BOF_{toe} = 4.50\,m$$

Driving Soil Load for overturning:

$$E1_{drive.E4.2} := \frac{K_o \cdot t_{hf.U2}^{\,2}}{2} \cdot \left(\gamma_r - \gamma_w\right) \cdot W_b \cdot -1 = -1055.7 \cdot kN$$

Acting at:

$$E1_{drive.loc.E4.2} := \frac{t_{hf.E4.2}}{3} = 1.50\,m$$

Downstream (resisting) Lateral Soil Load as required to produce horizontal equilibrium:

$$E2_{resistE4.2} := -1 \cdot \left(H_{hwp.U2} + H_{hwg.U2} + H_{hwf.U2} + H_{twp.U2} + H_{twf.U2} + I_{U2} + E1_{drive.U2}\right) = 10070.3 \cdot kN$$

Assumed Resisting Bedrock at middle of Key, passive soil pressure or lateral bearing contract joint at end of Monolith 3A3B

$$E2_{resistlocE4.2} := E2_{resistlocU2} = -0.75\,m$$

Overturning moment by Dead Loads about Point O @ Toe

$$\Sigma M_{DL.U2} = 654229.9 \cdot kN \cdot m$$

Overturning moment by Vertical Water Loads and Uplift, about Point O @ Toe

$$\Sigma M_{Vwater.U2} = -234242.4 \cdot kN \cdot m$$

Overturning moment by Lateral Hydrostatic Forces of Headwater Pool and Tailwater Pool,about Point O @ Toe

$$\Sigma M_{HWater.U2} = -16989.2 \cdot kN \cdot m$$

Overturning Moment by Impact/Ice Load, about Point O@ Toe

$$\Sigma M_{I.U2} = -21021 \cdot kN \cdot m$$

Overturning moment by Lateral Soil Forces about Point O @ Toe

$$\Sigma M_{soil.E4.2} := E1_{drive.E4.2} \cdot E1_{drive.loc.E4.2} \cdots + E2_{resistE4.2} \cdot E2_{resistlocE4.2} = -9136.3 \cdot kN \cdot m$$

Sum of the Overturning Moments about Point O @ Toe:

$$\Sigma M_{E4.2.OT} := \Sigma M_{DL.U2} + \Sigma M_{HWater.U2} + \Sigma M_{Vwater.U2.OT} + \Sigma M_{I.U2} + \Sigma M_{soil.E4.2} + \Sigma M_{Q.E4.2} = 388543 \cdot kN \cdot m$$

Sum of Vertical Forces:

$$\Sigma V_{E4.2.OT} := \Sigma V_{DL.U2} + \Sigma V_{water.U2.OT} + \left|\Sigma V_{Q.E4.EQv.2}\right| = 43794.2 \cdot kN$$

Distance X_R: EM 1110-2-2502 Eq.4-1

$$X_{R.E4.2} := \frac{\Sigma M_{E4.2.OT}}{\Sigma V_{E4.2.OT}} = 8.9\,m$$

Overturning Resultant Ratio

$$Ratio_{Overturning.E4.2} := \frac{X_{R.E4.2}}{L_b} = 0.37$$

EM 1110-2-2502

E3.3 CASE

MONOLITH OVERTURNING STABILITY ANALYSIS

Seismic Case $Q_{E3.3}$ - 30% Horizontal Seismic Force, 100% Vertical

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stability of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1

$Ratio_{overturning.allow.Extreme} = 0.167$

MONOLITH OVERTURNING STABILITY ANALYSIS

E4.3 CASE

Seismic Case $Q_{E4.3}$ - 30% Horizontal Seismic Force, 100% Vertical

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stability of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1 $Ratio_{overturning.allow.Extreme} = 0.167$ Resultant within Middle Half

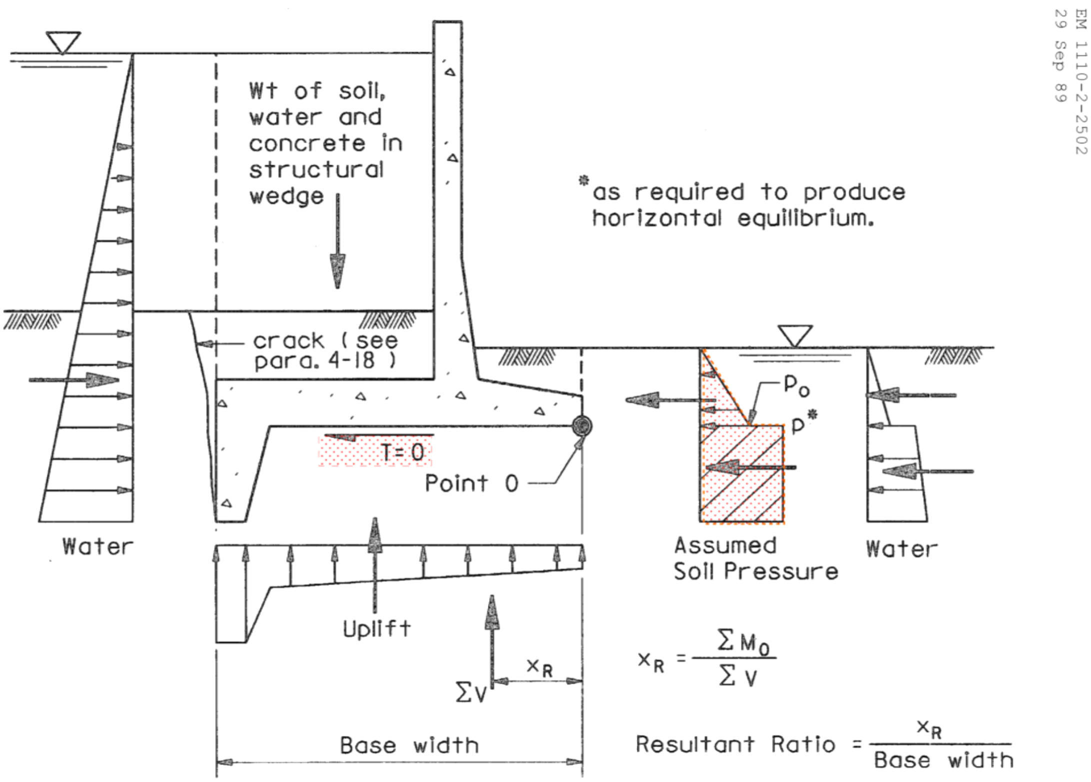

Figure 4-5. Forces for overturning analysis for wall with horizontal base and key

Resisting Water on Rear Face of Monolith, i.e., bottom of heel elevation: *(Point O @ TOE: BOFtoe = EL.1205.5)*

Horizontal Seismic Component of Concrete Structure:	$Q_{conc.E4.EQh.3} = -2713.5 \cdot kN$	AT	$Y_{conc.loc} = 6.21\,m$
Horizontal Seismic Component of Vertical Lift Gate:	$Q_{Gate.E4.EQh.3} = -30.2 \cdot kN$		$Y_{gate} = 8.00\,m$
Horizontal Seismic Component of Headwater on Pier:	$Q_{hwp.E4.EQh.3} = -40.2 \cdot kN$		$Y_{HWp.E4} = 6.8\,m$
Horizontal Seismic Component of Headwater on Gate:	$Q_{hwg.E4.EQh.3} = 0$		$Y_{HWg.E4} = 7.7\,m$
Horizontal Seismic Component of Headwater on Footing:	$Q_{hwf.E4.EQh.3} = -539.6 \cdot kN$		$Y_{HWf.E4} = 2.4\,m$
Horizontal Seismic Component of Active Soil: (Section 5-5, USACE EM_1110-2-2100)	$Q_{act.E4.EQh.3} = -535.4 \cdot kN$		$Y_{E.act.E4} = 2.8\,m$
Ice / Impact Load:	$I_{U2} = -2100.0 \cdot kN$	at:	$I_{U2.loc} = 10.01\,m$

Depth of Fill at Heel Side for Overturning Analysis (neglecting resistance by driving below Point O):

$t_{hf.E4.3} := TOC_{as} - BOF_{toe} = 4.50\,m$

Driving Soil Load for overturning:

$$E1_{drive.E4.3} := \frac{K_o \cdot t_{hf.U2}^{\;2}}{2} \cdot (\gamma_r - \gamma_w) \cdot W_b \cdot -1 = -1055.7 \cdot kN$$

Acting at:

$$E1_{drive.loc.E4.3} := \frac{t_{hf.E4.3}}{3} = 1.50\,m$$

Downstream (resisting) Lateral Soil Load as required to produce horizontal equilibrium:

$$E2_{resistE4.3} := -1\cdot\left(H_{hwp.U2} + H_{hwg.U2} + H_{hwf.U2} + H_{twp.U2} + H_{twf.U2} + I_{U2} + E1_{drive.U2}\right) = 10070.3\cdot kN$$

Assumed Resisting Bedrock at middle of Key, passive soil pressure or lateral bearing contract joint at end of Monolith 3A3B

$$E2_{resistlocE4.3} := E2_{resistlocU2} = -0.75\,m$$

Overturning moment by Dead Loads about Point O @ Toe

$$\Sigma M_{DL.U2} = 654229.9\cdot kN\cdot m$$

Overturning moment by Vertical Water Loads and Uplift, about Point O @ Toe

$$\Sigma M_{Vwater.U2} = -234242.4\cdot kN\cdot m$$

Overturning moment by Lateral Hydrostatic Forces of Headwater Pool and Tailwater Pool,about Point O @ Toe

$$\Sigma M_{HWater.U2} = -16989.2\cdot kN\cdot m$$

Overturning Moment by Impact/Ice Load, about Point O@ Toe

$$\Sigma M_{I.U2} = -21021\cdot kN\cdot m$$

Overturning moment by Lateral Soil Forces about Point O @ Toe

$$\Sigma M_{soil.E4.3} := E1_{drive.E4.3}\cdot E1_{drive.loc.E4.3} \cdots + E2_{resistE4.3}\cdot E2_{resistlocE4.3} = -9136.3\cdot kN\cdot m$$

Sum of the Overturning Moments about Point O @ Toe:

$$\Sigma M_{E4.3.OT} := \Sigma M_{DL.U2} + \Sigma M_{HWater.U2} + \Sigma M_{Vwater.U2.OT} + \Sigma M_{I.U2} + \Sigma M_{soil.E4.3} + \Sigma M_{Q.E4.3} = 383906\cdot kN\cdot m$$

Sum of Vertical Forces:

$$\Sigma V_{E4.3.OT} := \Sigma V_{DL.U2} + \Sigma V_{water.U2.OT} + \left|\Sigma V_{Q.E4.EQv.3}\right| = 47779.5\cdot kN$$

Distance X_R: EM 1110-2-2502 Eq.4-1

$$X_{R.E4.3} := \frac{\Sigma M_{E4.3.OT}}{\Sigma V_{E4.3.OT}} = 8\,m$$

Overturning Resultant Ratio

$$Ratio_{Overturning.E4.3} := \frac{X_{R.E4.3}}{L_b} = 0.33$$

EM 1110-2-2502

Table 4-1

Retaining Wall Stability Criteria

Loading Condition	Sliding Factor of Safety, FS	Shear Strength Test Required: Soil Foundation	Shear Strength Test Required: Rock Foundation[3]	Overturning Criteria Minimum Base Area in Compression: Soil Foundation	Overturning Criteria Minimum Base Area in Compression: Rock Foundation
Usual	1.5	(Q &/or S)[2,1]	Direct shear	100%[4]	75%[4]
Unusual	1.33	(Q &/or S)[2,1]	Direct shear	75%[4]	50%[4]
Earthquake	1.1	(Q)	Direct shear	Resultant within base	Resultant within base

Overturning Stability Check

$$Ratio_{Overturning.E4.3.check} := \begin{cases} \text{"Okay"} & \text{if } Ratio_{Overturning.E4.3} \ge Ratio_{overturning.allow.Extreme} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases}$$

$$Ratio_{Overturning.E4.3.check} = \text{"Okay"}$$

E4.3 CASE

Summary of Seismic Results (Only Report Controlling Load Case)

Seismic Case $Q_{E4.3}$ - 30% Horizontal Seismic Force, 100% Vertical

Horiz Sliding Factor of Safety: $FS_{HorizSliding.E4.3} = 0.99$

Horiz Sliding Factor of Safety Check:

$FS_{HorizSliding.E4.3.Check}$ = "Horizontal Sliding (No Key or Void Behind Key) Fail ! Revise Structure !"

Sliding Factor of Safety: $FS_{InclinedlSlidingE4.3} = 2.5$

Sliding Factor of Safety Check: $FS_{Sliding.E4.3.InclinedCheck}$ = "OKAY "

Calculation Section IV

DI-2A/2B and DI-4A/4B Gate Blocks Stability Calculations

Project Number: 110773396

Project Title: SR1 Project

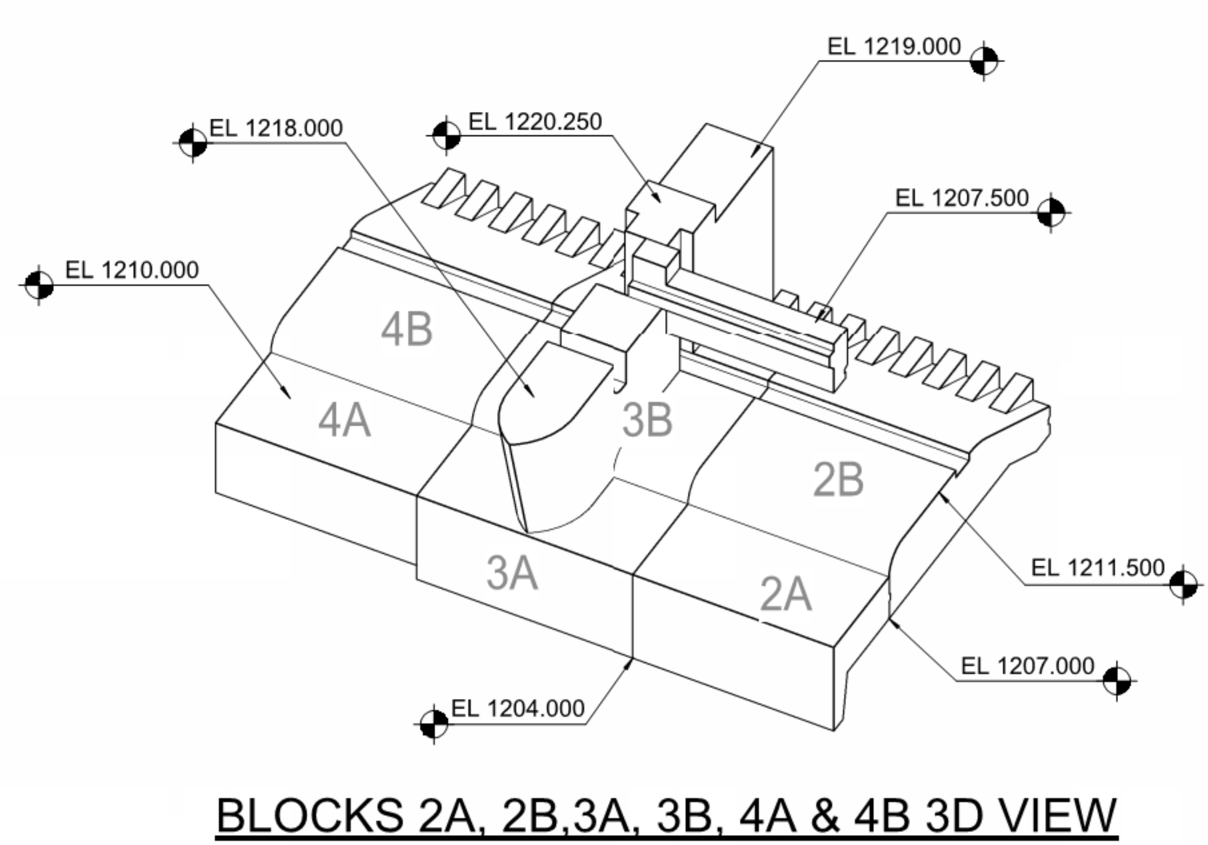
Client: Alberta Transportation

Engineer: Dave Crawford Date: 2018/12/14

Checker: Sean Xiao Date: 2019/01/09

Sliding Stability, Bearing Capacity and Overturning Stability Analysis for: Diversion Inlet Gate Blocks 2A2B / 4A4B

Structure Isometric:



DIVERSION INLET - MONOLITHS (2A+2B; 4A+4B) - GATE BLOCKS

REGION COLOR CONVENTION User Input Calculation Highlights Results

DIVERSION INLET DEIMENSIONAL INPUT PARAMETERS

BASE SECTION PROPERTIES

Base Length: $L_b := 24.20m$ Kern $:= \frac{L_b}{6} = 4.03\,m$

Stilling Basin Length: Lsb=0
when Drain effective at End of Block $L_{sb} := 0m$ $Ecc_{midhalf} := \frac{L_b}{4} = 6.1\,m$ (Dwg. S-330)

Base Width: $W_b := 12.00m$

Area of Base: $A_b := L_b \cdot W_b = 290.4\,m^2$

Section Modulus of Base: $S_b := \frac{W_b \cdot L_b^2}{6} = 1171.3\,m^3$

PIER, ABUTMENT, BREAST WALL AND HEADWALL: Not Applicable to Gate Blocks 2A4A and 4A4B

FOOTINGS (BOF_{base} EL = 1207.0)

Bottom of Key (Footing Heel) Elevation: $BOF_{elev} := 1204.00m$ <=========== *(Critical Design Parameter)*

Apron Slab Top of Concrete
Elevation at Edge of Slab: $TOC_{as} := 1210.00m$

Fixed Crest Top of Concrete
Elevation at Downstream Face: $TOC_{fce} := 1207.50m$ (TOC Elevation of DI Stilling Basin)

Fixed Crest Top of Concrete
Elevation at Center of Footing: $TOC_{fcc} := 1211.50m$

Bottom of Footing Elevation @ Toe: $BOF_{toe} := 1205.50m$ <========== *(Critical Design Parameter)*

(Point O @ TOE: BOFtoe = EL.1205.5)

Footing Concrete Base Elevation
(typ,, Except Heel Key and Toe): $BOF_{base} := 1207.0 \cdot m$

Fixed Crest Footing Elevation Area: $A_{fc} := 68.5m^2$ (From Bluebeam Area Measurement)

Fixed Crest Footing Width: $w_{fc} := 12.00m$

Total Fixed Crest Footing Volume: $V_{fc} := A_{fc} \cdot w_{fc} = 822.0 \cdot m^3$

Apron Slab Footing Width: $w_{as} := 12.00m$

Length of Apron Slab Footing: $L_{as} := 6.20m$

Apron Slab Elevation Area: $A_{as} := L_{as} \cdot \left(TOC_{as} - BOF_{base}\right) = 18.6\,m^2$

Total Apron Slab Footing Volume: $V_{as} := A_{as} \cdot w_{as} = 223.2 \cdot m^3$

Shear Key Depth from Toe
(below Toe EL): $Key_d := BOF_{toe} - BOF_{elev} = 1.5\,m$

Shear Key Width: $Key_w := 1m$

Shear Key Length $Key_l := 12m$

Total Shear Key Volume: $V_{key} := \left(Key_d + BOF_{base} - BOF_{toe}\right) \cdot Key_w \cdot Key_l = 36.0 \cdot m^3$

FOUNDATION PARAMETERS

Granular Fill Internal Angle of Friction: $\phi := 34 \cdot \frac{\pi}{180} = 0.593$ (Section 5.3, Design Criteria)

Friction Angle at Base Concrete / Rock Interface: $\phi_{rock} := 26$ (Section 5.2, Design Criteria)

Base Friction Coefficient: $\tan_{\phi} := \tan\left(\phi_{rock} \frac{\pi}{180}\right) = 0.488$ radians

Line-of-Seepage Parameters $L_{AB} := 0$ (Assuming Cracking for Overturning)

Seepage Line:
A-B-C-D-E-F-G-End of Stilling Basin

$L_{BC} := 1 \cdot m$

$L_{CD} := 3.04 \cdot m$

$L_{DE} := 18.203 \cdot m$

$L_{EF} := 3.353 \cdot m$ $X_{EF} := 3.0 \cdot m$

$L_{FG} := 1.5 \cdot m$

$L_{sb} = 0$

MATERIAL PROPERTIES

Unit Weight of Concrete: $\gamma_c := 23.5 \frac{kN}{m^3}$ (Section 7.1, Design Criteria)

Unit Weight of Rock Fill: $\gamma_r := 22.0 \frac{kN}{m^3}$ (Section 5.3, Design Criteria)

Rip Rap Backfill, Refer Dwg. C-214 $\phi_{backfill} := \left(20 \frac{\pi}{180}\right) = 0.3$ radians

Unit Weight of Water: $\gamma_w := 9.81 \frac{kN}{m^3}$ (Section 7.2, Design Criteria)

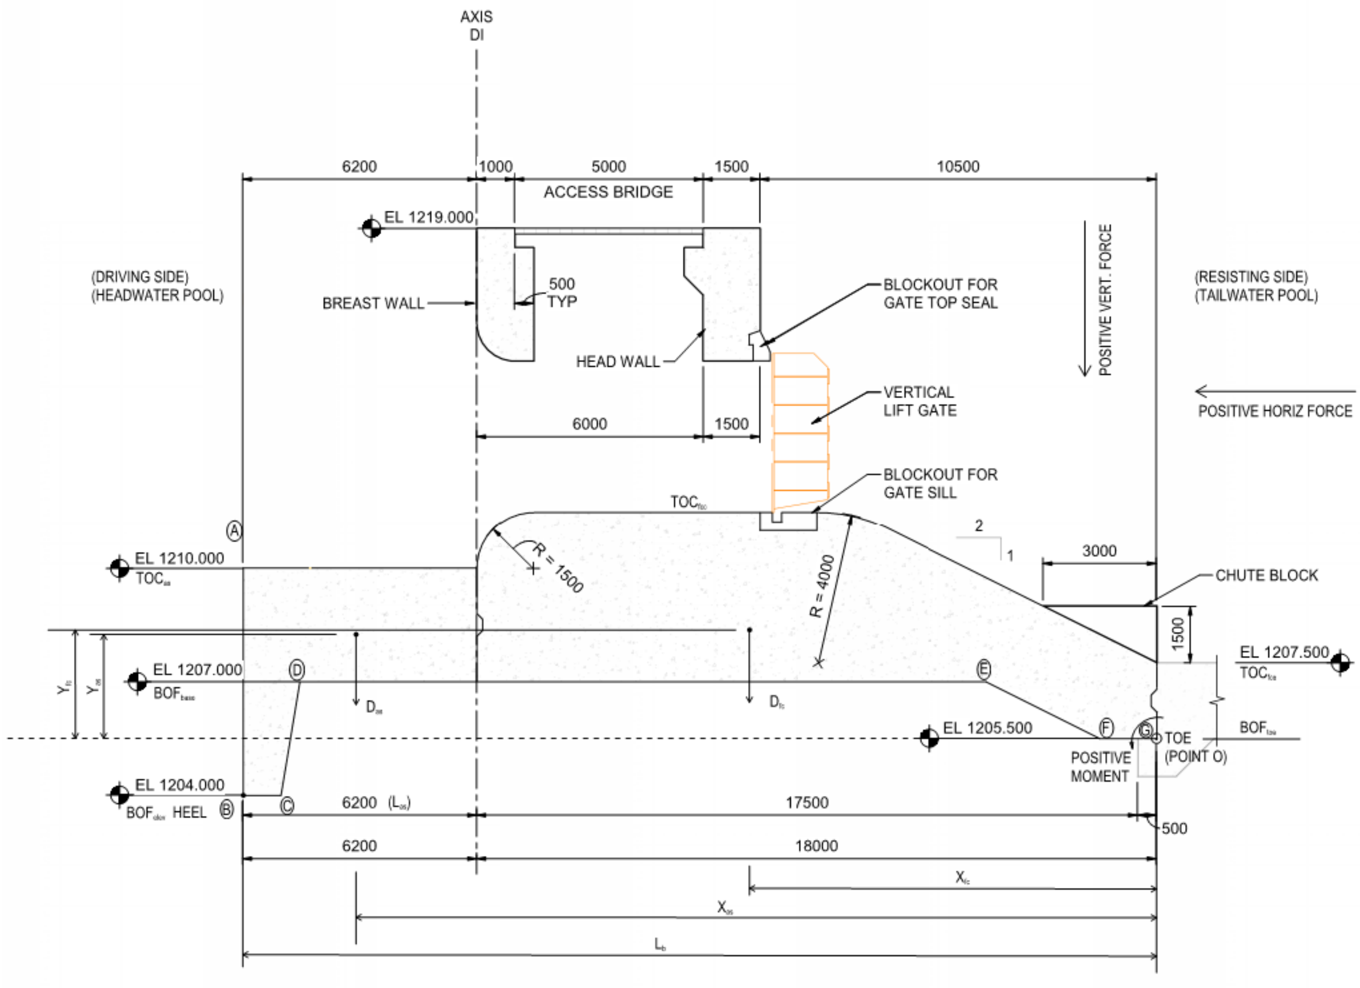
CONCRETE DEAD LOADS

Fixed Crest Footing: $D_{fc} := V_{fc} \cdot \gamma_c = 19317 \cdot kN$

Apron Slab Footing: $D_{as} := V_{as} \cdot \gamma_c = 5245.2 \cdot kN$

Concrete key: $D_{key} := V_{key} \cdot \gamma_c = 846 \cdot kN$

Total Concrete Dead Loads: $D_{conc} := D_{fc} + D_{as} + D_{key} = 25408.2 \cdot kN$



VARIABLES AND SIGN CONVENTION

MOMENT ARM FROM TOE TO CENTROID OF COMPONENT

Dist. from Toe to COG of Fixed Crest: $X_{fc} := 9.948\text{m}$ (From Bluebeam Measurements)

Dist. from Toe to COG of Apron Slab: $X_{as} := 21.10\text{m}$

Dist. from Toe to COG of Heel Key: $X_{key} := \left(L_b - \frac{Key_w}{2}\right) = 23.7\,\text{m}$

MOMENT ARM FROM BASE OF FOOTING TO CENTROID OF COMPONENT

Dist. from Base to COG of Fixed Crest: $Y_{fc} := 3.35\text{m}$ (From Bluebeam Measurements)

Dist. from Base to COG of Apron Slab: $Y_{as} := 3.0\text{m}$

Dist. from Base to COG of Heel Key: $Y_{key} := \frac{BOF_{base} + BOF_{elev}}{2} - BOF_{toe} = 0.00\,\text{m}$

Distance From Toe to COG of Concrete Dead Loads:

$$X_{conc.loc} := \frac{X_{fc} \cdot D_{fc} + X_{as} \cdot D_{as} + X_{key} \cdot D_{key}}{D_{conc}} = 12.71\,\text{m}$$

Distance Above Base to COG of Concrete Dead Loads:

$$Y_{conc.loc} := \frac{Y_{fc} \cdot D_{fc} + Y_{as} \cdot D_{as} + Y_{key} \cdot D_{key}}{D_{conc}} = 3.2\,\text{m}$$

Gate Block similar to Center Pier, without loading from Pier, Gate Slot, Deck, Breast Wall, Headwall)

VERTICAL LIFT GATE

(Lift Gate See Drawing Q-202 dated 03-31-2017.
Gate supported on Center Pier and Abutment when Open, partially sit on Monolith-2A2B when Gate is closed. Loading depends on individual Load Case)

Dead Load of Vertical Lift Gate: $D_{Gate} := 580 \cdot \frac{2}{2} kN$

Distance from Toe to COG of Gate: $X_{gate} := 8.75 \cdot m$

Distance from Base to Centroid of Vertical Lift Gate: $Y_{gate} := \left[\left(TOC_{fcc} - BOF_{toe} \right) + \frac{1215.5 \cdot m - TOC_{fcc}}{2} \right] = 8\,m$

(Distance from base to halfway between the bottom of the headwall and the top of the Fixed Crest.)

Lift Gate Position per Hydraulic Criteria $poss_{U1} := 1$ (poss = 1 if gate is Closed; = 0 if gate is Open)

(When Gate is Closed, it sits on Sill, tributary weight 2/20m = 60% of Unit Assembly ; when Gate is Open, simply supported on Center Pier, No load on Gate Block)

DEAD LOAD SUMMATION:

$$Gate_{R.U1} := \begin{cases} 0 & \text{if } poss_{U1} = 0 \\ 0.60 & \text{otherwise} \end{cases}$$

(Monolith Reaction for Lift Gate)

$$\Sigma V_{DL.U1} := D_{conc} + Gate_{R.U1} D_{Gate} = 25756.2 \cdot kN$$

$$\Sigma M_{DL.U1} := D_{conc} \cdot X_{conc.loc} + Gate_{R.U1} \cdot D_{Gate} \cdot X_{gate} = 325934.4 \cdot kN \cdot m$$

ROCK SECTION MOBILIZED FOR INCLINDED SLIDING FAILURE

Area of Rock Section Mobilized: $A_{rs} := 46.9 m^2$

(From Bluebeam Measurement)

Rock Mass Mobilized: $V_{rs} := A_{rs} \cdot \gamma_r \cdot W_b = 12381.6 \cdot kN$

(Pore pressure taken along assumed inclined sliding plane)

Distance from Toe to COG of Rock Section: $L_{rs} := 13.81 m$ (From Bluebeam Measurement)

Diversion Structure 2D Hydraulic Model Results

Tabular Summary of Diversion Structure 2D Hydraulic Model Results

Applicable or Relevant Scenarios: Diversion Inlet (DI) - Gate Structure

Prepared: 17 October 2018

Water Surface Over DI Gate Bay - Gate Open

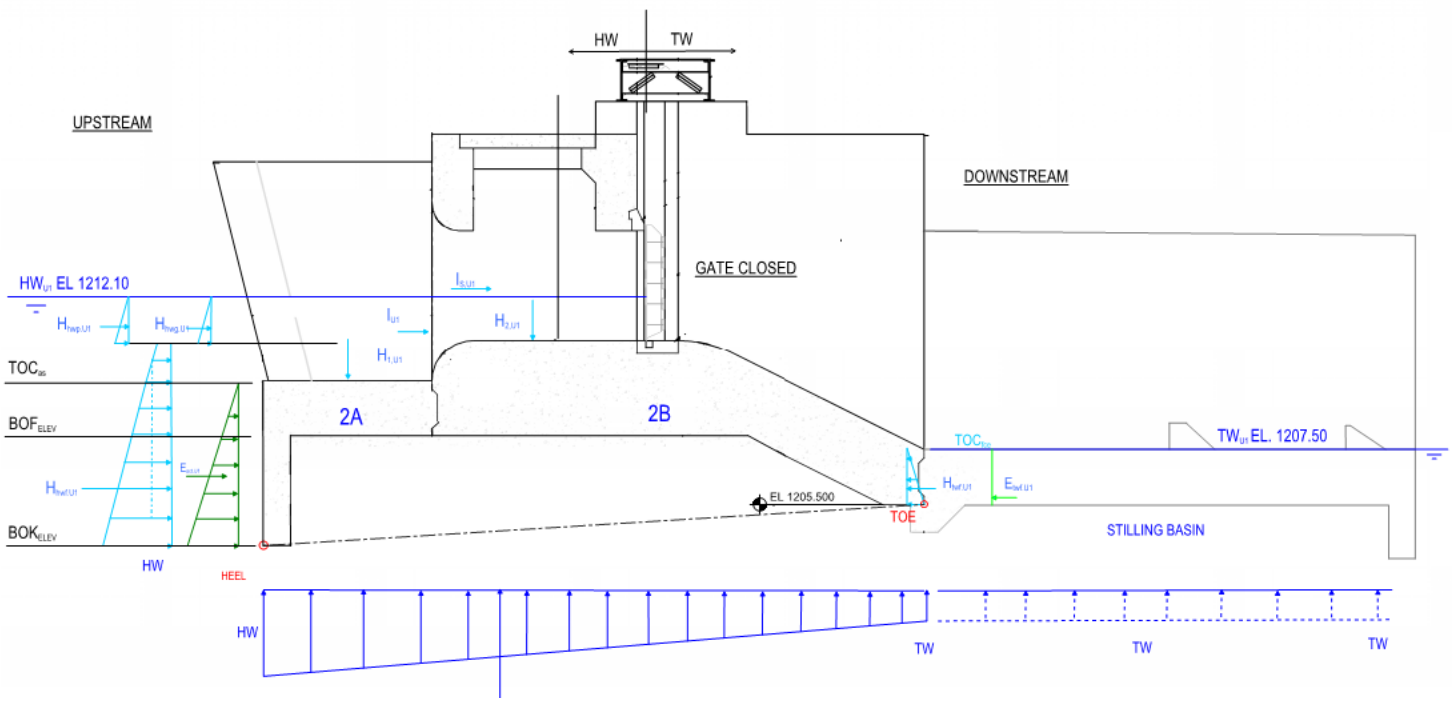
U1 DESIGN CASE

DIVERSION INLET GATE BLOCK (2A2B) - LOADING SCENARIO (U1, E3-Q) (U1, E3-Q: No Diversion, River Flow 160 m³/s)



ACCEPTANCE PARAMETERS

Required Factor of Safety for Sliding: $FS_{req.U1.sl} := 1.5$ (Without Cohesion) (Section 8.1, Design Criteria)

Resultant Within Middle Third of Base: $e \le \frac{L_b}{6} \wedge e \ge \frac{-L_b}{6}$ (100% Base in Compression, Design Criteria)

Allowable Rock Bearing Pressure: $\sigma_{allow.U1} := 1270 \cdot \frac{kN}{m^2}$ (Section 5.2, Design Criteria)

Required Factor of Safety for Flotation: $FS_{req.U.flt} := 1.5$

Overturning Min Required Resultant Ratio: $\frac{X_{R.U}}{Horizontal\_Width\_of\_Base} > 0.333$

(100% Base in Compression, Resultant within Middle Third)

INPUT PARAMETERS

Headwater Elevation: $HW_{U1} := 1212.10m$

Tailwater Elevation: $TW_{U1} := 1207.50m$

(Water Elevations based on Diversion Structure 2D Hydraulic Model Results. See page 6 and Section 8.2, Design Criteria)

Crest Water Elevation (No Diversion)

Chute Block Water Elevation (No Diversion)

Bottom of Key (Footing Heel) Elevation: $BOF_{elev} = 1204\,m$ <============= *(Critical Design Parameter)*

Apron Slab Top of Concrete Elevation at Edge of Slab: $TOC_{as} = 1210\,m$

Fixed Crest Top of Concrete Elevation at Downstream Face: $TOC_{fce} = 1207.5\,m$

Fixed Crest Top of Concrete Elevation at Center of Footing: $TOC_{fcc} = 1211.5\,m$

Bottom of Footing Elevation @ Toe: $BOF_{toe} = 1205.5\,m$ <============= *(Critical Design Parameter)*
(Point O @ TOE: BOFtoe = EL.1205.5)

LATERAL WATER LOADS

U1 CASE

HEADWATER (DRIVING): *(Point O @ TOE: BOFtoe = EL.1205.5)*

Water Depth Above Fixed Crest at Gate: $D_{hwg.U1} := HW_{U1} - TOC_{fcc} = 0.6\,m$

Water Load Unit Width on Gate $W_{hwg.U1} := 0 = 0.00$ (Gate supported by Abut and Center Pier)

Apply Load to Gate?: $poss_{U1} = 1$ poss = 1 if gate is closed
0 if gate is open

MONOLITH OVERTURNING STABILITY ANALYSIS

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stability of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1 $Ratio_{overturning.allow.Usual} := 0.333$ (Resultant within Middle Third)

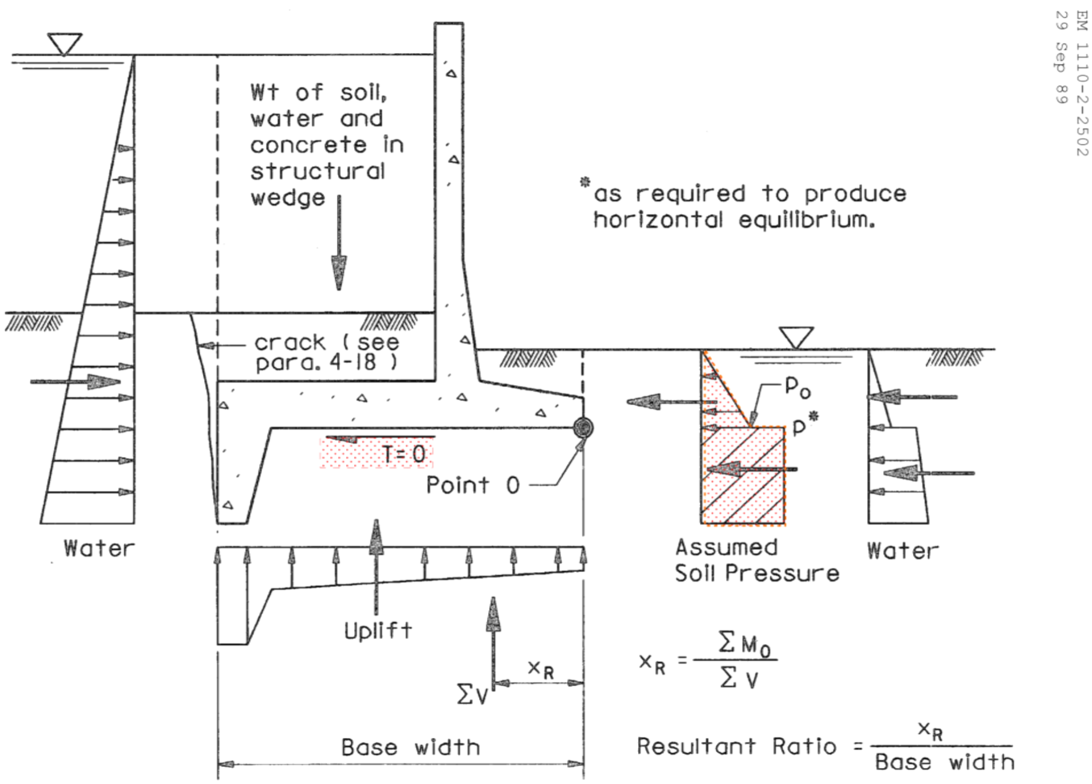

Figure 4-5. Forces for overturning analysis for wall with horizontal base and key

All Vertical Loads Applicable to Overturning Stability Analysis

Total Concrete Dead Loads:	$D_{conc} = 25408.2 \cdot kN$	at:	$X_{conc.loc} = 12.7\,m$
Dead Load of Gate:	$D_{Gate} = 580.0 \cdot kN$		$X_{gate} = 8.75\,m$
Water Weight (HW) on Apron Slab:	$H_{1.U1} = 1532.7 \cdot kN$		$H_{1.U1.loc} = 21.10\,m$
Water Weight (HW) on Fixed Crest:	$H_{2.U1} = 586.2 \cdot kN$		$H_{2.U1.loc} = 14.25\,m$
Water Weight (TW) on Fixed Crest:	$H_{3.U1} = 0.0 \cdot kN$		$H_{3.U1.loc} = 0.00\,m$

Uplift Force from Sliding Analysis. Line of Creep Method applied at presumed inclined sliding line, and subtraction gravity effect to Base of Concrete by Archimedes Principle

$$U_{U1.loc.sliding} := \frac{U_{A.U1} \cdot L_{A.U1} + U_{B.U1} \cdot L_{B.U1} - A_{rs} \cdot w_{as} \cdot \gamma_w \cdot L_{rs}}{U_{A.U1} + U_{B.U1} - A_{rs} \cdot w_{as} \cdot \gamma_w} = 13.73\,m$$

$$U_{U1.sliding} := U_{U1} + A_{rs} \cdot w_{as} \cdot \gamma_w = -11002.1 \cdot kN$$

U1 CASE

Uplift for Overturning Analysis, Line of Creep Method. Pore pressure at base of Concrete

$Uplift_{pore.U1} = -10515.7 \cdot kN$

$$Uplift_{pore.U1.loc} := \frac{\left(\begin{array}{l} Uplift_{BC.U1} \cdot Uplift_{BC.U1.loc} + Uplift_{DE.U1} \cdot Uplift_{DE.U1.loc} \cdots \\ + Uplift_{EF.U1} \cdot Uplift_{EF.U1.loc} + Uplift_{FG.U1} \cdot Uplift_{FG.U1.loc} \end{array}\right)}{Uplift_{pore.U1}} = 13.1\,m$$

Sum of All Water Load for Overturning Analysis $\Sigma V_{water.U1.OT} := H_{1.U1} + H_{2.U1} + H_{3.U1} + Uplift_{pore.U1} = -8396.7 \cdot kN$

All Lateral Loads Applicable to Overturning Stability Analysis

Apply Load to Gate?: $poss_{U1} = 1$ poss = 1 if gate is closed
0 if gate is open

Headwater Lateral Load on Gate: $H_{hwg.U1} = 0.0 \cdot kN$ $H_{hwg.U1.loc} = 6.20\,m$

Headwater Lateral Load on Footing: $H_{hwf.U1} = -3840.6 \cdot kN$ $H_{hwf.U1.loc} = 1.17\,m$

Total Horizontal Tailwater Load on Footing under Gate Openings, i.e., excluding Pier $H_{twf.U1} = 721.0 \cdot kN$ $H_{twf.U1.loc} = -0.33\,m$

(Point O @ TOE: BOFtoe = EL.1205.5)

Resisting Water on Rear Face of Monolith, i.e., bottom of heel elevation:

Ice / Impact Load: $I_{U1} = 0.0 \cdot kN$ at: $I_{U1.loc} = 6.30\,m$

Depth of Fill at Heel Side for Overturning Analysis: $t_{hf.U1} := TOC_{as} - BOF_{toe} = 4.50\,m$

Driving Soil Load for overturning: $$E1_{drive.U1} := \frac{K_o \cdot t_{hf.U1}^{\,2}}{2} \cdot \left(\gamma_r - \gamma_w\right) \cdot W_b \cdot -1 = -974.5 \cdot kN$$

Acting at: $$E1_{drive.loc.U1} := \frac{t_{hf.U1}}{3} = 1.50\,m$$

Downstream (resisting) Lateral Soil Load as required to produce horizontal equilibrium: $E2_{resist.U1} := -1 \cdot \left(H_{hwg.U1} + H_{hwf.U1} + H_{twf.U1} + I_{U1} + E1_{drive.U1}\right) = 4094.1 \cdot kN$

Assumed Resisting Bedrock at middle of Key, passive soil pressure or lateral bearing on contract joint at end of Monolith 3A3B $$E2_{resist.loc.U1} := \frac{-\left(BOF_{toe} - BOF_{elev}\right)}{2} = -0.75\,m$$

Overturning moment by Dead Loads about Point O @ Toe $\Sigma M_{DL.U1} = 325934.4 \cdot kN \cdot m$

Overturning moment by Vertical Water Loads and Uplift, about Point O @ Toe

$$\Sigma M_{Vwater.U1.OT} := H_{1.U1} \cdot H_{1.U1.loc} + H_{2.U1} \cdot H_{2.U1.loc} + H_{3.U1} \cdot H_{3.U1.loc} + Uplift_{pore.U1} \cdot Uplift_{pore.U1.loc} = -97128.1 \cdot kN \cdot m$$

Overturning moment by Lateral Hydrostatic Forces of Headwater Pool and Tailwater Pool, about Point O @ Toe $\Sigma M_{HWater.U1} = -4743.1 \cdot kN \cdot m$

Overturning Moment by Impact/Ice Load, about Point O@ Toe $\Sigma M_{I.U1} = 0 \cdot kN \cdot m$

Overturning moment by Lateral Soil Forces
about Point O @ Toe

$$\Sigma M_{soil.U1} := E1_{drive.U1} \cdot E1_{drive.loc.U1} + E2_{resistU1} \cdot E2_{resistlocU1} = -4532.4 \cdot kN \cdot m$$

Sum of the Overturning Moments about Point O @ Toe:

$$\Sigma M_{U1.OT} := \Sigma M_{DL.U1} + \Sigma M_{HWater.U1} + \Sigma M_{Vwater.U1.OT} + \Sigma M_{I.U1} + \Sigma M_{soil.U1} = 219531 \cdot kN \cdot m$$

Sum of Vertical Forces:

$$\Sigma V_{U1.OT} := \Sigma V_{DL.U1} + \Sigma V_{water.U1.OT} = 17359.5 \cdot kN$$

Distance X_R: EM 1110-2-2502 Eq.4-1

$$X_{R.U1} := \frac{\Sigma M_{U1.OT}}{\Sigma V_{U1.OT}} = 12.6\,m$$

Overturning Resultant Ratio

$$Ratio_{Overturning.U1} := \frac{X_{R.U1}}{L_b} = 0.52$$

EM 1110-2-2502

Table 4-1

Retaining Wall Stability Criteria

Loading Condition	Sliding Factor of Safety, FS	Shear Strength Test Required: Soil Foundation	Shear Strength Test Required: Rock Foundation[3]	Overturning Criteria Minimum Base Area in Compression: Soil Foundation	Overturning Criteria Minimum Base Area in Compression: Rock Foundation
Usual	1.5	(Q &/or S)[2,1]	Direct shear	100%[4]	75%[4]

ICE / IMPACT LOADS (CONSERVATIVELY ASSUME NO ICE LOADING ON DOWNSTREAM SIDE)

Static Impact Loading on Structure: $I_{S.U2} := 150.0 \frac{kN}{m}$ (Section 7.7, Design Criteria)

Static Impact load on Gates: $I_{G.U2} := 75 \frac{kN}{m}$ (Section 7.7, Design Criteria)

Impact Loading Unit Width on Structure: $W_{S.U2} := 0.00m$

Impact Loading Unit Width on Gates: $W_{G.U2} := 0m = 0.00$

Total Impact Load on Structure: $I_{U2} := (I_{S.U2} \cdot W_{S.U2} + I_{G.U2} \cdot W_{G.U2}) \cdot -1 = 0 \cdot kN$

Apply Ice load at: $I_{U2.loc} := (HW_{U2} - BOF_{elev} - 0.30m) = 11.50\,m$

$\Sigma H_{I.U2} := I_{U2} = 0 \cdot kN$

$\Sigma M_{I.U2} := I_{U2} \cdot I_{U2.loc} = 0 \cdot kN \cdot m$

SEISMIC LOAD (Not Applicable to this Load Case)

U2 CASE

SUMMARY OF LOADS

	Loads	Moment Arm
Dead Load of Concrete Structure:	$D_{conc} = 25408.2 \cdot kN$	$X_{conc.loc} = 12.71\ m$
Dead Load of Gate:	$D_{Gate} = 580.0 \cdot kN$	$X_{gate} = 8.75\ m$
Headwater Lateral Load on Gate:	$H_{hwg.U2} = 0.0 \cdot kN$	$H_{hwg.U2.loc} = 7.43\ m$
Headwater Lateral Load on Footing:	$H_{hwf.U2} = -7107.3 \cdot kN$	$H_{hwf.U2.loc} = 1.67\ m$
Tailwater Lateral Load:	$H_{twf.U2} = 1344.9 \cdot kN$	$H_{twf.U2.loc} = 0.09\ m$
Water Weight (HW) on Apron Slab:	$H_{1.U2} = 4233.2 \cdot kN$	$H_{1.U2.loc} = 21.10\ m$
Water Weight (HW) on Fixed Crest:	$H_{2.U2} = 3425.7 \cdot kN$	$H_{2.U2.loc} = 14.25\ m$
Water Weight (TW) on Fixed Crest:	$H_{3.U2} = 2808.8 \cdot kN$	$H_{3.U2.loc} = 5.78\ m$
Uplift:	$U_{U2} = -23616.8 \cdot kN$	$U_{U2.loc} = 13.81\ m$
Upstream (driving) Lateral Soil Load:	$E1_{drive.U2} = -1732.5 \cdot kN$	$E1_{drive.loc.U2} = 0.50\ m$
Downstream (resisting) Lateral Soil Load:	$E2_{resistU2} = 0 \cdot kN$	$E2_{resistlocU2} = 1.17\ m$
Ice / Impact Load:	$I_{U2} = 0.0 \cdot kN$	$I_{U2.loc} = 11.50\ m$

STABILITY ASSESSMENT (SLIDNG, OVERTURNING AND BEARING):

U2 CASE

CHECK SLIDING ALONG HORIZONTAL PLANE THRU TOE,
IGNORING BEDROCK MOBILIZED BY STRUCTURAL HEEL KEY , OR VOID BEHIND KEY

Sum of Vertical Forces:

$\Sigma V_{U2} := \Sigma V_{DL.U2} + \Sigma V_{water.U2} = 12259.1 \cdot kN$

Sum of Horizontal Forces:

$\Sigma H_{U2} := \Sigma H_{Water.U2} + \Sigma H_{soil.U2} + \Sigma H_{I.U2} = -7495 \cdot kN$

Sliding Factor of Safety:

$$FS_{HorizSliding.U2} := \frac{\tan_{\phi} \cdot \Sigma V_{U2}}{|\Sigma H_{U2}|} = 0.80$$

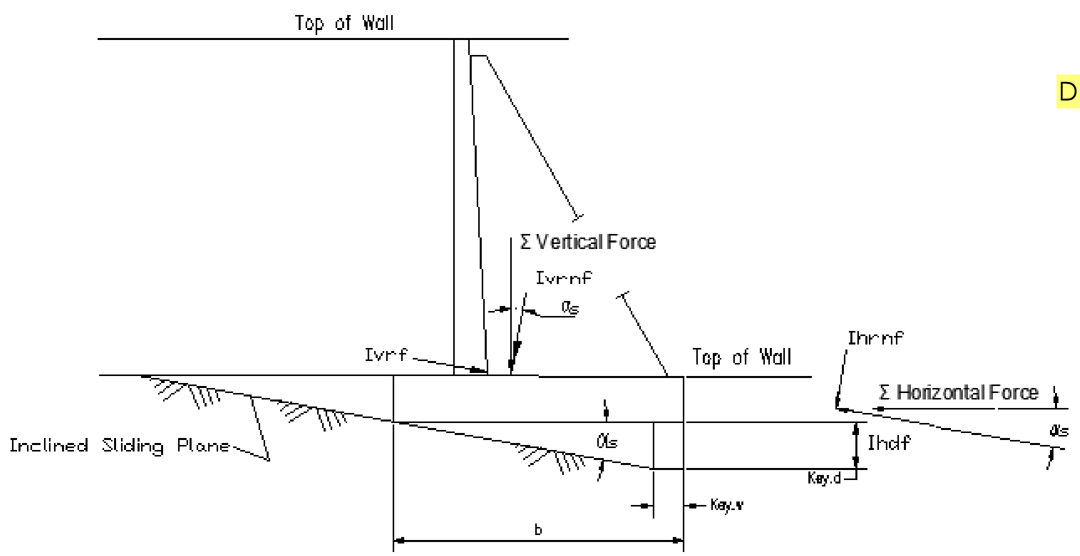
$$FS_{HorizSliding.U2.Check} := \begin{cases} \text{"OKAY"} & \text{if } FS_{HorizSliding.U2} \geq FS_{req.U2.sl} \\ \text{"Horizontal Sliding (No Key or Void Behind Key) Fail ! Revise Structure !"} & \text{otherwise} \end{cases}$$

$FS_{HorizSliding.U2.Check} =$ "Horizontal Sliding (No Key or Void Behind Key) Fail ! Revise Structure !"

CHECK SLIDING ALONG INCLINED SLIDING PLANE FROM HEEL KEY TO TOE,
WITH BEDROCK MASS MOBILIZED BY REINFOCREDE CONCRETE KEY)

RESISTING SIDE

DRIVING SIDE



TOE

Ivrf=Inclined Resisting Force
Ivrnf=Inclined Resisting Normal Force
Ihrnf=Inclined Resisting Normal Force
Ihdf=Inclined Driving Force

HEEL

$$\alpha s := \operatorname{atan}\left(\frac{BOF_{toe} - BOF_{elev}}{L_b - Key_l}\right) = 0.12 \qquad \text{as degrees=} \qquad \alpha s \cdot \left(\frac{180}{\pi}\right) = 7.01$$

Resolve $\Sigma Vert_{U2}$ & $\Sigma Horiz_{U2}$

$$\Sigma V_{InclinedU2} := \cos(\alpha s) \cdot \left(\Sigma V_{U2} + V_{rs}\right) + \sin(\alpha s) \cdot |\Sigma H_{U2}| = 25371.2 \cdot kN$$

$$\Sigma H_{InclinedU2} := \cos(\alpha s) \cdot |\Sigma H_{U2}| - \sin(\alpha s) \cdot \left(\Sigma V_{U2} + V_{rs}\right) = 4432.0 \cdot kN$$

(With properly engineered reinforced concrete Key, horizontal sliding plane thru Toe is protected, critical sliding plane is relocated to the INCLINED SLIDING PLANE FROM HEEL KEY To TOE, Bedrock Mass above this examing plane is mobilized by reinforced concrete key and combined into Structural Wedge.)

Inclined Sliding Plane Length $\qquad L_{incline} = 24.2\,m$

Safety Factor for Sliding
Inclined Failure Plane

$$FS_{InclinedlSlidingU2} := \frac{\Sigma V_{InclinedU1} \cdot \tan\left(\phi_{rock} \cdot \frac{\pi}{180}\right)}{|\Sigma H_{InclinedU2}|} = 2.66$$

$$FS_{InclinedSliding.check.U2} := \begin{cases} \text{"OKAY "} & \text{if } FS_{InclinedlSlidingU2} > FS_{req.U2.sl} \\ \text{"Revise Structure""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

$FS_{InclinedSliding.check.U2} =$ "OKAY "

CHECK ECCENTRICITY ON INCLINED PLANE

Sum of the Moments:

$$\Sigma M_{rs.U2} := \Sigma M_{DL.U2} + \Sigma M_{HWater.U2} + \Sigma M_{Vwater.U2} + \Sigma M_{I.U2} + \Sigma M_{soil.U2} + V_{rs} \cdot L_{rs} = 309563 \cdot kN \cdot m$$

Eccentricity:

$$e_{U2} := \frac{L_{incline}}{2} - \frac{\Sigma M_{rs.U2}}{\Sigma V_{InclinedU2}} = -0.08\,m$$

Eccentricity Check:

$$e_{check.U2} := \begin{cases} \text{"Okay"} & \text{if } |e_{U2}| \le Kern \\ \text{"Revise Structure"} & \text{otherwise} \end{cases}$$

$$e_{check.U2} = \text{"Okay"}$$

Foundation Bearing Pressures on Inclined Plane :

Bearing Pressure at Heel:

$$\sigma_{heel.U2} := \frac{\Sigma V_{InclinedU2}}{\frac{A_b}{\cos(\alpha s)}} - \frac{\Sigma V_{InclinedU2} \cdot e_{U2}}{\frac{S_b}{\cos(\alpha s)^2}} = 88.4 \cdot \frac{kN}{m^2}$$

$$\sigma_{heel.U2.check} := \left(\begin{cases} \text{"Okay"} & \text{if } \sigma_{heel.U2} \le \sigma_{allow.U2} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} \right)$$

$$\sigma_{heel.U2.check} = \text{"Okay"}$$

Bearing Pressure at Toe:

$$\sigma_{toe.U2} := \frac{\Sigma V_{InclinedU2}}{\frac{A_b}{\cos(\alpha s)}} + \frac{\Sigma V_{InclinedU2} \cdot e_{U2}}{\frac{S_b}{\cos(\alpha s)^2}} = 85 \cdot \frac{kN}{m^2}$$

$$\sigma_{toe.U2.check} := \begin{cases} \text{"Okay"} & \text{if } \sigma_{toe.U2} \le \sigma_{allow.U2} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases}$$

$$\sigma_{toe.U2.check} = \text{"Okay"}$$

CHECK FLOTATION

$$Uplift_{sliding.U2} := U_{U2} = -23616.8 \cdot kN$$

$$Uplift_{pore.U2} = -17214.6 \cdot kN$$

$$\left(Uplift_{U2}\right) := \min\left(Uplift_{pore.U2}, Uplift_{sliding.U2}\right)$$

(For conservative, taking maximum values)

$$FS_{Flotation.U2} := \frac{D_{conc} + D_{Gate} + H_{1.U2} + H_{2.U2} + H_{3.U2}}{|Uplift_{U2}|} = 1.5$$

$$FS_{Flotation.U2.check} := \begin{cases} \text{"OKAY "} & \text{if } FS_{Flotation.U2} > FS_{req.U.flt} \\ \text{"Revise Structure""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

MONOLITH OVERTURNING STABILITY ANALYSIS

U2 CASE

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.

Assumptions are made in order to compute overturning stability of indetermine forces on monolith with key;

(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.

(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium

(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1 $Ratio_{overturning.allow.Usual} = 0.33$ (Resultant within Middle Third)

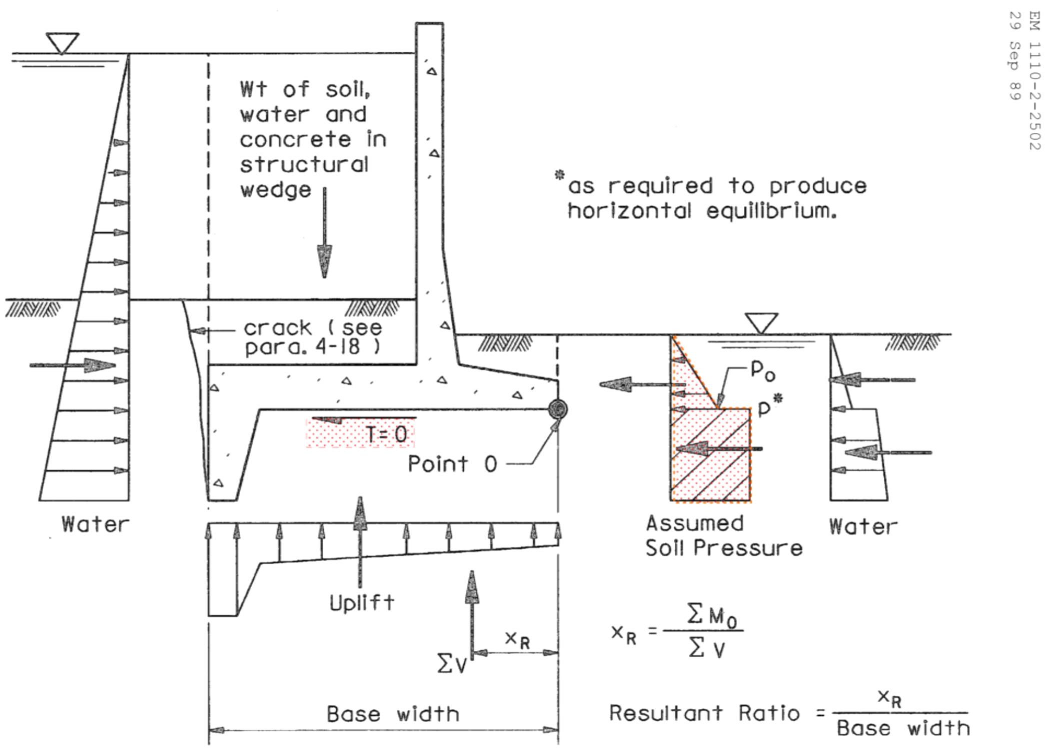


Figure 4-5. Forces for overturning analysis for wall with horizontal base and key

All Vertical Loads Applicable to Overturning Stability Analysis

Total Concrete Dead Loads:	$D_{conc} = 25408.2 \cdot kN$	at:	$X_{conc.loc} = 12.7\,m$
Dead Load of Gate:	$D_{Gate} = 580.0 \cdot kN$		$X_{gate} = 8.75\,m$
Water Weight (HW) on Apron Slab:	$H_{1.U2} = 4233.2 \cdot kN$		$H_{1.U2.loc} = 21.10\,m$
Water Weight (HW) on Fixed Crest:	$H_{2.U2} = 3425.7 \cdot kN$		$H_{2.U2.loc} = 14.25\,m$
Water Weight (TW) on Fixed Crest:	$H_{3.U2} = 2808.8 \cdot kN$		$H_{3.U2.loc} = 5.78\,m$

Uplift Force from Sliding Analysis. Line of Creep Method applied at presumed inclined sliding line, and subtraction gravity effect to Base of Concrete by Archimedes Principle

$$U_{U2.loc.sliding} := \frac{U_{A.U2} \cdot L_{A.U2} + U_{B.U2} \cdot L_{B.U2} - A_{rs} \cdot w_{as} \cdot \gamma_w \cdot L_{rs}}{U_{A.U2} + U_{B.U2} - A_{rs} \cdot w_{as} \cdot \gamma_w} = 13.81\,m$$

$$U_{U2.sliding} := U_{U2} + A_{rs} \cdot w_{as} \cdot \gamma_w = -18095.7 \cdot kN$$

U2 CASE

Uplift for Overturning Analysis, Line of Creep Method. Pore pressure at base of Concrete

$Uplift_{pore.U2} = -17214.6 \cdot kN$

$$Uplift_{pore.U2.loc} := \frac{\left(Uplift_{BC.U2} \cdot Uplift_{BC.U2.loc} + Uplift_{DE.U2} \cdot Uplift_{DE.U2.loc} + Uplift_{EF.U2} \cdot Uplift_{EF.U2.loc} + Uplift_{FG.U2} \cdot Uplift_{FG.U2.loc}\right)}{Uplift_{pore.U2}}$$

$Uplift_{pore.U2.loc} = 13.3\,m$

Sum of All Water Load for Overturning Analysis

$\Sigma V_{water.U2.OT} := H_{1.U2} + H_{2.U2} + H_{3.U2} + Uplift_{pore.U2} = -6746.9 \cdot kN$

All Lateral Loads Applicable to Overturning Stability Analysis

Apply Load to Gate?: $poss_{U2} = 0$ — poss = 1 if gate is closed; 0 if gate is open

Headwater Lateral Load on Gate: $H_{hwg.U2} = 0.0 \cdot kN$ $H_{hwg.U2.loc} = 7.43\,m$

Headwater Lateral Load on Footing: $H_{hwf.U2} = -7107.3 \cdot kN$ $H_{hwf.U2.loc} = 1.67\,m$

Total Horizontal Tailwater Load on Footing under Gate Openings, i.e., excluding Pier: $H_{twf.U2} = 1344.9 \cdot kN$ $H_{twf.U2.loc} = 0.09\,m$

Resisting Water on Rear Face of Monolith, i.e., bottom of heel elevation: *(Point O @ TOE: BOFtoe = EL.1205.5)*

Ice / Impact Load: $I_{U2} = 0.0 \cdot kN$ at: $I_{U2.loc} = 11.50\,m$

Depth of Fill at Heel Side for Overturning Analysis: $t_{hf.U2} := TOC_{as} - BOF_{toe} = 4.50\,m$

Driving Soil Load for overturning: $E1_{drive.U2} := \frac{K_o \cdot t_{hf.U2}^{\,2}}{2} \cdot \left(\gamma_r - \gamma_w\right) \cdot W_b \cdot -1 = -974.5 \cdot kN$

Acting at: $E1_{drive.loc.U2} := \frac{t_{hf.U2}}{3} = 1.50\,m$

Downstream (resisting) Lateral Soil Load as required to produce horizontal equilibrium: $E2_{resist.U2} := -1 \cdot \left(H_{hwg.U2} + H_{hwf.U2} + H_{twf.U2} + I_{U2} + E1_{drive.U2}\right) = 6737 \cdot kN$

Assumed Resisting Bedrock at middle of Key, passive soil pressure or lateral bearing on contract joint at end of Monolith 3A3B: $E2_{resistlocU2} := E2_{resistlocU1} = -0.75\,m$

Overturning moment by Dead Loads about Point O @ Toe: $\Sigma M_{DL.U2} = 322889.4 \cdot kN \cdot m$

Overturning moment by Vertical Water Loads and Uplift, about Point O @ Toe

$$\Sigma M_{Vwater.U2.OT} := H_{1.U2} \cdot H_{1.U2.loc} + H_{2.U2} \cdot H_{2.U2.loc} + H_{3.U2} \cdot H_{3.U2.loc} + Uplift_{pore.U2} \cdot Uplift_{pore.U2.loc} = -74527.9 \cdot kN \cdot m$$

Overturning moment by Lateral Hydrostatic Forces of Headwater Pool and Tailwater Pool,about Point O @ Toe: $\Sigma M_{HWater.U2} = -11727.4 \cdot kN \cdot m$

Overturning Moment by Impact/Ice Load, about Point O@ Toe: $\Sigma M_{I.U2} = 0 \cdot kN \cdot m$

Overturning moment by Lateral Soil Forces
about Point O @ Toe

$$\Sigma M_{soil.U2} := E1_{drive.U2} \cdot E1_{drive.loc.U2} + E2_{resistU2} \cdot E2_{resistlocU2} = -6514.5 \cdot kN \cdot m$$

Sum of the Overturning Moments about Point O @ Toe:

$$\Sigma M_{U2.OT} := \Sigma M_{DL.U2} + \Sigma M_{HWater.U2} + \Sigma M_{Vwater.U2.OT} + \Sigma M_{I.U2} + \Sigma M_{soil.U2} = 230120 \cdot kN \cdot m$$

Sum of Vertical Forces:

$$\Sigma V_{U2.OT} := \Sigma V_{DL.U2} + \Sigma V_{water.U2.OT} = 18661.3 \cdot kN$$

$$\Sigma M_{Vwater.U2} = -171722331.3\,J$$

Distance X_R: EM 1110-2-2502 Eq.4-1

$$X_{R.U2} := \frac{\Sigma M_{U2.OT}}{\Sigma V_{U2.OT}} = 12.3\,m$$

Overturning Resultant Ratio

$$Ratio_{Overturning.U2} := \frac{X_{R.U2}}{L_b} = 0.51$$

EM 1110-2-2502

Table 4-1

Retaining Wall Stability Criteria

Loading Condition	Sliding Factor of Safety, FS	Shear Strength Test Required: Soil Foundation	Shear Strength Test Required: Rock Foundation[3]	Overturning Criteria Minimum Base Area in Compression: Soil Foundation	Overturning Criteria Minimum Base Area in Compression: Rock Foundation
Usual	1.5	(Q &/or S)[2,1]	Direct shear	100%[4]	75%[4]

UN1 CASE

MONOLITH OVERTURNING STABILITY ANALYSIS

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stability of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1 $Ratio_{overturning.allow.Unusual} := 0.333$ (Resultant within Middle Third)

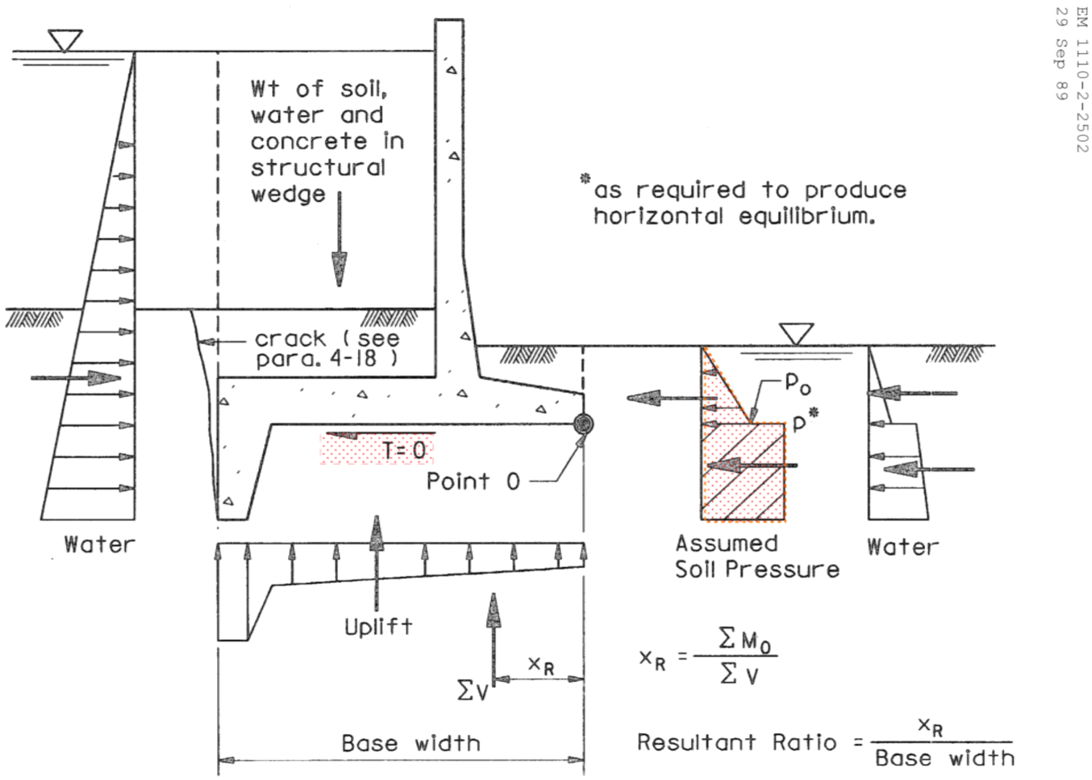

Figure 4-5. Forces for overturning analysis for wall with horizontal base and key

All Vertical Loads Applicable to Overturning Stability Analysis

Total Concrete Dead Loads:	$D_{conc} = 25408.2 \cdot kN$	at:	$X_{conc.loc} = 12.7\,m$
Dead Load of Gate:	$D_{Gate} = 580.0 \cdot kN$		$X_{gate} = 8.75\,m$
Water Weight (HW) on Apron Slab:	$H_{1.UN1} = 4233.2 \cdot kN$		$H_{1.UN1.loc} = 21.10\,m$
Water Weight (HW) on Fixed Crest:	$H_{2.UN1} = 3425.7 \cdot kN$		$H_{2.UN1.loc} = 14.25\,m$
Water Weight (TW) on Fixed Crest:	$H_{3.UN1} = 2808.8 \cdot kN$		$H_{3.UN1.loc} = 5.78\,m$

Uplift Force from Sliding Analysis. Line of Creep Method applied at presumed inclined sliding line, and subtraction gravity effect to Base of Concrete by Archimedes Principle

$$U_{UN1.loc.sliding} := \frac{U_{A.UN1} \cdot L_{A.UN1} + U_{B.UN1} \cdot L_{B.UN1} - A_{rs} \cdot w_{as} \cdot \gamma_w \cdot L_{rs}}{U_{A.UN1} + U_{B.UN1} - A_{rs} \cdot w_{as} \cdot \gamma_w} = 13.81\,m$$

$$U_{UN1.sliding} := U_{UN1} + A_{rs} \cdot w_{as} \cdot \gamma_w = -18095.7 \cdot kN$$

Uplift for Overturning Analysis, Line of Creep Method. Pore pressure at base of Concrete

UN1 CASE

$Uplift_{pore.UN1} = -17214.6 \cdot kN$

$$Uplift_{pore.UN1.loc} := \frac{Uplift_{BC.UN1} \cdot Uplift_{BC.UN1.loc} + Uplift_{DE.UN1} \cdot Uplift_{DE.UN1.loc} \cdots + Uplift_{EF.UN1} \cdot Uplift_{EF.UN1.loc} + Uplift_{FG.UN1} \cdot Uplift_{FG.UN1.loc}}{Uplift_{pore.U2}} = 13.3\,m$$

Sum of All Water Load for Overturning Analysis

$$\Sigma V_{water.UN1.OT} := H_{1.UN1} + H_{2.UN1} + H_{3.UN1} + Uplift_{pore.UN1} = -6746.9 \cdot kN$$

All Lateral Loads Applicable to Overturning Stability Analysis

Apply Load to Gate?: $poss_{UN1} = 0$ — poss = 1 if gate is closed, 0 if gate is open

Headwater Lateral Load on Gate: $H_{hwg.UN1} = 0.0 \cdot kN$ — $H_{hwg.UN1.loc} = 7.43\,m$

Headwater Lateral Load on Footing: $H_{hwf.UN1} = -7107.3 \cdot kN$ — $H_{hwf.UN1.loc} = 1.67\,m$

Total Horizontal Tailwater Load on Footing under Gate Openings, i.e., excluding Pier: $H_{twf.UN1} = 1344.9 \cdot kN$ — $H_{twf.UN1.loc} = 0.09\,m$

Resisting Water on Rear Face of Monolith, i.e., bottom of heel elevation: *(Point O @ TOE: BOFtoe = EL.1205.5)*

Ice / Impact Load: $I_{UN1} = 0.0 \cdot kN$ at: $I_{UN1.loc} = 11.50\,m$

Depth of Fill at Heel Side for Overturning Analysis: $t_{hf.UN1} := TOC_{as} - BOF_{toe} = 4.50\,m$

Driving Soil Load for overturning:

$$E1_{drive.UN1} := \frac{K_o \cdot t_{hf.UN1}^{\;2}}{2} \cdot (\gamma_r - \gamma_w) \cdot W_b \cdot -1 = -974.5 \cdot kN$$

Acting at:

$$E1_{drive.loc.UN1} := \frac{t_{hf.UN1}}{3} = 1.50\,m$$

Downstream (resisting) Lateral Soil Load as required to produce horizontal equilibrium:

$$E2_{resistUN1} := -1 \cdot (H_{hwg.UN1} + H_{hwf.UN1} + H_{twf.UN1} + I_{UN1} + E1_{drive.UN1})$$

$E2_{resistUN1} = 6737 \cdot kN$

Assumed Resisting Bedrock at middle of Key, passive soil pressure or lateral bearing on contract joint at end of Monolith 3A3B: $E2_{resistlocUN1} := E2_{resistlocU1} = -0.75\,m$

Overturning moment by Dead Loads about Point O @ Toe: $\Sigma M_{DL.UN1} = 322889.4 \cdot kN \cdot m$

Overturning moment by Vertical Water Loads and Uplift, about Point O @ Toe

$$\Sigma M_{Vwater.UN1.OT} := H_{1.UN1} \cdot H_{1.UN1.loc} + H_{2.UN1} \cdot H_{2.UN1.loc} + H_{3.UN1} \cdot H_{3.UN1.loc} + Uplift_{pore.UN1} \cdot Uplift_{pore.UN1.loc} = -74527.9 \cdot kN \cdot m$$

Overturning moment by Lateral Hydrostatic Forces of Headwater Pool and Tailwater Pool,about Point O @ Toe: $\Sigma M_{HWater.UN1} = -11727.4 \cdot kN \cdot m$

Overturning Moment by Impact/Ice Load, about Point O@ Toe: $\Sigma M_{I.UN1} = 0 \cdot kN \cdot m$

Overturning moment by Lateral Soil Forces
about Point O @ Toe

$\Sigma M_{soil.UN1} := E1_{drive.UN1} \cdot E1_{drive.loc.UN1} + E2_{resistUN1} \cdot E2_{resistlocUN1} = -6514.5 \cdot kN \cdot m$

Sum of the Overturning Moments about Point O @ Toe:

MONOLITH OVERTURNING STABILITY ANALYSIS

UN2 CASE

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.

Assumptions are made in order to compute overturning stability of indetermine forces on monolith with key;

(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.

(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium

(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1 $Ratio_{overturning.allow.Unusual} := 0.333$ (Resultant within Middle Third)

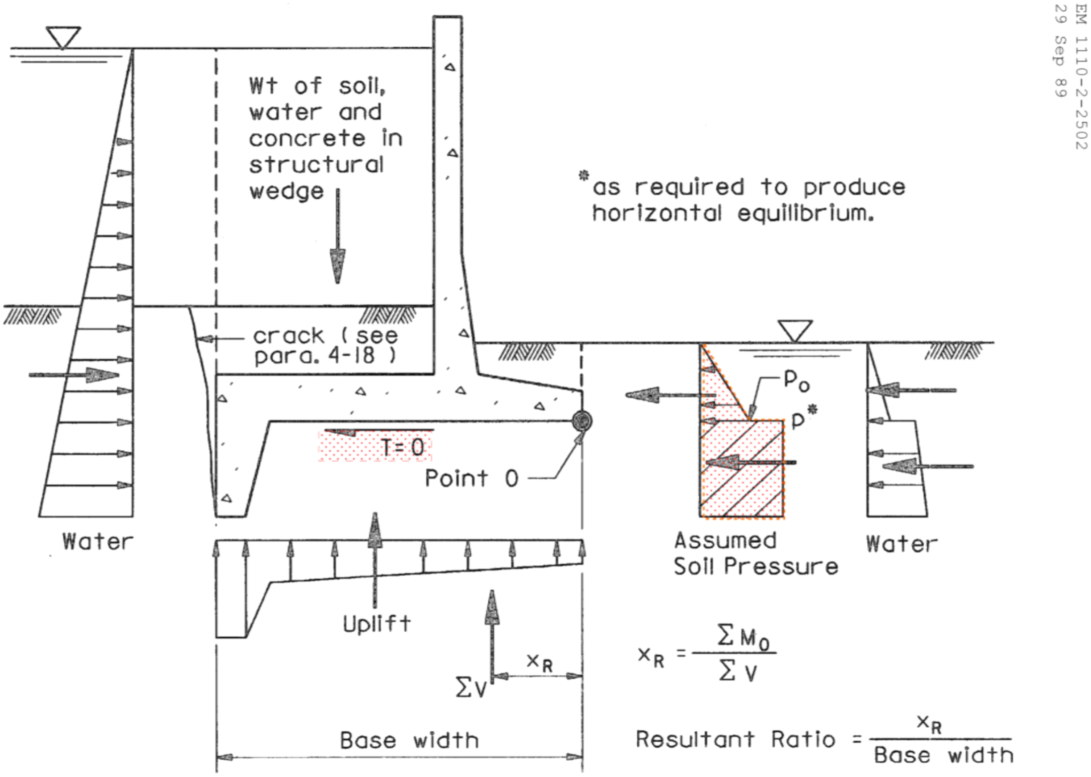

Figure 4-5. Forces for overturning analysis for wall with horizontal base and key

All Vertical Loads Applicable to Overturning Stability Analysis

Total Concrete Dead Loads:	$D_{conc} = 25408.2 \cdot kN$	at:	$X_{conc.loc} = 12.7\,m$
Dead Load of Gate:	$D_{Gate} = 580.0 \cdot kN$		$X_{gate} = 8.75\,m$
Water Weight (HW) on Apron Slab:	$H_{1.UN2} = 4525.2 \cdot kN$		$H_{1.UN2.loc} = 21.10\,m$
Water Weight (HW) on Fixed Crest:	$H_{2.UN2} = 4220.3 \cdot kN$		$H_{2.UN2.loc} = 14.25\,m$
Water Weight (TW) on Fixed Crest:	$H_{3.UN2} = 0.0 \cdot kN$		$H_{3.UN2.loc} = 0.00\,m$

Uplift Force from Sliding Analysis. Line of Creep Method applied at presumed inclined sliding line, and subtraction gravity effect to Base of Concrete by Archimedes Principle

$$U_{UN2.loc.sliding} := \frac{U_{A.UN2} \cdot L_{A.UN2} + U_{B.UN2} \cdot L_{B.UN2} - A_{rs} \cdot w_{as} \cdot \gamma_w \cdot L_{rs}}{U_{A.UN2} + U_{B.UN2} - A_{rs} \cdot w_{as} \cdot \gamma_w} = 13.31\,m$$

$$U_{UN2.sliding} := U_{UN2} + A_{rs} \cdot w_{as} \cdot \gamma_w = -21725.9 \cdot kN$$

UN2 CASE

Uplift for Overturning Analysis, Line of Creep Method. Pore pressure at base of Concrete

$Uplift_{pore.UN2} = -20762.1 \cdot kN$

$$Uplift_{pore.UN2.loc} := \frac{Uplift_{BC.UN2} \cdot Uplift_{BC.UN2.loc} + Uplift_{DE.UN2} \cdot Uplift_{DE.UN2.loc} \cdots + Uplift_{EF.UN2} \cdot Uplift_{EF.UN2.loc} + Uplift_{FG.UN2} \cdot Uplift_{FG.UN2.loc}}{Uplift_{pore.UN2}} = 12.7\, m$$

Sum of All Water Load for Overturning Analysis

$$\Sigma V_{water.UN2.OT} := H_{1.UN2} + H_{2.UN2} + H_{3.UN2} + Uplift_{pore.UN2} = -12016.6 \cdot kN$$

<u>All Lateral Loads Applicable to Overturning Stability Analysis</u>

Apply Load to Gate?: $poss_{UN2} = 1$ poss = 1 if gate is closed
0 if gate is open

Headwater Lateral Load on Gate: $H_{hwg.UN2} = 0.0 \cdot kN$ $H_{hwg.UN2.loc} = 7.57\, m$

Headwater Lateral Load on Footing: $H_{hwf.UN2} = -7460.5 \cdot kN$ $H_{hwf.UN2.loc} = 1.70\, m$

Total Horizontal Tailwater Load on Footing under Gate Openings, i.e., excluding Pier $H_{twf.UN2} = 721.0 \cdot kN$ $H_{twf.UN2.loc} = -0.33\, m$

Resisting Water on Rear Face of Monolith, i.e., bottom of heel elevation: *(Point O @ TOE: BOFtoe = EL.1205.5)*

Ice / Impact Load: $I_{UN2} = 0.0 \cdot kN$ at: $I_{UN2.loc} = 11.90\, m$

Depth of Fill at Heel Side for Overturning Analysis: $t_{hf.UN2} := TOC_{as} - BOF_{toe} = 4.50\, m$

Driving Soil Load for overtuming:

$$E1_{drive.UN2} := \frac{K_o \cdot t_{hf.UN2}^{\;2}}{2} \cdot \left(\gamma_r - \gamma_w\right) \cdot W_b \cdot -1 = -974.5 \cdot kN$$

Acting at:

$$E1_{drive.loc.UN2} := \frac{t_{hf.UN2}}{3} = 1.50\, m$$

Downstream (resisting) Lateral Soil Load as required to produce horizontal equilibrium:

$$E2_{resistUN2} := -1 \cdot \left(H_{hwg.UN2} + H_{hwf.UN2} + H_{twf.UN2} + I_{UN2} + E1_{drive.UN2}\right)$$

$E2_{resistUN2} = 7714 \cdot kN$

Assumed Resisting Bedrock at middle of Key, passive soil pressure or lateral bearing on contract joint at end of Monolith 3A3B $E2_{resistlocUN2} := E2_{resistlocU1} = -0.75\, m$

Overturning moment by Dead Loads about Point O @ Toe $\Sigma M_{DL.UN2} = 325934.4 \cdot kN \cdot m$

Overturning moment by Vertical Water Loads and Uplift, about Point O @ Toe

$$\Sigma M_{Vwater.UN2.OT} := H_{1.UN2} \cdot H_{1.UN2.loc} + H_{2.UN2} \cdot H_{2.UN2.loc} + H_{3.UN2} \cdot H_{3.UN2.loc} + Uplift_{pore.UN2} \cdot Uplift_{pore.UN2.loc} = -107031.9 \cdot kN \cdot m$$

Overturning moment by Lateral Hydrostatic Forces of Headwater Pool and Tailwater Pool,about Point O @ Toe $\Sigma M_{HWater.UN2} = -12887.9 \cdot kN \cdot m$

Overturning Moment by Impact/Ice Load, about Point O@ Toe $\Sigma M_{I.UN2} = 0$

Overturning moment by Lateral Soil Forces
about Point O @ Toe

$$\Sigma M_{soil.UN2} := E1_{drive.UN2} \cdot E1_{drive.loc.UN2} + E2_{resistUN2} \cdot E2_{resistlocUN2} = -7247.3 \cdot kN \cdot m$$

Sum of the Overturning Moments about Point O @ Toe:

$$\Sigma M_{UN2.OT} := \Sigma M_{DL.UN2} + \Sigma M_{HWater.UN2} + \Sigma M_{Vwater.UN2.OT} + \Sigma M_{I.UN2} + \Sigma M_{soil.UN2} = 198767 \cdot kN \cdot m$$

Sum of Vertical Forces:

$$\Sigma V_{UN2.OT} := \Sigma V_{DL.UN2} + \Sigma V_{water.UN2.OT} = 13739.6 \cdot kN$$

Distance X_R: EM 1110-2-2502 Eq.4-1

$$X_{R.UN2} := \frac{\Sigma M_{UN2.OT}}{\Sigma V_{UN2.OT}} = 14.5\,m$$

Overturning Resultant Ratio

$$Ratio_{Overturning.UN2} := \frac{X_{R.UN2}}{L_b} = 0.6$$

EM 1110-2-2502

Table 4-1

Retaining Wall Stability Criteria

Loading Condition	Sliding Factor of Safety, FS	Shear Strength Test Required: Soil Foundation	Shear Strength Test Required: Rock Foundation[3]	Overturning Criteria Minimum Base Area in Compression: Soil Foundation	Overturning Criteria Minimum Base Area in Compression: Rock Foundation
Usual	1.5	(Q &/or S)[2,1]	Direct shear	100%[4]	75%[4]
Unusual	1.33	(Q &/or S)[2,1]	Direct shear	75%[4]	50%[4]
Earthquake	1.1	(Q)	Direct shear	Resultant within base	Resultant within base

Overturning Stability Check

MONOLITH OVERTURNING STABILITY ANALYSIS

UN3 CASE

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stability of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1

$Ratio_{overturning.allow.Unusual} = 0.333$ (Resultant within Middle Third)

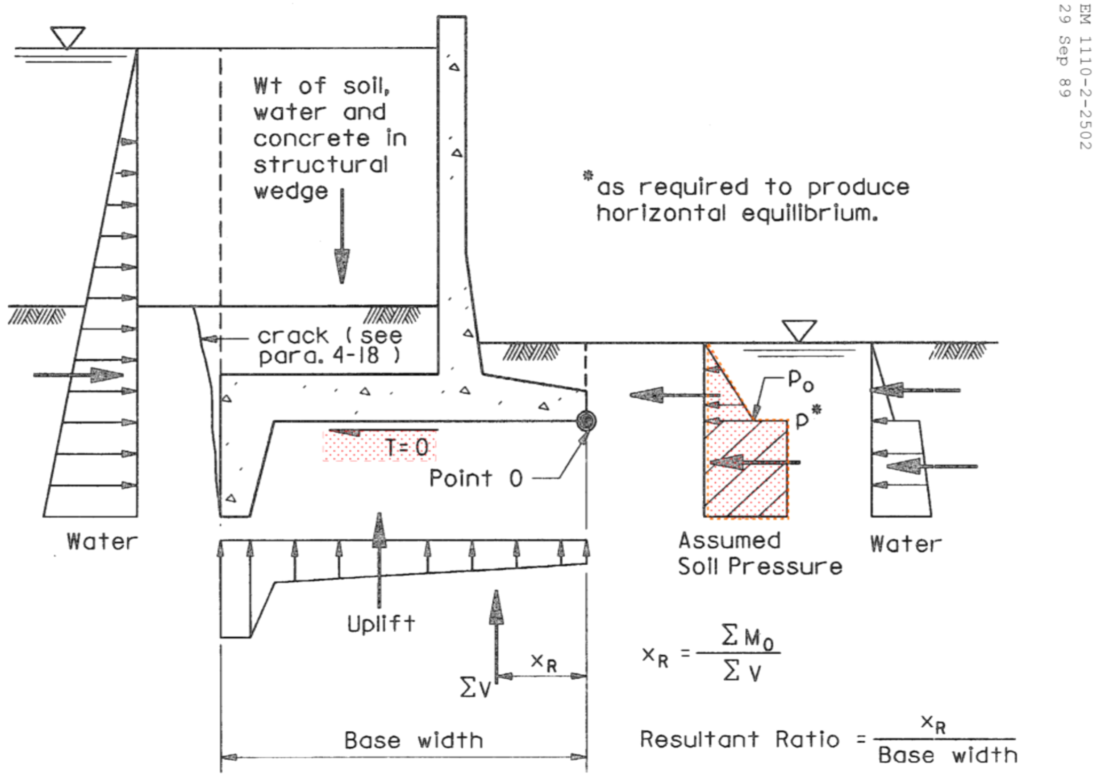

Figure 4-5. Forces for overturning analysis for wall with horizontal base and key

All Vertical Loads Applicable to Overturning Stability Analysis

Total Concrete Dead Loads:	$D_{conc} = 25408.2 \cdot kN$	at:	$X_{conc.loc} = 12.7\,m$
Dead Load of Gate:	$D_{Gate} = 580.0 \cdot kN$		$X_{gate} = 8.75\,m$
Water Weight (HW) on Apron Slab:	$H_{1.UN3} = 5109.0 \cdot kN$		$H_{1.UN3.loc} = 21.10\,m$
Water Weight (HW) on Fixed Crest:	$H_{2.UN3} = 4910.1 \cdot kN$		$H_{2.UN3.loc} = 14.25\,m$
Water Weight (TW) on Fixed Crest:	$H_{3.UN3} = 0.0 \cdot kN$		$H_{3.UN3.loc} = 0.00\,m$

Uplift Force from Sliding Analysis. Line of Creep Method applied at presumed inclined sliding line, and subtraction gravity effect to Base of Concrete by Archimedes Principle

$$U_{UN3.loc.sliding} := \frac{U_{A.UN3} \cdot L_{A.UN3} + U_{B.UN3} \cdot L_{B.UN3} - A_{rs} \cdot w_{as} \cdot \gamma_w \cdot L_{rs}}{U_{A.UN3} + U_{B.UN3} - A_{rs} \cdot w_{as} \cdot \gamma_w} = 14.31\ m$$

$$U_{UN3.sliding} := U_{UN3} + A_{rs} \cdot w_{as} \cdot \gamma_w = -17981.7 \cdot kN$$

UN3 CASE

Uplift for Overturning Analysis, Line of Creep Method. Pore pressure at base of Concrete

$$Uplift_{pore.UN3} = -16740.1 \cdot kN$$

$$Uplift_{pore.UN3.loc} := \frac{Uplift_{BC.UN3} \cdot Uplift_{BC.UN3.loc} + Uplift_{DE.UN3} \cdot Uplift_{DE.UN3.loc} \cdots + Uplift_{EF.UN3} \cdot Uplift_{EF.UN3.loc} + Uplift_{FG.UN3} \cdot Uplift_{FG.UN3.loc}}{Uplift_{pore.UN3}} = 14.1\,m$$

Sum of All Water Load for Overturning Analysis

$$\Sigma V_{water.UN3.OT} := H_{1.UN3} + H_{2.UN3} + H_{3.UN3} + Uplift_{pore.UN3} = -6720.9 \cdot kN$$

All Lateral Loads Applicable to Overturning Stability Analysis

Apply Load to Gate?: $poss_{UN3} = 1$ poss = 1 if gate is closed, 0 if gate is open

Headwater Lateral Load on Gate: $H_{hwg.UN3} = 0.0 \cdot kN$ $H_{hwg.UN3.loc} = 7.83\,m$

Headwater Lateral Load on Footing: $H_{hwf.UN3} = -8166.8 \cdot kN$ $H_{hwf.UN3.loc} = 1.74\,m$

Total Horizontal Tailwater Load on Footing under Gate Openings, i.e., excluding Pier: $H_{twf.UN3} = 721.0 \cdot kN$ $H_{twf.UN3.loc} = -0.33\,m$

Resisting Water on Rear Face of Monolith, i.e., bottom of heel elevation:

(Point O @ TOE: BOFtoe = EL.1205.5)

Ice / Impact Load: $I_{UN3} = 0.0 \cdot kN$ at: $I_{UN3.loc} = 12.70\,m$

Depth of Fill at Heel Side for Overturning Analysis: $t_{hf.UN3} := TOC_{as} - BOF_{toe} = 4.50\,m$

Driving Soil Load for overturning: $E1_{drive.UN3} := \frac{K_o \cdot t_{hf.UN3}^2}{2} \cdot (\gamma_r - \gamma_w) \cdot W_b \cdot -1 = -974.5 \cdot kN$

Acting at: $E1_{drive.loc.UN3} := \frac{t_{hf.UN3}}{3} = 1.50\,m$

Downstream (resisting) Lateral Soil Load as required to produce horizontal equilibrium:

$$E2_{resistUN3} := -1 \cdot (H_{hwg.UN3} + H_{hwf.UN3} + H_{twf.UN3} + I_{UN3} + E1_{drive.UN3})$$

$$E2_{resistUN3} = 8420.3 \cdot kN$$

Assumed Resisting Bedrock at middle of Key, passive soil pressure or lateral bearing on contract joint at end of Monolith 3A3B: $E2_{resistlocUN3} := E2_{resistlocU1} = -0.75\,m$

Overturning moment by Dead Loads about Point O @ Toe: $\Sigma M_{DL.UN1} = 322889.4 \cdot kN \cdot m$

Overturning moment by Vertical Water Loads and Uplift, about Point O @ Toe

$$\Sigma M_{Vwater.UN3.OT} := H_{1.UN3} \cdot H_{1.UN3.loc} + H_{2.UN3} \cdot H_{2.UN3.loc} + H_{3.UN1} \cdot H_{3.UN3.loc} + Uplift_{pore.UN3} \cdot Uplift_{pore.UN3.loc} = -58253.1 \cdot kN \cdot m$$

Overturning moment by Lateral Hydrostatic Forces of Headwater Pool and Tailwater Pool,about Point O @ Toe: $\Sigma M_{HWater.UN3} = -14477.1 \cdot kN \cdot m$

Overturning Moment by Impact/Ice Load, about Point O@ Toe: $\Sigma M_{I.UN3} = 0$

Overturning moment by Lateral Soil Forces
about Point O @ Toe

$$\Sigma M_{soil.UN3} := E1_{drive.UN3} \cdot E1_{drive.loc.UN3} + E2_{resistUN3} \cdot E2_{resistlocUN3} = -7777 \cdot kN \cdot m$$

Sum of the Overturning Moments about Point O @ Toe:

$$\Sigma M_{UN3.OT} := \Sigma M_{DL.UN3} + \Sigma M_{HWater.UN3} + \Sigma M_{Vwater.UN3.OT} + \Sigma M_{I.UN3} + \Sigma M_{soil.UN3} = 245427 \cdot kN \cdot m$$

Sum of Vertical Forces: $\Sigma V_{UN3.OT} := \Sigma V_{DL.UN3} + \Sigma V_{water.UN3.OT} = 19035.3 \cdot kN$

Distance X_R: EM 1110-2-2502 Eq.4-1 $X_{R.UN3} := \dfrac{\Sigma M_{UN3.OT}}{\Sigma V_{UN3.OT}} = 12.9\,m$

Overturning Resultant Ratio $Ratio_{Overturning.UN3} := \dfrac{X_{R.UN3}}{L_b} = 0.53$

EM 1110-2-2502

Table 4-1

Retaining Wall Stability Criteria

Loading Condition	Sliding Factor of Safety, FS	Shear Strength Test Required: Soil Foundation	Shear Strength Test Required: Rock Foundation[3]	Overturning Criteria Minimum Base Area in Compression: Soil Foundation	Overturning Criteria Minimum Base Area in Compression: Rock Foundation

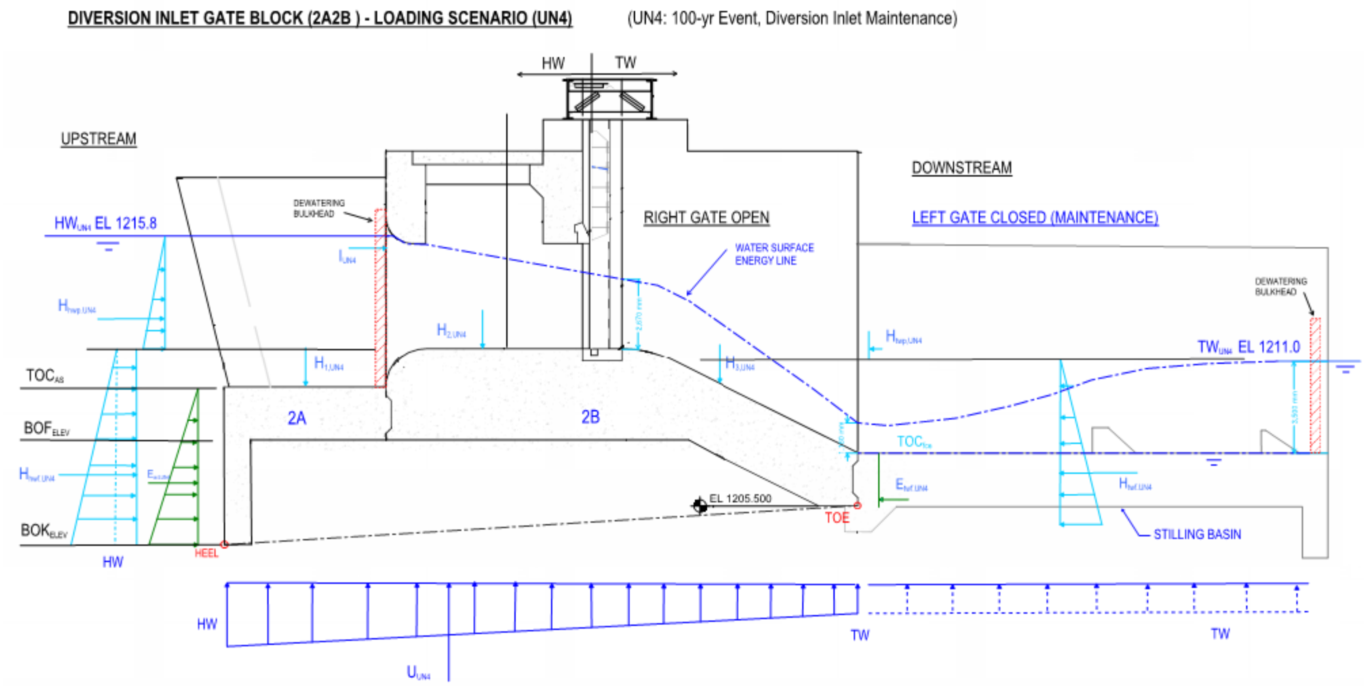
UN4 DESIGN CASE



This load case is the Construction / Maintenance / Single Gate Bay Dewatered Load Case. One vertical lift gate is open, while the other has been removed for maintenance, and bulkheads in place to dewater one gate bay at a time. Calculation highlighted in Orange where calculation which differ from Load Case UN1 procedures.

ACCEPTANCE PARAMETERS

Required Factor of Safety for Sliding: $FS_{req.UN4.sl} := 1.3$ (Without Cohesion) (Section 8.1, Design Criteria)

Resultant Within Middle Third of Base: $e \le \frac{L_b}{6} \wedge e \ge \frac{-L_b}{6}$

Allowable Rock Bearing Pressure: $\sigma_{allow.UN4} := 1470.0 \cdot \frac{kN}{m^2}$ (Section 5.2, Design Criteria)

Required Factor of Safety for Flotation: $FS_{req.UN.flt} = 1.3$

Overturning Min Required Resultant Ratio: $\frac{X_{R.UN}}{\text{Horizontal Width of Base}} > 0.333$

(100% Base in Compression, Resultant within Middle Third)

INPUT PARAMETERS

Headwater Elevation: $HW_{UN4} := 1215.80m$

Tailwater Elevation: $TW_{UN4} := 1211.10m$

(Water Elevations based on Diversion Structure 2D Hydraulic Model Results. See page 6 and Section 8.2, Design Criteria)

Crest Water Elevation, EL.1215.81 $CrestW_{UN4} := 2.87 \cdot m$

Chute Block Water Elevation EL.1208.78 $ChuteW_{UN4} := 1.28 \cdot m$ $TW_{UN4} := TOC_{fce} + ChuteW_{UN4} = 1208.8\,m$

Bottom of Key (Footing Heel) Elevation: $BOF_{elev} = 1204.00\,m$

Apron Slab Top of Concrete Elevation at Edge of Slab: $TOC_{as} = 1210.00\,m$

Fixed Crest Top of Concrete Elevation at Downstream Face: $TOC_{fce} = 1207.50\,m$

Fixed Crest Top of Concrete Elevation at Center of Footing: $TOC_{fcc} = 1211.50\,m$

UN4 CASE

Lift Gate Position per Hydraulic Criteria

$poss_{UN4} := 0$ poss = 1 if gate is closed
0 if gate is open

$Gate_{R.UN4} := 0.60 = 0.6$

Monolith Reaction for Lift Gate
UN4 - Maintenance one DI channel dewatered, while another DI channel open to tailwater pool

$\Sigma V_{DL.UN4} := D_{conc} + Gate_{R.UN4} D_{Gate} = 25756.2 \cdot kN$

$\Sigma M_{DL.UN4} := D_{conc} \cdot X_{conc.loc} + Gate_{R.UN4} \cdot D_{Gate} \cdot X_{gate} = 325934.4 \cdot kN \cdot m$

VERTICAL LIFT GATE

Dead Load of Vertical Lift Gate:

$D_{Gate.UN4} := \dfrac{D_{Gate} \cdot 4.5 \cdot m \cdot 2}{20 \cdot m} = 261.0 \cdot kN$

(Drawing Q-202 dated 03-31-2017, Gate on Sill)

Distance from Toe to COG of Gate:

$X_{gate.UN4} := 9.75 \cdot m$

Distance from Base to Centroid of Vertical Lift Gate:

$Y_{gate.UN4} := 7.0m$

Distance from base to halfway between the bottom of the headwall and the top of the Fixed Crest.

DEAD LOAD SUMMATION:

$\Sigma V_{DL.UN4} := D_{conc} + D_{Gate.UN4} = 25669.2 \cdot kN$

$\Sigma M_{DL.UN4} := D_{conc} \cdot X_{conc.loc} + D_{Gate.UN4} \cdot X_{gate.UN4} = 325434.2 \cdot kN \cdot m$

LATERAL WATER LOADS

HEADWATER (DRIVING):

Water Depth Above Fixed Crest at Gate: $D_{hwg.UN4} := HW_{UN4} - TOC_{fcc} = 4.3\,m$

Water Load Unit Width on Gate $W_{hwg.UN4} := 0 = 0.00$

Apply Load to Gate?: $poss_{UN4} = 0$

poss = 1 if gate is closed
0 if gate is open

Total Horizontal Water Load on Gate:

$H_{hwg.UN4} := \dfrac{-\left(\gamma_w \cdot D_{hwg.UN4}^{\;2}\right)}{2} \cdot W_{hwg.UN4} = 0 \cdot kN$

Apply Total Gate Water Load at:

$H_{hwg.UN4.loc} := \dfrac{D_{hwg.UN4}}{3} + \left(TOC_{fcc} - BOF_{toe}\right) = 7.43\,m$

Water Depth at Heel: $D_{hwf.UN4} := HW_{UN4} - BOF_{elev} = 11.80\,m$

Water Load Unit With on Footing: $W_{hw.UN4} := W_b$

Water Load at Bottom of Footing:

$H_{hwf.UN4.1} := -\left(\gamma_w \cdot D_{hwf.UN4}\right) \cdot W_{hw.UN4} = -1389.1 \dfrac{1}{m} \cdot kN$

Water Load at Top of Footing:
Total Horizontal Water Load on Footing:

$H_{hwf.UN4} := \dfrac{\left(H_{hwf.UN4.1} + H_{hwf.UN4.2}\right) \cdot \left(D_{hwf.UN4} - D_{hwg.UN4}\right)}{2} = -7107.3 \cdot kN \; UN4) \cdot W_{hw.UN4} = -506.2 \dfrac{1}{m} \cdot kN$

Apply Total Footing Water Load at:

$$H_{hwf.UN4.loc} := \frac{\left[H_{hwf.UN4.2} \cdot \dfrac{\left(TOC_{fcc} - BOF_{elev}\right)^2}{2} + \dfrac{\left(H_{hwf.UN4.1} - H_{hwf.UN4.2}\right)}{2} \cdot \dfrac{\left(TOC_{fcc} - BOF_{elev}\right)^2}{3}\right]}{\dfrac{\left(H_{hwf.UN4.2} + H_{hwf.UN4.1}\right) \cdot \left(TOC_{fcc} - BOF_{elev}\right)}{2}} - \left(BOF_{toe} - BOF_{elev}\right) = 1.67\,m$$

Converting horizontal force resultant from HEEL calculation to Point-O@TOE

LATERAL WATER LOADS (cont.)

UN4 CASE

TAILWATER (RESISTING):

Water Depth at toe: $D_{tw.UN4} := TW_{UN4} - BOF_{elev} = 4.78\,m$

Water Load Unit Width: $W_{twf.UN4} := W_b$

Total Horizontal Tailwater Load on Footing under Gate Openings, i.e., excluding Pier

Resisting Water on Rear Face of Monolith, i.e., bottom of heel elevation:

$COND_{UN4} := poss_{UN4} = 0 \wedge TW_{UN4} \geq TOC_{fcc}$

$$H_{twf.UN4} := \begin{cases} \frac{\gamma_w \cdot D_{tw.UN4}^2}{2} \cdot \left(W_{twf.UN4}\right) & \text{if } poss_{UN4} = 1 \\ \frac{\gamma_w \cdot D_{tw.UN4}^2}{2} \cdot \left(W_{twf.UN4}\right) & \text{if } poss_{UN4} = 0 \wedge TW_{UN4} \leq TOC_{fcc} \\ \gamma_w \cdot \left[\frac{D_{tw.UN4}}{2} + \frac{\left(TW_{UN4} - TOC_{fcc}\right)}{2}\right] \cdot \left(TOC_{fcc} - BOF_{elev}\right) \cdot \left(W_{twf.UN4}\right) & \text{if } COND_{UN4} \end{cases} = 1344.9 \cdot kN$$

Apply Footing Tailwater Load within Gate Openings at:

$$H_{twf.UN4.loc} := \begin{cases} \frac{D_{tw.UN4}}{3} - \left(BOF_{toe} - BOF_{elev}\right) & \text{if } poss_{UN4} = 1 \\ \frac{D_{tw.UN4}}{3} - \left(BOF_{toe} - BOF_{elev}\right) & \text{if } poss_{UN4} = 0 \wedge TW_{UN4} \leq TOC_{fcc} \\ \frac{\left(TOC_{fcc} - BOF_{elev}\right)^2 \cdot \left[\frac{D_{tw.UN4}}{2} + \frac{\left(\left(TOC_{fcc} - BOF_{elev}\right)\right)}{6}\right]}{\left(TOC_{fcc} - BOF_{elev}\right)\left[\left(TW_{UN4} - TOC_{fcc}\right) + \frac{\left(TOC_{fcc} - BOF_{elev}\right)}{2}\right]} - \left(BOF_{toe} - BOF_{elev}\right) & \text{if } COND_{UN4} \end{cases} = 0.09 \cdot m$$

$\Sigma H_{Water.UN4} := H_{hwg.UN4} + H_{hwf.UN4} + H_{twf.UN4} = -5762.5 \cdot kN$

$$\Sigma M_{HWater.UN4} := H_{hwg.UN4} \cdot H_{hwg.UN4.loc} + H_{hwf.UN4} \cdot H_{hwf.UN4.loc} \cdots + H_{twf.UN4} \cdot H_{twf.UN4.loc} = -11727.4 \cdot kN \cdot m$$

VERTICAL WATER LOADS

UN4 CASE

HEADWATER:

Water Depth on top of fixed crest: $d_{hw.UN4} := HW_{UN4} - TOC_{as} = 5.80\,m$

Weight of Water (H1) on Approach Slab: $H_{1.UN4} := \left(W_{hw.UN4} \cdot d_{hw.UN4} \cdot L_{as}\right) \cdot \gamma_w = 4233.2 \cdot kN$

Horiz. Moment Arm for H1 (from toe): $H_{1.UN4.loc} := L_b - \dfrac{L_{as}}{2} = 21.10\,m$

Cross-sectional Area of
Headwater Above Fixed Crest: $A_{fc.hw.UN4} := 29.10m^2$

(From Bluebeam Measurement, Bound by Energy Line through Crest Water Elevation CrestW and Chute Block Water Elevation ChuteW as defined above)

Volume of water Above Fixed Crest: $V_{fc.hw.UN4} := \left(A_{fc.hw.UN4} \cdot W_{hw.UN4}\right) = 349.2 \cdot m^3$

Weight of Water (H2) on Fixed Crest: $H_{2.UN4} := \left(V_{fc.hw.UN4}\right) \cdot \dfrac{\gamma_w}{2} = 1712.8 \cdot kN$

Divide by 2 since one one side of pier is dewatered

Horiz. Moment Arm for H2 (from toe): $H_{2.UN4.loc} := 14.25 \cdot m$ (From Bluebeam Measurement)

TAILWATER:

Slope of Crest from
D/S of Gate to edge of Stilling Basin: $S_{f.UN4} := S_{f.U1} = 0.500$

Height of Tailwater Above Stilling Basin: $y_{UN4} := TW_{UN4} - TOC_{fce} = 1.3\,m$

Cross Sectional Area of Tailwater
Above Sloped Portion of Crest: $A_{tw.UN4} := 23.86 \cdot m \cdot m = 23.9\,m^2$

(From Bluebeam Measurement, Bound by Energy Line through Crest Water Elevation CrestW and Chute Block Water Elevation ChuteW as defined above)

Weight of Water (H3)
Above Slope Portion of Crest: $H_{3.UN4} := \left(A_{tw.UN4} \cdot W_{twf.UN4}\right) \cdot \gamma_w$ $H_{3.UN4} = 2808.8 \cdot kN$

Horiz. Moment Arm for H3 (from Toe): $H_{3.UN4.loc} := 5.780 \cdot m$ (From Bluebeam Measurement)

UPLIFT AT INCLINED SLIDING PLANE

UN4 CASE

Uplift pressure at Headwater: $U_{HW.UN4} := D_{hwf.UN4} \cdot \gamma_w = 115.76 \cdot \frac{kN}{m^2}$

Uplift pressure at D/S end of Stilling Basin: $U_{TW.UN4} := D_{tw.UN4} \cdot \gamma_w = 46.9 \cdot \frac{kN}{m^2}$

Length from U/S Face of Gate Structure to Toe Point(Effective Drain at end of Monolith) $L_{overall} = 24.20\,m$ $L_{sb} = 0$

Length of Seepage per Line of Creep $L_{seepage} = 27.1\,m$

Difference between Uplift pressure at Headwater and Uplift Pressure at Toe of Stilling Basin: $U_{diffUN4} := U_{HW.UN4} - U_{TW.UN4} = 68.9 \cdot \frac{kN}{m^2}$

Slope of difference between Uplift pressure at Headwater and Uplift Pressure at Toe of Stilling Basin: $U_{slopeUN4} := \frac{U_{diffUN4} - Key_d \cdot \gamma_w}{L_{overall}} = 2.24 \cdot \frac{kN}{m^2 \cdot m}$

$$U_{seepageslopeUN4} := \frac{U_{diffUN4} - Key_d \cdot \gamma_w}{L_{seepage}}$$

Tailwater Pressure at toe of Gate Structure: $U_{press.toe.gsUN4} := U_{TW.UN4} + L_{sb} \cdot U_{slopeUN4} = 46.9 \cdot \frac{kN}{m^2}$

MONOLITH OVERTURNING STABILITY ANALYSIS

UN4 CASE

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.

Assumptions are made in order to compute overturning stability of indetermine forces on monolith with key;

(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.

(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium

(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1 $Ratio_{overturning.allow.Unusual} = 0.333$ (Resultant within Middle Third)

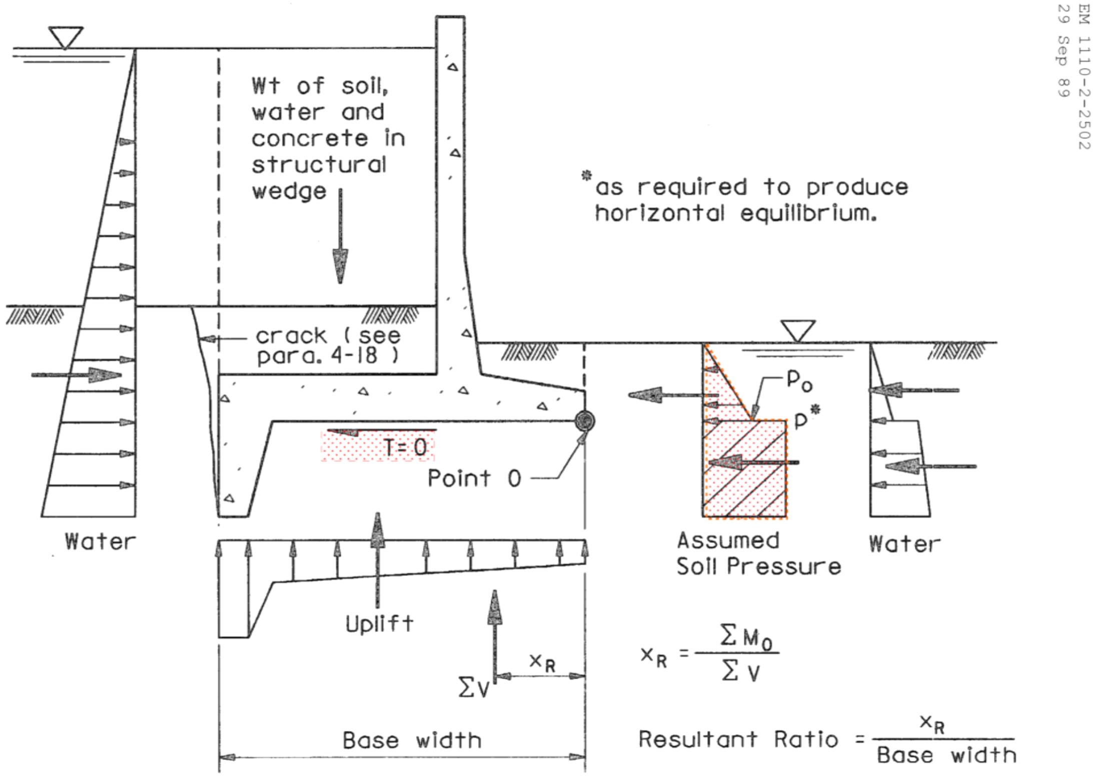

Figure 4-5. Forces for overturning analysis for wall with horizontal base and key

All Vertical Loads Applicable to Overturning Stability Analysis

Total Concrete Dead Loads:	$D_{conc} = 25408.2 \cdot kN$	at:	$X_{conc.loc} = 12.7\,m$
Dead Load of Gate:	$D_{Gate} = 580.0 \cdot kN$		$X_{gate} = 8.75\,m$
Water Weight (HW) on Apron Slab:	$H_{1.UN4} = 4233.2 \cdot kN$		$H_{1.UN4.loc} = 21.10\,m$
Water Weight (HW) on Fixed Crest:	$H_{2.UN4} = 1712.8 \cdot kN$		$H_{2.UN4.loc} = 14.25\,m$
Water Weight (TW) on Fixed Crest:	$H_{3.UN4} = 2808.8 \cdot kN$		$H_{3.UN4.loc} = 5.78\,m$

Uplift Force from Sliding Analysis. Line of Creep Method applied at presumed inclined sliding line, and subtraction gravity effect to Base of Concrete by Archimedes Principle

$$U_{UN4.loc.sliding} := \frac{U_{A.UN4} \cdot L_{A.UN4} + U_{B.UN4} \cdot L_{B.UN4} - A_{rs} \cdot w_{as} \cdot \gamma_w \cdot L_{rs}}{U_{A.UN4} + U_{B.UN4} - A_{rs} \cdot w_{as} \cdot \gamma_w} = 13.81\,m$$

$$U_{UN4.sliding} := U_{UN4} + A_{rs} \cdot w_{as} \cdot \gamma_w = -18095.7 \cdot kN$$

UN4 CASE

MONOLITH OVERTURNING STABILITY ANALYSIS

E1 CASE

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stability of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1

$Ratio_{overturning.allow.Extreme} := 0.167$

Resultant within Middle Half

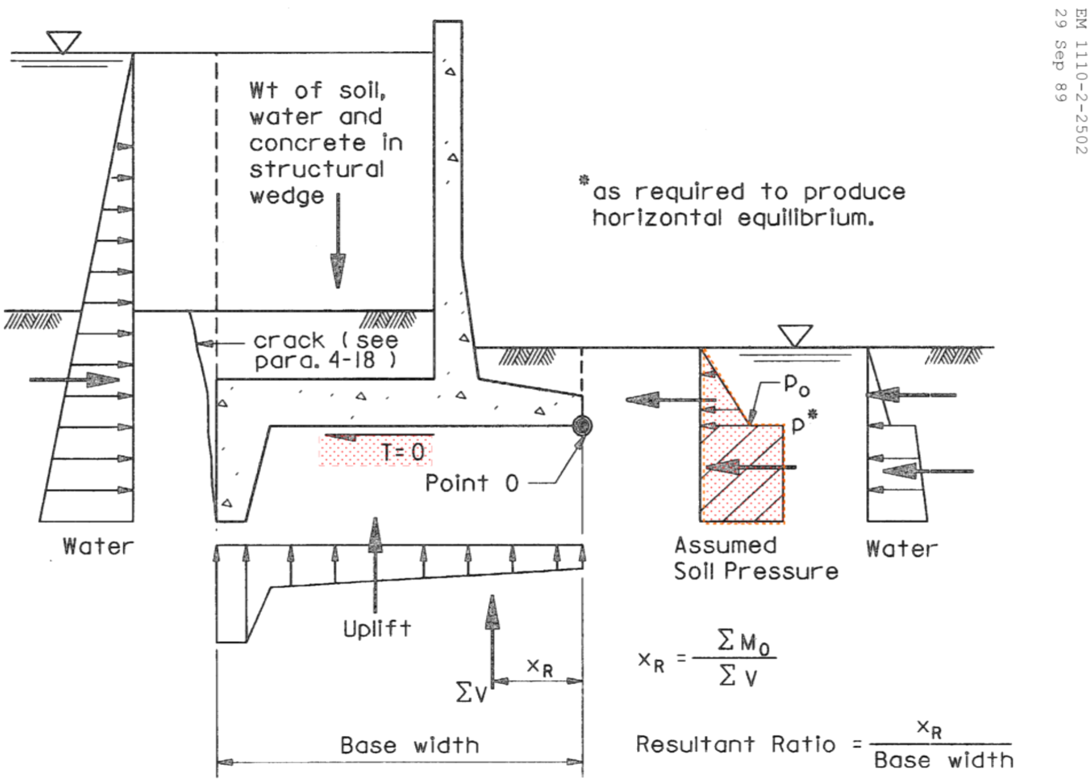

Figure 4-5. Forces for overturning analysis for wall with horizontal base and key

<u>All Vertical Loads Applicable to Overturning Stability Analysis</u>

Total Concrete Dead Loads:	$D_{conc} = 25408.2 \cdot kN$	at:	$X_{conc.loc} = 12.7\,m$
Dead Load of Gate:	$D_{Gate} = 580.0 \cdot kN$		$X_{gate} = 8.75\,m$
Water Weight (HW) on Apron Slab:	$H_{1.E1} = 5692.9 \cdot kN$		$H_{1.E1.loc} = 21.10\,m$
Water Weight (HW) on Fixed Crest:	$H_{2.E1} = 5597.6 \cdot kN$		$H_{2.E1.loc} = 14.25\,m$
Water Weight (TW) on Fixed Crest:	$H_{3.E1} = 0.0 \cdot kN$		$H_{3.E1.loc} = 0.00\,m$

Uplift Force from Sliding Analysis. Line of Creep Method applied at presumed inclined sliding line, and subtraction gravity effect to Base of Concrete by Archimedes Principle

$$U_{E1.loc.sliding} := \frac{U_{A.E1} \cdot L_{A.E1} + U_{B.E1} \cdot L_{B.E1} - A_{rs} \cdot w_{as} \cdot \gamma_w \cdot L_{rs}}{U_{A.E1} + U_{B.E1} - A_{rs} \cdot w_{as} \cdot \gamma_w} = 14.37\,m$$

$$U_{E1.sliding} := U_{E1} + A_{rs} \cdot w_{as} \cdot \gamma_w = -19121.3 \cdot kN$$

E1 CASE

Uplift for Overturning Analysis, Line of Creep Method. Pore pressure at base of Concrete

$$Uplift_{pore.E1} = -17756.3 \cdot kN$$

$$Uplift_{pore.E1.loc} := \frac{Uplift_{BC.E1} \cdot Uplift_{BC.E1.loc} + Uplift_{DE.E1} \cdot Uplift_{DE.E1.loc} \cdots + Uplift_{EF.E1} \cdot Uplift_{EF.E1.loc} + Uplift_{FG.E1} \cdot Uplift_{FG.E1.loc}}{Uplift_{pore.E1}} = 14.2\,m$$

Sum of All Water Load for Overturning Analysis

$$\Sigma V_{water.E1.OT} := H_{1.E1} + H_{2.E1} + H_{3.E1} + Uplift_{pore.E1} = -6465.8 \cdot kN$$

All Lateral Loads Applicable to Overturning Stability Analysis

Apply Load to Gate?: $poss_{E1} = 1$ poss = 1 if gate is closed, 0 if gate is open

Headwater Lateral Load on Gate: $H_{hwg.E1} = 0.0 \cdot kN$ $H_{hwg.E1.loc} = 8.10\,m$

Headwater Lateral Load on Footing: $H_{hwf.E1} = -8873.1 \cdot kN$ $H_{hwf.E1.loc} = 1.78\,m$

Total Horizontal Tailwater Load on Footing under Gate Openings, i.e., excluding Pier: $H_{twf.E1} = 721.0 \cdot kN$ $H_{twf.E1.loc} = -0.33\,m$

Resisting Water on Rear Face of Monolith, i.e., bottom of heel elevation: *(Point O @ TOE: BOFtoe = EL.1205.5)*

Ice / Impact Load: $I_{E1} = 0.0 \cdot kN$ at: $I_{E1.loc} = 13.50\,m$

Depth of Fill at Heel Side for Overturning Analysis: $t_{hf.E2} := TOC_{as} - BOF_{toe} = 4.50\,m$

Driving Soil Load for overturning: $$E1_{drive.E1} := \frac{K_o \cdot t_{hf.E1}^{\,2}}{2} \cdot (\gamma_r - \gamma_w) \cdot W_b \cdot -1 = -974.5 \cdot kN$$

Acting at: $$E1_{drive.loc.E1} := \frac{t_{hf.E1}}{3} = 1.50\,m$$

Downstream (resisting) Lateral Soil Load as required to produce horizontal equilibrium:

$$E2_{resistE1} := -1 \cdot (H_{hwg.E1} + H_{hwf.E1} + H_{twf.E1} + I_{E1} + E1_{drive.E1})$$

$$E2_{resistE1} = 9126.6 \cdot kN$$

Assumed Resisting Bedrock at middle of Key, passive soil pressure or lateral bearing on contract joint at end of Monolith 3A3B: $E2_{resistlocE1} := E2_{resistlocU1} = -0.75\,m$

Overturning moment by Dead Loads about Point O @ Toe: $\Sigma M_{DL.E1} = 325934.4 \cdot kN \cdot m$

Overturning moment by Vertical Water Loads and Uplift, about Point O @ Toe

$$\Sigma M_{Vwater.E1.OT} := H_{1.E1} \cdot H_{1.E1.loc} + H_{2.E1} \cdot H_{2.E1.loc} + H_{3.E1} \cdot H_{3.E1.loc} + Uplift_{pore.E1} \cdot Uplift_{pore.E1.loc} = -52169 \cdot kN \cdot m$$

Overturning moment by Lateral Hydrostatic Forces of Headwater Pool and Tailwater Pool,about Point O @ Toe: $\Sigma M_{HWater.E1} = -16066.3 \cdot kN \cdot m$

Overturning Moment by Impact/Ice Load, about Point O@ Toe: $\Sigma M_{I.E1} = 0$

Overturning moment by Lateral Soil Forces
about Point O @ Toe

$$\Sigma M_{soil.E1} := E1_{drive.E1} \cdot E1_{drive.loc.E1} + E2_{resistE1} \cdot E2_{resistlocE1} = -8306.8 \cdot kN \cdot m$$

Sum of the Overturning Moments about Point O @ Toe:

$$\Sigma M_{E1.OT} := \Sigma M_{DL.E1} + \Sigma M_{HWater.E1} + \Sigma M_{Vwater.E1.OT} + \Sigma M_{I.E1} + \Sigma M_{soil.E1} = 249392 \cdot kN \cdot m$$

Sum of Vertical Forces:

$$\Sigma V_{E1.OT} := \Sigma V_{DL.E1} + \Sigma V_{water.E1.OT} = 19290.4 \cdot kN$$

Distance X_R: EM 1110-2-2502 Eq.4-1

$$X_{R.E1} := \frac{\Sigma M_{E1.OT}}{\Sigma V_{E1.OT}} = 12.9\,m$$

Overturning Resultant Ratio

$$Ratio_{Overturning.E1} := \frac{X_{R.E1}}{L_b} = 0.53$$

EM 1110-2-2502

Table 4-1

Retaining Wall Stability Criteria

Loading Condition	Sliding Factor of Safety, FS	Shear Strength Test Required: Soil Foundation	Shear Strength Test Required: Rock Foundation[3]	Overturning Criteria Minimum Base Area in Compression: Soil Foundation	Overturning Criteria Minimum Base Area in Compression: Rock Foundation
Usual	1.5	(Q &/or S)[2,1]	Direct shear	100%[4]	75%[4]

MONOLITH OVERTURNING STABILITY ANALYSIS

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stability of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1 $Ratio_{overturning.allow.Extreme} = 0.167$ Resultant within Middle Half

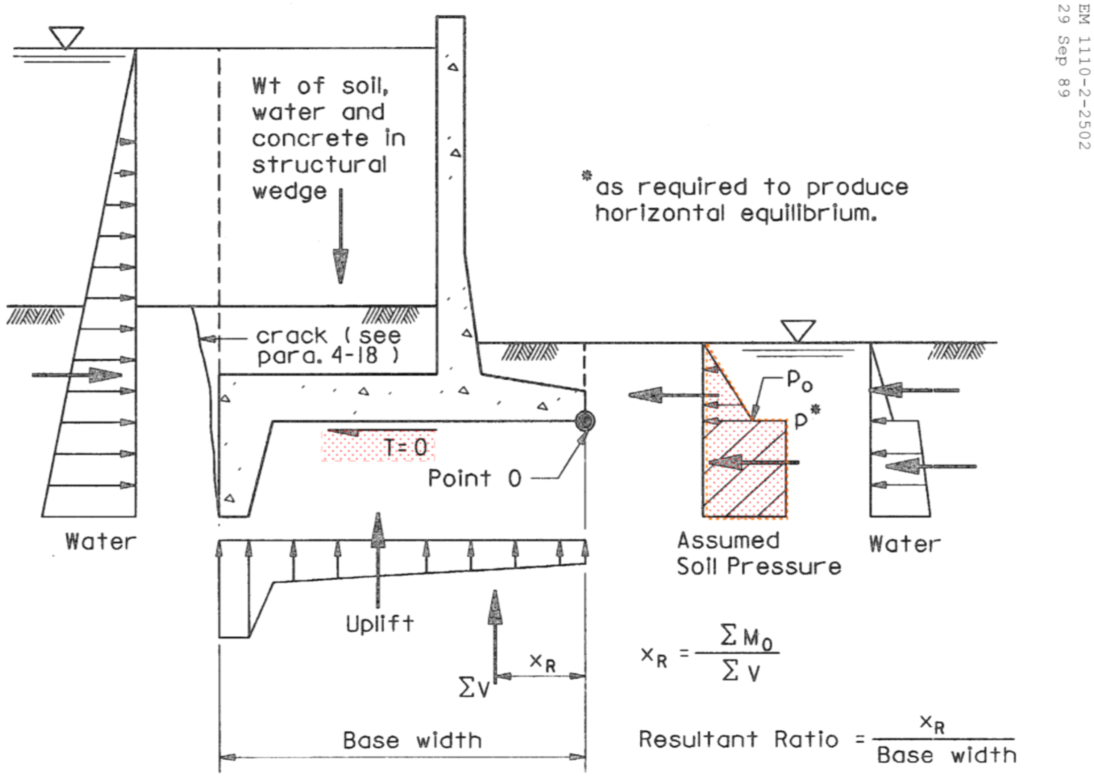

Figure 4-5. Forces for overturning analysis for wall with horizontal base and key

All Vertical Loads Applicable to Overturning Stability Analysis

Total Concrete Dead Loads:	$D_{conc} = 25408.2 \cdot kN$	at:	$X_{conc.loc} = 12.7\,m$
Dead Load of Gate:	$D_{Gate} = 580.0 \cdot kN$		$X_{gate} = 8.75\,m$
Water Weight (HW) on Apron Slab:	$H_{1.E2} = 4817.1 \cdot kN$		$H_{1.E2.loc} = 21.10\,m$
Water Weight (HW) on Fixed Crest:	$H_{2.E2} = 3583.4 \cdot kN$		$H_{2.E2.loc} = 14.25\,m$
Water Weight (TW) on Fixed Crest:	$H_{3.E2} = 3439.8 \cdot kN$		$H_{3.E2.loc} = 5.69\,m$

Uplift Force from Sliding Analysis. Line of Creep Method applied at presumed inclined sliding line, and subtraction gravity effect to Base of Concrete by Archimedes Principle

$$U_{E2.loc.sliding} := \frac{U_{A.E2} \cdot L_{A.E2} + U_{B.E2} \cdot L_{B.E2} - A_{rs} \cdot w_{as} \cdot \gamma_w \cdot L_{rs}}{U_{A.E2} + U_{B.E2} - A_{rs} \cdot w_{as} \cdot \gamma_w} = 13.77\,m$$

$$U_{E2.sliding} := U_{E2} + A_{rs} \cdot w_{as} \cdot \gamma_w = -19918.9 \cdot kN$$

E2 CASE

Uplift for Overturning Analysis, Line of Creep Method. Pore pressure at base of Concrete

$Uplift_{pore.E1} = -17756.3 \cdot kN$

$$Uplift_{pore.E2.loc} := \frac{Uplift_{BC.E2} \cdot Uplift_{BC.E2.loc} + Uplift_{DE.E2} \cdot Uplift_{DE.E2.loc} \cdots + Uplift_{EF.E2} \cdot Uplift_{EF.E2.loc} + Uplift_{FG.E2} \cdot Uplift_{FG.E2.loc}}{Uplift_{pore.E2}}$$

$Uplift_{pore.E2.loc} = 13.2 m$

Sum of All Water Load for Overturning Analysis

$\Sigma V_{water.E2.OT} := H_{1.E2} + H_{2.E2} + H_{3.E2} + Uplift_{pore.E2} = -7140.1 \cdot kN$

All Lateral Loads Applicable to Overturning Stability Analysis

Apply Load to Gate?: $poss_{E2} = 0$ — poss = 1 if gate is closed, 0 if gate is open

Headwater Lateral Load on Gate: $H_{hwg.E2} = 0.0 \cdot kN$ $H_{hwg.E2.loc} = 7.70 m$

Headwater Lateral Load on Footing: $H_{hwf.E2} = -7813.7 \cdot kN$ $H_{hwf.E2.loc} = 1.72 m$

Total Horizontal Tailwater Load on Footing under Gate Openings, i.e., excluding Pier: $H_{twf.E2} = 1628.5 \cdot kN$ $H_{twf.E2.loc} = 0.25 m$

Resisting Water on Rear Face of Monolith, i.e., bottom of heel elevation: *(Point O @ TOE: BOFtoe = EL.1205.5)*

Ice / Impact Load: $I_{E2} = 0.0 \cdot kN$ at: $I_{E2.loc} = 12.30 m$

Depth of Fill at Heel Side for Overturning Analysis: $t_{hf.E1} := TOC_{as} - BOF_{toe} = 4.50 m$

Driving Soil Load for overturning: $$E1_{drive.E2} := \frac{K_o \cdot t_{hf.E2}^{2}}{2} \cdot (\gamma_r - \gamma_w) \cdot W_b \cdot -1 = -974.5 \cdot kN$$

Acting at: $$E1_{drive.loc.E2} := \frac{t_{hf.E2}}{3} = 1.50 m$$

Downstream (resisting) Lateral Soil Load as required to produce horizontal equilibrium:

$E2_{resistE2} := -1 \cdot (H_{hwg.E2} + H_{hwf.E2} + H_{twf.E2} + I_{E2} + E1_{drive.E2})$

$E2_{resistE2} = 7159.7 \cdot kN$

Assumed Resisting Bedrock at middle of Key, passive soil pressure or lateral bearing on contract joint at end of Monolith 3A3B: $E2_{resistlocE2} := E2_{resistlocU1} = -0.75 m$

Overturning moment by Dead Loads about Point O @ Toe: $\Sigma M_{DL.E2} = 322889.4 \cdot kN \cdot m$

Overturning moment by Vertical Water Loads and Uplift, about Point O @ Toe

$\Sigma M_{Vwater.E2.OT} := H_{1.E2} \cdot H_{1.E2.loc} + H_{2.E2} \cdot H_{2.E2.loc} + H_{3.E2} \cdot H_{3.E2.loc} + Uplift_{pore.E2} \cdot Uplift_{pore.E2.loc} = -79005.6 \cdot kN \cdot m$

Overturning moment by Lateral Hydrostatic Forces of Headwater Pool and Tailwater Pool, about Point O @ Toe: $\Sigma M_{HWater.E1} = -16066.3 \cdot kN \cdot m$

Overturning Moment by Impact/Ice Load, about Point O@ Toe: $\Sigma M_{I.E2} = 0 \cdot kN \cdot m$

Overturning moment by Lateral Soil Forces
about Point O @ Toe

$$\Sigma M_{soil.E2} := E1_{drive.E2} \cdot E1_{drive.loc.E2} + E2_{resistE2} \cdot E2_{resistlocE2} = -6831.5 \cdot kN \cdot m$$

Sum of the Overturning Moments about Point O @ Toe:

$$\Sigma M_{E2.OT} := \Sigma M_{DL.E2} + \Sigma M_{HWater.E2} + \Sigma M_{Vwater.E2.OT} + \Sigma M_{I.E2} + \Sigma M_{soil.E2} = 224023 \cdot kN \cdot m$$

Sum of Vertical Forces:

$$\Sigma V_{E2.OT} := \Sigma V_{DL.E2} + \Sigma V_{water.E2.OT} = 18268.1 \cdot kN$$

Distance X_R: EM 1110-2-2502 Eq.4-1

$$X_{R.E2} := \frac{\Sigma M_{E2.OT}}{\Sigma V_{E2.OT}} = 12.3 m$$

Overturning Resultant Ratio

$$Ratio_{Overturning.E2} := \frac{X_{R.E2}}{L_b} = 0.51$$

EM 1110-2-2502

Table 4-1

Retaining Wall Stability Criteria

$Flotation_{E3.1.check} = \text{"Okay"}$

MONOLITH OVERTURNING STABILITY ANALYSIS

E3.1 CASE

Seismic Case $Q_{E3.1}$: 100% Horizontal Seismic Force, No Vertical

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.

Assumptions are made in order to compute overturning stability of indetermine forces on monolith with key;

(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.

(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium

(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1 $Ratio_{overturning.allow.Extreme} := 0.167$ Resultant within Middle Half

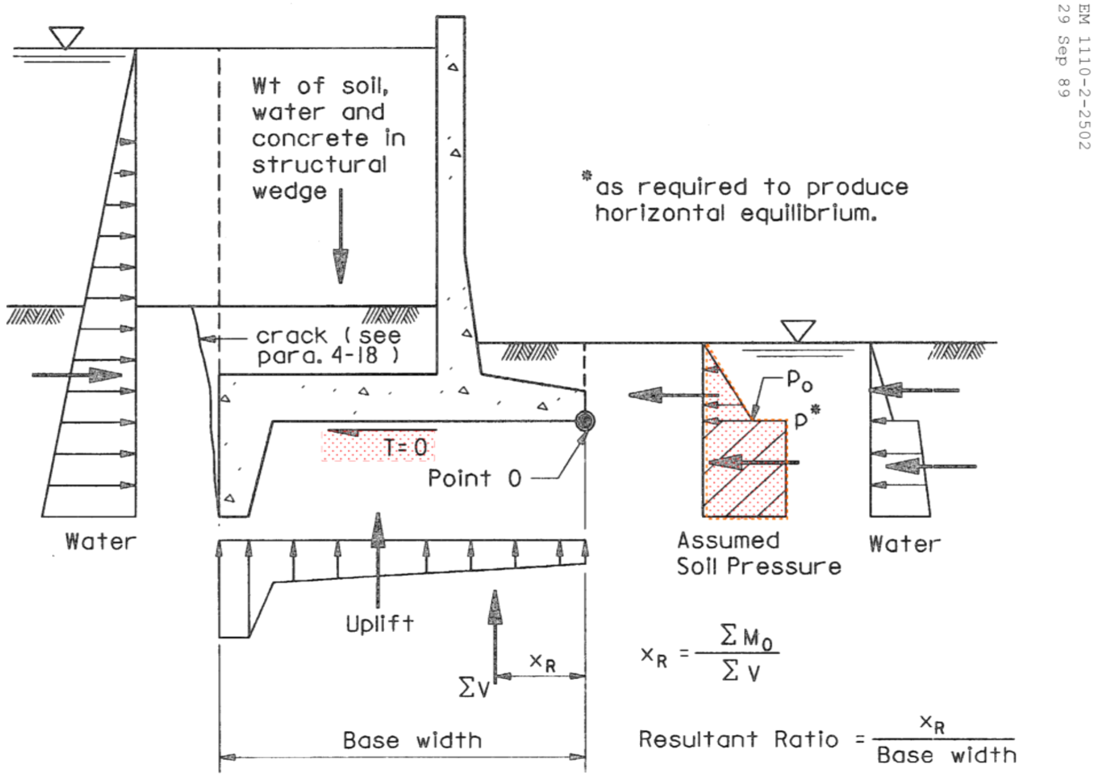

Figure 4-5. Forces for overturning analysis for wall with horizontal base and key

All Vertical Loads Applicable to Overturning Stability Analysis

Total Concrete Dead Loads:	$D_{conc} = 25408200\,N$	at:	$X_{conc.loc} = 12.71\,m$
Dead Load of Gate:	$D_{Gate} = 580.0\cdot kN$		$X_{gate} = 8.75\,m$
Water Weight (HW) on Apron Slab:	$H_{1.U1} = 1532.7\cdot kN$		$H_{1.U1.loc} = 21.10\,m$
Water Weight (HW) on Fixed Crest:	$H_{2.U1} = 586.2\cdot kN$		$H_{2.U1.loc} = 14.25\,m$
Water Weight (TW) on Fixed Crest:	$H_{3.U1} = 0.0\cdot kN$		$H_{3.U1.loc} = 0.00\,m$
Vertical Seismic Component of Concrete Structure:	$Q_{conc.E3.EQv.1} = 0$	at:	$X_{conc.loc} = 12.71\,m$
Vertical Seismic Component of Vertical Lift Gate:	$Q_{Gate.E3.EQv.1} = 0$		$X_{gate} = 8.75\,m$
Vertical Seismic Component of Headwater over Apron Slab:	$Q_{H1.E3.EQv.1} = 0$		$H_{1.U1.loc} = 21.10\,m$
Vertical Seismic Component of Headwater over Fixed Crest Slab:	$Q_{H2.E3.EQv.1} = 0$		$H_{2.U1.loc} = 14.25\,m$

Uplift for Overturning Analysis, Line of Creep Method. Pore pressure at base of Concrete, first calculation to presumed inclined straight line from Heel to Toe, thereafter by Archimedes Principle.

E3.1 CASE

$$U_{E3.1.loc.sliding} := \frac{U_{A.U1} \cdot L_{A.U1} + U_{B.U1} \cdot L_{B.U1} - A_{rs} \cdot w_{as} \cdot \gamma_w \cdot L_{rs}}{U_{A.U1} + U_{B.U1} - A_{rs} \cdot w_{as} \cdot \gamma_w} = 13.73\,m$$

$$U_{E3.1.sliding} := U_{U1} + A_{rs} \cdot w_{as} \cdot \gamma_w = -11002111.2\,N$$

Uplift for Overturning Analysis, Line of Creep Method. Pore pressure at base of Concrete

$Uplift_{pore.U1} = -10515.7 \cdot kN$

$$Uplift_{pore.E3.1.loc} := \frac{Uplift_{BC.U1} \cdot Uplift_{BC.U1.loc} + Uplift_{DE.U1} \cdot Uplift_{DE.U1.loc} + Uplift_{EF.U1} \cdot Uplift_{EF.U1.loc} + Uplift_{FG.U1} \cdot Uplift_{FG.U1.loc}}{Uplift_{pore.U1}}$$

$Uplift_{pore.E3.1.loc} = 13.1\,m$

Sum of All Water Load for Overturning Analysis

$$\Sigma V_{water.E3.1.OT} := H_{1.U1} + H_{2.U1} + H_{3.U1} + Uplift_{pore.U1} = -8396.7 \cdot kN$$

All Lateral Loads Applicable to Overturning Stability Analysis

Apply Load to Gate?:	$poss_{U1} = 1$		poss = 1 if gate is closed 0 if gate is open
Headwater Lateral Load on Gate:	$H_{hwg.U1} = 0.0 \cdot kN$		$H_{hwg.U1.loc} = 6.20\,m$
Headwater Lateral Load on Footing:	$H_{hwf.U1} = -3840.6 \cdot kN$		$H_{hwf.U1.loc} = 1.17\,m$
Total Horizontal Tailwater Load on Footing under Gate Openings, i.e., excluding Pier	$H_{twf.U1} = 721.0 \cdot kN$		$H_{twf.U1.loc} = -0.33\,m$
Resisting Water on Rear Face of Monolith, i.e., bottom of heel elevation:			*(Point O @ TOE: BOFtoe = EL.1205.5)*
Horizontal Seismic Component of Concrete Structure:	$Q_{conc.E3.EQh.1} = -4404.1 \cdot kN$	AT	$Y_{conc.loc} = 3.17\,m$
Horizontal Seismic Component of Vertical Lift Gate:	$Q_{Gate.E3.EQh.1} = -100.5 \cdot kN$		$Y_{gate} = 8.00\,m$
Horizontal Seismic Component of Headwater on Gate:	$Q_{hwg.E3.EQh.1} = 0$		$Y_{HWg.E3} = 7.7\,m$
Horizontal Seismic Component of Headwater on Footing:	$Q_{hwf.E3.EQh.1} = -780.9 \cdot kN$		$Y_{HWf.E3} = 3\,m$
Horizontal Seismic Component of Active Soil: (Section 5-5, USACE EM_1110-2-2100)	$Q_{act.E3.EQh.1} = -1647.4 \cdot kN$		$Y_{E.act.E3} = 3.8\,m$
Ice / Impact Load:	$I_{U1} = 0.0 \cdot kN$	at:	$I_{U1.loc} = 6.30\,m$

Depth of Fill at Heel Side for Overturning Analysis (neglecting resistance by driving below Point O):

$$t_{hf.E3.1} := TOC_{as} - BOF_{toe} = 4.50\,m$$

Driving Soil Load for overturning:

$$E1_{drive.E3.1} := \frac{K_o \cdot t_{hf.U1}^{\,2}}{2} \cdot (\gamma_r - \gamma_w) \cdot W_b \cdot -1 = -974.5 \cdot kN$$

Acting at:

$$E1_{drive.loc.E3.1} := \frac{t_{hf.E3.1}}{3} = 1.50\,m$$

Downstream (resisting) Lateral Soil Load
as required to produce horizontal equilibrium:

$$E2_{resistE3.1} := -1 \cdot \left(H_{hwg.U1} + H_{hwf.U1} + H_{twf.U1} + I_{U1} + E1_{drive.U1}\right)$$

$$E2_{resistE3.1} = 4094104.1\,N$$

Assumed Resisting Bedrock at middle of Key, passive soil pressure or lateral bearing contract joint at end of Monolith 3A3B

$$E2_{resistlocE3.1} := E2_{resistlocU1} = -0.75\,m$$

Overturning moment by Dead Loads about Point O @ Toe

$$\Sigma M_{DL.U1} = 325934.4 \cdot kN \cdot m$$

Overturning moment by Vertical Water Loads and Uplift, about Point O @ Toe

$$\Sigma M_{Vwater.U1} = -185663.8 \cdot kN \cdot m$$

Overturning moment by Lateral Hydrostatic Forces of Headwater Pool and Tailwater Pool,about Point O @ Toe

$$\Sigma M_{HWater.U1} = -4743.1 \cdot kN \cdot m$$

Overturning Moment by Impact/Ice Load, about Point O@ Toe

$$\Sigma M_{I.U1} = 0$$

Overturning moment by Lateral Soil Forces about Point O @ Toe

$$\Sigma M_{soil.E3.1} := E1_{drive.E3.1} \cdot E1_{drive.loc.E3.1} + E2_{resistE3.1} \cdot E2_{resistlocE3.1} = -4532.4 \cdot kN \cdot m$$

Sum of the Overturning Moments about Point O @ Toe:

$$\Sigma M_{E3.1.OT} := \Sigma M_{DL.U1} + \Sigma M_{HWater.U1} + \Sigma M_{Vwater.U1.OT} + \Sigma M_{I.U1} + \Sigma M_{soil.E3.1} + \Sigma M_{Q.E3.1} = 196212 \cdot kN \cdot m$$

Sum of Vertical Forces:

$$\Sigma V_{E3.1.OT} := \Sigma V_{DL.U1} + \Sigma V_{water.U1.OT} + \left|\Sigma V_{Q.E3.EQv.1}\right| = 17359.5 \cdot kN$$

Distance X_R: EM 1110-2-2502 Eq.4-1

$$X_{R.E3.1} := \frac{\Sigma M_{E3.1.OT}}{\Sigma V_{E3.1.OT}} = 11.3\,m$$

Overturning Resultant Ratio

$$Ratio_{Overturning.E3.1} := \frac{X_{R.E3.1}}{L_b} = 0.47$$

E4.1 CASE

MONOLITH OVERTURNING STABILITY ANALYSIS

Seismic Case $Q_{E3.1}$: 100% Horizontal Seismic Force, No Vertical

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.

Assumptions are made in order to compute overturning stability of indetermine forces on monolith with key;

(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.

(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium

(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1 $Ratio_{overturning.allow.Extreme} = 0.167$ Resultant within Middle Half

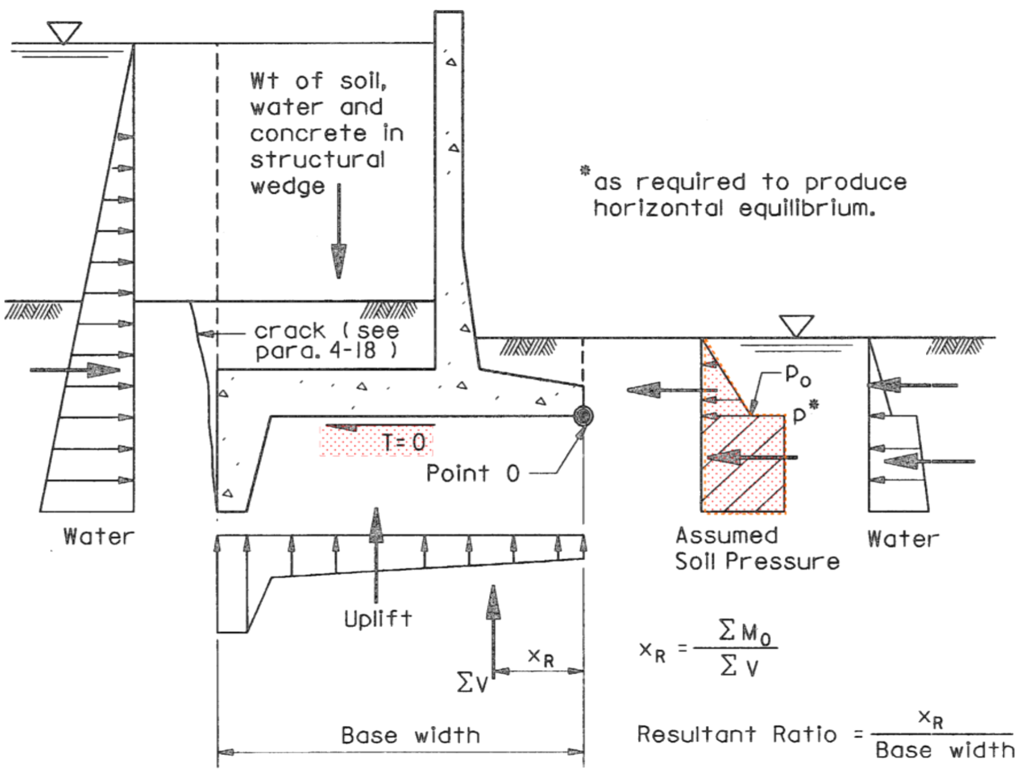

Figure 4-5. Forces for overturning analysis for wall with horizontal base and key

All Vertical Loads Applicable to Overturning Stability Analysis

Total Concrete Dead Loads:	$D_{conc} = 25408.2 \cdot kN$	at:	$X_{conc.loc} = 12.71\,m$
Dead Load of Gate:	$D_{Gate} = 580.0 \cdot kN$		$X_{gate} = 8.75\,m$
Water Weight (HW) on Apron Slab:	$H_{1.U2} = 4233.2 \cdot kN$		$H_{1.U2.loc} = 21.10\,m$
Water Weight (HW) on Fixed Crest:	$H_{2.U2} = 3425.7 \cdot kN$		$H_{2.U2.loc} = 14.25\,m$
Water Weight (TW) on Fixed Crest:	$H_{3.U2} = 2808.8 \cdot kN$		$H_{3.U2.loc} = 5.78\,m$
Vertical Seismic Component of Concrete Structure:	$Q_{conc.E4.EQv.1} = 0$	at:	$X_{conc.loc} = 12.71\,m$
Vertical Seismic Component of Vertical Lift Gate:	$Q_{Gate.E4.EQv.1} = 0$		$X_{gate} = 8.75\,m$
Vertical Seismic Component of Headwater over Apron Slab:	$Q_{H1.E4.EQv.1} = 0$		$H_{1.U2.loc} = 21.10\,m$
Vertical Seismic Component of Headwater over Fixed Crest Slab:	$Q_{H2.E4.EQv.1} = 0$		$H_{2.U2.loc} = 14.25\,m$

Uplift for Overturning Analysis, Line of Creep Method. Pore pressure at base of Concrete, first calculation to presumed inclined straight line from Heel to Toe, thereafter by Archimedes Principle. **E4.1 CASE**

$$U_{E4.1.loc.sliding} := \frac{U_{A.U2} \cdot L_{A.U2} + U_{B.U2} \cdot L_{B.U2} - A_{rs} \cdot w_{as} \cdot \gamma_w \cdot L_{rs}}{U_{A.U2} + U_{B.U2} - A_{rs} \cdot w_{as} \cdot \gamma_w} = 13.81\ m$$

$$U_{E4.1.sliding} := U_{U2} + A_{rs} \cdot w_{as} \cdot \gamma_w = -18095683\ N$$

Uplift for Overturning Analysis, Line of Creep Method. Pore pressure at base of Concrete

$$Uplift_{pore.U1} = -10515.7 \cdot kN$$

$$Uplift_{pore.E4.1.loc} := \frac{Uplift_{BC.U2} \cdot Uplift_{BC.U2.loc} + Uplift_{DE.U2} \cdot Uplift_{DE.U2.loc} + Uplift_{EF.U2} \cdot Uplift_{EF.U2.loc} + Uplift_{FG.U2} \cdot Uplift_{FG.U2.loc}}{Uplift_{pore.U2}} = 13.3\ m$$

Sum of All Water Load for Overturning Analysis

$$\Sigma V_{water.E4.1.OT} := H_{1.U1} + H_{2.U1} + H_{3.U1} + Uplift_{pore.U2} = -15095.6 \cdot kN$$

<u>All Lateral Loads Applicable to Overturning Stability Analysis</u>

Apply Load to Gate?: $poss_{U1} = 1$ — poss = 1 if gate is closed; 0 if gate is open

Headwater Lateral Load on Gate: $H_{hwg.U2} = 0.0 \cdot kN$ — $H_{hwg.U2.loc} = 7.43\ m$

Headwater Lateral Load on Footing: $H_{hwf.U2} = -7107.3 \cdot kN$ — $H_{hwf.U2.loc} = 1.67\ m$

Total Horizontal Tailwater Load on Footing under Gate Openings, i.e., excluding Pier: $H_{twf.U2} = 1344.9 \cdot kN$ — $H_{twf.U2.loc} = 0.09\ m$

Resisting Water on Rear Face of Monolith, i.e., bottom of heel elevation: *(Point O @ TOE: BOFtoe = EL.1205.5)*

Horizontal Seismic Component of Concrete Structure: $Q_{conc.E4.EQh.1} = -4404.1 \cdot kN$ AT $Y_{conc.loc} = 3.17\ m$

Horizontal Seismic Component of Vertical Lift Gate: $Q_{Gate.E4.EQh.1} = -100.5 \cdot kN$ — $Y_{gate} = 8.00\ m$

Horizontal Seismic Component of Headwater on Gate: $Q_{hwg.E4.EQh.1} = 0$ — $Y_{HWg.E4} = 9.2\ m$

Horizontal Seismic Component of Headwater on Footing: $Q_{hwf.E4.EQh.1} = -1657.3 \cdot kN$ — $Y_{HWf.E4} = 3\ m$

Horizontal Seismic Component of Active Soil: (Section 5-5, USACE EM_1110-2-2100) $Q_{act.E4.EQh.1} = -1647.4 \cdot kN$ — $Y_{E.act.E4} = 3.8\ m$

Ice / Impact Load: $I_{U2} = 0.0 \cdot kN$ at: $I_{U2.loc} = 11.50\ m$

Depth of Fill at Heel Side for Overturning Analysis (neglecting resistance by driving below Point O):

$$t_{hf.E4.1} := TOC_{as} - BOF_{toe} = 4.50\ m$$

Driving Soil Load for overturning:

$$E1_{drive.E4.1} := \frac{K_o \cdot t_{hf.U2}^{\ 2}}{2} \cdot \left(\gamma_r - \gamma_w\right) \cdot W_b \cdot -1 = -974.5 \cdot kN$$

Acting at:

$$E1_{drive.loc.E4.1} := \frac{t_{hf.E4.1}}{3} = 1.50\ m$$

Downstream (resisting) Lateral Soil Load
as required to produce horizontal equilibrium:

$$E2_{resistE4.1} := -1 \cdot \left(H_{hwg.U2} + H_{hwf.U2} + H_{twf.U2} + I_{U2} + E1_{drive.U2}\right)$$

$$E2_{resistE4.1} = 6737012.3\,N$$

Assumed Resisting Bedrock at middle of Key, passive soil pressure or lateral bearing contract joint at end of Monolith 3A3B

$$E2_{resistlocE4.1} := E2_{resistlocU2} = -0.75\,m$$

Overturning moment by Dead Loads about Point O @ Toe

$$\Sigma M_{DL.U2} = 322889.4 \cdot kN \cdot m$$

Overturning moment by Vertical Water Loads and Uplift, about Point O @ Toe

$$\Sigma M_{Vwater.U2} = -171722.3 \cdot kN \cdot m$$

Overturning moment by Lateral Hydrostatic Forces of Headwater Pool and Tailwater Pool,about Point O @ Toe

$$\Sigma M_{HWater.U2} = -11727.4 \cdot kN \cdot m$$

Overturning Moment by Impact/Ice Load, about Point O@ Toe

$$\Sigma M_{I.U2} = 0$$

Overturning moment by Lateral Soil Forces about Point O @ Toe

$$\Sigma M_{soil.E4.1} := E1_{drive.E4.1} \cdot E1_{drive.loc.E4.1} + E2_{resistE4.1} \cdot E2_{resistlocE4.1} = -6514.5 \cdot kN \cdot m$$

Sum of the Overturning Moments about Point O @ Toe:

$$\Sigma M_{E4.1.OT} := \Sigma M_{DL.U2} + \Sigma M_{HWater.U2} + \Sigma M_{Vwater.U2.OT} + \Sigma M_{I.U2} + \Sigma M_{soil.E4.1} + \Sigma M_{Q.E4.1} = 204172 \cdot kN \cdot m$$

Sum of Vertical Forces:

$$\Sigma V_{E4.1.OT} := \Sigma V_{DL.U2} + \Sigma V_{water.U2.OT} + \left|\Sigma V_{Q.E4.EQv.1}\right| = 18661.3 \cdot kN$$

Distance X_R: EM 1110-2-2502 Eq.4-1

$$X_{R.E4.1} := \frac{\Sigma M_{E4.1.OT}}{\Sigma V_{E4.1.OT}} = 10.9\,m$$

Overturning Resultant Ratio

$$Ratio_{Overturning.E4.1} := \frac{X_{R.E4.1}}{L_b} = 0.45$$

EM 1110-2-2502

Table 4-1

Retaining Wall Stability Criteria

Loading Condition	Sliding Factor of Safety, FS	Shear Strength Test Required: Soil Foundation	Shear Strength Test Required: Rock Foundation[3]	Overturning Criteria Minimum Base Area in Compression: Soil Foundation	Overturning Criteria Minimum Base Area in Compression: Rock Foundation

$$Flotation_{E3.2.check} := \begin{cases} \text{"Okay"} & \text{if } FS_{Flotation.E3.2} \ge FS_{req.E.flt} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases}$$

$Flotation_{E3.1.check} = \text{"Okay"}$

MONOLITH OVERTURNING STABILITY ANALYSIS

E3.2 CASE

Seismic Case $Q_{E3.2}$: 100% Horizontal Seismic Force, 30% Vertical

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stability of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1 $Ratio_{overturning.allow.Extreme} := 0.167$ Resultant within Middle Half

EM 1110-2-2502
29 Sep 89

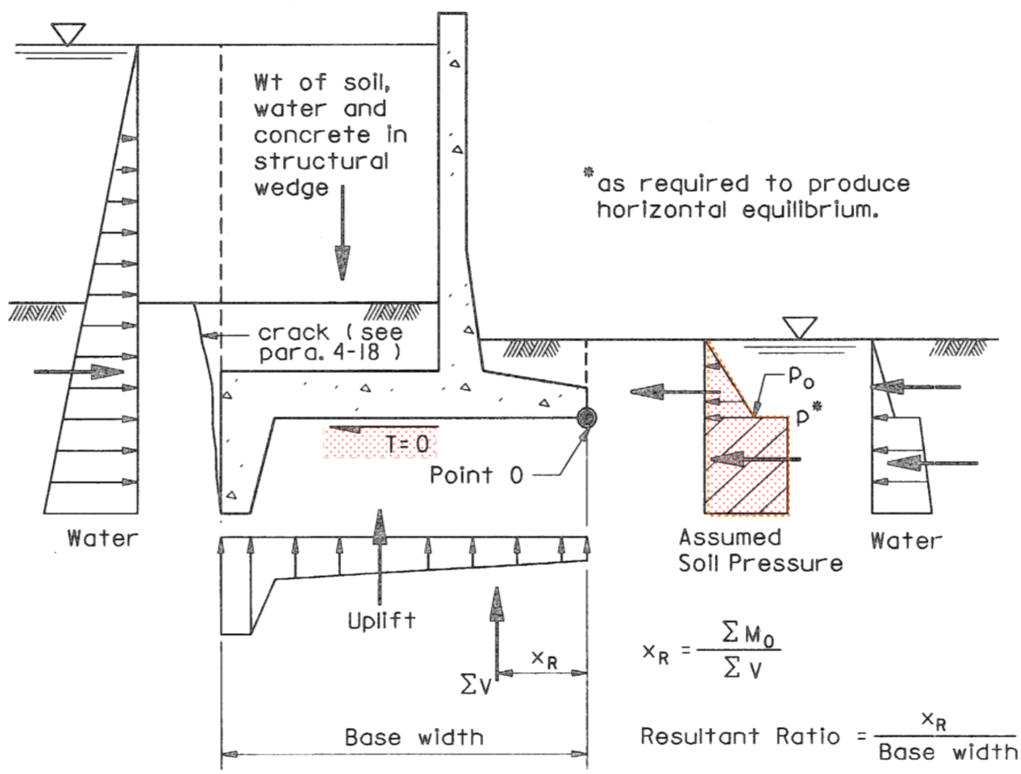

Figure 4-5. Forces for overturning analysis for wall with horizontal base and key

All Vertical Loads Applicable to Overturning Stability Analysis

Total Concrete Dead Loads:	$D_{conc} = 25408.2 \cdot kN$	at:	$X_{conc.loc} = 12.71\,m$
Dead Load of Gate:	$D_{Gate} = 580.0 \cdot kN$		$X_{gate} = 8.75\,m$
Water Weight (HW) on Apron Slab:	$H_{1.U1} = 1532.7 \cdot kN$		$H_{1.U1.loc} = 21.10\,m$
Water Weight (HW) on Fixed Crest:	$H_{2.U1} = 586.2 \cdot kN$		$H_{2.U1.loc} = 14.25\,m$
Water Weight (TW) on Fixed Crest:	$H_{3.U1} = 0.0 \cdot kN$		$H_{3.U1.loc} = 0.00\,m$
Vertical Seismic Component of Concrete Structure:	$Q_{conc.E3.EQv.2} = -739.9 \cdot kN$	at:	$X_{conc.loc} = 12.71\,m$
Vertical Seismic Component of Vertical Lift Gate:	$Q_{Gate.E3.EQv.2} = -16.9 \cdot kN$		$X_{gate} = 8.75\,m$
Vertical Seismic Component of Headwater over Apron Slab:	$Q_{H1.E3.EQv.2} = -44.6 \cdot kN$		$H_{1.U1.loc} = 21.10\,m$
Vertical Seismic Component of Headwater over Fixed Crest Slab:	$Q_{H2.E3.EQv.2} = -17.1 \cdot kN$		$H_{2.U1.loc} = 14.25\,m$

Uplift for Overturning Analysis, Line of Creep Method. Pore pressure at base of Concrete, first calculation to presumed inclined straight line from Heel to Toe, thereafter by Archimedes Principle.

$$U_{E3.2.loc.sliding} := \frac{U_{A.U1} \cdot L_{A.U1} + U_{B.U1} \cdot L_{B.U1} - A_{rs} \cdot w_{as} \cdot \gamma_w \cdot L_{rs}}{U_{A.U1} + U_{B.U1} - A_{rs} \cdot w_{as} \cdot \gamma_w} = 13.73\,m$$

$$U_{E3.2.sliding} := U_{U1} + A_{rs} \cdot w_{as} \cdot \gamma_w = -11002111.2\,N$$

Uplift for Overturning Analysis, Line of Creep Method. Pore pressure at base of Concrete $\quad Uplift_{pore.U1} = -10515.7 \cdot kN$

$$Uplift_{pore.E3.2.loc} := \frac{Uplift_{BC.U1} \cdot Uplift_{BC.U1.loc} + Uplift_{DE.U1} \cdot Uplift_{DE.U1.loc} + Uplift_{EF.U1} \cdot Uplift_{EF.U1.loc} + Uplift_{FG.U1} \cdot Uplift_{FG.U1.loc}}{Uplift_{pore.U1}} = 13.1\,m$$

Sum of All Water Load for Overturning Analysis $\quad \Sigma V_{water.E3.2.OT} := H_{1.U1} + H_{2.U1} + H_{3.U1} + Uplift_{pore.U1} = -8396.7 \cdot kN$

All Lateral Loads Applicable to Overturning Stability Analysis

Apply Load to Gate?: $\quad poss_{U1} = 1 \quad$ poss = 1 if gate is closed
0 if gate is open

Headwater Lateral Load on Gate: $\quad H_{hwg.U1} = 0.0 \cdot kN \quad H_{hwg.U1.loc} = 6.20\,m$

Headwater Lateral Load on Footing: $\quad H_{hwf.U1} = -3840.6 \cdot kN \quad H_{hwf.U1.loc} = 1.17\,m$

Total Horizontal Tailwater Load on Footing under Gate Openings, i.e., excluding Pier $\quad H_{twf.U1} = 721.0 \cdot kN \quad H_{twf.U1.loc} = -0.33\,m$

Resisting Water on Rear Face of Monolith, i.e., bottom of heel elevation: *(Point O @ TOE: BOFtoe = EL.1205.5)*

Horizontal Seismic Component of Concrete Structure: $\quad Q_{conc.E3.EQh.2} = -4404.1 \cdot kN \quad$ AT $\quad Y_{conc.loc} = 3.17\,m$

Horizontal Seismic Component of Vertical Lift Gate: $\quad Q_{Gate.E3.EQh.2} = -100.5 \cdot kN \quad Y_{gate} = 8.00\,m$

Horizontal Seismic Component of Headwater on Gate: $\quad Q_{hwg.E3.EQh.2} = 0 \quad Y_{HWg.E3} = 7.7\,m$

Horizontal Seismic Component of Headwater on Footing: $\quad Q_{hwf.E3.EQh.2} = -780.9 \cdot kN \quad Y_{HWf.E3} = 3\,m$

Horizontal Seismic Component of Active Soil: (Section 5-5, USACE EM_1110-2-2100) $\quad Q_{act.E3.EQh.2} = -1647.4 \cdot kN \quad Y_{E.act.E3} = 3.8\,m$

Ice / Impact Load: $\quad I_{U1} = 0.0 \cdot kN \quad$ at: $\quad I_{U1.loc} = 6.30\,m$

Depth of Fill at Heel Side for Overturning Analysis (neglecting resistance by driving below Point O): $\quad t_{hf.E3.2} := TOC_{as} - BOF_{toe} = 4.50\,m$

Driving Soil Load for overturning:

$$E1_{drive.E3.2} := \frac{K_o \cdot t_{hf.U1}^{\;2}}{2} \cdot (\gamma_r - \gamma_w) \cdot W_b \cdot -1 = -974.5 \cdot kN$$

Acting at:

$$E1_{drive.loc.E3.2} := \frac{t_{hf.E3.2}}{3} = 1.50\,m$$

E3.2 CASE

Downstream (resisting) Lateral Soil Load
as required to produce horizontal equilibrium:

$$E2_{resistE3.2} := -1 \cdot \left(H_{hwg.U1} + H_{hwf.U1} + H_{twf.U1} + I_{U1} + E1_{drive.U1}\right)$$

$$E2_{resistE3.2} = 4094104.1\ N$$

Assumed Resisting Bedrock at middle of Key, passive soil pressure or lateral bearing contract joint at end of Monolith 3A3B

$$E2_{resistlocE3.2} := E2_{resistlocU1} = -0.75\,m$$

Overturning moment by Dead Loads about Point O @ Toe

$$\Sigma M_{DL.U1} = 325934.4 \cdot kN \cdot m$$

Overturning moment by Vertical Water Loads and Uplift, about Point O @ Toe

$$\Sigma M_{Vwater.U1} = -185663.8 \cdot kN \cdot m$$

Overturning moment by Lateral Hydrostatic Forces of Headwater Pool and Tailwater Pool,about Point O @ Toe

$$\Sigma M_{HWater.U1} = -4743.1 \cdot kN \cdot m$$

Overturning Moment by Impact/Ice Load, about Point O@ Toe

$$\Sigma M_{I.U1} = 0$$

Overturning moment by Lateral Soil Forces about Point O @ Toe

$$\Sigma M_{soil.E3.2} := E1_{drive.E3.3} \cdot E1_{drive.loc.E3.3} + E2_{resistE3.2} \cdot E2_{resistlocE3.2} = -4532.4 \cdot kN \cdot m$$

Sum of the Overturning Moments about Point O @ Toe:

$$\Sigma M_{E3.2.OT} := \Sigma M_{DL.U1} + \Sigma M_{HWater.U1} + \Sigma M_{Vwater.U1.OT} + \Sigma M_{I.U1} + \Sigma M_{soil.E3.2} + \Sigma M_{Q.E3.2} = 185477 \cdot kN \cdot m$$

Sum of Vertical Forces:

$$\Sigma V_{E3.2.OT} := \Sigma V_{DL.U1} + \Sigma V_{water.U1.OT} + \left|\Sigma V_{Q.E3.EQv.2}\right| = 18177.9 \cdot kN$$

Distance X_R: EM 1110-2-2502 Eq.4-1

$$X_{R.E3.2} := \frac{\Sigma M_{E3.2.OT}}{\Sigma V_{E3.2.OT}} = 10.2\,m$$

Overturning Resultant Ratio

$$Ratio_{Overturning.E3.2} := \frac{X_{R.E3.2}}{L_b} = 0.42$$

EM 1110-2-2502

MONOLITH OVERTURNING STABILITY ANALYSIS

E4.2 CASE

Seismic Case $Q_{E4.2}$: 100% Horizontal Seismic Force, 30% Vertical

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.

Assumptions are made in order to compute overturning stability of indetermine forces on monolith with key;

(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.

(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium

(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1 $Ratio_{overturning.allow.Extreme} = 0.167$ Resultant within Middle Half

MONOLITH OVERTURNING STABILITY ANALYSIS

E3.3 CASE

Seismic Case $Q_{E3.3}$ - 30% Horizontal Seismic Force, 100% Vertical

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.

Assumptions are made in order to compute overturning stability of indetermine forces on monolith with key;

(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.

(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium

(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1

$Ratio_{overturning.allow.Extreme} = 0.167$

Resultant within Middle Half

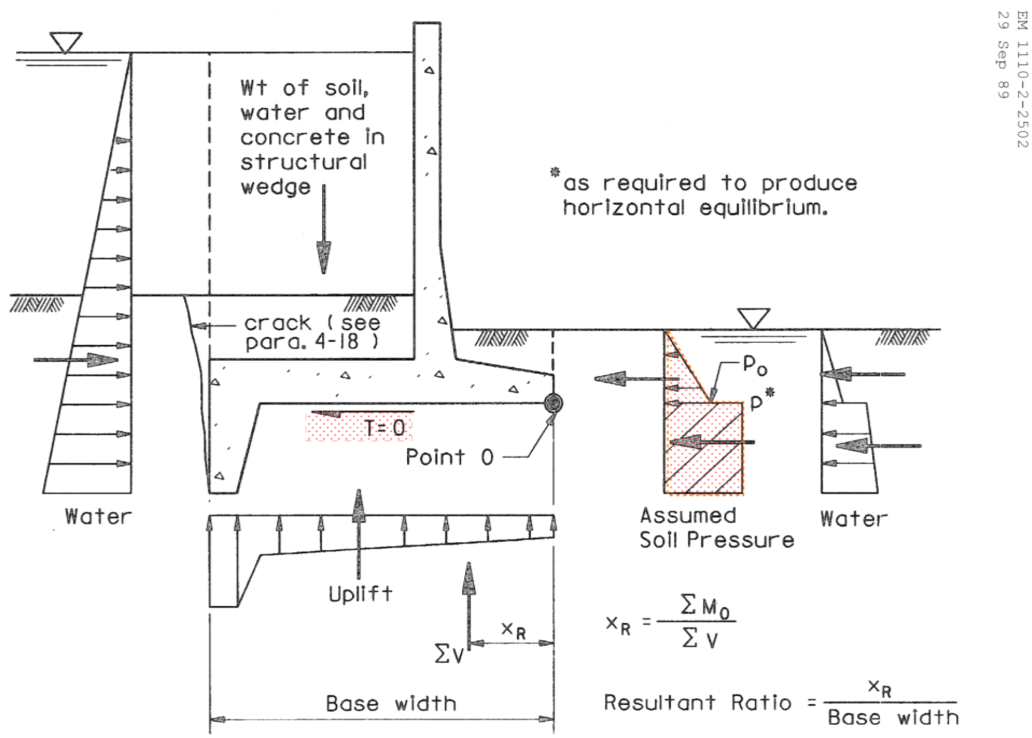

Figure 4-5. Forces for overturning analysis for wall with horizontal base and key

MONOLITH OVERTURNING STABILITY ANALYSIS

E4.3 CASE

Seismic Case $Q_{E4.3}$ - 30% Horizontal Seismic Force, 100% Vertical

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.

Assumptions are made in order to compute overturning stability of indetermine forces on monolith with key;

(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.

(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium

(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1 $Ratio_{overturning.allow.Extreme} = 0.167$ Resultant within Middle Half

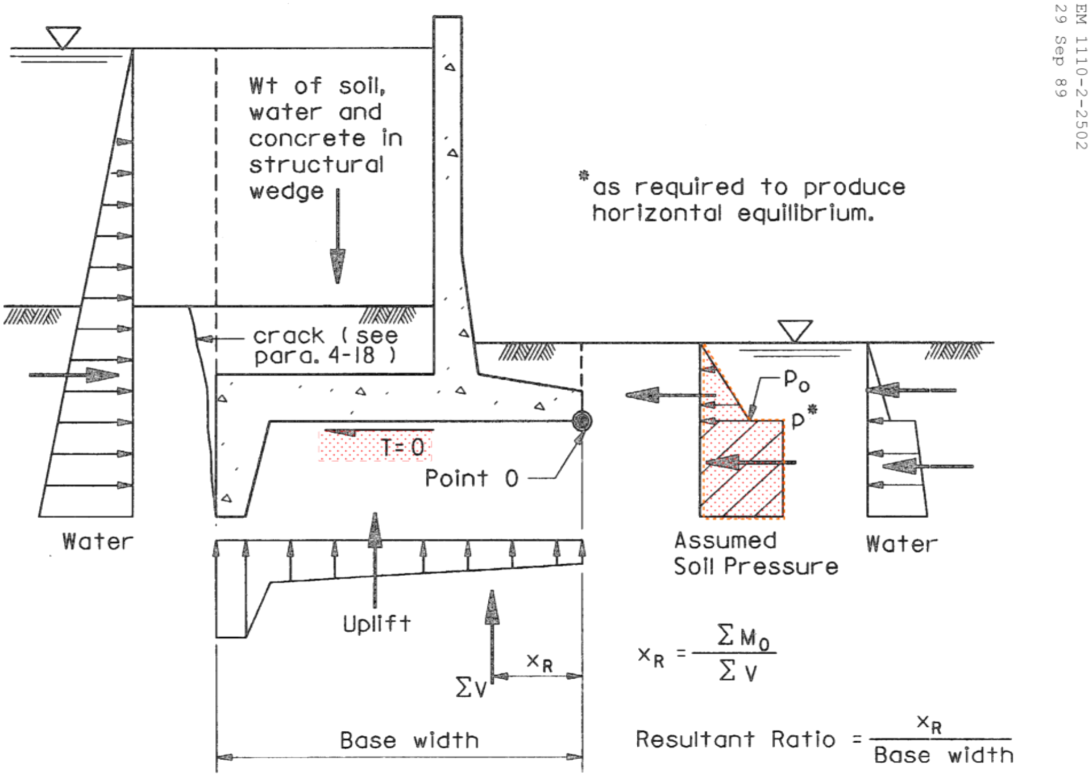

Figure 4-5. Forces for overturning analysis for wall with horizontal base and key

All Vertical Loads Applicable to Overturning Stability Analysis

Total Concrete Dead Loads:	$D_{conc} = 25408.2 \cdot kN$	at:	$X_{conc.loc} = 12.71\ m$
Dead Load of Gate:	$D_{Gate} = 580.0 \cdot kN$		$X_{gate} = 8.75\ m$
Water Weight (HW) on Apron Slab:	$H_{1.U2} = 4233.2 \cdot kN$		$H_{1.U2.loc} = 21.10\ m$
Water Weight (HW) on Fixed Crest:	$H_{2.U2} = 3425.7 \cdot kN$		$H_{2.U2.loc} = 14.25\ m$
Water Weight (TW) on Fixed Crest:	$H_{3.U2} = 2808.8 \cdot kN$		$H_{3.U2.loc} = 5.78\ m$
Vertical Seismic Component of Concrete Structure:	$Q_{conc.E4.EQv.3} = -2466.3 \cdot kN$	at:	$X_{conc.loc} = 12.71\ m$
Vertical Seismic Component of Vertical Lift Gate:	$Q_{Gate.E4.EQv.3} = -56.3 \cdot kN$		$X_{gate} = 8.75\ m$
Vertical Seismic Component of Headwater over Apron Slab:	$Q_{H1.E4.EQv.3} = -410.9 \cdot kN$		$H_{1.U2.loc} = 21.10\ m$
Vertical Seismic Component of Headwater over Fixed Crest Slab:	$Q_{H2.E4.EQv.3} = -332.5 \cdot kN$		$H_{2.U2.loc} = 14.25\ m$

Uplift for Overturning Analysis, Line of Creep Method. Pore pressure at base of Concrete, first calculation to presumed inclined straight line from Heel to Toe, thereafter by Archimedes Principle.

E4.3 CASE

$$U_{E4.3.loc.sliding} := \frac{U_{A.U2} \cdot L_{A.U2} + U_{B.U2} \cdot L_{B.U2} - A_{rs} \cdot w_{as} \cdot \gamma_w \cdot L_{rs}}{U_{A.U2} + U_{B.U2} - A_{rs} \cdot w_{as} \cdot \gamma_w} = 13.81\,m$$

$$U_{E4.3.sliding} := U_{U2} + A_{rs} \cdot w_{as} \cdot \gamma_w = -18095683\,N$$

Appendix E.1-2 STILLING BASINS

Calculation Section I

Results Summary Table (overview)

Table E.1-2.1 – Diversion Inlet - Stilling Basin

Load Case	Headwater/ Tailwater Elevation (m)	Vertical Force Down (kN)	Uplift Force (kN)	Floatation Safety Factor (FSF)		Additional Uplift to be Resisted (kN/m²)
				Required	Calculated	
F1 Usual Diversion Flow	1215.8 / 1213.1	18322	17534	1.50	1.04	36.9
F2 Unusual Const./Dewatered	1215.8 / 1211.0	10152	11654	1.30	0.87	23.1
F3 Extreme Ineffective Drain	1215.8 / 1208.17	10152	7989	1.10	1.27	0

Notes:
1. See Appendix E.1 for definition of monolith description, analysis methodology, and stability calculations.
2. Analysis assumes horizontal sliding plane, interface friction angle Φ = 26 degrees, and no cohesion.

Reported seismic results are controlling values for the three combinations of vertical and horizontal seismic load considered.

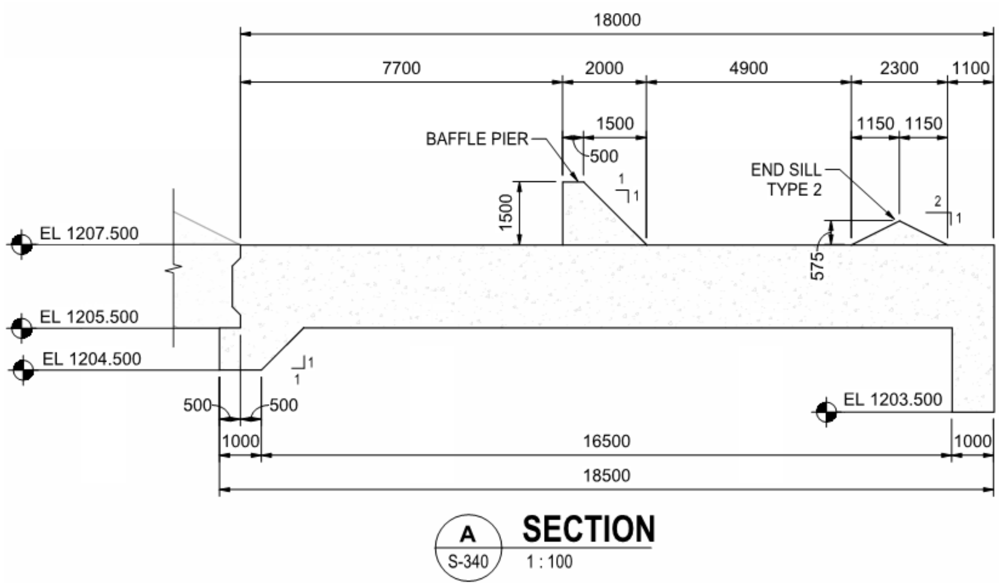
DI-2B/4B Stilling Basin Floatation Calculations

Project Number:	110773396		
Project Title:	SR1 Project		
Client:	Alberta Transportation		
Engineer:	D. Crawford	Date: 2020/06/24	
Checker:	Sean Xiao	Date: 2020/06/24	

Calculation for: Diversion Stilling Basin Monolith 2C Floatation Check



BASE SECTION PROPERTIES

Gate Structure Base Length: $L_b := 24.2m$ (Dwg. S-330 Block-2A + Block 2B)

Base Length: $L_{sb} := 18.0m$ $\quad Kern := \frac{L_{sb}}{6} = 3.00\ m$

Base Width: $W_{sb} := 12.00m$

Area of Base: $A_{sb} := L_{sb} \cdot W_{sb} = 216\ m^2$

Section Modulus of Base: $S_{sb} := \frac{\left(W_{sb} \cdot L_{sb}^2\right)}{6} = 648\ m^3$

Top of Concrete Elevation: $TOC := 1207.50m$

Bottom of Concrete Elevation: $BOF_{elev} := 1205.50m$

FOOTINGS

Stilling Basin Footing Thickness: $h_{sb} := 2.00m$

Stilling Basin Footing Width: $W_{sb} = 12.00\ m$

Stilling Basin Footing Length: $L_{sb} = 18.00\ m$

Total Apron Slab Footing Volume: $V_{sb} := h_{sb} \cdot W_{sb} \cdot L_{sb} = 432.0 \cdot m^3$

MATERIAL PROPERTIES

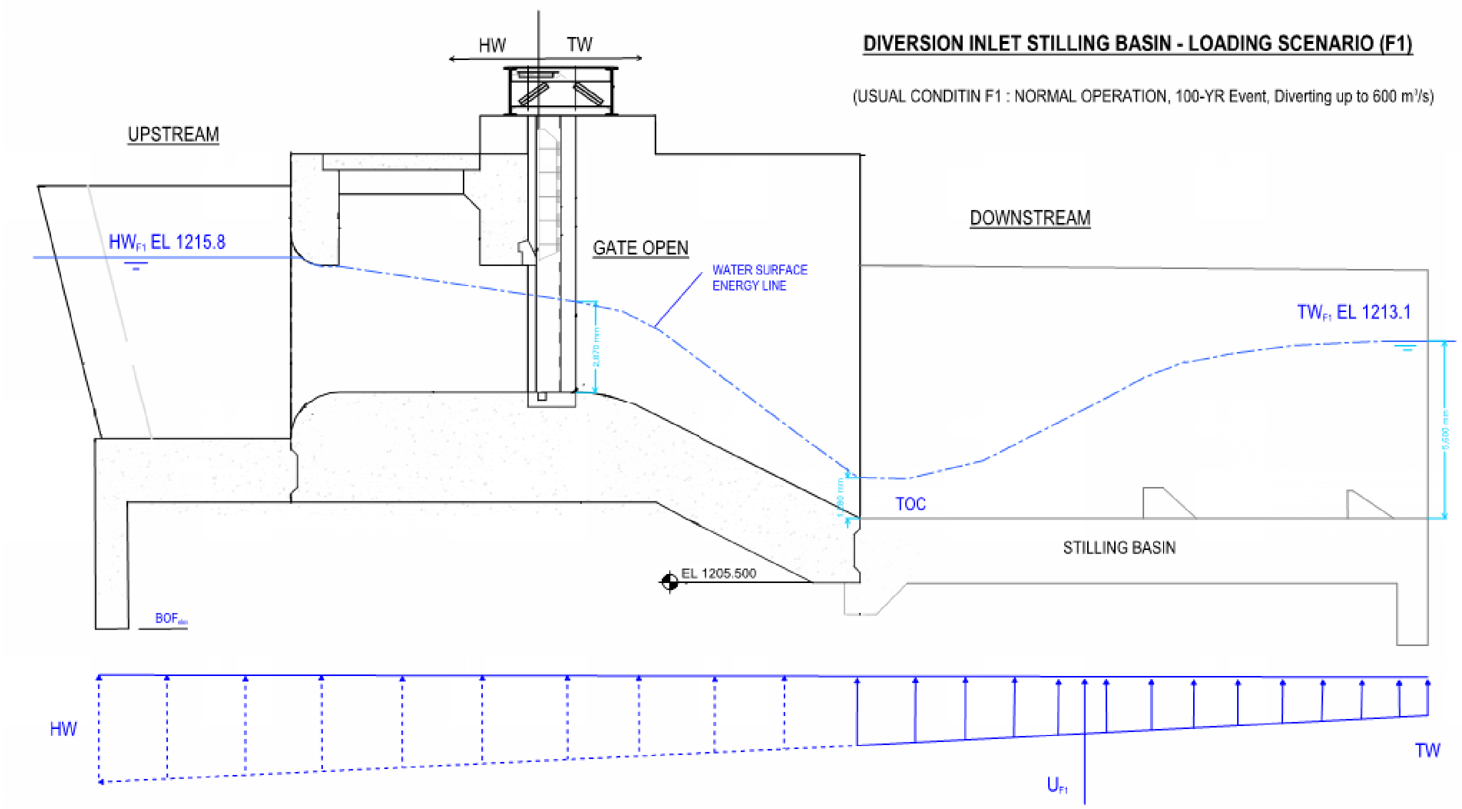
Unit Weight of Concrete: $\gamma_c := 23.5 \frac{kN}{m^3}$ (Section 7.1, Design Criteria)

Unit Weight of Water: $\gamma_w := 9.81 \frac{kN}{m^3}$ (Section 7.2, Design Criteria)

CONCRETE DEAD LOADS

Total Concrete Dead Loads: $D_{conc} := V_{sb} \cdot \gamma_c = 10152.0 \cdot kN$

F1 DESIGN CASE



ACCEPTANCE PARAMETERS

Required Factor of Safety: $FS_{req.F1} := 1.5$

(Without Cohesion)

(Section 8.1, Design Criteria)

VERTICAL WATER LOADS

Headwater Elevation: $H_{hw.F1} := 1215.80m$

Tailwater Elevation: $H_{tw.F1} := 1213.10m$

Include Vertical Water Load in Analysis?: $n_{F1} := 1$

n=1 Yes
n=0 No

Vertical Tailwater Load: $H_{1.F1} := \gamma_w \cdot W_{sb} \cdot (69.4 \cdot m \cdot m) \cdot n_{F1} = 8169.8 \cdot kN$

WATER UPLIFT

Uplift pressure at heel of Gated Structure: $U_{HW.F1} := \left(H_{hw.F1} - BOF_{elev}\right)\cdot\gamma_w = 101.0\cdot\frac{kN}{m^2}$

Uplift pressure at Toe of Stilling Basin: $U_{TW.F1} := \left(H_{tw.F1} - BOF_{elev}\right)\cdot\gamma_w = 74.6\cdot\frac{kN}{m^2}$

Length from Heel of Gate Structure to Toe of Stilling Basin: $L_{overall.F1} := L_b + L_{sb} = 42.20\,m$

Difference between Uplift pressure at Heel of Gate Structure and Uplift Pressure at Toe of Stilling Basin: $U_{diff.F1} := U_{HW.F1} - U_{TW.F1} = 26.5\cdot\frac{kN}{m^2}$

Slope of difference between Uplift pressure at Heel of Gate Structure and Uplift Pressure at Toe of Stilling Basin: $U_{slope.F1} := \frac{U_{diff.F1}}{L_{overall.F1}} = 0.628\cdot\frac{kN}{m^2\cdot m}$

Tailwater Pressure at toe of Gate Structure / Heel of Stilling Basin (Drain considered 50% effective): $U_{press.heel.sb.F1} := U_{TW.F1} + 0.5\cdot U_{diff.F1} = 87.8\cdot\frac{kN}{m^2}$

Uniform uplift force: $U_{A.F1} := U_{TW.F1}\cdot L_{sb}\cdot W_{sb}\cdot -1 = -16104.1\cdot kN$

Triangular uplift force: $U_{B.F1} := \frac{1}{2}\cdot\left(U_{press.heel.sb.F1} - U_{TW.F1}\right)\cdot L_{sb}\cdot W_{sb}\cdot -1 = -1430.3\cdot kN$

Total Resultant Uplift force: $U_{F1} := U_{A.F1} + U_{B.F1} = -17534.4\cdot kN$

$\Sigma V_{water.F1} := H_{1.F1} + U_{F1} = -9364.6\cdot kN$

FLOATATION ANALYSIS:

$\Sigma DL_{F1} := D_{conc} = 10152.0\cdot kN$

$\Sigma H_{vert.F1} := H_{1.F1} = 8169.8\cdot kN$

$\Sigma Up_{F1} := U_{F1} = -17534.4\cdot kN$

$\Sigma Fy_{F1} := \Sigma DL_{F1} + \Sigma H_{vert.F1} + \Sigma Up_{F1} = 787.4\cdot kN$

Factor of Safety: $FS_{act.F1} := \frac{\left(\Sigma DL_{F1} + \Sigma H_{vert.F1}\right)}{\left|\Sigma Up_{F1}\right|} = 1.04$

$$FS_{check.F1} := \begin{array}{|l} \text{"OKAY"} \text{ if } FS_{act.F1} \ge FS_{req.F1} \\ \text{"ANCHORS REQUIRED"} \text{ if } FS_{act.F1} < FS_{req.F1} \end{array} = \text{"ANCHORS REQUIRED"}$$

Anchor Force Required to Meet Factor of Safety Requirements:

$$A_{F1} := \begin{array}{|l} (0.0kN) \text{ if } FS_{act.F1} \ge FS_{req.F1} \\ \left(\left|\Sigma Up_{F1}\right|\cdot FS_{req.F1} - \Sigma DL_{F1} - \Sigma H_{vert.F1}\right) \text{ if } FS_{act.F1} < FS_{req.F1} \end{array} = 7979.8\cdot kN$$

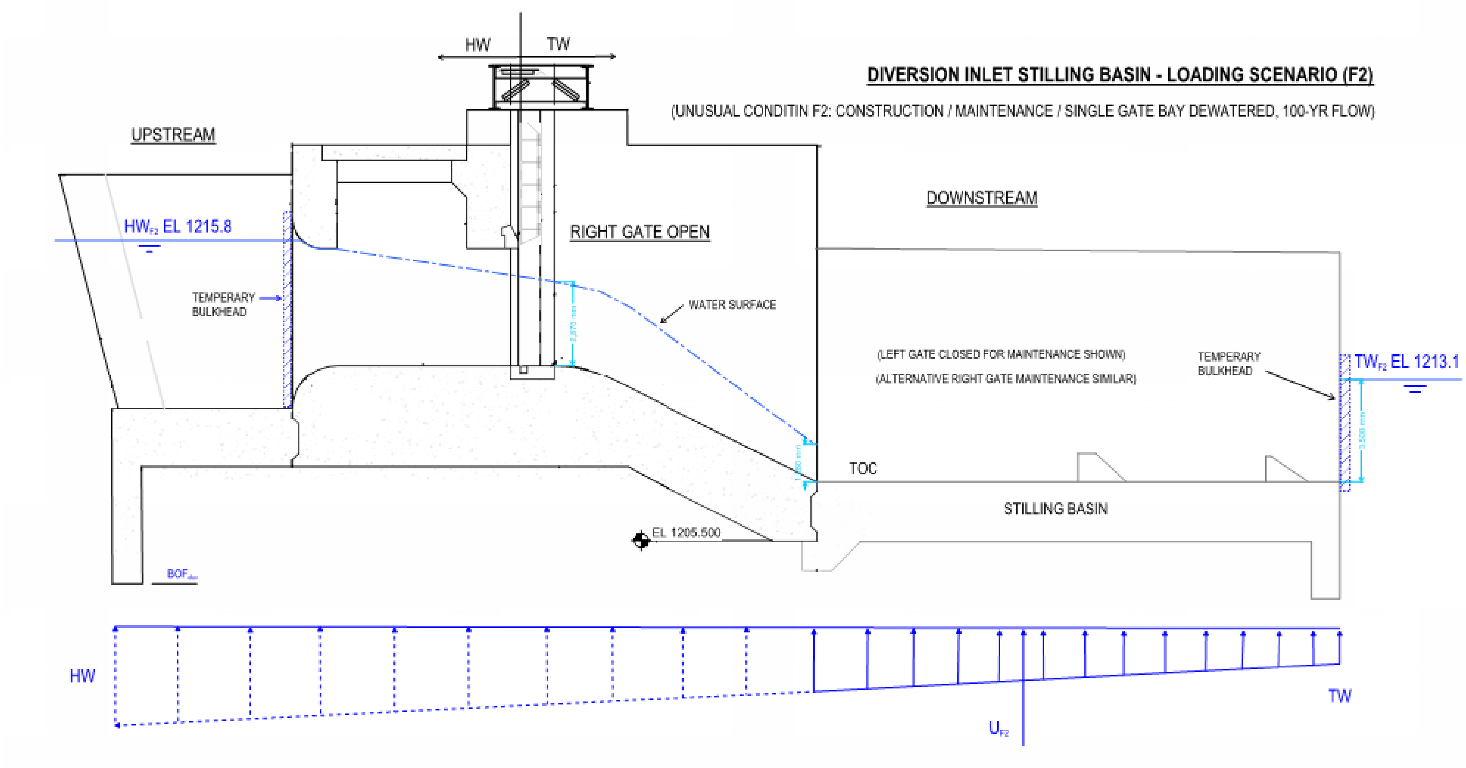
Required anchor resistance over stilling basin Area: $A_{F1.Area} := \frac{A_{F1}}{\left(L_{sb}\cdot W_{sb}\right)} = 36.9\cdot\frac{kN}{m^2}$

Design anchor force and resistance over stilling basin Area by all loading cases

$A_F := \max\left(A_{F1}, A_{F2}, A_{F3}\right) = 7979.8\cdot kN$

$A_{F.Area} := \max\left(A_{F1.Area}, A_{F2.Area}, A_{F3.Area}\right) = 36.9\cdot\frac{kN}{m^2}$

F2 DESIGN CASE



ACCEPTANCE PARAMETERS

Required Factor of Safety: $FS_{req.F2} := 1.3$ (Without Cohesion)

(Section 8.1, Design Criteria)

VERTICAL WATER LOADS

Headwater Elevation: $H_{hw.F2} := 1211.0m$

Tailwater Elevation: $H_{tw.F2} := 1211.0m$

Include Vertical Water Load in Analysis?: $n_{F2} := 0$ n=1 Yes
n=0 No

Vertical Tailwater Load: $H_{1.F2} := \gamma_w \cdot L_{sb} \cdot W_{sb} \cdot \left(H_{tw.F2} - TOC\right) \cdot n_{F2} = 0.0 \cdot kN$

WATER UPLIFT

Uplift pressure at heel of Gated Structure:	$U_{HW.F2} := \left(H_{hw.F2} - BOF_{elev}\right)\cdot\gamma_w = 54.0\cdot\frac{kN}{m^2}$
Uplift pressure at Toe of Stilling Basin:	$U_{TW.F2} := \left(H_{tw.F2} - BOF_{elev}\right)\cdot\gamma_w = 54\cdot\frac{kN}{m^2}$
Length from Heel of Gate Structure to Toe of Stilling Basin:	$L_{overall.F2} := L_b + L_{sb} = 42.20\,m$
Difference between Uplift pressure at Heel of Gate Structure and Uplift Pressure at Toe of Stilling Basin:	$U_{diff.F2} := U_{HW.F2} - U_{TW.F2} = 0\cdot\frac{kN}{m^2}$
Slope of difference between Uplift pressure at Heel of Gate Structure and Uplift Pressure at Toe of Stilling Basin:	$U_{slope.F2} := \frac{U_{diff.F2}}{L_{overall.F2}} = 0.00\cdot\frac{kN}{m^2\cdot m}$
Tailwater Pressure at toe of Gate Structure / Heel of Stilling Basin:	$U_{press.heel.sb.F2} := U_{TW.F2} + \left(L_{sb}\right)\cdot U_{slope.F2} = 54\cdot\frac{kN}{m^2}$
Uniform uplift force:	$U_{A.F2} := U_{TW.F2}\cdot L_{sb}\cdot W_{sb}\cdot -1 = -11654.3\cdot kN$
Triangular uplift force:	$U_{B.F2} := \frac{1}{2}\cdot\left(U_{press.heel.sb.F2} - U_{TW.F2}\right)\cdot L_{sb}\cdot W_{sb}\cdot -1 = 0\cdot kN$
Total Resultant Uplift force:	$U_{F2} := U_{A.F2} + U_{B.F2} = -11654.3\cdot kN$

$$\Sigma V_{water.F2} := H_{1.F2} + U_{F2} = -11654.3\cdot kN$$

FLOATATION ANALYSIS:

$\Sigma DL_{F2} := D_{conc} = 10152.0\cdot kN$

$\Sigma H_{vert.F2} := H_{1.F2} = 0.0\cdot kN$

$\Sigma Up_{F2} := U_{F2} = -11654.3\cdot kN$

$\Sigma Fy_{F2} := \Sigma DL_{F2} + \Sigma H_{vert.F2} + \Sigma Up_{F2} = -1502.3\cdot kN$

Factor of Safety:
$$FS_{act.F2} := \frac{\left(\Sigma DL_{F2} + \Sigma H_{vert.F2}\right)}{\left|\Sigma Up_{F2}\right|} = 0.87$$

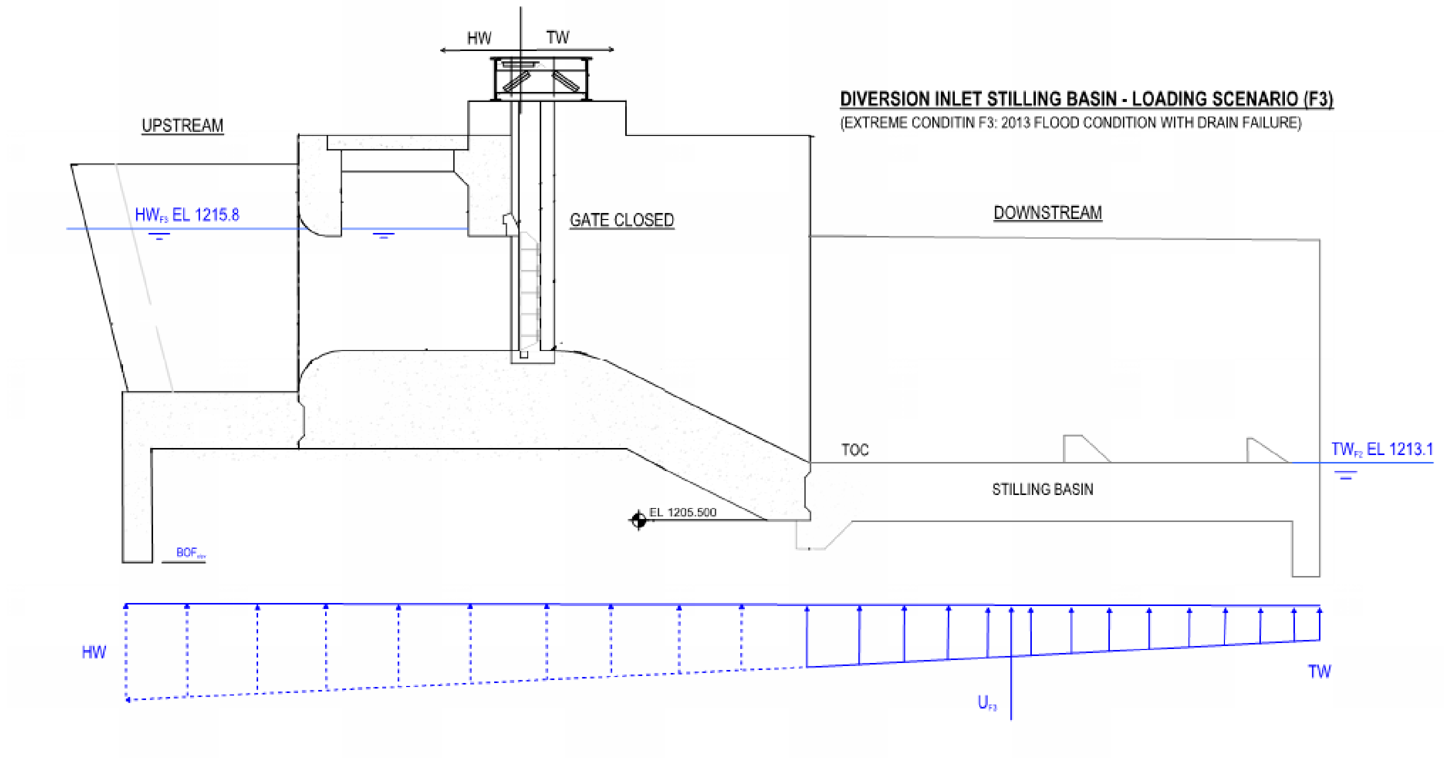
$$FS_{check.F2} := \begin{cases} \text{"OKAY"} & \text{if } FS_{act.F2} \ge FS_{req.F2} \\ \text{"ANCHORS REQUIRED"} & \text{if } FS_{act.F2} < FS_{req.F2} \end{cases} = \text{"ANCHORS REQUIRED"}$$

Anchor Force Required to Meet Factor of Safety Requirements:

$$A_{F2} := \begin{cases} (0.0kN) & \text{if } FS_{act.F2} \ge FS_{req.F2} \\ \left(\left|\Sigma Up_{F2}\right|\cdot FS_{req.F2} - \Sigma DL_{F2} - \Sigma H_{vert.F2}\right) & \text{if } FS_{act.F2} < FS_{req.F2} \end{cases} = 4998.6\cdot kN$$

Required anchor force over stilling basin Area:
$$A_{F2.Area} := \frac{A_{F2}}{\left(L_{sb}\cdot W_{sb}\right)} = 23.1\cdot\frac{kN}{m^2}$$

F3 DESIGN CASE



ACCEPTANCE PARAMETERS

Required Factor of Safety: $FS_{req.F3} := 1.1$ (Without Cohesion)

(Section 8.1, Design Criteria)

VERTICAL WATER LOADS

Headwater Elevation: $H_{hw.F3} := 1215.80m$

Tailwater Elevation: $H_{tw.F3} := 1207.5m$

Include Vertical Water Load in Analysis?: $n_{F3} := 0$

n=1 Yes
n=0 No

Vertical Tailwater Load: $H_{1.F3} := \gamma_w \cdot L_{sb} \cdot W_{sb} \cdot \left(H_{tw.F3} - TOC\right) \cdot n_{F3} = 0.0 \cdot kN$

WATER UPLIFT

F3 CASE

Uplift pressure at heel of Gated Structure: $U_{HW.F3} := \left(H_{hw.F3} - BOF_{elev}\right)\cdot\gamma_w = 101.0\cdot\frac{kN}{m^2}$

Uplift pressure at Toe of Stilling Basin: $U_{TW.F3} := \left(H_{tw.F3} - BOF_{elev}\right)\cdot\gamma_w = 19.6\cdot\frac{kN}{m^2}$

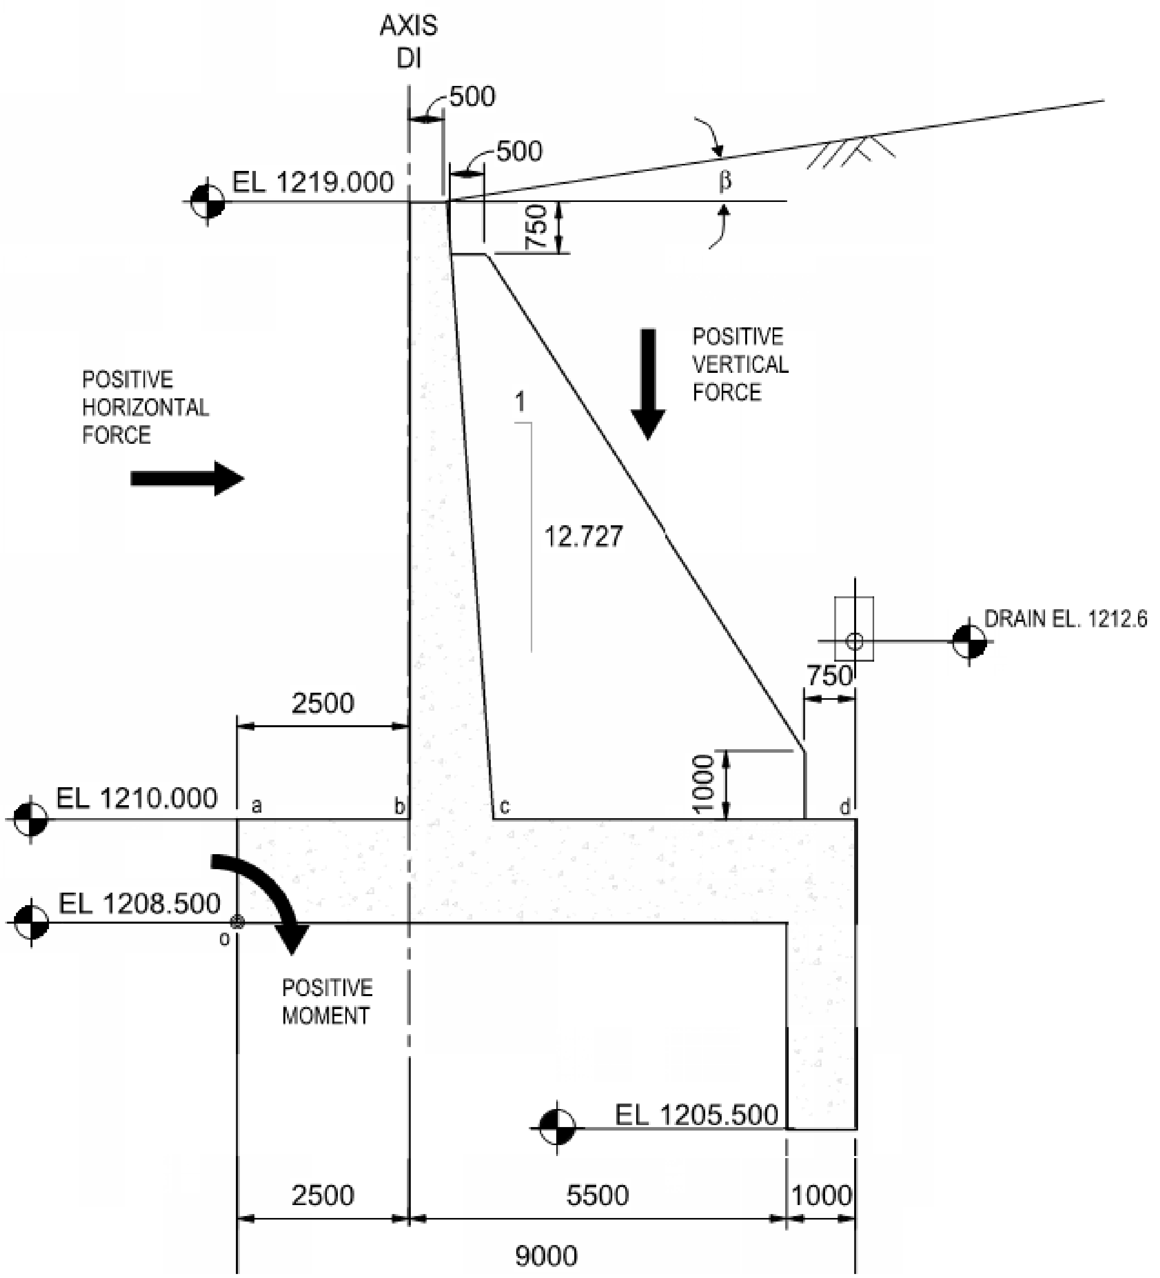
Calculation Section III

DI-6 Retaining Wall Stability Calculations

Project Number:	110773396		
Project Title:	SR1 - Diversion Structure		
Client:	Alberta Transportation		
Engineer:	Lawrence Choi	Date: 12/11/2018	
Checker:	Sean Xiao	Date: 12/18/2018	

Calculation for: Retaining Wall - Diversion Inlet Left - Block 6



REGION COLOR CONVENTION

User Input

Calulation Highlights

Results

WALL GEOMETRY:

Top of Wall Elevation: $T_w := 1219.0 \cdot m$

Top of Footing Elevation: $Top_{ftg} := 1210.0 \cdot m$

Thickness of Footing: $t_{ftg} := 1.5m$

Bottom of Footing Elevation: $Bot_{ftg} := Top_{ftg} - t_{ftg} = 1208.5 \text{ m}$

Overall Height of wall: $h_w := T_w - Bot_{ftg} = 10.50 \text{ m}$

Thickness of Wall: Base: $t_{wb} := 1.207 \cdot m$ Top: $t_{wt} := 0.50m$

Length of toe: $L_{ab} := 2.5m$

Total Length of Footing: $b := 9.0m$

Length of heel: $L_{cd} := b - L_{ab} - t_{wb} = 5.293 \text{ m}$

Unit Width of Wall for analysis: $B := 1.00m$

SHEAR KEY GEOMETRY:

	Toe	Heel	
Key depth:	$Key_{t.d} := 0m$	$Key_{h.d} := 3.0m$	(Assumption: $Key_{h.d}$ >= $Key_{t.d}$)
Key width:	$Key_{t.w} := 0m$	$Key_{h.w} := 1m$	
Face of Key from Point O:	$Key_{t.loc} := 0 \cdot m$	$Key_{h.loc} := b - Key_{h.w} = 8 \text{ m}$	

Horizontal Distance between Keys: $Key_{hdist} := Key_{h.loc} - Key_{t.loc} - Key_{t.w} = 8 \text{ m}$

Key Depth Diff. (from point O): $Key_{vdist} := -Key_{h.d} + Key_{t.d} = -3 \text{ m}$

BASE PROPERTIES:

Base Area: $A_b := b \cdot B = 9 \text{ m}^2$

Centroidal Distance for Footing (from Toe): $Y_t := \frac{b}{2} = 4.50 \text{ m}$

RETAINED SOIL GEOMETRY:

Slope of retained ground surface: $\beta := 0 \cdot \frac{\pi}{180} = 0.00$

Height of retained earth at heel: $H_w := T_w - Bot_{ftg} + \left(t_{wb} + L_{cd} - t_{wt}\right) \cdot \tan(\beta) = 10.50 \text{ m}$

RETAINING WALL GEOMETRY CHECKS:

(Foundation Analysis & Design Bowles)

$t_{bcheck} := \left| \begin{array}{l} \text{"OKAY"} \quad \text{if} \quad t_{ftg} \geq \frac{H_w}{12} \\ \text{"Warning"} \quad \text{otherwise} \end{array} \right. = \text{"OKAY"}$

$t_{wcheck} := \left| \begin{array}{l} \text{"OKAY"} \quad \text{if} \quad t_{wb} \geq \frac{H_w}{12} \\ \text{"Warning"} \quad \text{otherwise} \end{array} \right. = \text{"OKAY"}$

$b_{check} := \left| \begin{array}{l} \text{"OKAY"} \quad \text{if} \quad \frac{b}{H_w} \geq .4 \wedge \frac{b}{H_w} \leq 80 \\ \text{"Warning"} \quad \text{otherwise} \end{array} \right. = \text{"OKAY"}$

$L_{abcheck} := \left| \begin{array}{l} \text{"OKAY"} \quad \text{if} \quad \frac{L_{ab}}{b} \geq .25 \wedge \frac{L_{ab}}{b} \leq .4 \\ \text{"Warning"} \quad \text{otherwise} \end{array} \right. = \text{"OKAY"}$

Material Properties:

Unit Weight of Water: $\gamma_w := 9.8 \frac{kN}{m^3}$ (Section 7.2, Design Criteria)

Unit Weight of Concrete: $\gamma_c := 23.5 \frac{kN}{m^3}$

Unit Weight of Soil (Moist): $\gamma_m := 20.0 \frac{kN}{m^3}$ (Section 5.3, Design Criteria)
assumed moisture content (w) = 5%

Unit Weight Soil (Saturated): $\gamma_{sat} := 22.0 \frac{kN}{m^3}$ (Assuming Specific Gravity = 2.7

Unit Weight Soil (buoyant): $\gamma_b := \gamma_{sat} - \gamma_w = 12.2 \cdot \frac{kN}{m^3}$

Weight of Soil/Concrete above toe: $\gamma_{toe} := 22.0 \frac{kN}{m^3}$

Unit Weight of Rock: $\gamma_r := 25.6 \frac{kN}{m^3}$ (Section 7.2, Design Criteria)

Foundation Parameters:

Glacial Till Internal Friction: $\phi := 27 \cdot \frac{\pi}{180} = 0.471$

Bedrock Internal Friction Angle: $\phi_r := 24 \cdot \frac{\pi}{180} = 0.419$

Friction Angle at Base
Concrete / Rock Interface: $\phi_{rock} := 26$

Base Friction Coefficient: $tan_{\phi rock} := \tan\left(\phi_{rock} \frac{\pi}{180}\right) = 0.488$ radians

Rip Rap Backfill, Refer Dwg. C-214 $\phi_{backfill} := \left(20 \frac{\pi}{180}\right) = 0.349$ radians

Shear strength along rock
Failure plane $s_r := \frac{13100 \frac{kN}{m^2}}{2} = 6550 \cdot \frac{kN}{m^2}$ (Stantec Design Memo 8/8/16)

CONCRETE DEAD LOAD:

Area of Footing: $A_{ftg} := t_{ftg} \cdot b = 13.5\,m^2$

Weight of Footing: $D_{ftg} := A_{ftg} \cdot B \cdot \gamma_c = 317.3 \cdot kN$

Area of Stem (without batter): $A_{w1} := t_{wt} \cdot (h_w - t_{ftg}) = 4.5\,m^2$

Weight of Stem: $D_{w1} := A_{w1} \cdot B \cdot \gamma_c = 105.8 \cdot kN$

Area of stem Batter: $A_{w2} := \frac{(t_{wb} - t_{wt})}{2} (h_w - t_{ftg}) = 3.18\,m^2$

Weight of Batter: $D_{w2} := A_{w2} \cdot B \cdot \gamma_c = 74.8 \cdot kN$

Slope of batter: $S_{batter} := \frac{t_{wb} - t_{wt}}{h_w - t_{ftg}} = 0.079$

Area of Key $A_{t.key} := Key_{t.d} \cdot Key_{t.w} = 0$ $A_{h.key} := Key_{h.d} \cdot Key_{h.w} = 3\,m^2$

Weight of Key $D_{t.key} := A_{t.key} \cdot B \cdot \gamma_c = 0 \cdot kN$ $D_{h.key} := A_{h.key} \cdot B \cdot \gamma_c = 70.5 \cdot kN$

Centroidal Horizontal Distance of Wall (From Toe):

$$H_{cent} := \frac{A_{w1} \cdot \left(L_{ab} + \frac{t_{wt}}{2}\right) + A_{w2} \cdot \left(L_{ab} + t_{wt} + \frac{t_{wb} - t_{wt}}{3}\right) + A_{ftg} \cdot \frac{b}{2} \ldots + A_{t.key} \cdot \left(Key_{t.loc} + \frac{Key_{t.w}}{2}\right) + A_{h.key} \cdot \left(Key_{h.loc} + \frac{Key_{h.w}}{2}\right)}{A_{w1} + A_{w2} + A_{ftg} + A_{t.key} + A_{h.key}} = 4.50\,m$$

Centroidal Vertical Distance of Wall (Above Base of Footing):

$$V_{Cent} := \frac{A_{ftg} \cdot \frac{t_{ftg}}{2} + A_{w1} \cdot \left[t_{ftg} + \frac{(h_w - t_{ftg})}{2}\right] + A_{w2} \cdot \left[t_{ftg} + \frac{(h_w - t_{ftg})}{3}\right] + A_{t.key} \cdot \left(\frac{-Key_{t.d}}{2}\right) + A_{h.key} \cdot \left(\frac{-Key_{h.d}}{2}\right)}{A_{ftg} + A_{w1} + A_{w2} + A_{t.key} + A_{h.key}} = 1.94\,m$$

$\Sigma V_{conc} := D_{ftg} + D_{w1} + D_{w2} + D_{t.key} + D_{h.key} = 568.3 \cdot kN$

$\Sigma M_{conc} := \Sigma V_{conc} \cdot H_{cent} = 2559.6\,m \cdot kN$

ROCK SECTION MOBILIZED FOR INCLINDED SLIDING FAILURE

Area of Rock Section Mobilized: $A_{rocksection} := (Key_{t.d} + Key_{h.d}) \cdot \frac{Key_{hdist}}{2} = 12\,m^2$

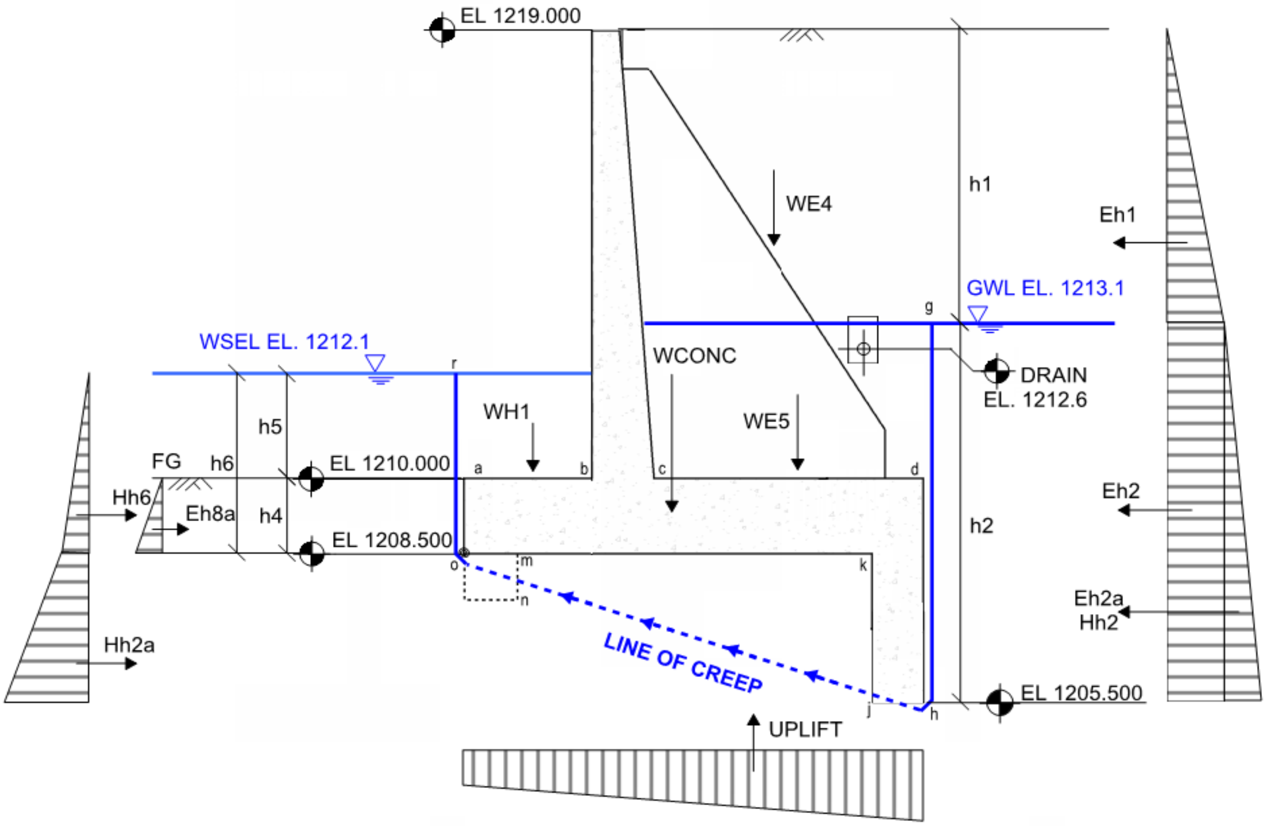
Rock Mass Mobilized: $V_{rocksection} := A_{rocksection} \cdot \gamma_r \cdot B = 307.2 \cdot kN$

(Pore pressure taken along assumed inclined sliding plane)

Distance from Toe to COG of Rock Section: $L_{rocksection} := \frac{Key_{hdist} \cdot (2 \cdot Key_{h.d} + Key_{t.d})}{3(Key_{h.d} + Key_{t.d})} + Key_{t.w} = 5.333\,m$

$\Sigma M_{rocksection} := V_{rocksection} \cdot L_{rocksection} = 1638.4\,m \cdot kN$

LOAD CASE U1 - NORMAL OPERATION



U1 DESIGN CASE

LOAD CASE U1 ACCEPTANCE PARAMETERS

FS sliding:

Usual (U) 1.5 (without cohesion) (Table 3-3, USACE EM 1110-2-2100)

Resultant Location:

Usual (U) Inside middle third ~100% base in compression

Required Factor of Safety for Sliding: $FS_{sliding.reqU1} := 1.5$ (Without Cohesion)

Allowable rock bearing pressure: $\sigma_{allowU1} := 1270kPa$ (Section 5.2, Design Criteria EM 1110-2-2100 Section 3-10)

Overturning Required Resultant Ratio: $X_{R.reqU1} := 0.333$ (EM 1110-2-2502, Figure 4-4)

Required Factor of Safety for Floatation $FS_{req.U1.flt} := 1.5$

SOIL HEIGHTS and Water Levels:

LOAD CASE U1

Heel Conditions:

Groundwater Elevation at Heel: $GWL_{U1} := 1213.1\,m$

Distance from Finish Grade to Groundwater at Heel: $h_{1U1} := \left[T_w - GWL_{U1} + \left(L_{cd} + t_{wb} - t_{wt}\right)\cdot \tan(\beta)\right] = 5.90\,m$

Distance from Water Surface to Bottom of Footing at Heel: $h_{2U1} := GWL_{U1} - Bot_{ftg} + Key_{h.d} = 7.60\,m$

Toe Conditions:

Water Surface Elevation at Toe: $WSEL_{U1} := 1212.1\,m$

Water Surface Elevation at Toe for Uplift: $UWSEL_{U1} := 1212.1\cdot m$

Finish Grade at Toe providing lateral resistance: $FG_{toeU1} := 1210.0\cdot m$

Soil Depth Above top of footing: $h_{3aU1} := FG_{toeU1} - Top_{ftg} = 0\,m$

$$h_{3U1} := \begin{cases} h_{3aU1} & \text{if } FG_{toeU1} - Top_{ftg} \ge 0 \\ 0 & \text{otherwise} \end{cases} = 0$$

Resisting Fill at Toe: $h_{4U1} := FG_{toeU1} - Bot_{ftg} + Key_{t.d} = 1.50\,m$

Distance from Water Level to Top of Footing: $h_{5U1} := WSEL_{U1} - Top_{ftg} = 2.10\,m$

Distance from Water Surface to Bottom of Footing: $h_{6U1} := WSEL_{U1} - Bot_{ftg} + Key_{t.d} = 3.60\cdot m$

Soil Depth Above WSEL: $h_{7aU1} := FG_{toeU1} - WSEL_{U1} = -2.1\,m$

$$h_{7U1} := \begin{cases} h_{7aU1} & \text{if } FG_{toeU1} - WSEL_{U1} \ge 0 \\ 0 & \text{otherwise} \end{cases} = 0$$

Soil Depth Below WSEL:

$$h_{8U1} := \begin{cases} WSEL_{U1} - Bot_{ftg} + Key_{t.d} & \text{if } FG_{toeU1} - WSEL_{U1} \ge 0 \\ h_{4U1} & \text{otherwise} \end{cases} = 1.5$$

For Line of Creep Method: $L_{ho.U1} := \sqrt{b^2 + \left(Key_{h.d} - Key_{t.d}\right)^2} = 9.487\,m$

Head Loss from Point g:

$\Delta h_{g.hj.U1} := h_{2U1} = 7.6\,m$ (to point h & j)

$\Delta h_{g.km.U1} := GWL_{U1} - Bot_{ftg} = 4.6\,m$ (to point k & m)

$\Delta h_{g.no.U1} := GWL_{U1} - Bot_{ftg} + Key_{t.d} = 4.6\,m$ (to point n & o)

$\Delta h_{g.p.U1} := GWL_{U1} - FG_{toeU1} = 3.1\,m$ (to point p*)

$\Delta h_{g.r.U1} := GWL_{U1} - UWSEL_{U1} = 1\,m$ (to point r)

Surcharge

Surcharge on Heel: $S1_{U1} := 0.0\,\frac{kN}{m^2}$

* same as point "a" in this case

Calculate Soil Lateral Pressure Coefficients:

LOAD CASE U1

For all load cases except seismic, soil loading to be based on At-Rest Condition.
Calculate at-rest pressure coefficient Ko based on Jaky's (1944) equation.

Soil At Rest Static Coefficient: $K_o := \dfrac{1 - \sin(\phi)}{1 + \sin(\beta)} = 0.546$ (Eq. 3-6, USACE EM 1110-2-2502)

Lateral - Driving Force (Headwater Side)

Lateral Soil Load:

Surcharge Load: $E_{s1U1} := S1_{U1} \cdot K_o \cdot \left(H_w + Key_{h.d}\right) \cdot B \cdot -1 = 0 \cdot kN$

Moment Arm (from bottom of footing): $E_{s1locU1} := \dfrac{H_w + Key_{h.d}}{2} + Key_{vdist} = 3.75\ m$

Moist Soil Load above GWL: $E_{h1U1} := \dfrac{\gamma_m \cdot K_o \cdot h_{1U1}^{\ 2}}{2} B \cdot -1 = -190.1 \cdot kN$

Moment Arm (from bottom of footing): $E_{h1locU1} := \dfrac{h_{1U1}}{3} + h_{2U1} + Key_{vdist} = 6.57\ m$

Saturated Soil Load below GWL:
(rectangular component)

$E_{h2U1} := \left(\gamma_m \cdot K_o \cdot h_{1U1}\right) \cdot \left(h_{2U1}\right) \cdot B \cdot -1 = -489.7 \cdot kN$

Moment Arm (from bottom of footing): $E_{h2locU1} := \dfrac{h_{2U1}}{2} + Key_{vdist} = 0.80\ m$

Saturated Soil Load below GWL:
(triangular component)

$E_{h2aU1} := \dfrac{\left(\gamma_{sat} - \gamma_w\right) \cdot K_o \cdot h_{2U1}^{\ 2}}{2} \cdot B \cdot -1 = -192.4 \cdot kN$

Moment Arm (from bottom of footing): $E_{h2alocU1} := \dfrac{h_{2U1}}{3} + Key_{vdist} = -0.47\ m$

Lateral Water Load:

Water Load GWL to Bottom of Key: $H_{h2U1} := \dfrac{\gamma_w \cdot h_{2U1}^{\ 2}}{2} \cdot B \cdot -1 = -283.0 \cdot kN$

Moment Arm (from bottom of footing): $H_{h2locU1} := \dfrac{h_{2U1}}{3} + Key_{vdist} = -0.47\ m$

$\Sigma H_{SoildriveU1} := E_{s1U1} + E_{h1U1} + E_{h2U1} + E_{h2aU1} + H_{h2U1} = -1155.1 \cdot kN$

$$\Sigma M_{LateralSoildriveU1} := E_{s1U1} \cdot E_{s1locU1} + E_{h1U1} \cdot E_{h1locU1} + E_{h2U1} \cdot E_{h2locU1} \ldots = -1418.0\ m \cdot kN$$
$$+ E_{h2aU1} \cdot E_{h2alocU1} + H_{h2U1} \cdot H_{h2locU1}$$

Lateral - Resisting Force (Tailwater Side)

LOAD CASE U1

Lateral Water Load:

Water Load WSEL to Bot. of Footing: $H_{h6U1} := \frac{\gamma_w \cdot h_{6U1}^2}{2} \cdot B = 63.5 \cdot kN$

Moment Arm (from bot. of toe key): $H_{h6locU1} := \frac{h_{6U1}}{3} = 1.20\,m$

Water Load Bot. of Footing to Bot. of H. Key: $H_{h2aU1} := \left[\left(UWSEL_{U1} - Bot_{ftg} + Key_{t.d}\right) + h_{2U1}\right] \cdot \frac{Key_{h.d}}{2} \cdot \gamma_w \cdot B = 164.6 \cdot kN$

Moment Arm (from bot. of toe key): $H_{h2alocU1} := \frac{Key_{h.d} \cdot \left[2 \cdot \left(UWSEL_{U1} - Bot_{ftg} + Key_{t.d}\right) + h_{2U1}\right]}{3\left[h_{2U1} + \left(UWSEL_{U1} - Bot_{ftg} + Key_{t.d}\right)\right]} \ldots + Key_{vdist} = -1.68\,m$

Lateral Soil Load:

Moist Soil Load above WSEL: $E_{h7U1} := \frac{\gamma_m \cdot K_o \cdot h_{7U1}^2}{2} B = 0.0 \cdot kN$

Moment Arm (from bot. of toe key): $E_{h7locU1} := h_{6U1} + \frac{h_{7U1}}{3} + Key_{vdist} = 0.60\,m$

Saturated Soil Load below WSEL: (rectangular component) $E_{h8U1} := \left(\gamma_m \cdot K_o \cdot h_{7U1}\right) \cdot h_{8U1} \cdot B = 0.0 \cdot kN$

Moment Arm (from bot. of toe key): $E_{h8locU1} := \frac{h_{8U1}}{2} = 0.75\,m$

Saturated Soil Load below WSEL: (triangular component) $E_{h8aU1} := \frac{\left[\left(\gamma_{sat} - \gamma_w\right) \cdot K_o\right] \cdot h_{8U1}^2}{2} \cdot B = 7.5 \cdot kN$

Moment Arm (from bot. of footing): $E_{h8alocU1} := \frac{h_{8U1}}{3} = 0.50\,m$

$$\Sigma H_{SoilresistU1} := H_{h6U1} + H_{h2aU1} + E_{h7U1} + E_{h8U1} + E_{h8aU1} = 235.6 \cdot kN$$

$$\Sigma M_{HorizSoilResistU1} := H_{h6U1} \cdot H_{h6locU1} + H_{h2aU1} \cdot H_{h2alocU1} + E_{h7U1} \cdot E_{h7locU1} \ldots + E_{h8U1} \cdot E_{h8locU1} + E_{h8aU1} \cdot E_{h8alocU1} = -196.4\,m \cdot kN$$

Vertical Force:

UPLIFT: Linear distribution from water at heel to water at toe:

$$\Sigma V_{UpliftU1} := \left[\left(UWSEL_{U1} - Bot_{ftg} + Key_{t.d}\right) + h_{2U1}\right] \cdot \frac{b}{2} \cdot \gamma_w \cdot B \cdot -1 = -493.92 \cdot kN$$

Moment Arm (from Point O): $V_{UpliftU1aloc} := \frac{b \cdot \left[2 \cdot h_{2U1} + \left(UWSEL_{U1} - Bot_{ftg} + Key_{t.d}\right)\right]}{3\left[h_{2U1} + \left(UWSEL_{U1} - Bot_{ftg} + Key_{t.d}\right)\right]} = 5.036\,m$

$$\Sigma M_{UpliftU1} := \Sigma V_{UpliftU1} \cdot V_{UpliftU1aloc} = -2487.24 \cdot kN \cdot m$$

Vertical Force (con't):

Weight of soil and water over toe:

Water Above the Top of Footing: $W_{H1U1} := \gamma_w \cdot h_{5U1} \cdot L_{ab} \cdot B = 51.45 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E1locU1} := \frac{L_{ab}}{2} = 1.25\,m$

Soil above top of footing: $W_{E6U1} := \gamma_b \cdot h_{3U1} \cdot L_{ab} \cdot B = 0.0 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E6locU1} := \frac{L_{ab}}{2} = 1.25\,m$

Vertical Load Due to Surcharge: $S_{U1} := S1_{U1} \cdot L_{cd} \cdot B = 0$ $\quad S_{U1loc} := b - \frac{L_{cd}}{2} = 6.35\,m$

Weight of soil and water over heel:

Moist Soil for sloped grade above top of wall:

Length of sloped portion of soil above top of wall: $L_{E3U1} := \left(L_{cd} + t_{wb} - t_{wt}\right) = 6.00\,m$

Height of sloped soil above top of wall over heel: $h_{E3locU1} := \left(L_{E3U1}\right) \cdot \tan(\beta) = 0.00\,m$

Weight of sloped soil above top of wall: $W_{E3U1} := \frac{\gamma_m}{2} \cdot h_{E3locU1} \cdot L_{E3U1} \cdot B = 0.0 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E3locU1} := L_{ab} + t_{wt} + \frac{2}{3} \cdot L_{E3U1} = 7.00\,m$

Moist soil from top of wall to groundwater level:

Height of soil from top of wall and top of GWL: $h_{1U1} = 5.90\,m$

Length from edge of wall at GWL to edge of heel: $L_{E4U1} := L_{E3U1} - \left(h_{1U1} \cdot S_{batter}\right) = 5.54\,m$

Weight of soil over heel from top of wall to GWL: $W_{E4U1} := \gamma_m \cdot h_{1U1} \cdot \frac{\left(L_{E3U1} + L_{E4U1}\right)}{2} \cdot B = 680.7 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E4locU1} := b - \frac{L_{E3U1}^2 + L_{E3U1} \cdot L_{E4U1} + L_{E4U1}^2}{3\left(L_{E3U1} + L_{E4U1}\right)} = 6.11\,m$

Saturated soil from groundwater to top of footing:

Height of soil from GWL to top of heel: $h_{E4U1} := h_{2U1} - t_{ftg} - Key_{h.d} = 3.10\,m$

Weight of soil over heel from GWL to top of heel: $W_{E5U1} := \left(\gamma_{sat}\right) \cdot h_{E4U1} \cdot \frac{\left(L_{E4U1} + L_{cd}\right)}{2} \cdot B = 369.3 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E5locU1} := b - \frac{L_{E4U1}^2 + L_{E4U1} \cdot L_{cd} + L_{cd}^2}{3\left(L_{E4U1} + L_{cd}\right)} = 6.29\,m$

$\Sigma V_{SoilWaterU1} := W_{H1U1} + W_{E6U1} + W_{E3U1} + W_{E4U1} + W_{E5U1} + S_{U1} = 1101.4 \cdot kN$

$$\Sigma M_{VertSoilWaterResistU1} := W_{H1U1} \cdot W_{E1locU1} + W_{E6U1} \cdot W_{E6locU1} \cdots + W_{E3U1} \cdot W_{E3locU1} + W_{E4U1} \cdot W_{E4locU1} + W_{E5U1} \cdot W_{E5locU1} + S_{U1} \cdot S_{U1loc} = 6549.7\,m \cdot kN$$

CHECK OVERTURNING

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stablity of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1

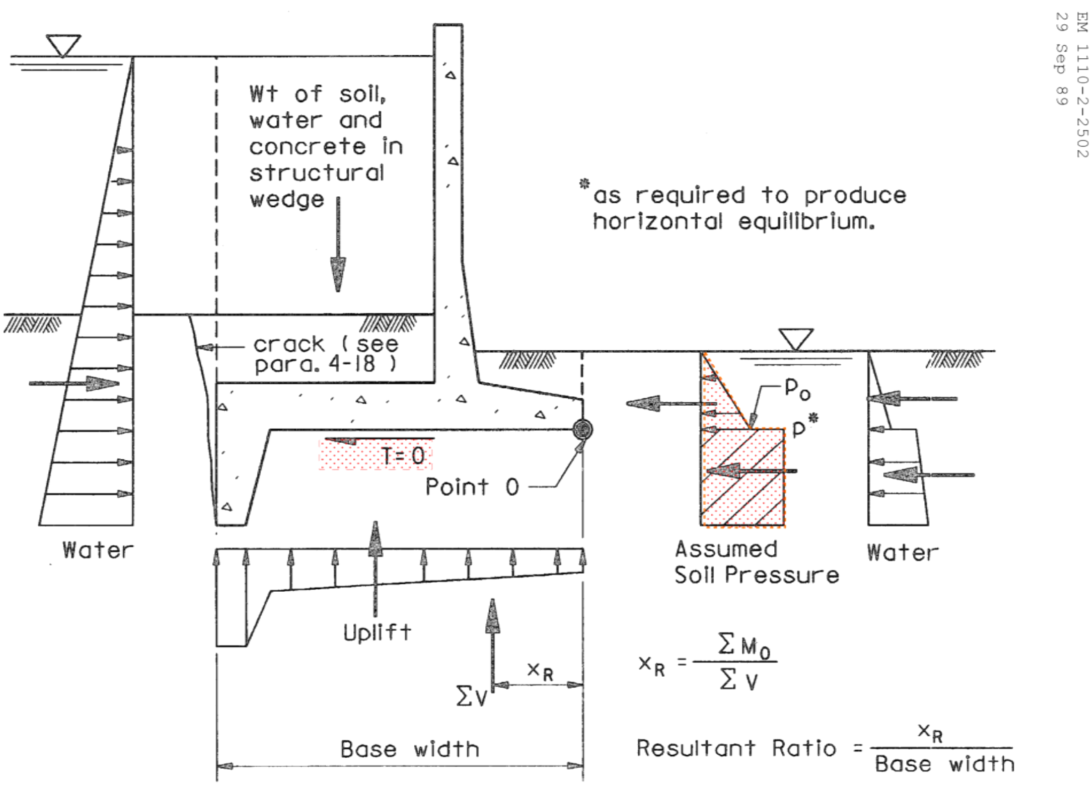

Figure 4-5. Forces for overturning analysis for wall with horizontal base and key

Modify Uplift for Overturning Analysis: **LOAD CASE U1**

(Uplift is calculated along the concrete/rock contact using the Line of Creep method)

Water Pressure at h: $u_{h.U1} := \Delta h_{g.hj.U1} \cdot \gamma_w = 74.48 \cdot kPa$

Water Pressure at o: $u_{o.U1} := \left(\Delta h_{g.no.U1} - \dfrac{\Delta h_{g.r.U1} \cdot L_{ho.U1}}{L_{ho.U1}}\right) \cdot \gamma_w = 35.28 \cdot kPa$

Head loss between point h and o: $\Delta h_{ho.U1} := \Delta h_{g.r.U1} \cdot \dfrac{L_{ho.U1}}{L_{ho.U1}} = 1\,m$

Length of concrete base (h -> o): $L_{baseho.U1} := Key_{h.w} + Key_{h.d} + Key_{hdist} + Key_{t.d} + Key_{t.w} = 12\,m$

Head loss along h -> j: $\Delta h_{hj.U1} := \Delta h_{ho.U1} \cdot \dfrac{Key_{h.w}}{L_{baseho.U1}} = 0.083\,m$

Water Pressure at j: $u_{j.U1} := \left(\Delta h_{g.hj.U1} - \Delta h_{hj.U1}\right) \cdot \gamma_w = 73.66 \cdot kPa$

Head loss along h -> k: $\Delta h_{hjk.U1} := \Delta h_{ho.U1} \cdot \left(\dfrac{Key_{h.w} + Key_{h.d}}{L_{baseho.U1}}\right) = 0.333\,m$

Water Pressure at k: $u_{k.U1} := \left(\Delta h_{g.km.U1} - \Delta h_{hjk.U1}\right) \cdot \gamma_w = 41.81 \cdot kPa$

Head loss along h -> m: $\Delta h_{hjkm.U1} := \Delta h_{ho.U1} \cdot \left(\dfrac{Key_{h.w} + Key_{h.d} + Key_{hdist}}{L_{baseho.U1}}\right) = 1\,m$

Water Pressure at m: $u_{m.U1} := \left(\Delta h_{g.km.U1} - \Delta h_{hjkm.U1}\right) \cdot \gamma_w = 35.28 \cdot kPa$

Head loss along h -> n: $\Delta h_{hjkmn.U1} := \Delta h_{ho.U1} \cdot \left(\dfrac{Key_{h.w} + Key_{h.d} + Key_{hdist} + Key_{t.d}}{L_{baseho.U1}}\right) = 1\,m$

Water Pressure at n: $u_{n.U1} := \left(\Delta h_{g.no.U1} - \Delta h_{hjkmn.U1}\right) \cdot \gamma_w = 35.28 \cdot kPa$

Uplift under key at heel: $V_{ulkeyhU1.OT} := \dfrac{\left(u_{h.U1} + u_{j.U1}\right) \cdot Key_{h.w}}{2} \cdot B \cdot -1 = -74.072 \cdot kN$

Moment Arm (from Point O): $V_{ulkeyhU1loc.OT} := b - \dfrac{Key_{h.w} \cdot \left(2 \cdot u_{j.U1} + u_{h.U1}\right)}{3 \cdot \left(u_{j.U1} + u_{h.U1}\right)} = 8.501\,m$

Uplift under base: $V_{ulbaseU1.OT} := \dfrac{\left(u_{k.U1} + u_{m.U1}\right) \cdot Key_{hdist}}{2} \cdot B \cdot -1 = -308.373 \cdot kN$

Moment Arm (from Point O): $V_{ulbaseU1loc.OT} := b - Key_{h.w} - \dfrac{Key_{hdist} \cdot \left(2 \cdot u_{m.U1} + u_{k.U1}\right)}{3 \cdot \left(u_{m.U1} + u_{k.U1}\right)} = 4.113\,m$

Uplift under key at toe: $V_{ulkeytU1.OT} := \dfrac{\left(u_{n.U1} + u_{o.U1}\right) \cdot Key_{t.w}}{2} \cdot B \cdot -1 = 0 \cdot kN$

Moment Arm (from Point O): $V_{ulkeytU1loc.OT} := \dfrac{Key_{t.w} \cdot \left(2 \cdot u_{n.U1} + u_{o.U1}\right)}{3 \cdot \left(u_{n.U1} + u_{o.U1}\right)} = 0$

$$\Sigma V_{UpliftU1.OT} := V_{ulkeyhU1.OT} + V_{ulbaseU1.OT} + V_{ulkeytU1.OT} = -382 \cdot kN$$

$$U_{U1.loc.OT} := \frac{V_{ulkeyhU1.OT} \cdot V_{ulkeyhU1loc.OT} + V_{ulbaseU1.OT} \cdot V_{ulbaseU1loc.OT} + V_{ulkeytU1.OT} \cdot V_{ulkeytU1loc.OT}}{\Sigma V_{UpliftU1.OT}} = 4.96\,m$$

$$\Sigma M_{UpliftU1.OT} := \Sigma V_{UpliftU1.OT} \cdot U_{U1.loc.OT} = -1898.0 \cdot kN \cdot m$$

Modify Lateral Water Pressure (Resisting) for Overturning Analysis:

(Resisting water pressure is calculated using the Line of Creep method)

Water Load at Key (heel):

$$H_{h2U1.OT} := \frac{u_{k.U1} + u_{j.U1}}{2} \cdot Key_{h.d} B = 173.2 \cdot kN$$

Moment Arm (from Point O):

$$H_{h2locU1.OT} := \frac{Key_{h.d} \cdot (2 \cdot u_{k.U1} + u_{j.U1})}{3(u_{k.U1} + u_{j.U1})} + Key_{vdist} = -1.64\ m$$

Water Load at Key (toe):

$$H_{h6U1.OT} := \frac{u_{o.U1} \cdot (UWSEL_{U1} - Bot_{ftg} + Key_{t.d})}{2} \cdot B = 64 \cdot kN$$

Moment Arm (from Point O):

$$H_{h6locU1.OT} := \frac{UWSEL_{U1} - Bot_{ftg} + Key_{t.d}}{3} = 1.20\ m$$

$$\Sigma H_{waterresistU1.OT} := H_{h2U1.OT} + H_{h6U1.OT} = 236.72 \cdot kN$$

$$H_{waterresistlocU1.OT} := \frac{H_{h2U1.OT} \cdot H_{h2locU1.OT} + H_{h6U1.OT} \cdot H_{h6locU1.OT}}{\Sigma H_{waterresistU1.OT}} = -0.877\ m$$

$$\Sigma M_{waterresistU1.OT} := \Sigma H_{waterresistU1.OT} \cdot H_{waterresistlocU1.OT} = -207.51 \cdot kN \cdot m$$

Modify Lateral Soil Loads for Overturning Analysis:

(Lateral soil loads are calculated down to Point O instead of bottom of shear key)

Driving Soil Load (Headwater Side):

Surcharge Load:

$$E_{s1U1.OT} := S1_{U1} \cdot K_o \cdot (H_w + Key_{h.d} + Key_{vdist}) \cdot B \cdot -1 = 0 \cdot kN$$

Moment Arm (from Point O):

$$E_{s1locU1.OT} := \frac{H_w + Key_{h.d} + Key_{vdist}}{2} = 5.25\ m$$

Moist Soil Load above GWL:

$$E_{h1U1.OT} := \frac{\gamma_m \cdot K_o \cdot h_{1U1}^{\ 2}}{2} B \cdot -1 = -190.1 \cdot kN$$

Moment Arm (from Point O):

$$E_{h1locU1.OT} := \frac{h_{1U1}}{3} + h_{2U1} + Key_{vdist} = 6.57\ m$$

Saturated Soil Load below GWL:
(rectangular component)

$$E_{h2U1.OT} := (\gamma_m \cdot K_o \cdot h_{1U1}) \cdot (h_{2U1} + Key_{vdist}) \cdot B \cdot -1 = -296.4 \cdot kN$$

Moment Arm (from Point O):

$$E_{h2locU1.OT} := \frac{h_{2U1} + Key_{vdist}}{2} = 2.30\ m$$

Saturated Soil Load below GWL:
(triangular component)

$$E_{h2aU1.OT} := \frac{(\gamma_{sat} - \gamma_w) \cdot K_o \cdot (h_{2U1} + Key_{vdist})^2}{2} \cdot B \cdot -1 = -70.5 \cdot kN$$

Moment Arm (from Point O):

$$E_{h2alocU1.OT} := \frac{h_{2U1} + Key_{vdist}}{3} = 1.53\ m$$

Resisting Soil Load (Tailwater Side):

(Determine resisting soil load based on depth variation between the keys (ie. Key_{vdist}). In case where key at heel is deeper than key at toe (ie. $Key_{vdist} < 0$), resisting soil load (p*) is assumed to produce horizontal equilibrium as per Figure 4-5 above. Resisting soil load (p_o) is neglected.)

Total Driving Force: $\Sigma H_{SoildriveU1.OT} := E_{s1U1.OT} + E_{h1U1.OT} + E_{h2U1.OT} + E_{h2aU1.OT} + H_{h2U1} = -839.9 \cdot kN$

Total Resisting Force: $\Sigma H_{waterresistU1.OT} = 236.7 \cdot kN$

Assumed Soil Load p*: $E_{h8U1a.OT} := \left(\Sigma H_{SoildriveU1.OT} + \Sigma H_{waterresistU1.OT}\right) \cdot -1 = 603.222 \cdot kN$

Moment Arm (from Point O): $E_{h8U1a.loc.OT} := \dfrac{Key_{vdist}}{2} = -1.5\,m$

$$E_{h8U1.OT} := \begin{cases} E_{h8U1a.OT} & \text{if } Key_{vdist} < 0 \\ \Sigma H_{SoilresistU1} - H_{h6U1} - H_{h2aU1} & \text{otherwise} \end{cases} = 603.222 \cdot kN$$

$$\Sigma M_{SoilresistU1} := \begin{cases} E_{h8U1a.OT} \cdot E_{h8U1a.loc.OT} & \text{if } Key_{vdist} < 0 \\ \Sigma M_{HorizSoilResistU1} - H_{h6U1} \cdot H_{h6locU1} - H_{h2aU1} \cdot H_{h2alocU1} & \text{otherwise} \end{cases} = -904.832 \cdot kN \cdot m$$

Sum of Moment about Point O:

$$\Sigma M_{LateraldriveU1.OT} := E_{s1U1.OT} \cdot E_{s1locU1.OT} + E_{h1U1.OT} \cdot E_{h1locU1.OT} + E_{h2U1.OT} \cdot E_{h2locU1.OT} \cdots + E_{h2aU1.OT} \cdot E_{h2alocU1.OT} + H_{h2U1} \cdot H_{h2locU1} = -1905.7 \cdot kN \cdot m$$

$$\Sigma M_{LateralresistU1.OT} := \Sigma M_{waterresistU1.OT} + \Sigma M_{SoilresistU1} = -1112.3 \cdot kN \cdot m$$

Total moment:

$$\Sigma M_{U1.OT} := \Sigma M_{conc} + \Sigma M_{VertSoilWaterResistU1} + \Sigma M_{UpliftU1.OT} + \Sigma M_{LateraldriveU1.OT} \cdots + \Sigma M_{LateralresistU1.OT} = 4193.2 \cdot kN \cdot m$$

Total Vertical Force: $\Sigma V_{U1.OT} := \Sigma V_{conc} + \Sigma V_{SoilWaterU1} + \Sigma V_{UplliftU1.OT} = 1287.2 \cdot kN$

Distance X_R: EM 1110-2-2502 Eq.4-1 $X_{R.U1} := \dfrac{\Sigma M_{U1.OT}}{\Sigma V_{U1.OT}} = 3.258\,m$

Overturning Resultant Ratio $Ratio_{U1.OT} := \dfrac{X_{R.U1}}{b} = 0.36$

$$Ratio_{U1.OT.check} := \begin{cases} \text{"OKAY "} & \text{if } Ratio_{U1.OT} > X_{R.reqU1} \\ \text{"Revise Structure""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

CHECK FOUNDATION ECCENTRICITY (HORIZONTAL PLANE):

Eccentricity (horizontal plan): $ex_{U1.OT} := \dfrac{b}{2} - \dfrac{\Sigma M_{U1.OT}}{\Sigma V_{U1.OT}} = 1.24\,m$ $Kern_{OT} := \dfrac{b}{6} = 1.5\,m$

Eccentricity Check:
$$e_{check.U1.OT} := \begin{cases} \text{"Okay"} & \text{if } ex_{U1} \le Kern_{OT} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"Okay"}$$

LOAD CASE U1

CHECK FOUNDATION BEARING CAPACITY (HORIZONTAL PLANE):

Base Section Modulus: $S_{b.OT} := \frac{1}{6}\left(B \cdot b^2\right) = 13.5\,m^3$

Bearing Pressure Under Toe:

$$\sigma_{ToeU1.OT} := \begin{cases} \left(\frac{\Sigma V_{U1.OT}}{b \cdot B} + \frac{\Sigma V_{U1.OT} \cdot ex_{U1.OT}}{S_{b.OT}}\right) & \text{if } \frac{\Sigma V_{U1.OT}}{b \cdot B} \geq \frac{\Sigma V_{U1.OT} \cdot ex_{U1.OT}}{S_{b.OT}} \\ \frac{2 \cdot \Sigma V_{U1.OT}}{B \cdot 3\left(\frac{b}{2} - ex_{U1.OT}\right)} & \text{otherwise} \end{cases} = 261.5 \cdot kPa$$

$$Bearing_{ChecktoeU1.OT} := \begin{cases} \text{"OKAY "} & \text{if } \sigma_{ToeU1.OT} < \sigma_{allowU1} \\ \text{"NG - for reference only""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

Bearing Pressure Under Heel:

$$\sigma_{HeelU1.OT} := \begin{cases} \left(\frac{\Sigma V_{U1.OT}}{b \cdot B} - \frac{\Sigma V_{U1.OT} \cdot ex_{U1.OT}}{S_{b.OT}}\right) & \text{if } \frac{\Sigma V_{U1.OT}}{b \cdot B} \geq \frac{\Sigma V_{U1.OT} \cdot ex_{U1.OT}}{S_{b.OT}} \\ 0 & \text{otherwise} \end{cases} = 24.6 \cdot kPa$$

UN1 DESIGN CASE

LOAD CASE UN1 ACCEPTANCE PARAMETERS

FS sliding:

Unusual (UN) 1.3 (without cohesion) (Table 3-3, USACE EM 1110-2-2100)

Resultant Location:

Unsual (UN) Inside middle third ~100% base in compression

Required Factor of Safety for Sliding: $FS_{sliding.reqUN1} := 1.3$ (Without Cohesion)

Allowable rock bearing pressure: $\sigma_{allowUN1} := 1470kPa$ (Section 5.2, Design Criteria EM 1110-2-2100 Section 3-10)

Overturning Required Resultant Ratio: $X_{R.reqUN1} := 0.333$ (EM 1110-2-2502, Figure 4-4)

Required Factor of Safety for Floatation $FS_{req.UN1.flt} := 1.3$

SOIL HEIGHTS and Water Levels:

LOAD CASE UN1

Heel Conditions:

Groundwater Elevation at Heel: $GWL_{UN1} := 1213.1\,m$

Distance from Finish Grade to Groundwater at Heel: $h_{1UN1} := \left[T_w - GWL_{UN1} + \left(L_{cd} + t_{wb} - t_{wt}\right)\cdot \tan(\beta)\right] = 5.90\,m$

Distance from Water Surface to Bottom of Footing at Heel: $h_{2UN1} := GWL_{UN1} - Bot_{ftg} + Key_{h.d} = 7.60\,m$

Toe Conditions:

Water Surface Elevation at Toe: $WSEL_{UN1} := 1212.1\,m$

Water Surface Elevation at Toe for Uplift: $UWSEL_{UN1} := 1212.1\cdot m$

Finish Grade at Toe providing lateral resistance: $FG_{toeUN1} := 1210.0\cdot m$

Soil Depth Above top of footing: $h_{3aUN1} := FG_{toeUN1} - Top_{ftg} = 0\,m$

$$h_{3UN1} := \begin{cases} h_{3aUN1} & \text{if } FG_{toeUN1} - Top_{ftg} \ge 0 \\ 0 & \text{otherwise} \end{cases} = 0$$

Resisting Fill at Toe: $h_{4UN1} := FG_{toeUN1} - Bot_{ftg} + Key_{t.d} = 1.50\,m$

Distance from Water Level to Top of Footing at Toe: $h_{5UN1} := WSEL_{UN1} - Top_{ftg} = 2.10\,m$

Distance from Water Surface to Bottom of Footing at Toe: $h_{6UN1} := WSEL_{UN1} - Bot_{ftg} + Key_{t.d} = 3.60\,m$

Soil Depth Above WSEL: $h_{7aUN1} := FG_{toeUN1} - WSEL_{UN1} = -2.1\,m$

$$h_{7UN1} := \begin{cases} h_{7aUN1} & \text{if } FG_{toeUN1} - WSEL_{UN1} \ge 0 \\ 0 & \text{otherwise} \end{cases} = 0$$

Soil Depth Below WSEL:

$$h_{8UN1} := \begin{cases} WSEL_{UN1} - Bot_{ftg} + Key_{t.d} & \text{if } FG_{toeUN1} - WSEL_{UN1} \ge 0 \\ h_{4UN1} & \text{otherwise} \end{cases} = 1.5$$

For Line of Creep Method: $L_{ho.UN1} := \sqrt{b^2 + \left(Key_{h.d} - Key_{t.d}\right)^2} = 9.487\,m$

Head Loss from Point g:

$\Delta h_{g.hj.UN1} := h_{2UN1} = 7.6\,m$ (to point h & j)

$\Delta h_{g.km.UN1} := GWL_{UN1} - Bot_{ftg} = 4.6\,m$ (to point k & m)

$\Delta h_{g.no.UN1} := GWL_{UN1} - Bot_{ftg} + Key_{t.d} = 4.6\,m$ (to point n & o)

$\Delta h_{g.p.UN1} := GWL_{UN1} - FG_{toeUN1} = 3.1\,m$ (to point p*)

$\Delta h_{g.r.UN1} := GWL_{UN1} - UWSEL_{UN1} = 1\,m$ (to point r)

Surcharge

Surcharge on Heel: $S1_{UN1} := 15.0\,\frac{kN}{m^2}$

* same as point "a" in this case

Calculate Soil Lateral Pressure Coefficients:

LOAD CASE UN1

For all load cases except seismic, soil loading to be based on At-Rest Condition.
Calculate at-rest pressure coefficient Ko based on Jaky's (1944) equation.

Soil At Rest Static Coefficient: $K_o := \frac{1 - \sin(\phi)}{1 + \sin(\beta)} = 0.546$ (Eq. 3-6, USACE EM 1110-2-2502)

Lateral - Driving Force

Static At-Rest:

Surcharge Load: $E_{s1UN1} := S1_{UN1} \cdot K_o \cdot \left(H_w + Key_{h.d}\right) \cdot B \cdot -1 = -110.567 \cdot kN$

Moment Arm (from bottom of footing): $E_{s1locUN1} := \frac{H_w + Key_{h.d}}{2} + Key_{vdist} = 3.75\ m$

Moist Soil Load above GWL: $E_{h1UN1} := \frac{\gamma_m \cdot K_o \cdot h_{1UN1}^{\ 2}}{2} \cdot B \cdot -1 = -190.1 \cdot kN$

Moment Arm (from bottom of footing): $E_{h1locUN1} := \frac{h_{1UN1}}{3} + h_{2UN1} + Key_{vdist} = 6.57\ m$

Saturated Soil Load below GWL:
(rectangular component) $E_{h2UN1} := \left(\gamma_m \cdot K_o \cdot h_{1UN1}\right) \cdot \left(h_{2UN1}\right) \cdot B \cdot -1 = -489.7 \cdot kN$

Moment Arm (from bottom of footing): $E_{h2locUN1} := \frac{h_{2UN1}}{2} + Key_{vdist} = 0.80\ m$

Saturated Soil Load below GWT:
(triangular L $E_{h2aUN1} := \frac{\left(\gamma_{sat} - \gamma_w\right) \cdot K_o \cdot h_{2UN1}^{\ 2}}{2} \cdot B \cdot -1 = -192.4 \cdot kN$

Moment Arm (from bottom of footing): $E_{h2alocUN1} := \frac{h_{2UN1}}{3} + Key_{vdist} = -0.47\ m$

Lateral Water Load:

Water Load GWL to Bottom of Key $H_{h2UN1} := \frac{\gamma_w \cdot h_{2UN1}^{\ 2}}{2} \cdot B \cdot -1 = -283.0 \cdot kN$

Moment Arm (from bottom of footing): $H_{h2locUN1} := \frac{h_{2UN1}}{3} + Key_{vdist} = -0.47\ m$

$$\Sigma H_{SoildriveUN1} := E_{s1UN1} + E_{h1UN1} + E_{h2UN1} + E_{h2aUN1} + H_{h2UN1} = -1265.7 \cdot kN$$

$$\Sigma M_{LateralSoildriveUN1} := E_{s1UN1} \cdot E_{s1locUN1} + E_{h1UN1} \cdot E_{h1locUN1} + E_{h2UN1} \cdot E_{h2locUN1} \ldots + E_{h2aUN1} \cdot E_{h2alocUN1} + H_{h2UN1} \cdot H_{h2locUN1} = -1832.6\ m \cdot kN$$

Lateral - Resisting Force

LOAD CASE UN1

Lateral Water Load:

Water Load WSEL to Bottom of Footing: $H_{h6UN1} := \frac{\gamma_w \cdot h_{6UN1}^{2}}{2} \cdot B = 63.5 \cdot kN$

Moment Arm (from bot. of toe key): $H_{h6locUN1} := \frac{h_{6UN1}}{3} = 1.20\ m$

Water Load Bot. of Footing to Bot. of H. Key: $H_{h2aUN1} := \left[\left(UWSEL_{UN1} - Bot_{ftg} + Key_{t.d}\right) + h_{2UN1}\right] \cdot \frac{Key_{h.d}}{2} \cdot \gamma_w \cdot B = 164.6 \cdot kN$

Moment Arm (from bot. of toe key): $H_{h2alocUN1} := \frac{Key_{h.d} \cdot \left[2 \cdot \left(UWSEL_{UN1} - Bot_{ftg} + Key_{t.d}\right) + h_{2UN1}\right]}{3\left[h_{2UN1} + \left(UWSEL_{UN1} - Bot_{ftg} + Key_{t.d}\right)\right]} \ldots + Key_{vdist} = -1.68\ m$

Lateral Soil Load:

Moist Soil Load above WSEL: $E_{h7UN1} := \frac{\gamma_m \cdot K_o \cdot h_{7UN1}^{2}}{2} \cdot B = 0.0 \cdot kN$

Moment Arm (from bot. of toe key): $E_{h7locUN1} := h_{6UN1} + \frac{h_{7UN1}}{3} + Key_{vdist} = 0.60\ m$

Saturated Soil Load below WSEL: (rectangular component) $E_{h8UN1} := \left(\gamma_m \cdot K_o \cdot h_{7UN1}\right) \cdot h_{8UN1} \cdot B = 0.0 \cdot kN$

Moment Arm (from bot. of toe key): $E_{h8locUN1} := \frac{h_{8UN1}}{2} = 0.75\ m$

Saturated Soil Load below WSEL: (triangular component) $E_{h8aUN1} := \frac{\left[\left(\gamma_{sat} - \gamma_w\right) \cdot K_o\right] \cdot h_{8UN1}^{2}}{2} \cdot B = 7.5 \cdot kN$

Moment Arm (from bot. of footing): $E_{h8alocUN1} := \frac{h_{8UN1}}{3} = 0.50\ m$

$\Sigma H_{SoilresistUN1} := H_{h6UN1} + H_{h2aUN1} + E_{h7UN1} + E_{h8UN1} + E_{h8aUN1} = 235.6 \cdot kN$

$\Sigma M_{HorizSoilResistUN1} := H_{h6UN1} \cdot H_{h6locUN1} + H_{h2aUN1} \cdot H_{h2alocUN1} + E_{h7UN1} \cdot E_{h7locUN1} \ldots + E_{h8UN1} \cdot E_{h8locUN1} + E_{h8aUN1} \cdot E_{h8alocUN1} = -196.4\ m \cdot kN$

Vertical Force:

UPLIFT: Linear distribution from water at heel to water at toe:

$\Sigma V_{UpliftUN1} := \left[\left(UWSEL_{UN1} - Bot_{ftg} + Key_{t.d}\right) + h_{2UN1}\right] \cdot \frac{b}{2} \cdot \gamma_w \cdot B \cdot -1 = -493.92 \cdot kN$

Moment Arm (from Point O): $V_{UpliftUN1aloc} := \frac{b \cdot \left[2 \cdot h_{2UN1} + \left(UWSEL_{UN1} - Bot_{ftg} + Key_{t.d}\right)\right]}{3\left[h_{2UN1} + \left(UWSEL_{UN1} - Bot_{ftg} + Key_{t.d}\right)\right]} = 5.036\ m$

$\Sigma M_{UpliftUN1} := \Sigma V_{UpliftUN1} \cdot V_{UpliftUN1aloc} = -2487.24 \cdot kN \cdot m$

Weight of soil and water over toe:

Water Above the Top of Footing: $W_{H1UN1} := \gamma_w \cdot h_{5UN1} \cdot L_{ab} \cdot B = 51.45 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E1locUN1} := \frac{L_{ab}}{2} = 1.25\ m$

Soil above top of footing: $W_{E6UN1} := \gamma_b \cdot h_{3UN1} \cdot L_{ab} \cdot B = 0.0 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E6locUN1} := \frac{L_{ab}}{2} = 1.25\ m$

Vertical Load Due to Surcharge: $S_{UN1} := S1_{UN1} \cdot L_{cd} \cdot B = 79.395 \cdot kN$ $\quad S_{UN1loc} := b - \frac{L_{cd}}{2} = 6.35\ m$

Weight of soil and water over heel:

Moist Soil for sloped grade above top of wall:

Length of sloped portion of soil above top of wall: $L_{E3UN1} := \left(L_{cd} + t_{wb} - t_{wt}\right) = 6.00\ m$

Height of sloped soil above top of wall over heel: $h_{E3locUN1} := \left(L_{E3UN1}\right) \cdot \tan(\beta) = 0.00\ m$

Weight of sloped soil above top of wall: $W_{E3UN1} := \frac{\gamma_m}{2} \cdot h_{E3locUN1} \cdot L_{E3UN1} \cdot B = 0.0 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E3locUN1} := L_{ab} + t_{wt} + \frac{2}{3} \cdot L_{E3UN1} = 7.00\ m$

Moist soil from top of wall to groundwater level:

Height of soil from top of wall and top of GWL: $h_{1UN1} = 5.90\ m$

Length from edge of wall at GWL to edge of heel: $L_{E4UN1} := L_{E3UN1} - \left(h_{1UN1} \cdot S_{batter}\right) = 5.54\ m$

Weight of soil over heel from top of wall to GWL: $W_{E4UN1} := \gamma_m \cdot h_{1UN1} \cdot \frac{\left(L_{E3UN1} + L_{E4UN1}\right)}{2} \cdot B = 680.7 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E4locUN1} := b - \frac{L_{E3UN1}^2 + L_{E3UN1} \cdot L_{E4UN1} + L_{E4UN1}^2}{3\left(L_{E3UN1} + L_{E4UN1}\right)} = 6.11\ m$

Saturated soil from groundwater to top of footing:

Height of soil from GWL to top of heel: $h_{E4UN1} := h_{2UN1} - t_{ftg} - Key_{h.d} = 3.10\ m$

Weight of soil over heel from GWL to top of heel: $W_{E5UN1} := \left(\gamma_{sat}\right) \cdot h_{E4UN1} \cdot \frac{\left(L_{E4UN1} + L_{cd}\right)}{2} \cdot B = 369.3 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E5locUN1} := b - \frac{L_{E4UN1}^2 + L_{E4UN1} \cdot L_{cd} + L_{cd}^2}{3\left(L_{E4UN1} + L_{cd}\right)} = 6.29\ m$

$$\Sigma V_{SoilWaterUN1} := W_{H1UN1} + W_{E6UN1} + W_{E3UN1} + W_{E4UN1} + W_{E5UN1} + S_{UN1} = 1180.8 \cdot kN$$

$$\Sigma M_{VertSoilWaterResistUN1} := W_{H1UN1} \cdot W_{E1locUN1} + W_{E6UN1} \cdot W_{E6locUN1} \cdots + W_{E3UN1} \cdot W_{E3locUN1} + W_{E4UN1} \cdot W_{E4locUN1} + W_{E5UN1} \cdot W_{E5locUN1} + S_{UN1} \cdot S_{UN1loc} = 7054.1\ m \cdot kN$$

CHECK OVERTURNING

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stablity of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1

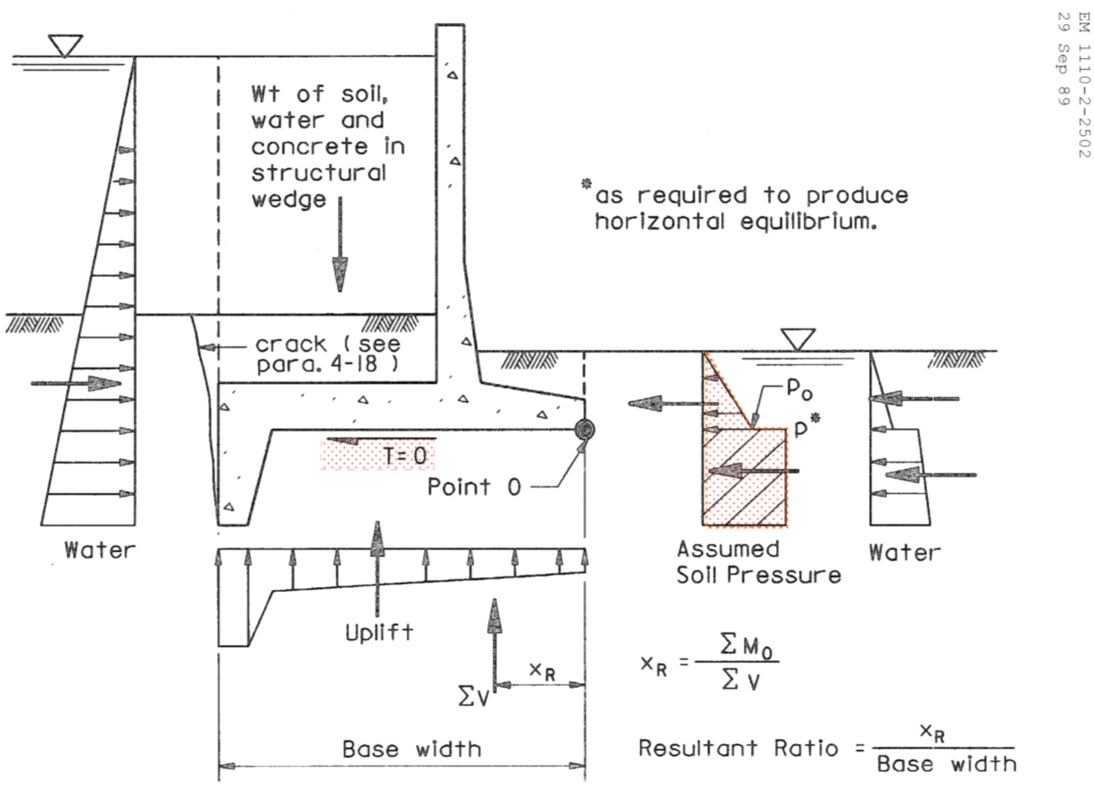

Figure 4-5. Forces for overturning analysis for wall with horizontal base and key

Modify Uplift for Overturning Analysis: **LOAD CASE UN1**

(Uplift is calculated along the concrete/rock contact using the Line of Creep method)

Water Pressure at h: $u_{h.UN1} := \Delta h_{g.hj.UN1} \cdot \gamma_w = 74.48 \cdot kPa$

Water Pressure at o: $u_{o.UN1} := \left(\Delta h_{g.no.UN1} - \dfrac{\Delta h_{g.r.UN1} \cdot L_{ho.UN1}}{L_{ho.UN1}}\right) \cdot \gamma_w = 35.28 \cdot kPa$

Head loss between point h and o: $\Delta h_{ho.UN1} := \Delta h_{g.r.UN1} \cdot \dfrac{L_{ho.UN1}}{L_{ho.UN1}} = 1\,m$

Length of concrete base (h -> o): $L_{baseho.UN1} := Key_{h.w} + Key_{h.d} + Key_{hdist} + Key_{t.d} + Key_{t.w} = 12\,m$

Head loss along h -> j: $\Delta h_{hj.UN1} := \Delta h_{ho.UN1} \cdot \dfrac{Key_{h.w}}{L_{baseho.UN1}} = 0.083\,m$

Water Pressure at j: $u_{j.UN1} := \left(\Delta h_{g.hj.UN1} - \Delta h_{hj.UN1}\right) \cdot \gamma_w = 73.66 \cdot kPa$

Head loss along h -> k: $\Delta h_{hjk.UN1} := \Delta h_{ho.UN1} \cdot \left(\dfrac{Key_{h.w} + Key_{h.d}}{L_{baseho.UN1}}\right) = 0.333\,m$

Water Pressure at k: $u_{k.UN1} := \left(\Delta h_{g.km.UN1} - \Delta h_{hjk.UN1}\right) \cdot \gamma_w = 41.81 \cdot kPa$

Moment Arm (from Point O): $V_{ulkeytUN1loc.OT} := \dfrac{Key_{t.w} \cdot \left(2 \cdot u_{n.UN1} + u_{o.UN1}\right)}{3 \cdot \left(u_{n.UN1} + u_{o.UN1}\right)} = 0$

$$\Sigma V_{UpliftUN1.OT} := V_{ulkeyhUN1.OT} + V_{ulbaseUN1.OT} + V_{ulkeytUN1.OT} = -382 \cdot kN$$

$$U_{UN1.loc.OT} := \frac{V_{ulkeyhUN1.OT} \cdot V_{ulkeyhUN1loc.OT} + V_{ulbaseUN1.OT} \cdot V_{ulbaseUN1loc.OT} + V_{ulkeytUN1.OT} \cdot V_{ulkeytUN1loc.OT}}{\Sigma V_{UpliftUN1.OT}} = 4.96\,m$$

$$\Sigma M_{UpliftUN1.OT} := \Sigma V_{UpliftUN1.OT} \cdot U_{UN1.loc.OT} = -1898.0 \cdot kN \cdot m$$

Modify Lateral Water Pressure (Resisting) for Overturning Analysis:

(Resisting water pressure is calculated using the Line of Creep method)

Water Load at Key (heel):

$$H_{h2UN1.OT} := \frac{u_{k.UN1} + u_{j.UN1}}{2} \cdot Key_{h.d} B = 173.2 \cdot kN$$

Moment Arm (from Point O):

$$H_{h2locUN1.OT} := \frac{Key_{h.d} \cdot (2 \cdot u_{k.UN1} + u_{j.UN1})}{3(u_{k.UN1} + u_{j.UN1})} + Key_{vdist} = -1.64\ m$$

Water Load at Key (toe):

$$H_{h6UN1.OT} := \frac{u_{o.UN1} \cdot (UWSEL_{UN1} - Bot_{ftg} + Key_{t.d})}{2} \cdot B = 64 \cdot kN$$

Moment Arm (from Point O):

$$H_{h6locUN1.OT} := \frac{UWSEL_{UN1} - Bot_{ftg} + Key_{t.d}}{3} = 1.20\ m$$

$$\Sigma H_{waterresistUN1.OT} := H_{h2UN1.OT} + H_{h6UN1.OT} = 236.72 \cdot kN$$

$$H_{waterresistlocUN1.OT} := \frac{H_{h2UN1.OT} \cdot H_{h2locUN1.OT} + H_{h6UN1.OT} \cdot H_{h6locUN1.OT}}{\Sigma H_{waterresistUN1.OT}} = -0.877\ m$$

$$\Sigma M_{waterresistUN1.OT} := \Sigma H_{waterresistUN1.OT} \cdot H_{waterresistlocUN1.OT} = -207.51 \cdot kN \cdot m$$

Modify Lateral Soil Loads for Overturning Analysis:

(Lateral soil loads are calculated down to Point O instead of bottom of shear key)

Driving Soil Load (Headwater Side):

Surcharge Load:

$$E_{s1UN1.OT} := S1_{UN1} \cdot K_o \cdot (H_w + Key_{h.d} + Key_{vdist}) \cdot B \cdot -1 = -85.996 \cdot kN$$

Moment Arm (from Point O):

$$E_{s1locUN1.OT} := \frac{H_w + Key_{h.d} + Key_{vdist}}{2} = 5.25\ m$$

Moist Soil Load above GWL:

$$E_{h1UN1.OT} := \frac{\gamma_m \cdot K_o \cdot h_{1UN1}^{2}}{2} B \cdot -1 = -190.1 \cdot kN$$

Moment Arm (from Point O):

$$E_{h1locUN1.OT} := \frac{h_{1UN1}}{3} + h_{2UN1} + Key_{vdist} = 6.57\ m$$

Saturated Soil Load below GWL:
(rectangular component)

$$E_{h2UN1.OT} := (\gamma_m \cdot K_o \cdot h_{1UN1}) \cdot (h_{2UN1} + Key_{vdist}) \cdot B \cdot -1 = -296.4 \cdot kN$$

Moment Arm (from Point O):

$$E_{h2locUN1.OT} := \frac{h_{2UN1} + Key_{vdist}}{2} = 2.30\ m$$

Saturated Soil Load below GWL:
(triangular component)

$$E_{h2aUN1.OT} := \frac{(\gamma_{sat} - \gamma_w) \cdot K_o \cdot (h_{2UN1} + Key_{vdist})^2}{2} \cdot B \cdot -1 = -70.5 \cdot kN$$

Moment Arm (from Point O):

$$E_{h2alocUN1.OT} := \frac{h_{2UN1} + Key_{vdist}}{3} = 1.53\ m$$

Resisting Soil Load (Tailwater Side):

(Determine resisting soil load based on depth variation between the keys (ie. Key_{vdist}). In case where key at heel is deeper than key at toe (ie. $Key_{vdist} < 0$), resisting soil load (p*) is assumed to produce horizontal equilibrium as per Figure 4-5 above. Resisting soil load (p_o) is neglected.)

Total Driving Force: $\Sigma H_{SoildriveUN1.OT} := E_{s1UN1.OT} + E_{h1UN1.OT} + E_{h2UN1.OT} + E_{h2aUN1.OT} + H_{h2UN1} = -925.9 \cdot kN$

Total Resisting Force: $\Sigma H_{waterresistUN1.OT} = 236.7 \cdot kN$

Assumed Soil Load p*: $E_{h8UN1a.OT} := \left(\Sigma H_{SoildriveUN1.OT} + \Sigma H_{waterresistU1.OT}\right) \cdot -1 = 689.218 \cdot kN$

Moment Arm (from Point O): $E_{h8UN1a.loc.OT} := \dfrac{Key_{vdist}}{2} = -1.5\,m$

$$E_{h8UN1.OT} := \begin{cases} E_{h8UN1a.OT} & \text{if } Key_{vdist} < 0 \\ \Sigma H_{SoilresistUN1} - H_{h6UN1} - H_{h2aUN1} & \text{otherwise} \end{cases} = 689.218 \cdot kN$$

$$\Sigma M_{SoilresistUN1} := \begin{cases} E_{h8UN1a.OT} \cdot E_{h8UN1a.loc.OT} & \text{if } Key_{vdist} < 0 \\ \Sigma M_{HorizSoilResistUN1} - H_{h6UN1} \cdot H_{h6locUN1} - H_{h2aUN1} \cdot H_{h2alocUN1} & \text{otherwise} \end{cases} = -1033.827 \cdot kN \cdot m$$

Sum of Moment about Point O:

$$\Sigma M_{LateraldriveUN1.OT} := E_{s1UN1.OT} \cdot E_{s1locUN1.OT} + E_{h1UN1.OT} \cdot E_{h1locUN1.OT} + E_{h2UN1.OT} \cdot E_{h2locUN1.OT} \dots + E_{h2aUN1.OT} \cdot E_{h2alocUN1.OT} + H_{h2UN1} \cdot H_{h2locUN1} = -2357.2 \cdot kN \cdot m$$

$$\Sigma M_{LateralresistUN1.OT} := \Sigma M_{waterresistUN1.OT} + \Sigma M_{SoilresistUN1} = -1241.3 \cdot kN \cdot m$$

Total moment:

$$\Sigma M_{UN1.OT} := \Sigma M_{conc} + \Sigma M_{VertSoilWaterResistUN1} + \Sigma M_{UpliftUN1.OT} + \Sigma M_{LateraldriveUN1.OT} \dots + \Sigma M_{LateralresistUN1.OT} = 4117.1 \cdot kN \cdot m$$

Total Vertical Force: $\Sigma V_{UN1.OT} := \Sigma V_{conc} + \Sigma V_{SoilWaterUN1} + \Sigma V_{UpliftUN1.OT} = 1366.6 \cdot kN$

Distance X_R: EM 1110-2-2502 Eq.4-1 $X_{R.UN1} := \dfrac{\Sigma M_{UN1.OT}}{\Sigma V_{UN1.OT}} = 3.013\,m$

Overturning Resultant Ratio $Ratio_{UN1.OT} := \dfrac{X_{R.UN1}}{b} = 0.33$

$$Ratio_{UN1.OT.check} := \begin{cases} \text{"OKAY "} & \text{if } Ratio_{UN1.OT} > X_{R.reqUN1} \\ \text{"Revise Structure""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

CHECK FOUNDATION ECCENTRICITY (HORIZONTAL PLANE):

Eccentricity (horizontal plan): $ex_{UN1.OT} := \dfrac{b}{2} - \dfrac{\Sigma M_{UN1.OT}}{\Sigma V_{UN1.OT}} = 1.49\,m$ $Kern_{OT} = 1.5\,m$

Eccentricity Check: $$e_{check.UN1.OT} := \begin{cases} \text{"Okay"} & \text{if } ex_{UN1} \le Kern_{OT} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"Okay"}$$

CHECK FOUNDATION BEARING CAPACITY (HORIZONTAL PLANE):

Base Section Modulus: $S_{b.OT} = 13.5\,m^3$

Bearing Pressure Under Toe:

$$\sigma_{ToeUN1.OT} := \begin{cases} \left(\dfrac{\Sigma V_{UN1.OT}}{b \cdot B} + \dfrac{\Sigma V_{UN1.OT} \cdot ex_{UN1.OT}}{S_{b.OT}}\right) & \text{if } \dfrac{\Sigma V_{UN1.OT}}{b \cdot B} \ge \dfrac{\Sigma V_{UN1.OT} \cdot ex_{UN1.OT}}{S_{b.OT}} \\ \dfrac{2 \cdot \Sigma V_{UN1.OT}}{B \cdot 3\left(\dfrac{b}{2} - ex_{UN1.OT}\right)} & \text{otherwise} \end{cases} = 302.4 \cdot kPa$$

$$Bearing_{ChecktoeUN1.OT} := \begin{cases} \text{"OKAY "} & \text{if } \sigma_{ToeUN1.OT} < \sigma_{allowUN1} \\ \text{"NG - for reference only""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

Bearing Pressure Under Heel:

$$\sigma_{HeelUN1.OT} := \begin{cases} \left(\dfrac{\Sigma V_{UN1.OT}}{b \cdot B} - \dfrac{\Sigma V_{UN1.OT} \cdot ex_{UN1.OT}}{S_{b.OT}}\right) & \text{if } \dfrac{\Sigma V_{UN1.OT}}{b \cdot B} \ge \dfrac{\Sigma V_{UN1.OT} \cdot ex_{UN1.OT}}{S_{b.OT}} \\ 0 & \text{otherwise} \end{cases} = 1.3 \cdot kPa$$

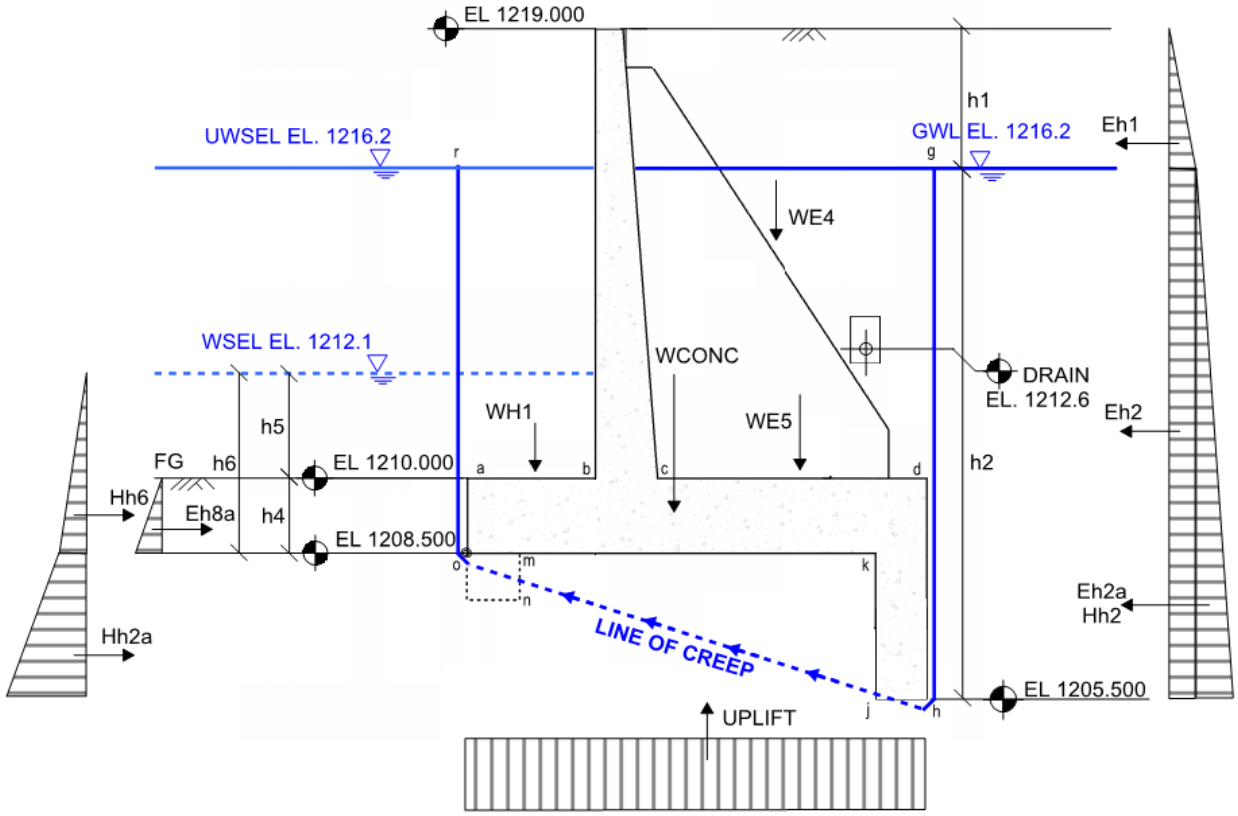
LOAD CASE UN2 - INEFFECTIVE DRAIN



UN2 DESIGN CASE

LOAD CASE UN2 ACCEPTANCE PARAMETERS

FS sliding:

Unusual (UN) 1.3 (without cohesion) (Table 3-3, USACE EM 1110-2-2100)

Resultant Location:

Unsual (UN) Inside middle third ~100% base in compression

Required Factor of Safety for Sliding: $FS_{sliding.reqUN2} := 1.3$ (Without Cohesion)

Allowable rock bearing pressure: $\sigma_{allowUN2} := 1470kPa$ (Section 5.2, Design Criteria EM 1110-2-2100 Section 3-10)

Overturning Required Resultant Ratio: $X_{R.reqUN2} := 0.333$ (EM 1110-2-2502, Figure 4-4)

Required Factor of Safety for Floatation $FS_{req.UN2.flt} := 1.3$

SOIL HEIGHTS and Water Levels:

LOAD CASE UN2

Heel Conditions:

Groundwater Elevation at Heel: $GWL_{UN2} := 1216.2\text{m}$

Distance from Finish Grade to Groundwater at Heel: $h_{1UN2} := \left[T_w - GWL_{UN2} + \left(L_{cd} + t_{wb} - t_{wt}\right)\cdot\tan(\beta)\right] = 2.80\text{ m}$

Distance from Water Surface to Bottom of Footing at Heel: $h_{2UN2} := GWL_{UN2} - Bot_{ftg} + Key_{h.d} = 10.70\text{ m}$

Toe Conditions:

Water Surface Elevation at Toe: $WSEL_{UN2} := 1212.1\text{m}$

Water Surface Elevation at Toe for Uplift: $UWSEL_{UN2} := 1216.2\cdot\text{m}$

Finish Grade at Toe providing lateral resistance: $FG_{toeUN2} := 1210.0\cdot\text{m}$

Soil Depth Above top of footing: $h_{3aUN2} := FG_{toeUN2} - Top_{ftg} = 0\text{ m}$

$$h_{3UN2} := \begin{cases} h_{3aUN2} & \text{if } FG_{toeUN2} - Top_{ftg} \ge 0 \\ 0 & \text{otherwise} \end{cases} = 0$$

Resisting Fill at Toe: $h_{4UN2} := FG_{toeUN2} - Bot_{ftg} + Key_{t.d} = 1.50\text{ m}$

Distance from Water Level to Top of Footing at Toe: $h_{5UN2} := WSEL_{UN2} - Top_{ftg} = 2.10\text{ m}$

Distance from Water Surface to Bottom of Footing at Toe: $h_{6UN2} := WSEL_{UN2} - Bot_{ftg} + Key_{t.d} = 3.60\text{ m}$

Soil Depth Above WSEL: $h_{7aUN2} := FG_{toeUN2} - WSEL_{UN2} = -2.1\text{ m}$

$$h_{7UN2} := \begin{cases} h_{7aUN2} & \text{if } FG_{toeUN2} - WSEL_{UN2} \ge 0 \\ 0 & \text{otherwise} \end{cases} = 0$$

Soil Depth Below WSEL:

$$h_{8UN2} := \begin{cases} WSEL_{UN2} - Bot_{ftg} + Key_{t.d} & \text{if } FG_{toeUN2} - WSEL_{UN2} \ge 0 \\ h_{4UN2} & \text{otherwise} \end{cases} = 1.5$$

For Line of Creep Method: $L_{ho.UN2} := \sqrt{b^2 + \left(Key_{h.d} - Key_{t.d}\right)^2} = 9.487\text{ m}$

Head Loss from Point g:

$\Delta h_{g.hj.UN2} := h_{2UN2} = 10.7\text{ m}$ (to point h & j)

$\Delta h_{g.km.UN2} := GWL_{UN2} - Bot_{ftg} = 7.7\text{ m}$ (to point k & m)

$\Delta h_{g.no.UN2} := GWL_{UN2} - Bot_{ftg} + Key_{t.d} = 7.7\text{ m}$ (to point n & o)

$\Delta h_{g.p.UN2} := GWL_{UN2} - FG_{toeUN2} = 6.2\text{ m}$ (to point p*)

$\Delta h_{g.r.UN2} := GWL_{UN2} - UWSEL_{UN2} = 0\text{ m}$ (to point r)

Surcharge

Surcharge on Heel: $S1_{UN2} := 0.0\,\frac{\text{kN}}{\text{m}^2}$

* same as point "a" in this case

Calculate Soil Lateral Pressure Coefficients:

LOAD CASE UN2

For all load cases except seismic, soil loading to be based on At-Rest Condition.
Calculate at-rest pressure coefficient Ko based on Jaky's (1944) equation.

Soil At Rest Static Coefficient: $K_o := \dfrac{1 - \sin(\phi)}{1 + \sin(\beta)} = 0.546$ (Eq. 3-6, USACE EM 1110-2-2502)

Lateral - Driving Force

Static At-Rest:

Surcharge Load: $E_{s1UN2} := S1_{UN2} \cdot K_o \cdot \left(H_w + Key_{h.d}\right) \cdot B \cdot -1 = 0 \cdot kN$

Moment Arm (from bottom of footing): $E_{s1locUN2} := \dfrac{H_w + Key_{h.d}}{2} + Key_{vdist} = 3.75\ m$

Moist Soil Load above GWL: $E_{h1UN2} := \dfrac{\gamma_m \cdot K_o \cdot h_{1UN2}^{\ 2}}{2} \cdot B \cdot -1 = -42.8 \cdot kN$

Moment Arm (from bottom of footing): $E_{h1locUN2} := \dfrac{h_{1UN2}}{3} + h_{2UN2} + Key_{vdist} = 8.63\ m$

Saturated Soil Load below GWL:
(rectangular component) $E_{h2UN2} := \left(\gamma_m \cdot K_o \cdot h_{1UN2}\right) \cdot h_{2UN2} \cdot B \cdot -1 = -327.2 \cdot kN$

Moment Arm (from bottom of footing): $E_{h2locUN2} := \dfrac{h_{2UN2}}{2} + Key_{vdist} = 2.35\ m$

Saturated Soil Load below GWL:
(triangular component) $E_{h2aUN2} := \dfrac{\left(\gamma_{sat} - \gamma_w\right) \cdot K_o \cdot h_{2UN2}^{\ 2}}{2} \cdot B \cdot -1 = -381.3 \cdot kN$

Moment Arm (from bottom of footing): $E_{h2alocUN2} := \dfrac{h_{2UN2}}{3} + Key_{vdist} = 0.57\ m$

Lateral Water Load:

Water Load GWL to Bottom of Key: $H_{h2UN2} := \dfrac{\gamma_w \cdot h_{2UN2}^{\ 2}}{2} \cdot B \cdot -1 = -561.0 \cdot kN$

Moment Arm (from bottom of footing): $H_{h2locUN2} := \dfrac{h_{2UN2}}{3} + Key_{vdist} = 0.57\ m$

$$\Sigma H_{SoildriveUN2} := E_{s1UN2} + E_{h1UN2} + E_{h2UN2} + E_{h2aUN2} + H_{h2UN2} = -1312.3 \cdot kN$$

$$\Sigma M_{LateralSoildriveUN2} := E_{s1UN2} \cdot E_{s1locUN2} + E_{h1UN2} \cdot E_{h1locUN2} + E_{h2UN2} \cdot E_{h2locUN2} \ldots + E_{h2aUN2} \cdot E_{h2alocUN2} + H_{h2UN2} \cdot H_{h2locUN2} = -1672.4\ m \cdot kN$$

Lateral - Resisting Force

Lateral Water Load:

Water Load WSEL to Bottom of Footing: $H_{h6UN2} := \frac{\gamma_w \cdot h_{6UN2}^{\;2}}{2} \cdot B = 63.5 \cdot kN$

Moment Arm (from bot. of toe key): $H_{h6locUN2} := \frac{h_{6UN2}}{3} = 1.20\ m$

Water Load Bot. of Footing to Bot. of H. Key: $H_{h2aUN2} := \left[\left(UWSEL_{UN2} - Bot_{ftg} + Key_{t.d}\right) + h_{2UN2}\right] \cdot \frac{Key_{h.d}}{2} \cdot \gamma_w \cdot B = 270.5 \cdot kN$

Moment Arm (from bot. of toe key): $H_{h2alocUN2} := \frac{Key_{h.d} \cdot \left[2 \cdot \left(UWSEL_{UN2} - Bot_{ftg} + Key_{t.d}\right) + h_{2UN2}\right]}{3\left[h_{2UN2} + \left(UWSEL_{UN2} - Bot_{ftg} + Key_{t.d}\right)\right]} \ldots + Key_{vdist} = -1.58\ m$

Lateral Soil Load:

Moist Soil Load above WSEL: $E_{h7UN2} := \frac{\gamma_m \cdot K_o \cdot h_{7UN2}^{\;2}}{2} B = 0.0 \cdot kN$

Moment Arm (from bot. of toe key): $E_{h7locUN2} := h_{6UN2} + \frac{h_{7UN2}}{3} + Key_{vdist} = 0.60\ m$

Saturated Soil Load below WSEL: (rectangular component) $E_{h8UN2} := \left(\gamma_m \cdot K_o \cdot h_{7UN2}\right) \cdot h_{8UN2} \cdot B = 0.0 \cdot kN$

Moment Arm (from bot. of toe key): $E_{h8locUN2} := \frac{h_{8UN2}}{2} = 0.75\ m$

Saturated Soil Load below WSEL: (triangular component) $E_{h8aUN2} := \frac{\left[\left(\gamma_{sat} - \gamma_w\right) \cdot K_o\right] \cdot h_{8UN2}^{\;2}}{2} \cdot B = 7.5 \cdot kN$

Moment Arm (from bot. of footing): $E_{h8alocUN2} := \frac{h_{8UN2}}{3} = 0.50\ m$

$\Sigma H_{SoilresistUN2} := H_{h6UN2} + H_{h2aUN2} + E_{h7UN2} + E_{h8UN2} + E_{h8aUN2} = 341.5 \cdot kN$

$\Sigma M_{HorizSoilResistUN2} := H_{h6UN2} \cdot H_{h6locUN2} + H_{h2aUN2} \cdot H_{h2alocUN2} + E_{h7UN2} \cdot E_{h7locUN2} \ldots + E_{h8UN2} \cdot E_{h8locUN2} + E_{h8aUN2} \cdot E_{h8alocUN2} = -347.8\ m \cdot kN$

Vertical Force:

UPLIFT: Linear distribution from water at heel to water at toe:

$\Sigma V_{UpliftUN2} := \left[\left(UWSEL_{UN2} - Bot_{ftg} + Key_{t.d}\right) + h_{2UN2}\right] \cdot \frac{b}{2} \cdot \gamma_w \cdot B \cdot -1 = -811.44 \cdot kN$

Moment Arm (from Point O): $V_{UpliftUN2aloc} := \frac{b \cdot \left[2 \cdot h_{2UN2} + \left(UWSEL_{UN2} - Bot_{ftg} + Key_{t.d}\right)\right]}{3\left[h_{2UN2} + \left(UWSEL_{UN2} - Bot_{ftg} + Key_{t.d}\right)\right]} = 4.745\ m$

$\Sigma M_{UpliftUN2} := \Sigma V_{UpliftUN2} \cdot V_{UpliftUN2aloc} = -3849.93 \cdot kN \cdot m$

Weight of soil and water over toe:

Water Above the Top of Footing: $W_{H1UN2} := \gamma_w \cdot h_{5UN2} \cdot L_{ab} \cdot B = 51.45 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E1locUN2} := \frac{L_{ab}}{2} = 1.25\ m$

Soil above top of footing: $W_{E6UN2} := \gamma_b \cdot h_{3UN2} \cdot L_{ab} \cdot B = 0.0 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E6locUN2} := \frac{L_{ab}}{2} = 1.25\ m$

Vertical Load Due to Surcharge: $S_{UN2} := S1_{UN2} \cdot L_{cd} \cdot B = 0 \cdot kN$ $\quad S_{UN2loc} := b - \frac{L_{cd}}{2} = 6.35\ m$

Weight of soil and water over heel:

Moist Soil for sloped grade above top of wall:

Length of sloped portion of soil above top of wall: $L_{E3UN2} := \left(L_{cd} + t_{wb} - t_{wt}\right) = 6.00\ m$

Height of sloped soil above top of wall over heel: $h_{E3locUN2} := \left(L_{E3UN2}\right) \cdot \tan(\beta) = 0.00\ m$

Weight of sloped soil above top of wall: $W_{E3UN2} := \frac{\gamma_m}{2} \cdot h_{E3locUN2} \cdot L_{E3UN2} \cdot B = 0.0 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E3locUN2} := L_{ab} + t_{wt} + \frac{2}{3} \cdot L_{E3UN2} = 7.00\ m$

Moist soil from top of wall to groundwater level:

Height of soil from top of wall and top of GWL: $h_{1UN2} = 2.80\ m$

Length from edge of wall at GWL to edge of heel: $L_{E4UN2} := L_{E3UN2} - \left(h_{1UN2} \cdot S_{batter}\right) = 5.78\ m$

Weight of soil over heel from top of wall to GWL: $W_{E4UN2} := \gamma_m \cdot h_{1UN2} \cdot \frac{\left(L_{E3UN2} + L_{E4UN2}\right)}{2} \cdot B = 329.8 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E4locUN2} := b - \frac{L_{E3UN2}^{\ 2} + L_{E3UN2} \cdot L_{E4UN2} + L_{E4UN2}^{\ 2}}{3\left(L_{E3UN2} + L_{E4UN2}\right)} = 6.05\ m$

Saturated soil from groundwater to top of footing:

Height of soil from GWL to top of heel: $h_{E4UN2} := h_{2UN2} - t_{ftg} - Key_{h.d} = 6.20\ m$

Weight of soil over heel from GWL to top of heel: $W_{E5UN2} := \left(\gamma_{sat}\right) \cdot h_{E4UN2} \cdot \frac{\left(L_{E4UN2} + L_{cd}\right)}{2} \cdot B = 755.2 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E5locUN2} := b - \frac{L_{E4UN2}^{\ 2} + L_{E4UN2} \cdot L_{cd} + L_{cd}^{\ 2}}{3\left(L_{E4UN2} + L_{cd}\right)} = 6.23\ m$

$$\Sigma V_{SoilWaterUN2} := W_{H1UN2} + W_{E6UN2} + W_{E3UN2} + W_{E4UN2} + W_{E5UN2} + S_{UN2} = 1136.5 \cdot kN$$

$$\Sigma M_{VertSoilWaterResistUN2} := W_{H1UN2} \cdot W_{E1locUN2} + W_{E6UN2} \cdot W_{E6locUN2} \cdots + W_{E3UN2} \cdot W_{E3locUN2} + W_{E4UN2} \cdot W_{E4locUN2} + W_{E5UN2} \cdot W_{E5locUN2} + S_{UN2} \cdot S_{UN2loc} = 6766.1\ m \cdot kN$$

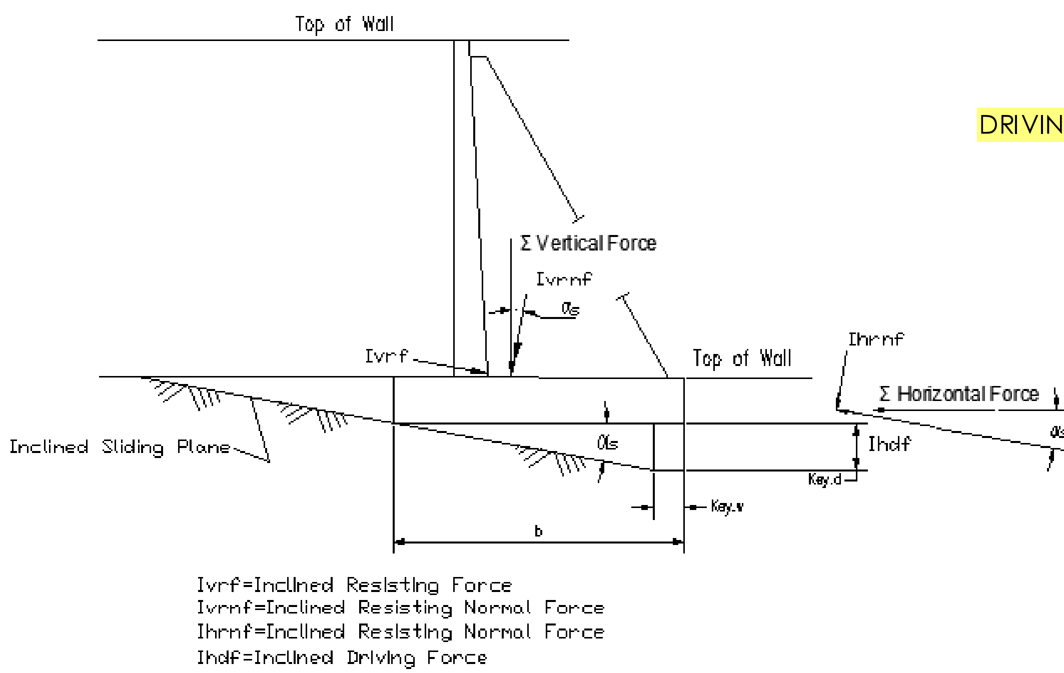
CHECK FACTOR OF SAFETY SLIDING WITH KEY (INCLINED SLIDING PLANE):

RESISTING SIDE

DRIVING SIDE



TOE

HEEL

(With properly engineered reinforced concrete Key, horizontal sliding plane thru Toe is protected, critical sliding plane is relocated to the INCLINED SLIDING PLANE FROM HEEL KEY To TOE, Bedrock Mass above this examing plane is mobilized by reinforced concrete key and combined into Structural Wedge.)

Resolve ΣV_{UN2} & ΣH_{UN2}

$$\Sigma V_{InclinedUN2} := \cos(\alpha s) \cdot \left(\left|\Sigma V_{UN2} + V_{rocksection}\right|\right) + \sin(\alpha s) \cdot \left|\Sigma H_{UN2}\right| = 1464.9 \cdot kN$$

$$\Sigma H_{InclinedUN2} := \cos(\alpha s) \cdot \left|\Sigma H_{UN2}\right| - \sin(\alpha s) \cdot \left(\left|\Sigma V_{UN2} + V_{rocksection}\right|\right) = 487.5 \cdot kN$$

Safety Factor for Sliding
Inclined Failure Plane

$$FS_{InclinedISlidingUN2} := \frac{\Sigma V_{InclinedUN2} \cdot \tan(\phi_r)}{\Sigma H_{InclinedUN2}} = 1.34$$

LOAD CASE UN2

$$FS_{Sliding.check2.UN2} := \begin{cases} \text{"OKAY"} & \text{if } FS_{InclinedISlidingUN2} > FS_{sliding.reqUN2} \\ \text{"NG - Revise Structure""} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

CHECK FOUNDATION ECCENTRICITY:

Summation of the resisting moments about the toe:

$$\Sigma M_{resUN2} := \Sigma M_{conc} + \Sigma M_{VertSoilWaterResistUN2} + \Sigma M_{HorizSoilResistUN2} + \Sigma M_{rocksection} = 10616 \cdot kN \cdot m$$

Summation of the overturning moments about the toe:

$$\Sigma M_{oUN2} := \Sigma M_{LateralSoildriveUN2} + \Sigma M_{UpliftUN2} = -5522 \cdot kN \cdot m$$

Total moment: $\Sigma M_{UN2} := \Sigma M_{resUN2} + \Sigma M_{oUN2} = 5094.0\ m \cdot kN$

Normal force to base: $\Sigma V_{InclinedUN2} = 1464.9 \cdot kN$

Inclined Sliding Plane Length: $L_{incline} = 9.6 \cdot m$

Eccentricity (inclined plane): $ex_{UN2} := \frac{L_{incline}}{2} - \frac{\Sigma M_{UN2}}{\Sigma V_{InclinedUN2}} = 1.33\ m$ $\qquad Kern = 1.602\ m$

Eccentricity Check: $e_{check.UN2} := \begin{cases} \text{"Okay"} & \text{if } ex_{UN2} \le Kern \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"Okay"}$

CHECK FOUNDATION BEARING CAPACITY:

Base Section Modulus: $S_b = 15.4\ m^3$

Bearing Pressure Under Toe:

$$\sigma_{ToeUN2} := \begin{cases} \left(\frac{\Sigma V_{InclinedUN2}}{L_{incline} \cdot B} + \frac{\Sigma V_{InclinedUN2} \cdot ex_{UN2}}{S_b} \right) & \text{if } \frac{\Sigma V_{InclinedUN2} \cdot ex_{UN2}}{S_b} \le \frac{\Sigma V_{InclinedUN2}}{L_{incline} \cdot B} \\ \frac{2 \cdot \Sigma V_{InclinedUN2}}{B \cdot 3 \left(\frac{b}{2} - ex_{UN2} \right)} & \text{otherwise} \end{cases} = 278.8 \cdot kPa$$

$$Bearing_{ChecktoeUN2} := \begin{cases} \text{"OKAY"} & \text{if } \sigma_{ToeUN2} < \sigma_{allowUN2} \\ \text{"NG""} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

Bearing Pressure Under Heel:

$$\sigma_{HeelUN2} := \begin{cases} \left(\frac{\Sigma V_{InclinedUN2}}{L_{incline} \cdot B} - \frac{\Sigma V_{InclinedUN2} \cdot ex_{UN2}}{S_b} \right) & \text{if } \frac{\Sigma V_{InclinedUN2} \cdot ex_{UN2}}{S_b} \le \frac{\Sigma V_{InclinedUN2}}{L_{incline} \cdot B} \\ 0 & \text{otherwise} \end{cases} = 26.0 \cdot kPa$$

$$Bearing_{CheckheelUN2} := \left(\begin{cases} \text{"OKAY"} & \text{if } \sigma_{HeelUN2} < \sigma_{allowUN2} \wedge \sigma_{HeelUN2} > 0 \\ \text{"NG - perform cracked base analysis""} & \text{otherwise} \end{cases} \right) = \text{"OKAY"}$$

LOAD CASE UN2

CHECK FLOATATION:

Safety Factor for Floatation:

$$FS_{FloatationUN2} := \frac{\Sigma V_{conc} + \Sigma V_{SoilWaterUN2}}{\left|\Sigma V_{UpliftUN2}\right|} = 2.10$$

$$FS_{Floatation.UN2.check} := \begin{cases} \text{"OKAY "} & \text{if } FS_{FloatationUN2} > FS_{req.UN2.flt} \\ \text{"Revise Structure""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

CHECK OVERTURNING

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stablity of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1

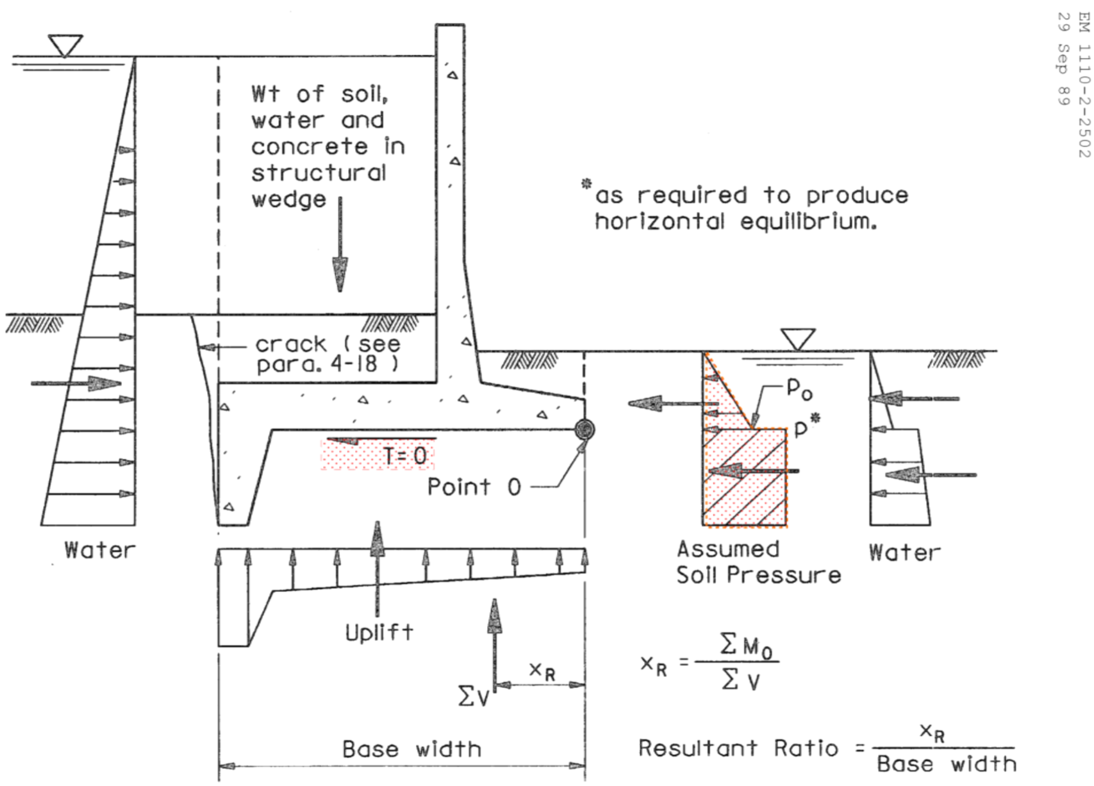


Figure 4-5. Forces for overturning analysis for wall with horizontal base and key

Modify Uplift for Overturning Analysis: **LOAD CASE UN2**

(Uplift is calculated along the concrete/rock contact using the Line of Creep method)

Water Pressure at h: $u_{h.UN2} := \Delta h_{g.hj.UN2} \cdot \gamma_w = 104.86 \cdot kPa$

Water Pressure at o: $u_{o.UN2} := \left(\Delta h_{g.no.UN2} - \frac{\Delta h_{g.r.UN2} \cdot L_{ho.UN2}}{L_{ho.UN2}}\right) \cdot \gamma_w = 75.46 \cdot kPa$

Head loss between point h and o: $\Delta h_{ho.UN2} := \Delta h_{g.r.UN2} \cdot \frac{L_{ho.UN2}}{L_{ho.UN2}} = 0\,m$

Length of concrete base (h -> o): $L_{baseho.UN2} := Key_{h.w} + Key_{h.d} + Key_{hdist} + Key_{t.d} + Key_{t.w} = 12\,m$

Head loss along h -> j: $\Delta h_{hj.UN2} := \Delta h_{ho.UN2} \cdot \frac{Key_{h.w}}{L_{baseho.UN2}} = 0\,m$

Water Pressure at j: $u_{j.UN2} := (\Delta h_{g.hj.UN2} - \Delta h_{hj.UN2}) \cdot \gamma_w = 104.86 \cdot kPa$

Head loss along h -> k: $\Delta h_{hjk.UN2} := \Delta h_{ho.UN2} \cdot \left(\frac{Key_{h.w} + Key_{h.d}}{L_{baseho.UN2}}\right) = 0\,m$

Water Pressure at k: $u_{k.UN2} := (\Delta h_{g.km.UN2} - \Delta h_{hjk.UN2}) \cdot \gamma_w = 75.46 \cdot kPa$

Head loss along h -> m: $\Delta h_{hjkm.UN2} := \Delta h_{ho.UN2} \cdot \left(\frac{Key_{h.w} + Key_{h.d} + Key_{hdist}}{L_{baseho.UN2}}\right) = 0\,m$

Water Pressure at m: $u_{m.UN2} := (\Delta h_{g.km.UN2} - \Delta h_{hjkm.UN2}) \cdot \gamma_w = 75.46 \cdot kPa$

Head loss along h -> n: $\Delta h_{hjkmn.UN2} := \Delta h_{ho.UN2} \cdot \left(\frac{Key_{h.w} + Key_{h.d} + Key_{hdist} + Key_{t.d}}{L_{baseho.UN2}}\right) = 0\,m$

Water Pressure at n: $u_{n.UN2} := (\Delta h_{g.no.UN2} - \Delta h_{hjkmn.UN2}) \cdot \gamma_w = 75.46 \cdot kPa$

Uplift under key at heel: $V_{ulkeyhUN2.OT} := \frac{(u_{h.UN2} + u_{j.UN2}) \cdot Key_{h.w}}{2} \cdot B \cdot -1 = -104.86 \cdot kN$

Moment Arm (from Point O): $V_{ulkeyhUN2loc.OT} := b - \frac{Key_{h.w} \cdot (2 \cdot u_{j.UN2} + u_{h.UN2})}{3 \cdot (u_{j.UN2} + u_{h.UN2})} = 8.5\,m$

Uplift under base: $V_{ulbaseUN2.OT} := \frac{(u_{k.UN2} + u_{m.UN2}) \cdot Key_{hdist}}{2} \cdot B \cdot -1 = -603.68 \cdot kN$

Moment Arm (from Point O): $V_{ulbaseUN2loc.OT} := b - Key_{h.w} - \frac{Key_{hdist} \cdot (2 \cdot u_{m.UN2} + u_{k.UN2})}{3 \cdot (u_{m.UN2} + u_{k.UN2})} = 4\,m$

Uplift under key at toe: $V_{ulkeytUN2.OT} := \frac{(u_{n.UN2} + u_{o.UN2}) \cdot Key_{t.w}}{2} \cdot B \cdot -1 = 0 \cdot kN$

Moment Arm (from Point O): $V_{ulkeytUN2loc.OT} := \frac{Key_{t.w} \cdot (2 \cdot u_{n.UN2} + u_{o.UN2})}{3 \cdot (u_{n.UN2} + u_{o.UN2})} = 0$

$$\Sigma V_{UpliftUN2.OT} := V_{ulkeyhUN2.OT} + V_{ulbaseUN2.OT} + V_{ulkeytUN2.OT} = -709 \cdot kN$$

$$U_{UN2.loc.OT} := \frac{V_{ulkeyhUN2.OT} \cdot V_{ulkeyhUN2loc.OT} + V_{ulbaseUN2.OT} \cdot V_{ulbaseUN2loc.OT} + V_{ulkeytUN2.OT} \cdot V_{ulkeytUN2loc.OT}}{\Sigma V_{UpliftUN2.OT}} = 4.67\,m$$

$$\Sigma M_{UpliftUN2.OT} := \Sigma V_{UpliftUN2.OT} \cdot U_{UN2.loc.OT} = -3306.0 \cdot kN \cdot m$$

Modify Lateral Water Pressure (Resisting) for Overturning Analysis:

(Resisting water pressure is calculated using the Line of Creep method)

Water Load at Key (heel):
$$H_{h2UN2.OT} := \frac{u_{k.UN2} + u_{j.UN2}}{2} \cdot Key_{h.d} B = 270.5 \cdot kN$$

Moment Arm (from Point O):
$$H_{h2locUN2.OT} := \frac{Key_{h.d} \cdot (2 \cdot u_{k.UN2} + u_{j.UN2})}{3(u_{k.UN2} + u_{j.UN2})} + Key_{vdist} = -1.58\ m$$

Water Load at Key (toe):
$$H_{h6UN2.OT} := \frac{u_{o.UN2} \cdot (UWSEL_{UN2} - Bot_{ftg} + Key_{t.d})}{2} \cdot B = 291 \cdot kN$$

Moment Arm (from Point O):
$$H_{h6locUN2.OT} := \frac{UWSEL_{UN2} - Bot_{ftg} + Key_{t.d}}{3} = 2.57\ m$$

$$\Sigma H_{waterresistUN2.OT} := H_{h2UN2.OT} + H_{h6UN2.OT} = 561 \cdot kN$$

$$H_{waterresistlocUN2.OT} := \frac{H_{h2UN2.OT} \cdot H_{h2locUN2.OT} + H_{h6UN2.OT} \cdot H_{h6locUN2.OT}}{\Sigma H_{waterresistUN2.OT}} = 0.567\ m$$

$$\Sigma M_{waterresistUN2.OT} := \Sigma H_{waterresistUN2.OT} \cdot H_{waterresistlocUN2.OT} = 317.9 \cdot kN \cdot m$$

Modify Lateral Soil Loads for Overturning Analysis:

(Lateral soil loads are calculated down to Point O instead of bottom of shear key)

Driving Soil Load (Headwater Side):

Surcharge Load:
$$E_{s1UN2.OT} := S1_{UN2} \cdot K_o \cdot (H_w + Key_{h.d} + Key_{vdist}) \cdot B \cdot -1 = 0 \cdot kN$$

Moment Arm (from Point O):
$$E_{s1locUN2.OT} := \frac{H_w + Key_{h.d} + Key_{vdist}}{2} = 5.25\ m$$

Moist Soil Load above GWL:
$$E_{h1UN2.OT} := \frac{\gamma_m \cdot K_o \cdot h_{1UN2}^{\ 2}}{2} B \cdot -1 = -42.8 \cdot kN$$

Moment Arm (from Point O):
$$E_{h1locUN2.OT} := \frac{h_{1UN2}}{3} + h_{2UN2} + Key_{vdist} = 8.63\ m$$

Saturated Soil Load below GWL:
(rectangular component)
$$E_{h2UN2.OT} := (\gamma_m \cdot K_o \cdot h_{1UN2}) \cdot (h_{2UN2} + Key_{vdist}) \cdot B \cdot -1 = -235.4 \cdot kN$$

Moment Arm (from Point O):
$$E_{h2locUN2.OT} := \frac{h_{2UN2} + Key_{vdist}}{2} = 3.85\ m$$

Saturated Soil Load below GWL:
(triangular component)
$$E_{h2aUN2.OT} := \frac{(\gamma_{sat} - \gamma_w) \cdot K_o \cdot (h_{2UN2} + Key_{vdist})^2}{2} \cdot B \cdot -1 = -197.5 \cdot kN$$

Moment Arm (from Point O):
$$E_{h2alocUN2.OT} := \frac{h_{2UN2} + Key_{vdist}}{3} = 2.57\ m$$

Resisting Soil Load (Tailwater Side):

(Determine resisting soil load based on depth variation between the keys (ie. Key_{vdist}). In case where key at heel is deeper than key at toe (ie. $Key_{vdist} < 0$), resisting soil load (p*) is assumed to produce horizontal equilibrium as per Figure 4-5 above. Resisting soil load (p_o) is neglected.)

Total Driving Force: $\Sigma H_{SoildriveUN2.OT} := E_{s1UN2.OT} + E_{h1UN2.OT} + E_{h2UN2.OT} + E_{h2aUN2.OT} + H_{h2UN2} = -1036.7 \cdot kN$

Total Resisting Force: $\Sigma H_{waterresistUN2.OT} = 561.0 \cdot kN$

Assumed Soil Load p*: $E_{h8UN2a.OT} := (\Sigma H_{SoildriveUN2.OT} + \Sigma H_{waterresistUN2.OT}) \cdot -1 = 475.721 \cdot kN$

Moment Arm (from Point O): $E_{h8UN2a.loc.OT} := \dfrac{Key_{vdist}}{2} = -1.5\,m$

$$E_{h8UN2.OT} := \begin{cases} E_{h8UN2a.OT} & \text{if } Key_{vdist} < 0 \\ \Sigma H_{SoilresistUN2} - H_{h6UN2} - H_{h2aUN2} & \text{otherwise} \end{cases} = 475.721 \cdot kN$$

$$\Sigma M_{SoilresistUN2} := \begin{cases} E_{h8UN2a.OT} \cdot E_{h8UN2a.loc.OT} & \text{if } Key_{vdist} < 0 \\ \Sigma M_{HorizSoilResistUN2} - H_{h6UN2} \cdot H_{h6locUN2} - H_{h2aUN2} \cdot H_{h2alocUN2} & \text{otherwise} \end{cases} = -713.582 \cdot kN \cdot m$$

Sum of Moment about Point O:

$$\Sigma M_{LateraldriveUN2.OT} := E_{s1UN2.OT} \cdot E_{s1locUN2.OT} + E_{h1UN2.OT} \cdot E_{h1locUN2.OT} + E_{h2UN2.OT} \cdot E_{h2locUN2.OT} \cdots + E_{h2aUN2.OT} \cdot E_{h2alocUN2.OT} + H_{h2UN2} \cdot H_{h2locUN2} = -2100.8 \cdot kN \cdot m$$

$$\Sigma M_{LateralresistUN2.OT} := \Sigma M_{waterresistUN2.OT} + \Sigma M_{SoilresistUN2} = -395.7 \cdot kN \cdot m$$

Total moment:

$$\Sigma M_{UN2.OT} := \Sigma M_{conc} + \Sigma M_{VertSoilWaterResistUN2} + \Sigma M_{UpliftUN2.OT} \cdots + \Sigma M_{LateraldriveUN2.OT} + \Sigma M_{LateralresistUN2.OT} = 3523.3 \cdot kN \cdot m$$

Total Vertical Force: $\Sigma V_{UN2.OT} := \Sigma V_{conc} + \Sigma V_{SoilWaterUN2} + \Sigma V_{UplliftUN2.OT} = 996.2 \cdot kN$

Distance X_R: EM 1110-2-2502 Eq.4-1 $X_{R.UN2} := \dfrac{\Sigma M_{UN2.OT}}{\Sigma V_{UN2.OT}} = 3.537\,m$

Overturning Resultant Ratio $Ratio_{UN2.OT} := \dfrac{X_{R.UN2}}{b} = 0.39$

$$Ratio_{UN2.OT.check} := \begin{cases} \text{"OKAY "} & \text{if } Ratio_{UN2.OT} > X_{R.reqUN2} \\ \text{"Revise Structure""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

CHECK FOUNDATION ECCENTRICITY (HORIZONTAL PLANE):

Eccentricity (horizontal plan): $ex_{UN2.OT} := \dfrac{b}{2} - \dfrac{\Sigma M_{UN2.OT}}{\Sigma V_{UN2.OT}} = 0.96\,m$ $Kern_{OT} = 1.5\,m$

Eccentricity Check:

$$e_{check.UN2.OT} := \begin{cases} \text{"Okay"} & \text{if } ex_{UN2} \le Kern_{OT} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"Okay"}$$

LOAD CASE UN2

CHECK FOUNDATION BEARING CAPACITY (HORIZONTAL PLANE):

Base Section Modulus: $S_{b.OT} = 13.5\,m^3$

Bearing Pressure Under Toe:

$$\sigma_{ToeUN2.OT} := \begin{cases} \left(\dfrac{\Sigma V_{UN2.OT}}{b \cdot B} + \dfrac{\Sigma V_{UN2.OT} \cdot ex_{UN2.OT}}{S_{b.OT}}\right) & \text{if } \dfrac{\Sigma V_{UN2.OT}}{b \cdot B} \ge \dfrac{\Sigma V_{UN2.OT} \cdot ex_{UN2.OT}}{S_{b.OT}} \\ \dfrac{2 \cdot \Sigma V_{UN2.OT}}{B \cdot 3\left(\dfrac{b}{2} - ex_{UN2.OT}\right)} & \text{otherwise} \end{cases} = 181.8 \cdot kPa$$

$$Bearing_{ChecktoeUN2.OT} := \begin{cases} \text{"OKAY "} & \text{if } \sigma_{ToeUN2.OT} < \sigma_{allowUN2} \\ \text{"NG - for reference only""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

Bearing Pressure Under Heel:

$$\sigma_{HeelUN2.OT} := \begin{cases} \left(\dfrac{\Sigma V_{UN2.OT}}{b \cdot B} - \dfrac{\Sigma V_{UN2.OT} \cdot ex_{UN2.OT}}{S_{b.OT}}\right) & \text{if } \dfrac{\Sigma V_{UN2.OT}}{b \cdot B} \ge \dfrac{\Sigma V_{UN2.OT} \cdot ex_{UN2.OT}}{S_{b.OT}} \\ 0 & \text{otherwise} \end{cases} = 39.6 \cdot kPa$$

$$Bearing_{CheckheelUN2.OT} := \left(\begin{cases} \text{"OKAY "} & \text{if } \sigma_{HeelUN2.OT} < \sigma_{allowUN2} \wedge \sigma_{HeelUN2.OT} > 0 \\ \text{"NG - for reference only""} & \text{otherwise} \end{cases}\right) = \text{"OKAY "}$$

SUMMARY OF STABILITY ASSESSMENT:

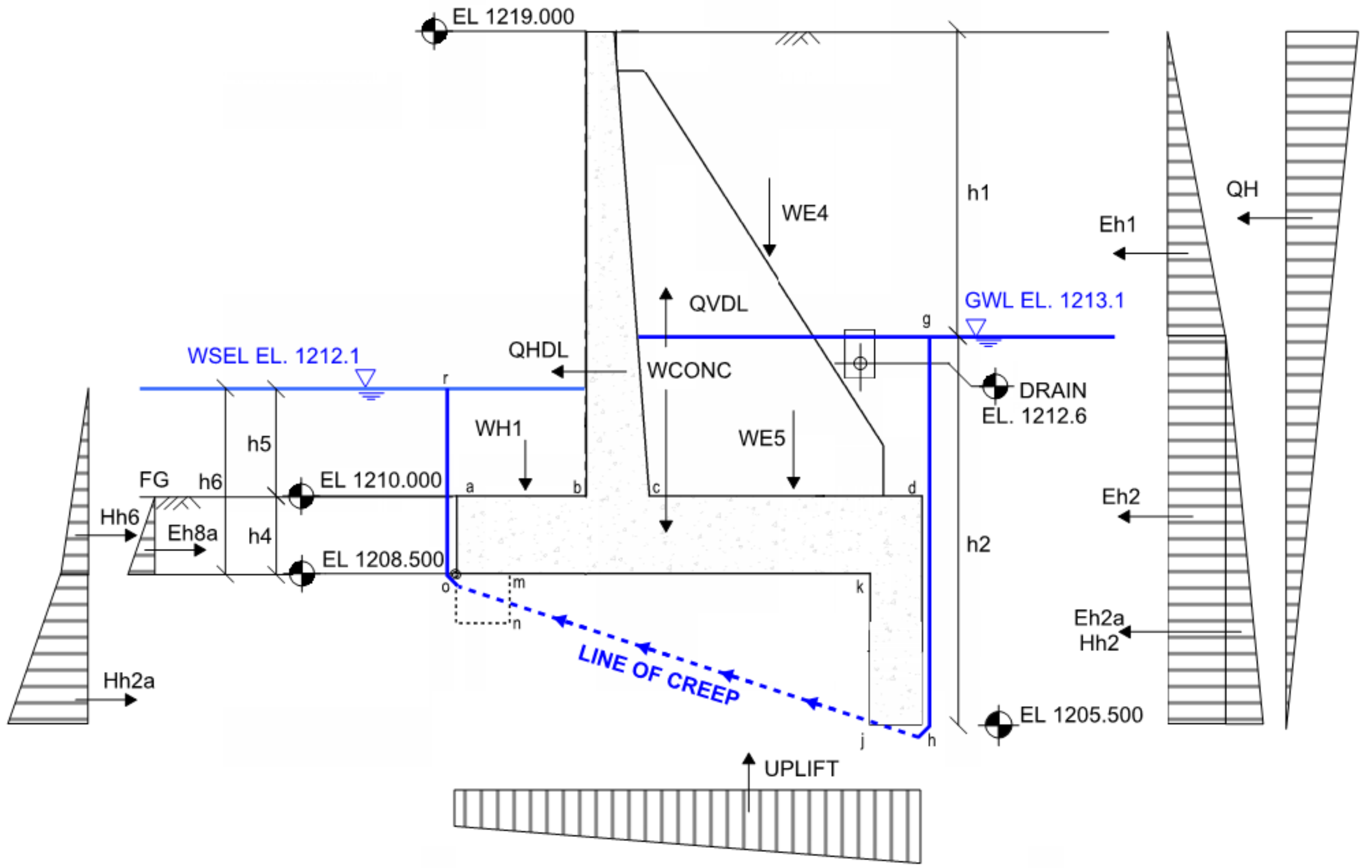
LOAD CASE E1 - SEISMIC LOADING



E1 DESIGN CASE

LOAD CASE E1 ACCEPTANCE PARAMETERS

FS sliding:

Extreme (E) loading) 1.0 (without cohesion, seismic (Table 3-3, USACE EM 1110-2-2100)

Resultant Location:

Extremem (E) Inside middle half ~75% base in compression

Required Factor of Safety for Sliding: $FS_{sliding.reqE1} := 1.0$ (Without Cohesion)

Allowable rock bearing pressure: $\sigma_{allowE1} := 1740kPa$ (Section 5.2, Design Criteria EM 1110-2-2100 Section 3-10)

Overturning Required Resultant Ratio: $X_{R.reqE1} := 0.25$ (EM 1110-2-2502, Figure 4-4)

Required Factor of Safety for Floatation $FS_{req.E1.flt} := 1.1$

SOIL HEIGHTS and Water Levels:

LOAD CASE E1

Heel Conditions:

Groundwater Elevation at Heel: $GWL_{E1} := 1213.1\text{m}$

Distance from Finish Grade to Groundwater at Heel: $h_{1E1} := \left[T_w - GWL_{E1} + \left(L_{cd} + t_{wb} - t_{wt}\right)\cdot\tan(\beta)\right] = 5.90\text{ m}$

Distance from Water Surface to Bottom of Footing at Heel: $h_{2E1} := GWL_{E1} - Bot_{ftg} + Key_{h.d} = 7.60\text{ m}$

Toe Conditions:

Water Surface Elevation at Toe: $WSEL_{E1} := 1212.1\text{m}$

Water Surface Elevation at Toe for Uplift: $UWSEL_{E1} := 1212.1\cdot\text{m}$

Finish Grade at Toe providing lateral resistance: $FG_{toeE1} := 1210.0\cdot\text{m}$

Soil Depth Above top of footing: $h_{3aE1} := FG_{toeE1} - Top_{ftg} = 0\text{ m}$

$$h_{3E1} := \begin{cases} h_{3aE1} & \text{if } FG_{toeE1} - Top_{ftg} \ge 0 \\ 0 & \text{otherwise} \end{cases} = 0$$

Resisting Fill at Toe: $h_{4E1} := FG_{toeE1} - Bot_{ftg} + Key_{t.d} = 1.50\text{ m}$

Distance from Water Level to Top of Footing at Toe: $h_{5E1} := WSEL_{E1} - Top_{ftg} = 2.10\text{ m}$

Distance from Water Surface to Bottom of Footing at Toe: $h_{6E1} := WSEL_{E1} - Bot_{ftg} + Key_{t.d} = 3.60\text{ m}$

Soil Depth Above WSEL: $h_{7aE1} := FG_{toeE1} - WSEL_{E1} = -2.1\text{ m}$

$$h_{7E1} := \begin{cases} h_{7aE1} & \text{if } FG_{toeE1} - WSEL_{E1} \ge 0 \\ 0 & \text{otherwise} \end{cases} = 0$$

Soil Depth Below WSEL:

$$h_{8E1} := \begin{cases} WSEL_{E1} - Bot_{ftg} + Key_{t.d} & \text{if } FG_{toeE1} - WSEL_{E1} \ge 0 \\ h_{4E1} & \text{otherwise} \end{cases} = 1.5$$

For Line of Creep Method: $L_{ho.E1} := \sqrt{b^2 + \left(Key_{h.d} - Key_{t.d}\right)^2} = 9.487\text{ m}$

Head Loss from Point g:

$\Delta h_{g.hj.E1} := h_{2E1} = 7.6\text{ m}$ (to point h & j)

$\Delta h_{g.km.E1} := GWL_{E1} - Bot_{ftg} = 4.6\text{ m}$ (to point k & m)

$\Delta h_{g.no.E1} := GWL_{E1} - Bot_{ftg} + Key_{t.d} = 4.6\text{ m}$ (to point n & o)

$\Delta h_{g.p.E1} := GWL_{E1} - FG_{toeE1} = 3.1\text{ m}$ (to point p*)

$\Delta h_{g.r.E1} := GWL_{E1} - UWSEL_{E1} = 1\text{ m}$ (to point r)

Surcharge

Surcharge on Heel: $S1_{E1} := 0.0\dfrac{\text{kN}}{\text{m}^2}$

* same as point "a" in this case

Calculate Soil Lateral Pressure Coefficients:

LOAD CASE E1

Calculate at-rest pressure coefficient K_o based on Jaky's (1944) equation.

Soil At Rest Static Coefficient:
(apply to resisting soil loads)

$$K_o := \frac{1 - \sin(\phi)}{1 + \sin(\beta)} = 0.546$$

(Eq. 3-6, USACE EM 1110-2-2502)

Calculate active pressure coefficient K_A based on Coulumb equations.

Determine Slope of Active Wedge: (cohesionless backfill with water table)

$$c_1 := 2 \cdot \tan(\phi) = 1.019 \qquad c_2 := 1 - \tan(\phi) \cdot \tan(\beta) - \frac{\tan(\beta)}{\tan(\phi)} = 1$$

(Eq. G-14 / G-15, USACE EM 1110-2-2100)

$$\alpha := \operatorname{atan}\left(\frac{c_1 + \sqrt{c_1^{\,2} + 4 \cdot c_2}}{2}\right) = 1.021 \qquad \alpha_{deg} := \alpha \cdot \frac{180}{\pi} = 58.5$$

degrees (Eq. G-13, USACE EM 1110-2-2100)

Soil Active Coefficient above GWL:

$$K_{Aagwt} := \left(\frac{1 - \tan(\phi) \cdot \cot(\alpha)}{1 + \tan(\phi) \cdot \tan(\alpha)}\right) \cdot \left(\frac{\tan(\alpha)}{\tan(\alpha) - \tan(\beta)}\right) = 0.376$$

Soil Active Coefficient below GWL:

$$K_{Abgwt} := \frac{1 - \tan(\phi) \cdot \cot(\alpha)}{1 + \tan(\phi) \cdot \tan(\alpha)} \cdot \left[1 + \left(\frac{\tan(\alpha)}{\tan(\alpha) - \tan(\beta)} - 1\right) \cdot \left(\frac{\gamma_m}{\gamma_{sat} - \gamma_w}\right)\right] = 0.376$$

(Eq. G-29, USACE EM 1110-2-2100)

Lateral - Driving Force

Static Copmonent : Active Pressure:

Surcharge Load:

$$E_{s1E1} := S1_{E1} \cdot K_{Aagwt} \cdot \left(H_w + Key_{h.d}\right) \cdot B \cdot -1 = 0 \cdot kN$$

Moment Arm (from bottom of footing):

$$E_{s1locE1} := \frac{H_w + Key_{h.d}}{2} + Key_{vdist} = 3.75\ m$$

Moist Soil Load above GWL:

$$E_{h1E1} := \frac{\gamma_m \cdot K_{Aagwt} \cdot h_{1E1}^{\,2}}{2} \cdot B \cdot -1 = -130.7 \cdot kN$$

Moment Arm (from bottom of footing):

$$E_{h1locE1} := \frac{h_{1E1}}{3} + h_{2E1} + Key_{vdist} = 6.57\ m$$

Saturated Soil Load below GWL:
(rectangular component)

$$E_{h2E1} := \left(\gamma_m \cdot K_{Abgwt} \cdot h_{1E1}\right) \cdot h_{2E1} \cdot B \cdot -1 = -336.8 \cdot kN$$

Moment Arm (from bottom of footing):

$$E_{h2locE1} := \frac{h_{2E1}}{2} + Key_{vdist} = 0.80\ m$$

Saturated Soil Load below GWL:
(triangular component)

$$E_{h2aE1} := \frac{\left(\gamma_{sat} - \gamma_w\right) \cdot K_{Abgwt} \cdot h_{2E1}^{\,2}}{2} \cdot B \cdot -1 = -132.3 \cdot kN$$

Moment Arm (from bottom of footing):

$$E_{h2alocE1} := \frac{h_{2E1}}{3} + Key_{vdist} = -0.47\ m$$

Lateral Water Load:

Water Load GWL to Bottom of Key

$$H_{h2E1} := \frac{\gamma_w \cdot h_{2E1}^{\,2}}{2} \cdot B \cdot -1 = -283.0 \cdot kN$$

Moment Arm (from bottom of footing):

$$H_{h2locE1} := \frac{h_{2E1}}{3} + Key_{vdist} = -0.47\ m$$

$$\Sigma H_{SoildriveE1} := E_{s1E1} + E_{h1E1} + E_{h2E1} + E_{h2aE1} + H_{h2E1} = -882.8 \cdot kN$$

$$\Sigma M_{LateralSoildriveE1} := E_{s1E1} \cdot E_{s1locE1} + E_{h1E1} \cdot E_{h1locE1} + E_{h2E1} \cdot E_{h2locE1} \cdots + E_{h2aE1} \cdot E_{h2alocE1} + H_{h2E1} \cdot H_{h2locE1} = -934.0\ m \cdot kN$$

Lateral - Resisting Force

LOAD CASE E1

Note: **Due to the relatively shallow depth of resisting soil/rock, a conservative apporach using at-rest coefficient in lieu of a passive wedge is used to calculate resisting forces.**

Lateral Water Load:

Water Load WSEL to Bottom of Footing: $H_{h6E1} := H_{h6U1} = 63.5 \cdot kN$

Moment Arm (from bot. of toe key): $H_{h6locE1} := H_{h6locU1} = 1.20\ m$

Water Load Bot. of Footing to Bot. of H. Key: $H_{h2aE1} := \left[\left(UWSEL_{E1} - Bot_{ftg} + Key_{t.d}\right) + h_{2E1}\right] \cdot \frac{Key_{h.d}}{2} \cdot \gamma_w \cdot B = 164.6 \cdot kN$

Moment Arm (from bot. of toe key):

$$H_{h2alocE1} := \frac{Key_{h.d} \cdot \left[2 \cdot \left(UWSEL_{E1} - Bot_{ftg} + Key_{t.d}\right) + h_{2E1}\right]}{3\left[h_{2E1} + \left(UWSEL_{E1} - Bot_{ftg} + Key_{t.d}\right)\right]} \ldots = -1.68\ m$$
$$+ Key_{vdist}$$

Lateral Soil Load:

Moist Soil Load above WSEL: $E_{h7E1} := \frac{\gamma_m \cdot K_o \cdot h_{7E1}^{\ 2}}{2} \cdot B = 0.0 \cdot kN$

Moment Arm (from bot. of toe key): $E_{h7locE1} := h_{6E1} + \frac{h_{7E1}}{3} + Key_{vdist} = 0.60\ m$

Saturated Soil Load below WSEL: (rectangular component) $E_{h8E1} := \left(\gamma_m \cdot K_o \cdot h_{7E1}\right) \cdot h_{8E1} \cdot B = 0.0 \cdot kN$

Moment Arm (from bot. of toe key): $E_{h8locE1} := \frac{h_{8E1}}{2} = 0.75\ m$

Saturated Soil Load below WSEL: (triangular component) $E_{h8aE1} := \frac{\left[\left(\gamma_{sat} - \gamma_w\right) \cdot K_o\right] \cdot h_{8E1}^{\ 2}}{2} \cdot B = 7.5 \cdot kN$

Moment Arm (from bot. of footing): $E_{h8alocE1} := \frac{h_{8E1}}{3} = 0.50\ m$

$$\Sigma H_{SoilresistE1} := H_{h6E1} + H_{h2aE1} + E_{h7E1} + E_{h8E1} + E_{h8aE1} = 235.6 \cdot kN$$

$$\Sigma M_{HorizSoilResistE1} := H_{h6E1} \cdot H_{h6locE1} + H_{h2aE1} \cdot H_{h2alocE1} + E_{h7E1} \cdot E_{h7locE1} \ldots = -196.4\ m \cdot kN$$
$$+ E_{h8E1} \cdot E_{h8locE1} + E_{h8aE1} \cdot E_{h8alocE1}$$

Vertical Force:

UPLIFT: Linear distribution from water at heel to water at toe:

$$\Sigma V_{UpliftE1} := \left[\left(UWSEL_{E1} - Bot_{ftg} + Key_{t.d}\right) + h_{2E1}\right] \cdot \frac{b}{2} \cdot \gamma_w \cdot B \cdot -1 = -493.92 \cdot kN$$

Moment Arm (from Point O):

$$V_{UpliftE1aloc} := \frac{b \cdot \left[2 \cdot h_{2E1} + \left(UWSEL_{E1} - Bot_{ftg} + Key_{t.d}\right)\right]}{3\left[h_{2E1} + \left(UWSEL_{E1} - Bot_{ftg} + Key_{t.d}\right)\right]} = 5.036\ m$$

$$\Sigma M_{UpliftE1} := \Sigma V_{UpliftE1} \cdot V_{UpliftE1aloc} = -2487.24 \cdot kN \cdot m$$

Weight of soil and water over toe:

Water Above the Top of Footing: $W_{H1E1} := \gamma_w \cdot h_{5E1} \cdot L_{ab} \cdot B = 51.45 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E1locE1} := \frac{L_{ab}}{2} = 1.25\ m$

Soil above top of footing: $W_{E6E1} := \gamma_b \cdot h_{3E1} \cdot L_{ab} \cdot B = 0.0 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E6locE1} := \frac{L_{ab}}{2} = 1.25\ m$

Vertical Load Due to Surcharge: $S_{E1} := S1_{E1} \cdot L_{cd} \cdot B = 0 \cdot kN$ $\quad S_{E1loc} := b - \frac{L_{cd}}{2} = 6.35\ m$

Weight of soil and water over heel:

Moist Soil for sloped grade above top of wall:

Length of sloped portion of soil above top of wall: $L_{E3E1} := \left(L_{cd} + t_{wb} - t_{wt}\right) = 6.00\ m$

Height of sloped soil above top of wall over heel: $h_{E3locE1} := \left(L_{E3E1}\right) \cdot \tan(\beta) = 0.00\ m$

Weight of sloped soil above top of wall: $W_{E3E1} := \frac{\gamma_m}{2} \cdot h_{E3locE1} \cdot L_{E3E1} \cdot B = 0.0 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E3locE1} := L_{ab} + t_{wt} + \frac{2}{3} \cdot L_{E3E1} = 7.00\ m$

Moist soil from top of wall to groundwater level:

Height of soil from top of wall and top of GWL: $h_{1E1} = 5.90\ m$

Length from edge of wall at GWL to edge of heel: $L_{E4E1} := L_{E3E1} - \left(h_{1E1} \cdot S_{batter}\right) = 5.54\ m$

Weight of soil over heel from top of wall to GWL: $W_{E4E1} := \gamma_m \cdot h_{1E1} \cdot \frac{\left(L_{E3E1} + L_{E4E1}\right)}{2} \cdot B = 680.7 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E4locE1} := b - \frac{L_{E3E1}^2 + L_{E3E1} \cdot L_{E4U1} + L_{E4E1}^2}{3\left(L_{E3E1} + L_{E4E1}\right)} = 6.11\ m$

Saturated soil from groundwater to top of footing:

Height of soil from GWL to top of heel: $h_{E4E1} := h_{2E1} - t_{ftg} - Key_{h.d} = 3.10\ m$

Weight of soil over heel from GWL to top of heel: $W_{E5E1} := \left(\gamma_{sat}\right) \cdot h_{E4E1} \cdot \frac{\left(L_{E4E1} + L_{cd}\right)}{2} \cdot B = 369.3 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E5locE1} := b - \frac{L_{E4E1}^2 + L_{E4E1} \cdot L_{cd} + L_{cd}^2}{3\left(L_{E4E1} + L_{cd}\right)} = 6.29\ m$

$$\Sigma V_{SoilWaterE1} := W_{H1E1} + W_{E6E1} + W_{E3E1} + W_{E4E1} + W_{E5E1} + S_{E1} = 1101.4 \cdot kN$$

$$\Sigma M_{VertSoilWaterResistE1} := W_{H1E1} \cdot W_{E1locE1} + W_{E6E1} \cdot W_{E6locE1} \cdots + W_{E3E1} \cdot W_{E3locE1} + W_{E4E1} \cdot W_{E4locE1} + W_{E5E1} \cdot W_{E5locE1} + S_{E1} \cdot S_{E1loc} = 6549.7\ m \cdot kN$$

SESIMIC ANALYSIS:

LOAD CASE E1

Seismic coefficient will be applied to dead loads to calculate seismic force and force is applied at center of gravity of the mass. Vertical and Horizontal loads are applied in the "destabilizing direction"

SEISMIC PARAMETERS:

Peak Ground Acceleration for Seismic Load $PGA_{Horiz} := 0.26$ $PGA_{Vert} := 0.56 \cdot PGA_{Horiz} = 0.146$ (Section 7.9, Design Criteria)

In accordance with USACE EM 1110-2-2100 Section 4-7.b, consider 2/3 PGA as seismic coefficient for stabilitiy.

Horizontal Seismic coefficient for stabilty: $K_{hE1} := \frac{2}{3} PGA_{Horiz} = 0.173$

Vertical Seismic coefficient for stabilty: $K_{vE1} := \frac{2}{3} PGA_{Vert} = 0.097$

SEISMIC ACCELERATION OF RIGID MASSES (Q_D):

Vertical Load Application:

$\Sigma V_{conc} = 568.3 \cdot kN$

$Q_{v.conc} := \Sigma V_{conc} \cdot K_{vE1} \cdot -1 = -55.2 \cdot kN$ (assume acting upwards for adverse sliding effect)

Moment arm for siesmic load application (From Toe): $H_{cent} = 4.504\,m$

$M_{Qv.conc} := Q_{v.conc} \cdot H_{cent} = -248.5 \cdot kN \cdot m$

Lateral Load Application:

$Q_{h.conc} := \Sigma V_{conc} \cdot K_{hE1} \cdot -1 = -98.5 \cdot kN$

Moment arm for siesmic load application (Above Base of Footing): $V_{Cent} = 1.941\,m$

$M_{Q.conc} := Q_{h.conc} \cdot V_{Cent} = -191.2 \cdot kN \cdot m$

SEISMIC ACCELERATION OF SOIL WEDGE + WATER (Q_{EH}):

Vertical Load Application:

$\Sigma V_{SoilWaterE1} = 1101.4 \cdot kN$

$Q_{v.SoilWaterE1} := \Sigma V_{SoilWaterE1} \cdot K_{vE1} \cdot -1 = -106.9 \cdot kN$ (assume acting upwards for adverse sliding effect)

Moment arm for siesmic load application (From Toe): $e_{QE1} := \dfrac{\Sigma M_{VertSoilWaterResistE1}}{\Sigma V_{SoilWaterE1}} = 5.947\,m$

$M_{Qv.SoilWaterE1} := Q_{v.SoilWaterE1} \cdot e_{QE1} = -635.8 \cdot kN \cdot m$

Lateral Load Application:

Seismic soil load is calculated based on Mononobe-Okabe method to determine combined static and dynamic coefficient (K_{AE}). Coulomb's active component (K_A) is subtracted from K_{AE} to obtain the seismic coefficient (ΔK_{AE}) for dynamic component of soil force.

Glacial Till Internal Friction (radians): $\phi = 0.471$

Seismic Inertia Angle (radians): $\psi := \operatorname{atan}\left(\dfrac{K_{hE1}}{1 - K_{vE1}}\right) = 0.190$

Inclination of batter (radians): $\theta := 0.00$ assuming zero is conservative

Slope of retained ground surface: $\beta = 0.00$

$$K_{AE} := \frac{\cos(\phi - \psi - \theta) \cdot \cos(\phi - \psi - \theta)}{\cos(\psi) \cdot \cos(\theta) \cdot \cos(\theta)\, \cos(\psi + \theta) \cdot \left(1 + \sqrt{\dfrac{\sin(\phi)\, \sin(\phi - \psi - \beta)}{\cos(\beta - \theta) \cdot \cos(\psi + \theta)}}\right)^2} = 0.519$$

$\Delta K_{AE} := K_{AE} - K_{Abgwt} = 0.143$

Dynamic component of active seismic wedge:

$$Q_{h.SoilWaterE1} := \Delta K_{AE} \left[\frac{\gamma_m \cdot \left(H_w + Key_{h.d}\right)^2}{2 \cdot (\tan(\alpha) - \tan(\beta))} + \frac{\left(\gamma_{sat} - \gamma_m\right) \cdot h_{2E1}^{\;2}}{2 \cdot \tan(\alpha)}\right] \cdot B \cdot -1 = -164.8 \cdot kN$$

(Eq. G-64, USACE EM 1110-2-2100)

Moment arm for siesmic load application (About Point O): $Q_{h.SoilWaterlocE1} := \frac{2}{3} \cdot \left(H_w + Key_{h.d}\right) + Key_{vdist} = 6.00\,m$

$M_{Q.h.SoilWaterE1} := Q_{h.SoilWaterE1} \cdot Q_{h.SoilWaterlocE1} = -988.5 \cdot kN \cdot m$

STABILITY ASSESSMENT:

LOAD CASE E1

CHECK SLIDING ALONG HORIZONTAL SLIDING PLANE:

Summation of the vertical forces: $\Sigma V_{E1} := \Sigma V_{conc} + \Sigma V_{SoilWaterE1} + \Sigma V_{UpliftE1} + Q_{v.conc} + Q_{v.SoilWaterE1} = 1013.7 \cdot kN$

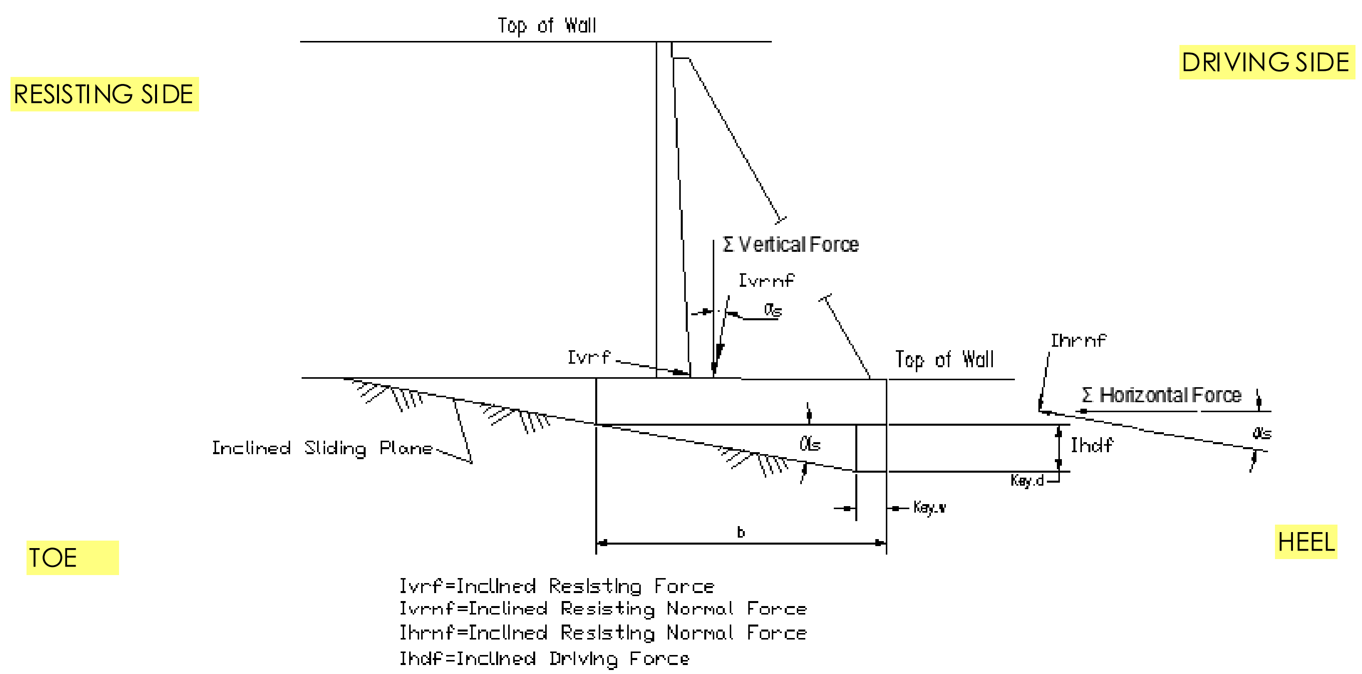
Summation of the horizontal forces: $\Sigma H_{E1} := \Sigma H_{SoildriveE1} + Q_{h.conc} + Q_{h.SoilWaterE1} + \Sigma H_{SoilresistE1} = -910.4 \cdot kN$

Safety Factor for Sliding Horizontal Failure Plane

$$FS_{Horiz.SlidingE1} := \frac{\left|\Sigma V_{E1}\right| \cdot \tan\left(\phi_{rock} \cdot \frac{\pi}{180}\right)}{\left|\Sigma H_{E1}\right|} = 0.54$$

$$FS_{Sliding.check1.E1} := \begin{vmatrix} \text{"OKAY " if } FS_{Horiz.SlidingE1} > FS_{sliding.reqE1} \\ \text{"NG - key req"" otherwise} \end{vmatrix} = \text{"NG - key req""}$$

CHECK FACTOR OF SAFETY SLIDING WITH KEY (INCLINED SLIDING PLANE):



(With properly engineered reinforced concrete Key, horizontal sliding plane thru Toe is protected, critical sliding plane is relocated to the INCLINED SLIDING PLANE FROM HEEL KEY To TOE, Bedrock Mass above this examing plane is mobilized by reinforced concrete key and combined into Structural Wedge.)

Resolve ΣV_{E1} & ΣH_{E1}

$$\Sigma V_{InclinedE1} := \cos(\alpha s) \cdot \left(\left|\Sigma V_{E1} + V_{rocksection}\right|\right) + \sin(\alpha s) \cdot \left|\Sigma H_{E1}\right| = 1556.4 \cdot kN$$

$$\Sigma H_{InclinedE1} := \cos(\alpha s) \cdot \left|\Sigma H_{E1}\right| - \sin(\alpha s) \cdot \left(\left|\Sigma V_{E1} + V_{rocksection}\right|\right) = 388.7 \cdot kN$$

Safety Factor for Sliding Inclined Failure Plane

$$FS_{InclinedISlidingE1} := \frac{\Sigma V_{InclinedE1} \cdot \tan(\phi_r)}{\Sigma H_{InclinedE1}} = 1.78$$

$$FS_{Sliding.check2.E1} := \begin{vmatrix} \text{"OKAY " if } FS_{InclinedISlidingE1} > FS_{sliding.reqE1} \\ \text{"NG"" otherwise} \end{vmatrix} = \text{"OKAY "}$$

CHECK FOUNDATION ECCENTRICITY:

LOAD CASE E1

(Vertical seismic loads from concrete, soil and water are assumed acting downwards for adverse bearing effect)

Summation of the vertical forces: $\Sigma V_{seisE1} := \Sigma V_{conc} + \Sigma V_{SoilWaterE1} + \Sigma V_{UpliftE1} - Q_{v.conc} - Q_{v.SoilWaterE1} = 1337.8 \cdot kN$

Summation of the horizontal forces: $\Sigma H_{seisE1} := \Sigma H_{E1} = -910.4 \cdot kN$

Resolve ΣV_{seisE1} & ΣH_{seisE1}

$$\Sigma V_{InclinedseisE1} := \cos(\alpha s) \cdot \left(\left| \Sigma V_{seisE1} + V_{rocksection} \right| \right) + \sin(\alpha s) \cdot \left| \Sigma H_{seisE1} \right| = 1859.9 \cdot kN$$

$$\Sigma H_{InclinedseisE1} := \cos(\alpha s) \cdot \left| \Sigma H_{seisE1} \right| - \sin(\alpha s) \cdot \left(\left| \Sigma V_{seisE1} + V_{rocksection} \right| \right) = 274.9 \cdot kN$$

Summation of the resisting moments about the toe:

$$\Sigma M_{resE1} := \Sigma M_{conc} + \Sigma M_{VertSoilWaterResistE1} + \Sigma M_{HorizSoilResistE1} + \Sigma M_{rocksection} = 10551 \cdot kN \cdot m$$

Summation of seismic moments about the toe:

$$\Sigma M_{seisE1} := -M_{Qv.conc} + M_{Q.conc} - M_{Qv.SoilWaterE1} + M_{Q.h.SoilWaterE1} = -296 \cdot kN \cdot m$$

Summation of the overturning moments about the toe:

$$\Sigma M_{oE1} := \Sigma M_{LateralSoildriveE1} + \Sigma M_{UpliftE1} = -3421 \cdot kN \cdot m$$

Total moment: $\Sigma M_{E1} := \Sigma M_{resE1} + \Sigma M_{seisE1} + \Sigma M_{oE1} = 6834.5 \cdot kN \cdot m$

Normal force to base: $\Sigma V_{InclinedseisE1} = 1859.9 \cdot kN$

Inclined Sliding Plane Length: $L_{incline} = 9.6 \cdot m$

Eccentricity (inclined plane): $ex_{E1} := \frac{L_{incline}}{2} - \frac{\Sigma M_{E1}}{\Sigma V_{InclinedseisE1}} = 1.13\, m$ $\quad Kern_{E1} := \frac{L_{incline}}{4} = 2.403\, m$

Eccentricity Check: $e_{check.E1} := \begin{cases} \text{"Okay"} & \text{if } ex_{E1} \le Kern_{E1} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"Okay"}$

CHECK FOUNDATION BEARING CAPACITY:

Base Section Modulus: $S_b = 15.4\, m^3$

Bearing Pressure Under Toe:

$$\sigma_{ToeE1} := \begin{cases} \left(\frac{\Sigma V_{InclinedE1}}{L_{incline} \cdot B} + \frac{\Sigma V_{InclinedE1} \cdot ex_{E1}}{S_b} \right) & \text{if } \frac{\Sigma V_{InclinedE1} \cdot ex_{E1}}{S_b} \le \frac{\Sigma V_{InclinedE1}}{L_{incline} \cdot B} \\ \frac{2 \cdot \Sigma V_{InclinedE1}}{B \cdot 3 \left(\frac{b}{2} - ex_{E1} \right)} & \text{otherwise} \end{cases} = 276.3 \cdot kPa$$

$$Bearing_{CheckToeE1} := \begin{cases} \text{"OKAY "} & \text{if } \sigma_{ToeE1} < \sigma_{allowE1} \\ \text{"NG""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

Bearing Pressure Under Heel:

$$\sigma_{HeelE1} := \begin{cases} \left(\frac{\Sigma V_{InclinedE1}}{L_{incline} \cdot B} - \frac{\Sigma V_{InclinedE1} \cdot ex_{E1}}{S_b} \right) & \text{if } \frac{\Sigma V_{InclinedE1} \cdot ex_{E1}}{S_b} \le \frac{\Sigma V_{InclinedE1}}{L_{incline} \cdot B} \\ 0 & \text{otherwise} \end{cases} = 47.6 \cdot kPa$$

$$Bearing_{CheckheelE1} := \left(\begin{cases} \text{"OKAY "} & \text{if } \sigma_{HeelE1} < \sigma_{allowE1} \wedge \sigma_{HeelE1} > 0 \\ \text{"NG - perform cracked base analysis""} & \text{otherwise} \end{cases} \right) = \text{"OKAY "}$$

CHECK FLOATATION:

Safety Factor for Floatation:

$$FS_{FloatationE1} := \frac{\Sigma V_{conc} + \Sigma V_{SoilWaterE1} + Q_{v.conc} + Q_{v.SoilWaterE1}}{\left|\Sigma V_{UpliftE1}\right|} = 3.05$$

$$FS_{Floatation.E1.check} := \begin{cases} \text{"OKAY"} & \text{if } FS_{FloatationE1} > FS_{req.E1.flt} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

CHECK OVERTURNING

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stablity of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1

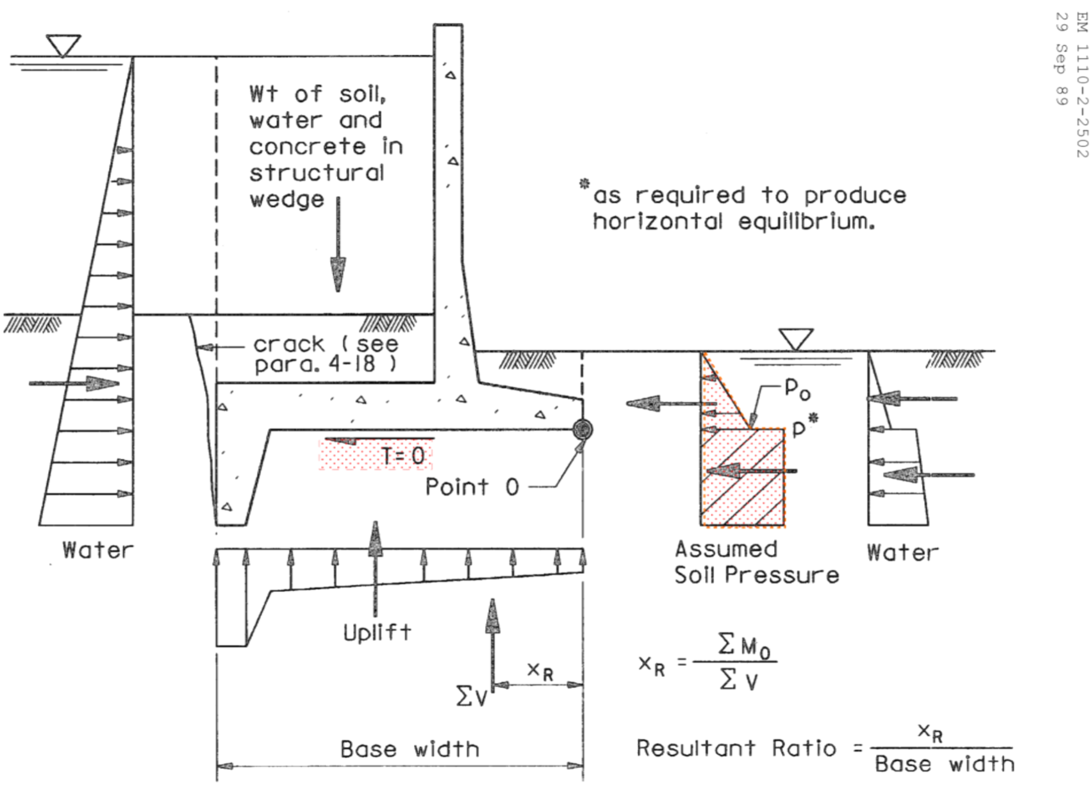


Figure 4-5. Forces for overturning analysis for wall with horizontal base and key

Modify Uplift for Overturning Analysis: **LOAD CASE E1**

(Uplift is calculated along the concrete/rock contact using the Line of Creep method)

Water Pressure at h: $u_{h.E1} := \Delta h_{g.hj.E1} \cdot \gamma_w = 74.48 \cdot kPa$

Water Pressure at o: $u_{o.E1} := \left(\Delta h_{g.no.E1} - \frac{\Delta h_{g.r.E1} \cdot L_{ho.E1}}{L_{ho.E1}} \right) \cdot \gamma_w = 35.28 \cdot kPa$

Head loss between point h and o: $\Delta h_{ho.E1} := \Delta h_{g.r.E1} \cdot \frac{L_{ho.E1}}{L_{ho.E1}} = 1\,m$

Length of concrete base (h -> o): $L_{baseho.E1} := Key_{h.w} + Key_{h.d} + Key_{hdist} + Key_{t.d} + Key_{t.w} = 12\,m$

Head loss along h -> j: $\Delta h_{hj.E1} := \Delta h_{ho.E1} \cdot \frac{Key_{h.w}}{L_{baseho.E1}} = 0.083\,m$

Water Pressure at j: $u_{j.E1} := \left(\Delta h_{g.hj.E1} - \Delta h_{hj.E1} \right) \cdot \gamma_w = 73.66 \cdot kPa$

Head loss along h -> k: $\Delta h_{hjk.E1} := \Delta h_{ho.E1} \cdot \left(\frac{Key_{h.w} + Key_{h.d}}{L_{baseho.E1}} \right) = 0.333\,m$

Water Pressure at k: $u_{k.E1} := \left(\Delta h_{g.km.E1} - \Delta h_{hjk.E1} \right) \cdot \gamma_w = 41.81 \cdot kPa$

Head loss along h -> m: $\Delta h_{hjkm.E1} := \Delta h_{ho.E1} \cdot \left(\frac{Key_{h.w} + Key_{h.d} + Key_{hdist}}{L_{baseho.E1}} \right) = 1\,m$

Water Pressure at m: $u_{m.E1} := \left(\Delta h_{g.km.E1} - \Delta h_{hjkm.E1} \right) \cdot \gamma_w = 35.28 \cdot kPa$

Head loss along h -> n: $\Delta h_{hjkmn.E1} := \Delta h_{ho.E1} \cdot \left(\frac{Key_{h.w} + Key_{h.d} + Key_{hdist} + Key_{t.d}}{L_{baseho.E1}} \right) = 1\,m$

Water Pressure at n: $u_{n.E1} := \left(\Delta h_{g.no.E1} - \Delta h_{hjkmn.E1} \right) \cdot \gamma_w = 35.28 \cdot kPa$

Uplift under key at heel: $V_{ulkeyhE1.OT} := \frac{\left(u_{h.E1} + u_{j.E1} \right) \cdot Key_{h.w}}{2} \cdot B \cdot -1 = -74.072 \cdot kN$

Moment Arm (from Point O): $V_{ulkeyhE1loc.OT} := b - \frac{Key_{h.w} \cdot \left(2 \cdot u_{j.E1} + u_{h.E1} \right)}{3 \cdot \left(u_{j.E1} + u_{h.E1} \right)} = 8.501\,m$

Uplift under base: $V_{ulbaseE1.OT} := \frac{\left(u_{k.E1} + u_{m.E1} \right) \cdot Key_{hdist}}{2} \cdot B \cdot -1 = -308.373 \cdot kN$

Moment Arm (from Point O): $V_{ulbaseE1loc.OT} := b - Key_{h.w} - \frac{Key_{hdist} \cdot \left(2 \cdot u_{m.E1} + u_{k.E1} \right)}{3 \cdot \left(u_{m.E1} + u_{k.E1} \right)} = 4.113\,m$

Uplift under key at toe: $V_{ulkeytE1.OT} := \frac{\left(u_{n.E1} + u_{o.E1} \right) \cdot Key_{t.w}}{2} \cdot B \cdot -1 = 0 \cdot kN$

Moment Arm (from Point O): $V_{ulkeytE1loc.OT} := \frac{Key_{t.w} \cdot \left(2 \cdot u_{n.E1} + u_{o.E1} \right)}{3 \cdot \left(u_{n.E1} + u_{o.E1} \right)} = 0$

$$\Sigma V_{UpliftE1.OT} := V_{ulkeyhE1.OT} + V_{ulbaseE1.OT} + V_{ulkeytE1.OT} = -382 \cdot kN$$

$$U_{E1.loc.OT} := \frac{V_{ulkeyhE1.OT} \cdot V_{ulkeyhE1loc.OT} + V_{ulbaseE1.OT} \cdot V_{ulbaseE1loc.OT} + V_{ulkeytE1.OT} \cdot V_{ulkeytE1loc.OT}}{\Sigma V_{UplliftE1.OT}} = 4.96\,m$$

$$\Sigma M_{UpliftE1.OT} := \Sigma V_{UplliftE1.OT} \cdot U_{E1.loc.OT} = -1898.0 \cdot kN \cdot m$$

LOAD CASE E1

Modify Lateral Water Pressure (Resisting) for Overturning Analysis:

(Resisting water pressure is calculated using the Line of Creep method)

Water Load at Key (heel): $H_{h2E1.OT} := \frac{u_{k.E1} + u_{j.E1}}{2} \cdot Key_{h.d} B = 173.2 \cdot kN$

Moment Arm (from Point O): $H_{h2locE1.OT} := \frac{Key_{h.d} \cdot \left(2 \cdot u_{k.E1} + u_{j.E1}\right)}{3\left(u_{k.E1} + u_{j.E1}\right)} + Key_{vdist} = -1.64\ m$

Water Load at Key (toe): $H_{h6E1.OT} := \frac{u_{o.E1} \cdot \left(UWSEL_{E1} - Bot_{ftg} + Key_{t.d}\right)}{2} \cdot B = 64 \cdot kN$

Moment Arm (from Point O): $H_{h6locE1.OT} := \frac{UWSEL_{E1} - Bot_{ftg} + Key_{t.d}}{3} = 1.20\ m$

$$\Sigma H_{waterresistE1.OT} := H_{h2E1.OT} + H_{h6E1.OT} = 236.72 \cdot kN$$

$$H_{waterresistlocE1.OT} := \frac{H_{h2E1.OT} \cdot H_{h2locE1.OT} + H_{h6E1.OT} \cdot H_{h6locE1.OT}}{\Sigma H_{waterresistE1.OT}} = -0.877\ m$$

$$\Sigma M_{waterresistE1.OT} := \Sigma H_{waterresistE1.OT} \cdot H_{waterresistlocE1.OT} = -207.51 \cdot kN \cdot m$$

Modify Lateral Soil Loads for Overturning Analysis:

(Lateral soil loads are calculated down to Point O instead of bottom of shear key)

Driving Soil Load (Headwater Side):

Surcharge Load: $E_{s1E1.OT} := S1_{E1} \cdot K_{Aagwt} \cdot \left(H_w + Key_{h.d} + Key_{vdist}\right) \cdot B \cdot -1 = 0 \cdot kN$

Moment Arm (from Point O): $E_{s1locE1.OT} := \frac{H_w + Key_{h.d} + Key_{vdist}}{2} = 5.25\ m$

Moist Soil Load above GWL: $E_{h1E1.OT} := \frac{\gamma_m \cdot K_{Aagwt} \cdot h_{1E1}^{\ 2}}{2} B \cdot -1 = -130.7 \cdot kN$

Moment Arm (from Point O): $E_{h1locE1.OT} := \frac{h_{1E1}}{3} + h_{2E1} + Key_{vdist} = 6.57\ m$

Saturated Soil Load below GWL: (rectangular component) $E_{h2E1.OT} := \left(\gamma_m \cdot K_{Aagwt} \cdot h_{1E1}\right) \cdot \left(h_{2E1} + Key_{vdist}\right) \cdot B \cdot -1 = -203.8 \cdot kN$

Moment Arm (from Point O): $E_{h2locE1.OT} := \frac{h_{2E1} + Key_{vdist}}{2} = 2.30\ m$

Saturated Soil Load below GWL: (triangular component) $E_{h2aE1.OT} := \frac{\left(\gamma_{sat} - \gamma_w\right) \cdot K_{Aagwt} \cdot \left(h_{2E1} + Key_{vdist}\right)^2}{2} \cdot B \cdot -1 = -48.5 \cdot kN$

Moment Arm (from Point O): $E_{h2alocE1.OT} := \frac{h_{2E1} + Key_{vdist}}{3} = 1.53\ m$

Resisting Soil Load (Tailwater Side):

LOAD CASE E1

(Determine resisting soil load based on depth variation between the keys (ie. Key_{vdist}). In case where key at heel is deeper than key at toe (ie. $Key_{vdist} < 0$), resisting soil load (p*) is assumed to produce horizontal equilibrium as per Figure 4-5 above. Resisting soil load (p_o) is neglected.)

Total Driving Force:

$$\Sigma H_{SoildriveE1.OT} := E_{s1E1.OT} + E_{h1E1.OT} + E_{h2E1.OT} + E_{h2aE1.OT} + H_{h2E1} \cdots + Q_{h.conc} + Q_{h.SoilWaterE1} = -929.3 \cdot kN$$

Total Resisting Force:

$$\Sigma H_{waterresistE1.OT} = 236.719 \cdot kN$$

Assumed Soil Load p*:

$$E_{h8E1a.OT} := \left(\Sigma H_{SoildriveE1.OT} + \Sigma H_{waterresistE1.OT}\right) \cdot -1 = 692.583 \cdot kN$$

Moment Arm (from Point O):

$$E_{h8E1a.loc.OT} := \frac{Key_{vdist}}{2} = -1.5\,m$$

$$E_{h8E1.OT} := \begin{cases} E_{h8E1a.OT} & \text{if } Key_{vdist} < 0 \\ \Sigma H_{SoilresistE1} - H_{h6E1} - H_{h2aE1} & \text{otherwise} \end{cases} = 692.583 \cdot kN$$

$$\Sigma M_{SoilresistE1} := \begin{cases} E_{h8E1a.OT} \cdot E_{h8E1a.loc.OT} & \text{if } Key_{vdist} < 0 \\ \Sigma M_{HorizSoilResistE1} - H_{h6E1} \cdot H_{h6locE1} - H_{h2aE1} \cdot H_{h2alocE1} & \text{otherwise} \end{cases} = -1038.875 \cdot kN \cdot m$$

Sum of Moment about Point O:

$$\Sigma M_{LateraldriveE1.OT} := E_{s1E1.OT} \cdot E_{s1locE1.OT} + E_{h1E1.OT} \cdot E_{h1locE1.OT} + E_{h2E1.OT} \cdot E_{h2locE1.OT} \cdots + E_{h2aE1.OT} \cdot E_{h2alocE1.OT} + H_{h2E1} \cdot H_{h2locE1} = -1269.5 \cdot kN \cdot m$$

$$\Sigma M_{LateralresistE1.OT} := \Sigma M_{waterresistE1.OT} + \Sigma M_{SoilresistUN2} = -921.1 \cdot kN \cdot m$$

$$\Sigma M_{seisE1.OT} := M_{Qv.conc} + M_{Q.conc} + M_{Qv.SoilWaterE1} + M_{Q.h.SoilWaterE1} = -2064 \cdot kN \cdot m$$

(seismic moment modified for the most adverse overturning effect)

Total moment:

$$\Sigma M_{E1.OT} := \Sigma M_{conc} + \Sigma M_{VertSoilWaterResistE1} + \Sigma M_{UpliftE1.OT} \cdots + \Sigma M_{LateraldriveE1.OT} + \Sigma M_{LateralresistE1.OT} + \Sigma M_{seisE1.OT} = 2956.8 \cdot kN \cdot m$$

Total Vertical Force:

$$\Sigma V_{E1.OT} := \Sigma V_{conc} + \Sigma V_{SoilWaterE1} + \Sigma V_{UplliftE1.OT} + Q_{v.conc} + Q_{v.SoilWaterE1} = 1125.1 \cdot kN$$

Distance X_R: EM 1110-2-2502 Eq.4-1

$$X_{R.E1} := \frac{\Sigma M_{E1.OT}}{\Sigma V_{E1.OT}} = 2.628\,m$$

Overturning Resultant Ratio

$$Ratio_{E1.OT} := \frac{X_{R.E1}}{b} = 0.29$$

$$Ratio_{E1.OT.check} := \begin{cases} \text{"OKAY "} & \text{if } Ratio_{E1.OT} > X_{R.reqE1} \\ \text{"Revise Structure""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

CHECK FOUNDATION ECCENTRICITY (HORIZONTAL PLANE):

Eccentricity (horizontal plan):

$$ex_{E1.OT} := \frac{b}{2} - \frac{\Sigma M_{E1.OT}}{\Sigma V_{E1.OT}} = 1.87\,m \qquad Kern_{E1.OT} := \frac{b}{4} = 2.25\,m$$

Eccentricity Check:

$$e_{check.E1.OT} := \begin{cases} \text{"Okay"} & \text{if } ex_{E1.OT} \le Kern_{E1.OT} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"Okay"}$$

LOAD CASE E1

CHECK FOUNDATION BEARING CAPACITY (HORIZONTAL PLANE):

Base Section Modulus: $S_{b.OT} = 13.5\ m^3$

Bearing Pressure Under Toe:

$$\sigma_{ToeE1.OT} := \begin{cases} \left(\dfrac{\Sigma V_{E1.OT}}{b \cdot B} + \dfrac{\Sigma V_{E1.OT} \cdot ex_{E1.OT}}{S_{b.OT}}\right) & \text{if } \dfrac{\Sigma V_{E1.OT}}{b \cdot B} \geq \dfrac{\Sigma V_{E1.OT} \cdot ex_{E1.OT}}{S_{b.OT}} \\ \dfrac{2 \cdot \Sigma V_{E1.OT}}{B \cdot 3\left(\dfrac{b}{2} - ex_{E1.OT}\right)} & \text{otherwise} \end{cases} = 285.4 \cdot kPa$$

$$Bearing_{ChecktoeE1.OT} := \begin{cases} \text{"OKAY "} & \text{if } \sigma_{ToeE1.OT} < \sigma_{allowE1} \\ \text{"NG - for reference only""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

Bearing Pressure Under Heel:

$$\sigma_{HeelE1.OT} := \begin{cases} \left(\dfrac{\Sigma V_{E1.OT}}{b \cdot B} - \dfrac{\Sigma V_{E1.OT} \cdot ex_{E1.OT}}{S_{b.OT}}\right) & \text{if } \dfrac{\Sigma V_{E1.OT}}{b \cdot B} \geq \dfrac{\Sigma V_{E1.OT} \cdot ex_{E1.OT}}{S_{b.OT}} \\ 0 & \text{otherwise} \end{cases} = 0.0 \cdot kPa$$

$$Bearing_{CheckheelE1.OT} := \left(\begin{cases} \text{"OKAY "} & \text{if } \sigma_{HeelE1.OT} < \sigma_{allowE1} \wedge \sigma_{HeelE1.OT} > 0 \\ \text{"NG - for reference only""} & \text{otherwise} \end{cases} \right) = \text{"NG - for reference only""}$$

DI-5B Retaining Wall Stability Calculations

Project Number: 110773396

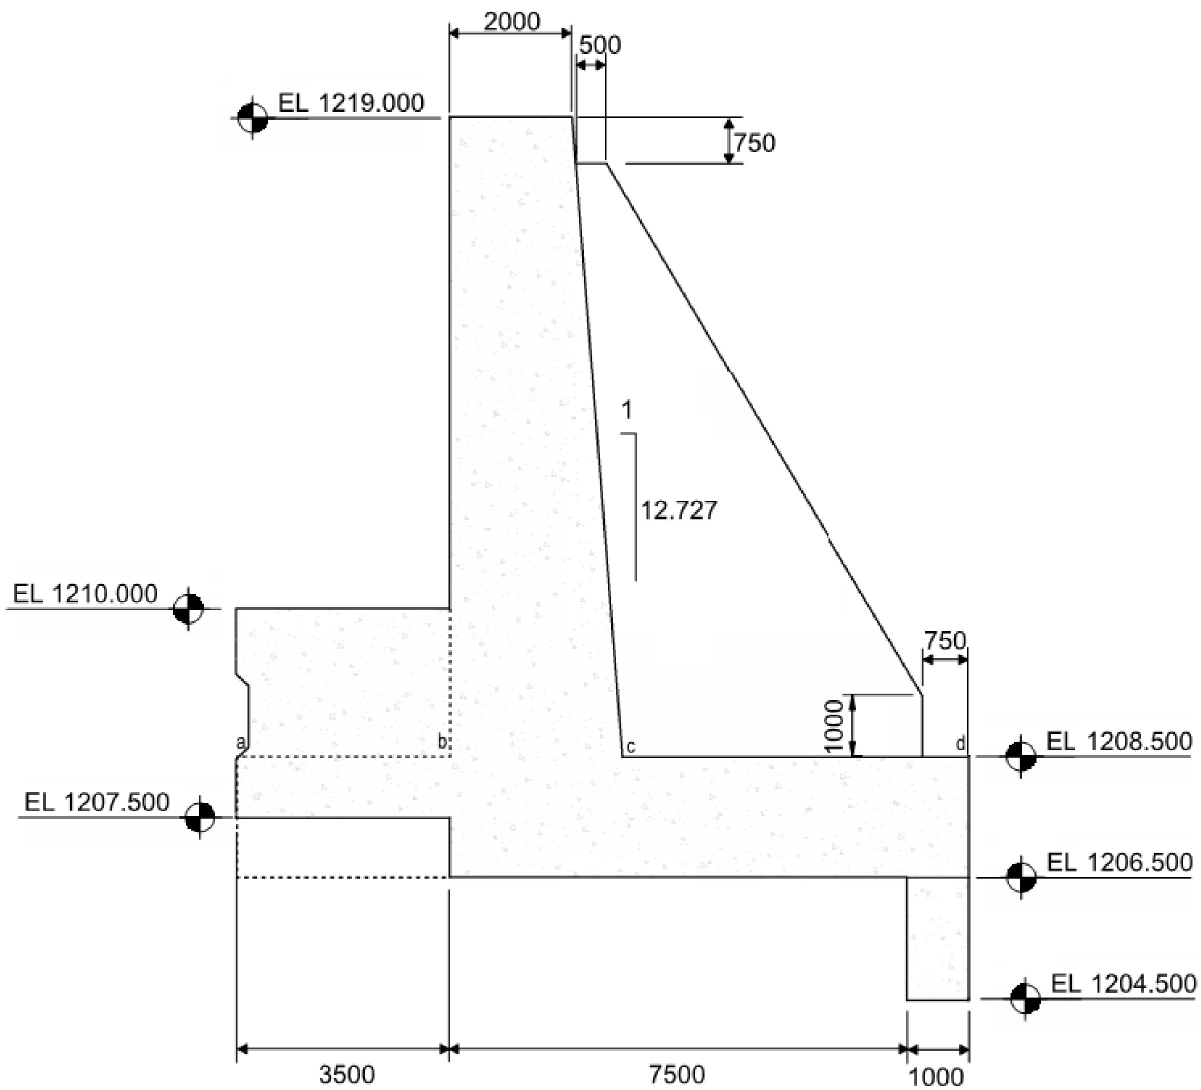
Project Title: SR1 - Diversion Structure

Client: Alberta Transportation

Engineer: Lawrence Choi   Date: 12/11/2018

Checker: Sean Xiao   Date: 12/18/2018

Calculation for: Retaining Wall - Diversion Inlet Left - Block 5B



REGION COLOR CONVENTION

User Input

Calulation Highlights

Results

WALL GEOMETRY:

Top of Wall Elevation: $T_w := 1219.0 \cdot m$

Top of Footing Elevation: $Top_{ftg} := 1208.5 \cdot m$

Thickness of Footing: $t_{ftg} := 2.0m$

Bottom of Footing Elevation: $Bot_{ftg} := Top_{ftg} - t_{ftg} = 1206.5\ m$

Overall Height of wall: $h_w := T_w - Bot_{ftg} = 12.50\ m$

Thickness of Wall: Base: $t_{wb} := 2.825 \cdot m$ Top: $t_{wt} := 2.0m$

Length of toe: $L_{ab} := 3.5m$

Total Length of Footing: $b := 12.0m$

Length of heel: $L_{cd} := b - L_{ab} - t_{wb} = 5.675\ m$

Unit Width of Wall for analysis: $B := 1.00m$

SHEAR KEY GEOMETRY:

	Toe	Heel	
Key depth:	$Key_{t.d} := 0m$	$Key_{h.d} := 2.0m$	(Assumption: $Key_{h.d}$ >= $Key_{t.d}$)
Key width:	$Key_{t.w} := 0m$	$Key_{h.w} := 1m$	
Face of Key from Point O:	$Key_{t.loc} := 0 \cdot m$	$Key_{h.loc} := 11.0 \cdot m$	

Horizontal Distance between Keys: $Key_{hdist} := Key_{h.loc} - Key_{t.loc} - Key_{t.w} = 11\ m$

Key Depth Diff. (from point O): $Key_{vdist} := -Key_{h.d} + Key_{t.d} = -2\ m$

BASE PROPERTIES:

Base Area: $A_b := b \cdot B = 12\ m^2$

Centroidal Distance for Footing (from Toe): $Y_t := \frac{b}{2} = 6.00\ m$

RETAINED SOIL GEOMETRY:

Slope of retained ground surface: $\beta := 0 \cdot \frac{\pi}{180} = 0.00$

Height of retained earth at heel: $H_w := T_w - Bot_{ftg} + \left(t_{wb} + L_{cd} - t_{wt}\right) \cdot \tan(\beta) = 12.50\ m$

RETAINING WALL GEOMETRY CHECKS:

(Foundation Analysis & Design Bowles)

$$t_{bcheck} := \begin{cases} \text{"OKAY"} & \text{if } t_{ftg} \ge \frac{H_w}{12} \\ \text{"Warning"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

$$t_{wcheck} := \begin{cases} \text{"OKAY"} & \text{if } t_{wb} \ge \frac{H_w}{12} \\ \text{"Warning"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

$$b_{check} := \begin{cases} \text{"OKAY"} & \text{if } \frac{b}{H_w} \ge .4 \wedge \frac{b}{H_w} \le 80 \\ \text{"Warning"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

$$L_{abcheck} := \begin{cases} \text{"OKAY"} & \text{if } \frac{L_{ab}}{b} \ge .25 \wedge \frac{L_{ab}}{b} \le .4 \\ \text{"Warning"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

Material Properties:

Unit Weight of Water:	$\gamma_w := 9.8 \frac{kN}{m^3}$	(Section 7.2, Design Criteria)
Unit Weight of Concrete:	$\gamma_c := 23.5 \frac{kN}{m^3}$	
Unit Weight of Soil (Moist):	$\gamma_m := 20.0 \frac{kN}{m^3}$	(Section 5.3, Design Criteria) assumed moisture content (w) = 5%
Unit Weight Soil (Saturated):	$\gamma_{sat} := 22.0 \frac{kN}{m^3}$	(Assuming Specific Gravity = 2.7
Unit Weight Soil (buoyant):	$\gamma_b := \gamma_{sat} - \gamma_w = 12.2 \cdot \frac{kN}{m^3}$	
Weight of Soil/Concrete above toe:	$\gamma_{toe} := 22.0 \frac{kN}{m^3}$	
Unit Weight of Rock:	$\gamma_r := 25.6 \frac{kN}{m^3}$	(Section 7.2, Design Criteria)

Foundation Parameters:

Glacial Till Internal Friction:	$\phi := 27 \cdot \frac{\pi}{180} = 0.471$	
Bedrock Internal Friction Angle:	$\phi_r := 24 \cdot \frac{\pi}{180} = 0.419$	
Friction Angle at Base Concrete / Rock Interface:	$\phi_{rock} := 26$	
Base Friction Coefficient:	$tan_{\phi rock} := \tan\left(\phi_{rock} \frac{\pi}{180}\right) = 0.488$	radians
Rip Rap Backfill, Refer Dwg. C-214	$\phi_{backfill} := \left(20 \frac{\pi}{180}\right) = 0.349$	radians
Shear strength along rock Failure plane	$s_r := \frac{13100 \frac{kN}{m^2}}{2} = 6550 \cdot \frac{kN}{m^2}$	(Stantec Design Memo 8/8/16)

CONCRETE DEAD LOAD:

Area of Footing: $A_{ftg} := t_{ftg} \cdot b = 24\,m^2$

Weight of Footing: $D_{ftg} := A_{ftg} \cdot B \cdot \gamma_c = 564 \cdot kN$

Area of Stem (without batter): $A_{w1} := t_{wt} \cdot (h_w - t_{ftg}) = 21\,m^2$

Weight of Stem: $D_{w1} := A_{w1} \cdot B \cdot \gamma_c = 493.5 \cdot kN$

Area of stem Batter: $A_{w2} := \frac{(t_{wb} - t_{wt})}{2} (h_w - t_{ftg}) = 4.33\,m^2$

Weight of Batter: $D_{w2} := A_{w2} \cdot B \cdot \gamma_c = 101.8 \cdot kN$

Slope of batter: $S_{batter} := \frac{t_{wb} - t_{wt}}{h_w - t_{ftg}} = 0.079$

Area of Key $A_{t.key} := Key_{t.d} \cdot Key_{t.w} = 0$ $A_{h.key} := Key_{h.d} \cdot Key_{h.w} = 2\,m^2$

Weight of Key $D_{t.key} := A_{t.key} \cdot B \cdot \gamma_c = 0 \cdot kN$ $D_{h.key} := A_{h.key} \cdot B \cdot \gamma_c = 47 \cdot kN$

Centroidal Horizontal Distance of Wall (From Toe):

$$H_{cent} := \frac{A_{w1} \cdot \left(L_{ab} + \frac{t_{wt}}{2}\right) + A_{w2} \cdot \left(L_{ab} + t_{wt} + \frac{t_{wb} - t_{wt}}{3}\right) + A_{ftg} \cdot \frac{b}{2} + A_{t.key} \cdot \left(Key_{t.loc} + \frac{Key_{t.w}}{2}\right) + A_{h.key} \cdot \left(Key_{h.loc} + \frac{Key_{h.w}}{2}\right)}{A_{w1} + A_{w2} + A_{ftg} + A_{t.key} + A_{h.key}} = 5.58\,m$$

Centroidal Vertical Distance of Wall (Above Base of Footing):

$$V_{Cent} := \frac{A_{ftg} \cdot \frac{t_{ftg}}{2} + A_{w1} \cdot \left[t_{ftg} + \frac{(h_w - t_{ftg})}{2}\right] + A_{w2} \cdot \left[t_{ftg} + \frac{(h_w - t_{ftg})}{3}\right] + A_{t.key} \cdot \left(\frac{-Key_{t.d}}{2}\right) + A_{h.key} \cdot \left(\frac{-Key_{h.d}}{2}\right)}{A_{ftg} + A_{w1} + A_{w2} + A_{t.key} + A_{h.key}} = 3.86\,m$$

$\Sigma V_{conc} := D_{ftg} + D_{w1} + D_{w2} + D_{t.key} + D_{h.key} = 1206.3 \cdot kN$

$\Sigma M_{conc} := \Sigma V_{conc} \cdot H_{cent} = 6733.1\,m \cdot kN$

ROCK SECTION MOBILIZED FOR INCLINDED SLIDING FAILURE

Area of Rock Section Mobilized: $A_{rocksection} := (Key_{t.d} + Key_{h.d}) \cdot \frac{Key_{hdist}}{2} = 11\,m^2$

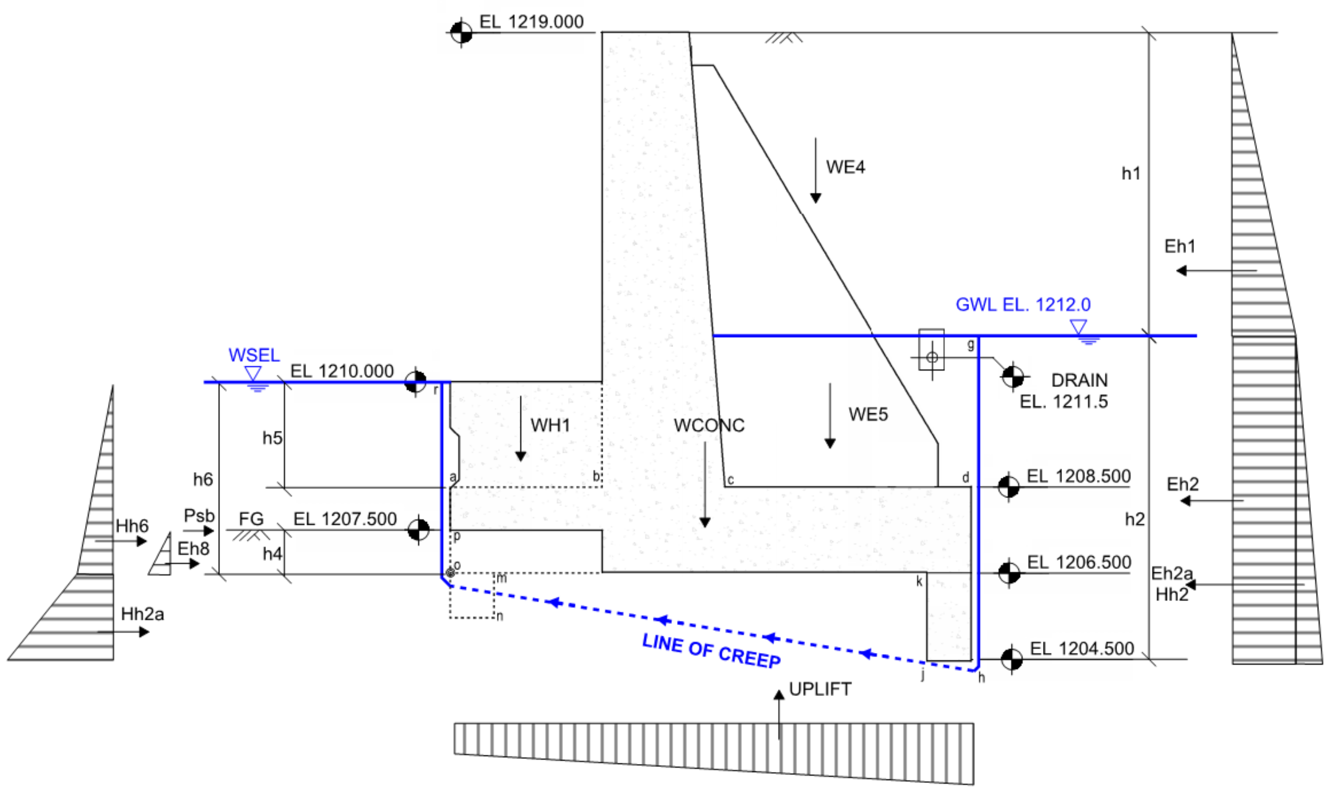
Rock Mass Mobilized: $V_{rocksection} := A_{rocksection} \cdot \gamma_r \cdot B = 281.6 \cdot kN$

(Pore pressure taken along assumed inclined sliding plane)

Distance from Toe to COG of Rock Section: $L_{rocksection} := \frac{Key_{hdist} \cdot (2 \cdot Key_{h.d} + Key_{t.d})}{3(Key_{h.d} + Key_{t.d})} + Key_{t.w} = 7.333\,m$

$\Sigma M_{rocksection} := V_{rocksection} \cdot L_{rocksection} = 2065.1\,m \cdot kN$

LOAD CASE U1 - NORMAL OPERATION



U1 DESIGN CASE

LOAD CASE U1 ACCEPTANCE PARAMETERS

FS sliding:

Usual (U) 1.5 (without cohesion) (Table 3-3, USACE EM 1110-2-2100)

Resultant Location:

Usual (U) Inside middle third ~100% base in compression

Required Factor of Safety for Sliding: $FS_{sliding.reqU1} := 1.5$ (Without Cohesion)

Allowable rock bearing pressure: $\sigma_{allowU1} := 1270kPa$ (Section 5.2, Design Criteria EM 1110-2-2100 Section 3-10)

Overturning Required Resultant Ratio: $X_{R.reqU1} := 0.333$ (EM 1110-2-2502, Figure 4-4)

Required Factor of Safety for Floatation $FS_{req.U1.flt} := 1.5$

SOIL HEIGHTS and Water Levels:

LOAD CASE U1

Heel Conditions:

Groundwater Elevation at Heel: $GWL_{U1} := 1212.0m$

Distance from Finish Grade to Groundwater at Heel: $h_{1U1} := \left[T_w - GWL_{U1} + \left(L_{cd} + t_{wb} - t_{wt}\right)\cdot \tan(\beta)\right] = 7.00\ m$

Distance from Water Surface to Bottom of Footing at Heel: $h_{2U1} := GWL_{U1} - Bot_{ftg} + Key_{h.d} = 7.50\ m$

Toe Conditions:

Water Surface Elevation at Toe: $WSEL_{U1} := 1210.0m$

Water Surface Elevation at Toe for Uplift: $UWSEL_{U1} := 1210.0\cdot m$

Finish Grade at Toe providing lateral resistance: $FG_{toeU1} := 1207.5\cdot m$

Soil Depth Above top of footing: $h_{3aU1} := FG_{toeU1} - Top_{ftg} = -1\ m$

$$h_{3U1} := \begin{cases} h_{3aU1} & \text{if } FG_{toeU1} - Top_{ftg} \ge 0 \\ 0 & \text{otherwise} \end{cases} = 0$$

Resisting Fill at Toe: $h_{4U1} := FG_{toeU1} - Bot_{ftg} + Key_{t.d} = 1.00\ m$

Distance from Water Level to Top of Footing: $h_{5U1} := WSEL_{U1} - Top_{ftg} = 1.50\ m$

Distance from Water Surface to Bottom of Footing: $h_{6U1} := WSEL_{U1} - Bot_{ftg} + Key_{t.d} = 3.50\cdot m$

Soil Depth Above WSEL: $h_{7aU1} := FG_{toeU1} - WSEL_{U1} = -2.5\ m$

$$h_{7U1} := \begin{cases} h_{7aU1} & \text{if } FG_{toeU1} - WSEL_{U1} \ge 0 \\ 0 & \text{otherwise} \end{cases} = 0$$

Soil Depth Below WSEL:

$$h_{8U1} := \begin{cases} WSEL_{U1} - Bot_{ftg} + Key_{t.d} & \text{if } FG_{toeU1} - WSEL_{U1} \ge 0 \\ h_{4U1} & \text{otherwise} \end{cases} = 1$$

For Line of Creep Method: $L_{ho.U1} := \sqrt{b^2 + \left(Key_{h.d} - Key_{t.d}\right)^2} = 12.166\ m$

Head Loss from Point g:

$\Delta h_{g.hj.U1} := h_{2U1} = 7.5\ m$ (to point h & j)

$\Delta h_{g.km.U1} := GWL_{U1} - Bot_{ftg} = 5.5\ m$ (to point k & m)

$\Delta h_{g.no.U1} := GWL_{U1} - Bot_{ftg} + Key_{t.d} = 5.5\ m$ (to point n & o)

$\Delta h_{g.p.U1} := GWL_{U1} - FG_{toeU1} = 4.5\ m$ (to point p)

$\Delta h_{g.r.U1} := GWL_{U1} - UWSEL_{U1} = 2\ m$ (to point r)

Surcharge

Surcharge on Heel: $S1_{U1} := 0.0\ \frac{kN}{m^2}$

Calculate Soil Lateral Pressure Coefficients:

LOAD CASE U1

For all load cases except seismic, soil loading to be based on At-Rest Condition.
Calculate at-rest pressure coefficient Ko based on Jaky's (1944) equation.

Soil At Rest Static Coefficient: $K_o := \dfrac{1 - \sin(\phi)}{1 + \sin(\beta)} = 0.546$ (Eq. 3-6, USACE EM 1110-2-2502)

Lateral - Driving Force (Headwater Side)

Lateral Soil Load:

Surcharge Load: $E_{s1U1} := S1_{U1} \cdot K_o \cdot \left(H_w + Key_{h.d}\right) \cdot B \cdot -1 = 0 \cdot kN$

Moment Arm (from bottom of footing): $E_{s1locU1} := \dfrac{H_w + Key_{h.d}}{2} + Key_{vdist} = 5.25\ m$

Moist Soil Load above GWL: $E_{h1U1} := \dfrac{\gamma_m \cdot K_o \cdot h_{1U1}^{\ 2}}{2} B \cdot -1 = -267.5 \cdot kN$

Moment Arm (from bottom of footing): $E_{h1locU1} := \dfrac{h_{1U1}}{3} + h_{2U1} + Key_{vdist} = 7.83\ m$

Saturated Soil Load below GWL:
(rectangular component) $E_{h2U1} := \left(\gamma_m \cdot K_o \cdot h_{1U1}\right) \cdot \left(h_{2U1}\right) \cdot B \cdot -1 = -573.3 \cdot kN$

Moment Arm (from bottom of footing): $E_{h2locU1} := \dfrac{h_{2U1}}{2} + Key_{vdist} = 1.75\ m$

Saturated Soil Load below GWL:
(triangular component) $E_{h2aU1} := \dfrac{\left(\gamma_{sat} - \gamma_w\right) \cdot K_o \cdot h_{2U1}^{\ 2}}{2} \cdot B \cdot -1 = -187.3 \cdot kN$

Moment Arm (from bottom of footing): $E_{h2alocU1} := \dfrac{h_{2U1}}{3} + Key_{vdist} = 0.50\ m$

Lateral Water Load:

Water Load GWL to Bottom of Key $H_{h2U1} := \dfrac{\gamma_w \cdot h_{2U1}^{\ 2}}{2} \cdot B \cdot -1 = -275.6 \cdot kN$

Moment Arm (from bottom of footing): $H_{h2locU1} := \dfrac{h_{2U1}}{3} + Key_{vdist} = 0.50\ m$

$\Sigma H_{SoildriveU1} := E_{s1U1} + E_{h1U1} + E_{h2U1} + E_{h2aU1} + H_{h2U1} = -1303.8 \cdot kN$

$$\Sigma M_{LateralSoildriveU1} := E_{s1U1} \cdot E_{s1locU1} + E_{h1U1} \cdot E_{h1locU1} + E_{h2U1} \cdot E_{h2locU1} \ \cdots + E_{h2aU1} \cdot E_{h2alocU1} + H_{h2U1} \cdot H_{h2locU1} = -3330.5\ m \cdot kN$$

Lateral - Resisting Force (Tailwater Side)

LOAD CASE U1

Lateral Water Load:

Water Load WSEL to Bot. of Footing: $H_{h6U1} := \dfrac{\gamma_w \cdot h_{6U1}^{\,2}}{2} \cdot B = 60.0 \cdot kN$

Moment Arm (from bot. of toe key): $H_{h6locU1} := \dfrac{h_{6U1}}{3} = 1.17\,m$

Water Load Bot. of Footing to Bot. of H. Key: $H_{h2aU1} := \left[\left(UWSEL_{U1} - Bot_{ftg} + Key_{t.d}\right) + h_{2U1}\right] \cdot \dfrac{Key_{h.d}}{2} \cdot \gamma_w \cdot B = 107.8 \cdot kN$

Moment Arm (from bot. of toe key): $H_{h2alocU1} := \dfrac{Key_{h.d} \cdot \left[2 \cdot \left(UWSEL_{U1} - Bot_{ftg} + Key_{t.d}\right) + h_{2U1}\right]}{3\left[h_{2U1} + \left(UWSEL_{U1} - Bot_{ftg} + Key_{t.d}\right)\right]} \ldots + Key_{vdist} = -1.12\,m$

Lateral Soil Load:

Moist Soil Load above WSEL: $E_{h7U1} := \dfrac{\gamma_m \cdot K_o \cdot h_{7U1}^{\,2}}{2} B = 0.0 \cdot kN$

Moment Arm (from bot. of toe key): $E_{h7locU1} := h_{6U1} + \dfrac{h_{7U1}}{3} + Key_{vdist} = 1.50\,m$

Saturated Soil Load below WSEL:
(rectangular component) $E_{h8U1} := \left(\gamma_m \cdot K_o \cdot h_{7U1}\right) \cdot h_{8U1} \cdot B = 0.0 \cdot kN$

Moment Arm (from bot. of toe key): $E_{h8locU1} := \dfrac{h_{8U1}}{2} = 0.50\,m$

Saturated Soil Load below WSEL:
(triangular component) $E_{h8aU1} := \dfrac{\left[\left(\gamma_{sat} - \gamma_w\right) \cdot K_o\right] \cdot h_{8U1}^{\,2}}{2} \cdot B = 3.3 \cdot kN$

Moment Arm (from bot. of footing): $E_{h8alocU1} := \dfrac{h_{8U1}}{3} = 0.33\,m$

Lateral Resistance from Stilling Basin:

Lateral Resistance from Stilling Basin: $P_{sbU1} := 291kN$ (Force needed to achieve the required sliding factor of safety in case UN2)

Moment Arm (from bot. of toe key): $P_{sblocU1} := \dfrac{t_{ftg}}{2} + Key_{t.d} = 1.00\,m$

$\Sigma H_{SoilresistU1} := H_{h6U1} + H_{h2aU1} + E_{h7U1} + E_{h8U1} + E_{h8aU1} + P_{sbU1} = 462.2 \cdot kN$

$\Sigma M_{HorizSoilResistU1} := H_{h6U1} \cdot H_{h6locU1} + H_{h2aU1} \cdot H_{h2alocU1} + E_{h7U1} \cdot E_{h7locU1} \ldots + E_{h8U1} \cdot E_{h8locU1} + E_{h8aU1} \cdot E_{h8alocU1} + P_{sbU1} \cdot P_{sblocU1} = 241.3\,m \cdot kN$

Vertical Force:

UPLIFT: Linear distribution from water at heel to water at toe:

$\Sigma V_{UpliftU1} := \left[\left(UWSEL_{U1} - Bot_{ftg} + Key_{t.d}\right) + h_{2U1}\right] \cdot \dfrac{b}{2} \cdot \gamma_w \cdot B \cdot -1 = -646.8 \cdot kN$

Moment Arm (from Point O): $V_{UpliftU1aloc} := \dfrac{b \cdot \left[2 \cdot h_{2U1} + \left(UWSEL_{U1} - Bot_{ftg} + Key_{t.d}\right)\right]}{3\left[h_{2U1} + \left(UWSEL_{U1} - Bot_{ftg} + Key_{t.d}\right)\right]} = 6.727\,m$

$\Sigma M_{UpliftU1} := \Sigma V_{UpliftU1} \cdot V_{UpliftU1aloc} = -4351.2 \cdot kN \cdot m$

Vertical Force (con't):

Weight of soil and water over toe:

Water Above the Top of Footing: $W_{H1U1} := \gamma_w \cdot h_{5U1} \cdot L_{ab} \cdot B = 51.45 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E1locU1} := \frac{L_{ab}}{2} = 1.75\,m$

Soil above top of footing: $W_{E6U1} := \gamma_b \cdot h_{3U1} \cdot L_{ab} \cdot B = 0.0 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E6locU1} := \frac{L_{ab}}{2} = 1.75\,m$

Vertical Load Due to Surcharge: $S_{U1} := S1_{U1} \cdot L_{cd} \cdot B = 0$ $\quad S_{U1loc} := b - \frac{L_{cd}}{2} = 9.16\,m$

Weight of soil and water over heel:

Moist Soil for sloped grade above top of wall:

Length of sloped portion of soil above top of wall: $L_{E3U1} := \left(L_{cd} + t_{wb} - t_{wt}\right) = 6.50\,m$

Height of sloped soil above top of wall over heel: $h_{E3locU1} := \left(L_{E3U1}\right) \cdot \tan(\beta) = 0.00\,m$

Weight of sloped soil above top of wall: $W_{E3U1} := \frac{\gamma_m}{2} \cdot h_{E3locU1} \cdot L_{E3U1} \cdot B = 0.0 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E3locU1} := L_{ab} + t_{wt} + \frac{2}{3} \cdot L_{E3U1} = 9.83\,m$

Moist soil from top of wall to groundwater level:

Height of soil from top of wall and top of GWL: $h_{1U1} = 7.00\,m$

Length from edge of wall at GWL to edge of heel: $L_{E4U1} := L_{E3U1} - \left(h_{1U1} \cdot S_{batter}\right) = 5.95\,m$

Weight of soil over heel from top of wall to GWL: $W_{E4U1} := \gamma_m \cdot h_{1U1} \cdot \frac{\left(L_{E3U1} + L_{E4U1}\right)}{2} \cdot B = 871.5 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E4locU1} := b - \frac{L_{E3U1}^2 + L_{E3U1} \cdot L_{E4U1} + L_{E4U1}^2}{3\left(L_{E3U1} + L_{E4U1}\right)} = 8.89\,m$

Saturated soil from groundwater to top of footing:

Height of soil from GWL to top of heel: $h_{E4U1} := h_{2U1} - t_{ftg} - Key_{h.d} = 3.50\,m$

Weight of soil over heel from GWL to top of heel: $W_{E5U1} := \left(\gamma_{sat}\right) \cdot h_{E4U1} \cdot \frac{\left(L_{E4U1} + L_{cd}\right)}{2} \cdot B = 447.6 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E5locU1} := b - \frac{L_{E4U1}^2 + L_{E4U1} \cdot L_{cd} + L_{cd}^2}{3\left(L_{E4U1} + L_{cd}\right)} = 9.09\,m$

$$\Sigma V_{SoilWaterU1} := W_{H1U1} + W_{E6U1} + W_{E3U1} + W_{E4U1} + W_{E5U1} + S_{U1} = 1370.5 \cdot kN$$

$$\Sigma M_{VertSoilWaterResistU1} := W_{H1U1} \cdot W_{E1locU1} + W_{E6U1} \cdot W_{E6locU1} \cdots + W_{E3U1} \cdot W_{E3locU1} + W_{E4U1} \cdot W_{E4locU1} + W_{E5U1} \cdot W_{E5locU1} + S_{U1} \cdot S_{U1loc} = 11903.5\,m \cdot kN$$

CHECK OVERTURNING

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stablity of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1

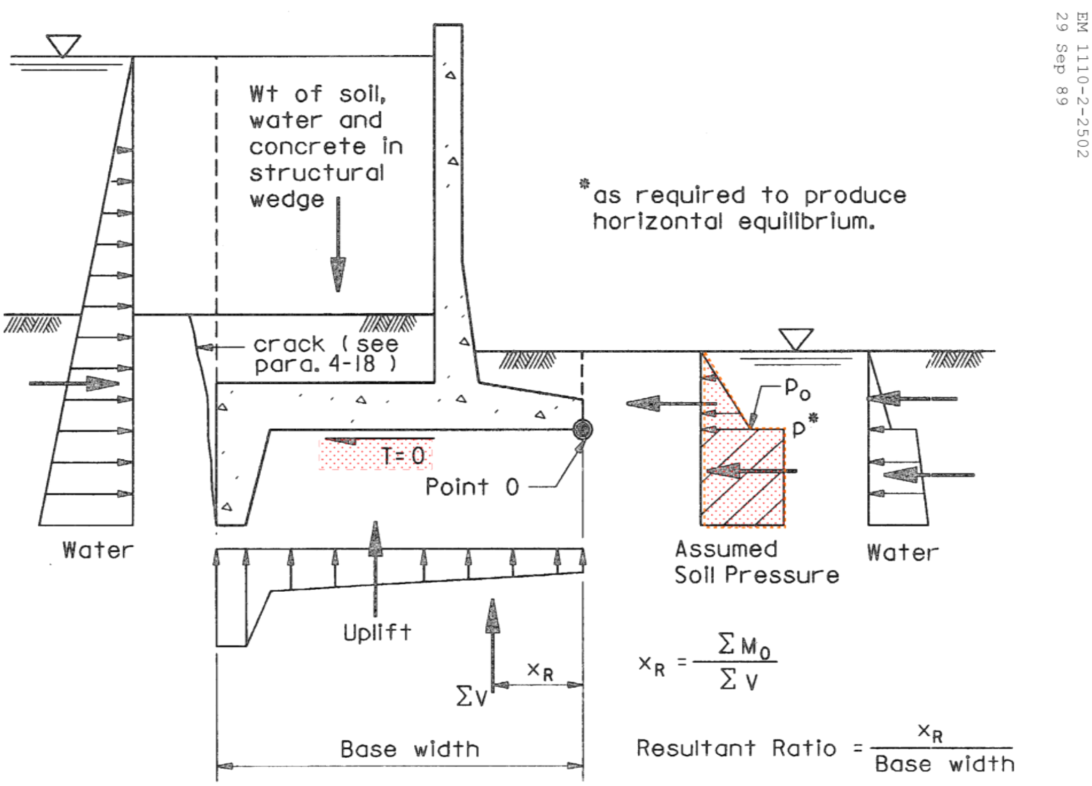

Figure 4-5. Forces for overturning analysis for wall with horizontal base and key

Modify Uplift for Overturning Analysis: **LOAD CASE U1**

(Uplift is calculated along the concrete/rock contact using the Line of Creep method)

Water Pressure at h: $u_{h.U1} := \Delta h_{g.hj.U1} \cdot \gamma_w = 73.50 \cdot kPa$

Water Pressure at o: $u_{o.U1} := \left(\Delta h_{g.no.U1} - \frac{\Delta h_{g.r.U1} \cdot L_{ho.U1}}{L_{ho.U1}}\right) \cdot \gamma_w = 34.3 \cdot kPa$

Head loss between point h and o: $\Delta h_{ho.U1} := \Delta h_{g.r.U1} \cdot \frac{L_{ho.U1}}{L_{ho.U1}} = 2\,m$

Length of concrete base (h -> o): $L_{baseho.U1} := Key_{h.w} + Key_{h.d} + Key_{hdist} + Key_{t.d} + Key_{t.w} = 14\,m$

Head loss along h -> j: $\Delta h_{hj.U1} := \Delta h_{ho.U1} \cdot \frac{Key_{h.w}}{L_{baseho.U1}} = 0.143\,m$

Water Pressure at j: $u_{j.U1} := \left(\Delta h_{g.hj.U1} - \Delta h_{hj.U1}\right) \cdot \gamma_w = 72.10 \cdot kPa$

Head loss along h -> k: $\Delta h_{hjk.U1} := \Delta h_{ho.U1} \cdot \left(\frac{Key_{h.w} + Key_{h.d}}{L_{baseho.U1}}\right) = 0.429\,m$

Water Pressure at k: $u_{k.U1} := \left(\Delta h_{g.km.U1} - \Delta h_{hjk.U1}\right) \cdot \gamma_w = 49.70 \cdot kPa$

Head loss along h -> m: $\Delta h_{hjkm.U1} := \Delta h_{ho.U1} \cdot \left(\frac{Key_{h.w} + Key_{h.d} + Key_{hdist}}{L_{baseho.U1}}\right) = 2\,m$

Water Pressure at m: $u_{m.U1} := \left(\Delta h_{g.km.U1} - \Delta h_{hjkm.U1}\right) \cdot \gamma_w = 34.30 \cdot kPa$

Head loss along h -> n: $\Delta h_{hjkmn.U1} := \Delta h_{ho.U1} \cdot \left(\frac{Key_{h.w} + Key_{h.d} + Key_{hdist} + Key_{t.d}}{L_{baseho.U1}}\right) = 2\,m$

Water Pressure at n: $u_{n.U1} := \left(\Delta h_{g.no.U1} - \Delta h_{hjkmn.U1}\right) \cdot \gamma_w = 34.30 \cdot kPa$

Uplift under key at heel: $V_{ulkeyhU1.OT} := \frac{\left(u_{h.U1} + u_{j.U1}\right) \cdot Key_{h.w}}{2} \cdot B \cdot -1 = -72.8 \cdot kN$

Moment Arm (from Point O): $V_{ulkeyhU1loc.OT} := b - \frac{Key_{h.w} \cdot \left(2 \cdot u_{j.U1} + u_{h.U1}\right)}{3 \cdot \left(u_{j.U1} + u_{h.U1}\right)} = 11.502\,m$

Uplift under base: $V_{ulbaseU1.OT} := \frac{\left(u_{k.U1} + u_{m.U1}\right) \cdot Key_{hdist}}{2} \cdot B \cdot -1 = -462 \cdot kN$

Moment Arm (from Point O): $V_{ulbaseU1loc.OT} := b - Key_{h.w} - \frac{Key_{hdist} \cdot \left(2 \cdot u_{m.U1} + u_{k.U1}\right)}{3 \cdot \left(u_{m.U1} + u_{k.U1}\right)} = 5.836\,m$

Uplift under key at toe: $V_{ulkeytU1.OT} := \frac{\left(u_{n.U1} + u_{o.U1}\right) \cdot Key_{t.w}}{2} \cdot B \cdot -1 = 0 \cdot kN$

Moment Arm (from Point O): $V_{ulkeytU1loc.OT} := \frac{Key_{t.w} \cdot \left(2 \cdot u_{n.U1} + u_{o.U1}\right)}{3 \cdot \left(u_{n.U1} + u_{o.U1}\right)} = 0$

$$\Sigma V_{UpliftU1.OT} := V_{ulkeyhU1.OT} + V_{ulbaseU1.OT} + V_{ulkeytU1.OT} = -535 \cdot kN$$

$$U_{U1.loc.OT} := \frac{V_{ulkeyhU1.OT} \cdot V_{ulkeyhU1loc.OT} + V_{ulbaseU1.OT} \cdot V_{ulbaseU1loc.OT} + V_{ulkeytU1.OT} \cdot V_{ulkeytU1loc.OT}}{\Sigma V_{UpliftU1.OT}} = 6.61\,m$$

$$\Sigma M_{UpliftU1.OT} := \Sigma V_{UpliftU1.OT} \cdot U_{U1.loc.OT} = -3533.6 \cdot kN \cdot m$$

Modify Lateral Water Pressure (Resisting) for Overturning Analysis:

(Resisting water pressure is calculated using the Line of Creep method)

Water Load at Key (heel): $H_{h2U1.OT} := \frac{u_{k.U1} + u_{j.U1}}{2} \cdot Key_{h.d} B = 121.8 \cdot kN$

Moment Arm (from Point O): $H_{h2locU1.OT} := \frac{Key_{h.d} \cdot \left(2 \cdot u_{k.U1} + u_{j.U1}\right)}{3\left(u_{k.U1} + u_{j.U1}\right)} + Key_{vdist} = -1.06\ m$

Water Load at Key (toe): $H_{h6U1.OT} := \frac{u_{o.U1} \cdot \left(UWSEL_{U1} - Bot_{ftg} + Key_{t.d}\right)}{2} \cdot B = 60 \cdot kN$

Moment Arm (from Point O): $H_{h6locU1.OT} := \frac{UWSEL_{U1} - Bot_{ftg} + Key_{t.d}}{3} = 1.17\ m$

$$\Sigma H_{waterresistU1.OT} := H_{h2U1.OT} + H_{h6U1.OT} = 181.82 \cdot kN$$

$$H_{waterresistlocU1.OT} := \frac{H_{h2U1.OT} \cdot H_{h2locU1.OT} + H_{h6U1.OT} \cdot H_{h6locU1.OT}}{\Sigma H_{waterresistU1.OT}} = -0.326\ m$$

$$\Sigma M_{waterresistU1.OT} := \Sigma H_{waterresistU1.OT} \cdot H_{waterresistlocU1.OT} = -59.24 \cdot kN \cdot m$$

Modify Lateral Soil Loads for Overturning Analysis:

(Lateral soil loads are calculated down to Point O instead of bottom of shear key)

Driving Soil Load (Headwater Side):

Surcharge Load: $E_{s1U1.OT} := S1_{U1} \cdot K_o \cdot \left(H_w + Key_{h.d} + Key_{vdist}\right) \cdot B \cdot -1 = 0 \cdot kN$

Moment Arm (from Point O): $E_{s1locU1.OT} := \frac{H_w + Key_{h.d} + Key_{vdist}}{2} = 6.25\ m$

Moist Soil Load above GWL: $E_{h1U1.OT} := \frac{\gamma_m \cdot K_o \cdot h_{1U1}^{\ 2}}{2} B \cdot -1 = -267.5 \cdot kN$

Moment Arm (from Point O): $E_{h1locU1.OT} := \frac{h_{1U1}}{3} + h_{2U1} + Key_{vdist} = 7.83\ m$

Saturated Soil Load below GWL: (rectangular component) $E_{h2U1.OT} := \left(\gamma_m \cdot K_o \cdot h_{1U1}\right) \cdot \left(h_{2U1} + Key_{vdist}\right) \cdot B \cdot -1 = -420.4 \cdot kN$

Moment Arm (from Point O): $E_{h2locU1.OT} := \frac{h_{2U1} + Key_{vdist}}{2} = 2.75\ m$

Saturated Soil Load below GWL: (triangular component) $E_{h2aU1.OT} := \frac{\left(\gamma_{sat} - \gamma_w\right) \cdot K_o \cdot \left(h_{2U1} + Key_{vdist}\right)^2}{2} \cdot B \cdot -1 = -100.8 \cdot kN$

Moment Arm (from Point O): $E_{h2alocU1.OT} := \frac{h_{2U1} + Key_{vdist}}{3} = 1.83\ m$

Resisting Soil Load (Tailwater Side):

(Determine resisting soil load based on depth variation between the keys (ie. Key_{vdist}). In case where key at heel is deeper than key at toe (ie. $Key_{vdist} < 0$), resisting soil load (p*) is assumed to produce horizontal equilibrium as per Figure 4-5 above. Resisting soil load (p_o) is neglected.)

Total Driving Force: $\Sigma H_{SoildriveU1.OT} := E_{s1U1.OT} + E_{h1U1.OT} + E_{h2U1.OT} + E_{h2aU1.OT} + H_{h2U1} = -1064.3 \cdot kN$

Total Resisting Force: $\Sigma H_{waterresistU1.OT} = 181.8 \cdot kN$

Assumed Soil Load p*: $E_{h8U1a.OT} := \left(\Sigma H_{SoildriveU1.OT} + \Sigma H_{waterresistU1.OT}\right) \cdot -1 = 882.524 \cdot kN$

Moment Arm (from Point O): $E_{h8U1a.loc.OT} := \dfrac{Key_{vdist}}{2} = -1\ m$

$$E_{h8U1.OT} := \begin{cases} E_{h8U1a.OT} & \text{if } Key_{vdist} < 0 \\ \Sigma H_{SoilresistU1} - H_{h6U1} - H_{h2aU1} - P_{sbU1} & \text{otherwise} \end{cases} = 882.524 \cdot kN$$

$$\Sigma M_{SoilresistU1} := \begin{cases} E_{h8U1a.OT} \cdot E_{h8U1a.loc.OT} & \text{if } Key_{vdist} < 0 \\ \Sigma M_{HorizSoilResistU1} - H_{h6U1} \cdot H_{h6locU1} - H_{h2aU1} \cdot H_{h2alocU1} - P_{sbU1} \cdot P_{sblocU1} & \text{otherwise} \end{cases} = -882.524 \cdot kN \cdot m$$

Sum of Moment about Point O:

$$\Sigma M_{LateraldriveU1.OT} := E_{s1U1.OT} \cdot E_{s1locU1.OT} + E_{h1U1.OT} \cdot E_{h1locU1.OT} + E_{h2U1.OT} \cdot E_{h2locU1.OT} \dots + E_{h2aU1.OT} \cdot E_{h2alocU1.OT} + H_{h2U1} \cdot H_{h2locU1} = -3574.5 \cdot kN \cdot m$$

$$\Sigma M_{LateralresistU1.OT} := \Sigma M_{waterresistU1.OT} + \Sigma M_{SoilresistU1} = -941.8 \cdot kN \cdot m$$

Total moment:

UN1 DESIGN CASE

LOAD CASE UN1 ACCEPTANCE PARAMETERS

FS sliding:

Unusual (UN) 1.3 (without cohesion) (Table 3-3, USACE EM 1110-2-2100)

Resultant Location:

Unsual (UN) Inside middle third ~100% base in compression

Required Factor of Safety for Sliding: $FS_{sliding.reqUN1} := 1.3$ (Without Cohesion)

Allowable rock bearing pressure: $\sigma_{allowUN1} := 1470kPa$ (Section 5.2, Design Criteria EM 1110-2-2100 Section 3-10)

Overturning Required Resultant Ratio: $X_{R.reqUN1} := 0.333$ (EM 1110-2-2502, Figure 4-4)

Required Factor of Safety for Floatation $FS_{req.UN1.flt} := 1.3$

SOIL HEIGHTS and Water Levels:

LOAD CASE UN1

Heel Conditions:

Groundwater Elevation at Heel: $GWL_{UN1} := 1212.0m$

Distance from Finish Grade to Groundwater at Heel: $h_{1UN1} := \left[T_w - GWL_{UN1} + \left(L_{cd} + t_{wb} - t_{wt}\right)\cdot \tan(\beta)\right] = 7.00\ m$

Distance from Water Surface to Bottom of Footing at Heel: $h_{2UN1} := GWL_{UN1} - Bot_{ftg} + Key_{h.d} = 7.50\ m$

Toe Conditions:

Water Surface Elevation at Toe: $WSEL_{UN1} := 1210.0m$

Water Surface Elevation at Toe for Uplift: $UWSEL_{UN1} := 1210.0\cdot m$

Finish Grade at Toe providing lateral resistance: $FG_{toeUN1} := 1207.5\cdot m$

Soil Depth Above top of footing: $h_{3aUN1} := FG_{toeUN1} - Top_{ftg} = -1\ m$

$$h_{3UN1} := \begin{cases} h_{3aUN1} & \text{if } FG_{toeUN1} - Top_{ftg} \ge 0 \\ 0 & \text{otherwise} \end{cases} = 0$$

Resisting Fill at Toe: $h_{4UN1} := FG_{toeUN1} - Bot_{ftg} + Key_{t.d} = 1.00\ m$

Distance from Water Level to Top of Footing at Toe: $h_{5UN1} := WSEL_{UN1} - Top_{ftg} = 1.50\ m$

Distance from Water Surface to Bottom of Footing at Toe: $h_{6UN1} := WSEL_{UN1} - Bot_{ftg} + Key_{t.d} = 3.50\ m$

Soil Depth Above WSEL: $h_{7aUN1} := FG_{toeUN1} - WSEL_{UN1} = -2.5\ m$

$$h_{7UN1} := \begin{cases} h_{7aUN1} & \text{if } FG_{toeUN1} - WSEL_{UN1} \ge 0 \\ 0 & \text{otherwise} \end{cases} = 0$$

Soil Depth Below WSEL:

$$h_{8UN1} := \begin{cases} WSEL_{UN1} - Bot_{ftg} + Key_{t.d} & \text{if } FG_{toeUN1} - WSEL_{UN1} \ge 0 \\ h_{4UN1} & \text{otherwise} \end{cases} = 1$$

For Line of Creep Method: $L_{ho.UN1} := \sqrt{b^2 + \left(Key_{h.d} - Key_{t.d}\right)^2} = 12.166\ m$

Head Loss from Point g:

$\Delta h_{g.hj.UN1} := h_{2UN1} = 7.5\ m$ (to point h & j)

$\Delta h_{g.km.UN1} := GWL_{UN1} - Bot_{ftg} = 5.5\ m$ (to point k & m)

$\Delta h_{g.no.UN1} := GWL_{UN1} - Bot_{ftg} + Key_{t.d} = 5.5\ m$ (to point n & o)

$\Delta h_{g.p.UN1} := GWL_{UN1} - FG_{toeUN1} = 4.5\ m$ (to point p)

$\Delta h_{g.r.UN1} := GWL_{UN1} - UWSEL_{UN1} = 2\ m$ (to point r)

Surcharge

Surcharge on Heel: $S1_{UN1} := 15.0\ \frac{kN}{m^2}$

Calculate Soil Lateral Pressure Coefficients:

LOAD CASE UN1

For all load cases except seismic, soil loading to be based on At-Rest Condition.
Calculate at-rest pressure coefficient Ko based on Jaky's (1944) equation.

Soil At Rest Static Coefficient: $K_o := \frac{1 - \sin(\phi)}{1 + \sin(\beta)} = 0.546$ (Eq. 3-6, USACE EM 1110-2-2502)

Lateral - Driving Force

Static At-Rest:

Surcharge Load: $E_{s1UN1} := S1_{UN1} \cdot K_o \cdot \left(H_w + Key_{h.d}\right) \cdot B \cdot -1 = -118.757 \cdot kN$

Moment Arm (from bottom of footing): $E_{s1locUN1} := \frac{H_w + Key_{h.d}}{2} + Key_{vdist} = 5.25\ m$

Moist Soil Load above GWL: $E_{h1UN1} := \frac{\gamma_m \cdot K_o \cdot h_{1UN1}^{\ 2}}{2} \cdot B \cdot -1 = -267.5 \cdot kN$

Moment Arm (from bottom of footing): $E_{h1locUN1} := \frac{h_{1UN1}}{3} + h_{2UN1} + Key_{vdist} = 7.83\ m$

Saturated Soil Load below GWL:
(rectangular component)
$E_{h2UN1} := \left(\gamma_m \cdot K_o \cdot h_{1UN1}\right) \cdot \left(h_{2UN1}\right) \cdot B \cdot -1 = -573.3 \cdot kN$

Moment Arm (from bottom of footing): $E_{h2locUN1} := \frac{h_{2UN1}}{2} + Key_{vdist} = 1.75\ m$

Saturated Soil Load below GWT:
(triangular L
$E_{h2aUN1} := \frac{\left(\gamma_{sat} - \gamma_w\right) \cdot K_o \cdot h_{2UN1}^{\ 2}}{2} \cdot B \cdot -1 = -187.3 \cdot kN$

Moment Arm (from bottom of footing): $E_{h2alocUN1} := \frac{h_{2UN1}}{3} + Key_{vdist} = 0.50\ m$

Lateral Water Load:

Water Load GWL to Bottom of Key: $H_{h2UN1} := \frac{\gamma_w \cdot h_{2UN1}^{\ 2}}{2} \cdot B \cdot -1 = -275.6 \cdot kN$

Moment Arm (from bottom of footing): $H_{h2locUN1} := \frac{h_{2UN1}}{3} + Key_{vdist} = 0.50\ m$

$$\Sigma H_{SoildriveUN1} := E_{s1UN1} + E_{h1UN1} + E_{h2UN1} + E_{h2aUN1} + H_{h2UN1} = -1422.6 \cdot kN$$

$$\Sigma M_{LateralSoildriveUN1} := E_{s1UN1} \cdot E_{s1locUN1} + E_{h1UN1} \cdot E_{h1locUN1} + E_{h2UN1} \cdot E_{h2locUN1} \ldots + E_{h2aUN1} \cdot E_{h2alocUN1} + H_{h2UN1} \cdot H_{h2locUN1} = -3954.0\ m \cdot kN$$

Lateral - Resisting Force

LOAD CASE UN1

Lateral Water Load:

Water Load WSEL to Bottom of Footing: $H_{h6UN1} := \frac{\gamma_w \cdot h_{6UN1}^2}{2} \cdot B = 60.0 \cdot kN$

Moment Arm (from bot. of toe key): $H_{h6locUN1} := \frac{h_{6UN1}}{3} = 1.17\,m$

Water Load Bot. of Footing to Bot. of H. Key: $H_{h2aUN1} := \left[\left(UWSEL_{UN1} - Bot_{ftg} + Key_{t.d}\right) + h_{2UN1}\right] \cdot \frac{Key_{h.d}}{2} \cdot \gamma_w \cdot B = 107.8 \cdot kN$

Moment Arm (from bot. of toe key): $H_{h2alocUN1} := \frac{Key_{h.d} \cdot \left[2 \cdot \left(UWSEL_{UN1} - Bot_{ftg} + Key_{t.d}\right) + h_{2UN1}\right]}{3\left[h_{2UN1} + \left(UWSEL_{UN1} - Bot_{ftg} + Key_{t.d}\right)\right]} \dots + Key_{vdist} = -1.12\,m$

Lateral Soil Load:

Moist Soil Load above WSEL: $E_{h7UN1} := \frac{\gamma_m \cdot K_o \cdot h_{7UN1}^2}{2} \cdot B = 0.0 \cdot kN$

Moment Arm (from bot. of toe key): $E_{h7locUN1} := h_{6UN1} + \frac{h_{7UN1}}{3} + Key_{vdist} = 1.50\,m$

Saturated Soil Load below WSEL: (rectangular component) $E_{h8UN1} := \left(\gamma_m \cdot K_o \cdot h_{7UN1}\right) \cdot h_{8UN1} \cdot B = 0.0 \cdot kN$

Moment Arm (from bot. of toe key): $E_{h8locUN1} := \frac{h_{8UN1}}{2} = 0.50\,m$

Saturated Soil Load below WSEL: (triangular component) $E_{h8aUN1} := \frac{\left[\left(\gamma_{sat} - \gamma_w\right) \cdot K_o\right] \cdot h_{8UN1}^2}{2} \cdot B = 3.3 \cdot kN$

Moment Arm (from bot. of footing): $E_{h8alocUN1} := \frac{h_{8UN1}}{3} = 0.33\,m$

Lateral Resistance from Stilling Basin:

Lateral Resistance from Stilling Basin: $P_{sbUN1} := 291\,kN$ (Force needed to achieve the required sliding factor of safety in case UN2)

Moment Arm (from bot. of toe key): $P_{sblocUN1} := \frac{t_{ftg}}{2} + Key_{t.d} = 1.00\,m$

$$\Sigma H_{SoilresistUN1} := H_{h6UN1} + H_{h2aUN1} + E_{h7UN1} + E_{h8UN1} + E_{h8aUN1} + P_{sbUN1} = 462.2 \cdot kN$$

$$\Sigma M_{HorizSoilResistUN1} := H_{h6UN1} \cdot H_{h6locUN1} + H_{h2aUN1} \cdot H_{h2alocUN1} + E_{h7UN1} \cdot E_{h7locUN1} \dots + E_{h8UN1} \cdot E_{h8locUN1} + E_{h8aUN1} \cdot E_{h8alocUN1} + P_{sbUN1} \cdot P_{sblocUN1} = 241.3\,m \cdot kN$$

Vertical Force:

UPLIFT: Linear distribution from water at heel to water at toe:

$$\Sigma V_{UpliftUN1} := \left[\left(UWSEL_{UN1} - Bot_{ftg} + Key_{t.d}\right) + h_{2UN1}\right] \cdot \frac{b}{2} \cdot \gamma_w \cdot B \cdot -1 = -646.8 \cdot kN$$

Moment Arm (from Point O): $V_{UpliftUN1aloc} := \frac{b \cdot \left[2 \cdot h_{2UN1} + \left(UWSEL_{UN1} - Bot_{ftg} + Key_{t.d}\right)\right]}{3\left[h_{2UN1} + \left(UWSEL_{UN1} - Bot_{ftg} + Key_{t.d}\right)\right]} = 6.727\,m$

$$\Sigma M_{UpliftUN1} := \Sigma V_{UpliftUN1} \cdot V_{UpliftUN1aloc} = -4351.2 \cdot kN \cdot m$$

Weight of soil and water over toe:

Water Above the Top of Footing: $W_{H1UN1} := \gamma_w \cdot h_{5UN1} \cdot L_{ab} \cdot B = 51.45 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E1locUN1} := \frac{L_{ab}}{2} = 1.75\ m$

Soil above top of footing: $W_{E6UN1} := \gamma_b \cdot h_{3UN1} \cdot L_{ab} \cdot B = 0.0 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E6locUN1} := \frac{L_{ab}}{2} = 1.75\ m$

Vertical Load Due to Surcharge: $S_{UN1} := S1_{UN1} \cdot L_{cd} \cdot B = 85.125 \cdot kN$ $\quad S_{UN1loc} := b - \frac{L_{cd}}{2} = 9.16\ m$

Weight of soil and water over heel:

Moist Soil for sloped grade above top of wall:

Length of sloped portion of soil above top of wall: $L_{E3UN1} := \left(L_{cd} + t_{wb} - t_{wt}\right) = 6.50\ m$

Height of sloped soil above top of wall over heel: $h_{E3locUN1} := \left(L_{E3UN1}\right) \cdot \tan(\beta) = 0.00\ m$

Weight of sloped soil above top of wall: $W_{E3UN1} := \frac{\gamma_m}{2} \cdot h_{E3locUN1} \cdot L_{E3UN1} \cdot B = 0.0 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E3locUN1} := L_{ab} + t_{wt} + \frac{2}{3} \cdot L_{E3UN1} = 9.83\ m$

Moist soil from top of wall to groundwater level:

Height of soil from top of wall and top of GWL: $h_{1UN1} = 7.00\ m$

Length from edge of wall at GWL to edge of heel: $L_{E4UN1} := L_{E3UN1} - \left(h_{1UN1} \cdot S_{batter}\right) = 5.95\ m$

Weight of soil over heel from top of wall to GWL: $W_{E4UN1} := \gamma_m \cdot h_{1UN1} \cdot \frac{\left(L_{E3UN1} + L_{E4UN1}\right)}{2} \cdot B = 871.5 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E4locUN1} := b - \frac{L_{E3UN1}^2 + L_{E3UN1} \cdot L_{E4UN1} + L_{E4UN1}^2}{3\left(L_{E3UN1} + L_{E4UN1}\right)} = 8.89\ m$

Saturated soil from groundwater to top of footing:

Height of soil from GWL to top of heel: $h_{E4UN1} := h_{2UN1} - t_{ftg} - Key_{h.d} = 3.50\ m$

Weight of soil over heel from GWL to top of heel: $W_{E5UN1} := \left(\gamma_{sat}\right) \cdot h_{E4UN1} \cdot \frac{\left(L_{E4UN1} + L_{cd}\right)}{2} \cdot B = 447.6 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E5locUN1} := b - \frac{L_{E4UN1}^2 + L_{E4UN1} \cdot L_{cd} + L_{cd}^2}{3\left(L_{E4UN1} + L_{cd}\right)} = 9.09\ m$

$$\Sigma V_{SoilWaterUN1} := W_{H1UN1} + W_{E6UN1} + W_{E3UN1} + W_{E4UN1} + W_{E5UN1} + S_{UN1} = 1455.6 \cdot kN$$

$$\Sigma M_{VertSoilWaterResistUN1} := W_{H1UN1} \cdot W_{E1locUN1} + W_{E6UN1} \cdot W_{E6locUN1} \cdots + W_{E3UN1} \cdot W_{E3locUN1} + W_{E4UN1} \cdot W_{E4locUN1} + W_{E5UN1} \cdot W_{E5locUN1} + S_{UN1} \cdot S_{UN1loc} = 12683.5\ m \cdot kN$$

CHECK OVERTURNING

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stablity of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1

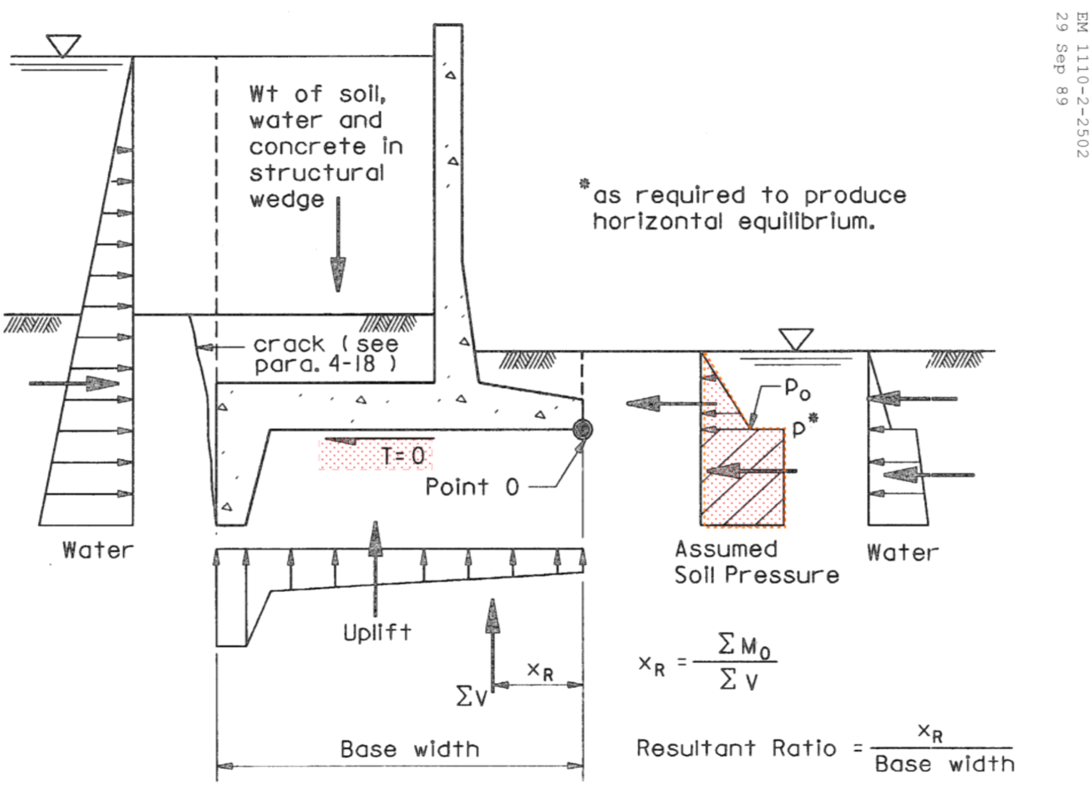

Figure 4-5. Forces for overturning analysis for wall with horizontal base and key

Modify Uplift for Overturning Analysis: **LOAD CASE UN1**

(Uplift is calculated along the concrete/rock contact using the Line of Creep method)

Water Pressure at h: $u_{h.UN1} := \Delta h_{g.hj.UN1} \cdot \gamma_w = 73.50 \cdot kPa$

Water Pressure at o: $u_{o.UN1} := \left(\Delta h_{g.no.UN1} - \frac{\Delta h_{g.r.UN1} \cdot L_{ho.UN1}}{L_{ho.UN1}}\right) \cdot \gamma_w = 34.3 \cdot kPa$

Head loss between point h and o: $\Delta h_{ho.UN1} := \Delta h_{g.r.UN1} \cdot \frac{L_{ho.UN1}}{L_{ho.UN1}} = 2\,m$

Length of concrete base (h -> o): $L_{baseho.UN1} := Key_{h.w} + Key_{h.d} + Key_{hdist} + Key_{t.d} + Key_{t.w} = 14\,m$

Head loss along h -> j: $\Delta h_{hj.UN1} := \Delta h_{ho.UN1} \cdot \frac{Key_{h.w}}{L_{baseho.UN1}} = 0.143\,m$

Water Pressure at j: $u_{j.UN1} := \left(\Delta h_{g.hj.UN1} - \Delta h_{hj.UN1}\right) \cdot \gamma_w = 72.10 \cdot kPa$

Head loss along h -> k: $\Delta h_{hjk.UN1} := \Delta h_{ho.UN1} \cdot \left(\frac{Key_{h.w} + Key_{h.d}}{L_{baseho.UN1}}\right) = 0.429\,m$

Water Pressure at k: $u_{k.UN1} := \left(\Delta h_{g.km.UN1} - \Delta h_{hjk.UN1}\right) \cdot \gamma_w = 49.70 \cdot kPa$

Head loss along h -> m: $\Delta h_{hjkm.UN1} := \Delta h_{ho.UN1} \cdot \left(\frac{Key_{h.w} + Key_{h.d} + Key_{hdist}}{L_{baseho.UN1}}\right) = 2\,m$

Water Pressure at m: $u_{m.UN1} := \left(\Delta h_{g.km.UN1} - \Delta h_{hjkm.UN1}\right) \cdot \gamma_w = 34.30 \cdot kPa$

Head loss along h -> n: $\Delta h_{hjkmn.UN1} := \Delta h_{ho.UN1} \cdot \left(\frac{Key_{h.w} + Key_{h.d} + Key_{hdist} + Key_{t.d}}{L_{baseho.UN1}}\right) = 2\,m$

Water Pressure at n: $u_{n.UN1} := \left(\Delta h_{g.no.UN1} - \Delta h_{hjkmn.UN1}\right) \cdot \gamma_w = 34.30 \cdot kPa$

Uplift under key at heel: $V_{ulkeyhUN1.OT} := \frac{\left(u_{h.UN1} + u_{j.UN1}\right) \cdot Key_{h.w}}{2} \cdot B \cdot -1 = -72.8 \cdot kN$

Moment Arm (from Point O): $V_{ulkeyhUN1loc.OT} := b - \frac{Key_{h.w} \cdot \left(2 \cdot u_{j.UN1} + u_{h.UN1}\right)}{3 \cdot \left(u_{j.UN1} + u_{h.UN1}\right)} = 11.502\,m$

Uplift under base: $V_{ulbaseUN1.OT} := \frac{\left(u_{k.UN1} + u_{m.UN1}\right) \cdot Key_{hdist}}{2} \cdot B \cdot -1 = -462 \cdot kN$

Moment Arm (from Point O): $V_{ulbaseUN1loc.OT} := b - Key_{h.w} - \frac{Key_{hdist} \cdot \left(2 \cdot u_{m.UN1} + u_{k.UN1}\right)}{3 \cdot \left(u_{m.UN1} + u_{k.UN1}\right)} = 5.836\,m$

Uplift under key at toe: $V_{ulkeytUN1.OT} := \frac{\left(u_{n.UN1} + u_{o.UN1}\right) \cdot Key_{t.w}}{2} \cdot B \cdot -1 = 0 \cdot kN$

Moment Arm (from Point O): $V_{ulkeytUN1loc.OT} := \frac{Key_{t.w} \cdot \left(2 \cdot u_{n.UN1} + u_{o.UN1}\right)}{3 \cdot \left(u_{n.UN1} + u_{o.UN1}\right)} = 0$

$$U_{UN1.loc.OT} := \frac{V_{ulkeyhUN1.OT} \cdot V_{ulkeyhUN1loc.OT} + V_{ulbaseUN1.OT} \cdot V_{ulbaseUN1loc.OT} + V_{ulkeytUN1.OT} \cdot V_{ulkeytUN1loc.OT}}{\Sigma V_{UpliftUN1.OT}} = 6.61\,m$$

$$\Sigma M_{UpliftUN1.OT} := \Sigma V_{UpliftUN1.OT} \cdot U_{UN1.loc.OT} = -3533.6 \cdot kN \cdot m$$

Modify Lateral Water Pressure (Resisting) for Overturning Analysis:

(Resisting water pressure is calculated using the Line of Creep method)

Water Load at Key (heel):
$$H_{h2UN1.OT} := \frac{u_{k.UN1} + u_{j.UN1}}{2} \cdot Key_{h.d} B = 121.8 \cdot kN$$

Moment Arm (from Point O):
$$H_{h2locUN1.OT} := \frac{Key_{h.d} \cdot (2 \cdot u_{k.UN1} + u_{j.UN1})}{3(u_{k.UN1} + u_{j.UN1})} + Key_{vdist} = -1.06\ m$$

Water Load at Key (toe):
$$H_{h6UN1.OT} := \frac{u_{o.UN1} \cdot (UWSEL_{UN1} - Bot_{ftg} + Key_{t.d})}{2} \cdot B = 60 \cdot kN$$

Moment Arm (from Point O):
$$H_{h6locUN1.OT} := \frac{UWSEL_{UN1} - Bot_{ftg} + Key_{t.d}}{3} = 1.17\ m$$

$$\Sigma H_{waterresistUN1.OT} := H_{h2UN1.OT} + H_{h6UN1.OT} = 181.82 \cdot kN$$

$$H_{waterresistlocUN1.OT} := \frac{H_{h2UN1.OT} \cdot H_{h2locUN1.OT} + H_{h6UN1.OT} \cdot H_{h6locUN1.OT}}{\Sigma H_{waterresistUN1.OT}} = -0.326\ m$$

$$\Sigma M_{waterresistUN1.OT} := \Sigma H_{waterresistUN1.OT} \cdot H_{waterresistlocUN1.OT} = -59.24 \cdot kN \cdot m$$

Modify Lateral Soil Loads for Overturning Analysis:

(Lateral soil loads are calculated down to Point O instead of bottom of shear key)

Driving Soil Load (Headwater Side):

Surcharge Load:
$$E_{s1UN1.OT} := S1_{UN1} \cdot K_o \cdot (H_w + Key_{h.d} + Key_{vdist}) \cdot B \cdot -1 = -102.377 \cdot kN$$

Moment Arm (from Point O):
$$E_{s1locUN1.OT} := \frac{H_w + Key_{h.d} + Key_{vdist}}{2} = 6.25\ m$$

Moist Soil Load above GWL:
$$E_{h1UN1.OT} := \frac{\gamma_m \cdot K_o \cdot h_{1UN1}^{\ 2}}{2} B \cdot -1 = -267.5 \cdot kN$$

Moment Arm (from Point O):
$$E_{h1locUN1.OT} := \frac{h_{1UN1}}{3} + h_{2UN1} + Key_{vdist} = 7.83\ m$$

Saturated Soil Load below GWL:
(rectangular component)
$$E_{h2UN1.OT} := (\gamma_m \cdot K_o \cdot h_{1UN1}) \cdot (h_{2UN1} + Key_{vdist}) \cdot B \cdot -1 = -420.4 \cdot kN$$

Moment Arm (from Point O):
$$E_{h2locUN1.OT} := \frac{h_{2UN1} + Key_{vdist}}{2} = 2.75\ m$$

Saturated Soil Load below GWL:
(triangular component)
$$E_{h2aUN1.OT} := \frac{(\gamma_{sat} - \gamma_w) \cdot K_o \cdot (h_{2UN1} + Key_{vdist})^2}{2} \cdot B \cdot -1 = -100.8 \cdot kN$$

Moment Arm (from Point O):
$$E_{h2alocUN1.OT} := \frac{h_{2UN1} + Key_{vdist}}{3} = 1.83\ m$$

Resisting Soil Load (Tailwater Side):

(Determine resisting soil load based on depth variation between the keys (ie. Key_{vdist}). In case where key at heel is deeper than key at toe (ie. Key_{vdist}< 0), resisting soil load (p*) is assumed to produce horizontal equilibrium as per Figure 4-5 above. Resisting soil load (p_o) is neglected.)

Total Driving Force: $\Sigma H_{SoildriveUN1.OT} := E_{s1UN1.OT} + E_{h1UN1.OT} + E_{h2UN1.OT} + E_{h2aUN1.OT} + H_{h2UN1} = -1166.7 \cdot kN$

Total Resisting Force: $\Sigma H_{waterresistUN1.OT} = 181.8 \cdot kN$

Assumed Soil Load p*: $E_{h8UN1a.OT} := (\Sigma H_{SoildriveUN1.OT} + \Sigma H_{waterresistU1.OT}) \cdot -1 = 984.901 \cdot kN$

Moment Arm (from Point O): $E_{h8UN1a.loc.OT} := \frac{Key_{vdist}}{2} = -1\ m$

$$E_{h8UN1.OT} := \begin{cases} E_{h8UN1a.OT} & \text{if } Key_{vdist} < 0 \\ \Sigma H_{SoilresistUN1} - H_{h6UN1} - H_{h2aUN1} - P_{sbUN1} & \text{otherwise} \end{cases} = 984.901 \cdot kN$$

$$\Sigma M_{SoilresistUN1} := \begin{cases} E_{h8UN1a.OT} \cdot E_{h8UN1a.loc.OT} & \text{if } Key_{vdist} < 0 \\ \Sigma M_{HorizSoilResistUN1} - H_{h6UN1} \cdot H_{h6locUN1} - H_{h2aUN1} \cdot H_{h2alocUN1} - P_{sbUN1} \cdot P_{sblocUN1} & \text{otherwise} \end{cases} = -984.901 \cdot kN \cdot m$$

Sum of Moment about Point O:

$$\Sigma M_{LateraldriveUN1.OT} := E_{s1UN1.OT} \cdot E_{s1locUN1.OT} + E_{h1UN1.OT} \cdot E_{h1locUN1.OT} + E_{h2UN1.OT} \cdot E_{h2locUN1.OT} \dots + E_{h2aUN1.OT} \cdot E_{h2alocUN1.OT} + H_{h2UN1} \cdot H_{h2locUN1} = -4214.3 \cdot kN \cdot m$$

$$\Sigma M_{LateralresistUN1.OT} := \Sigma M_{waterresistUN1.OT} + \Sigma M_{SoilresistUN1} = -1044.1 \cdot kN \cdot m$$

Total moment:

$$\Sigma M_{UN1.OT} := \Sigma M_{conc} + \Sigma M_{VertSoilWaterResistUN1} + \Sigma M_{UpliftUN1.OT} + \Sigma M_{LateraldriveUN1.OT} + \Sigma M_{LateralresistUN1.OT} = 10624.5 \cdot kN \cdot m$$

Total Vertical Force: $\Sigma V_{UN1.OT} := \Sigma V_{conc} + \Sigma V_{SoilWaterUN1} + \Sigma V_{UplliftUN1.OT} = 2127.1 \cdot kN$

Distance X_R: EM 1110-2-2502 Eq.4-1 $X_{R.UN1} := \frac{\Sigma M_{UN1.OT}}{\Sigma V_{UN1.OT}} = 4.995\ m$

Overturning Resultant Ratio $Ratio_{UN1.OT} := \frac{X_{R.UN1}}{b} = 0.42$

$$Ratio_{UN1.OT.check} := \begin{cases} \text{"OKAY "} & \text{if } Ratio_{UN1.OT} > X_{R.reqUN1} \\ \text{"Revise Structure""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

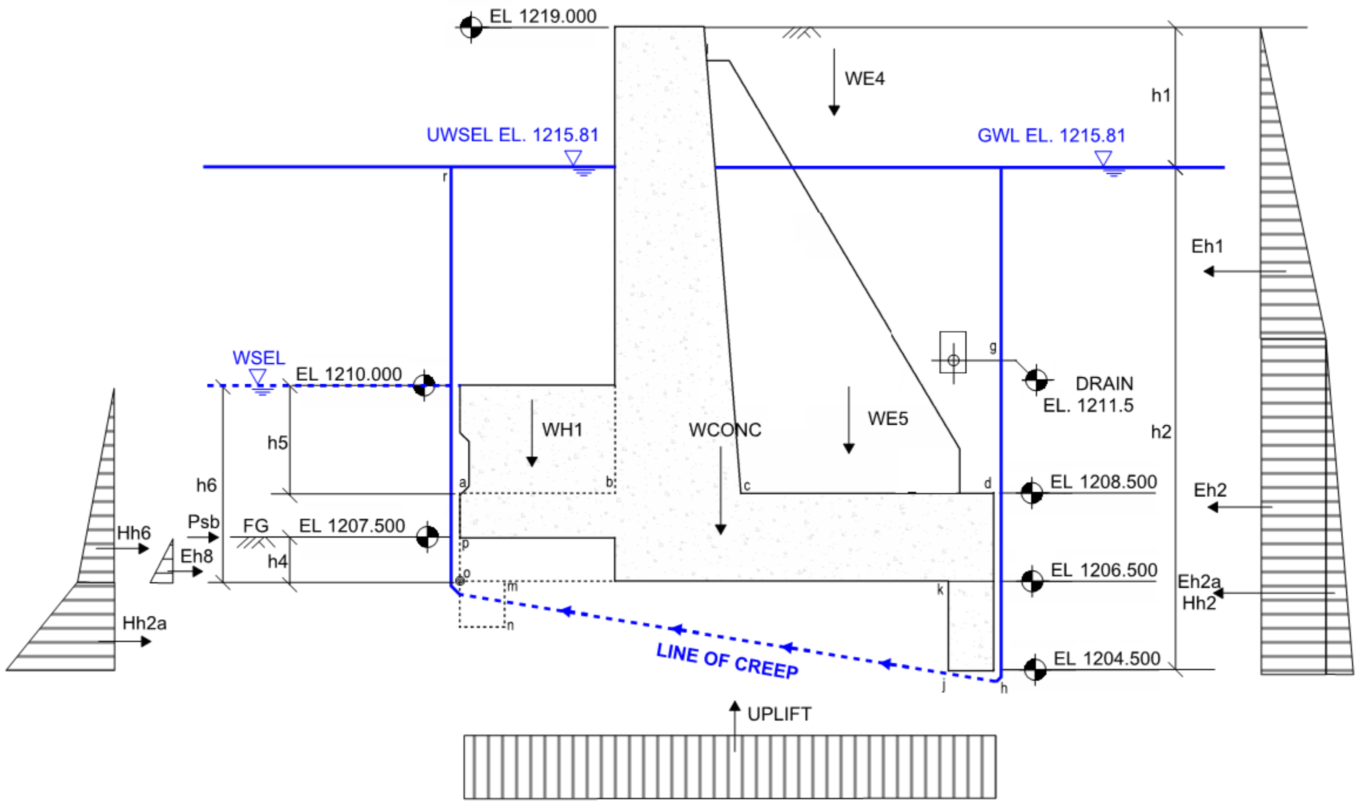
LOAD CASE UN2 - INEFFECTIVE DRAIN



UN2 DESIGN CASE

LOAD CASE UN2 ACCEPTANCE PARAMETERS

FS sliding:

Unusual (UN) 1.3 (without cohesion) (Table 3-3, USACE EM 1110-2-2100)

Resultant Location:

Unsual (UN) Inside middle third ~100% base in compression

Required Factor of Safety for Sliding: $FS_{sliding.reqUN2} := 1.3$ (Without Cohesion)

Allowable rock bearing pressure: $\sigma_{allowUN2} := 1470kPa$ (Section 5.2, Design Criteria EM 1110-2-2100 Section 3-10)

Overturning Required Resultant Ratio: $X_{R.reqUN2} := 0.333$ (EM 1110-2-2502, Figure 4-4)

Required Factor of Safety for Floatation $FS_{req.UN2.flt} := 1.3$

SOIL HEIGHTS and Water Levels:

LOAD CASE UN2

Heel Conditions:

Groundwater Elevation at Heel: $GWL_{UN2} := 1215.81m$

Distance from Finish Grade to Groundwater at Heel: $h_{1UN2} := \left[T_w - GWL_{UN2} + \left(L_{cd} + t_{wb} - t_{wt}\right)\cdot\tan(\beta)\right] = 3.19\ m$

Distance from Water Surface to Bottom of Footing at Heel: $h_{2UN2} := GWL_{UN2} - Bot_{ftg} + Key_{h.d} = 11.31\ m$

Toe Conditions:

Water Surface Elevation at Toe: $WSEL_{UN2} := 1210.0m$

Water Surface Elevation at Toe for Uplift: $UWSEL_{UN2} := 1215.81\cdot m$

Finish Grade at Toe providing lateral resistance: $FG_{toeUN2} := 1207.5\cdot m$

Soil Depth Above top of footing: $h_{3aUN2} := FG_{toeUN2} - Top_{ftg} = -1\ m$

$$h_{3UN2} := \begin{vmatrix} h_{3aUN2} \text{ if } FG_{toeUN2} - Top_{ftg} \geq 0 \\ 0 \text{ otherwise} \end{vmatrix} = 0$$

Resisting Fill at Toe: $h_{4UN2} := FG_{toeUN2} - Bot_{ftg} + Key_{t.d} = 1.00\ m$

Distance from Water Level to Top of Footing at Toe: $h_{5UN2} := WSEL_{UN2} - Top_{ftg} = 1.50\ m$

Distance from Water Surface to Bottom of Footing at Toe: $h_{6UN2} := WSEL_{UN2} - Bot_{ftg} + Key_{t.d} = 3.50\ m$

Soil Depth Above WSEL: $h_{7aUN2} := FG_{toeUN2} - WSEL_{UN2} = -2.5\ m$

$$h_{7UN2} := \begin{vmatrix} h_{7aUN2} \text{ if } FG_{toeUN2} - WSEL_{UN2} \geq 0 \\ 0 \text{ otherwise} \end{vmatrix} = 0$$

Soil Depth Below WSEL:

$$h_{8UN2} := \begin{vmatrix} WSEL_{UN2} - Bot_{ftg} + Key_{t.d} \text{ if } FG_{toeUN2} - WSEL_{UN2} \geq 0 \\ h_{4UN2} \text{ otherwise} \end{vmatrix} = 1$$

For Line of Creep Method: $L_{ho.UN2} := \sqrt{b^2 + \left(Key_{h.d} - Key_{t.d}\right)^2} = 12.166\ m$

Head Loss from Point g:

$\Delta h_{g.hj.UN2} := h_{2UN2} = 11.31\ m$ (to point h & j)

$\Delta h_{g.km.UN2} := GWL_{UN2} - Bot_{ftg} = 9.31\ m$ (to point k & m)

$\Delta h_{g.no.UN2} := GWL_{UN2} - Bot_{ftg} + Key_{t.d} = 9.31\ m$ (to point n & o)

$\Delta h_{g.p.UN2} := GWL_{UN2} - FG_{toeUN2} = 8.31\ m$ (to point p)

$\Delta h_{g.r.UN2} := GWL_{UN2} - UWSEL_{UN2} = 0\ m$ (to point r)

Surcharge

Surcharge on Heel: $S1_{UN2} := 0.0\ \frac{kN}{m^2}$

Calculate Soil Lateral Pressure Coefficients:

LOAD CASE UN2

For all load cases except seismic, soil loading to be based on At-Rest Condition.
Calculate at-rest pressure coefficient Ko based on Jaky's (1944) equation.

Soil At Rest Static Coefficient: $K_o := \frac{1 - \sin(\phi)}{1 + \sin(\beta)} = 0.546$ (Eq. 3-6, USACE EM 1110-2-2502)

Lateral - Driving Force

Static At-Rest:

Surcharge Load: $E_{s1UN2} := S1_{UN2} \cdot K_o \cdot \left(H_w + Key_{h.d}\right) \cdot B \cdot -1 = 0 \cdot kN$

Moment Arm (from bottom of footing): $E_{s1locUN2} := \frac{H_w + Key_{h.d}}{2} + Key_{vdist} = 5.25\ m$

Moist Soil Load above GWL: $E_{h1UN2} := \frac{\gamma_m \cdot K_o \cdot {h_{1UN2}}^2}{2} B \cdot -1 = -55.6 \cdot kN$

Moment Arm (from bottom of footing): $E_{h1locUN2} := \frac{h_{1UN2}}{3} + h_{2UN2} + Key_{vdist} = 10.37\ m$

Saturated Soil Load below GWL:
(rectangular component) $E_{h2UN2} := \left(\gamma_m \cdot K_o \cdot h_{1UN2}\right) \cdot h_{2UN2} \cdot B \cdot -1 = -394.0 \cdot kN$

Moment Arm (from bottom of footing): $E_{h2locUN2} := \frac{h_{2UN2}}{2} + Key_{vdist} = 3.65\ m$

Saturated Soil Load below GWL:
(triangular component) $E_{h2aUN2} := \frac{\left(\gamma_{sat} - \gamma_w\right) \cdot K_o \cdot {h_{2UN2}}^2}{2} \cdot B \cdot -1 = -426.0 \cdot kN$

Moment Arm (from bottom of footing): $E_{h2alocUN2} := \frac{h_{2UN2}}{3} + Key_{vdist} = 1.77\ m$

Lateral Water Load:

Water Load GWL to Bottom of Key: $H_{h2UN2} := \frac{\gamma_w \cdot {h_{2UN2}}^2}{2} \cdot B \cdot -1 = -626.8 \cdot kN$

Moment Arm (from bottom of footing): $H_{h2locUN2} := \frac{h_{2UN2}}{3} + Key_{vdist} = 1.77\ m$

$$\Sigma H_{SoildriveUN2} := E_{s1UN2} + E_{h1UN2} + E_{h2UN2} + E_{h2aUN2} + H_{h2UN2} = -1502.4 \cdot kN$$

$$\Sigma M_{LateralSoildriveUN2} := E_{s1UN2} \cdot E_{s1locUN2} + E_{h1UN2} \cdot E_{h1locUN2} + E_{h2UN2} \cdot E_{h2locUN2} \cdots + E_{h2aUN2} \cdot E_{h2alocUN2} + H_{h2UN2} \cdot H_{h2locUN2} = -3879.9\ m \cdot kN$$

Lateral - Resisting Force

LOAD CASE UN2

Lateral Water Load:

Water Load WSEL to Bottom of Footing: $H_{h6UN2} := \frac{\gamma_w \cdot h_{6UN2}^2}{2} \cdot B = 60.0 \cdot kN$

Moment Arm (from bot. of toe key): $H_{h6locUN2} := \frac{h_{6UN2}}{3} = 1.17\ m$

Water Load Bot. of Footing to Bot. of H. Key: $H_{h2aUN2} := \left[\left(UWSEL_{UN2} - Bot_{ftg} + Key_{t.d}\right) + h_{2UN2}\right] \cdot \frac{Key_{h.d}}{2} \cdot \gamma_w \cdot B = 202.1 \cdot kN$

Moment Arm (from bot. of toe key): $H_{h2alocUN2} := \frac{Key_{h.d} \cdot \left[2 \cdot \left(UWSEL_{UN2} - Bot_{ftg} + Key_{t.d}\right) + h_{2UN2}\right]}{3\left[h_{2UN2} + \left(UWSEL_{UN2} - Bot_{ftg} + Key_{t.d}\right)\right]} \dots + Key_{vdist} = -1.03\ m$

Lateral Soil Load:

Moist Soil Load above WSEL: $E_{h7UN2} := \frac{\gamma_m \cdot K_o \cdot h_{7UN2}^2}{2} \cdot B = 0.0 \cdot kN$

Moment Arm (from bot. of toe key): $E_{h7locUN2} := h_{6UN2} + \frac{h_{7UN2}}{3} + Key_{vdist} = 1.50\ m$

Saturated Soil Load below WSEL:
(rectangular component) $E_{h8UN2} := \left(\gamma_m \cdot K_o \cdot h_{7UN2}\right) \cdot h_{8UN2} \cdot B = 0.0 \cdot kN$

Moment Arm (from bot. of toe key): $E_{h8locUN2} := \frac{h_{8UN2}}{2} = 0.50\ m$

Saturated Soil Load below WSEL:
(triangular component) $E_{h8aUN2} := \frac{\left[\left(\gamma_{sat} - \gamma_w\right) \cdot K_o\right] \cdot h_{8UN2}^2}{2} \cdot B = 3.3 \cdot kN$

Moment Arm (from bot. of footing): $E_{h8alocUN2} := \frac{h_{8UN2}}{3} = 0.33\ m$

Lateral Resistance from Stilling Basin:

Lateral Resistance from Stilling Basin: $P_{sbUN2} := 291 kN$ (Force needed to achieve the required sliding factor of safety in case UN2)

Moment Arm (from bot. of toe key): $P_{sblocUN2} := \frac{t_{ftg}}{2} + Key_{t.d} = 1.00\ m$

$\Sigma H_{SoilresistUN2} := H_{h6UN2} + H_{h2aUN2} + E_{h7UN2} + E_{h8UN2} + E_{h8aUN2} + P_{sbUN2} = 556.4 \cdot kN$

$\Sigma M_{HorizSoilResistUN2} := H_{h6UN2} \cdot H_{h6locUN2} + H_{h2aUN2} \cdot H_{h2alocUN2} + E_{h7UN2} \cdot E_{h7locUN2} \dots + E_{h8UN2} \cdot E_{h8locUN2} + E_{h8aUN2} \cdot E_{h8alocUN2} + P_{sbUN2} \cdot P_{sblocUN2} = 153.5\ m \cdot kN$

Vertical Force:

UPLIFT: Linear distribution from water at heel to water at toe:

$\Sigma V_{UpliftUN2} := \left[\left(UWSEL_{UN2} - Bot_{ftg} + Key_{t.d}\right) + h_{2UN2}\right] \cdot \frac{b}{2} \cdot \gamma_w \cdot B \cdot -1 = -1212.456 \cdot kN$

Moment Arm (from Point O): $V_{UpliftUN2aloc} := \frac{b \cdot \left[2 \cdot h_{2UN2} + \left(UWSEL_{UN2} - Bot_{ftg} + Key_{t.d}\right)\right]}{3\left[h_{2UN2} + \left(UWSEL_{UN2} - Bot_{ftg} + Key_{t.d}\right)\right]} = 6.194\ m$

$\Sigma M_{UpliftUN2} := \Sigma V_{UpliftUN2} \cdot V_{UpliftUN2aloc} = -7509.936 \cdot kN \cdot m$

Weight of soil and water over toe:

Water Above the Top of Footing: $W_{H1UN2} := \gamma_w \cdot h_{5UN2} \cdot L_{ab} \cdot B = 51.45 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E1locUN2} := \frac{L_{ab}}{2} = 1.75\ m$

Soil above top of footing: $W_{E6UN2} := \gamma_b \cdot h_{3UN2} \cdot L_{ab} \cdot B = 0.0 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E6locUN2} := \frac{L_{ab}}{2} = 1.75\ m$

Vertical Load Due to Surcharge: $S_{UN2} := S1_{UN2} \cdot L_{cd} \cdot B = 0 \cdot kN$ $\quad S_{UN2loc} := b - \frac{L_{cd}}{2} = 9.16\ m$

Weight of soil and water over heel:

Moist Soil for sloped grade above top of wall:

Length of sloped portion of soil above top of wall: $L_{E3UN2} := \left(L_{cd} + t_{wb} - t_{wt}\right) = 6.50\ m$

Height of sloped soil above top of wall over heel: $h_{E3locUN2} := \left(L_{E3UN2}\right) \cdot \tan(\beta) = 0.00\ m$

Weight of sloped soil above top of wall: $W_{E3UN2} := \frac{\gamma_m}{2} \cdot h_{E3locUN2} \cdot L_{E3UN2} \cdot B = 0.0 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E3locUN2} := L_{ab} + t_{wt} + \frac{2}{3} \cdot L_{E3UN2} = 9.83\ m$

Moist soil from top of wall to groundwater level:

Height of soil from top of wall and top of GWL: $h_{1UN2} = 3.19\ m$

Length from edge of wall at GWL to edge of heel: $L_{E4UN2} := L_{E3UN2} - \left(h_{1UN2} \cdot S_{batter}\right) = 6.25\ m$

Weight of soil over heel from top of wall to GWL: $W_{E4UN2} := \gamma_m \cdot h_{1UN2} \cdot \frac{\left(L_{E3UN2} + L_{E4UN2}\right)}{2} \cdot B = 406.7 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E4locUN2} := b - \frac{L_{E3UN2}^2 + L_{E3UN2} \cdot L_{E4UN2} + L_{E4UN2}^2}{3\left(L_{E3UN2} + L_{E4UN2}\right)} = 8.81\ m$

Saturated soil from groundwater to top of footing:

Height of soil from GWL to top of heel: $h_{E4UN2} := h_{2UN2} - t_{ftg} - Key_{h.d} = 7.31\ m$

Weight of soil over heel from GWL to top of heel: $W_{E5UN2} := \left(\gamma_{sat}\right) \cdot h_{E4UN2} \cdot \frac{\left(L_{E4UN2} + L_{cd}\right)}{2} \cdot B = 958.8 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E5locUN2} := b - \frac{L_{E4UN2}^2 + L_{E4UN2} \cdot L_{cd} + L_{cd}^2}{3\left(L_{E4UN2} + L_{cd}\right)} = 9.02\ m$

$$\Sigma V_{SoilWaterUN2} := W_{H1UN2} + W_{E6UN2} + W_{E3UN2} + W_{E4UN2} + W_{E5UN2} + S_{UN2} = 1417.0 \cdot kN$$

$$\Sigma M_{VertSoilWaterResistUN2} := W_{H1UN2} \cdot W_{E1locUN2} + W_{E6UN2} \cdot W_{E6locUN2} \cdots + W_{E3UN2} \cdot W_{E3locUN2} + W_{E4UN2} \cdot W_{E4locUN2} + W_{E5UN2} \cdot W_{E5locUN2} + S_{UN2} \cdot S_{UN2loc} = 12319.5\ m \cdot kN$$

CHECK OVERTURNING

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stablity of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1

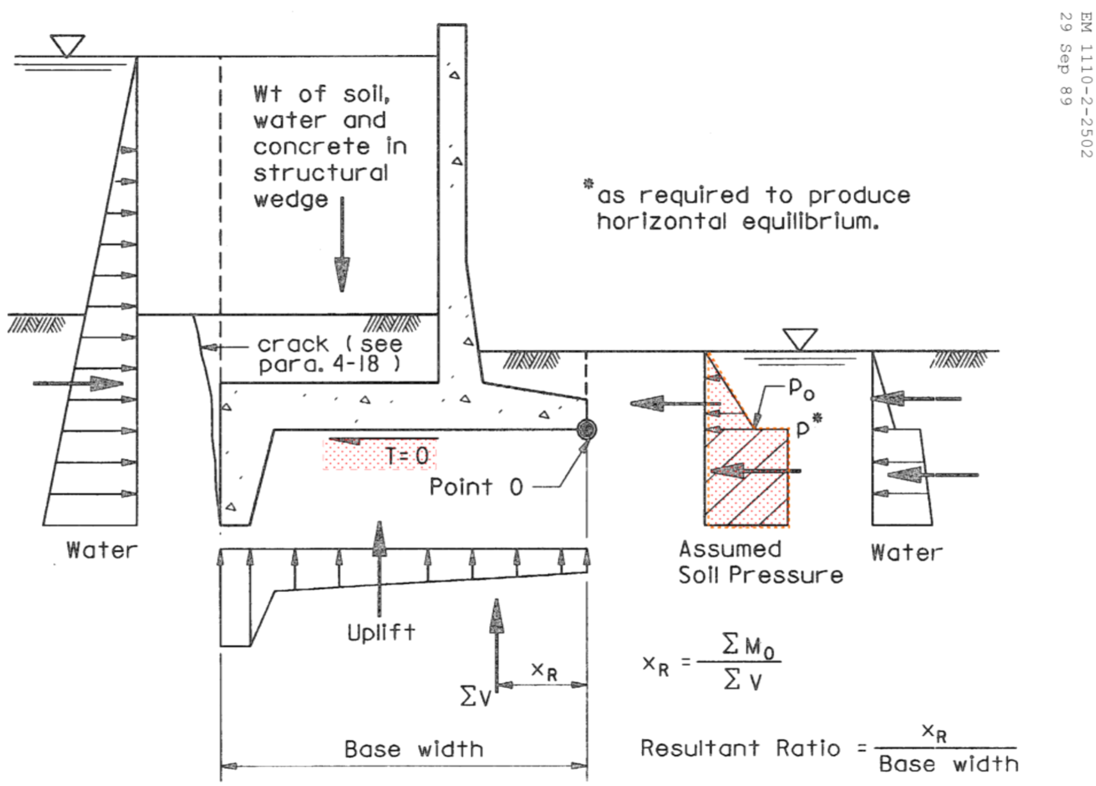

Figure 4-5. Forces for overturning analysis for wall with horizontal base and key

Modify Uplift for Overturning Analysis: **LOAD CASE UN2**

(Uplift is calculated along the concrete/rock contact using the Line of Creep method)

Water Pressure at h: $u_{h.UN2} := \Delta h_{g.hj.UN2} \cdot \gamma_w = 110.84 \cdot kPa$

Water Pressure at o: $u_{o.UN2} := \left(\Delta h_{g.no.UN2} - \frac{\Delta h_{g.r.UN2} \cdot L_{ho.UN2}}{L_{ho.UN2}}\right) \cdot \gamma_w = 91.24 \cdot kPa$

Head loss between point h and o: $\Delta h_{ho.UN2} := \Delta h_{g.r.UN2} \cdot \frac{L_{ho.UN2}}{L_{ho.UN2}} = 0\,m$

Length of concrete base (h -> o): $L_{baseho.UN2} := Key_{h.w} + Key_{h.d} + Key_{hdist} + Key_{t.d} + Key_{t.w} = 14\,m$

Head loss along h -> j: $\Delta h_{hj.UN2} := \Delta h_{ho.UN2} \cdot \frac{Key_{h.w}}{L_{baseho.UN2}} = 0\,m$

Water Pressure at j: $u_{j.UN2} := \left(\Delta h_{g.hj.UN2} - \Delta h_{hj.UN2}\right) \cdot \gamma_w = 110.84 \cdot kPa$

Head loss along h -> k: $\Delta h_{hjk.UN2} := \Delta h_{ho.UN2} \cdot \left(\frac{Key_{h.w} + Key_{h.d}}{L_{baseho.UN2}}\right) = 0\,m$

Water Pressure at k: $u_{k.UN2} := \left(\Delta h_{g.km.UN2} - \Delta h_{hjk.UN2}\right) \cdot \gamma_w = 91.24 \cdot kPa$

Head loss along h -> m: $\Delta h_{hjkm.UN2} := \Delta h_{ho.UN2} \cdot \left(\frac{Key_{h.w} + Key_{h.d} + Key_{hdist}}{L_{baseho.UN2}}\right) = 0\,m$

Water Pressure at m: $u_{m.UN2} := \left(\Delta h_{g.km.UN2} - \Delta h_{hjkm.UN2}\right) \cdot \gamma_w = 91.24 \cdot kPa$

Head loss along h -> n: $\Delta h_{hjkmn.UN2} := \Delta h_{ho.UN2} \cdot \left(\frac{Key_{h.w} + Key_{h.d} + Key_{hdist} + Key_{t.d}}{L_{baseho.UN2}}\right) = 0\,m$

Water Pressure at n: $u_{n.UN2} := \left(\Delta h_{g.no.UN2} - \Delta h_{hjkmn.UN2}\right) \cdot \gamma_w = 91.24 \cdot kPa$

Uplift under key at heel: $V_{ulkeyhUN2.OT} := \frac{\left(u_{h.UN2} + u_{j.UN2}\right) \cdot Key_{h.w}}{2} \cdot B \cdot -1 = -110.838 \cdot kN$

Moment Arm (from Point O): $V_{ulkeyhUN2loc.OT} := b - \frac{Key_{h.w} \cdot \left(2 \cdot u_{j.UN2} + u_{h.UN2}\right)}{3 \cdot \left(u_{j.UN2} + u_{h.UN2}\right)} = 11.5\,m$

Uplift under base: $V_{ulbaseUN2.OT} := \frac{\left(u_{k.UN2} + u_{m.UN2}\right) \cdot Key_{hdist}}{2} \cdot B \cdot -1 = -1003.618 \cdot kN$

Moment Arm (from Point O): $V_{ulbaseUN2loc.OT} := b - Key_{h.w} - \frac{Key_{hdist} \cdot \left(2 \cdot u_{m.UN2} + u_{k.UN2}\right)}{3 \cdot \left(u_{m.UN2} + u_{k.UN2}\right)} = 5.5\,m$

Uplift under key at toe: $V_{ulkeytUN2.OT} := \frac{\left(u_{n.UN2} + u_{o.UN2}\right) \cdot Key_{t.w}}{2} \cdot B \cdot -1 = 0 \cdot kN$

Moment Arm (from Point O): $V_{ulkeytUN2loc.OT} := \frac{Key_{t.w} \cdot \left(2 \cdot u_{n.UN2} + u_{o.UN2}\right)}{3 \cdot \left(u_{n.UN2} + u_{o.UN2}\right)} = 0$

$$\Sigma V_{UpliftUN2.OT} := V_{ulkeyhUN2.OT} + V_{ulbaseUN2.OT} + V_{ulkeytUN2.OT} = -1114 \cdot kN$$

$$U_{UN2.loc.OT} := \frac{V_{ulkeyhUN2.OT} \cdot V_{ulkeyhUN2loc.OT} + V_{ulbaseUN2.OT} \cdot V_{ulbaseUN2loc.OT} + V_{ulkeytUN2.OT} \cdot V_{ulkeytUN2loc.OT}}{\Sigma V_{UpliftUN2.OT}} = 6.10\,m$$

$$\Sigma M_{UpliftUN2.OT} := \Sigma V_{UpliftUN2.OT} \cdot U_{UN2.loc.OT} = -6794.5 \cdot kN \cdot m$$

Modify Lateral Water Pressure (Resisting) for Overturning Analysis:

(Resisting water pressure is calculated using the Line of Creep method)

Water Load at Key (heel): $H_{h2UN2.OT} := \frac{u_{k.UN2} + u_{j.UN2}}{2} \cdot Key_{h.d} \, B = 202.1 \cdot kN$

Moment Arm (from Point O): $H_{h2locUN2.OT} := \frac{Key_{h.d} \cdot (2 \cdot u_{k.UN2} + u_{j.UN2})}{3(u_{k.UN2} + u_{j.UN2})} + Key_{vdist} = -1.03\ m$

Water Load at Key (toe): $H_{h6UN2.OT} := \frac{u_{o.UN2} \cdot (UWSEL_{UN2} - Bot_{ftg} + Key_{t.d})}{2} \cdot B = 425 \cdot kN$

Moment Arm (from Point O): $H_{h6locUN2.OT} := \frac{UWSEL_{UN2} - Bot_{ftg} + Key_{t.d}}{3} = 3.10\ m$

$$\Sigma H_{waterresistUN2.OT} := H_{h2UN2.OT} + H_{h6UN2.OT} = 626.79 \cdot kN$$

$$H_{waterresistlocUN2.OT} := \frac{H_{h2UN2.OT} \cdot H_{h2locUN2.OT} + H_{h6UN2.OT} \cdot H_{h6locUN2.OT}}{\Sigma H_{waterresistUN2.OT}} = 1.77\ m$$

$$\Sigma M_{waterresistUN2.OT} := \Sigma H_{waterresistUN2.OT} \cdot H_{waterresistlocUN2.OT} = 1109.42 \cdot kN \cdot m$$

Modify Lateral Soil Loads for Overturning Analysis:

(Lateral soil loads are calculated down to Point O instead of bottom of shear key)

Driving Soil Load (Headwater Side):

Surcharge Load: $E_{s1UN2.OT} := S1_{UN2} \cdot K_o \cdot (H_w + Key_{h.d} + Key_{vdist}) \cdot B \cdot -1 = 0 \cdot kN$

Moment Arm (from Point O): $E_{s1locUN2.OT} := \frac{H_w + Key_{h.d} + Key_{vdist}}{2} = 6.25\ m$

Moist Soil Load above GWL: $E_{h1UN2.OT} := \frac{\gamma_m \cdot K_o \cdot h_{1UN2}^{\,2}}{2} B \cdot -1 = -55.6 \cdot kN$

Moment Arm (from Point O): $E_{h1locUN2.OT} := \frac{h_{1UN2}}{3} + h_{2UN2} + Key_{vdist} = 10.37\ m$

Saturated Soil Load below GWL:
(rectangular component) $E_{h2UN2.OT} := (\gamma_m \cdot K_o \cdot h_{1UN2}) \cdot (h_{2UN2} + Key_{vdist}) \cdot B \cdot -1 = -324.3 \cdot kN$

Moment Arm (from Point O): $E_{h2locUN2.OT} := \frac{h_{2UN2} + Key_{vdist}}{2} = 4.65\ m$

Saturated Soil Load below GWL:
(triangular component) $E_{h2aUN2.OT} := \frac{(\gamma_{sat} - \gamma_w) \cdot K_o \cdot (h_{2UN2} + Key_{vdist})^2}{2} \cdot B \cdot -1 = -288.7 \cdot kN$

Moment Arm (from Point O): $E_{h2alocUN2.OT} := \frac{h_{2UN2} + Key_{vdist}}{3} = 3.10\ m$

Resisting Soil Load (Tailwater Side):

(Determine resisting soil load based on depth variation between the keys (ie. Key_{vdist}). In case where key at heel is deeper than key at toe (ie. $Key_{vdist} < 0$), resisting soil load (p*) is assumed to produce horizontal equilibrium as per Figure 4-5 above. Resisting soil load (p_o) is neglected.)

Total Driving Force: $\Sigma H_{SoildriveUN2.OT} := E_{s1UN2.OT} + E_{h1UN2.OT} + E_{h2UN2.OT} + E_{h2aUN2.OT} + H_{h2UN2} = -1295.4 \cdot kN$

Total Resisting Force: $\Sigma H_{waterresistUN2.OT} = 626.8 \cdot kN$

Assumed Soil Load p*: $E_{h8UN2a.OT} := \left(\Sigma H_{SoildriveUN2.OT} + \Sigma H_{waterresistUN2.OT}\right) \cdot -1 = 668.569 \cdot kN$

Moment Arm (from Point O): $E_{h8UN2a.loc.OT} := \dfrac{Key_{vdist}}{2} = -1\ m$

$$E_{h8UN2.OT} := \begin{cases} E_{h8UN2a.OT} & \text{if } Key_{vdist} < 0 \\ \Sigma H_{SoilresistUN2} - H_{h6UN2} - H_{h2aUN2} - P_{sbUN2} & \text{otherwise} \end{cases} = 668.569 \cdot kN$$

$$\Sigma M_{SoilresistUN2} := \begin{cases} E_{h8UN2a.OT} \cdot E_{h8UN2a.loc.OT} & \text{if } Key_{vdist} < 0 \\ \Sigma M_{HorizSoilResistUN2} - H_{h6UN2} \cdot H_{h6locUN2} - H_{h2aUN2} \cdot H_{h2alocUN2} - P_{sbUN2} \cdot P_{sblocUN2} & \text{otherwise} \end{cases} = -668.569 \cdot kN \cdot m$$

Sum of Moment about Point O:

$$\Sigma M_{LateraldriveUN2.OT} := E_{s1UN2.OT} \cdot E_{s1locUN2.OT} + E_{h1UN2.OT} \cdot E_{h1locUN2.OT} + E_{h2UN2.OT} \cdot E_{h2locUN2.OT} \dots + E_{h2aUN2.OT} \cdot E_{h2alocUN2.OT} + H_{h2UN2} \cdot H_{h2locUN2} = -4091.4 \cdot kN \cdot m$$

$$\Sigma M_{LateralresistUN2.OT} := \Sigma M_{waterresistUN2.OT} + \Sigma M_{SoilresistUN2} = 440.8 \cdot kN \cdot m$$

Total moment:

$$\Sigma M_{UN2.OT} := \Sigma M_{conc} + \Sigma M_{VertSoilWaterResistUN2} + \Sigma M_{UpliftUN2.OT} + \Sigma M_{LateraldriveUN2.OT} + \Sigma M_{LateralresistUN2.OT} = 8607.5 \cdot kN \cdot m$$

Total Vertical Force: $\Sigma V_{UN2.OT} := \Sigma V_{conc} + \Sigma V_{SoilWaterUN2} + \Sigma V_{UpliftUN2.OT} = 1508.8 \cdot kN$

Distance X_R: EM 1110-2-2502 Eq.4-1 $X_{R.UN2} := \dfrac{\Sigma M_{UN2.OT}}{\Sigma V_{UN2.OT}} = 5.705\ m$

Overturning Resultant Ratio $Ratio_{UN2.OT} := \dfrac{X_{R.UN2}}{b} = 0.48$

$$Ratio_{UN2.OT.check} := \begin{cases} \text{"OKAY "} & \text{if } Ratio_{UN2.OT} > X_{R.reqUN2} \\ \text{"Revise Structure""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

CHECK FOUNDATION ECCENTRICITY (HORIZONTAL PLANE):

Eccentricity (horizontal plan): $ex_{UN2.OT} := \dfrac{b}{2} - \dfrac{\Sigma M_{UN2.OT}}{\Sigma V_{UN2.OT}} = 0.30\ m$ $Kern_{OT} = 2\ m$

Eccentricity Check: $e_{check.UN2.OT} := \begin{cases} \text{"Okay"} & \text{if } ex_{UN2} \le Kern_{OT} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"Okay"}$

LOAD CASE UN2

CHECK FOUNDATION BEARING CAPACITY (HORIZONTAL PLANE):

Base Section Modulus: $S_{b.OT} = 24\,m^3$

Bearing Pressure Under Toe:

Heel Conditions:

Groundwater Elevation at Heel: $GWL_{E1} := 1212.0m$

Distance from Finish Grade to Groundwater at Heel: $h_{1E1} := \left[T_w - GWL_{E1} + \left(L_{cd} + t_{wb} - t_{wt}\right) \cdot \tan(\beta)\right] = 7.00\ m$

Distance from Water Surface to Bottom of Footing at Heel: $h_{2E1} := GWL_{E1} - Bot_{ftg} + Key_{h.d} = 7.50\ m$

Toe Conditions:

Water Surface Elevation at Toe: $WSEL_{E1} := 1210.0m$

Water Surface Elevation at Toe for Uplift: $UWSEL_{E1} := 1210.0 \cdot m$

Finish Grade at Toe providing lateral resistance: $FG_{toeE1} := 1207.5 \cdot m$

Soil Depth Above top of footing: $h_{3aE1} := FG_{toeE1} - Top_{ftg} = -1\ m$

$$h_{3E1} := \begin{vmatrix} h_{3aE1} & \text{if } FG_{toeE1} - Top_{ftg} \geq 0 \\ 0 & \text{otherwise} \end{vmatrix} = 0$$

Resisting Fill at Toe: $h_{4E1} := FG_{toeE1} - Bot_{ftg} + Key_{t.d} = 1.00\ m$

Distance from Water Level to Top of Footing at Toe: $h_{5E1} := WSEL_{E1} - Top_{ftg} = 1.50\ m$

Distance from Water Surface to Bottom of Footing at Toe: $h_{6E1} := WSEL_{E1} - Bot_{ftg} + Key_{t.d} = 3.50\ m$

Soil Depth Above WSEL: $h_{7aE1} := FG_{toeE1} - WSEL_{E1} = -2.5\ m$

$$h_{7E1} := \begin{vmatrix} h_{7aE1} & \text{if } FG_{toeE1} - WSEL_{E1} \geq 0 \\ 0 & \text{otherwise} \end{vmatrix} = 0$$

Soil Depth Below WSEL:

$$h_{8E1} := \begin{vmatrix} WSEL_{E1} - Bot_{ftg} + Key_{t.d} & \text{if } FG_{toeE1} - WSEL_{E1} \geq 0 \\ h_{4E1} & \text{otherwise} \end{vmatrix} = 1$$

For Line of Creep Method: $L_{ho.E1} := \sqrt{b^2 + \left(Key_{h.d} - Key_{t.d}\right)^2} = 12.166\ m$

Head Loss from Point g:

$\Delta h_{g.hj.E1} := h_{2E1} = 7.5\ m$ (to point h & j)

$\Delta h_{g.km.E1} := GWL_{E1} - Bot_{ftg} = 5.5\ m$ (to point k & m)

$\Delta h_{g.no.E1} := GWL_{E1} - Bot_{ftg} + Key_{t.d} = 5.5\ m$ (to point n & o)

$\Delta h_{g.p.E1} := GWL_{E1} - FG_{toeE1} = 4.5\ m$ (to point p)

$\Delta h_{g.r.E1} := GWL_{E1} - UWSEL_{E1} = 2\ m$ (to point r)

Surcharge

Surcharge on Heel: $S1_{E1} := 0.0 \dfrac{kN}{m^2}$

Calculate Soil Lateral Pressure Coefficients:

LOAD CASE E1

Calculate at-rest pressure coefficient K_o based on Jaky's (1944) equation.

Soil At Rest Static Coefficient:
(apply to resisting soil loads)

$$K_o := \frac{1 - \sin(\phi)}{1 + \sin(\beta)} = 0.546$$

(Eq. 3-6, USACE EM 1110-2-2502)

Calculate active pressure coefficient K_A based on Coulumb equations.

Determine Slope of Active Wedge: (cohesionless backfill with water table)

$$c_1 := 2 \cdot \tan(\phi) = 1.019 \qquad c_2 := 1 - \tan(\phi) \cdot \tan(\beta) - \frac{\tan(\beta)}{\tan(\phi)} = 1$$

(Eq. G-14 / G-15, USACE EM 1110-2-2100)

$$\alpha := \operatorname{atan}\left(\frac{c_1 + \sqrt{c_1^{\,2} + 4 \cdot c_2}}{2}\right) = 1.021 \qquad \alpha_{deg} := \alpha \cdot \frac{180}{\pi} = 58.5$$

degrees (Eq. G-13, USACE EM 1110-2-2100)

Soil Active Coefficient above GWL:

$$K_{Aagwt} := \left(\frac{1 - \tan(\phi) \cdot \cot(\alpha)}{1 + \tan(\phi) \cdot \tan(\alpha)}\right) \cdot \left(\frac{\tan(\alpha)}{\tan(\alpha) - \tan(\beta)}\right) = 0.376$$

Soil Active Coefficient below GWL:

$$K_{Abgwt} := \frac{1 - \tan(\phi) \cdot \cot(\alpha)}{1 + \tan(\phi) \cdot \tan(\alpha)} \cdot \left[1 + \left(\frac{\tan(\alpha)}{\tan(\alpha) - \tan(\beta)} - 1\right) \cdot \left(\frac{\gamma_m}{\gamma_{sat} - \gamma_w}\right)\right] = 0.376$$

(Eq. G-29, USACE EM 1110-2-2100)

Lateral - Driving Force

Static Copmonent : Active Pressure:

Surcharge Load:

$$E_{s1E1} := S1_{E1} \cdot K_{Aagwt} \cdot \left(H_w + Key_{h.d}\right) \cdot B \cdot -1 = 0 \cdot kN$$

Moment Arm (from bottom of footing):

$$E_{s1locE1} := \frac{H_w + Key_{h.d}}{2} + Key_{vdist} = 5.25\ m$$

Moist Soil Load above GWL:

$$E_{h1E1} := \frac{\gamma_m \cdot K_{Aagwt} \cdot h_{1E1}^{\,2}}{2} \cdot B \cdot -1 = -184.0 \cdot kN$$

Moment Arm (from bottom of footing):

$$E_{h1locE1} := \frac{h_{1E1}}{3} + h_{2E1} + Key_{vdist} = 7.83\ m$$

Saturated Soil Load below GWL:
(rectangular component)

$$E_{h2E1} := \left(\gamma_m \cdot K_{Abgwt} \cdot h_{1E1}\right) \cdot h_{2E1} \cdot B \cdot -1 = -394.3 \cdot kN$$

Moment Arm (from bottom of footing):

$$E_{h2locE1} := \frac{h_{2E1}}{2} + Key_{vdist} = 1.75\ m$$

Saturated Soil Load below GWL:
(triangular component)

$$E_{h2aE1} := \frac{\left(\gamma_{sat} - \gamma_w\right) \cdot K_{Abgwt} \cdot h_{2E1}^{\,2}}{2} \cdot B \cdot -1 = -128.9 \cdot kN$$

Moment Arm (from bottom of footing):

$$E_{h2alocE1} := \frac{h_{2E1}}{3} + Key_{vdist} = 0.50\ m$$

Lateral Water Load:

Water Load GWL to Bottom of Key

$$H_{h2E1} := \frac{\gamma_w \cdot h_{2E1}^{\,2}}{2} \cdot B \cdot -1 = -275.6 \cdot kN$$

Moment Arm (from bottom of footing):

$$H_{h2locE1} := \frac{h_{2E1}}{3} + Key_{vdist} = 0.50\ m$$

$$\Sigma H_{SoildriveE1} := E_{s1E1} + E_{h1E1} + E_{h2E1} + E_{h2aE1} + H_{h2E1} = -982.8 \cdot kN$$

$$\Sigma M_{LateralSoildriveE1} := E_{s1E1} \cdot E_{s1locE1} + E_{h1E1} \cdot E_{h1locE1} + E_{h2E1} \cdot E_{h2locE1} \ldots + E_{h2aE1} \cdot E_{h2alocE1} + H_{h2E1} \cdot H_{h2locE1} = -2333.7\ m \cdot kN$$

Lateral - Resisting Force

LOAD CASE E1

Note: **Due to the relatively shallow depth of resisting soil/rock, a conservative apporach using at-rest coefficient in lieu of a passive wedge is used to calculate resisting forces.**

Lateral Water Load:

Water Load WSEL to Bottom of Footing: $H_{h6E1} := H_{h6U1} = 60.0 \cdot kN$

Moment Arm (from bot. of toe key): $H_{h6locE1} := H_{h6locU1} = 1.17\ m$

Water Load Bot. of Footing to Bot. of H. Key: $H_{h2aE1} := \left[\left(UWSEL_{E1} - Bot_{ftg} + Key_{t.d}\right) + h_{2E1}\right] \cdot \frac{Key_{h.d}}{2} \cdot \gamma_w \cdot B = 107.8 \cdot kN$

Moment Arm (from bot. of toe key):

$$H_{h2alocE1} := \frac{Key_{h.d} \cdot \left[2 \cdot \left(UWSEL_{E1} - Bot_{ftg} + Key_{t.d}\right) + h_{2E1}\right]}{3\left[h_{2E1} + \left(UWSEL_{E1} - Bot_{ftg} + Key_{t.d}\right)\right]} \ldots = -1.12\ m$$
$$+ Key_{vdist}$$

Lateral Soil Load:

Moist Soil Load above WSEL: $E_{h7E1} := \frac{\gamma_m \cdot K_o \cdot h_{7E1}^{\ 2}}{2} B = 0.0 \cdot kN$

Moment Arm (from bot. of toe key): $E_{h7locE1} := h_{6E1} + \frac{h_{7E1}}{3} + Key_{vdist} = 1.50\ m$

Saturated Soil Load below WSEL: (rectangular component) $E_{h8E1} := \left(\gamma_m \cdot K_o \cdot h_{7E1}\right) \cdot h_{8E1} \cdot B = 0.0 \cdot kN$

Moment Arm (from bot. of toe key): $E_{h8locE1} := \frac{h_{8E1}}{2} = 0.50\ m$

Saturated Soil Load below WSEL: (triangular component) $E_{h8aE1} := \frac{\left[\left(\gamma_{sat} - \gamma_w\right) \cdot K_o\right] \cdot h_{8E1}^{\ 2}}{2} \cdot B = 3.3 \cdot kN$

Moment Arm (from bot. of footing): $E_{h8alocE1} := \frac{h_{8E1}}{3} = 0.33\ m$

Lateral Resistance from Stilling Basin:

Lateral Resistance from Stilling Basin: $P_{sbE1} := 291 kN$ (Force needed to achieve the required sliding factor of safety in case UN2)

Moment Arm (from bot. of toe key): $P_{sblocE1} := \frac{t_{ftg}}{2} + Key_{t.d} = 1.00\ m$

$$\Sigma H_{SoilresistE1} := H_{h6E1} + H_{h2aE1} + E_{h7E1} + E_{h8E1} + E_{h8aE1} + P_{sbE1} = 462.2 \cdot kN$$

$$\Sigma M_{HorizSoilResistE1} := H_{h6E1} \cdot H_{h6locE1} + H_{h2aE1} \cdot H_{h2alocE1} + E_{h7E1} \cdot E_{h7locE1} \ldots = 241.3\ m \cdot kN$$
$$+ E_{h8E1} \cdot E_{h8locE1} + E_{h8aE1} \cdot E_{h8alocE1} + P_{sbE1} \cdot P_{sblocE1}$$

Vertical Force:

UPLIFT: Linear distribution from water at heel to water at toe:

$$\Sigma V_{UpliftE1} := \left[\left(UWSEL_{E1} - Bot_{ftg} + Key_{t.d}\right) + h_{2E1}\right] \cdot \frac{b}{2} \cdot \gamma_w \cdot B \cdot -1 = -646.8 \cdot kN$$

Moment Arm (from Point O):

$$V_{UpliftE1aloc} := \frac{b \cdot \left[2 \cdot h_{2E1} + \left(UWSEL_{E1} - Bot_{ftg} + Key_{t.d}\right)\right]}{3\left[h_{2E1} + \left(UWSEL_{E1} - Bot_{ftg} + Key_{t.d}\right)\right]} = 6.727\ m$$

$$\Sigma M_{UpliftE1} := \Sigma V_{UpliftE1} \cdot V_{UpliftE1aloc} = -4351.2 \cdot kN \cdot m$$

Weight of soil and water over toe:

Water Above the Top of Footing: $W_{H1E1} := \gamma_w \cdot h_{5E1} \cdot L_{ab} \cdot B = 51.45 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E1locE1} := \frac{L_{ab}}{2} = 1.75\ m$

Soil above top of footing: $W_{E6E1} := \gamma_b \cdot h_{3E1} \cdot L_{ab} \cdot B = 0.0 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E6locE1} := \frac{L_{ab}}{2} = 1.75\ m$

Vertical Load Due to Surcharge: $S_{E1} := S1_{E1} \cdot L_{cd} \cdot B = 0 \cdot kN$ $\quad S_{E1loc} := b - \frac{L_{cd}}{2} = 9.16\ m$

Weight of soil and water over heel:

Moist Soil for sloped grade above top of wall:

Length of sloped portion of soil above top of wall: $L_{E3E1} := \left(L_{cd} + t_{wb} - t_{wt}\right) = 6.50\ m$

Height of sloped soil above top of wall over heel: $h_{E3locE1} := \left(L_{E3E1}\right) \cdot \tan(\beta) = 0.00\ m$

Weight of sloped soil above top of wall: $W_{E3E1} := \frac{\gamma_m}{2} \cdot h_{E3locE1} \cdot L_{E3E1} \cdot B = 0.0 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E3locE1} := L_{ab} + t_{wt} + \frac{2}{3} \cdot L_{E3E1} = 9.83\ m$

Moist soil from top of wall to groundwater level:

Height of soil from top of wall and top of GWL: $h_{1E1} = 7.00\ m$

Length from edge of wall at GWL to edge of heel: $L_{E4E1} := L_{E3E1} - \left(h_{1E1} \cdot S_{batter}\right) = 5.95\ m$

Weight of soil over heel from top of wall to GWL: $W_{E4E1} := \gamma_m \cdot h_{1E1} \cdot \frac{\left(L_{E3E1} + L_{E4E1}\right)}{2} \cdot B = 871.5 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E4locE1} := b - \frac{L_{E3E1}^{\ 2} + L_{E3E1} \cdot L_{E4U1} + L_{E4E1}^{\ 2}}{3\left(L_{E3E1} + L_{E4E1}\right)} = 8.89\ m$

Saturated soil from groundwater to top of footing:

Height of soil from GWL to top of heel: $h_{E4E1} := h_{2E1} - t_{ftg} - Key_{h.d} = 3.50\ m$

Weight of soil over heel from GWL to top of heel: $W_{E5E1} := \left(\gamma_{sat}\right) \cdot h_{E4E1} \cdot \frac{\left(L_{E4E1} + L_{cd}\right)}{2} \cdot B = 447.6 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E5locE1} := b - \frac{L_{E4E1}^{\ 2} + L_{E4E1} \cdot L_{cd} + L_{cd}^{\ 2}}{3\left(L_{E4E1} + L_{cd}\right)} = 9.09\ m$

$\Sigma V_{SoilWaterE1} := W_{H1E1} + W_{E6E1} + W_{E3E1} + W_{E4E1} + W_{E5E1} + S_{E1} = 1370.5 \cdot kN$

$\Sigma M_{VertSoilWaterResistE1} := W_{H1E1} \cdot W_{E1locE1} + W_{E6E1} \cdot W_{E6locE1} \cdots + W_{E3E1} \cdot W_{E3locE1} + W_{E4E1} \cdot W_{E4locE1} + W_{E5E1} \cdot W_{E5locE1} + S_{E1} \cdot S_{E1loc} = 11903.5\ m \cdot kN$

SESIMIC ANALYSIS:

LOAD CASE E1

Seismic coefficient will be applied to dead loads to calculate seismic force and force is applied at center of gravity of the mass. Vertical and Horizontal loads are applied in the "destabilizing direction"

SEISMIC PARAMETERS:

Peak Ground Acceleration for Seismic Load $PGA_{Horiz} := 0.26$ $PGA_{Vert} := 0.56 \cdot PGA_{Horiz} = 0.146$ (Section 7.9, Design Criteria)

In accordance with USACE EM 1110-2-2100 Section 4-7.b, consider 2/3 PGA as seismic coefficient for stabilitiy.

Horizontal Seismic coefficient for stabilty: $K_{hE1} := \frac{2}{3} PGA_{Horiz} = 0.173$

Vertical Seismic coefficient for stabilty: $K_{vE1} := \frac{2}{3} PGA_{Vert} = 0.097$

SEISMIC ACCELERATION OF RIGID MASSES (Q_D):

Vertical Load Application:

$\Sigma V_{conc} = 1206.3 \cdot kN$

$Q_{v.conc} := \Sigma V_{conc} \cdot K_{vE1} \cdot -1 = -117.1 \cdot kN$ (assume acting upwards for adverse sliding effect)

Moment arm for siesmic load application (From Toe): $H_{cent} = 5.582\, m$

$M_{Qv.conc} := Q_{v.conc} \cdot H_{cent} = -653.6 \cdot kN \cdot m$

Lateral Load Application:

$Q_{h.conc} := \Sigma V_{conc} \cdot K_{hE1} \cdot -1 = -209.1 \cdot kN$

Moment arm for siesmic load application (Above Base of Footing): $V_{Cent} = 3.859\, m$

$M_{Q.conc} := Q_{h.conc} \cdot V_{Cent} = -806.8 \cdot kN \cdot m$

SEISMIC ACCELERATION OF SOIL WEDGE + WATER (Q_{EH}):

Vertical Load Application:

$\Sigma V_{SoilWaterE1} = 1370.5 \cdot kN$

$Q_{v.SoilWaterE1} := \Sigma V_{SoilWaterE1} \cdot K_{vE1} \cdot -1 = -133 \cdot kN$ (assume acting upwards for adverse sliding effect)

Moment arm for siesmic load application (From Toe): $e_{QE1} := \frac{\Sigma M_{VertSoilWaterResistE1}}{\Sigma V_{SoilWaterE1}} = 8.685\, m$

$M_{Qv.SoilWaterE1} := Q_{v.SoilWaterE1} \cdot e_{QE1} = -1155.4 \cdot kN \cdot m$

Lateral Load Application:

Seismic soil load is calculated based on Mononobe-Okabe method to determine combined static and dynamic coefficient (K_{AE}). Coulomb's active component (K_A) is subtracted from K_{AE} to obtain the seismic coefficient (ΔK_{AE}) for dynamic component of soil force.

Glacial Till Internal Friction (radians): $\phi = 0.471$

Seismic Inertia Angle (radians): $\psi := \operatorname{atan}\left(\frac{K_{hE1}}{1 - K_{vE1}}\right) = 0.190$

Inclination of batter (radians): $\theta := 0.00$ assuming zero is conservative

Slope of retained ground surface: $\beta = 0.00$

$$K_{AE} := \frac{\cos(\phi - \psi - \theta) \cdot \cos(\phi - \psi - \theta)}{\cos(\psi) \cdot \cos(\theta) \cdot \cos(\theta)\, \cos(\psi + \theta) \cdot \left(1 + \sqrt{\frac{\sin(\phi)\, \sin(\phi - \psi - \beta)}{\cos(\beta - \theta) \cdot \cos(\psi + \theta)}}\right)^2} = 0.519$$

$\Delta K_{AE} := K_{AE} - K_{Abgwt} = 0.143$

Dynamic component of active seismic wedge:

$$Q_{h.SoilWaterE1} := \Delta K_{AE} \cdot \left[\frac{\gamma_m \cdot \left(H_w + Key_{h.d}\right)^2}{2 \cdot (\tan(\alpha) - \tan(\beta))} + \frac{\left(\gamma_{sat} - \gamma_m\right) \cdot h_{2E1}{}^2}{2 \cdot \tan(\alpha)}\right] \cdot B \cdot -1 = -189.2 \cdot kN$$

(Eq. G-64, USACE EM 1110-2-2100)

Moment arm for siesmic load application (About Point O): $Q_{h.SoilWaterlocE1} := \frac{2}{3} \cdot \left(H_w + Key_{h.d}\right) + Key_{vdist} = 7.67\, m$

$M_{Q.h.SoilWaterE1} := Q_{h.SoilWaterE1} \cdot Q_{h.SoilWaterlocE1} = -1450.2 \cdot kN \cdot m$

STABILITY ASSESSMENT:

LOAD CASE E1

CHECK SLIDING ALONG HORIZONTAL SLIDING PLANE:

Summation of the vertical forces: $\Sigma V_{E1} := \Sigma V_{conc} + \Sigma V_{SoilWaterE1} + \Sigma V_{UpliftE1} + Q_{v.conc} + Q_{v.SoilWaterE1} = 1679.9 \cdot kN$

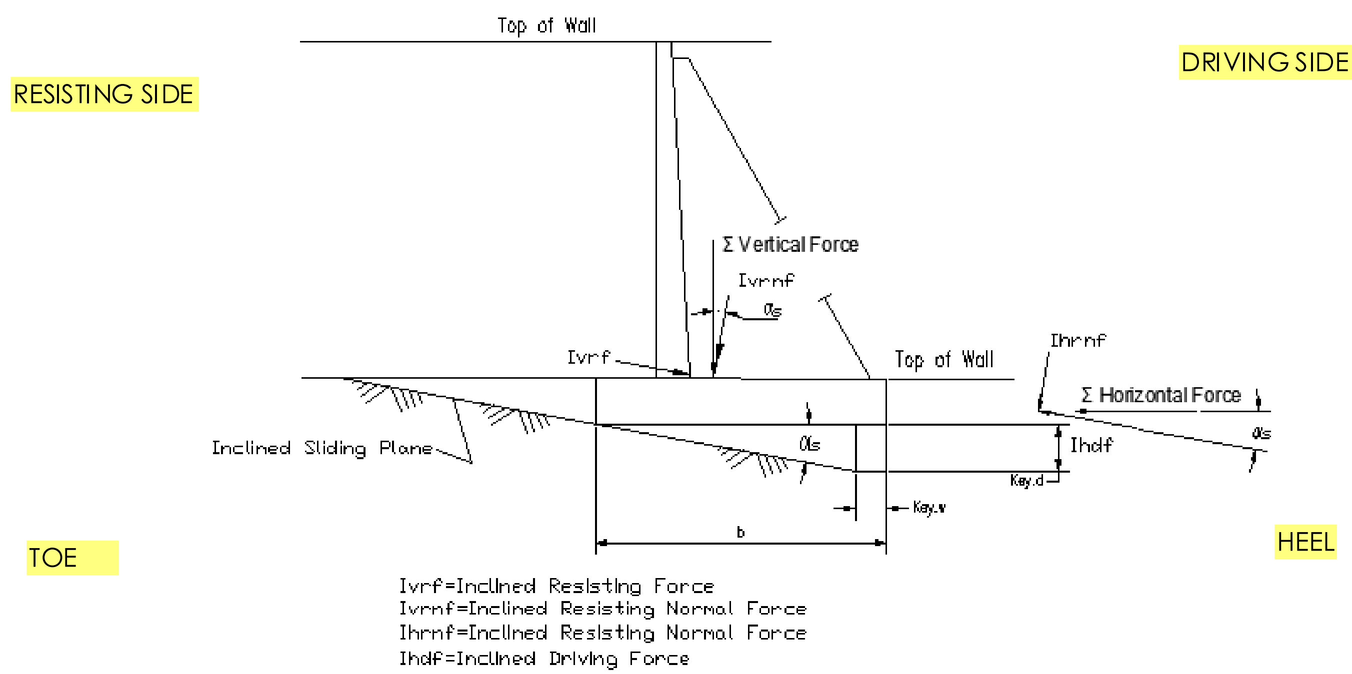
Summation of the horizontal forces: $\Sigma H_{E1} := \Sigma H_{SoildriveE1} + Q_{h.conc} + Q_{h.SoilWaterE1} + \Sigma H_{SoilresistE1} = -918.9 \cdot kN$

Safety Factor for Sliding Horizontal Failure Plane

$$FS_{Horiz.SlidingE1} := \frac{\left|\Sigma V_{E1}\right| \cdot \tan\left(\phi_{rock} \cdot \frac{\pi}{180}\right)}{\left|\Sigma H_{E1}\right|} = 0.89$$

$$FS_{Sliding.check1.E1} := \begin{cases} \text{"OKAY"} & \text{if } FS_{Horiz.SlidingE1} > FS_{sliding.reqE1} \\ \text{"NG - key req"} & \text{otherwise} \end{cases} = \text{"NG - key req"}$$

CHECK FACTOR OF SAFETY SLIDING WITH KEY (INCLINED SLIDING PLANE):



(With properly engineered reinforced concrete Key, horizontal sliding plane thru Toe is protected, critical sliding plane is relocated to the INCLINED SLIDING PLANE FROM HEEL KEY To TOE, Bedrock Mass above this examing plane is mobilized by reinforced concrete key and combined into Structural Wedge.)

Resolve ΣV_{E1} & ΣH_{E1}

$$\Sigma V_{InclinedE1} := \cos(\alpha s) \cdot \left(\left|\Sigma V_{E1} + V_{rocksection}\right|\right) + \sin(\alpha s) \cdot \left|\Sigma H_{E1}\right| = 2094.2 \cdot kN$$

$$\Sigma H_{InclinedE1} := \cos(\alpha s) \cdot \left|\Sigma H_{E1}\right| - \sin(\alpha s) \cdot \left(\left|\Sigma V_{E1} + V_{rocksection}\right|\right) = 553.2 \cdot kN$$

Safety Factor for Sliding Inclined Failure Plane

$$FS_{InclinedISlidingE1} := \frac{\Sigma V_{InclinedE1} \cdot \tan\left(\phi_r\right)}{\Sigma H_{InclinedE1}} = 1.69$$

$$FS_{Sliding.check2.E1} := \begin{cases} \text{"OKAY"} & \text{if } FS_{InclinedISlidingE1} > FS_{sliding.reqE1} \\ \text{"NG"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

CHECK FOUNDATION ECCENTRICITY:

LOAD CASE E1

(Vertical seismic loads from concrete, soil and water are assumed acting downwards for adverse bearing effect)

Summation of the vertical forces: $\Sigma V_{seisE1} := \Sigma V_{conc} + \Sigma V_{SoilWaterE1} + \Sigma V_{UpliftE1} - Q_{v.conc} - Q_{v.SoilWaterE1} = 2180.1 \cdot kN$

Summation of the horizontal forces: $\Sigma H_{seisE1} := \Sigma H_{E1} = -918.9 \cdot kN$

Resolve ΣV_{seisE1} & ΣH_{seisE1}

$$\Sigma V_{InclinedseisE1} := \cos(\alpha s) \cdot \left(\left|\Sigma V_{seisE1} + V_{rocksection}\right|\right) + \sin(\alpha s) \cdot \left|\Sigma H_{seisE1}\right| = 2586.4 \cdot kN$$

$$\Sigma H_{InclinedseisE1} := \cos(\alpha s) \cdot \left|\Sigma H_{seisE1}\right| - \sin(\alpha s) \cdot \left(\left|\Sigma V_{seisE1} + V_{rocksection}\right|\right) = 463.7 \cdot kN$$

Summation of the resisting moments about the toe:

$$\Sigma M_{resE1} := \Sigma M_{conc} + \Sigma M_{VertSoilWaterResistE1} + \Sigma M_{HorizSoilResistE1} + \Sigma M_{rocksection} = 20943 \cdot kN \cdot m$$

Summation of seismic moments about the toe:

$$\Sigma M_{seisE1} := -M_{Qv.conc} + M_{Q.conc} - M_{Qv.SoilWaterE1} + M_{Q.h.SoilWaterE1} = -448 \cdot kN \cdot m$$

Summation of the overturning moments about the toe:

$$\Sigma M_{oE1} := \Sigma M_{LateralSoildriveE1} + \Sigma M_{UpliftE1} = -6685 \cdot kN \cdot m$$

Total moment: $\Sigma M_{E1} := \Sigma M_{resE1} + \Sigma M_{seisE1} + \Sigma M_{oE1} = 13810.0 \cdot kN \cdot m$

Normal force to base: $\Sigma V_{InclinedseisE1} = 2586.4 \cdot kN$

Inclined Sliding Plane Length: $L_{incline} = 12.2 \cdot m$

Eccentricity (inclined plane): $ex_{E1} := \frac{L_{incline}}{2} - \frac{\Sigma M_{E1}}{\Sigma V_{InclinedseisE1}} = 0.76\,m$ $\quad Kern_{E1} := \frac{L_{incline}}{4} = 3.049\,m$

Eccentricity Check: $e_{check.E1} := \begin{cases} \text{"Okay"} & \text{if } ex_{E1} \le Kern_{E1} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"Okay"}$

CHECK FOUNDATION BEARING CAPACITY:

Base Section Modulus: $S_b = 24.79\,m^3$

Bearing Pressure Under Toe:

$$\sigma_{ToeE1} := \begin{cases} \left(\frac{\Sigma V_{InclinedE1}}{L_{incline} \cdot B} + \frac{\Sigma V_{InclinedE1} \cdot ex_{E1}}{S_b}\right) & \text{if } \frac{\Sigma V_{InclinedE1} \cdot ex_{E1}}{S_b} \le \frac{\Sigma V_{InclinedE1}}{L_{incline} \cdot B} \\ \frac{2 \cdot \Sigma V_{InclinedE1}}{B \cdot 3\left(\frac{b}{2} - ex_{E1}\right)} & \text{otherwise} \end{cases} = 235.8 \cdot kPa$$

$$Bearing_{ChecktoeE1} := \begin{cases} \text{"OKAY "} & \text{if } \sigma_{ToeE1} < \sigma_{allowE1} \\ \text{"NG""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

Bearing Pressure Under Heel:

$$\sigma_{HeelE1} := \begin{cases} \left[\frac{\Sigma V_{InclinedE1}}{L_{incline} \cdot B} - \frac{\left(\Sigma V_{InclinedE1} \cdot ex_{E1}\right)}{S_b}\right] & \text{if } \frac{\Sigma V_{InclinedE1} \cdot ex_{E1}}{S_b} \le \frac{\Sigma V_{InclinedE1}}{L_{incline} \cdot B} \\ 0 & \text{otherwise} \end{cases} = 107.6 \cdot kPa$$

$$Bearing_{CheckheelE1} := \left(\begin{cases} \text{"OKAY "} & \text{if } \sigma_{HeelE1} < \sigma_{allowE1} \wedge \sigma_{HeelE1} > 0 \\ \text{"NG - perform cracked base analysis""} & \text{otherwise} \end{cases}\right) = \text{"OKAY "}$$

CHECK FLOATATION:

Safety Factor for Floatation:

$$FS_{FloatationE1} := \frac{\Sigma V_{conc} + \Sigma V_{SoilWaterE1} + Q_{v.conc} + Q_{v.SoilWaterE1}}{\left|\Sigma V_{UpliftE1}\right|} = 3.60$$

$$FS_{Floatation.E1.check} := \begin{cases} \text{"OKAY"} & \text{if } FS_{FloatationE1} > FS_{req.E1.flt} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

CHECK OVERTURNING

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stablity of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1

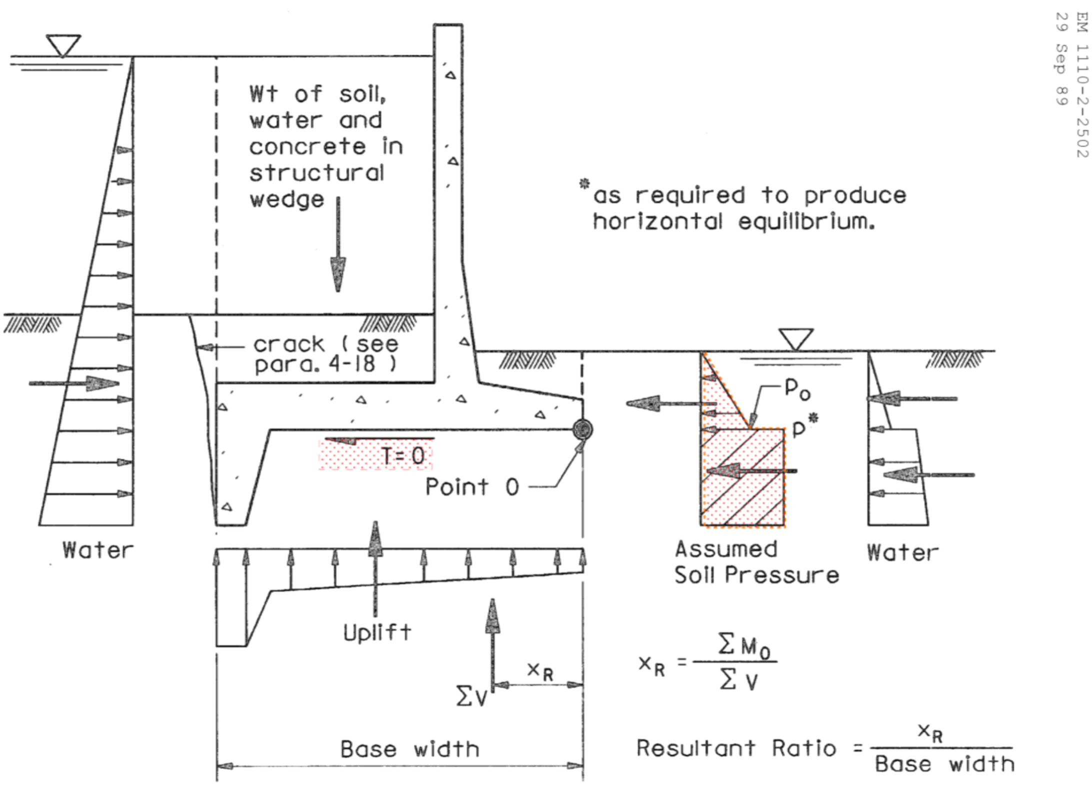


Figure 4-5. Forces for overturning analysis for wall with horizontal base and key

Modify Uplift for Overturning Analysis: **LOAD CASE E1**

(Uplift is calculated along the concrete/rock contact using the Line of Creep method)

Water Pressure at h: $u_{h.E1} := \Delta h_{g.hj.E1} \cdot \gamma_w = 73.50 \cdot kPa$

Water Pressure at o: $u_{o.E1} := \left(\Delta h_{g.no.E1} - \frac{\Delta h_{g.r.E1} \cdot L_{ho.E1}}{L_{ho.E1}}\right) \cdot \gamma_w = 34.3 \cdot kPa$

Head loss between point h and o: $\Delta h_{ho.E1} := \Delta h_{g.r.E1} \cdot \frac{L_{ho.E1}}{L_{ho.E1}} = 2\,m$

Length of concrete base (h -> o): $L_{baseho.E1} := Key_{h.w} + Key_{h.d} + Key_{hdist} + Key_{t.d} + Key_{t.w} = 14\,m$

Head loss along h -> j: $\Delta h_{hj.E1} := \Delta h_{ho.E1} \cdot \frac{Key_{h.w}}{L_{baseho.E1}} = 0.143\,m$

Water Pressure at j: $u_{j.E1} := \left(\Delta h_{g.hj.E1} - \Delta h_{hj.E1}\right) \cdot \gamma_w = 72.10 \cdot kPa$

Head loss along h -> k: $\Delta h_{hjk.E1} := \Delta h_{ho.E1} \cdot \left(\frac{Key_{h.w} + Key_{h.d}}{L_{baseho.E1}}\right) = 0.429\,m$

Water Pressure at k: $u_{k.E1} := \left(\Delta h_{g.km.E1} - \Delta h_{hjk.E1}\right) \cdot \gamma_w = 49.70 \cdot kPa$

Head loss along h -> m: $\Delta h_{hjkm.E1} := \Delta h_{ho.E1} \cdot \left(\frac{Key_{h.w} + Key_{h.d} + Key_{hdist}}{L_{baseho.E1}}\right) = 2\,m$

Water Pressure at m: $u_{m.E1} := \left(\Delta h_{g.km.E1} - \Delta h_{hjkm.E1}\right) \cdot \gamma_w = 34.30 \cdot kPa$

Head loss along h -> n: $\Delta h_{hjkmn.E1} := \Delta h_{ho.E1} \cdot \left(\frac{Key_{h.w} + Key_{h.d} + Key_{hdist} + Key_{t.d}}{L_{baseho.E1}}\right) = 2\,m$

Water Pressure at n: $u_{n.E1} := \left(\Delta h_{g.no.E1} - \Delta h_{hjkmn.E1}\right) \cdot \gamma_w = 34.30 \cdot kPa$

Uplift under key at heel: $V_{ulkeyhE1.OT} := \frac{\left(u_{h.E1} + u_{j.E1}\right) \cdot Key_{h.w}}{2} \cdot B \cdot -1 = -72.8 \cdot kN$

Moment Arm (from Point O): $V_{ulkeyhE1loc.OT} := b - \frac{Key_{h.w} \cdot \left(2 \cdot u_{j.E1} + u_{h.E1}\right)}{3 \cdot \left(u_{j.E1} + u_{h.E1}\right)} = 11.502\,m$

Uplift under base: $V_{ulbaseE1.OT} := \frac{\left(u_{k.E1} + u_{m.E1}\right) \cdot Key_{hdist}}{2} \cdot B \cdot -1 = -462 \cdot kN$

Moment Arm (from Point O): $V_{ulbaseE1loc.OT} := b - Key_{h.w} - \frac{Key_{hdist} \cdot \left(2 \cdot u_{m.E1} + u_{k.E1}\right)}{3 \cdot \left(u_{m.E1} + u_{k.E1}\right)} = 5.836\,m$

Uplift under key at toe: $V_{ulkeytE1.OT} := \frac{\left(u_{n.E1} + u_{o.E1}\right) \cdot Key_{t.w}}{2} \cdot B \cdot -1 = 0 \cdot kN$

Moment Arm (from Point O): $V_{ulkeytE1loc.OT} := \frac{Key_{t.w} \cdot \left(2 \cdot u_{n.E1} + u_{o.E1}\right)}{3 \cdot \left(u_{n.E1} + u_{o.E1}\right)} = 0$

$$\Sigma V_{UpliftE1.OT} := V_{ulkeyhE1.OT} + V_{ulbaseE1.OT} + V_{ulkeytE1.OT} = -535 \cdot kN$$

$$U_{E1.loc.OT} := \frac{V_{ulkeyhE1.OT} \cdot V_{ulkeyhE1loc.OT} + V_{ulbaseE1.OT} \cdot V_{ulbaseE1loc.OT} + V_{ulkeytE1.OT} \cdot V_{ulkeytE1loc.OT}}{\Sigma V_{UpliftE1.OT}} = 6.61\,m$$

$$\Sigma M_{UpliftE1.OT} := \Sigma V_{UpliftE1.OT} \cdot U_{E1.loc.OT} = -3533.6 \cdot kN \cdot m$$

LOAD CASE E1

Modify Lateral Water Pressure (Resisting) for Overturning Analysis:

(Resisting water pressure is calculated using the Line of Creep method)

Water Load at Key (heel): $H_{h2E1.OT} := \frac{u_{k.E1} + u_{j.E1}}{2} \cdot Key_{h.d} B = 121.8 \cdot kN$

Moment Arm (from Point O): $H_{h2locE1.OT} := \frac{Key_{h.d} \cdot (2 \cdot u_{k.E1} + u_{j.E1})}{3(u_{k.E1} + u_{j.E1})} + Key_{vdist} = -1.06\ m$

Water Load at Key (toe): $H_{h6E1.OT} := \frac{u_{o.E1} \cdot (UWSEL_{E1} - Bot_{ftg} + Key_{t.d})}{2} \cdot B = 60 \cdot kN$

Moment Arm (from Point O): $H_{h6locE1.OT} := \frac{UWSEL_{E1} - Bot_{ftg} + Key_{t.d}}{3} = 1.17\ m$

$$\Sigma H_{waterresistE1.OT} := H_{h2E1.OT} + H_{h6E1.OT} = 181.82 \cdot kN$$

$$H_{waterresistlocE1.OT} := \frac{H_{h2E1.OT} \cdot H_{h2locE1.OT} + H_{h6E1.OT} \cdot H_{h6locE1.OT}}{\Sigma H_{waterresistE1.OT}} = -0.326\ m$$

$$\Sigma M_{waterresistE1.OT} := \Sigma H_{waterresistE1.OT} \cdot H_{waterresistlocE1.OT} = -59.24 \cdot kN \cdot m$$

Modify Lateral Soil Loads for Overturning Analysis:

(Lateral soil loads are calculated down to Point O instead of bottom of shear key)

Driving Soil Load (Headwater Side):

Surcharge Load: $E_{s1E1.OT} := S1_{E1} \cdot K_{Aagwt} \cdot (H_w + Key_{h.d} + Key_{vdist}) \cdot B \cdot -1 = 0 \cdot kN$

Moment Arm (from Point O): $E_{s1locE1.OT} := \frac{H_w + Key_{h.d} + Key_{vdist}}{2} = 6.25\ m$

Moist Soil Load above GWL: $E_{h1E1.OT} := \frac{\gamma_m \cdot K_{Aagwt} \cdot h_{1E1}^2}{2} B \cdot -1 = -184.0 \cdot kN$

Moment Arm (from Point O): $E_{h1locE1.OT} := \frac{h_{1E1}}{3} + h_{2E1} + Key_{vdist} = 7.83\ m$

Saturated Soil Load below GWL:
(rectangular component) $E_{h2E1.OT} := (\gamma_m \cdot K_{Aagwt} \cdot h_{1E1}) \cdot (h_{2E1} + Key_{vdist}) \cdot B \cdot -1 = -289.2 \cdot kN$

Moment Arm (from Point O): $E_{h2locE1.OT} := \frac{h_{2E1} + Key_{vdist}}{2} = 2.75\ m$

Saturated Soil Load below GWL:
(triangular component) $E_{h2aE1.OT} := \frac{(\gamma_{sat} - \gamma_w) \cdot K_{Aagwt} \cdot (h_{2E1} + Key_{vdist})^2}{2} \cdot B \cdot -1 = -69.3 \cdot kN$

Moment Arm (from Point O): $E_{h2alocE1.OT} := \frac{h_{2E1} + Key_{vdist}}{3} = 1.83\ m$

Resisting Soil Load (Tailwater Side): **LOAD CASE E1**

(Determine resisting soil load based on depth variation between the keys (ie. Key_{vdist}). In case where key at heel is deeper than key at toe (ie. $Key_{vdist} < 0$), resisting soil load (p*) is assumed to produce horizontal equilibrium as per Figure 4-5 above. Resisting soil load (p_o) is neglected.)

Total Driving Force: $\Sigma H_{SoildriveE1.OT} := E_{s1E1.OT} + E_{h1E1.OT} + E_{h2E1.OT} + E_{h2aE1.OT} + H_{h2E1} \cdots + Q_{h.conc} + Q_{h.SoilWaterE1} = -1216.3 \cdot kN$

Total Resisting Force: $\Sigma H_{waterresistE1.OT} = 181.825 \cdot kN$

Assumed Soil Load p*: $E_{h8E1a.OT} := \left(\Sigma H_{SoildriveE1.OT} + \Sigma H_{waterresistE1.OT}\right) \cdot -1 = 1034.499 \cdot kN$

Moment Arm (from Point O): $E_{h8E1a.loc.OT} := \frac{Key_{vdist}}{2} = -1\ m$

$$E_{h8E1.OT} := \begin{cases} E_{h8E1a.OT} & \text{if } Key_{vdist} < 0 \\ \Sigma H_{SoilresistE1} - H_{h6E1} - H_{h2aE1} - P_{sbE1} & \text{otherwise} \end{cases} = 1034.499 \cdot kN$$

$$\Sigma M_{SoilresistE1} := \begin{cases} E_{h8E1a.OT} \cdot E_{h8E1a.loc.OT} & \text{if } Key_{vdist} < 0 \\ \Sigma M_{HorizSoilResistE1} - H_{h6E1} \cdot H_{h6locE1} - H_{h2aE1} \cdot H_{h2alocE1} - P_{sbE1} \cdot P_{sblocE1} & \text{otherwise} \end{cases} = -1034.499 \cdot kN \cdot m$$

Sum of Moment about Point O:

$$\Sigma M_{LateraldriveE1.OT} := E_{s1E1.OT} \cdot E_{s1locE1.OT} + E_{h1E1.OT} \cdot E_{h1locE1.OT} + E_{h2E1.OT} \cdot E_{h2locE1.OT} \cdots + E_{h2aE1.OT} \cdot E_{h2alocE1.OT} + H_{h2E1} \cdot H_{h2locE1} = -2501.4 \cdot kN \cdot m$$

$$\Sigma M_{LateralresistE1.OT} := \Sigma M_{waterresistE1.OT} + \Sigma M_{SoilresistE1} = -1093.7 \cdot kN \cdot m$$

$$\Sigma M_{seisE1.OT} := M_{Qv.conc} + M_{Q.conc} + M_{Qv.SoilWaterE1} + M_{Q.h.SoilWaterE1} = -4066 \cdot kN \cdot m$$

(seismic moment modified for the most adverse overturning effect)

Total moment:

$$\Sigma M_{E1.OT} := \Sigma M_{conc} + \Sigma M_{VertSoilWaterResistE1} + \Sigma M_{UpliftE1.OT} + \Sigma M_{LateraldriveE1.OT} + \Sigma M_{LateralresistE1.OT} + \Sigma M_{seisE1.OT} = 7441.8 \cdot kN \cdot m$$

Total Vertical Force: $\Sigma V_{E1.OT} := \Sigma V_{conc} + \Sigma V_{SoilWaterE1} + \Sigma V_{UplliftE1.OT} + Q_{v.conc} + Q_{v.SoilWaterE1} = 1791.9 \cdot kN$

Distance X_R: EM 1110-2-2502 Eq.4-1 $X_{R.E1} := \frac{\Sigma M_{E1.OT}}{\Sigma V_{E1.OT}} = 4.153\ m$

Overturning Resultant Ratio $Ratio_{E1.OT} := \frac{X_{R.E1}}{b} = 0.35$

$$Ratio_{E1.OT.check} := \begin{cases} \text{"OKAY "} & \text{if } Ratio_{E1.OT} > X_{R.reqE1} \\ \text{"Revise Structure""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

CHECK FOUNDATION ECCENTRICITY (HORIZONTAL PLANE):

Eccentricity (horizontal plan): $ex_{E1.OT} := \frac{b}{2} - \frac{\Sigma M_{E1.OT}}{\Sigma V_{E1.OT}} = 1.85\ m$ $Kern_{E1.OT} := \frac{b}{4} = 3\ m$

Eccentricity Check:

$$e_{check.E1.OT} := \begin{cases} \text{"Okay"} & \text{if } ex_{E1.OT} \le Kern_{E1.OT} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"Okay"}$$

LOAD CASE E1

CHECK FOUNDATION BEARING CAPACITY (HORIZONTAL PLANE):

Base Section Modulus: $S_{b.OT} = 24\,m^3$

Bearing Pressure Under Toe:

$$\sigma_{ToeE1.OT} := \begin{cases} \left(\dfrac{\Sigma V_{E1.OT}}{b \cdot B} + \dfrac{\Sigma V_{E1.OT} \cdot ex_{E1.OT}}{S_{b.OT}}\right) & \text{if } \dfrac{\Sigma V_{E1.OT}}{b \cdot B} \geq \dfrac{\Sigma V_{E1.OT} \cdot ex_{E1.OT}}{S_{b.OT}} \\ \dfrac{2 \cdot \Sigma V_{E1.OT}}{B \cdot 3\left(\dfrac{b}{2} - ex_{E1.OT}\right)} & \text{otherwise} \end{cases} = 287.2 \cdot kPa$$

$$Bearing_{ChecktoeE1.OT} := \begin{cases} \text{"OKAY "} & \text{if } \sigma_{ToeE1.OT} < \sigma_{allowE1} \\ \text{"NG - for reference only""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

Bearing Pressure Under Heel:

$$\sigma_{HeelE1.OT} := \begin{cases} \left(\dfrac{\Sigma V_{E1.OT}}{b \cdot B} - \dfrac{\Sigma V_{E1.OT} \cdot ex_{E1.OT}}{S_{b.OT}}\right) & \text{if } \dfrac{\Sigma V_{E1.OT}}{b \cdot B} \geq \dfrac{\Sigma V_{E1.OT} \cdot ex_{E1.OT}}{S_{b.OT}} \\ 0 & \text{otherwise} \end{cases} = 11.4 \cdot kPa$$

$$Bearing_{CheckheelE1.OT} := \left(\begin{cases} \text{"OKAY "} & \text{if } \sigma_{HeelE1.OT} < \sigma_{allowE1} \wedge \sigma_{HeelE1.OT} > 0 \\ \text{"NG - for reference only""} & \text{otherwise} \end{cases}\right) = \text{"OKAY "}$$

SUMMARY OF STABILITY ASSESSMENT:

LOAD CASE E1

Sliding Factor of Safety: (Horizontal Plane - Ref only)	$FS_{Horiz.SlidingE1} = 0.89$	$FS_{Sliding.check1.E1}$ = "NG - key req""
Sliding Factor of Safety: (Inclined Plane)	$FS_{InclinedlSlidingE1} = 1.69$	$FS_{Sliding.check2.E1}$ = "OKAY "

WALL GEOMETRY:

Top of Wall Elevation: $T_w := 1219.0 \cdot m$

Top of Footing Elevation: $Top_{ftg} := 1207.5 \cdot m$

Thickness of Footing: $t_{ftg} := 2.0m$

Bottom of Footing Elevation: $Bot_{ftg} := Top_{ftg} - t_{ftg} = 1205.5\ m$

Overall Height of wall: $h_w := T_w - Bot_{ftg} = 13.50\ m$

Thickness of Wall: Base: $t_{wb} := 1.404 \cdot m$ Top: $t_{wt} := 0.5m$

Length of toe: $L_{ab} := 3.5m$

Total Length of Footing: $b := 12.00m$

Length of heel: $L_{cd} := b - L_{ab} - t_{wb} = 7.096\ m$

Unit Width of Wall for analysis: $B := 1.00m$

SHEAR KEY GEOMETRY:

	Toe	Heel	
Key depth:	$Key_{t.d} := 0m$	$Key_{h.d} := 2.0m$	(Assumption: $Key_{h.d}$ >= $Key_{t.d}$)
Key width:	$Key_{t.w} := 0m$	$Key_{h.w} := 1m$	
Face of Key from Point O:	$Key_{t.loc} := 0 \cdot m$	$Key_{h.loc} := 11.00 \cdot m$	

Horizontal Distance between Keys: $Key_{hdist} := Key_{h.loc} - Key_{t.loc} - Key_{t.w} = 11\ m$

Key Depth Diff. (from point O): $Key_{vdist} := -Key_{h.d} + Key_{t.d} = -2\ m$

BASE PROPERTIES:

Base Area: $A_b := b \cdot B = 12\ m^2$

Centroidal Distance for Footing (from Toe): $Y_t := \frac{b}{2} = 6.00\ m$

RETAINED SOIL GEOMETRY:

Slope of retained ground surface: $\beta := 0 \cdot \frac{\pi}{180} = 0.00$

Height of retained earth at heel: $H_w := T_w - Bot_{ftg} + \left(t_{wb} + L_{cd} - t_{wt}\right) \cdot \tan(\beta) = 13.50\ m$

RETAINING WALL GEOMETRY CHECKS:

(Foundation Analysis & Design Bowles)

$$t_{bcheck} := \begin{cases} \text{"OKAY"} & \text{if } t_{ftg} \geq \frac{H_w}{12} \\ \text{"Warning"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

$$t_{wcheck} := \begin{cases} \text{"OKAY"} & \text{if } t_{wb} \geq \frac{H_w}{12} \\ \text{"Warning"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

$$b_{check} := \begin{cases} \text{"OKAY"} & \text{if } \frac{b}{H_w} \geq .4 \wedge \frac{b}{H_w} \leq 80 \\ \text{"Warning"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

$$L_{abcheck} := \begin{cases} \text{"OKAY"} & \text{if } \frac{L_{ab}}{b} \geq .25 \wedge \frac{L_{ab}}{b} \leq .4 \\ \text{"Warning"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

Material Properties:

Unit Weight of Water: $\gamma_w := 9.8 \frac{kN}{m^3}$ (Section 7.2, Design Criteria)

Unit Weight of Concrete: $\gamma_c := 23.5 \frac{kN}{m^3}$

Unit Weight of Soil (Moist): $\gamma_m := 20.0 \frac{kN}{m^3}$ (Section 5.3, Design Criteria)
assumed moisture content (w) = 5%

Unit Weight Soil (Saturated): $\gamma_{sat} := 22.0 \frac{kN}{m^3}$ (Assuming Specific Gravity = 2.7

Unit Weight Soil (buoyant): $\gamma_b := \gamma_{sat} - \gamma_w = 12.2 \cdot \frac{kN}{m^3}$

Weight of Soil/Concrete above toe: $\gamma_{toe} := 22.0 \frac{kN}{m^3}$

Unit Weight of Rock: $\gamma_r := 25.6 \frac{kN}{m^3}$ (Section 7.2, Design Criteria)

Foundation Parameters:

Glacial Till Internal Friction: $\phi := 27 \cdot \frac{\pi}{180} = 0.471$

Bedrock Internal Friction Angle: $\phi_r := 24 \cdot \frac{\pi}{180} = 0.419$

Friction Angle at Base
Concrete / Rock Interface: $\phi_{rock} := 26$

Base Friction Coefficient: $tan_{\phi rock} := \tan\left(\phi_{rock} \frac{\pi}{180}\right) = 0.488$ radians

Rip Rap Backfill, Refer Dwg. C-214 $\phi_{backfill} := \left(20 \frac{\pi}{180}\right) = 0.349$ radians

Shear strength along rock
Failure plane $s_r := \frac{13100 \frac{kN}{m^2}}{2} = 6550 \cdot \frac{kN}{m^2}$ (Stantec Design Memo 8/8/16)

CONCRETE DEAD LOAD:

Area of Footing: $A_{ftg} := t_{ftg} \cdot b = 24\,m^2$

Weight of Footing: $D_{ftg} := A_{ftg} \cdot B \cdot \gamma_c = 564 \cdot kN$

Area of Stem (without batter): $A_{w1} := t_{wt} \cdot (h_w - t_{ftg}) = 5.75\,m^2$

Weight of Stem: $D_{w1} := A_{w1} \cdot B \cdot \gamma_c = 135.1 \cdot kN$

Area of stem Batter: $A_{w2} := \frac{(t_{wb} - t_{wt})}{2} (h_w - t_{ftg}) = 5.2\,m^2$

Weight of Batter: $D_{w2} := A_{w2} \cdot B \cdot \gamma_c = 122.2 \cdot kN$

Slope of batter: $S_{batter} := \frac{t_{wb} - t_{wt}}{h_w - t_{ftg}} = 0.079$

Area of Key $A_{t.key} := Key_{t.d} \cdot Key_{t.w} = 0$ $A_{h.key} := Key_{h.d} \cdot Key_{h.w} = 2\,m^2$

Weight of Key $D_{t.key} := A_{t.key} \cdot B \cdot \gamma_c = 0 \cdot kN$ $D_{h.key} := A_{h.key} \cdot B \cdot \gamma_c = 47 \cdot kN$

Centroidal Horizontal Distance of Wall (From Toe):

$$H_{cent} := \frac{A_{w1} \cdot \left(L_{ab} + \frac{t_{wt}}{2}\right) + A_{w2} \cdot \left(L_{ab} + t_{wt} + \frac{t_{wb} - t_{wt}}{3}\right) + A_{ftg} \cdot \frac{b}{2} \ldots + A_{t.key} \cdot \left(Key_{t.loc} + \frac{Key_{t.w}}{2}\right) + A_{h.key} \cdot \left(Key_{h.loc} + \frac{Key_{h.w}}{2}\right)}{A_{w1} + A_{w2} + A_{ftg} + A_{t.key} + A_{h.key}} = 5.71\,m$$

Centroidal Vertical Distance of Wall (Above Base of Footing):

$$V_{Cent} := \frac{A_{ftg} \cdot \frac{t_{ftg}}{2} + A_{w1} \cdot \left[t_{ftg} + \frac{(h_w - t_{ftg})}{2}\right] + A_{w2} \cdot \left[t_{ftg} + \frac{(h_w - t_{ftg})}{3}\right] + A_{t.key} \cdot \left(\frac{-Key_{t.d}}{2}\right) + A_{h.key} \cdot \left(\frac{-Key_{h.d}}{2}\right)}{A_{ftg} + A_{w1} + A_{w2} + A_{t.key} + A_{h.key}} = 2.62\,m$$

$\Sigma V_{conc} := D_{ftg} + D_{w1} + D_{w2} + D_{t.key} + D_{h.key} = 868.3 \cdot kN$

$\Sigma M_{conc} := \Sigma V_{conc} \cdot H_{cent} = 4956.6\,m \cdot kN$

ROCK SECTION MOBILIZED FOR INCLINDED SLIDING FAILURE

Area of Rock Section Mobilized: $A_{rocksection} := (Key_{t.d} + Key_{h.d}) \cdot \frac{Key_{hdist}}{2} = 11\,m^2$

Rock Mass Mobilized: $V_{rocksection} := A_{rocksection} \cdot \gamma_r \cdot B = 281.6 \cdot kN$

(Pore pressure taken along assumed inclined sliding plane)

Distance from Toe to COG of Rock Section: $L_{rocksection} := \frac{Key_{hdist} \cdot (2 \cdot Key_{h.d} + Key_{t.d})}{3(Key_{h.d} + Key_{t.d})} + Key_{t.w} = 7.333\,m$

$\Sigma M_{rocksection} := V_{rocksection} \cdot L_{rocksection} = 2065.1\,m \cdot kN$

SOIL HEIGHTS and Water Levels:

LOAD CASE U1

Heel Conditions:

Groundwater Elevation at Heel: $GWL_{U1} := 1210.5m$

Distance from Finish Grade to Groundwater at Heel: $h_{1U1} := \left[T_w - GWL_{U1} + \left(L_{cd} + t_{wb} - t_{wt}\right)\cdot\tan(\beta)\right] = 8.50\ m$

Distance from Water Surface to Bottom of Footing at Heel: $h_{2U1} := GWL_{U1} - Bot_{ftg} + Key_{h.d} = 7.00\ m$

Toe Conditions:

Water Surface Elevation at Toe: $WSEL_{U1} := 1207.5m$

Water Surface Elevation at Toe for Uplift: $UWSEL_{U1} := 1207.5\cdot m$

Finish Grade at Toe providing lateral resistance: $FG_{toeU1} := 1205.5\cdot m$

Soil Depth Above top of footing: $h_{3aU1} := FG_{toeU1} - Top_{ftg} = -2\ m$

$$h_{3U1} := \begin{cases} h_{3aU1} & \text{if } FG_{toeU1} - Top_{ftg} \geq 0 \\ 0 & \text{otherwise} \end{cases} = 0$$

Resisting Fill at Toe: $h_{4U1} := FG_{toeU1} - Bot_{ftg} + Key_{t.d} = 0.00\ m$

Distance from Water Level to Top of Footing: $h_{5U1} := WSEL_{U1} - Top_{ftg} = 0.00\ m$

Distance from Water Surface to Bottom of Footing: $h_{6U1} := WSEL_{U1} - Bot_{ftg} + Key_{t.d} = 2.00\cdot m$

Soil Depth Above WSEL: $h_{7aU1} := FG_{toeU1} - WSEL_{U1} = -2\ m$

$$h_{7U1} := \begin{cases} h_{7aU1} & \text{if } FG_{toeU1} - WSEL_{U1} \geq 0 \\ 0 & \text{otherwise} \end{cases} = 0$$

Soil Depth Below WSEL:

$$h_{8U1} := \begin{cases} WSEL_{U1} - Bot_{ftg} + Key_{t.d} & \text{if } FG_{toeU1} - WSEL_{U1} \geq 0 \\ h_{4U1} & \text{otherwise} \end{cases} = 0$$

For Line of Creep Method: $L_{ho.U1} := \sqrt{b^2 + \left(Key_{h.d} - Key_{t.d}\right)^2} = 12.166\ m$

Head Loss from Point g:

$\Delta h_{g.hj.U1} := h_{2U1} = 7\ m$ (to point h & j)

$\Delta h_{g.km.U1} := GWL_{U1} - Bot_{ftg} = 5\ m$ (to point k & m)

$\Delta h_{g.no.U1} := GWL_{U1} - Bot_{ftg} + Key_{t.d} = 5\ m$ (to point n & o)

$\Delta h_{g.p.U1} := GWL_{U1} - FG_{toeU1} = 5\ m$ (to point p*)

$\Delta h_{g.r.U1} := GWL_{U1} - UWSEL_{U1} = 3\ m$ (to point r)

Surcharge

Surcharge on Heel: $S1_{U1} := 0.0\ \frac{kN}{m^2}$

* same as point "o" in this case

Calculate Soil Lateral Pressure Coefficients:

LOAD CASE U1

For all load cases except seismic, soil loading to be based on At-Rest Condition.
Calculate at-rest pressure coefficient Ko based on Jaky's (1944) equation.

Soil At Rest Static Coefficient: $K_o := \frac{1 - \sin(\phi)}{1 + \sin(\beta)} = 0.546$ (Eq. 3-6, USACE EM 1110-2-2502)

Lateral - Driving Force (Headwater Side)

Lateral Soil Load:

Surcharge Load: $E_{s1U1} := S1_{U1} \cdot K_o \cdot \left(H_w + Key_{h.d}\right) \cdot B \cdot -1 = 0 \cdot kN$

Moment Arm (from bottom of footing): $E_{s1locU1} := \frac{H_w + Key_{h.d}}{2} + Key_{vdist} = 5.75\ m$

Moist Soil Load above GWL: $E_{h1U1} := \frac{\gamma_m \cdot K_o \cdot h_{1U1}^{\ 2}}{2} B \cdot -1 = -394.5 \cdot kN$

Moment Arm (from bottom of footing): $E_{h1locU1} := \frac{h_{1U1}}{3} + h_{2U1} + Key_{vdist} = 7.83\ m$

Saturated Soil Load below GWL:
(rectangular component) $E_{h2U1} := \left(\gamma_m \cdot K_o \cdot h_{1U1}\right) \cdot \left(h_{2U1}\right) \cdot B \cdot -1 = -649.8 \cdot kN$

Moment Arm (from bottom of footing): $E_{h2locU1} := \frac{h_{2U1}}{2} + Key_{vdist} = 1.50\ m$

Saturated Soil Load below GWL:
(triangular component) $E_{h2aU1} := \frac{\left(\gamma_{sat} - \gamma_w\right) \cdot K_o \cdot h_{2U1}^{\ 2}}{2} \cdot B \cdot -1 = -163.2 \cdot kN$

Moment Arm (from bottom of footing): $E_{h2alocU1} := \frac{h_{2U1}}{3} + Key_{vdist} = 0.33\ m$

Lateral Water Load:

Water Load GWL to Bottom of Key $H_{h2U1} := \frac{\gamma_w \cdot h_{2U1}^{\ 2}}{2} \cdot B \cdot -1 = -240.1 \cdot kN$

Moment Arm (from bottom of footing): $H_{h2locU1} := \frac{h_{2U1}}{3} + Key_{vdist} = 0.33\ m$

$$\Sigma H_{SoildriveU1} := E_{s1U1} + E_{h1U1} + E_{h2U1} + E_{h2aU1} + H_{h2U1} = -1447.5 \cdot kN$$

$$\Sigma M_{LateralSoildriveU1} := E_{s1U1} \cdot E_{s1locU1} + E_{h1U1} \cdot E_{h1locU1} + E_{h2U1} \cdot E_{h2locU1} + E_{h2aU1} \cdot E_{h2alocU1} \ldots + H_{h2U1} \cdot H_{h2locU1} = -4199.2\ m \cdot kN$$

Lateral - Resisting Force (Tailwater Side)

LOAD CASE U1

Lateral Water Load:

Water Load WSEL to Bot. of Footing:

$$H_{h6U1} := \frac{\gamma_w \cdot h_{6U1}^{2}}{2} \cdot B = 19.6 \cdot kN$$

Moment Arm (from bot. of toe key):

$$H_{h6locU1} := \frac{h_{6U1}}{3} = 0.67\ m$$

Water Load Bot. of Footing to Bot. of H. Key:

$$H_{h2aU1} := \left[\left(UWSEL_{U1} - Bot_{ftg} + Key_{t.d}\right) + h_{2U1}\right] \cdot \frac{Key_{h.d}}{2} \cdot \gamma_w \cdot B = 88.2 \cdot kN$$

Moment Arm (from bot. of toe key):

$$H_{h2alocU1} := \frac{Key_{h.d} \cdot \left[2 \cdot \left(UWSEL_{U1} - Bot_{ftg} + Key_{t.d}\right) + h_{2U1}\right]}{3\left[h_{2U1} + \left(UWSEL_{U1} - Bot_{ftg} + Key_{t.d}\right)\right]} \ldots = -1.19\ m$$
$$+ Key_{vdist}$$

Lateral Soil Load:

Moist Soil Load above WSEL:

$$E_{h7U1} := \frac{\gamma_m \cdot K_o \cdot h_{7U1}^{2}}{2} B = 0.0 \cdot kN$$

Moment Arm (from bot. of toe key):

$$E_{h7locU1} := h_{6U1} + \frac{h_{7U1}}{3} + Key_{vdist} = 0.00\ m$$

Saturated Soil Load below WSEL: (rectangular component)

$$E_{h8U1} := \left(\gamma_m \cdot K_o \cdot h_{7U1}\right) \cdot h_{8U1} \cdot B = 0.0 \cdot kN$$

Moment Arm (from bot. of toe key):

$$E_{h8locU1} := \frac{h_{8U1}}{2} = 0.00\ m$$

c

Saturated Soil Load below WSEL: (triangular component)

$$E_{h8aU1} := \frac{\left[\left(\gamma_{sat} - \gamma_w\right) \cdot K_o\right] \cdot h_{8U1}^{2}}{2} \cdot B = 0.0 \cdot kN$$

Moment Arm (from bot. of footing):

$$E_{h8alocU1} := \frac{h_{8U1}}{3} = 0.00\ m$$

Lateral Resistance from Stilling Basin:

Lateral Resistance from Stilling Basin:

$$P_{sbU1} := 415kN$$

(Force needed to achieve the required sliding factor of safety in case UN2)

Moment Arm (from bot. of toe key):

$$P_{sblocU1} := \frac{t_{ftg}}{2} + Key_{t.d} = 1.00\ m$$

$$\Sigma H_{SoilresistU1} := H_{h6U1} + H_{h2aU1} + E_{h7U1} + E_{h8U1} + E_{h8aU1} + P_{sbU1} = 522.8 \cdot kN$$

$$\Sigma M_{HorizSoilResistU1} := H_{h6U1} \cdot H_{h6locU1} + H_{h2aU1} \cdot H_{h2alocU1} + E_{h7U1} \cdot E_{h7locU1} \ldots = 323.5\ m \cdot kN$$
$$+ E_{h8U1} \cdot E_{h8locU1} + E_{h8aU1} \cdot E_{h8alocU1} + P_{sbU1} \cdot P_{sblocU1}$$

Vertical Force:

UPLIFT: Linear distribution from water at heel to water at toe:

$$\Sigma V_{UpliftU1} := \left[\left(UWSEL_{U1} - Bot_{ftg} + Key_{t.d}\right) + h_{2U1}\right] \cdot \frac{b}{2} \cdot \gamma_w \cdot B \cdot -1 = -529.2 \cdot kN$$

Moment Arm (from Point O):

$$V_{UpliftU1aloc} := \frac{b \cdot \left[2 \cdot h_{2U1} + \left(UWSEL_{U1} - Bot_{ftg} + Key_{t.d}\right)\right]}{3\left[h_{2U1} + \left(UWSEL_{U1} - Bot_{ftg} + Key_{t.d}\right)\right]} = 7.111\ m$$

$$\Sigma M_{UpliftU1} := \Sigma V_{UpliftU1} \cdot V_{UpliftU1aloc} = -3763.2 \cdot kN \cdot m$$

Vertical Force (con't):

Weight of soil and water over toe:

Water Above the Top of Footing: $W_{H1U1} := \gamma_w \cdot h_{5U1} \cdot L_{ab} \cdot B = 0 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E1locU1} := \frac{L_{ab}}{2} = 1.75\ m$

Soil above top of footing: $W_{E6U1} := \gamma_b \cdot h_{3U1} \cdot L_{ab} \cdot B = 0.0 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E6locU1} := \frac{L_{ab}}{2} = 1.75\ m$

Vertical Load Due to Surcharge: $S_{U1} := S1_{U1} \cdot L_{cd} \cdot B = 0$ $\quad S_{U1loc} := b - \frac{L_{cd}}{2} = 8.45\ m$

Weight of soil and water over heel:

Moist Soil for sloped grade above top of wall:

Length of sloped portion of soil above top of wall: $L_{E3U1} := \left(L_{cd} + t_{wb} - t_{wt}\right) = 8.00\ m$

Height of sloped soil above top of wall over heel: $h_{E3locU1} := \left(L_{E3U1}\right) \cdot \tan(\beta) = 0.00\ m$

Weight of sloped soil above top of wall: $W_{E3U1} := \frac{\gamma_m}{2} \cdot h_{E3locU1} \cdot L_{E3U1} \cdot B = 0.0 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E3locU1} := L_{ab} + t_{wt} + \frac{2}{3} \cdot L_{E3U1} = 9.33\ m$

Moist soil from top of wall to groundwater level:

Height of soil from top of wall and top of GWL: $h_{1U1} = 8.50\ m$

Length from edge of wall at GWL to edge of heel: $L_{E4U1} := L_{E3U1} - \left(h_{1U1} \cdot S_{batter}\right) = 7.33\ m$

Weight of soil over heel from top of wall to GWL: $W_{E4U1} := \gamma_m \cdot h_{1U1} \cdot \frac{\left(L_{E3U1} + L_{E4U1}\right)}{2} \cdot B = 1303.2 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E4locU1} := b - \frac{L_{E3U1}^{2} + L_{E3U1} \cdot L_{E4U1} + L_{E4U1}^{2}}{3\left(L_{E3U1} + L_{E4U1}\right)} = 8.16\ m$

Saturated soil from groundwater to top of footing:

Height of soil from GWL to top of heel: $h_{E4U1} := h_{2U1} - t_{ftg} - Key_{h.d} = 3.00\ m$

Weight of soil over heel from GWL to top of heel: $W_{E5U1} := \left(\gamma_{sat}\right) \cdot h_{E4U1} \cdot \frac{\left(L_{E4U1} + L_{cd}\right)}{2} \cdot B = 476.1 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E5locU1} := b - \frac{L_{E4U1}^{2} + L_{E4U1} \cdot L_{cd} + L_{cd}^{2}}{3\left(L_{E4U1} + L_{cd}\right)} = 8.39\ m$

$$\Sigma V_{SoilWaterU1} := W_{H1U1} + W_{E6U1} + W_{E3U1} + W_{E4U1} + W_{E5U1} + S_{U1} = 1779.3 \cdot kN$$

$$\Sigma M_{VertSoilWaterResistU1} := W_{H1U1} \cdot W_{E1locU1} + W_{E6U1} \cdot W_{E6locU1} \cdots + W_{E3U1} \cdot W_{E3locU1} + W_{E4U1} \cdot W_{E4locU1} + W_{E5U1} \cdot W_{E5locU1} + S_{U1} \cdot S_{U1loc} = 14636.1\ m \cdot kN$$

CHECK OVERTURNING

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stablity of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1

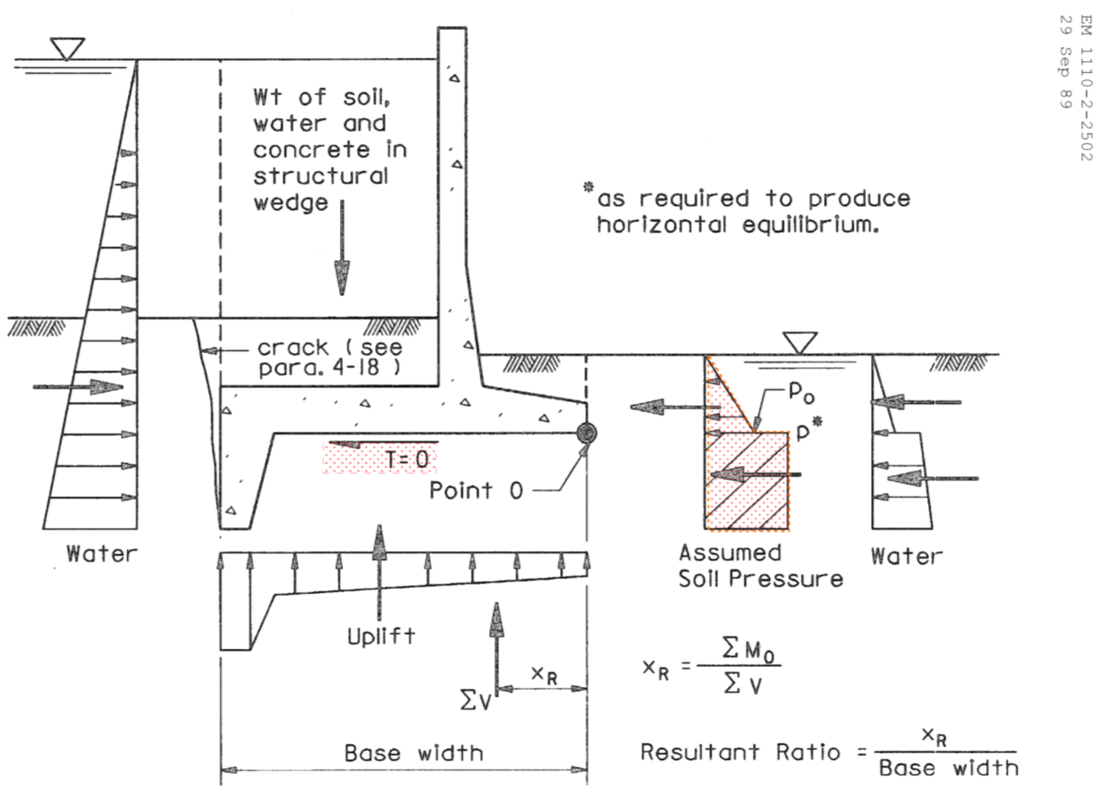

Figure 4-5. Forces for overturning analysis for wall with horizontal base and key

Modify Uplift for Overturning Analysis: **LOAD CASE U1**

(Uplift is calculated along the concrete/rock contact using the Line of Creep method)

Water Pressure at h: $u_{h.U1} := \Delta h_{g.hj.U1} \cdot \gamma_w = 68.60 \cdot kPa$

Water Pressure at o: $u_{o.U1} := \left(\Delta h_{g.no.U1} - \dfrac{\Delta h_{g.r.U1} \cdot L_{ho.U1}}{L_{ho.U1}}\right) \cdot \gamma_w = 19.6 \cdot kPa$

Head loss between point h and o: $\Delta h_{ho.U1} := \Delta h_{g.r.U1} \cdot \dfrac{L_{ho.U1}}{L_{ho.U1}} = 3\,m$

Length of concrete base (h -> o): $L_{baseho.U1} := Key_{h.w} + Key_{h.d} + Key_{hdist} + Key_{t.d} + Key_{t.w} = 14\,m$

Head loss along h -> j: $\Delta h_{hj.U1} := \Delta h_{ho.U1} \cdot \dfrac{Key_{h.w}}{L_{baseho.U1}} = 0.214\,m$

Water Pressure at j: $u_{j.U1} := \left(\Delta h_{g.hj.U1} - \Delta h_{hj.U1}\right) \cdot \gamma_w = 66.50 \cdot kPa$

Head loss along h -> k: $\Delta h_{hjk.U1} := \Delta h_{ho.U1} \cdot \left(\dfrac{Key_{h.w} + Key_{h.d}}{L_{baseho.U1}}\right) = 0.643\,m$

Water Pressure at k: $u_{k.U1} := \left(\Delta h_{g.km.U1} - \Delta h_{hjk.U1}\right) \cdot \gamma_w = 42.70 \cdot kPa$

Head loss along h -> m: $\Delta h_{hjkm.U1} := \Delta h_{ho.U1} \cdot \left(\dfrac{Key_{h.w} + Key_{h.d} + Key_{hdist}}{L_{baseho.U1}}\right) = 3\,m$

Water Pressure at m: $u_{m.U1} := \left(\Delta h_{g.km.U1} - \Delta h_{hjkm.U1}\right) \cdot \gamma_w = 19.60 \cdot kPa$

Head loss along h -> n: $\Delta h_{hjkmn.U1} := \Delta h_{ho.U1} \cdot \left(\dfrac{Key_{h.w} + Key_{h.d} + Key_{hdist} + Key_{t.d}}{L_{baseho.U1}}\right) = 3\,m$

Water Pressure at n: $u_{n.U1} := \left(\Delta h_{g.no.U1} - \Delta h_{hjkmn.U1}\right) \cdot \gamma_w = 19.60 \cdot kPa$

Uplift under key at heel: $V_{ulkeyhU1.OT} := \dfrac{\left(u_{h.U1} + u_{j.U1}\right) \cdot Key_{h.w}}{2} \cdot B \cdot -1 = -67.55 \cdot kN$

Moment Arm (from Point O): $V_{ulkeyhU1loc.OT} := b - \dfrac{Key_{h.w} \cdot \left(2 \cdot u_{j.U1} + u_{h.U1}\right)}{3 \cdot \left(u_{j.U1} + u_{h.U1}\right)} = 11.503\,m$

Uplift under base: $V_{ulbaseU1.OT} := \dfrac{\left(u_{k.U1} + u_{m.U1}\right) \cdot Key_{hdist}}{2} \cdot B \cdot -1 = -342.65 \cdot kN$

Moment Arm (from Point O): $V_{ulbaseU1loc.OT} := b - Key_{h.w} - \dfrac{Key_{hdist} \cdot \left(2 \cdot u_{m.U1} + u_{k.U1}\right)}{3 \cdot \left(u_{m.U1} + u_{k.U1}\right)} = 6.18\,m$

Uplift under key at toe: $V_{ulkeytU1.OT} := \dfrac{\left(u_{n.U1} + u_{o.U1}\right) \cdot Key_{t.w}}{2} \cdot B \cdot -1 = 0 \cdot kN$

Moment Arm (from Point O): $V_{ulkeytU1loc.OT} := \dfrac{Key_{t.w} \cdot \left(2 \cdot u_{n.U1} + u_{o.U1}\right)}{3 \cdot \left(u_{n.U1} + u_{o.U1}\right)} = 0$

$$\Sigma V_{UpliftU1.OT} := V_{ulkeyhU1.OT} + V_{ulbaseU1.OT} + V_{ulkeytU1.OT} = -410 \cdot kN$$

$$U_{U1.loc.OT} := \frac{V_{ulkeyhU1.OT} \cdot V_{ulkeyhU1loc.OT} + V_{ulbaseU1.OT} \cdot V_{ulbaseU1loc.OT} + V_{ulkeytU1.OT} \cdot V_{ulkeytU1loc.OT}}{\Sigma V_{UpliftU1.OT}} = 7.06\,m$$

$$\Sigma M_{UpliftU1.OT} := \Sigma V_{UpliftU1.OT} \cdot U_{U1.loc.OT} = -2894.5 \cdot kN \cdot m$$

Modify Lateral Water Pressure (Resisting) for Overturning Analysis:

(Resisting water pressure is calculated using the Line of Creep method)

Water Load at Key (heel):

$$H_{h2U1.OT} := \frac{u_{k.U1} + u_{j.U1}}{2} \cdot Key_{h.d} \cdot B = 109.2 \cdot kN$$

Moment Arm (from Point O):

$$H_{h2locU1.OT} := \frac{Key_{h.d} \cdot \left(2 \cdot u_{k.U1} + u_{j.U1}\right)}{3\left(u_{k.U1} + u_{j.U1}\right)} + Key_{vdist} = -1.07\ m$$

Water Load at Key (toe):

$$H_{h6U1.OT} := \frac{u_{o.U1} \cdot \left(UWSEL_{U1} - Bot_{ftg} + Key_{t.d}\right)}{2} \cdot B = 20 \cdot kN$$

Moment Arm (from Point O):

$$H_{h6locU1.OT} := \frac{UWSEL_{U1} - Bot_{ftg} + Key_{t.d}}{3} = 0.67\ m$$

$$\Sigma H_{waterresistU1.OT} := H_{h2U1.OT} + H_{h6U1.OT} = 128.8 \cdot kN$$

$$H_{waterresistlocU1.OT} := \frac{H_{h2U1.OT} \cdot H_{h2locU1.OT} + H_{h6U1.OT} \cdot H_{h6locU1.OT}}{\Sigma H_{waterresistU1.OT}} = -0.808\ m$$

$$\Sigma M_{waterresistU1.OT} := \Sigma H_{waterresistU1.OT} \cdot H_{waterresistlocU1.OT} = -104.07 \cdot kN \cdot m$$

Modify Lateral Soil Loads for Overturning Analysis:

(Lateral soil loads are calculated down to Point O instead of bottom of shear key)

Driving Soil Load (Headwater Side):

Surcharge Load:

$$E_{s1U1.OT} := S1_{U1} \cdot K_o \cdot \left(H_w + Key_{h.d} + Key_{vdist}\right) \cdot B \cdot -1 = 0 \cdot kN$$

Moment Arm (from Point O):

$$E_{s1locU1.OT} := \frac{H_w + Key_{h.d} + Key_{vdist}}{2} = 6.75\ m$$

Moist Soil Load above GWL:

$$E_{h1U1.OT} := \frac{\gamma_m \cdot K_o \cdot h_{1U1}^{\ 2}}{2} B \cdot -1 = -394.5 \cdot kN$$

Moment Arm (from Point O):

$$E_{h1locU1.OT} := \frac{h_{1U1}}{3} + h_{2U1} + Key_{vdist} = 7.83\ m$$

Saturated Soil Load below GWL:
(rectangular component)

$$E_{h2U1.OT} := \left(\gamma_m \cdot K_o \cdot h_{1U1}\right) \cdot \left(h_{2U1} + Key_{vdist}\right) \cdot B \cdot -1 = -464.1 \cdot kN$$

Moment Arm (from Point O):

$$E_{h2locU1.OT} := \frac{h_{2U1} + Key_{vdist}}{2} = 2.50\ m$$

Saturated Soil Load below GWL:
(triangular component)

$$E_{h2aU1.OT} := \frac{\left(\gamma_{sat} - \gamma_w\right) \cdot K_o \cdot \left(h_{2U1} + Key_{vdist}\right)^2}{2} \cdot B \cdot -1 = -83.3 \cdot kN$$

Moment Arm (from Point O):

$$E_{h2alocU1.OT} := \frac{h_{2U1} + Key_{vdist}}{3} = 1.67\ m$$

Resisting Soil Load (Tailwater Side):

(Determine resisting soil load based on depth variation between the keys (ie. Key_{vdist}). In case where key at heel is deeper than key at toe (ie. $Key_{vdist} < 0$), resisting soil load (p*) is assumed to produce horizontal equilibrium as per Figure 4-5 above. Resisting soil load (p_o) is neglected.)

Total Driving Force: $\Sigma H_{SoildriveU1.OT} := E_{s1U1.OT} + E_{h1U1.OT} + E_{h2U1.OT} + E_{h2aU1.OT} + H_{h2U1} = -1182.0 \cdot kN$

Total Resisting Force: $\Sigma H_{waterresistU1.OT} = 128.8 \cdot kN$

Assumed Soil Load p*: $E_{h8U1a.OT} := \left(\Sigma H_{SoildriveU1.OT} + \Sigma H_{waterresistU1.OT}\right) \cdot -1 = 1053.166 \cdot kN$

Moment Arm (from Point O): $E_{h8U1a.loc.OT} := \dfrac{Key_{vdist}}{2} = -1\ m$

$$E_{h8U1.OT} := \begin{cases} E_{h8U1a.OT} & \text{if } Key_{vdist} < 0 \\ \Sigma H_{SoilresistU1} - H_{h6U1} - H_{h2aU1} - P_{sbU1} & \text{otherwise} \end{cases} = 1053.166 \cdot kN$$

$$\Sigma M_{SoilresistU1} := \begin{cases} E_{h8U1a.OT} \cdot E_{h8U1a.loc.OT} & \text{if } Key_{vdist} < 0 \\ \Sigma M_{HorizSoilResistU1} - H_{h6U1} \cdot H_{h6locU1} - H_{h2aU1} \cdot H_{h2alocU1} - P_{sbU1} \cdot P_{sblocU1} & \text{otherwise} \end{cases} = -1053.166 \cdot kN \cdot m$$

Sum of Moment about Point O:

$$\Sigma M_{LateraldriveU1.OT} := E_{s1U1.OT} \cdot E_{s1locU1.OT} + E_{h1U1.OT} \cdot E_{h1locU1.OT} + E_{h2U1.OT} \cdot E_{h2locU1.OT} \cdots + E_{h2aU1.OT} \cdot E_{h2alocU1.OT} + H_{h2U1} \cdot H_{h2locU1} = -4469.3 \cdot kN \cdot m$$

$$\Sigma M_{LateralresistU1.OT} := \Sigma M_{waterresistU1.OT} + \Sigma M_{SoilresistU1} = -1157.2 \cdot kN \cdot m$$

Total moment:

$$\Sigma M_{U1.OT} := \Sigma M_{conc} + \Sigma M_{VertSoilWaterResistU1} + \Sigma M_{UpliftU1.OT} + \Sigma M_{LateraldriveU1.OT} + \Sigma M_{LateralresistU1.OT} = 11071.7 \cdot kN \cdot m$$

Total Vertical Force: $\Sigma V_{U1.OT} := \Sigma V_{conc} + \Sigma V_{SoilWaterU1} + \Sigma V_{UpliftU1.OT} = 2237.4 \cdot kN$

Distance X_R: EM 1110-2-2502 Eq.4-1 $X_{R.U1} := \dfrac{\Sigma M_{U1.OT}}{\Sigma V_{U1.OT}} = 4.948\ m$

Overturning Resultant Ratio $Ratio_{U1.OT} := \dfrac{X_{R.U1}}{b} = 0.41$

$$Ratio_{U1.OT.check} := \begin{cases} \text{"OKAY "} & \text{if } Ratio_{U1.OT} > X_{R.reqU1} \\ \text{"Revise Structure""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

CHECK FOUNDATION ECCENTRICITY (HORIZONTAL PLANE):

Eccentricity (horizontal plan): $ex_{U1.OT} := \dfrac{b}{2} - \dfrac{\Sigma M_{U1.OT}}{\Sigma V_{U1.OT}} = 1.05\ m$ $Kern_{OT} := \dfrac{b}{6} = 2\ m$

Eccentricity Check:

$$e_{check.U1.OT} := \begin{cases} \text{"Okay"} & \text{if } ex_{U1} \le Kern_{OT} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"Okay"}$$

LOAD CASE U1

CHECK FOUNDATION BEARING CAPACITY (HORIZONTAL PLANE):

Base Section Modulus:

$$S_{b.OT} := \frac{1}{6}\left(B \cdot b^2\right) = 24\,m^3$$

Bearing Pressure Under Toe:

$$\sigma_{ToeU1.OT} := \begin{cases} \left(\frac{\Sigma V_{U1.OT}}{b \cdot B} + \frac{\Sigma V_{U1.OT} \cdot ex_{U1.OT}}{S_{b.OT}}\right) & \text{if } \frac{\Sigma V_{U1.OT}}{b \cdot B} \geq \frac{\Sigma V_{U1.OT} \cdot ex_{U1.OT}}{S_{b.OT}} \\ \frac{2 \cdot \Sigma V_{U1.OT}}{B \cdot 3\left(\frac{b}{2} - ex_{U1.OT}\right)} & \text{otherwise} \end{cases} = 284.5 \cdot kPa$$

$$Bearing_{ChecktoeU1.OT} := \begin{cases} \text{"OKAY "} & \text{if } \sigma_{ToeU1.OT} < \sigma_{allowU1} \\ \text{"NG - for reference only""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

Bearing Pressure Under Heel:

$$\sigma_{HeelU1.OT} := \begin{cases} \left(\frac{\Sigma V_{U1.OT}}{b \cdot B} - \frac{\Sigma V_{U1.OT} \cdot ex_{U1.OT}}{S_{b.OT}}\right) & \text{if } \frac{\Sigma V_{U1.OT}}{b \cdot B} \geq \frac{\Sigma V_{U1.OT} \cdot ex_{U1.OT}}{S_{b.OT}} \\ 0 & \text{otherwise} \end{cases} = 88.4 \cdot kPa$$

$$Bearing_{CheckheelU1.OT} := \left(\begin{cases} \text{"OKAY "} & \text{if } \sigma_{HeelU1.OT} < \sigma_{allowU1} \wedge \sigma_{HeelU1.OT} > 0 \\ \text{"NG - for reference only""} & \text{otherwise} \end{cases}\right) = \text{"OKAY "}$$

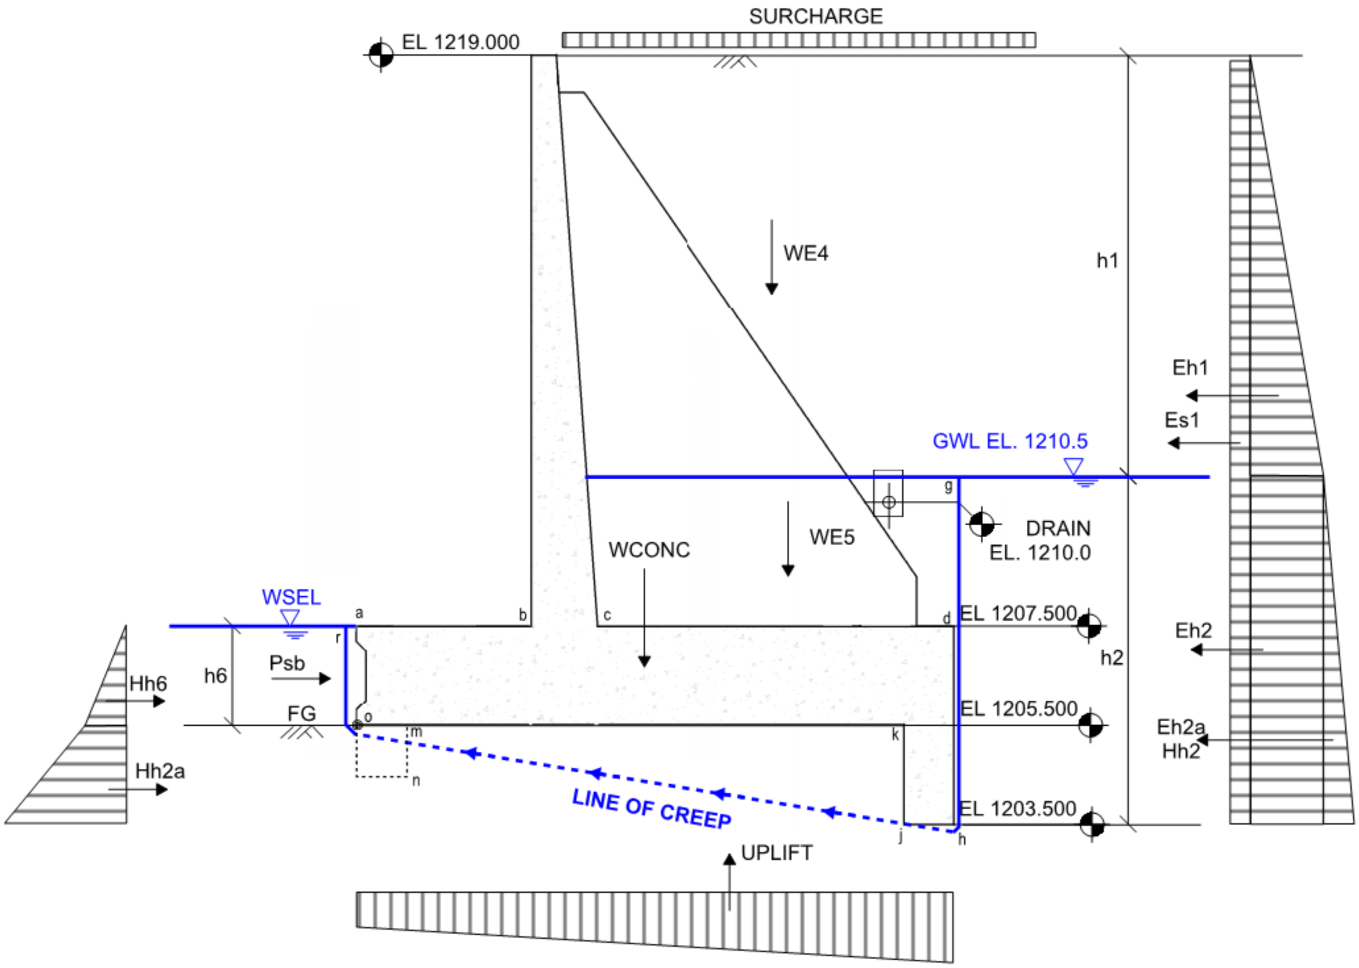
LOAD CASE UN1 - NORMAL OPERATION + SURCHARGE



UN1 DESIGN CASE

LOAD CASE UN1 ACCEPTANCE PARAMETERS

FS sliding:

Unusual (UN) 1.3 (without cohesion) (Table 3-3, USACE EM 1110-2-2100)

Resultant Location:

Unsual (UN) Inside middle third ~100% base in compression

Required Factor of Safety for Sliding: $FS_{sliding.reqUN1} := 1.3$ (Without Cohesion)

Allowable rock bearing pressure: $\sigma_{allowUN1} := 1470kPa$ (Section 5.2, Design Criteria EM 1110-2-2100 Section 3-10)

Overturning Required Resultant Ratio: $X_{R.reqUN1} := 0.333$ (EM 1110-2-2502, Figure 4-4)

Required Factor of Safety for Floatation $FS_{req.UN1.flt} := 1.3$

SOIL HEIGHTS and Water Levels:

LOAD CASE UN1

Heel Conditions:

Groundwater Elevation at Heel: $GWL_{UN1} := 1210.5m$

Distance from Finish Grade to Groundwater at Heel:

$$h_{1UN1} := \left[T_w - GWL_{UN1} + \left(L_{cd} + t_{wb} - t_{wt}\right) \cdot \tan(\beta)\right] = 8.50\ m$$

Distance from Water Surface to Bottom of Footing at Heel:

$$h_{2UN1} := GWL_{UN1} - Bot_{ftg} + Key_{h.d} = 7.00\ m$$

Toe Conditions:

Water Surface Elevation at Toe: $WSEL_{UN1} := 1207.5m$

Water Surface Elevation at Toe for Uplift: $UWSEL_{UN1} := 1207.5 \cdot m$

Finish Grade at Toe providing lateral resistance: $FG_{toeUN1} := 1205.5 \cdot m$

Soil Depth Above top of footing:

$$h_{3aUN1} := FG_{toeUN1} - Top_{ftg} = -2\ m$$

$$h_{3UN1} := \begin{cases} h_{3aUN1} & \text{if } FG_{toeUN1} - Top_{ftg} \ge 0 \\ 0 & \text{otherwise} \end{cases} = 0$$

Resisting Fill at Toe:

$$h_{4UN1} := FG_{toeUN1} - Bot_{ftg} + Key_{t.d} = 0.00\ m$$

Distance from Water Level to Top of Footing at Toe:

$$h_{5UN1} := WSEL_{UN1} - Top_{ftg} = 0.00\ m$$

Distance from Water Surface to Bottom of Footing at Toe:

$$h_{6UN1} := WSEL_{UN1} - Bot_{ftg} + Key_{t.d} = 2.00\ m$$

Soil Depth Above WSEL:

$$h_{7aUN1} := FG_{toeUN1} - WSEL_{UN1} = -2\ m$$

$$h_{7UN1} := \begin{cases} h_{7aUN1} & \text{if } FG_{toeUN1} - WSEL_{UN1} \ge 0 \\ 0 & \text{otherwise} \end{cases} = 0$$

Soil Depth Below WSEL:

$$h_{8UN1} := \begin{cases} WSEL_{UN1} - Bot_{ftg} + Key_{t.d} & \text{if } FG_{toeUN1} - WSEL_{UN1} \ge 0 \\ h_{4UN1} & \text{otherwise} \end{cases} = 0$$

For Line of Creep Method:

$$L_{ho.UN1} := \sqrt{b^2 + \left(Key_{h.d} - Key_{t.d}\right)^2} = 12.166\ m$$

Head Loss from Point g:

$\Delta h_{g.hj.UN1} := h_{2UN1} = 7\ m$ (to point h & j)

$\Delta h_{g.km.UN1} := GWL_{UN1} - Bot_{ftg} = 5\ m$ (to point k & m)

$\Delta h_{g.no.UN1} := GWL_{UN1} - Bot_{ftg} + Key_{t.d} = 5\ m$ (to point n & o)

$\Delta h_{g.p.UN1} := GWL_{UN1} - FG_{toeUN1} = 5\ m$ (to point p*)

$\Delta h_{g.r.UN1} := GWL_{UN1} - UWSEL_{UN1} = 3\ m$ (to point r)

Surcharge

Surcharge on Heel: $S1_{UN1} := 15.0 \dfrac{kN}{m^2}$

* same as point "o" in this case

Calculate Soil Lateral Pressure Coefficients:

LOAD CASE UN1

For all load cases except seismic, soil loading to be based on At-Rest Condition.
Calculate at-rest pressure coefficient Ko based on Jaky's (1944) equation.

Soil At Rest Static Coefficient: $K_o := \frac{1 - \sin(\phi)}{1 + \sin(\beta)} = 0.546$ (Eq. 3-6, USACE EM 1110-2-2502)

Lateral - Driving Force

Static At-Rest:

Surcharge Load: $E_{s1UN1} := S1_{UN1} \cdot K_o \cdot \left(H_w + Key_{h.d}\right) \cdot B \cdot -1 = -126.947 \cdot kN$

Moment Arm (from bottom of footing): $E_{s1locUN1} := \frac{H_w + Key_{h.d}}{2} + Key_{vdist} = 5.75\ m$

Moist Soil Load above GWL: $E_{h1UN1} := \frac{\gamma_m \cdot K_o \cdot h_{1UN1}^{\ 2}}{2} \cdot B \cdot -1 = -394.5 \cdot kN$

Moment Arm (from bottom of footing): $E_{h1locUN1} := \frac{h_{1UN1}}{3} + h_{2UN1} + Key_{vdist} = 7.83\ m$

Saturated Soil Load below GWL:
(rectangular component) $E_{h2UN1} := \left(\gamma_m \cdot K_o \cdot h_{1UN1}\right) \cdot \left(h_{2UN1}\right) \cdot B \cdot -1 = -649.8 \cdot kN$

Moment Arm (from bottom of footing): $E_{h2locUN1} := \frac{h_{2UN1}}{2} + Key_{vdist} = 1.50\ m$

Saturated Soil Load below GWT:
(triangular L $E_{h2aUN1} := \frac{\left(\gamma_{sat} - \gamma_w\right) \cdot K_o \cdot h_{2UN1}^{\ 2}}{2} \cdot B \cdot -1 = -163.2 \cdot kN$

Moment Arm (from bottom of footing): $E_{h2alocUN1} := \frac{h_{2UN1}}{3} + Key_{vdist} = 0.33\ m$

Lateral Water Load:

Water Load GWL to Bottom of Key $H_{h2UN1} := \frac{\gamma_w \cdot h_{2UN1}^{\ 2}}{2} \cdot B \cdot -1 = -240.1 \cdot kN$

Moment Arm (from bottom of footing): $H_{h2locUN1} := \frac{h_{2UN1}}{3} + Key_{vdist} = 0.33\ m$

$\Sigma H_{SoildriveUN1} := E_{s1UN1} + E_{h1UN1} + E_{h2UN1} + E_{h2aUN1} + H_{h2UN1} = -1574.5 \cdot kN$

$\Sigma M_{LateralSoildriveUN1} := E_{s1UN1} \cdot E_{s1locUN1} + E_{h1UN1} \cdot E_{h1locUN1} + E_{h2UN1} \cdot E_{h2locUN1} + E_{h2aUN1} \cdot E_{h2alocUN1} \ldots + H_{h2UN1} \cdot H_{h2locUN1} = -4929.2\ m \cdot kN$

Lateral - Resisting Force

LOAD CASE UN1

Lateral Water Load:

Water Load WSEL to Bottom of Footing:

$$H_{h6UN1} := \frac{\gamma_w \cdot h_{6UN1}^{\ 2}}{2} \cdot B = 19.6 \cdot kN$$

Moment Arm (from bot. of toe key):

$$H_{h6locUN1} := \frac{h_{6UN1}}{3} = 0.67\ m$$

Water Load Bot. of Footing to Bot. of H. Key:

$$H_{h2aUN1} := \left[\left(UWSEL_{UN1} - Bot_{ftg} + Key_{t.d}\right) + h_{2UN1}\right] \cdot \frac{Key_{h.d}}{2} \cdot \gamma_w \cdot B = 88.2 \cdot kN$$

Moment Arm (from bot. of toe key):

$$H_{h2alocUN1} := \frac{Key_{h.d} \cdot \left[2 \cdot \left(UWSEL_{UN1} - Bot_{ftg} + Key_{t.d}\right) + h_{2UN1}\right]}{3\left[h_{2UN1} + \left(UWSEL_{UN1} - Bot_{ftg} + Key_{t.d}\right)\right]} \ ... \ + Key_{vdist} = -1.19\ m$$

Lateral Soil Load:

Moist Soil Load above WSEL:

$$E_{h7UN1} := \frac{\gamma_m \cdot K_o \cdot h_{7UN1}^{\ 2}}{2} \cdot B = 0.0 \cdot kN$$

Moment Arm (from bot. of toe key): $E_{h7locUN1} := h_{6UN1} + \frac{h_{7UN1}}{3} + Key_{vdist} = 0.00\ m$

Saturated Soil Load below WSEL: (rectangular component)

$$E_{h8UN1} := \left(\gamma_m \cdot K_o \cdot h_{7UN1}\right) \cdot h_{8UN1} \cdot B = 0.0 \cdot kN$$

Moment Arm (from bot. of toe key): $E_{h8locUN1} := \frac{h_{8UN1}}{2} = 0.00\ m$

Saturated Soil Load below WSEL: (triangular component)

$$E_{h8aUN1} := \frac{\left[\left(\gamma_{sat} - \gamma_w\right) \cdot K_o\right] \cdot h_{8UN1}^{\ 2}}{2} \cdot B = 0.0 \cdot kN$$

Moment Arm (from bot. of footing): $E_{h8alocUN1} := \frac{h_{8UN1}}{3} = 0.00\ m$

Lateral Resistance from Stilling Basin:

Lateral Resistance from Stilling Basin: $P_{sbUN1} := 415kN$ (Force needed to achieve the required sliding factor of safety in case UN2)

Moment Arm (from bot. of toe key): $P_{sblocUN1} := \frac{t_{ftg}}{2} + Key_{t.d} = 1.00\ m$

$$\Sigma H_{SoilresistUN1} := H_{h6UN1} + H_{h2aUN1} + E_{h7UN1} + E_{h8UN1} + E_{h8aUN1} + P_{sbUN1} = 522.8 \cdot kN$$

$$\Sigma M_{HorizSoilResistUN1} := H_{h6UN1} \cdot H_{h6locUN1} + H_{h2aUN1} \cdot H_{h2alocUN1} + E_{h7UN1} \cdot E_{h7locUN1} \ ... \ + E_{h8UN1} \cdot E_{h8locUN1} + E_{h8aUN1} \cdot E_{h8alocUN1} + P_{sbUN1} \cdot P_{sblocUN1} = 323.5\ m \cdot kN$$

Vertical Force:

UPLIFT: Linear distribution from water at heel to water at toe:

$$\Sigma V_{UpliftUN1} := \left[\left(UWSEL_{UN1} - Bot_{ftg} + Key_{t.d}\right) + h_{2UN1}\right] \cdot \frac{b}{2} \cdot \gamma_w \cdot B \cdot -1 = -529.2 \cdot kN$$

Moment Arm (from Point O):

$$V_{UpliftUN1aloc} := \frac{b \cdot \left[2 \cdot h_{2UN1} + \left(UWSEL_{UN1} - Bot_{ftg} + Key_{t.d}\right)\right]}{3\left[h_{2UN1} + \left(UWSEL_{UN1} - Bot_{ftg} + Key_{t.d}\right)\right]} = 7.111\ m$$

$$\Sigma M_{UpliftUN1} := \Sigma V_{UpliftUN1} \cdot V_{UpliftUN1aloc} = -3763.2 \cdot kN \cdot m$$

Weight of soil and water over toe:

Water Above the Top of Footing: $W_{H1UN1} := \gamma_w \cdot h_{5UN1} \cdot L_{ab} \cdot B = 0 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E1locUN1} := \frac{L_{ab}}{2} = 1.75\ m$

Soil above top of footing: $W_{E6UN1} := \gamma_b \cdot h_{3UN1} \cdot L_{ab} \cdot B = 0.0 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E6locUN1} := \frac{L_{ab}}{2} = 1.75\ m$

Vertical Load Due to Surcharge: $S_{UN1} := S1_{UN1} \cdot L_{cd} \cdot B = 106.44 \cdot kN$ $\quad S_{UN1loc} := b - \frac{L_{cd}}{2} = 8.45\ m$

Weight of soil and water over heel:

Moist Soil for sloped grade above top of wall:

Length of sloped portion of soil above top of wall: $L_{E3UN1} := \left(L_{cd} + t_{wb} - t_{wt}\right) = 8.00\ m$

Height of sloped soil above top of wall over heel: $h_{E3locUN1} := \left(L_{E3UN1}\right) \cdot \tan(\beta) = 0.00\ m$

Weight of sloped soil above top of wall: $W_{E3UN1} := \frac{\gamma_m}{2} \cdot h_{E3locUN1} \cdot L_{E3UN1} \cdot B = 0.0 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E3locUN1} := L_{ab} + t_{wt} + \frac{2}{3} \cdot L_{E3UN1} = 9.33\ m$

Moist soil from top of wall to groundwater level:

Height of soil from top of wall and top of GWL: $h_{1UN1} = 8.50\ m$

Length from edge of wall at GWL to edge of heel: $L_{E4UN1} := L_{E3UN1} - \left(h_{1UN1} \cdot S_{batter}\right) = 7.33\ m$

Weight of soil over heel from top of wall to GWL: $W_{E4UN1} := \gamma_m \cdot h_{1UN1} \cdot \frac{\left(L_{E3UN1} + L_{E4UN1}\right)}{2} \cdot B = 1303.2 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E4locUN1} := b - \frac{L_{E3UN1}^2 + L_{E3UN1} \cdot L_{E4UN1} + L_{E4UN1}^2}{3\left(L_{E3UN1} + L_{E4UN1}\right)} = 8.16\ m$

Saturated soil from groundwater to top of footing:

Height of soil from GWL to top of heel: $h_{E4UN1} := h_{2UN1} - t_{ftg} - Key_{h.d} = 3.00\ m$

Weight of soil over heel from GWL to top of heel: $W_{E5UN1} := \left(\gamma_{sat}\right) \cdot h_{E4UN1} \cdot \frac{\left(L_{E4UN1} + L_{cd}\right)}{2} \cdot B = 476.1 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E5locUN1} := b - \frac{L_{E4UN1}^2 + L_{E4UN1} \cdot L_{cd} + L_{cd}^2}{3\left(L_{E4UN1} + L_{cd}\right)} = 8.39\ m$

$\Sigma V_{SoilWaterUN1} := W_{H1UN1} + W_{E6UN1} + W_{E3UN1} + W_{E4UN1} + W_{E5UN1} + S_{UN1} = 1885.8 \cdot kN$

$$\Sigma M_{VertSoilWaterResistUN1} := W_{H1UN1} \cdot W_{E1locUN1} + W_{E6UN1} \cdot W_{E6locUN1} \cdots + W_{E3UN1} \cdot W_{E3locUN1} + W_{E4UN1} \cdot W_{E4locUN1} + W_{E5UN1} \cdot W_{E5locUN1} + S_{UN1} \cdot S_{UN1loc} = 15535.7\ m \cdot kN$$

CHECK OVERTURNING

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stablity of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1

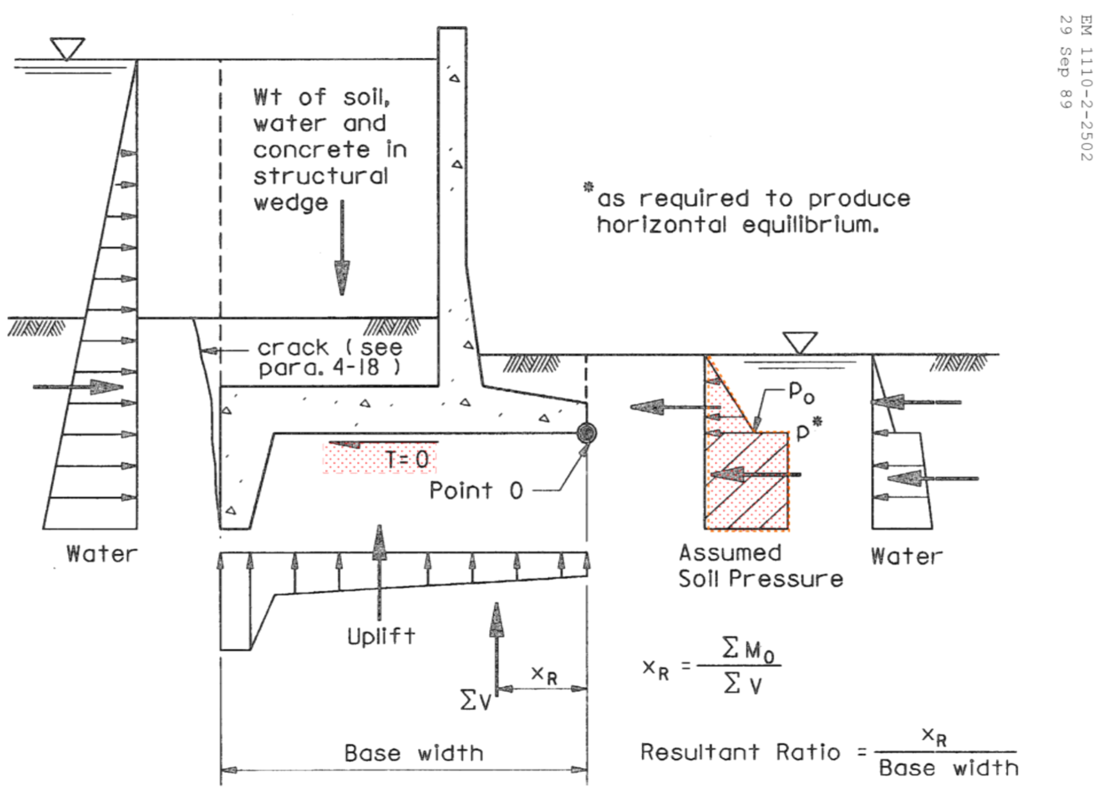

Figure 4-5. Forces for overturning analysis for wall with horizontal base and key

Modify Uplift for Overturning Analysis: **LOAD CASE UN1**

(Uplift is calculated along the concrete/rock contact using the Line of Creep method)

Water Pressure at h: $u_{h.UN1} := \Delta h_{g.hj.UN1} \cdot \gamma_w = 68.60 \cdot kPa$

Water Pressure at o: $u_{o.UN1} := \left(\Delta h_{g.no.UN1} - \frac{\Delta h_{g.r.UN1} \cdot L_{ho.UN1}}{L_{ho.UN1}} \right) \cdot \gamma_w = 19.6 \cdot kPa$

Head loss between point h and o: $\Delta h_{ho.UN1} := \Delta h_{g.r.UN1} \cdot \frac{L_{ho.UN1}}{L_{ho.UN1}} = 3\,m$

Length of concrete base (h -> o): $L_{baseho.UN1} := Key_{h.w} + Key_{h.d} + Key_{hdist} + Key_{t.d} + Key_{t.w} = 14\,m$

Head loss along h -> j: $\Delta h_{hj.UN1} := \Delta h_{ho.UN1} \cdot \frac{Key_{h.w}}{L_{baseho.UN1}} = 0.214\,m$

Water Pressure at j: $u_{j.UN1} := \left(\Delta h_{g.hj.UN1} - \Delta h_{hj.UN1} \right) \cdot \gamma_w = 66.50 \cdot kPa$

Head loss along h -> k: $\Delta h_{hjk.UN1} := \Delta h_{ho.UN1} \cdot \left(\frac{Key_{h.w} + Key_{h.d}}{L_{baseho.UN1}} \right) = 0.643\,m$

Water Pressure at k: $u_{k.UN1} := \left(\Delta h_{g.km.UN1} - \Delta h_{hjk.UN1} \right) \cdot \gamma_w = 42.70 \cdot kPa$

Head loss along h -> m: $\Delta h_{hjkm.UN1} := \Delta h_{ho.UN1} \cdot \left(\frac{Key_{h.w} + Key_{h.d} + Key_{hdist}}{L_{baseho.UN1}} \right) = 3\,m$

Water Pressure at m: $u_{m.UN1} := \left(\Delta h_{g.km.UN1} - \Delta h_{hjkm.UN1} \right) \cdot \gamma_w = 19.60 \cdot kPa$

Head loss along h -> n: $\Delta h_{hjkmn.UN1} := \Delta h_{ho.UN1} \cdot \left(\frac{Key_{h.w} + Key_{h.d} + Key_{hdist} + Key_{t.d}}{L_{baseho.UN1}} \right) = 3\,m$

Water Pressure at n: $u_{n.UN1} := \left(\Delta h_{g.no.UN1} - \Delta h_{hjkmn.UN1} \right) \cdot \gamma_w = 19.60 \cdot kPa$

Uplift under key at heel: $V_{ulkeyhUN1.OT} := \frac{\left(u_{h.UN1} + u_{j.UN1} \right) \cdot Key_{h.w}}{2} \cdot B \cdot -1 = -67.55 \cdot kN$

Moment Arm (from Point O): $V_{ulkeyhUN1loc.OT} := b - \frac{Key_{h.w} \cdot \left(2 \cdot u_{j.UN1} + u_{h.UN1} \right)}{3 \cdot \left(u_{j.UN1} + u_{h.UN1} \right)} = 11.503\,m$

Uplift under base: $V_{ulbaseUN1.OT} := \frac{\left(u_{k.UN1} + u_{m.UN1} \right) \cdot Key_{hdist}}{2} \cdot B \cdot -1 = -342.65 \cdot kN$

Moment Arm (from Point O): $V_{ulbaseUN1loc.OT} := b - Key_{h.w} - \frac{Key_{hdist} \cdot \left(2 \cdot u_{m.UN1} + u_{k.UN1} \right)}{3 \cdot \left(u_{m.UN1} + u_{k.UN1} \right)} = 6.18\,m$

Uplift under key at toe: $V_{ulkeytUN1.OT} := \frac{\left(u_{n.UN1} + u_{o.UN1} \right) \cdot Key_{t.w}}{2} \cdot B \cdot -1 = 0 \cdot kN$

Moment Arm (from Point O): $V_{ulkeytUN1loc.OT} := \frac{Key_{t.w} \cdot \left(2 \cdot u_{n.UN1} + u_{o.UN1} \right)}{3 \cdot \left(u_{n.UN1} + u_{o.UN1} \right)} = 0$

$$\Sigma V_{UpliftUN1.OT} := V_{ulkeyhUN1.OT} + V_{ulbaseUN1.OT} + V_{ulkeytUN1.OT} = -410 \cdot kN$$

$$U_{UN1.loc.OT} := \frac{V_{ulkeyhUN1.OT} \cdot V_{ulkeyhUN1loc.OT} + V_{ulbaseUN1.OT} \cdot V_{ulbaseUN1loc.OT} + V_{ulkeytUN1.OT} \cdot V_{ulkeytUN1loc.OT}}{\Sigma V_{UpliftUN1.OT}} = 7.06\,m$$

$$\Sigma M_{UpliftUN1.OT} := \Sigma V_{UpliftUN1.OT} \cdot U_{UN1.loc.OT} = -2894.5 \cdot kN \cdot m$$

Modify Lateral Water Pressure (Resisting) for Overturning Analysis:

(Resisting water pressure is calculated using the Line of Creep method)

Water Load at Key (heel):

$$H_{h2UN1.OT} := \frac{u_{k.UN1} + u_{j.UN1}}{2} \cdot Key_{h.d} B = 109.2 \cdot kN$$

Moment Arm (from Point O):

$$H_{h2locUN1.OT} := \frac{Key_{h.d} \cdot (2 \cdot u_{k.UN1} + u_{j.UN1})}{3(u_{k.UN1} + u_{j.UN1})} + Key_{vdist} = -1.07\ m$$

Water Load at Key (toe):

$$H_{h6UN1.OT} := \frac{u_{o.UN1} \cdot (UWSEL_{UN1} - Bot_{ftg} + Key_{t.d})}{2} \cdot B = 20 \cdot kN$$

Moment Arm (from Point O):

$$H_{h6locUN1.OT} := \frac{UWSEL_{UN1} - Bot_{ftg} + Key_{t.d}}{3} = 0.67\ m$$

$$\Sigma H_{waterresistUN1.OT} := H_{h2UN1.OT} + H_{h6UN1.OT} = 128.8 \cdot kN$$

$$H_{waterresistlocUN1.OT} := \frac{H_{h2UN1.OT} \cdot H_{h2locUN1.OT} + H_{h6UN1.OT} \cdot H_{h6locUN1.OT}}{\Sigma H_{waterresistUN1.OT}} = -0.808\ m$$

$$\Sigma M_{waterresistUN1.OT} := \Sigma H_{waterresistUN1.OT} \cdot H_{waterresistlocUN1.OT} = -104.07 \cdot kN \cdot m$$

Modify Lateral Soil Loads for Overturning Analysis:

(Lateral soil loads are calculated down to Point O instead of bottom of shear key)

Driving Soil Load (Headwater Side):

Surcharge Load:

$$E_{s1UN1.OT} := S1_{UN1} \cdot K_o \cdot (H_w + Key_{h.d} + Key_{vdist}) \cdot B \cdot -1 = -110.567 \cdot kN$$

Moment Arm (from Point O):

$$E_{s1locUN1.OT} := \frac{H_w + Key_{h.d} + Key_{vdist}}{2} = 6.75\ m$$

Moist Soil Load above GWL:

$$E_{h1UN1.OT} := \frac{\gamma_m \cdot K_o \cdot h_{1UN1}^{\ 2}}{2} B \cdot -1 = -394.5 \cdot kN$$

Moment Arm (from Point O):

$$E_{h1locUN1.OT} := \frac{h_{1UN1}}{3} + h_{2UN1} + Key_{vdist} = 7.83\ m$$

Saturated Soil Load below GWL:
(rectangular component)

$$E_{h2UN1.OT} := (\gamma_m \cdot K_o \cdot h_{1UN1}) \cdot (h_{2UN1} + Key_{vdist}) \cdot B \cdot -1 = -464.1 \cdot kN$$

Moment Arm (from Point O):

$$E_{h2locUN1.OT} := \frac{h_{2UN1} + Key_{vdist}}{2} = 2.50\ m$$

Saturated Soil Load below GWL:
(triangular component)

$$E_{h2aUN1.OT} := \frac{(\gamma_{sat} - \gamma_w) \cdot K_o \cdot (h_{2UN1} + Key_{vdist})^2}{2} \cdot B \cdot -1 = -83.3 \cdot kN$$

Moment Arm (from Point O):

$$E_{h2alocUN1.OT} := \frac{h_{2UN1} + Key_{vdist}}{3} = 1.67\ m$$

Resisting Soil Load (Tailwater Side):

(Determine resisting soil load based on depth variation between the keys (ie. Key_{vdist}). In case where key at heel is deeper than key at toe (ie. $Key_{vdist} < 0$), resisting soil load (p*) is assumed to produce horizontal equilibrium as per Figure 4-5 above. Resisting soil load (p_o) is neglected.)

Total Driving Force: $\Sigma H_{SoildriveUN1.OT} := E_{s1UN1.OT} + E_{h1UN1.OT} + E_{h2UN1.OT} + E_{h2aUN1.OT} + H_{h2UN1} = -1292.5 \cdot kN$

Total Resisting Force: $\Sigma H_{waterresistUN1.OT} = 128.8 \cdot kN$

Assumed Soil Load p*: $E_{h8UN1a.OT} := \left(\Sigma H_{SoildriveUN1.OT} + \Sigma H_{waterresistU1.OT}\right) \cdot -1 = 1163.733 \cdot kN$

Moment Arm (from Point O): $E_{h8UN1a.loc.OT} := \frac{Key_{vdist}}{2} = -1\, m$

$$E_{h8UN1.OT} := \begin{cases} E_{h8UN1a.OT} & \text{if } Key_{vdist} < 0 \\ \Sigma H_{SoilresistUN1} - H_{h6UN1} - H_{h2aUN1} - P_{sbUN1} & \text{otherwise} \end{cases} = 1163.733 \cdot kN$$

$$\Sigma M_{SoilresistUN1} := \begin{cases} E_{h8UN1a.OT} \cdot E_{h8UN1a.loc.OT} & \text{if } Key_{vdist} < 0 \\ \Sigma M_{HorizSoilResistUN1} - H_{h6UN1} \cdot H_{h6locUN1} - H_{h2aUN1} \cdot H_{h2alocUN1} - P_{sbUN1} \cdot P_{sblocUN1} & \text{otherwise} \end{cases} = -1163.733 \cdot kN \cdot m$$

Sum of Moment about Point O:

$$\Sigma M_{LateraldriveUN1.OT} := E_{s1UN1.OT} \cdot E_{s1locUN1.OT} + E_{h1UN1.OT} \cdot E_{h1locUN1.OT} + E_{h2UN1.OT} \cdot E_{h2locUN1.OT} \cdots + E_{h2aUN1.OT} \cdot E_{h2alocUN1.OT} + H_{h2UN1} \cdot H_{h2locUN1} = -5215.6 \cdot kN \cdot m$$

$$\Sigma M_{LateralresistUN1.OT} := \Sigma M_{waterresistUN1.OT} + \Sigma M_{SoilresistUN1} = -1267.8 \cdot kN \cdot m$$

Total moment:

$$\Sigma M_{UN1.OT} := \Sigma M_{conc} + \Sigma M_{VertSoilWaterResistUN1} + \Sigma M_{UpliftUN1.OT} \cdots + \Sigma M_{LateraldriveUN1.OT} + \Sigma M_{LateralresistUN1.OT} = 11114.5 \cdot kN \cdot m$$

Total Vertical Force: $\Sigma V_{UN1.OT} := \Sigma V_{conc} + \Sigma V_{SoilWaterUN1} + \Sigma V_{UpliftUN1.OT} = 2343.8 \cdot kN$

Distance X_R: EM 1110-2-2502 Eq.4-1 $X_{R.UN1} := \frac{\Sigma M_{UN1.OT}}{\Sigma V_{UN1.OT}} = 4.742\, m$

Overturning Resultant Ratio $Ratio_{UN1.OT} := \frac{X_{R.UN1}}{b} = 0.4$

$$Ratio_{UN1.OT.check} := \begin{cases} \text{"OKAY "} & \text{if } Ratio_{UN1.OT} > X_{R.reqUN1} \\ \text{"Revise Structure""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

CHECK FOUNDATION ECCENTRICITY (HORIZONTAL PLANE):

Eccentricity (horizontal plan): $ex_{UN1.OT} := \frac{b}{2} - \frac{\Sigma M_{UN1.OT}}{\Sigma V_{UN1.OT}} = 1.26\, m$ $\quad Kern_{OT} = 2\, m$

Eccentricity Check:

$$e_{check.UN1.OT} := \begin{cases} \text{"Okay"} & \text{if } ex_{UN1} \le Kern_{OT} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"Okay"}$$

LOAD CASE UN1

CHECK FOUNDATION BEARING CAPACITY (HORIZONTAL PLANE):

Base Section Modulus: $S_{b.OT} = 24\,m^3$

Bearing Pressure Under Toe:

$$\sigma_{ToeUN1.OT} := \begin{cases} \left(\dfrac{\Sigma V_{UN1.OT}}{b \cdot B} + \dfrac{\Sigma V_{UN1.OT} \cdot ex_{UN1.OT}}{S_{b.OT}}\right) & \text{if } \dfrac{\Sigma V_{UN1.OT}}{b \cdot B} \geq \dfrac{\Sigma V_{UN1.OT} \cdot ex_{UN1.OT}}{S_{b.OT}} \\ \dfrac{2 \cdot \Sigma V_{UN1.OT}}{B \cdot 3\left(\dfrac{b}{2} - ex_{UN1.OT}\right)} & \text{otherwise} \end{cases} = 318.2 \cdot kPa$$

$\Delta h_{g.p.UN2} := GWL_{UN2} - FG_{toeUN2} = 8.96\ m$ (to point p*)

$\Delta h_{g.r.UN2} := GWL_{UN2} - UWSEL_{UN2} = 0\ m$ (to point r)

Surcharge

Surcharge on Heel: $S1_{UN2} := 0.0\ \frac{kN}{m^2}$

* same as point "o" in this case

Calculate Soil Lateral Pressure Coefficients:

LOAD CASE UN2

For all load cases except seismic, soil loading to be based on At-Rest Condition.
Calculate at-rest pressure coefficient Ko based on Jaky's (1944) equation.

Soil At Rest Static Coefficient: $K_o := \frac{1 - \sin(\phi)}{1 + \sin(\beta)} = 0.546$ (Eq. 3-6, USACE EM 1110-2-2502)

Lateral - Driving Force

Static At-Rest:

Surcharge Load: $E_{s1UN2} := S1_{UN2} \cdot K_o \cdot \left(H_w + Key_{h.d}\right) \cdot B \cdot -1 = 0 \cdot kN$

Moment Arm (from bottom of footing): $E_{s1locUN2} := \frac{H_w + Key_{h.d}}{2} + Key_{vdist} = 5.75\ m$

Moist Soil Load above GWL: $E_{h1UN2} := \frac{\gamma_m \cdot K_o \cdot h_{1UN2}^{\ 2}}{2} \cdot B \cdot -1 = -112.5 \cdot kN$

Moment Arm (from bottom of footing): $E_{h1locUN2} := \frac{h_{1UN2}}{3} + h_{2UN2} + Key_{vdist} = 10.47\ m$

Saturated Soil Load below GWL:
(rectangular component) $E_{h2UN2} := \left(\gamma_m \cdot K_o \cdot h_{1UN2}\right) \cdot h_{2UN2} \cdot B \cdot -1 = -543.4 \cdot kN$

Moment Arm (from bottom of footing): $E_{h2locUN2} := \frac{h_{2UN2}}{2} + Key_{vdist} = 3.48\ m$

Saturated Soil Load below GWL:
(triangular component) $E_{h2aUN2} := \frac{\left(\gamma_{sat} - \gamma_w\right) \cdot K_o \cdot h_{2UN2}^{\ 2}}{2} \cdot B \cdot -1 = -400.1 \cdot kN$

Moment Arm (from bottom of footing): $E_{h2alocUN2} := \frac{h_{2UN2}}{3} + Key_{vdist} = 1.65\ m$

<u>Lateral Water Load:</u>

Water Load GWL to Bottom of Key $H_{h2UN2} := \frac{\gamma_w \cdot h_{2UN2}^{\ 2}}{2} \cdot B \cdot -1 = -588.6 \cdot kN$

Moment Arm (from bottom of footing): $H_{h2locUN2} := \frac{h_{2UN2}}{3} + Key_{vdist} = 1.65\ m$

$$\Sigma H_{SoildriveUN2} := E_{s1UN2} + E_{h1UN2} + E_{h2UN2} + E_{h2aUN2} + H_{h2UN2} = -1644.6 \cdot kN$$

$$\Sigma M_{LateralSoildriveUN2} := E_{s1UN2} \cdot E_{s1locUN2} + E_{h1UN2} \cdot E_{h1locUN2} + E_{h2UN2} \cdot E_{h2locUN2} + E_{h2aUN2} \cdot E_{h2alocUN2} \cdots + H_{h2UN2} \cdot H_{h2locUN2} = -4704.2\ m \cdot kN$$

Lateral - Resisting Force

LOAD CASE UN2

Lateral Water Load:

Water Load WSEL to Bottom of Footing:

$$H_{h6UN2} := \frac{\gamma_w \cdot h_{6UN2}^2}{2} \cdot B = 19.6 \cdot kN$$

Moment Arm (from bot. of toe key):

$$H_{h6locUN2} := \frac{h_{6UN2}}{3} = 0.67\ m$$

Water Load Bot. of Footing to Bot. of H. Key:

$$H_{h2aUN2} := \left[\left(UWSEL_{UN2} - Bot_{ftg} + Key_{t.d}\right) + h_{2UN2}\right] \cdot \frac{Key_{h.d}}{2} \cdot \gamma_w \cdot B = 195.2 \cdot kN$$

Moment Arm (from bot. of toe key):

$$H_{h2alocUN2} := \frac{Key_{h.d} \cdot \left[2 \cdot \left(UWSEL_{UN2} - Bot_{ftg} + Key_{t.d}\right) + h_{2UN2}\right]}{3\left[h_{2UN2} + \left(UWSEL_{UN2} - Bot_{ftg} + Key_{t.d}\right)\right]} \dots + Key_{vdist} = -1.03\ m$$

Lateral Soil Load:

Moist Soil Load above WSEL:

$$E_{h7UN2} := \frac{\gamma_m \cdot K_o \cdot h_{7UN2}^2}{2} \cdot B = 0.0 \cdot kN$$

Moment Arm (from bot. of toe key):

$$E_{h7locUN2} := h_{6UN2} + \frac{h_{7UN2}}{3} + Key_{vdist} = 0.00\ m$$

Saturated Soil Load below WSEL: (rectangular component)

$$E_{h8UN2} := \left(\gamma_m \cdot K_o \cdot h_{7UN2}\right) \cdot h_{8UN2} \cdot B = 0.0 \cdot kN$$

Moment Arm (from bot. of toe key):

$$E_{h8locUN2} := \frac{h_{8UN2}}{2} = 0.00\ m$$

Saturated Soil Load below WSEL: (triangular component)

$$E_{h8aUN2} := \frac{\left[\left(\gamma_{sat} - \gamma_w\right) \cdot K_o\right] \cdot h_{8UN2}^2}{2} \cdot B = 0.0 \cdot kN$$

Moment Arm (from bot. of footing):

$$E_{h8alocUN2} := \frac{h_{8UN2}}{3} = 0.00\ m$$

Lateral Resistance from Stilling Basin:

Lateral Resistance from Stilling Basin:

$$P_{sbUN2} := 415kN$$

(Force needed to achieve the required sliding factor of safety in case UN2)

Moment Arm (from bot. of toe key):

$$P_{sblocUN2} := \frac{t_{ftg}}{2} + Key_{t.d} = 1.00\ m$$

$$\Sigma H_{SoilresistUN2} := H_{h6UN2} + H_{h2aUN2} + E_{h7UN2} + E_{h8UN2} + E_{h8aUN2} + P_{sbUN2} = 629.8 \cdot kN$$

$$\Sigma M_{HorizSoilResistUN2} := H_{h6UN2} \cdot H_{h6locUN2} + H_{h2aUN2} \cdot H_{h2alocUN2} + E_{h7UN2} \cdot E_{h7locUN2} \dots + E_{h8UN2} \cdot E_{h8locUN2} + E_{h8aUN2} \cdot E_{h8alocUN2} + P_{sbUN2} \cdot P_{sblocUN2} = 226.3\ m \cdot kN$$

Vertical Force:

UPLIFT: Linear distribution from water at heel to water at toe:

$$\Sigma V_{UpliftUN2} := \left[\left(UWSEL_{UN2} - Bot_{ftg} + Key_{t.d}\right) + h_{2UN2}\right] \cdot \frac{b}{2} \cdot \gamma_w \cdot B \cdot -1 = -1171.296 \cdot kN$$

Moment Arm (from Point O):

$$V_{UpliftUN2aloc} := \frac{b \cdot \left[2 \cdot h_{2UN2} + \left(UWSEL_{UN2} - Bot_{ftg} + Key_{t.d}\right)\right]}{3\left[h_{2UN2} + \left(UWSEL_{UN2} - Bot_{ftg} + Key_{t.d}\right)\right]} = 6.201\ m$$

$$\Sigma M_{UpliftUN2} := \Sigma V_{UpliftUN2} \cdot V_{UpliftUN2aloc} = -7262.976 \cdot kN \cdot m$$

Weight of soil and water over toe:

Water Above the Top of Footing: $W_{H1UN2} := \gamma_w \cdot h_{5UN2} \cdot L_{ab} \cdot B = 0 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E1locUN2} := \frac{L_{ab}}{2} = 1.75\,m$

Soil above top of footing: $W_{E6UN2} := \gamma_b \cdot h_{3UN2} \cdot L_{ab} \cdot B = 0.0 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E6locUN2} := \frac{L_{ab}}{2} = 1.75\,m$

Vertical Load Due to Surcharge: $S_{UN2} := S1_{UN2} \cdot L_{cd} \cdot B = 0 \cdot kN$ $\quad S_{UN2loc} := b - \frac{L_{cd}}{2} = 8.45\,m$

Weight of soil and water over heel:

Moist Soil for sloped grade above top of wall:

Length of sloped portion of soil above top of wall: $L_{E3UN2} := \left(L_{cd} + t_{wb} - t_{wt}\right) = 8.00\,m$

Height of sloped soil above top of wall over heel: $h_{E3locUN2} := \left(L_{E3UN2}\right) \cdot \tan(\beta) = 0.00\,m$

Weight of sloped soil above top of wall: $W_{E3UN2} := \frac{\gamma_m}{2} \cdot h_{E3locUN2} \cdot L_{E3UN2} \cdot B = 0.0 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E3locUN2} := L_{ab} + t_{wt} + \frac{2}{3} \cdot L_{E3UN2} = 9.33\,m$

Moist soil from top of wall to groundwater level:

Height of soil from top of wall and top of GWL: $h_{1UN2} = 4.54\,m$

Length from edge of wall at GWL to edge of heel: $L_{E4UN2} := L_{E3UN2} - \left(h_{1UN2} \cdot S_{batter}\right) = 7.64\,m$

Weight of soil over heel from top of wall to GWL: $W_{E4UN2} := \gamma_m \cdot h_{1UN2} \cdot \frac{\left(L_{E3UN2} + L_{E4UN2}\right)}{2} \cdot B = 710.2 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E4locUN2} := b - \frac{L_{E3UN2}^2 + L_{E3UN2} \cdot L_{E4UN2} + L_{E4UN2}^2}{3\left(L_{E3UN2} + L_{E4UN2}\right)} = 8.09\,m$

Saturated soil from groundwater to top of footing:

Height of soil from GWL to top of heel: $h_{E4UN2} := h_{2UN2} - t_{ftg} - Key_{h.d} = 6.96\,m$

Weight of soil over heel from GWL to top of heel: $W_{E5UN2} := \left(\gamma_{sat}\right) \cdot h_{E4UN2} \cdot \frac{\left(L_{E4UN2} + L_{cd}\right)}{2} \cdot B = 1128.4 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E5locUN2} := b - \frac{L_{E4UN2}^2 + L_{E4UN2} \cdot L_{cd} + L_{cd}^2}{3\left(L_{E4UN2} + L_{cd}\right)} = 8.31\,m$

$$\Sigma V_{SoilWaterUN2} := W_{H1UN2} + W_{E6UN2} + W_{E3UN2} + W_{E4UN2} + W_{E5UN2} + S_{UN2} = 1838.6 \cdot kN$$

$$\Sigma M_{VertSoilWaterResistUN2} := W_{H1UN2} \cdot W_{E1locUN2} + W_{E6UN2} \cdot W_{E6locUN2} \cdots + W_{E3UN2} \cdot W_{E3locUN2} + W_{E4UN2} \cdot W_{E4locUN2} \cdots + W_{E5UN2} \cdot W_{E5locUN2} + S_{UN2} \cdot S_{UN2loc} = 15125.7\,m \cdot kN$$

STABILITY ASSESSMENT:

LOAD CASE UN2

CHECK SLIDING ALONG HORIZONTAL SLIDING PLANE:

Summation of the vertical forces:

$$\Sigma V_{UN2} := \Sigma V_{conc} + \Sigma V_{SoilWaterUN2} + \Sigma V_{UpliftUN2} = 1535.6 \cdot kN$$

Summation of the horizontal forces:

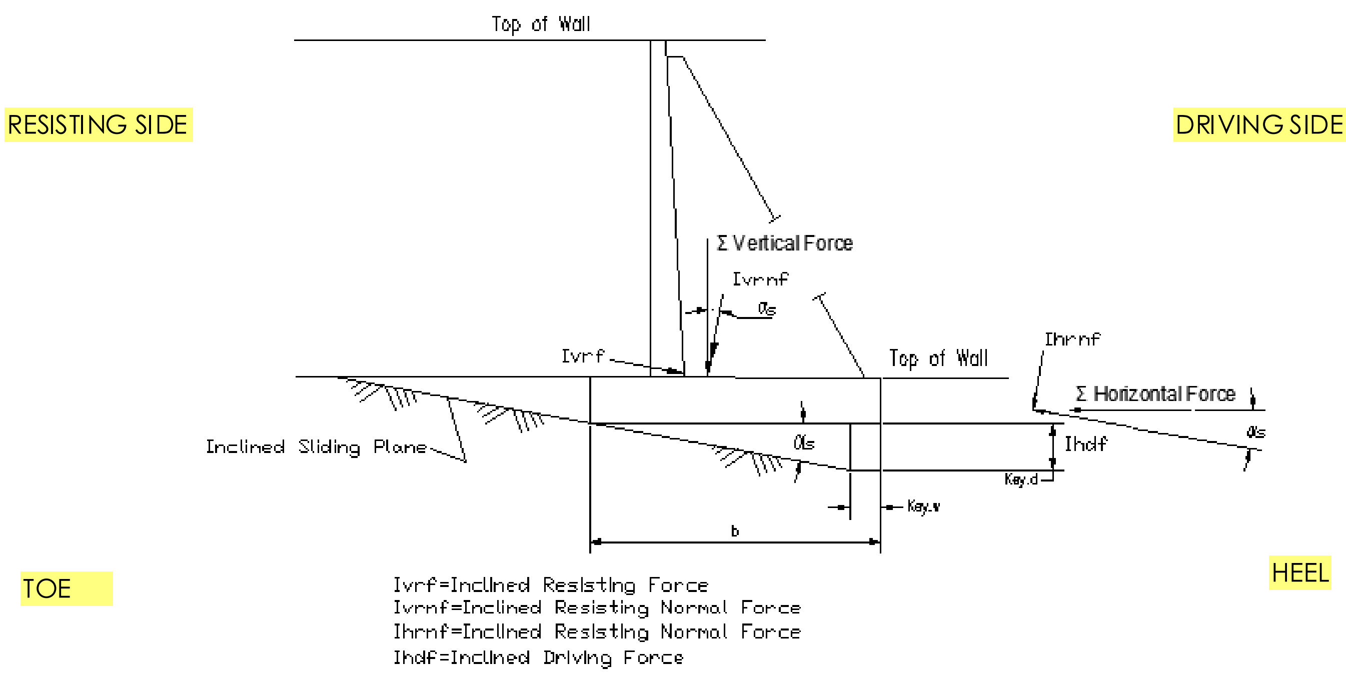
$$\Sigma H_{UN2} := \Sigma H_{SoildriveUN2} + \Sigma H_{SoilresistUN2} = -1014.8 \cdot kN$$

Safety Factor for Sliding Horizontal Failure Plane

$$FS_{Horiz.SlidingUN2} := \frac{\left|\Sigma V_{UN2}\right| \cdot \tan\left(\phi_{rock} \cdot \frac{\pi}{180}\right)}{\left|\Sigma H_{UN2}\right|} = 0.74$$

$$FS_{Sliding.check1.UN2} := \begin{vmatrix} \text{"OKAY" if } FS_{Horiz.SlidingUN2} > FS_{sliding.reqUN2} \\ \text{"NG - key req'"} \text{ otherwise} \end{vmatrix} = \text{"NG - key req'"}$$

CHECK FACTOR OF SAFETY SLIDING WITH KEY (INCLINED SLIDING PLANE):



$\alpha s = 0.18$ as degrees= $\alpha s \cdot \left(\frac{180}{\pi}\right) = 10.30$

(With properly engineered reinforced concrete Key, horizontal sliding plane thru Toe is protected, critical sliding plane is relocated to the INCLINED SLIDING PLANE FROM HEEL KEY To TOE, Bedrock Mass above this examing plane is mobilized by reinforced concrete key and combined into Structural Wedge.)

Resolve ΣV_{UN2} & ΣH_{UN2}

$$\Sigma V_{InclinedUN2} := \cos(\alpha s) \cdot \left(\left|\Sigma V_{UN2} + V_{rocksection}\right|\right) + \sin(\alpha s) \cdot \left|\Sigma H_{UN2}\right| = 1969.4 \cdot kN$$

$$\Sigma H_{InclinedUN2} := \cos(\alpha s) \cdot \left|\Sigma H_{UN2}\right| - \sin(\alpha s) \cdot \left(\left|\Sigma V_{UN2} + V_{rocksection}\right|\right) = 673.3 \cdot kN$$

Safety Factor for Sliding Inclined Failure Plane

$$FS_{InclinedISlidingUN2} := \frac{\Sigma V_{InclinedUN2} \cdot \tan(\phi_r)}{\Sigma H_{InclinedUN2}} = 1.30$$

LOAD CASE UN2

$$FS_{Sliding.check2.UN2} := \begin{cases} \text{"OKAY "} & \text{if } FS_{InclinedISlidingUN2} > FS_{sliding.reqUN2} \\ \text{"NG - Revise Structure""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

CHECK FOUNDATION ECCENTRICITY:

Summation of the resisting moments about the toe:

$$\Sigma M_{resUN2} := \Sigma M_{conc} + \Sigma M_{VertSoilWaterResistUN2} + \Sigma M_{HorizSoilResistUN2} + \Sigma M_{rocksection} = 22374 \cdot kN \cdot m$$

Summation of the overturning moments about the toe:

$$\Sigma M_{oUN2} := \Sigma M_{LateralSoildriveUN2} + \Sigma M_{UpliftUN2} = -11967 \cdot kN \cdot m$$

Total moment: $\Sigma M_{UN2} := \Sigma M_{resUN2} + \Sigma M_{oUN2} = 10406.5\, m \cdot kN$

Normal force to base: $\Sigma V_{InclinedUN2} = 1969.4 \cdot kN$

Inclined Sliding Plane Length: $L_{incline} = 12.2 \cdot m$

Eccentricity (inclined plane): $$ex_{UN2} := \frac{L_{incline}}{2} - \frac{\Sigma M_{UN2}}{\Sigma V_{InclinedUN2}} = 0.81\, m$$

$Kern = 2.033\, m$

Eccentricity Check: $$e_{check.UN2} := \begin{cases} \text{"Okay"} & \text{if } ex_{UN2} \le Kern \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"Okay"}$$

CHECK FOUNDATION BEARING CAPACITY:

Base Section Modulus: $S_b = 24.79\, m^3$

Bearing Pressure Under Toe:

$$\sigma_{ToeUN2} := \begin{cases} \left(\frac{\Sigma V_{InclinedUN2}}{L_{incline} \cdot B} + \frac{\Sigma V_{InclinedUN2} \cdot ex_{UN2}}{S_b}\right) & \text{if } \frac{\Sigma V_{InclinedUN2} \cdot ex_{UN2}}{S_b} \le \frac{\Sigma V_{InclinedUN2}}{L_{incline} \cdot B} \\ \frac{2 \cdot \Sigma V_{InclinedUN2}}{B \cdot 3\left(\frac{b}{2} - ex_{UN2}\right)} & \text{otherwise} \end{cases} = 226.2 \cdot kPa$$

CHECK FLOATATION:

Safety Factor for Floatation:

$$FS_{FloatationUN2} := \frac{\Sigma V_{conc} + \Sigma V_{SoilWaterUN2}}{\left|\Sigma V_{UpliftUN2}\right|} = 2.31$$

$$FS_{Floatation.UN2.check} := \left| \begin{array}{ll} \text{"OKAY "} & \text{if } FS_{FloatationUN2} > FS_{req.UN2.flt} \\ \text{"Revise Structure""} & \text{otherwise} \end{array} \right. = \text{"OKAY "}$$

CHECK OVERTURNING

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stablity of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1

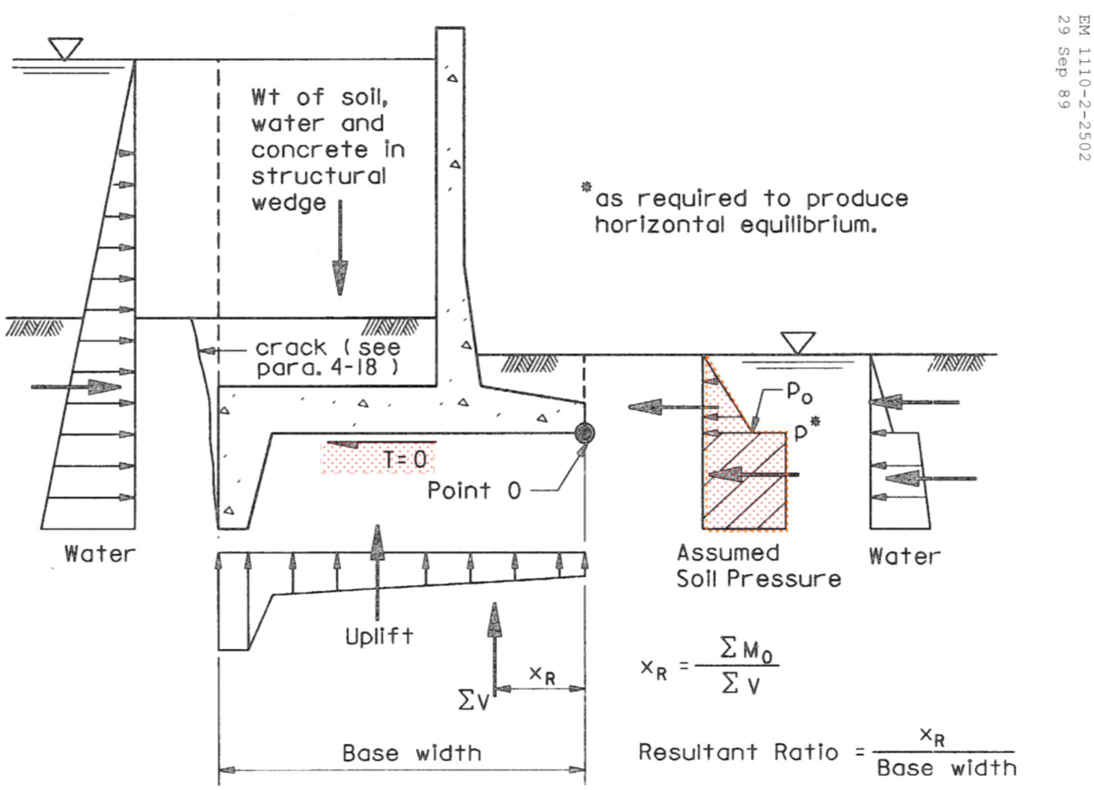

Figure 4-5. Forces for overturning analysis for wall with horizontal base and key

Modify Uplift for Overturning Analysis: **LOAD CASE UN2**

(Uplift is calculated along the concrete/rock contact using the Line of Creep method)

Water Pressure at h: $u_{h.UN2} := \Delta h_{g.hj.UN2} \cdot \gamma_w = 107.41 \cdot kPa$

Water Pressure at o: $u_{o.UN2} := \left(\Delta h_{g.no.UN2} - \frac{\Delta h_{g.r.UN2} \cdot L_{ho.UN2}}{L_{ho.UN2}} \right) \cdot \gamma_w = 87.81 \cdot kPa$

Head loss between point h and o: $\Delta h_{ho.UN2} := \Delta h_{g.r.UN2} \cdot \frac{L_{ho.UN2}}{L_{ho.UN2}} = 0\,m$

Length of concrete base (h -> o): $L_{baseho.UN2} := Key_{h.w} + Key_{h.d} + Key_{hdist} + Key_{t.d} + Key_{t.w} = 14\,m$

Head loss along h -> j: $\Delta h_{hj.UN2} := \Delta h_{ho.UN2} \cdot \frac{Key_{h.w}}{L_{baseho.UN2}} = 0\,m$

Water Pressure at j: $u_{j.UN2} := \left(\Delta h_{g.hj.UN2} - \Delta h_{hj.UN2} \right) \cdot \gamma_w = 107.41 \cdot kPa$

Head loss along h -> k: $\Delta h_{hjk.UN2} := \Delta h_{ho.UN2} \cdot \left(\frac{Key_{h.w} + Key_{h.d}}{L_{baseho.UN2}} \right) = 0\,m$

Water Pressure at k: $u_{k.UN2} := \left(\Delta h_{g.km.UN2} - \Delta h_{hjk.UN2} \right) \cdot \gamma_w = 87.81 \cdot kPa$

Head loss along h -> m: $\Delta h_{hjkm.UN2} := \Delta h_{ho.UN2} \cdot \left(\frac{Key_{h.w} + Key_{h.d} + Key_{hdist}}{L_{baseho.UN2}} \right) = 0\,m$

Water Pressure at m: $u_{m.UN2} := \left(\Delta h_{g.km.UN2} - \Delta h_{hjkm.UN2} \right) \cdot \gamma_w = 87.81 \cdot kPa$

Head loss along h -> n: $\Delta h_{hjkmn.UN2} := \Delta h_{ho.UN2} \cdot \left(\frac{Key_{h.w} + Key_{h.d} + Key_{hdist} + Key_{t.d}}{L_{baseho.UN2}} \right) = 0\,m$

Water Pressure at n: $u_{n.UN2} := \left(\Delta h_{g.no.UN2} - \Delta h_{hjkmn.UN2} \right) \cdot \gamma_w = 87.81 \cdot kPa$

Uplift under key at heel: $V_{ulkeyhUN2.OT} := \frac{\left(u_{h.UN2} + u_{j.UN2} \right) \cdot Key_{h.w}}{2} \cdot B \cdot -1 = -107.408 \cdot kN$

Moment Arm (from Point O): $V_{ulkeyhUN2loc.OT} := b - \frac{Key_{h.w} \cdot \left(2 \cdot u_{j.UN2} + u_{h.UN2} \right)}{3 \cdot \left(u_{j.UN2} + u_{h.UN2} \right)} = 11.5\,m$

Uplift under base: $V_{ulbaseUN2.OT} := \frac{\left(u_{k.UN2} + u_{m.UN2} \right) \cdot Key_{hdist}}{2} \cdot B \cdot -1 = -965.888 \cdot kN$

Moment Arm (from Point O): $V_{ulbaseUN2loc.OT} := b - Key_{h.w} - \frac{Key_{hdist} \cdot \left(2 \cdot u_{m.UN2} + u_{k.UN2} \right)}{3 \cdot \left(u_{m.UN2} + u_{k.UN2} \right)} = 5.5\,m$

Uplift under key at toe: $V_{ulkeytUN2.OT} := \frac{\left(u_{n.UN2} + u_{o.UN2} \right) \cdot Key_{t.w}}{2} \cdot B \cdot -1 = 0 \cdot kN$

Moment Arm (from Point O): $V_{ulkeytUN2loc.OT} := \frac{Key_{t.w} \cdot \left(2 \cdot u_{n.UN2} + u_{o.UN2} \right)}{3 \cdot \left(u_{n.UN2} + u_{o.UN2} \right)} = 0$

$$\Sigma V_{UpliftUN2.OT} := V_{ulkeyhUN2.OT} + V_{ulbaseUN2.OT} + V_{ulkeytUN2.OT} = -1073 \cdot kN$$

$$U_{UN2.loc.OT} := \frac{V_{ulkeyhUN2.OT} \cdot V_{ulkeyhUN2loc.OT} + V_{ulbaseUN2.OT} \cdot V_{ulbaseUN2loc.OT} + V_{ulkeytUN2.OT} \cdot V_{ulkeytUN2loc.OT}}{\Sigma V_{UpliftUN2.OT}} = 6.10\,m$$

$$\Sigma M_{UpliftUN2.OT} := \Sigma V_{UpliftUN2.OT} \cdot U_{UN2.loc.OT} = -6547.6 \cdot kN \cdot m$$

Modify Lateral Water Pressure (Resisting) for Overturning Analysis:

(Resisting water pressure is calculated using the Line of Creep method)

Water Load at Key (heel):

$$H_{h2UN2.OT} := \frac{u_{k.UN2} + u_{j.UN2}}{2} \cdot Key_{h.d} B = 195.2 \cdot kN$$

Moment Arm (from Point O):

$$H_{h2locUN2.OT} := \frac{Key_{h.d} \cdot \left(2 \cdot u_{k.UN2} + u_{j.UN2}\right)}{3\left(u_{k.UN2} + u_{j.UN2}\right)} + Key_{vdist} = -1.03\ m$$

Water Load at Key (toe):

$$H_{h6UN2.OT} := \frac{u_{o.UN2} \cdot \left(UWSEL_{UN2} - Bot_{ftg} + Key_{t.d}\right)}{2} \cdot B = 393 \cdot kN$$

Moment Arm (from Point O):

$$H_{h6locUN2.OT} := \frac{UWSEL_{UN2} - Bot_{ftg} + Key_{t.d}}{3} = 2.99\ m$$

$$\Sigma H_{waterresistUN2.OT} := H_{h2UN2.OT} + H_{h6UN2.OT} = 588.6 \cdot kN$$

$$H_{waterresistlocUN2.OT} := \frac{H_{h2UN2.OT} \cdot H_{h2locUN2.OT} + H_{h6UN2.OT} \cdot H_{h6locUN2.OT}}{\Sigma H_{waterresistUN2.OT}} = 1.653\ m$$

$$\Sigma M_{waterresistUN2.OT} := \Sigma H_{waterresistUN2.OT} \cdot H_{waterresistlocUN2.OT} = 973.15 \cdot kN \cdot m$$

Modify Lateral Soil Loads for Overturning Analysis:

(Lateral soil loads are calculated down to Point O instead of bottom of shear key)

<u>Driving Soil Load (Headwater Side):</u>

Surcharge Load:

$$E_{s1UN2.OT} := S1_{UN2} \cdot K_o \cdot \left(H_w + Key_{h.d} + Key_{vdist}\right) \cdot B \cdot -1 = 0 \cdot kN$$

Moment Arm (from Point O):

$$E_{s1locUN2.OT} := \frac{H_w + Key_{h.d} + Key_{vdist}}{2} = 6.75\ m$$

Moist Soil Load above GWL:

$$E_{h1UN2.OT} := \frac{\gamma_m \cdot K_o \cdot h_{1UN2}^{\ 2}}{2} B \cdot -1 = -112.5 \cdot kN$$

Moment Arm (from Point O):

$$E_{h1locUN2.OT} := \frac{h_{1UN2}}{3} + h_{2UN2} + Key_{vdist} = 10.47\ m$$

Saturated Soil Load below GWL:
(rectangular component)

$$E_{h2UN2.OT} := \left(\gamma_m \cdot K_o \cdot h_{1UN2}\right) \cdot \left(h_{2UN2} + Key_{vdist}\right) \cdot B \cdot -1 = -444.2 \cdot kN$$

Moment Arm (from Point O):

$$E_{h2locUN2.OT} := \frac{h_{2UN2} + Key_{vdist}}{2} = 4.48\ m$$

Saturated Soil Load below GWL:
(triangular component)

$$E_{h2aUN2.OT} := \frac{\left(\gamma_{sat} - \gamma_w\right) \cdot K_o \cdot \left(h_{2UN2} + Key_{vdist}\right)^2}{2} \cdot B \cdot -1 = -267.4 \cdot kN$$

Moment Arm (from Point O):

$$E_{h2alocUN2.OT} := \frac{h_{2UN2} + Key_{vdist}}{3} = 2.99\ m$$

Resisting Soil Load (Tailwater Side):

(Determine resisting soil load based on depth variation between the keys (ie. Key_{vdist}). In case where key at heel is deeper than key at toe (ie. $Key_{vdist} < 0$), resisting soil load (p*) is assumed to produce horizontal equilibrium as per Figure 4-5 above. Resisting soil load (p_o) is neglected.)

Total Driving Force: $\Sigma H_{SoildriveUN2.OT} := E_{s1UN2.OT} + E_{h1UN2.OT} + E_{h2UN2.OT} + E_{h2aUN2.OT} + H_{h2UN2} = -1412.7 \cdot kN$

Total Resisting Force: $\Sigma H_{waterresistUN2.OT} = 588.6 \cdot kN$

Assumed Soil Load p*: $E_{h8UN2a.OT} := (\Sigma H_{SoildriveUN2.OT} + \Sigma H_{waterresistUN2.OT}) \cdot -1 = 824.148 \cdot kN$

Moment Arm (from Point O): $E_{h8UN2a.loc.OT} := \frac{Key_{vdist}}{2} = -1\ m$

$$E_{h8UN2.OT} := \begin{cases} E_{h8UN2a.OT} & \text{if } Key_{vdist} < 0 \\ \Sigma H_{SoilresistUN2} - H_{h6UN2} - H_{h2aUN2} - P_{sbUN2} & \text{otherwise} \end{cases} = 824.148 \cdot kN$$

$$\Sigma M_{SoilresistUN2} := \begin{cases} E_{h8UN2a.OT} \cdot E_{h8UN2a.loc.OT} & \text{if } Key_{vdist} < 0 \\ \Sigma M_{HorizSoilResistUN2} - H_{h6UN2} \cdot H_{h6locUN2} - H_{h2aUN2} \cdot H_{h2alocUN2} - P_{sbUN2} \cdot P_{sblocUN2} & \text{otherwise} \end{cases} = -824.148 \cdot kN \cdot m$$

Sum of Moment about Point O:

$$\Sigma M_{LateraldriveUN2.OT} := E_{s1UN2.OT} \cdot E_{s1locUN2.OT} + E_{h1UN2.OT} \cdot E_{h1locUN2.OT} + E_{h2UN2.OT} \cdot E_{h2locUN2.OT} \cdots + E_{h2aUN2.OT} \cdot E_{h2alocUN2.OT} + H_{h2UN2} \cdot H_{h2locUN2} = -4940.5 \cdot kN \cdot m$$

$$\Sigma M_{LateralresistUN2.OT} := \Sigma M_{waterresistUN2.OT} + \Sigma M_{SoilresistUN2} = 149.0 \cdot kN \cdot m$$

Total moment:

$$\Sigma M_{UN2.OT} := \Sigma M_{conc} + \Sigma M_{VertSoilWaterResistUN2} + \Sigma M_{UpliftUN2.OT} \cdots + \Sigma M_{LateraldriveUN2.OT} + \Sigma M_{LateralresistUN2.OT} = 8743.2 \cdot kN \cdot m$$

Total Vertical Force: $\Sigma V_{UN2.OT} := \Sigma V_{conc} + \Sigma V_{SoilWaterUN2} + \Sigma V_{UpliftUN2.OT} = 1633.6 \cdot kN$

Distance X_R: EM 1110-2-2502 Eq.4-1 $X_{R.UN2} := \frac{\Sigma M_{UN2.OT}}{\Sigma V_{UN2.OT}} = 5.352\ m$

Overturning Resultant Ratio $Ratio_{UN2.OT} := \frac{X_{R.UN2}}{b} = 0.45$

$$Ratio_{UN2.OT.check} := \begin{cases} \text{"OKAY "} & \text{if } Ratio_{UN2.OT} > X_{R.reqUN2} \\ \text{"Revise Structure""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

CHECK FOUNDATION ECCENTRICITY (HORIZONTAL PLANE):

Eccentricity (horizontal plan): $ex_{UN2.OT} := \frac{b}{2} - \frac{\Sigma M_{UN2.OT}}{\Sigma V_{UN2.OT}} = 0.65\ m$ $Kern_{OT} = 2\ m$

Eccentricity Check:

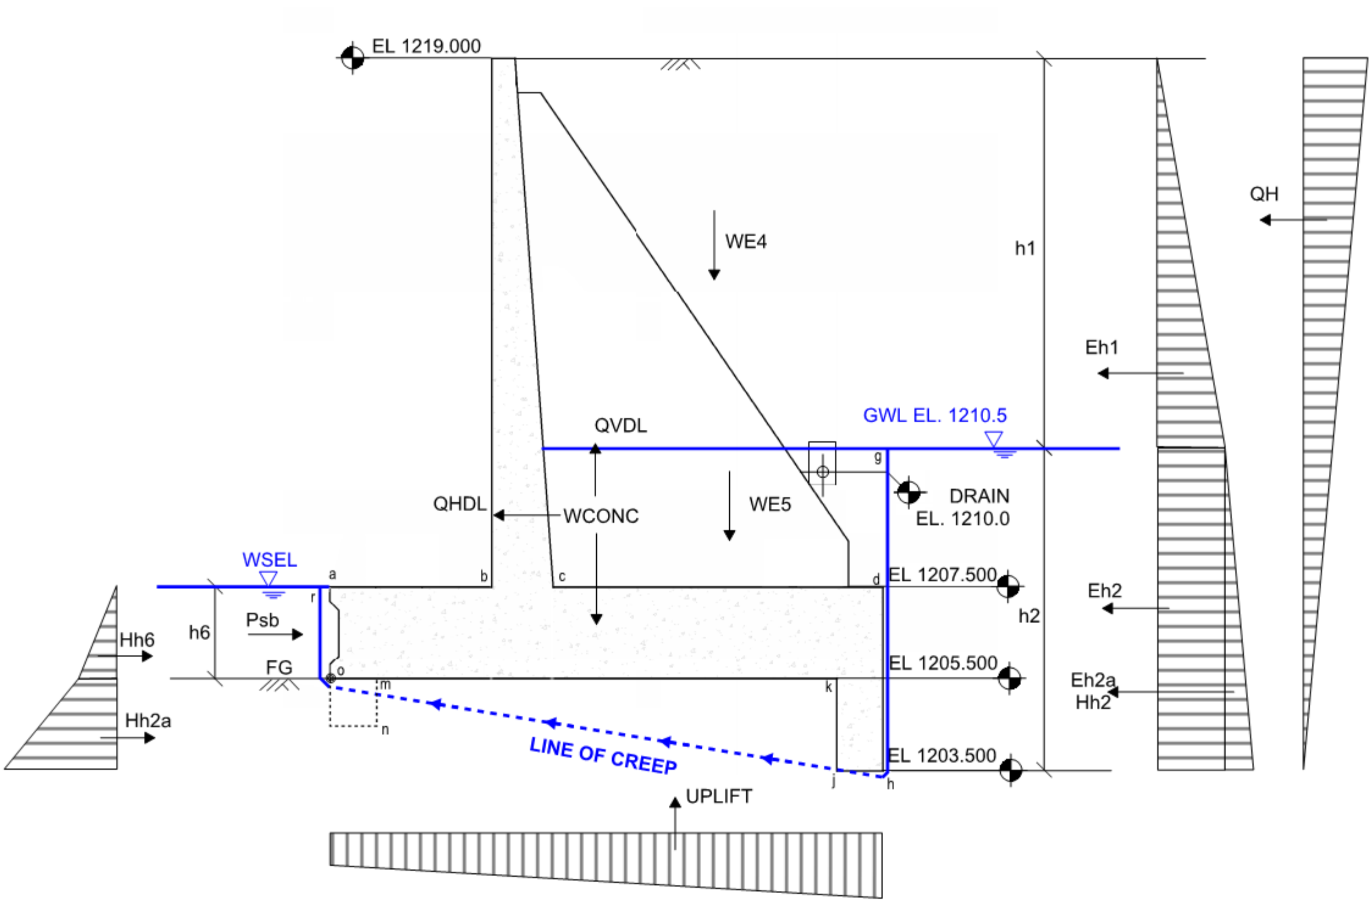
LOAD CASE E1 - SEISMIC LOADING



E1 DESIGN CASE

LOAD CASE E1 ACCEPTANCE PARAMETERS

FS sliding:

Extreme (E) 1.0 (without cohesion, seismic loading) (Table 3-3, USACE EM 1110-2-2100)

Resultant Location:

Extremem (E) Inside middle half ~75% base in compression

Required Factor of Safety for Sliding:	$FS_{sliding.reqE1} := 1.0$	(Without Cohesion)
Allowable rock bearing pressure:	$\sigma_{allowE1} := 1740kPa$	(Section 5.2, Design Criteria EM 1110-2-2100 Section 3-10)
Overturning Required Resultant Ratio:	$X_{R.reqE1} := 0.25$	(EM 1110-2-2502, Figure 4-4)
Required Factor of Safety for Floatation	$FS_{req.E1.flt} := 1.1$	

SOIL HEIGHTS and Water Levels:

LOAD CASE E1

Heel Conditions:

Groundwater Elevation at Heel: $GWL_{E1} := 1210.5m$

Distance from Finish Grade to Groundwater at Heel: $h_{1E1} := \left[T_w - GWL_{E1} + \left(L_{cd} + t_{wb} - t_{wt}\right)\cdot \tan(\beta)\right] = 8.50\ m$

Distance from Water Surface to Bottom of Footing at Heel: $h_{2E1} := GWL_{E1} - Bot_{ftg} + Key_{h.d} = 7.00\ m$

Toe Conditions:

Water Surface Elevation at Toe: $WSEL_{E1} := 1207.5m$

Water Surface Elevation at Toe for Uplift: $UWSEL_{E1} := 1207.5\cdot m$

Finish Grade at Toe providing lateral resistance: $FG_{toeE1} := 1205.5\cdot m$

Soil Depth Above top of footing: $h_{3aE1} := FG_{toeE1} - Top_{ftg} = -2\ m$

$$h_{3E1} := \begin{cases} h_{3aE1} & \text{if } FG_{toeE1} - Top_{ftg} \ge 0 \\ 0 & \text{otherwise} \end{cases} = 0$$

Resisting Fill at Toe: $h_{4E1} := FG_{toeE1} - Bot_{ftg} + Key_{t.d} = 0.00\ m$

Distance from Water Level to Top of Footing at Toe: $h_{5E1} := WSEL_{E1} - Top_{ftg} = 0.00\ m$

Distance from Water Surface to Bottom of Footing at Toe: $h_{6E1} := WSEL_{E1} - Bot_{ftg} + Key_{t.d} = 2.00\ m$

Soil Depth Above WSEL: $h_{7aE1} := FG_{toeE1} - WSEL_{E1} = -2\ m$

$$h_{7E1} := \begin{cases} h_{7aE1} & \text{if } FG_{toeE1} - WSEL_{E1} \ge 0 \\ 0 & \text{otherwise} \end{cases} = 0$$

Soil Depth Below WSEL:

$$h_{8E1} := \begin{cases} WSEL_{E1} - Bot_{ftg} + Key_{t.d} & \text{if } FG_{toeE1} - WSEL_{E1} \ge 0 \\ h_{4E1} & \text{otherwise} \end{cases} = 0$$

For Line of Creep Method: $L_{ho.E1} := \sqrt{b^2 + \left(Key_{h.d} - Key_{t.d}\right)^2} = 12.166\ m$

Head Loss from Point g:

$\Delta h_{g.hj.E1} := h_{2E1} = 7\ m$ (to point h & j)

$\Delta h_{g.km.E1} := GWL_{E1} - Bot_{ftg} = 5\ m$ (to point k & m)

$\Delta h_{g.no.E1} := GWL_{E1} - Bot_{ftg} + Key_{t.d} = 5\ m$ (to point n & o)

$\Delta h_{g.p.E1} := GWL_{E1} - FG_{toeE1} = 5\ m$ (to point p*)

$\Delta h_{g.r.E1} := GWL_{E1} - UWSEL_{E1} = 3\ m$ (to point r)

Surcharge

Surcharge on Heel: $S1_{E1} := 0.0\ \frac{kN}{m^2}$

* same as point "o" in this case

Calculate Soil Lateral Pressure Coefficients:

Calculate at-rest pressure coefficient K_o based on Jaky's (1944) equation.

Soil At Rest Static Coefficient:
(apply to resisting soil loads)

$$K_o := \frac{1 - \sin(\phi)}{1 + \sin(\beta)} = 0.546$$

(Eq. 3-6, USACE EM 1110-2-2502)

Calculate active pressure coefficient K_A based on Coulumb equations.

Determine Slope of Active Wedge: (cohesionless backfill with water table)

$$c_1 := 2 \cdot \tan(\phi) = 1.019 \qquad c_2 := 1 - \tan(\phi) \cdot \tan(\beta) - \frac{\tan(\beta)}{\tan(\phi)} = 1$$

(Eq. G-14 / G-15, USACE EM 1110-2-2100)

$$\alpha := \mathrm{atan}\left(\frac{c_1 + \sqrt{c_1^{\,2} + 4 \cdot c_2}}{2}\right) = 1.021 \qquad \alpha_{deg} := \alpha \cdot \frac{180}{\pi} = 58.5$$

degrees (Eq. G-13, USACE EM 1110-2-2100)

Soil Active Coefficient above GWL:

$$K_{Aagwt} := \left(\frac{1 - \tan(\phi) \cdot \cot(\alpha)}{1 + \tan(\phi) \cdot \tan(\alpha)}\right) \cdot \left(\frac{\tan(\alpha)}{\tan(\alpha) - \tan(\beta)}\right) = 0.376$$

Soil Active Coefficient below GWL:

$$K_{Abgwt} := \frac{1 - \tan(\phi) \cdot \cot(\alpha)}{1 + \tan(\phi) \cdot \tan(\alpha)} \cdot \left[1 + \left(\frac{\tan(\alpha)}{\tan(\alpha) - \tan(\beta)} - 1\right) \cdot \left(\frac{\gamma_m}{\gamma_{sat} - \gamma_w}\right)\right] = 0.376$$

(Eq. G-29, USACE EM 1110-2-2100)

Lateral - Driving Force

Static Copmonent : Active Pressure:

Surcharge Load:

$$E_{s1E1} := S1_{E1} \cdot K_{Aagwt} \cdot \left(H_w + Key_{h.d}\right) \cdot B \cdot -1 = 0 \cdot kN$$

Moment Arm (from bottom of footing):

$$E_{s1locE1} := \frac{H_w + Key_{h.d}}{2} + Key_{vdist} = 5.75\ m$$

Moist Soil Load above GWL:

$$E_{h1E1} := \frac{\gamma_m \cdot K_{Aagwt} \cdot h_{1E1}^{\,2}}{2} \cdot B \cdot -1 = -271.3 \cdot kN$$

Moment Arm (from bottom of footing):

$$E_{h1locE1} := \frac{h_{1E1}}{3} + h_{2E1} + Key_{vdist} = 7.83\ m$$

Saturated Soil Load below GWL:
(rectangular component)

$$E_{h2E1} := \left(\gamma_m \cdot K_{Abgwt} \cdot h_{1E1}\right) \cdot h_{2E1} \cdot B \cdot -1 = -446.9 \cdot kN$$

Moment Arm (from bottom of footing):

$$E_{h2locE1} := \frac{h_{2E1}}{2} + Key_{vdist} = 1.50\ m$$

Saturated Soil Load below GWL:
(triangular component)

$$E_{h2aE1} := \frac{\left(\gamma_{sat} - \gamma_w\right) \cdot K_{Abgwt} \cdot h_{2E1}^{\,2}}{2} \cdot B \cdot -1 = -112.2 \cdot kN$$

Moment Arm (from bottom of footing):

$$E_{h2alocE1} := \frac{h_{2E1}}{3} + Key_{vdist} = 0.33\ m$$

Lateral Water Load:

Water Load GWL to Bottom of Key

$$H_{h2E1} := \frac{\gamma_w \cdot h_{2E1}^{\,2}}{2} \cdot B \cdot -1 = -240.1 \cdot kN$$

Moment Arm (from bottom of footing):

$$H_{h2locE1} := \frac{h_{2E1}}{3} + Key_{vdist} = 0.33\ m$$

$$\Sigma H_{SoildriveE1} := E_{s1E1} + E_{h1E1} + E_{h2E1} + E_{h2aE1} + H_{h2E1} = -1070.5 \cdot kN$$

$$\Sigma M_{LateralSoildriveE1} := E_{s1E1} \cdot E_{s1locE1} + E_{h1E1} \cdot E_{h1locE1} + E_{h2E1} \cdot E_{h2locE1} + E_{h2aE1} \cdot E_{h2alocE1} \ldots + H_{h2E1} \cdot H_{h2locE1} = -2913.1\ m \cdot kN$$

Lateral - Resisting Force

LOAD CASE E1

Note: **Due to the relatively shallow depth of resisting soil/rock, a conservative apporach using at-rest coefficient in lieu of a passive wedge is used to calculate resisting forces.**

Lateral Water Load:

Water Load WSEL to Bottom of Footing: $H_{h6E1} := H_{h6U1} = 19.6 \cdot kN$

Moment Arm (from bot. of toe key): $H_{h6locE1} := H_{h6locU1} = 0.67\ m$

Water Load Bot. of Footing to Bot. of H. Key: $H_{h2aE1} := \left[\left(UWSEL_{E1} - Bot_{ftg} + Key_{t.d}\right) + h_{2E1}\right] \cdot \frac{Key_{h.d}}{2} \cdot \gamma_w \cdot B = 88.2 \cdot kN$

Moment Arm (from bot. of toe key): $H_{h2alocE1} := \frac{Key_{h.d} \cdot \left[2 \cdot \left(UWSEL_{E1} - Bot_{ftg} + Key_{t.d}\right) + h_{2E1}\right]}{3\left[h_{2E1} + \left(UWSEL_{E1} - Bot_{ftg} + Key_{t.d}\right)\right]} \ldots = -1.19\ m$
$+ Key_{vdist}$

Lateral Soil Load:

Moist Soil Load above WSEL: $E_{h7E1} := \frac{\gamma_m \cdot K_o \cdot h_{7E1}^2}{2} B = 0.0 \cdot kN$

Moment Arm (from bot. of toe key): $E_{h7locE1} := h_{6E1} + \frac{h_{7E1}}{3} + Key_{vdist} = 0.00\ m$

Saturated Soil Load below WSEL: (rectangular component) $E_{h8E1} := \left(\gamma_m \cdot K_o \cdot h_{7E1}\right) \cdot h_{8E1} \cdot B = 0.0 \cdot kN$

Moment Arm (from bot. of toe key): $E_{h8locE1} := \frac{h_{8E1}}{2} = 0.00\ m$

Saturated Soil Load below WSEL: (triangular component) $E_{h8aE1} := \frac{\left[\left(\gamma_{sat} - \gamma_w\right) \cdot K_o\right] \cdot h_{8E1}^2}{2} \cdot B = 0.0 \cdot kN$

Moment Arm (from bot. of footing): $E_{h8alocE1} := \frac{h_{8E1}}{3} = 0.00\ m$

Lateral Resistance from Stilling Basin:

Lateral Resistance from Stilling Basin: $P_{sbE1} := 415kN$ (Force needed to achieve the required sliding factor of safety in case UN2)

Moment Arm (from bot. of toe key): $P_{sblocE1} := \frac{t_{ftg}}{2} + Key_{t.d} = 1.00\ m$

$\Sigma H_{SoilresistE1} := H_{h6E1} + H_{h2aE1} + E_{h7E1} + E_{h8E1} + E_{h8aE1} + P_{sbE1} = 522.8 \cdot kN$

$\Sigma M_{HorizSoilResistE1} := H_{h6E1} \cdot H_{h6locE1} + H_{h2aE1} \cdot H_{h2alocE1} + E_{h7E1} \cdot E_{h7locE1} \ldots = 323.5\ m \cdot kN$
$+ E_{h8E1} \cdot E_{h8locE1} + E_{h8aE1} \cdot E_{h8alocE1} + P_{sbE1} \cdot P_{sblocE1}$

Vertical Force:

UPLIFT: Linear distribution from water at heel to water at toe:

$\Sigma V_{UpliftE1} := \left[\left(UWSEL_{E1} - Bot_{ftg} + Key_{t.d}\right) + h_{2E1}\right] \cdot \frac{b}{2} \cdot \gamma_w \cdot B \cdot -1 = -529.2 \cdot kN$

Moment Arm (from Point O): $V_{UpliftE1aloc} := \frac{b \cdot \left[2 \cdot h_{2E1} + \left(UWSEL_{E1} - Bot_{ftg} + Key_{t.d}\right)\right]}{3\left[h_{2E1} + \left(UWSEL_{E1} - Bot_{ftg} + Key_{t.d}\right)\right]} = 7.111\ m$

$\Sigma M_{UpliftE1} := \Sigma V_{UpliftE1} \cdot V_{UpliftE1aloc} = -3763.2 \cdot kN \cdot m$

Weight of soil and water over toe:

Water Above the Top of Footing: $W_{H1E1} := \gamma_w \cdot h_{5E1} \cdot L_{ab} \cdot B = 0 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E1locE1} := \frac{L_{ab}}{2} = 1.75\ m$

Soil above top of footing: $W_{E6E1} := \gamma_b \cdot h_{3E1} \cdot L_{ab} \cdot B = 0.0 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E6locE1} := \frac{L_{ab}}{2} = 1.75\ m$

Vertical Load Due to Surcharge: $S_{E1} := S1_{E1} \cdot L_{cd} \cdot B = 0 \cdot kN$ $\quad S_{E1loc} := b - \frac{L_{cd}}{2} = 8.45\ m$

Weight of soil and water over heel:

Moist Soil for sloped grade above top of wall:

Length of sloped portion of soil above top of wall: $L_{E3E1} := \left(L_{cd} + t_{wb} - t_{wt}\right) = 8.00\ m$

Height of sloped soil above top of wall over heel: $h_{E3locE1} := \left(L_{E3E1}\right) \cdot \tan(\beta) = 0.00\ m$

Weight of sloped soil above top of wall: $W_{E3E1} := \frac{\gamma_m}{2} \cdot h_{E3locE1} \cdot L_{E3E1} \cdot B = 0.0 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E3locE1} := L_{ab} + t_{wt} + \frac{2}{3} \cdot L_{E3E1} = 9.33\ m$

Moist soil from top of wall to groundwater level:

Height of soil from top of wall and top of GWL: $h_{1E1} = 8.50\ m$

Length from edge of wall at GWL to edge of heel: $L_{E4E1} := L_{E3E1} - \left(h_{1E1} \cdot S_{batter}\right) = 7.33\ m$

Weight of soil over heel from top of wall to GWL: $W_{E4E1} := \gamma_m \cdot h_{1E1} \cdot \frac{\left(L_{E3E1} + L_{E4E1}\right)}{2} \cdot B = 1303.2 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E4locE1} := b - \frac{L_{E3E1}^2 + L_{E3E1} \cdot L_{E4U1} + L_{E4E1}^2}{3\left(L_{E3E1} + L_{E4E1}\right)} = 8.16\ m$

Saturated soil from groundwater to top of footing:

Height of soil from GWL to top of heel: $h_{E4E1} := h_{2E1} - t_{ftg} - Key_{h.d} = 3.00\ m$

Weight of soil over heel from GWL to top of heel: $W_{E5E1} := \left(\gamma_{sat}\right) \cdot h_{E4E1} \cdot \frac{\left(L_{E4E1} + L_{cd}\right)}{2} \cdot B = 476.1 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E5locE1} := b - \frac{L_{E4E1}^2 + L_{E4E1} \cdot L_{cd} + L_{cd}^2}{3\left(L_{E4E1} + L_{cd}\right)} = 8.39\ m$

$\Sigma V_{SoilWaterE1} := W_{H1E1} + W_{E6E1} + W_{E3E1} + W_{E4E1} + W_{E5E1} + S_{E1} = 1779.3 \cdot kN$

$\Sigma M_{VertSoilWaterResistE1} := W_{H1E1} \cdot W_{E1locE1} + W_{E6E1} \cdot W_{E6locE1} \cdots + W_{E3E1} \cdot W_{E3locE1} + W_{E4E1} \cdot W_{E4locE1} + W_{E5E1} \cdot W_{E5locE1} + S_{E1} \cdot S_{E1loc} = 14636.1\ m \cdot kN$

SESIMIC ANALYSIS:

LOAD CASE E1

Seismic coefficient will be applied to dead loads to calculate seismic force and force is applied at center of gravity of the mass. Vertical and Horizontal loads are applied in the "destabilizing direction"

SEISMIC PARAMETERS:

Peak Ground Acceleration for Seismic Load $PGA_{Horiz} := 0.26$ $PGA_{Vert} := 0.56 \cdot PGA_{Horiz} = 0.146$ (Section 7.9, Design Criteria)

In accordance with USACE EM 1110-2-2100 Section 4-7.b, consider 2/3 PGA as seismic coefficient for stabilitiy.

Horizontal Seismic coefficient for stabilty: $K_{hE1} := \frac{2}{3} PGA_{Horiz} = 0.173$

Vertical Seismic coefficient for stabilty: $K_{vE1} := \frac{2}{3} PGA_{Vert} = 0.097$

SEISMIC ACCELERATION OF RIGID MASSES (Q_D):

Vertical Load Application:

$\Sigma V_{conc} = 868.3 \cdot kN$

$Q_{v.conc} := \Sigma V_{conc} \cdot K_{vE1} \cdot -1 = -84.3 \cdot kN$ (assume acting upwards for adverse sliding effect)

Moment arm for siesmic load application (From Toe): $H_{cent} = 5.709\,m$

$M_{Qv.conc} := Q_{v.conc} \cdot H_{cent} = -481.1 \cdot kN \cdot m$

Lateral Load Application:

$Q_{h.conc} := \Sigma V_{conc} \cdot K_{hE1} \cdot -1 = -150.5 \cdot kN$

Moment arm for siesmic load application (Above Base of Footing): $V_{Cent} = 2.622\,m$

$M_{Q.conc} := Q_{h.conc} \cdot V_{Cent} = -394.6 \cdot kN \cdot m$

SEISMIC ACCELERATION OF SOIL WEDGE + WATER (Q_{EH}):

Vertical Load Application:

$\Sigma V_{SoilWaterE1} = 1779.3 \cdot kN$

$Q_{v.SoilWaterE1} := \Sigma V_{SoilWaterE1} \cdot K_{vE1} \cdot -1 = -172.7 \cdot kN$ (assume acting upwards for adverse sliding effect)

Moment arm for siesmic load application (From Toe): $e_{QE1} := \frac{\Sigma M_{VertSoilWaterResistE1}}{\Sigma V_{SoilWaterE1}} = 8.226\,m$

$M_{Qv.SoilWaterE1} := Q_{v.SoilWaterE1} \cdot e_{QE1} = -1420.7 \cdot kN \cdot m$

Lateral Load Application:

Seismic soil load is calculated based on Mononobe-Okabe method to determine combined static and dynamic coefficient (K_{AE}). Coulomb's active component (K_A) is subtracted from K_{AE} to obtain the seismic coefficient (ΔK_{AE}) for dynamic component of soil force.

Glacial Till Internal Friction (radians): $\phi = 0.471$

Seismic Inertia Angle (radians): $\psi := atan\left(\frac{K_{hE1}}{1 - K_{vE1}}\right) = 0.190$

Inclination of batter (radians): $\theta := 0.00$ assuming zero is conservative

Slope of retained ground surface: $\beta = 0.00$

$$K_{AE} := \frac{\cos(\phi - \psi - \theta) \cdot \cos(\phi - \psi - \theta)}{\cos(\psi) \cdot \cos(\theta) \cdot \cos(\theta)\, \cos(\psi + \theta) \cdot \left(1 + \sqrt{\frac{\sin(\phi)\, \sin(\phi - \psi - \beta)}{\cos(\beta - \theta) \cdot \cos(\psi + \theta)}}\right)^2} = 0.519$$

$\Delta K_{AE} := K_{AE} - K_{Abgwt} = 0.143$

Dynamic component of active seismic wedge:

$$Q_{h.SoilWaterE1} := \Delta K_{AE} \cdot \left[\frac{\gamma_m \cdot \left(H_w + Key_{h.d}\right)^2}{2 \cdot (\tan(\alpha) - \tan(\beta))} + \frac{\left(\gamma_{sat} - \gamma_m\right) \cdot h_{2E1}^{\;2}}{2 \cdot \tan(\alpha)}\right] \cdot B \cdot -1 = -214.8 \cdot kN$$

(Eq. G-64, USACE EM 1110-2-2100)

Moment arm for siesmic load application (About Point O): $Q_{h.SoilWaterlocE1} := \frac{2}{3} \cdot \left(H_w + Key_{h.d}\right) + Key_{vdist} = 8.33\,m$

$M_{Q.h.SoilWaterE1} := Q_{h.SoilWaterE1} \cdot Q_{h.SoilWaterlocE1} = -1790.1 \cdot kN \cdot m$

STABILITY ASSESSMENT:

LOAD CASE E1

CHECK SLIDING ALONG HORIZONTAL SLIDING PLANE:

Summation of the vertical forces: $\Sigma V_{E1} := \Sigma V_{conc} + \Sigma V_{SoilWaterE1} + \Sigma V_{UpliftE1} + Q_{v.conc} + Q_{v.SoilWaterE1} = 1861.4 \cdot kN$

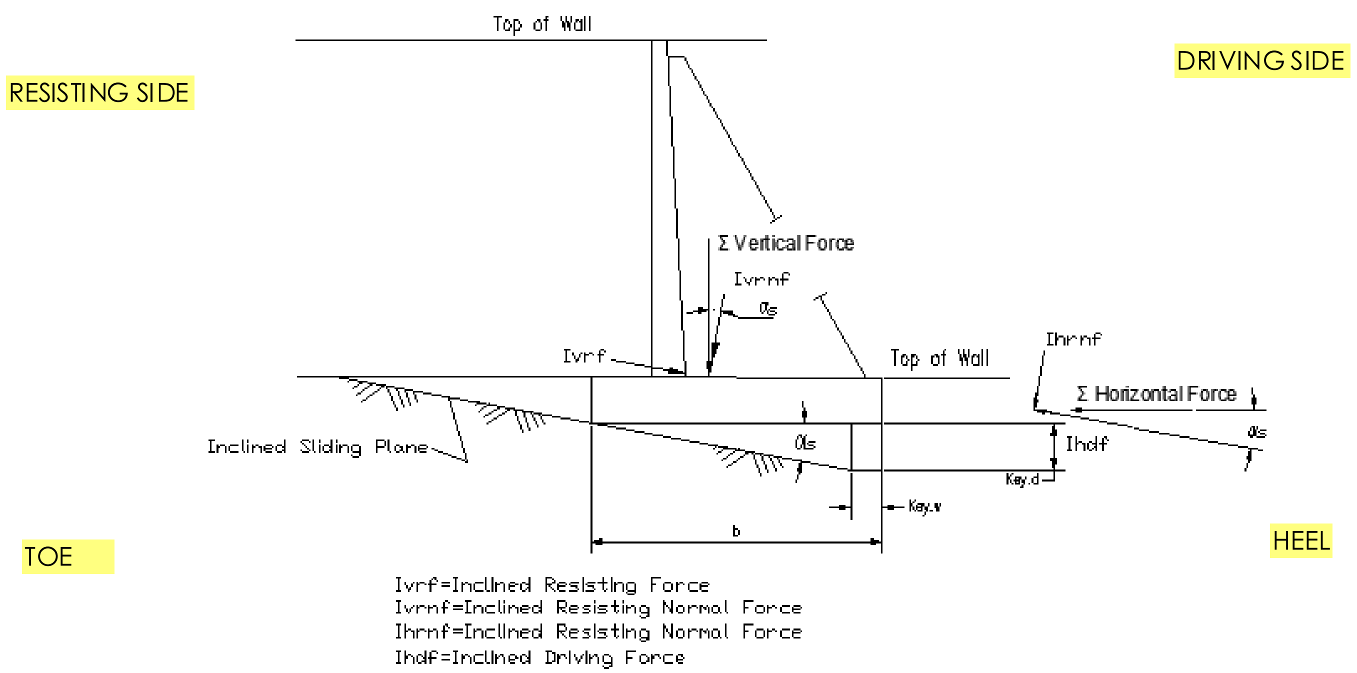
Summation of the horizontal forces: $\Sigma H_{E1} := \Sigma H_{SoildriveE1} + Q_{h.conc} + Q_{h.SoilWaterE1} + \Sigma H_{SoilresistE1} = -913.0 \cdot kN$

Safety Factor for Sliding Horizontal Failure Plane

$$FS_{Horiz.SlidingE1} := \frac{\left|\Sigma V_{E1}\right| \cdot \tan\left(\phi_{rock} \cdot \frac{\pi}{180}\right)}{\left|\Sigma H_{E1}\right|} = 0.99$$

$$FS_{Sliding.check1.E1} := \begin{vmatrix} \text{"OKAY "} & \text{if} & FS_{Horiz.SlidingE1} > FS_{sliding.reqE1} \\ \text{"NG - key req'"} & \text{otherwise} & \end{vmatrix} = \text{"NG - key req'"}$$

CHECK FACTOR OF SAFETY SLIDING WITH KEY (INCLINED SLIDING PLANE):



(With properly engineered reinforced concrete Key, horizontal sliding plane thru Toe is protected, critical sliding plane is relocated to the INCLINED SLIDING PLANE FROM HEEL KEY To TOE, Bedrock Mass above this examing plane is mobilized by reinforced concrete key and combined into Structural Wedge.)

Resolve ΣV_{E1} & ΣH_{E1}

$$\Sigma V_{InclinedE1} := \cos(\alpha s) \cdot \left(\left|\Sigma V_{E1} + V_{rocksection}\right|\right) + \sin(\alpha s) \cdot \left|\Sigma H_{E1}\right| = 2271.8 \cdot kN$$

$$\Sigma H_{InclinedE1} := \cos(\alpha s) \cdot \left|\Sigma H_{E1}\right| - \sin(\alpha s) \cdot \left(\left|\Sigma V_{E1} + V_{rocksection}\right|\right) = 515.0 \cdot kN$$

Safety Factor for Sliding Inclined Failure Plane

$$FS_{InclinedSlidingE1} := \frac{\Sigma V_{InclinedE1} \cdot \tan\left(\phi_r\right)}{\Sigma H_{InclinedE1}} = 1.96$$

$$FS_{Sliding.check2.E1} := \begin{vmatrix} \text{"OKAY "} & \text{if} & FS_{InclinedSlidingE1} > FS_{sliding.reqE1} \\ \text{"NG'"} & \text{otherwise} & \end{vmatrix} = \text{"OKAY "}$$

CHECK FOUNDATION ECCENTRICITY:

LOAD CASE E1

(Vertical seismic loads from concrete, soil and water are assumed acting downwards for adverse bearing effect)

Summation of the vertical forces: $\Sigma V_{seisE1} := \Sigma V_{conc} + \Sigma V_{SoilWaterE1} + \Sigma V_{UpliftE1} - Q_{v.conc} - Q_{v.SoilWaterE1} = 2375.4 \cdot kN$

Summation of the horizontal forces: $\Sigma H_{seisE1} := \Sigma H_{E1} = -913.0 \cdot kN$

Resolve ΣV_{seisE1} & ΣH_{seisE1}

$$\Sigma V_{InclinedseisE1} := \cos(\alpha s) \cdot \left(\left| \Sigma V_{seisE1} + V_{rocksection} \right| \right) + \sin(\alpha s) \cdot \left| \Sigma H_{seisE1} \right| = 2777.5 \cdot kN$$

$$\Sigma H_{InclinedseisE1} := \cos(\alpha s) \cdot \left| \Sigma H_{seisE1} \right| - \sin(\alpha s) \cdot \left(\left| \Sigma V_{seisE1} + V_{rocksection} \right| \right) = 423.0 \cdot kN$$

Summation of the resisting moments about the toe:

$$\Sigma M_{resE1} := \Sigma M_{conc} + \Sigma M_{VertSoilWaterResistE1} + \Sigma M_{HorizSoilResistE1} + \Sigma M_{rocksection} = 21981 \cdot kN \cdot m$$

Summation of seismic moments about the toe:

$$\Sigma M_{seisE1} := -M_{Qv.conc} + M_{Q.conc} - M_{Qv.SoilWaterE1} + M_{Q.h.SoilWaterE1} = -283 \cdot kN \cdot m$$

Summation of the overturning moments about the toe:

$$\Sigma M_{oE1} := \Sigma M_{LateralSoildriveE1} + \Sigma M_{UpliftE1} = -6676 \cdot kN \cdot m$$

Total moment: $\Sigma M_{E1} := \Sigma M_{resE1} + \Sigma M_{seisE1} + \Sigma M_{oE1} = 15022.2 \cdot kN \cdot m$

Normal force to base: $\Sigma V_{InclinedseisE1} = 2777.5 \cdot kN$

Inclined Sliding Plane Length: $L_{incline} = 12.2 \cdot m$

Eccentricity (inclined plane): $ex_{E1} := \frac{L_{incline}}{2} - \frac{\Sigma M_{E1}}{\Sigma V_{InclinedseisE1}} = 0.69\ m$ $\quad Kern_{E1} := \frac{L_{incline}}{4} = 3.049\ m$

Eccentricity Check: $e_{check.E1} := \begin{cases} \text{"Okay"} & \text{if } ex_{E1} \le Kern_{E1} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"Okay"}$

CHECK FOUNDATION BEARING CAPACITY:

Base Section Modulus: $S_b = 24.79\ m^3$

Bearing Pressure Under Toe:

$$\sigma_{ToeE1} := \begin{cases} \left(\frac{\Sigma V_{InclinedE1}}{L_{incline} \cdot B} + \frac{\Sigma V_{InclinedE1} \cdot ex_{E1}}{S_b} \right) & \text{if } \frac{\Sigma V_{InclinedE1} \cdot ex_{E1}}{S_b} \le \frac{\Sigma V_{InclinedE1}}{L_{incline} \cdot B} \\ \frac{2 \cdot \Sigma V_{InclinedE1}}{B \cdot 3 \left(\frac{b}{2} - ex_{E1} \right)} & \text{otherwise} \end{cases} = 249.5 \cdot kPa$$

$$Bearing_{ChecktoeE1} := \begin{cases} \text{"OKAY "} & \text{if } \sigma_{ToeE1} < \sigma_{allowE1} \\ \text{"NG""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

Bearing Pressure Under Heel:

$$\sigma_{HeelE1} := \begin{cases} \left(\frac{\Sigma V_{InclinedE1}}{L_{incline} \cdot B} - \frac{\Sigma V_{InclinedE1} \cdot ex_{E1}}{S_b} \right) & \text{if } \frac{\Sigma V_{InclinedE1} \cdot ex_{E1}}{S_b} \le \frac{\Sigma V_{InclinedE1}}{L_{incline} \cdot B} \\ 0 & \text{otherwise} \end{cases} = 123.1 \cdot kPa$$

$$Bearing_{CheckheelE1} := \left(\begin{cases} \text{"OKAY "} & \text{if } \sigma_{HeelE1} < \sigma_{allowE1} \wedge \sigma_{HeelE1} > 0 \\ \text{"NG - perform cracked base analysis""} & \text{otherwise} \end{cases} \right) = \text{"OKAY "}$$

CHECK FLOATATION:

Safety Factor for Floatation:

$$FS_{FloatationE1} := \frac{\Sigma V_{conc} + \Sigma V_{SoilWaterE1} + Q_{v.conc} + Q_{v.SoilWaterE1}}{\left|\Sigma V_{UpliftE1}\right|} = 4.52$$

$$FS_{Floatation.E1.check} := \begin{cases} \text{"OKAY"} & \text{if } FS_{FloatationE1} > FS_{req.E1.flt} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

CHECK OVERTURNING

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stablity of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1

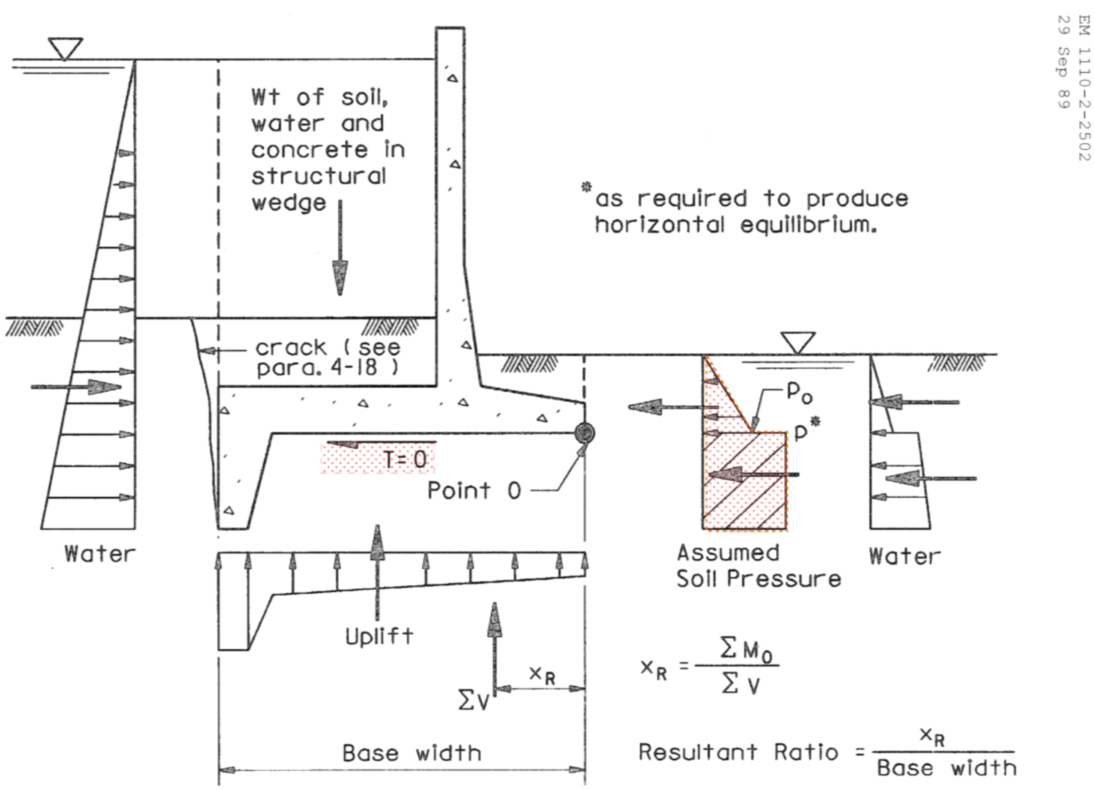


Figure 4-5. Forces for overturning analysis for wall with horizontal base and key

Modify Uplift for Overturning Analysis:

(Uplift is calculated along the concrete/rock contact using the Line of Creep method)

Water Pressure at h: $u_{h.E1} := \Delta h_{g.hj.E1} \cdot \gamma_w = 68.60 \cdot kPa$

Water Pressure at o: $u_{o.E1} := \left(\Delta h_{g.no.E1} - \frac{\Delta h_{g.r.E1} \cdot L_{ho.E1}}{L_{ho.E1}}\right) \cdot \gamma_w = 19.6 \cdot kPa$

Head loss between point h and o: $\Delta h_{ho.E1} := \Delta h_{g.r.E1} \cdot \frac{L_{ho.E1}}{L_{ho.E1}} = 3\,m$

Length of concrete base (h -> o): $L_{baseho.E1} := Key_{h.w} + Key_{h.d} + Key_{hdist} + Key_{t.d} + Key_{t.w} = 14\,m$

Head loss along h -> j: $\Delta h_{hj.E1} := \Delta h_{ho.E1} \cdot \frac{Key_{h.w}}{L_{baseho.E1}} = 0.214\,m$

Water Pressure at j: $u_{j.E1} := \left(\Delta h_{g.hj.E1} - \Delta h_{hj.E1}\right) \cdot \gamma_w = 66.50 \cdot kPa$

Head loss along h -> k: $\Delta h_{hjk.E1} := \Delta h_{ho.E1} \cdot \left(\frac{Key_{h.w} + Key_{h.d}}{L_{baseho.E1}}\right) = 0.643\,m$

Water Pressure at k: $u_{k.E1} := \left(\Delta h_{g.km.E1} - \Delta h_{hjk.E1}\right) \cdot \gamma_w = 42.70 \cdot kPa$

Head loss along h -> m: $\Delta h_{hjkm.E1} := \Delta h_{ho.E1} \cdot \left(\frac{Key_{h.w} + Key_{h.d} + Key_{hdist}}{L_{baseho.E1}}\right) = 3\,m$

Water Pressure at m: $u_{m.E1} := \left(\Delta h_{g.km.E1} - \Delta h_{hjkm.E1}\right) \cdot \gamma_w = 19.60 \cdot kPa$

Head loss along h -> n: $\Delta h_{hjkmn.E1} := \Delta h_{ho.E1} \cdot \left(\frac{Key_{h.w} + Key_{h.d} + Key_{hdist} + Key_{t.d}}{L_{baseho.E1}}\right) = 3\,m$

Water Pressure at n: $u_{n.E1} := \left(\Delta h_{g.no.E1} - \Delta h_{hjkmn.E1}\right) \cdot \gamma_w = 19.60 \cdot kPa$

Uplift under key at heel: $V_{ulkeyhE1.OT} := \frac{\left(u_{h.E1} + u_{j.E1}\right) \cdot Key_{h.w}}{2} \cdot B \cdot -1 = -67.55 \cdot kN$

Moment Arm (from Point O): $V_{ulkeyhE1loc.OT} := b - \frac{Key_{h.w} \cdot \left(2 \cdot u_{j.E1} + u_{h.E1}\right)}{3 \cdot \left(u_{j.E1} + u_{h.E1}\right)} = 11.503\,m$

Uplift under base: $V_{ulbaseE1.OT} := \frac{\left(u_{k.E1} + u_{m.E1}\right) \cdot Key_{hdist}}{2} \cdot B \cdot -1 = -342.65 \cdot kN$

Moment Arm (from Point O): $V_{ulbaseE1loc.OT} := b - Key_{h.w} - \frac{Key_{hdist} \cdot \left(2 \cdot u_{m.E1} + u_{k.E1}\right)}{3 \cdot \left(u_{m.E1} + u_{k.E1}\right)} = 6.18\,m$

Uplift under key at toe: $V_{ulkeytE1.OT} := \frac{\left(u_{n.E1} + u_{o.E1}\right) \cdot Key_{t.w}}{2} \cdot B \cdot -1 = 0 \cdot kN$

Moment Arm (from Point O): $V_{ulkeytE1loc.OT} := \frac{Key_{t.w} \cdot \left(2 \cdot u_{n.E1} + u_{o.E1}\right)}{3 \cdot \left(u_{n.E1} + u_{o.E1}\right)} = 0$

$$\Sigma V_{UpliftE1.OT} := V_{ulkeyhE1.OT} + V_{ulbaseE1.OT} + V_{ulkeytE1.OT} = -410 \cdot kN$$

$$U_{E1.loc.OT} := \frac{V_{ulkeyhE1.OT} \cdot V_{ulkeyhE1loc.OT} + V_{ulbaseE1.OT} \cdot V_{ulbaseE1loc.OT} + V_{ulkeytE1.OT} \cdot V_{ulkeytE1loc.OT}}{\Sigma V_{UpliftE1.OT}} = 7.06\,m$$

$$\Sigma M_{UpliftE1.OT} := \Sigma V_{UpliftE1.OT} \cdot U_{E1.loc.OT} = -2894.5 \cdot kN \cdot m$$

Modify Lateral Water Pressure (Resisting) for Overturning Analysis:

(Resisting water pressure is calculated using the Line of Creep method)

Water Load at Key (heel):
$$H_{h2E1.OT} := \frac{u_{k.E1} + u_{j.E1}}{2} \cdot Key_{h.d} \, B = 109.2 \cdot kN$$

Moment Arm (from Point O):
$$H_{h2locE1.OT} := \frac{Key_{h.d} \cdot \left(2 \cdot u_{k.E1} + u_{j.E1}\right)}{3\left(u_{k.E1} + u_{j.E1}\right)} + Key_{vdist} = -1.07\ m$$

Water Load at Key (toe):
$$H_{h6E1.OT} := \frac{u_{o.E1} \cdot \left(UWSEL_{E1} - Bot_{ftg} + Key_{t.d}\right)}{2} \cdot B = 20 \cdot kN$$

Moment Arm (from Point O):
$$H_{h6locE1.OT} := \frac{UWSEL_{E1} - Bot_{ftg} + Key_{t.d}}{3} = 0.67\ m$$

$$\Sigma H_{waterresistE1.OT} := H_{h2E1.OT} + H_{h6E1.OT} = 128.8 \cdot kN$$

$$H_{waterresistlocE1.OT} := \frac{H_{h2E1.OT} \cdot H_{h2locE1.OT} + H_{h6E1.OT} \cdot H_{h6locE1.OT}}{\Sigma H_{waterresistE1.OT}} = -0.808\ m$$

$$\Sigma M_{waterresistE1.OT} := \Sigma H_{waterresistE1.OT} \cdot H_{waterresistlocE1.OT} = -104.07 \cdot kN \cdot m$$

Modify Lateral Soil Loads for Overturning Analysis:

(Lateral soil loads are calculated down to Point O instead of bottom of shear key)

Driving Soil Load (Headwater Side):

Surcharge Load:
$$E_{s1E1.OT} := S1_{E1} \cdot K_{Aagwt} \cdot \left(H_w + Key_{h.d} + Key_{vdist}\right) \cdot B \cdot -1 = 0 \cdot kN$$

Moment Arm (from Point O):
$$E_{s1locE1.OT} := \frac{H_w + Key_{h.d} + Key_{vdist}}{2} = 6.75\ m$$

Moist Soil Load above GWL:
$$E_{h1E1.OT} := \frac{\gamma_m \cdot K_{Aagwt} \cdot h_{1E1}^{\ 2}}{2} B \cdot -1 = -271.3 \cdot kN$$

Moment Arm (from Point O):
$$E_{h1locE1.OT} := \frac{h_{1E1}}{3} + h_{2E1} + Key_{vdist} = 7.83\ m$$

Saturated Soil Load below GWL:
(rectangular component)
$$E_{h2E1.OT} := \left(\gamma_m \cdot K_{Aagwt} \cdot h_{1E1}\right) \cdot \left(h_{2E1} + Key_{vdist}\right) \cdot B \cdot -1 = -319.2 \cdot kN$$

Moment Arm (from Point O):
$$E_{h2locE1.OT} := \frac{h_{2E1} + Key_{vdist}}{2} = 2.50\ m$$

Saturated Soil Load below GWL:
(triangular component)
$$E_{h2aE1.OT} := \frac{\left(\gamma_{sat} - \gamma_w\right) \cdot K_{Aagwt} \cdot \left(h_{2E1} + Key_{vdist}\right)^2}{2} \cdot B \cdot -1 = -57.3 \cdot kN$$

Moment Arm (from Point O):
$$E_{h2alocE1.OT} := \frac{h_{2E1} + Key_{vdist}}{3} = 1.67\ m$$

Resisting Soil Load (Tailwater Side): **LOAD CASE E1**

(Determine resisting soil load based on depth variation between the keys (ie. Key_{vdist}). In case where key at heel is deeper than key at toe (ie. Key_{vdist}< 0), resisting soil load (p*) is assumed to produce horizontal equilibrium as per Figure 4-5 above. Resisting soil load (p_o) is neglected.)

Total Driving Force: $\Sigma H_{SoildriveE1.OT} := E_{s1E1.OT} + E_{h1E1.OT} + E_{h2E1.OT} + E_{h2aE1.OT} + H_{h2E1} \cdots + Q_{h.conc} + Q_{h.SoilWaterE1} = -1253.2 \cdot kN$

Total Resisting Force: $\Sigma H_{waterresistE1.OT} = 128.8 \cdot kN$

Assumed Soil Load p*: $E_{h8E1a.OT} := \left(\Sigma H_{SoildriveE1.OT} + \Sigma H_{waterresistE1.OT}\right) \cdot -1 = 1124.388 \cdot kN$

Moment Arm (from Point O): $E_{h8E1a.loc.OT} := \dfrac{Key_{vdist}}{2} = -1\ m$

$$E_{h8E1.OT} := \begin{cases} E_{h8E1a.OT} & \text{if } Key_{vdist} < 0 \\ \Sigma H_{SoilresistE1} - H_{h6E1} - H_{h2aE1} - P_{sbE1} & \text{otherwise} \end{cases} = 1124.388 \cdot kN$$

$$\Sigma M_{SoilresistE1} := \begin{cases} E_{h8E1a.OT} \cdot E_{h8E1a.loc.OT} & \text{if } Key_{vdist} < 0 \\ \Sigma M_{HorizSoilResistE1} - H_{h6E1} \cdot H_{h6locE1} - H_{h2aE1} \cdot H_{h2alocE1} - P_{sbE1} \cdot P_{sblocE1} & \text{otherwise} \end{cases} = -1124.388 \cdot kN \cdot m$$

Sum of Moment about Point O:

$$\Sigma M_{LateraldriveE1.OT} := E_{s1E1.OT} \cdot E_{s1locE1.OT} + E_{h1E1.OT} \cdot E_{h1locE1.OT} + E_{h2E1.OT} \cdot E_{h2locE1.OT} \cdots + E_{h2aE1.OT} \cdot E_{h2alocE1.OT} + H_{h2E1} \cdot H_{h2locE1} = -3098.8 \cdot kN \cdot m$$

$$\Sigma M_{LateralresistE1.OT} := \Sigma M_{waterresistE1.OT} + \Sigma M_{SoilresistE1} = -1228.5 \cdot kN \cdot m$$

$$\Sigma M_{seisE1.OT} := M_{Qv.conc} + M_{Q.conc} + M_{Qv.SoilWaterE1} + M_{Q.h.SoilWaterE1} = -4086 \cdot kN \cdot m$$

(seismic moment modified for the most adverse overturning effect)

Total moment:

$$\Sigma M_{E1.OT} := \Sigma M_{conc} + \Sigma M_{VertSoilWaterResistE1} + \Sigma M_{UpliftE1.OT} \cdots + \Sigma M_{LateraldriveE1.OT} + \Sigma M_{LateralresistE1.OT} + \Sigma M_{seisE1.OT} = 8284.5 \cdot kN \cdot m$$

Total Vertical Force:

$$\Sigma V_{E1.OT} := \Sigma V_{conc} + \Sigma V_{SoilWaterE1} + \Sigma V_{UpliftE1.OT} + Q_{v.conc} + Q_{v.SoilWaterE1} = 1980.4 \cdot kN$$

Distance X_R: EM 1110-2-2502 Eq.4-1 $X_{R.E1} := \dfrac{\Sigma M_{E1.OT}}{\Sigma V_{E1.OT}} = 4.183\ m$

Overturning Resultant Ratio $Ratio_{E1.OT} := \dfrac{X_{R.E1}}{b} = 0.35$

$$Ratio_{E1.OT.check} := \begin{cases} \text{"OKAY "} & \text{if } Ratio_{E1.OT} > X_{R.reqE1} \\ \text{"Revise Structure""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

CHECK FOUNDATION ECCENTRICITY (HORIZONTAL PLANE):

Eccentricity (horizontal plan): $ex_{E1.OT} := \dfrac{b}{2} - \dfrac{\Sigma M_{E1.OT}}{\Sigma V_{E1.OT}} = 1.82\ m$ $Kern_{E1.OT} := \dfrac{b}{4} = 3\ m$

Eccentricity Check:

$$e_{check.E1.OT} := \begin{cases} \text{"Okay"} & \text{if } ex_{E1.OT} \le Kern_{E1.OT} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"Okay"}$$

LOAD CASE E1

CHECK FOUNDATION BEARING CAPACITY (HORIZONTAL PLANE):

Base Section Modulus: $S_{b.OT} = 24\,m^3$

Bearing Pressure Under Toe:

$$\sigma_{ToeE1.OT} := \begin{cases} \left(\dfrac{\Sigma V_{E1.OT}}{b \cdot B} + \dfrac{\Sigma V_{E1.OT} \cdot ex_{E1.OT}}{S_{b.OT}}\right) & \text{if } \dfrac{\Sigma V_{E1.OT}}{b \cdot B} \ge \dfrac{\Sigma V_{E1.OT} \cdot ex_{E1.OT}}{S_{b.OT}} \\ \dfrac{2 \cdot \Sigma V_{E1.OT}}{B \cdot 3\left(\dfrac{b}{2} - ex_{E1.OT}\right)} & \text{otherwise} \end{cases} = 314.9 \cdot kPa$$

$$Bearing_{ChecktoeE1.OT} := \begin{cases} \text{"OKAY "} & \text{if } \sigma_{ToeE1.OT} < \sigma_{allowE1} \\ \text{"NG - for reference only""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

Bearing Pressure Under Heel:

$$\sigma_{HeelE1.OT} := \begin{cases} \left(\dfrac{\Sigma V_{E1.OT}}{b \cdot B} - \dfrac{\Sigma V_{E1.OT} \cdot ex_{E1.OT}}{S_{b.OT}}\right) & \text{if } \dfrac{\Sigma V_{E1.OT}}{b \cdot B} \ge \dfrac{\Sigma V_{E1.OT} \cdot ex_{E1.OT}}{S_{b.OT}} \\ 0 & \text{otherwise} \end{cases} = 15.1 \cdot kPa$$

$$Bearing_{CheckheelE1.OT} := \left(\begin{cases} \text{"OKAY "} & \text{if } \sigma_{HeelE1.OT} < \sigma_{allowE1} \wedge \sigma_{HeelE1.OT} > 0 \\ \text{"NG - for reference only""} & \text{otherwise} \end{cases}\right) = \text{"OKAY "}$$

SUMMARY OF STABILITY ASSESSMENT:

LOAD CASE E1

Sliding Factor of Safety: (Horizontal Plane - Ref only)	$FS_{Horiz.SlidingE1} = 0.99$	$FS_{Sliding.check1.E1}$ = "NG - key req""
Sliding Factor of Safety: (Inclined Plane)	$FS_{InclinedlSlidingE1} = 1.96$	$FS_{Sliding.check2.E1}$ = "OKAY "

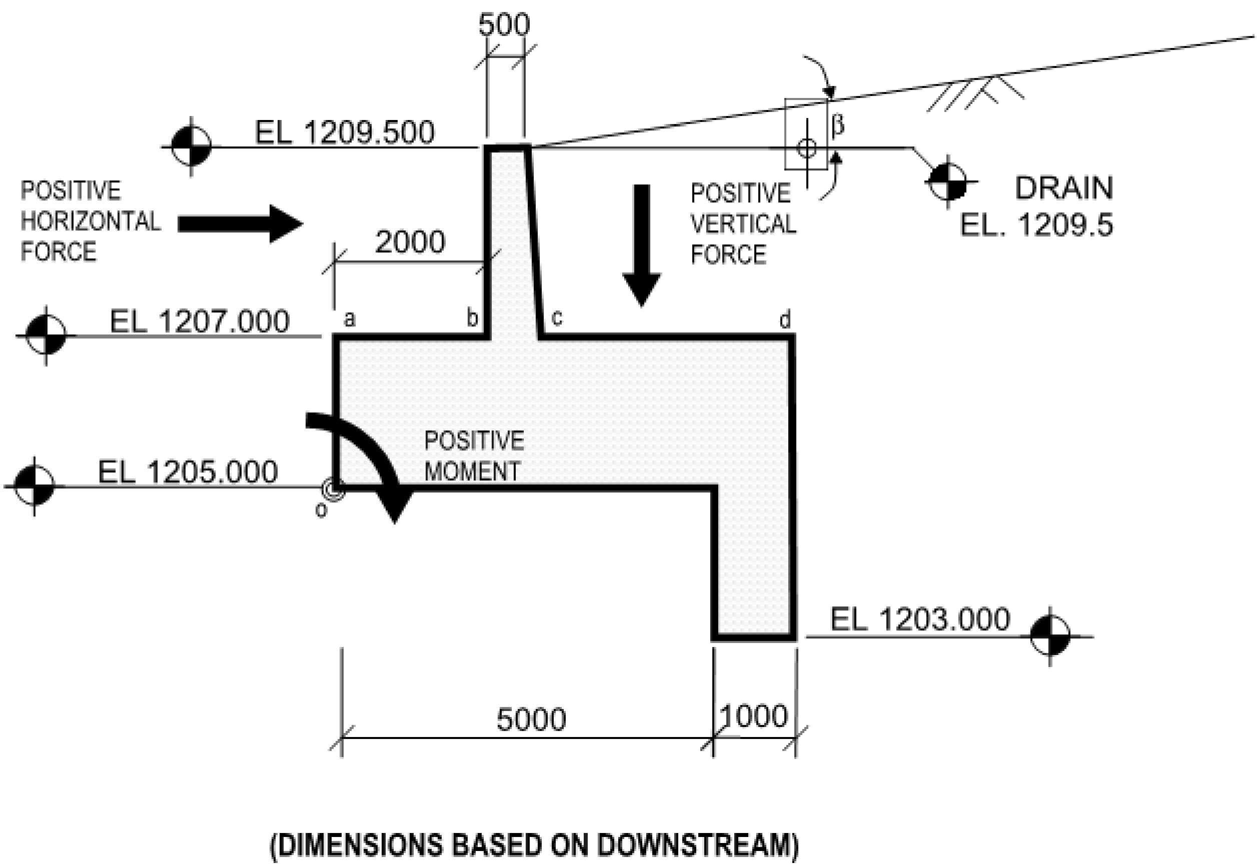
DI-Block 5D (Downstream) Retaining Wall Stability Calculations

Project Number:	110773396		
Project Title:	SR1 - Diversion Structure		
Client:	Alberta Transportation		
Engineer:	Lawrence Choi	Date: 12/11/2018	
Checker:	Sean Xiao	Date: 12/18/2018	

Calculation for: Retaining Wall - Diversion Inlet Left - Block 5D (Downstream)



REGION COLOR CONVENTION

User Input

Calulation Highlights

Results

WALL GEOMETRY:

Top of Wall Elevation: $T_w := 1209.5 \cdot m$

Top of Footing Elevation: $Top_{ftg} := 1207.0 \cdot m$

Thickness of Footing: $t_{ftg} := 2.0m$

Bottom of Footing Elevation: $Bot_{ftg} := Top_{ftg} - t_{ftg} = 1205\,m$

Overall Height of wall: $h_w := T_w - Bot_{ftg} = 4.50\,m$

Thickness of Wall: Base: $t_{wb} := 0.696 \cdot m$ Top: $t_{wt} := 0.5m$

Length of toe: $L_{ab} := 2.0m$

Total Length of Footing: $b := 6.0m$

Length of heel: $L_{cd} := b - L_{ab} - t_{wb} = 3.304\,m$

Unit Width of Wall for analysis: $B := 1.00m$

SHEAR KEY GEOMETRY:

	Toe	Heel
Key depth:	$Key_{t.d} := 0m$	$Key_{h.d} := 2.0m$
Key width:	$Key_{t.w} := 0m$	$Key_{h.w} := 1m$
Face of Key from Point O:	$Key_{t.loc} := 0 \cdot m$	$Key_{h.loc} := b - Key_{h.w} = 5\,m$

Horizontal Distance between Keys: $Key_{hdist} := Key_{h.loc} - Key_{t.loc} - Key_{t.w} = 5\,m$

Key Depth Diff. (from point O): $Key_{vdist} := -Key_{h.d} + Key_{t.d} = -2\,m$

BASE PROPERTIES:

Base Area: $A_b := b \cdot B = 6\,m^2$

Centroidal Distance for Footing (from Toe): $Y_t := \frac{b}{2} = 3.00\,m$

RETAINED SOIL GEOMETRY:

Slope of retained ground surface: $\beta := 0 \cdot \frac{\pi}{180} = 0.00$

Height of retained earth at heel: $H_w := T_w - Bot_{ftg} + \left(t_{wb} + L_{cd} - t_{wt}\right) \cdot \tan(\beta) = 4.50\,m$

RETAINING WALL GEOMETRY CHECKS:

(Foundation Analysis & Design Bowles)

$$t_{bcheck} := \begin{cases} \text{"OKAY"} & \text{if } t_{ftg} \geq \frac{H_w}{12} \\ \text{"Warning"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

$$t_{wcheck} := \begin{cases} \text{"OKAY"} & \text{if } t_{wb} \geq \frac{H_w}{12} \\ \text{"Warning"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

$$b_{check} := \begin{cases} \text{"OKAY"} & \text{if } \frac{b}{H_w} \geq .4 \wedge \frac{b}{H_w} \leq 80 \\ \text{"Warning"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

$$L_{abcheck} := \begin{cases} \text{"OKAY"} & \text{if } \frac{L_{ab}}{b} \geq .25 \wedge \frac{L_{ab}}{b} \leq .4 \\ \text{"Warning"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

Material Properties:

Unit Weight of Water:	$\gamma_w := 9.8 \frac{kN}{m^3}$	(Section 7.2, Design Criteria)
Unit Weight of Concrete:	$\gamma_c := 23.5 \frac{kN}{m^3}$	
Unit Weight of Soil (Moist):	$\gamma_m := 20.0 \frac{kN}{m^3}$	(Section 5.3, Design Criteria) assumed moisture content (w) = 5%
Unit Weight Soil (Saturated):	$\gamma_{sat} := 22.0 \frac{kN}{m^3}$	(Assuming Specific Gravity = 2.7
Unit Weight Soil (buoyant):	$\gamma_b := \gamma_{sat} - \gamma_w = 12.2 \cdot \frac{kN}{m^3}$	
Weight of Soil/Concrete above toe:	$\gamma_{toe} := 22.0 \frac{kN}{m^3}$	
Unit Weight of Rock:	$\gamma_r := 25.6 \frac{kN}{m^3}$	(Section 7.2, Design Criteria)

Foundation Parameters:

Glacial Till Internal Friction:	$\phi := 27 \cdot \frac{\pi}{180} = 0.471$	
Bedrock Internal Friction Angle:	$\phi_r := 24 \cdot \frac{\pi}{180} = 0.419$	
Friction Angle at Base Concrete / Rock Interface:	$\phi_{rock} := 26$	
Base Friction Coefficient:	$tan_{\phi rock} := \tan\left(\phi_{rock} \frac{\pi}{180}\right) = 0.488$	radians
Rip Rap Backfill, Refer Dwg. C-214	$\phi_{backfill} := \left(20 \frac{\pi}{180}\right) = 0.349$	radians
Shear strength along rock Failure plane	$s_r := \frac{13100 \frac{kN}{m^2}}{2} = 6550 \cdot \frac{kN}{m^2}$	(Stantec Design Memo 8/8/16)

CONCRETE DEAD LOAD:

Area of Footing: $A_{ftg} := t_{ftg} \cdot b = 12\,m^2$

Weight of Footing: $D_{ftg} := A_{ftg} \cdot B \cdot \gamma_c = 282 \cdot kN$

Area of Stem (without batter): $A_{w1} := t_{wt} \cdot \left(h_w - t_{ftg}\right) = 1.25\,m^2$

Weight of Stem: $D_{w1} := A_{w1} \cdot B \cdot \gamma_c = 29.4 \cdot kN$

Area of stem Batter: $A_{w2} := \dfrac{\left(t_{wb} - t_{wt}\right)}{2} \left(h_w - t_{ftg}\right) = 0.25\,m^2$

Weight of Batter: $D_{w2} := A_{w2} \cdot B \cdot \gamma_c = 5.8 \cdot kN$

Slope of batter: $S_{batter} := \dfrac{t_{wb} - t_{wt}}{h_w - t_{ftg}} = 0.078$

Area of Key $A_{t.key} := Key_{t.d} \cdot Key_{t.w} = 0$ $A_{h.key} := Key_{h.d} \cdot Key_{h.w} = 2\,m^2$

Weight of Key $D_{t.key} := A_{t.key} \cdot B \cdot \gamma_c = 0 \cdot kN$ $D_{h.key} := A_{h.key} \cdot B \cdot \gamma_c = 47 \cdot kN$

Centroidal Horizontal Distance of Wall (From Toe):

$$H_{cent} := \frac{A_{w1} \cdot \left(L_{ab} + \frac{t_{wt}}{2}\right) + A_{w2} \cdot \left(L_{ab} + t_{wt} + \frac{t_{wb} - t_{wt}}{3}\right) + A_{ftg} \cdot \frac{b}{2} + A_{t.key} \cdot \left(Key_{t.loc} + \frac{Key_{t.w}}{2}\right) + A_{h.key} \cdot \left(Key_{h.loc} + \frac{Key_{h.w}}{2}\right)}{A_{w1} + A_{w2} + A_{ftg} + A_{t.key} + A_{h.key}} = 3.26\,m$$

Centroidal Vertical Distance of Wall (Above Base of Footing):

$$V_{Cent} := \frac{A_{ftg} \cdot \frac{t_{ftg}}{2} + A_{w1} \cdot \left[t_{ftg} + \frac{\left(h_w - t_{ftg}\right)}{2}\right] + A_{w2} \cdot \left[t_{ftg} + \frac{\left(h_w - t_{ftg}\right)}{3}\right] + A_{t.key} \cdot \left(\frac{-Key_{t.d}}{2}\right) + A_{h.key} \cdot \left(\frac{-Key_{h.d}}{2}\right)}{A_{ftg} + A_{w1} + A_{w2} + A_{t.key} + A_{h.key}} = 0.95\,m$$

$\Sigma V_{conc} := D_{ftg} + D_{w1} + D_{w2} + D_{t.key} + D_{h.key} = 364.1 \cdot kN$

$\Sigma M_{conc} := \Sigma V_{conc} \cdot H_{cent} = 1185.4\,m \cdot kN$

ROCK SECTION MOBILIZED FOR INCLINDED SLIDING FAILURE

Area of Rock Section Mobilized: $A_{rocksection} := \left(Key_{t.d} + Key_{h.d}\right) \cdot \dfrac{Key_{hdist}}{2} = 5\,m^2$

Rock Mass Mobilized: $V_{rocksection} := A_{rocksection} \cdot \gamma_r \cdot B = 128 \cdot kN$

(Pore pressure taken along assumed inclined sliding plane)

Distance from Toe to COG of Rock Section: $L_{rocksection} := \dfrac{Key_{hdist} \cdot \left(2 \cdot Key_{h.d} + Key_{t.d}\right)}{3\left(Key_{h.d} + Key_{t.d}\right)} + Key_{t.w} = 3.333\,m$

$\Sigma M_{rocksection} := V_{rocksection} \cdot L_{rocksection} = 426.7\,m \cdot kN$

CHECK OVERTURNING

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stablity of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1

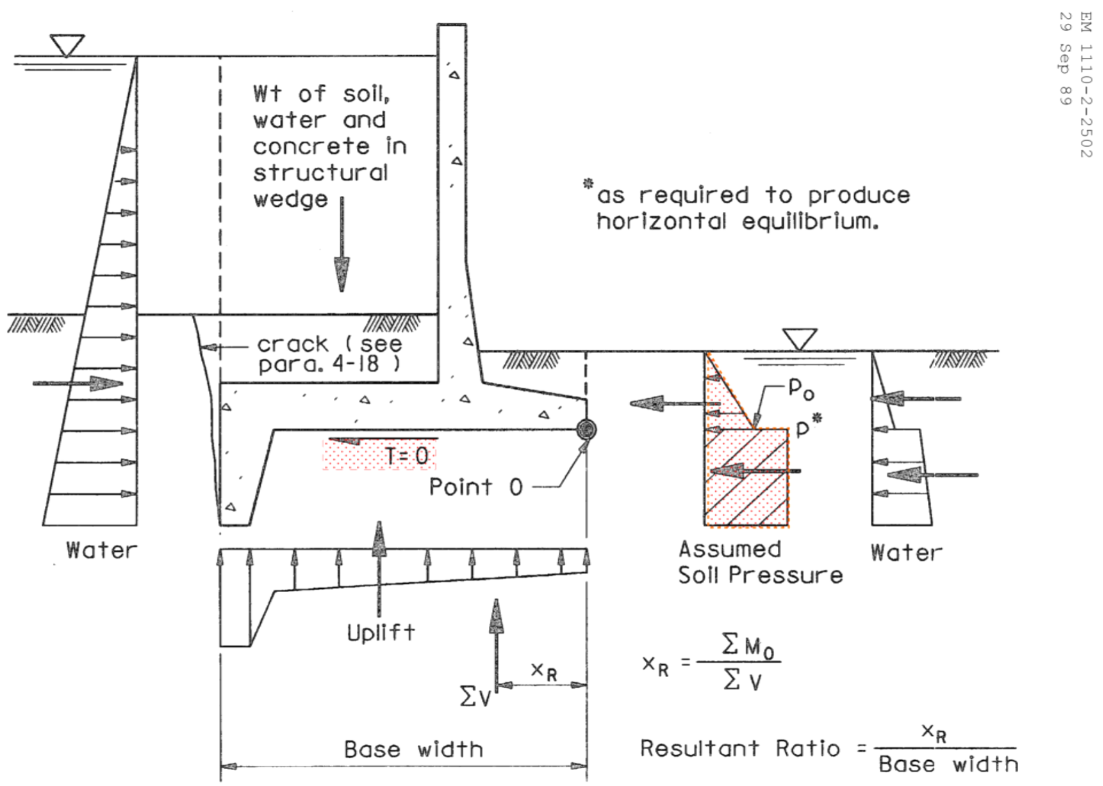

Figure 4-5. Forces for overturning analysis for wall with horizontal base and key

Modify Uplift for Overturning Analysis:

LOAD CASE U1

(Uplift is calculated along the concrete/rock contact using the Line of Creep method)

Water Pressure at h: $u_{h.U1} := \Delta h_{g.hj.U1} \cdot \gamma_w = 63.70 \cdot kPa$

Water Pressure at o: $u_{o.U1} := \left(\Delta h_{g.no.U1} - \frac{\Delta h_{g.r.U1} \cdot L_{ho.U1}}{L_{ho.U1}}\right) \cdot \gamma_w = 24.5 \cdot kPa$

Head loss between point h and o: $\Delta h_{ho.U1} := \Delta h_{g.r.U1} \cdot \frac{L_{ho.U1}}{L_{ho.U1}} = 2\,m$

Length of concrete base (h -> o): $L_{baseho.U1} := Key_{h.w} + Key_{h.d} + Key_{hdist} + Key_{t.d} + Key_{t.w} = 8\,m$

Head loss along h -> j: $\Delta h_{hj.U1} := \Delta h_{ho.U1} \cdot \frac{Key_{h.w}}{L_{baseho.U1}} = 0.25\,m$

Water Pressure at j: $u_{j.U1} := \left(\Delta h_{g.hj.U1} - \Delta h_{hj.U1}\right) \cdot \gamma_w = 61.25 \cdot kPa$

Head loss along h -> k: $\Delta h_{hjk.U1} := \Delta h_{ho.U1} \cdot \left(\frac{Key_{h.w} + Key_{h.d}}{L_{baseho.U1}}\right) = 0.75\,m$

Water Pressure at k: $u_{k.U1} := \left(\Delta h_{g.km.U1} - \Delta h_{hjk.U1}\right) \cdot \gamma_w = 36.75 \cdot kPa$

Head loss along h -> m: $\Delta h_{hjkm.U1} := \Delta h_{ho.U1} \cdot \left(\frac{Key_{h.w} + Key_{h.d} + Key_{hdist}}{L_{baseho.U1}}\right) = 2\,m$

Water Pressure at m: $u_{m.U1} := \left(\Delta h_{g.km.U1} - \Delta h_{hjkm.U1}\right) \cdot \gamma_w = 24.50 \cdot kPa$

Head loss along h -> n: $\Delta h_{hjkmn.U1} := \Delta h_{ho.U1} \cdot \left(\frac{Key_{h.w} + Key_{h.d} + Key_{hdist} + Key_{t.d}}{L_{baseho.U1}}\right) = 2\,m$

Water Pressure at n: $u_{n.U1} := \left(\Delta h_{g.no.U1} - \Delta h_{hjkmn.U1}\right) \cdot \gamma_w = 24.50 \cdot kPa$

Uplift under key at heel: $V_{ulkeyhU1.OT} := \frac{\left(u_{h.U1} + u_{j.U1}\right) \cdot Key_{h.w}}{2} \cdot B \cdot -1 = -62.475 \cdot kN$

Moment Arm (from Point O): $V_{ulkeyhU1loc.OT} := b - \frac{Key_{h.w} \cdot \left(2 \cdot u_{j.U1} + u_{h.U1}\right)}{3 \cdot \left(u_{j.U1} + u_{h.U1}\right)} = 5.503\,m$

Uplift under base: $V_{ulbaseU1.OT} := \frac{\left(u_{k.U1} + u_{m.U1}\right) \cdot Key_{hdist}}{2} \cdot B \cdot -1 = -153.125 \cdot kN$

Moment Arm (from Point O): $V_{ulbaseU1loc.OT} := b - Key_{h.w} - \frac{Key_{hdist} \cdot \left(2 \cdot u_{m.U1} + u_{k.U1}\right)}{3 \cdot \left(u_{m.U1} + u_{k.U1}\right)} = 2.667\,m$

Uplift under key at toe: $V_{ulkeytU1.OT} := \frac{\left(u_{n.U1} + u_{o.U1}\right) \cdot Key_{t.w}}{2} \cdot B \cdot -1 = 0 \cdot kN$

Moment Arm (from Point O): $V_{ulkeytU1loc.OT} := \frac{Key_{t.w} \cdot \left(2 \cdot u_{n.U1} + u_{o.U1}\right)}{3 \cdot \left(u_{n.U1} + u_{o.U1}\right)} = 0$

$$\Sigma V_{UpliftU1.OT} := V_{ulkeyhU1.OT} + V_{ulbaseU1.OT} + V_{ulkeytU1.OT} = -216 \cdot kN$$

$$U_{U1.loc.OT} := \frac{V_{ulkeyhU1.OT} \cdot V_{ulkeyhU1loc.OT} + V_{ulbaseU1.OT} \cdot V_{ulbaseU1loc.OT} + V_{ulkeytU1.OT} \cdot V_{ulkeytU1loc.OT}}{\Sigma V_{UpliftU1.OT}} = 3.49\,m$$

$$\Sigma M_{UpliftU1.OT} := \Sigma V_{UpliftU1.OT} \cdot U_{U1.loc.OT} = -752.1 \cdot kN \cdot m$$

Modify Lateral Water Pressure (Resisting) for Overturning Analysis:

(Resisting water pressure is calculated using the Line of Creep method)

Water Load at Key (heel): $H_{h2U1.OT} := \frac{u_{k.U1} + u_{j.U1}}{2} \cdot Key_{h.d} B = 98.0 \cdot kN$

Moment Arm (from Point O): $H_{h2locU1.OT} := \frac{Key_{h.d} \cdot (2 \cdot u_{k.U1} + u_{j.U1})}{3(u_{k.U1} + u_{j.U1})} + Key_{vdist} = -1.08\ m$

Water Load at Key (toe): $H_{h6U1.OT} := \frac{u_{o.U1} \cdot (UWSEL_{U1} - Bot_{ftg} + Key_{t.d})}{2} \cdot B = 31 \cdot kN$

Moment Arm (from Point O): $H_{h6locU1.OT} := \frac{UWSEL_{U1} - Bot_{ftg} + Key_{t.d}}{3} = 0.83\ m$

$$\Sigma H_{waterresistU1.OT} := H_{h2U1.OT} + H_{h6U1.OT} = 128.63 \cdot kN$$

$$H_{waterresistlocU1.OT} := \frac{H_{h2U1.OT} \cdot H_{h2locU1.OT} + H_{h6U1.OT} \cdot H_{h6locU1.OT}}{\Sigma H_{waterresistU1.OT}} = -0.627\ m$$

$$\Sigma M_{waterresistU1.OT} := \Sigma H_{waterresistU1.OT} \cdot H_{waterresistlocU1.OT} = -80.65 \cdot kN \cdot m$$

Modify Lateral Soil Loads for Overturning Analysis:

(Lateral soil loads are calculated down to Point O instead of bottom of shear key)

Driving Soil Load (Headwater Side):

Surcharge Load: $E_{s1U1.OT} := S1_{U1} \cdot K_o \cdot (H_w + Key_{h.d} + Key_{vdist}) \cdot B \cdot -1 = 0 \cdot kN$

Moment Arm (from Point O): $E_{s1locU1.OT} := \frac{H_w + Key_{h.d} + Key_{vdist}}{2} = 2.25\ m$

Moist Soil Load above GWL: $E_{h1U1.OT} := \frac{\gamma_m \cdot K_o \cdot h_{1U1}^2}{2} B \cdot -1 = 0.0 \cdot kN$

Moment Arm (from Point O): $E_{h1locU1.OT} := \frac{h_{1U1}}{3} + h_{2U1} + Key_{vdist} = 4.50\ m$

Saturated Soil Load below GWL:
(rectangular component)
$E_{h2U1.OT} := (\gamma_m \cdot K_o \cdot h_{1U1}) \cdot (h_{2U1} + Key_{vdist}) \cdot B \cdot -1 = 0.0 \cdot kN$

Moment Arm (from Point O): $E_{h2locU1.OT} := \frac{h_{2U1} + Key_{vdist}}{2} = 2.25\ m$

Saturated Soil Load below GWL:
(triangular component)
$E_{h2aU1.OT} := \frac{(\gamma_{sat} - \gamma_w) \cdot K_o \cdot (h_{2U1} + Key_{vdist})^2}{2} \cdot B \cdot -1 = -67.4 \cdot kN$

Moment Arm (from Point O): $E_{h2alocU1.OT} := \frac{h_{2U1} + Key_{vdist}}{3} = 1.50\ m$

Resisting Soil Load (Tailwater Side):

(Determine resisting soil load based on depth variation between the keys (ie. Key_{vdist}). In case where key at heel is deeper than key at toe (ie. $Key_{vdist} < 0$), resisting soil load (p*) is assumed to produce horizontal equilibrium as per Figure 4-5 above. Resisting soil load (p_o) is neglected.)

Total Driving Force: $\Sigma H_{SoildriveU1.OT} := E_{s1U1.OT} + E_{h1U1.OT} + E_{h2U1.OT} + E_{h2aU1.OT} + H_{h2U1} = -274.5 \cdot kN$

Total Resisting Force: $\Sigma H_{waterresistU1.OT} = 128.6 \cdot kN$

Assumed Soil Load p*: $E_{h8U1a.OT} := \left(\Sigma H_{SoildriveU1.OT} + \Sigma H_{waterresistU1.OT}\right) \cdot -1 = 145.846 \cdot kN$

Moment Arm (from Point O): $E_{h8U1a.loc.OT} := \dfrac{Key_{vdist}}{2} = -1\ m$

$$E_{h8U1.OT} := \begin{cases} E_{h8U1a.OT} & \text{if } Key_{vdist} < 0 \\ \Sigma H_{SoilresistU1} - H_{h6U1} - H_{h6aU1} & \text{otherwise} \end{cases} = 145.846 \cdot kN$$

$$\Sigma M_{SoilresistU1.OT} := \begin{cases} E_{h8U1a.OT} \cdot E_{h8U1a.loc.OT} & \text{if } Key_{vdist} < 0 \\ \Sigma M_{HorizSoilResistU1} - H_{h6U1} \cdot H_{h6locU1} - H_{h6aU1} \cdot H_{h6alocU1} & \text{otherwise} \end{cases} = -145.846 \cdot kN \cdot m$$

Sum of Moment about Point O:

$$\Sigma M_{LateraldriveU1.OT} := E_{s1U1.OT} \cdot E_{s1locU1.OT} + E_{h1U1.OT} \cdot E_{h1locU1.OT} + E_{h2U1.OT} \cdot E_{h2locU1.OT} \cdots + E_{h2aU1.OT} \cdot E_{h2alocU1.OT} + H_{h2U1} \cdot H_{h2locU1} = -135.7 \cdot kN \cdot m$$

$$\Sigma M_{LateralresistU1.OT} := \Sigma M_{waterresistU1.OT} + \Sigma M_{SoilresistU1.OT} = -226.5 \cdot kN \cdot m$$

Total moment:

$$\Sigma M_{U1.OT} := \Sigma M_{conc} + \Sigma M_{VertSoilWaterResistU1} + \Sigma M_{UpliftU1.OT} + \Sigma M_{LateraldriveU1.OT} + \Sigma M_{LateralresistU1.OT} = 897.3 \cdot kN \cdot m$$

Total Vertical Force: $\Sigma V_{U1.OT} := \Sigma V_{conc} + \Sigma V_{SoilWaterU1} + \Sigma V_{UplliftU1.OT} = 357.6 \cdot kN$

Distance X_R: EM 1110-2-2502 Eq.4-1 $X_{R.U1} := \dfrac{\Sigma M_{U1.OT}}{\Sigma V_{U1.OT}} = 2.509\ m$

Overturning Resultant Ratio $Ratio_{U1.OT} := \dfrac{X_{R.U1}}{b} = 0.42$

$$Ratio_{U1.OT.check} := \begin{cases} \text{"OKAY "} & \text{if } Ratio_{U1.OT} > X_{R.reqU1} \\ \text{"Revise Structure""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

CHECK FOUNDATION ECCENTRICITY (HORIZONTAL PLANE):

Eccentricity (horizontal plan): $ex_{U1.OT} := \dfrac{b}{2} - \dfrac{\Sigma M_{U1.OT}}{\Sigma V_{U1.OT}} = 0.49\ m$ $Kern_{OT} := \dfrac{b}{6} = 1\ m$

Eccentricity Check:

$$e_{check.U1.OT} := \begin{cases} \text{"Okay"} & \text{if } ex_{U1} \le Kern_{OT} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"Okay"}$$

CHECK FOUNDATION BEARING CAPACITY (HORIZONTAL PLANE):

Base Section Modulus: $S_{b.OT} := \frac{1}{6}\left(B \cdot b^2\right) = 6\,m^3$

Bearing Pressure Under Toe:

$$\sigma_{ToeU1.OT} := \begin{cases} \left(\frac{\Sigma V_{U1.OT}}{b \cdot B} + \frac{\Sigma V_{U1.OT} \cdot ex_{U1.OT}}{S_{b.OT}}\right) & \text{if } \frac{\Sigma V_{U1.OT}}{b \cdot B} \ge \frac{\Sigma V_{U1.OT} \cdot ex_{U1.OT}}{S_{b.OT}} \\ \frac{2 \cdot \Sigma V_{U1.OT}}{B \cdot 3\left(\frac{b}{2} - ex_{U1.OT}\right)} & \text{otherwise} \end{cases} = 88.9 \cdot kPa$$

$$Bearing_{ChecktoeU1.OT} := \begin{cases} \text{"OKAY "} & \text{if } \sigma_{ToeU1.OT} < \sigma_{allowU1} \\ \text{"NG - for reference only""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

Bearing Pressure Under Heel:

$$\sigma_{HeelU1.OT} := \begin{cases} \left(\frac{\Sigma V_{U1.OT}}{b \cdot B} - \frac{\Sigma V_{U1.OT} \cdot ex_{U1.OT}}{S_{b.OT}}\right) & \text{if } \frac{\Sigma V_{U1.OT}}{b \cdot B} \ge \frac{\Sigma V_{U1.OT} \cdot ex_{U1.OT}}{S_{b.OT}} \\ 0 & \text{otherwise} \end{cases} = 30.3 \cdot kPa$$

$$Bearing_{CheckheelU1.OT} := \left(\begin{cases} \text{"OKAY "} & \text{if } \sigma_{HeelU1.OT} < \sigma_{allowU1} \wedge \sigma_{HeelU1.OT} > 0 \\ \text{"NG - for reference only""} & \text{otherwise} \end{cases}\right) = \text{"OKAY "}$$

LOAD CASE U1

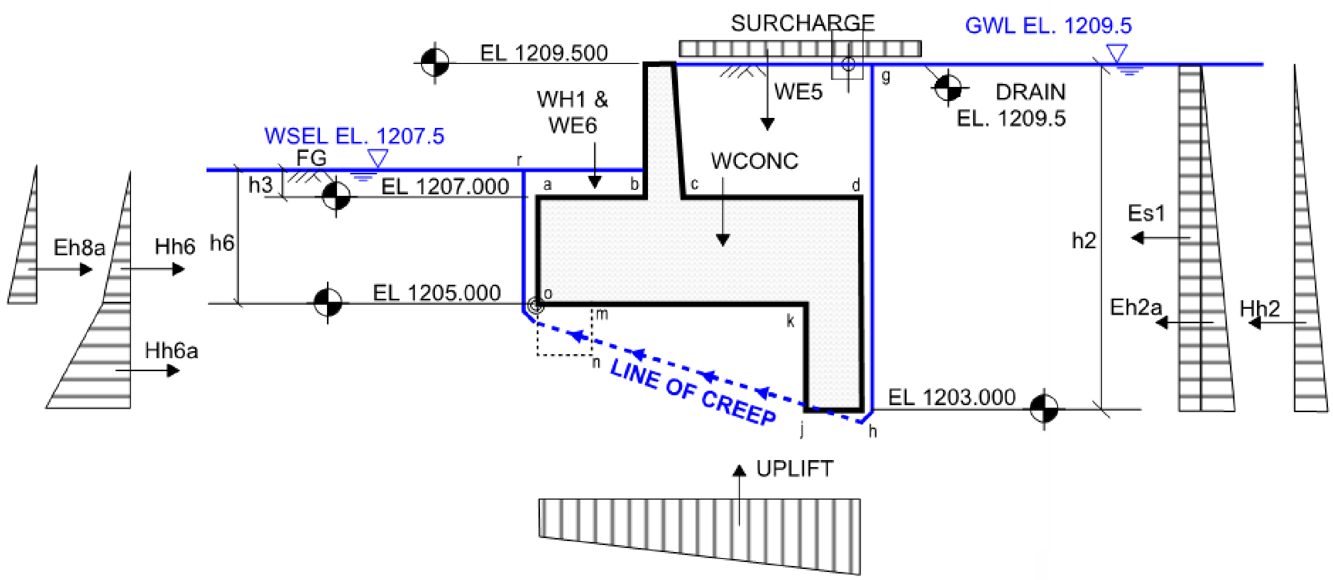
LOAD CASE UN1 - NORMAL OPERATION + SURCHARGE



UN1 DESIGN CASE

LOAD CASE UN1 ACCEPTANCE PARAMETERS

FS sliding:

Unusual (UN) 1.3 (without cohesion) (Table 3-3, USACE EM 1110-2-2100)

Resultant Location:

Unsual (UN) Inside middle third ~100% base in compression

Required Factor of Safety for Sliding: $FS_{sliding.reqUN1} := 1.3$ (Without Cohesion)

Allowable rock bearing pressure: $\sigma_{allowUN1} := 1470kPa$ (Section 5.2, Design Criteria EM 1110-2-2100 Section 3-10)

Overturning Required Resultant Ratio: $X_{R.reqUN1} := 0.333$ (EM 1110-2-2502, Figure 4-4)

Required Factor of Safety for Floatation $FS_{req.UN1.flt} := 1.3$

SOIL HEIGHTS and Water Levels:

LOAD CASE UN1

Heel Conditions:

Groundwater Elevation at Heel: $GWL_{UN1} := 1209.5m$

Distance from Finish Grade to Groundwater at Heel: $h_{1UN1} := \left[T_w - GWL_{UN1} + \left(L_{cd} + t_{wb} - t_{wt}\right)\cdot \tan(\beta)\right] = 0.00\ m$

Distance from Water Surface to Bottom of Footing at Heel: $h_{2UN1} := GWL_{UN1} - Bot_{ftg} + Key_{h.d} = 6.50\ m$

Toe Conditions:

Water Surface Elevation at Toe: $WSEL_{UN1} := 1207.5m$

Water Surface Elevation at Toe for Uplift: $UWSEL_{UN1} := 1207.5\cdot m$

Finish Grade at Toe providing lateral resistance: $FG_{toeUN1} := 1207.5\cdot m$

Soil Depth Above top of footing: $h_{3aUN1} := FG_{toeUN1} - Top_{ftg} = 0.5\ m$

$$h_{3UN1} := \begin{cases} h_{3aUN1} & \text{if } FG_{toeUN1} - Top_{ftg} \geq 0 \\ 0 & \text{otherwise} \end{cases} = 0.5$$

Resisting Fill at Toe: $h_{4UN1} := FG_{toeUN1} - Bot_{ftg} + Key_{t.d} = 2.50\ m$

Distance from Water Level to Top of Footing: $h_{5UN1} := WSEL_{UN1} - Top_{ftg} = 0.50\ m$

Distance from Water Surface to Bottom of Toe Key: $h_{6UN1} := WSEL_{UN1} - Bot_{ftg} + Key_{t.d} = 2.50\ m$

Soil Depth Above WSEL: $h_{7aUN1} := FG_{toeUN1} - WSEL_{UN1} = 0\ m$

$$h_{7UN1} := \begin{cases} h_{7aUN1} & \text{if } FG_{toeUN1} - WSEL_{UN1} \geq 0 \\ 0 & \text{otherwise} \end{cases} = 0$$

Soil Depth Below WSEL:

$$h_{8UN1} := \begin{cases} WSEL_{UN1} - Bot_{ftg} + Key_{t.d} & \text{if } FG_{toeUN1} - WSEL_{UN1} \geq 0 \\ h_{4UN1} & \text{otherwise} \end{cases} = 2.5$$

For Line of Creep Method: $L_{ho.UN1} := \sqrt{b^2 + \left(Key_{h.d} - Key_{t.d}\right)^2} = 6.325\ m$

Head Loss from Point g:

$\Delta h_{g.hj.UN1} := h_{2UN1} = 6.5\ m$ (to point h & j)

$\Delta h_{g.km.UN1} := GWL_{UN1} - Bot_{ftg} = 4.5\ m$ (to point k & m)

$\Delta h_{g.no.UN1} := GWL_{UN1} - Bot_{ftg} + Key_{t.d} = 4.5\ m$ (to point n & o)

$\Delta h_{g.p.UN1} := GWL_{UN1} - FG_{toeUN1} = 2\ m$ (to point p*)

$\Delta h_{g.r.UN1} := GWL_{UN1} - UWSEL_{UN1} = 2\ m$ (to point r)

Surcharge

Surcharge on Heel: $S1_{UN1} := 15.0 \dfrac{kN}{m^2}$

* same as point "r" in this case

Calculate Soil Lateral Pressure Coefficients:

LOAD CASE UN1

For all load cases except seismic, soil loading to be based on At-Rest Condition.
Calculate at-rest pressure coefficient Ko based on Jaky's (1944) equation.

Soil At Rest Static Coefficient: $K_o := \dfrac{1 - \sin(\phi)}{1 + \sin(\beta)} = 0.546$ (Eq. 3-6, USACE EM 1110-2-2502)

Lateral - Driving Force

Static At-Rest:

Surcharge Load: $E_{s1UN1} := S1_{UN1} \cdot K_o \cdot \left(H_w + Key_{h.d}\right) \cdot B \cdot -1 = -53.236 \cdot kN$

Moment Arm (from Point O): $E_{s1locUN1} := \dfrac{H_w + Key_{h.d}}{2} + Key_{vdist} = 1.25\,m$

Moist Soil Load above GWL: $E_{h1UN1} := \dfrac{\gamma_m \cdot K_o \cdot h_{1UN1}^{\,2}}{2} \cdot B \cdot -1 = 0.0 \cdot kN$

Moment Arm (from Point O): $E_{h1locUN1} := \dfrac{h_{1UN1}}{3} + h_{2UN1} + Key_{vdist} = 4.50\,m$

Saturated Soil Load below GWL:
(rectangular component) $E_{h2UN1} := \left(\gamma_m \cdot K_o \cdot h_{1UN1}\right) \cdot \left(h_{2UN1}\right) \cdot B \cdot -1 = 0.0 \cdot kN$

Moment Arm (from Point O): $E_{h2locUN1} := \dfrac{h_{2UN1}}{2} + Key_{vdist} = 1.25\,m$

Saturated Soil Load below GWT:
(triangular L $E_{h2aUN1} := \dfrac{\left(\gamma_{sat} - \gamma_w\right) \cdot K_o \cdot h_{2UN1}^{\,2}}{2} \cdot B \cdot -1 = -140.7 \cdot kN$

Moment Arm (from Point O): $E_{h2alocUN1} := \dfrac{h_{2UN1}}{3} + Key_{vdist} = 0.17\,m$

Lateral Water Load:

Water Load GWL to Bottom of Keys:

$$H_{h2UN1} := \begin{cases} \dfrac{\gamma_w \cdot h_{2UN1}^{\,2}}{2} \cdot B \cdot -1 & \text{if } Key_{vdist} < 0 \\ \dfrac{\gamma_w \cdot \left(h_{2UN1} + Key_{vdist}\right)^2}{2} \cdot B \cdot -1 & \text{otherwise} \end{cases} = -207.0 \cdot kN$$

Moment Arm (from Point O):

$$H_{h2locUN1} := \begin{cases} \dfrac{h_{2UN1}}{3} + Key_{vdist} & \text{if } Key_{vdist} < 0 \\ \dfrac{h_{2UN1} + Key_{vdist}}{3} & \text{otherwise} \end{cases} = 0.17 \cdot m$$

$$\Sigma H_{SoildriveUN1} := E_{s1UN1} + E_{h1UN1} + E_{h2UN1} + E_{h2aUN1} + H_{h2UN1} = -401.0 \cdot kN$$

$$\Sigma M_{LateralSoildriveUN1} := E_{s1UN1} \cdot E_{s1locUN1} + E_{h1UN1} \cdot E_{h1locUN1} + E_{h2UN1} \cdot E_{h2locUN1} \cdots + E_{h2aUN1} \cdot E_{h2alocUN1} + H_{h2UN1} \cdot H_{h2locUN1} = -124.5\,m \cdot kN$$

Lateral - Resisting Force

LOAD CASE UN1

Lateral Water Load:

Water Load WSEL to Bot. of Toe Key:

$$H_{h6UN1} := \frac{\gamma_w \cdot h_{6UN1}^{\ 2}}{2} \cdot B = 30.6 \cdot kN$$

Moment Arm (from Point O):

$$H_{h6locUN1} := \frac{h_{6UN1}}{3} = 0.83\ m$$

Water Load between Keys (if any)

$$H_{h6aUN1} := \begin{cases} \dfrac{(h_{6UN1} + h_{2UN1}) \cdot -Key_{vdist}}{2} \cdot \gamma_w \cdot B & \text{if } Key_{vdist} < 0 \\ 0 & \text{otherwise} \end{cases} = 88.2 \cdot kN$$

Moment Arm (from Point O):

$$H_{h6alocUN1} := \begin{cases} \dfrac{Key_{vdist} \cdot (2 \cdot h_{2UN1} + h_{6UN1})}{3(h_{2UN1} + h_{6UN1})} & \text{if } Key_{vdist} < 0 \\ 0 & \text{otherwise} \end{cases} = -1.15 \cdot m$$

Lateral Soil Load:

Moist Soil Load above WSEL:

$$E_{h7UN1} := \frac{\gamma_m \cdot K_o \cdot h_{7UN1}^{\ 2}}{2} \cdot B = 0.0 \cdot kN$$

Moment Arm (from bot. of toe key):

$$E_{h7locUN1} := h_{6UN1} + \frac{h_{7UN1}}{3} + Key_{vdist} = 0.50\ m$$

Saturated Soil Load below WSEL:
(rectangular component)

$$E_{h8UN1} := (\gamma_m \cdot K_o \cdot h_{7UN1}) \cdot h_{8UN1} \cdot B = 0.0 \cdot kN$$

Moment Arm (from bot. of toe key):

$$E_{h8locUN1} := \frac{h_{8UN1}}{2} = 1.25\ m$$

Saturated Soil Load below WSEL:
(triangular component)

$$E_{h8aUN1} := \frac{\left[(\gamma_{sat} - \gamma_w) \cdot K_o\right] \cdot h_{8UN1}^{\ 2}}{2} \cdot B = 20.8 \cdot kN$$

Moment Arm (from bot. of footing):

$$E_{h8alocUN1} := \frac{h_{8UN1}}{3} = 0.83\ m$$

$$\Sigma H_{SoilresistUN1} := H_{h6UN1} + H_{h6aUN1} + E_{h7UN1} + E_{h8UN1} + E_{h8aUN1} = 139.6 \cdot kN$$

$$\Sigma M_{HorizSoilResistUN1} := H_{h6UN1} \cdot H_{h6locUN1} + H_{h6aUN1} \cdot H_{h6alocUN1} + E_{h7UN1} \cdot E_{h7locUN1} \cdots + E_{h8UN1} \cdot E_{h8locUN1} + E_{h8aUN1} \cdot E_{h8alocUN1} = -58.4\ m \cdot kN$$

Vertical Force:

UPLIFT: Linear distribution from water at heel to water at toe:

$$\Sigma V_{UplliftUN1} := \left[\left(UWSEL_{UN1} - Bot_{ftg} + Key_{t.d}\right) + h_{2UN1}\right] \cdot \frac{b}{2} \cdot \gamma_w \cdot B \cdot -1 = -264.6 \cdot kN$$

Moment Arm (from Point O):

$$V_{UpliftUN1aloc} := \frac{b \cdot \left[2 \cdot h_{2UN1} + \left(UWSEL_{UN1} - Bot_{ftg} + Key_{t.d}\right)\right]}{3\left[h_{2UN1} + \left(UWSEL_{UN1} - Bot_{ftg} + Key_{t.d}\right)\right]} = 3.444\ m$$

$$\Sigma M_{UpliftUN1} := \Sigma V_{UplliftUN1} \cdot V_{UpliftUN1aloc} = -911.4 \cdot kN \cdot m$$

Weight of soil and water over toe:

Water Above the Top of Footing: $W_{H1UN1} := \gamma_w \cdot h_{5UN1} \cdot L_{ab} \cdot B = 9.8 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E1locUN1} := \frac{L_{ab}}{2} = 1\ m$

Soil above top of footing: $W_{E6UN1} := \gamma_b \cdot h_{3UN1} \cdot L_{ab} \cdot B = 12.2 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E6locUN1} := \frac{L_{ab}}{2} = 1\ m$

Vertical Load Due to Surcharge: $S_{UN1} := S1_{UN1} \cdot L_{cd} \cdot B = 49.56 \cdot kN$ $\quad S_{UN1loc} := b - \frac{L_{cd}}{2} = 4.35\ m$

Weight of soil and water over heel:

Moist Soil for sloped grade above top of wall:

Length of sloped portion of soil above top of wall: $L_{E3UN1} := \left(L_{cd} + t_{wb} - t_{wt}\right) = 3.50\ m$

Height of sloped soil above top of wall over heel: $h_{E3locUN1} := \left(L_{E3UN1}\right) \cdot \tan(\beta) = 0.00\ m$

Weight of sloped soil above top of wall: $W_{E3UN1} := \frac{\gamma_m}{2} \cdot h_{E3locUN1} \cdot L_{E3UN1} \cdot B = 0.0 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E3locUN1} := L_{ab} + t_{wt} + \frac{2}{3} \cdot L_{E3UN1} = 4.83\ m$

Moist soil from top of wall to groundwater level:

Height of soil from top of wall and top of GWL: $h_{1UN1} = 0.00\ m$

Length from edge of wall at GWL to edge of heel: $L_{E4UN1} := L_{E3UN1} - \left(h_{1UN1} \cdot S_{batter}\right) = 3.50\ m$

Weight of soil over heel from top of wall to GWL: $W_{E4UN1} := \gamma_m \cdot h_{1UN1} \cdot \frac{\left(L_{E3UN1} + L_{E4UN1}\right)}{2} \cdot B = 0.0 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E4locUN1} := b - \frac{L_{E3UN1}^{2} + L_{E3UN1} \cdot L_{E4UN1} + L_{E4UN1}^{2}}{3\left(L_{E3UN1} + L_{E4UN1}\right)} = 4.25\ m$

Saturated soil from groundwater to top of footing:

Height of soil from GWL to top of heel: $h_{E4UN1} := h_{2UN1} - t_{ftg} - Key_{h.d} = 2.50\ m$

Weight of soil over heel from GWL to top of heel: $W_{E5UN1} := \left(\gamma_{sat}\right) \cdot h_{E4UN1} \cdot \frac{\left(L_{E4UN1} + L_{cd}\right)}{2} \cdot B = 187.1 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E5locUN1} := b - \frac{L_{E4UN1}^{2} + L_{E4UN1} \cdot L_{cd} + L_{cd}^{2}}{3\left(L_{E4UN1} + L_{cd}\right)} = 4.30\ m$

$$\Sigma V_{SoilWaterUN1} := W_{H1UN1} + W_{E6UN1} + W_{E3UN1} + W_{E4UN1} + W_{E5UN1} + S_{UN1} = 258.7 \cdot kN$$

$$\Sigma M_{VertSoilWaterResistUN1} := W_{H1UN1} \cdot W_{E1locUN1} + W_{E6UN1} \cdot W_{E6locUN1} \cdots + W_{E3UN1} \cdot W_{E3locUN1} + W_{E4UN1} \cdot W_{E4locUN1} + W_{E5UN1} \cdot W_{E5locUN1} + S_{UN1} \cdot S_{UN1loc} = 1041.8\ m \cdot kN$$

CHECK OVERTURNING

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stablity of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1

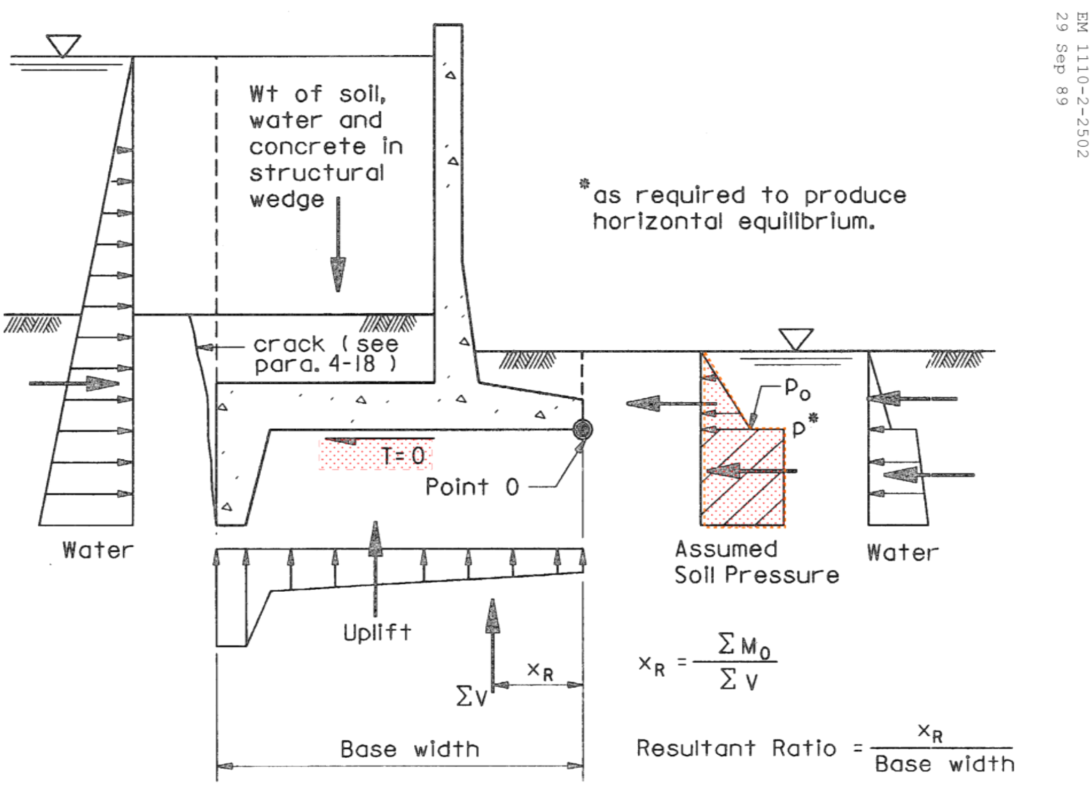

Figure 4-5. Forces for overturning analysis for wall with horizontal base and key

Modify Uplift for Overturning Analysis: **LOAD CASE UN1**

(Uplift is calculated along the concrete/rock contact using the Line of Creep method)

Water Pressure at h: $u_{h.UN1} := \Delta h_{g.hj.UN1} \cdot \gamma_w = 63.70 \cdot kPa$

Water Pressure at o: $u_{o.UN1} := \left(\Delta h_{g.no.UN1} - \dfrac{\Delta h_{g.r.UN1} \cdot L_{ho.UN1}}{L_{ho.UN1}}\right) \cdot \gamma_w = 24.5 \cdot kPa$

Head loss between point h and o: $\Delta h_{ho.UN1} := \Delta h_{g.r.UN1} \cdot \dfrac{L_{ho.UN1}}{L_{ho.UN1}} = 2\,m$

Length of concrete base (h -> o): $L_{baseho.UN1} := Key_{h.w} + Key_{h.d} + Key_{hdist} + Key_{t.d} + Key_{t.w} = 8\,m$

Head loss along h -> j: $\Delta h_{hj.UN1} := \Delta h_{ho.UN1} \cdot \dfrac{Key_{h.w}}{L_{baseho.UN1}} = 0.25\,m$

Water Pressure at j: $u_{j.UN1} := \left(\Delta h_{g.hj.UN1} - \Delta h_{hj.UN1}\right) \cdot \gamma_w = 61.25 \cdot kPa$

Head loss along h -> k: $\Delta h_{hjk.UN1} := \Delta h_{ho.UN1} \cdot \left(\dfrac{Key_{h.w} + Key_{h.d}}{L_{baseho.UN1}}\right) = 0.75\,m$

Water Pressure at k: $u_{k.UN1} := \left(\Delta h_{g.km.UN1} - \Delta h_{hjk.UN1}\right) \cdot \gamma_w = 36.75 \cdot kPa$

Head loss along h -> m: $\Delta h_{hjkm.UN1} := \Delta h_{ho.UN1} \cdot \left(\dfrac{Key_{h.w} + Key_{h.d} + Key_{hdist}}{L_{baseho.UN1}}\right) = 2\,m$

Water Pressure at m: $u_{m.UN1} := \left(\Delta h_{g.km.UN1} - \Delta h_{hjkm.UN1}\right) \cdot \gamma_w = 24.50 \cdot kPa$

Head loss along h -> n: $\Delta h_{hjkmn.UN1} := \Delta h_{ho.UN1} \cdot \left(\dfrac{Key_{h.w} + Key_{h.d} + Key_{hdist} + Key_{t.d}}{L_{baseho.UN1}}\right) = 2\,m$

Water Pressure at n: $u_{n.UN1} := \left(\Delta h_{g.no.UN1} - \Delta h_{hjkmn.UN1}\right) \cdot \gamma_w = 24.50 \cdot kPa$

Uplift under key at heel: $V_{ulkeyhUN1.OT} := \dfrac{\left(u_{h.UN1} + u_{j.UN1}\right) \cdot Key_{h.w}}{2} \cdot B \cdot -1 = -62.475 \cdot kN$

Moment Arm (from Point O): $V_{ulkeyhUN1loc.OT} := b - \dfrac{Key_{h.w} \cdot \left(2 \cdot u_{j.UN1} + u_{h.UN1}\right)}{3 \cdot \left(u_{j.UN1} + u_{h.UN1}\right)} = 5.503\,m$

Uplift under base: $V_{ulbaseUN1.OT} := \dfrac{\left(u_{k.UN1} + u_{m.UN1}\right) \cdot Key_{hdist}}{2} \cdot B \cdot -1 = -153.125 \cdot kN$

Moment Arm (from Point O): $V_{ulbaseUN1loc.OT} := b - Key_{h.w} - \dfrac{Key_{hdist} \cdot \left(2 \cdot u_{m.UN1} + u_{k.UN1}\right)}{3 \cdot \left(u_{m.UN1} + u_{k.UN1}\right)} = 2.667\,m$

Uplift under key at toe $V_{ulkeytUN1.OT} := \dfrac{\left(u_{n.UN1} + u_{o.UN1}\right) \cdot Key_{t.w}}{2} \cdot B \cdot -1 = 0 \cdot kN$

Moment Arm (from Point O): $V_{ulkeytUN1loc.OT} := \dfrac{Key_{t.w} \cdot \left(2 \cdot u_{n.UN1} + u_{o.UN1}\right)}{3 \cdot \left(u_{n.UN1} + u_{o.UN1}\right)} = 0$

$$\Sigma V_{UpliftUN1.OT} := V_{ulkeyhUN1.OT} + V_{ulbaseUN1.OT} + V_{ulkeytUN1.OT} = -216 \cdot kN$$

$$U_{UN1.loc.OT} := \frac{V_{ulkeyhUN1.OT} \cdot V_{ulkeyhUN1loc.OT} + V_{ulbaseUN1.OT} \cdot V_{ulbaseUN1loc.OT} + V_{ulkeytUN1.OT} \cdot V_{ulkeytUN1loc.OT}}{\Sigma V_{UpliftUN1.OT}} = 3.49\,m$$

$$\Sigma M_{UpliftUN1.OT} := \Sigma V_{UpliftUN1.OT} \cdot U_{UN1.loc.OT} = -752.1 \cdot kN \cdot m$$

Modify Lateral Water Pressure (Resisting) for Overturning Analysis:

(Resisting water pressure is calculated using the Line of Creep method)

Water Load at Key (heel): $H_{h2UN1.OT} := \frac{u_{k.UN1} + u_{j.UN1}}{2} \cdot Key_{h.d} B = 98.0 \cdot kN$

Moment Arm (from Point O): $H_{h2locUN1.OT} := \frac{Key_{h.d} \cdot (2 \cdot u_{k.UN1} + u_{j.UN1})}{3(u_{k.UN1} + u_{j.UN1})} + Key_{vdist} = -1.08\ m$

Water Load at Key (toe): $H_{h6UN1.OT} := \frac{u_{o.UN1} \cdot (UWSEL_{UN1} - Bot_{ftg} + Key_{t.d})}{2} \cdot B = 31 \cdot kN$

Moment Arm (from Point O): $H_{h6locUN1.OT} := \frac{UWSEL_{UN1} - Bot_{ftg} + Key_{t.d}}{3} = 0.83\ m$

$$\Sigma H_{waterresistUN1.OT} := H_{h2UN1.OT} + H_{h6UN1.OT} = 128.63 \cdot kN$$

$$H_{waterresistlocUN1.OT} := \frac{H_{h2UN1.OT} \cdot H_{h2locUN1.OT} + H_{h6UN1.OT} \cdot H_{h6locUN1.OT}}{\Sigma H_{waterresistUN1.OT}} = -0.627\ m$$

$$\Sigma M_{waterresistUN1.OT} := \Sigma H_{waterresistUN1.OT} \cdot H_{waterresistlocUN1.OT} = -80.65 \cdot kN \cdot m$$

Modify Lateral Soil Loads for Overturning Analysis:

(Lateral soil loads are calculated down to Point O instead of bottom of shear key)

Driving Soil Load (Headwater Side):

Surcharge Load: $E_{s1UN1.OT} := S1_{UN1} \cdot K_o \cdot (H_w + Key_{h.d} + Key_{vdist}) \cdot B \cdot -1 = -36.856 \cdot kN$

Moment Arm (from Point O): $E_{s1locUN1.OT} := \frac{H_w + Key_{h.d} + Key_{vdist}}{2} = 2.25\ m$

Moist Soil Load above GWL: $E_{h1UN1.OT} := \frac{\gamma_m \cdot K_o \cdot h_{1UN1}^{\ 2}}{2} B \cdot -1 = 0.0 \cdot kN$

Moment Arm (from Point O): $E_{h1locUN1.OT} := \frac{h_{1UN1}}{3} + h_{2UN1} + Key_{vdist} = 4.50\ m$

Saturated Soil Load below GWL:
(rectangular component) $E_{h2UN1.OT} := (\gamma_m \cdot K_o \cdot h_{1UN1}) \cdot (h_{2UN1} + Key_{vdist}) \cdot B \cdot -1 = 0.0 \cdot kN$

Moment Arm (from Point O): $E_{h2locUN1.OT} := \frac{h_{2UN1} + Key_{vdist}}{2} = 2.25\ m$

Saturated Soil Load below GWL:
(triangular component) $E_{h2aUN1.OT} := \frac{(\gamma_{sat} - \gamma_w) \cdot K_o \cdot (h_{2UN1} + Key_{vdist})^2}{2} \cdot B \cdot -1 = -67.4 \cdot kN$

Moment Arm (from Point O): $E_{h2alocUN1.OT} := \frac{h_{2UN1} + Key_{vdist}}{3} = 1.50\ m$

Resisting Soil Load (Tailwater Side):

(Determine resisting soil load based on depth variation between the keys (ie. Key_{vdist}). In case where key at heel is deeper than key at toe (ie. $Key_{vdist} < 0$), resisting soil load (p*) is assumed to produce horizontal equilibrium as per Figure 4-5 above. Resisting soil load (p_o) is neglected.)

Total Driving Force: $\Sigma H_{SoildriveUN1.OT} := E_{s1UN1.OT} + E_{h1UN1.OT} + E_{h2UN1.OT} + E_{h2aUN1.OT} + H_{h2UN1} = -311.3 \cdot kN$

Total Resisting Force: $\Sigma H_{waterresistUN1.OT} = 128.6 \cdot kN$

Assumed Soil Load p*: $E_{h8UN1a.OT} := \left(\Sigma H_{SoildriveUN1.OT} + \Sigma H_{waterresistU1.OT}\right) \cdot -1 = 182.701 \cdot kN$

Moment Arm (from Point O): $E_{h8UN1a.loc.OT} := \dfrac{Key_{vdist}}{2} = -1\ m$

$$E_{h8UN1.OT} := \begin{cases} E_{h8UN1a.OT} & \text{if } Key_{vdist} < 0 \\ \Sigma H_{SoilresistUN1} - H_{h6UN1} - H_{h6aUN1} & \text{otherwise} \end{cases} = 182.701 \cdot kN$$

$$\Sigma M_{SoilresistUN1.OT} := \begin{cases} E_{h8UN1a.OT} \cdot E_{h8UN1a.loc.OT} & \text{if } Key_{vdist} < 0 \\ \Sigma M_{HorizSoilResistUN1} - H_{h6UN1} \cdot H_{h6locUN1} - H_{h6aUN1} \cdot H_{h6alocUN1} & \text{otherwise} \end{cases} = -182.701 \cdot kN \cdot m$$

Sum of Moment about Point O:

$$\Sigma M_{LateraldriveUN1.OT} := E_{s1UN1.OT} \cdot E_{s1locUN1.OT} + E_{h1UN1.OT} \cdot E_{h1locUN1.OT} + E_{h2UN1.OT} \cdot E_{h2locUN1.OT} \ldots + E_{h2aUN1.OT} \cdot E_{h2alocUN1.OT} + H_{h2UN1} \cdot H_{h2locUN1} = -218.6 \cdot kN \cdot m$$

$$\Sigma M_{LateralresistUN1.OT} := \Sigma M_{waterresistUN1.OT} + \Sigma M_{SoilresistUN1.OT} = -263.3 \cdot kN \cdot m$$

Total moment:

$$\Sigma M_{UN1.OT} := \Sigma M_{conc} + \Sigma M_{VertSoilWaterResistUN1} + \Sigma M_{UpliftUN1.OT} + \Sigma M_{LateraldriveUN1.OT} + \Sigma M_{LateralresistUN1.OT} = 993.1 \cdot kN \cdot m$$

Total Vertical Force: $\Sigma V_{UN1.OT} := \Sigma V_{conc} + \Sigma V_{SoilWaterUN1} + \Sigma V_{UplliftUN1.OT} = 407.2 \cdot kN$

Distance X_R: EM 1110-2-2502 Eq.4-1 $X_{R.UN1} := \dfrac{\Sigma M_{UN1.OT}}{\Sigma V_{UN1.OT}} = 2.439\ m$

Overturning Resultant Ratio $Ratio_{UN1.OT} := \dfrac{X_{R.UN1}}{b} = 0.41$

$$Ratio_{UN1.OT.check} := \begin{cases} \text{"OKAY "} & \text{if } Ratio_{UN1.OT} > X_{R.reqUN1} \\ \text{"Revise Structure""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

CHECK FOUNDATION ECCENTRICITY (HORIZONTAL PLANE):

Eccentricity (horizontal plan): $ex_{UN1.OT} := \dfrac{b}{2} - \dfrac{\Sigma M_{UN1.OT}}{\Sigma V_{UN1.OT}} = 0.56\ m$ $Kern_{OT} = 1\ m$

Eccentricity Check:

$$e_{check.UN1.OT} := \begin{cases} \text{"Okay"} & \text{if } ex_{UN1} \le Kern_{OT} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"Okay"}$$

CHECK FOUNDATION BEARING CAPACITY (HORIZONTAL PLANE):

Base Section Modulus: $S_{b.OT} = 6\,m^3$

Bearing Pressure Under Toe:

$$\sigma_{ToeUN1.OT} := \begin{cases} \left(\dfrac{\Sigma V_{UN1.OT}}{b \cdot B} + \dfrac{\Sigma V_{UN1.OT} \cdot ex_{UN1.OT}}{S_{b.OT}}\right) & \text{if } \dfrac{\Sigma V_{UN1.OT}}{b \cdot B} \geq \dfrac{\Sigma V_{UN1.OT} \cdot ex_{UN1.OT}}{S_{b.OT}} \\ \dfrac{2 \cdot \Sigma V_{UN1.OT}}{B \cdot 3\left(\dfrac{b}{2} - ex_{UN1.OT}\right)} & \text{otherwise} \end{cases} = 106.0 \cdot kPa$$

LOAD CASE UN2

Heel Conditions:

Groundwater Elevation at Heel: $GWL_{UN2} := 1209.5m$

Distance from Finish Grade to Groundwater at Heel: $h_{1UN2} := \left[T_w - GWL_{UN2} + \left(L_{cd} + t_{wb} - t_{wt}\right)\cdot \tan(\beta)\right] = 0.00\ m$

Distance from Water Surface to Bottom of Footing at Heel: $h_{2UN2} := GWL_{UN2} - Bot_{ftg} + Key_{h.d} = 6.50\ m$

Toe Conditions:

Water Surface Elevation at Toe: $WSEL_{UN2} := 1207.5m$

Water Surface Elevation at Toe for Uplift: $UWSEL_{UN2} := 1209.5\cdot m$

Finish Grade at Toe providing lateral resistance: $FG_{toeUN2} := 1207.5\cdot m$

Soil Depth Above top of footing: $h_{3aUN2} := FG_{toeUN2} - Top_{ftg} = 0.5\ m$

$$h_{3UN2} := \begin{cases} h_{3aUN2} & \text{if } FG_{toeUN2} - Top_{ftg} \ge 0 \\ 0 & \text{otherwise} \end{cases} = 0.5$$

Resisting Fill at Toe: $h_{4UN2} := FG_{toeUN2} - Bot_{ftg} + Key_{t.d} = 2.50\ m$

Distance from Water Level to Top of Footing: $h_{5UN2} := WSEL_{UN2} - Top_{ftg} = 0.50\ m$

Distance from Water Surface to Bottom of Toe Key: $h_{6UN2} := WSEL_{UN2} - Bot_{ftg} + Key_{t.d} = 2.50\ m$

Soil Depth Above WSEL: $h_{7aUN2} := FG_{toeUN2} - WSEL_{UN2} = 0\ m$

$$h_{7UN2} := \begin{cases} h_{7aUN2} & \text{if } FG_{toeUN2} - WSEL_{UN2} \ge 0 \\ 0 & \text{otherwise} \end{cases} = 0$$

Soil Depth Below WSEL:

$$h_{8UN2} := \begin{cases} WSEL_{UN2} - Bot_{ftg} + Key_{t.d} & \text{if } FG_{toeUN2} - WSEL_{UN2} \ge 0 \\ h_{4UN2} & \text{otherwise} \end{cases} = 2.5$$

For Line of Creep Method: $L_{ho.UN2} := \sqrt{b^2 + \left(Key_{h.d} - Key_{t.d}\right)^2} = 6.325\ m$

Head Loss from Point g:

$\Delta h_{g.hj.UN2} := h_{2UN2} = 6.5\ m$ (to point h & j)

$\Delta h_{g.km.UN2} := GWL_{UN2} - Bot_{ftg} = 4.5\ m$ (to point k & m)

$\Delta h_{g.no.UN2} := GWL_{UN2} - Bot_{ftg} + Key_{t.d} = 4.5\ m$ (to point n & o)

$\Delta h_{g.p.UN2} := GWL_{UN2} - FG_{toeUN2} = 2\ m$ (to point p)

$\Delta h_{g.r.UN2} := GWL_{UN2} - UWSEL_{UN2} = 0\ m$ (to point r)

Surcharge

Surcharge on Heel: $S1_{UN2} := 0.0\ \frac{kN}{m^2}$

Calculate Soil Lateral Pressure Coefficients:

LOAD CASE UN2

For all load cases except seismic, soil loading to be based on At-Rest Condition.
Calculate at-rest pressure coefficient Ko based on Jaky's (1944) equation.

Soil At Rest Static Coefficient: $K_o := \dfrac{1 - \sin(\phi)}{1 + \sin(\beta)} = 0.546$ (Eq. 3-6, USACE EM 1110-2-2502)

Lateral - Driving Force

Static At-Rest:

Surcharge Load: $E_{s1UN2} := S1_{UN2} \cdot K_o \cdot \left(H_w + Key_{h.d}\right) \cdot B \cdot -1 = 0 \cdot kN$

Moment Arm (from Point O): $E_{s1locUN2} := \dfrac{H_w + Key_{h.d}}{2} + Key_{vdist} = 1.25\ m$

Moist Soil Load above GWL: $E_{h1UN2} := \dfrac{\gamma_m \cdot K_o \cdot h_{1UN2}^{\ 2}}{2} B \cdot -1 = 0.0 \cdot kN$

Moment Arm (from Point O): $E_{h1locUN2} := \dfrac{h_{1UN2}}{3} + h_{2UN2} + Key_{vdist} = 4.50\ m$

Saturated Soil Load below GWL:
(rectangular component)

$E_{h2UN2} := \left(\gamma_m \cdot K_o \cdot h_{1UN2}\right) \cdot h_{2UN2} \cdot B \cdot -1 = 0.0 \cdot kN$

Moment Arm (from Point O): $E_{h2locUN2} := \dfrac{h_{2UN2}}{2} + Key_{vdist} = 1.25\ m$

Saturated Soil Load below GWL:
(triangular component)

$E_{h2aUN2} := \dfrac{\left(\gamma_{sat} - \gamma_w\right) \cdot K_o \cdot h_{2UN2}^{\ 2}}{2} \cdot B \cdot -1 = -140.7 \cdot kN$

Moment Arm (from Point O): $E_{h2alocUN2} := \dfrac{h_{2UN2}}{3} + Key_{vdist} = 0.17\ m$

Lateral Water Load:

Water Load GWL to Bottom of Keys:

$$H_{h2UN2} := \begin{cases} \dfrac{\gamma_w \cdot h_{2UN2}^{\ 2}}{2} \cdot B \cdot -1 & \text{if } Key_{vdist} < 0 \\ \dfrac{\gamma_w \cdot \left(h_{2UN2} + Key_{vdist}\right)^2}{2} \cdot B \cdot -1 & \text{otherwise} \end{cases} = -207.0 \cdot kN$$

Moment Arm (from Point O):

$$H_{h2locUN2} := \begin{cases} \dfrac{h_{2UN2}}{3} + Key_{vdist} & \text{if } Key_{vdist} < 0 \\ \dfrac{h_{2UN2} + Key_{vdist}}{3} & \text{otherwise} \end{cases} = 0.17 \cdot m$$

$$\Sigma H_{SoildriveUN2} := E_{s1UN2} + E_{h1UN2} + E_{h2UN2} + E_{h2aUN2} + H_{h2UN2} = -347.7 \cdot kN$$

$$\Sigma M_{LateralSoildriveUN2} := E_{s1UN2} \cdot E_{s1locUN2} + E_{h1UN2} \cdot E_{h1locUN2} + E_{h2UN2} \cdot E_{h2locUN2} \cdots + E_{h2aUN2} \cdot E_{h2alocUN2} + H_{h2UN2} \cdot H_{h2locUN2} = -58.0\ m \cdot kN$$

Lateral - Resisting Force

LOAD CASE UN2

Lateral Water Load:

Water Load WSEL to Bot. of Toe Key:

$$H_{h6UN2} := \frac{\gamma_w \cdot h_{6UN2}^{\;2}}{2} \cdot B = 30.6 \cdot kN$$

Moment Arm (from Point O):

$$H_{h6locUN2} := \frac{h_{6UN2}}{3} = 0.83\ m$$

Water Load between Keys (if any)

$$H_{h6aUN2} := \begin{cases} \frac{\left(h_{6UN2} + h_{2UN2}\right) \cdot -Key_{vdist}}{2} \cdot \gamma_w \cdot B & \text{if } Key_{vdist} < 0 \\ 0 & \text{otherwise} \end{cases} = 88.2 \cdot kN$$

Moment Arm (from Point O):

$$H_{h6alocUN2} := \begin{cases} \frac{Key_{vdist} \cdot \left(2 \cdot h_{2UN2} + h_{6UN2}\right)}{3\left(h_{2UN2} + h_{6UN2}\right)} & \text{if } Key_{vdist} < 0 \\ 0 & \text{otherwise} \end{cases} = -1.15 \cdot m$$

Lateral Soil Load:

Moist Soil Load above WSEL:

$$E_{h7UN2} := \frac{\gamma_m \cdot K_o \cdot h_{7UN2}^{\;2}}{2} B = 0.0 \cdot kN$$

Moment Arm (from bot. of toe key):

$$E_{h7locUN2} := h_{6UN2} + \frac{h_{7UN2}}{3} + Key_{vdist} = 0.50\ m$$

Saturated Soil Load below WSEL:
(rectangular component)

$$E_{h8UN2} := \left(\gamma_m \cdot K_o \cdot h_{7UN2}\right) \cdot h_{8UN2} \cdot B = 0.0 \cdot kN$$

Moment Arm (from bot. of toe key):

$$E_{h8locUN2} := \frac{h_{8UN2}}{2} = 1.25\ m$$

Saturated Soil Load below WSEL:
(triangular component)

$$E_{h8aUN2} := \frac{\left[\left(\gamma_{sat} - \gamma_w\right) \cdot K_o\right] \cdot h_{8UN2}^{\;2}}{2} \cdot B = 20.8 \cdot kN$$

Moment Arm (from bot. of footing):

$$E_{h8alocUN2} := \frac{h_{8UN2}}{3} = 0.83\ m$$

$$\Sigma H_{SoilresistUN2} := H_{h6UN2} + H_{h6aUN2} + E_{h7UN2} + E_{h8UN2} + E_{h8aUN2} = 139.6 \cdot kN$$

$$\Sigma M_{HorizSoilResistUN2} := H_{h6UN2} \cdot H_{h6locUN2} + H_{h6aUN2} \cdot H_{h6alocUN2} + E_{h7UN2} \cdot E_{h7locUN2} \cdots + E_{h8UN2} \cdot E_{h8locUN2} + E_{h8aUN2} \cdot E_{h8alocUN2} = -58.4\ m \cdot kN$$

Vertical Force:

UPLIFT: Linear distribution from water at heel to water at toe:

$$\Sigma V_{UplliftUN2} := \left[\left(UWSEL_{UN2} - Bot_{ftg} + Key_{t.d}\right) + h_{2UN2}\right] \cdot \frac{b}{2} \cdot \gamma_w \cdot B \cdot -1 = -323.4 \cdot kN$$

Moment Arm (from Point O):

$$V_{UpliftUN2aloc} := \frac{b \cdot \left[2 \cdot h_{2UN2} + \left(UWSEL_{UN2} - Bot_{ftg} + Key_{t.d}\right)\right]}{3\left[h_{2UN2} + \left(UWSEL_{UN2} - Bot_{ftg} + Key_{t.d}\right)\right]} = 3.182\ m$$

$$\Sigma M_{UpliftUN2} := \Sigma V_{UplliftUN2} \cdot V_{UpliftUN2aloc} = -1029 \cdot kN \cdot m$$

Weight of soil and water over toe:

Water Above the Top of Footing: $W_{H1UN2} := \gamma_w \cdot h_{5UN2} \cdot L_{ab} \cdot B = 9.8 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E1locUN2} := \frac{L_{ab}}{2} = 1\ m$

Soil above top of footing: $W_{E6UN2} := \gamma_b \cdot h_{3UN2} \cdot L_{ab} \cdot B = 12.2 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E6locUN2} := \frac{L_{ab}}{2} = 1\ m$

Vertical Load Due to Surcharge: $S_{UN2} := S1_{UN2} \cdot L_{cd} \cdot B = 0 \cdot kN$ $\quad S_{UN2loc} := b - \frac{L_{cd}}{2} = 4.35\ m$

Weight of soil and water over heel:

Moist Soil for sloped grade above top of wall:

Length of sloped portion of soil above top of wall: $L_{E3UN2} := \left(L_{cd} + t_{wb} - t_{wt}\right) = 3.50\ m$

Height of sloped soil above top of wall over heel: $h_{E3locUN2} := \left(L_{E3UN2}\right) \cdot \tan(\beta) = 0.00\ m$

Weight of sloped soil above top of wall: $W_{E3UN2} := \frac{\gamma_m}{2} \cdot h_{E3locUN2} \cdot L_{E3UN2} \cdot B = 0.0 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E3locUN2} := L_{ab} + t_{wt} + \frac{2}{3} \cdot L_{E3UN2} = 4.83\ m$

Moist soil from top of wall to groundwater level:

Height of soil from top of wall and top of GWL: $h_{1UN2} = 0.00\ m$

Length from edge of wall at GWL to edge of heel: $L_{E4UN2} := L_{E3UN2} - \left(h_{1UN2} \cdot S_{batter}\right) = 3.50\ m$

Weight of soil over heel from top of wall to GWL: $W_{E4UN2} := \gamma_m \cdot h_{1UN2} \cdot \frac{\left(L_{E3UN2} + L_{E4UN2}\right)}{2} \cdot B = 0.0 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E4locUN2} := b - \frac{L_{E3UN2}^2 + L_{E3UN2} \cdot L_{E4UN2} + L_{E4UN2}^2}{3\left(L_{E3UN2} + L_{E4UN2}\right)} = 4.25\ m$

Saturated soil from groundwater to top of footing:

Height of soil from GWL to top of heel: $h_{E4UN2} := h_{2UN2} - t_{ftg} - Key_{h.d} = 2.50\ m$

Weight of soil over heel from GWL to top of heel: $W_{E5UN2} := \left(\gamma_{sat}\right) \cdot h_{E4UN2} \cdot \frac{\left(L_{E4UN2} + L_{cd}\right)}{2} \cdot B = 187.1 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E5locUN2} := b - \frac{L_{E4UN2}^2 + L_{E4UN2} \cdot L_{cd} + L_{cd}^2}{3\left(L_{E4UN2} + L_{cd}\right)} = 4.30\ m$

$\Sigma V_{SoilWaterUN2} := W_{H1UN2} + W_{E6UN2} + W_{E3UN2} + W_{E4UN2} + W_{E5UN2} + S_{UN2} = 209.1 \cdot kN$

$$\Sigma M_{VertSoilWaterResistUN2} := W_{H1UN2} \cdot W_{E1locUN2} + W_{E6UN2} \cdot W_{E6locUN2} \cdots + W_{E3UN2} \cdot W_{E3locUN2} + W_{E4UN2} \cdot W_{E4locUN2} + W_{E5UN2} \cdot W_{E5locUN2} + S_{UN2} \cdot S_{UN2loc} = 826.3\ m \cdot kN$$

CHECK OVERTURNING

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stablity of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1

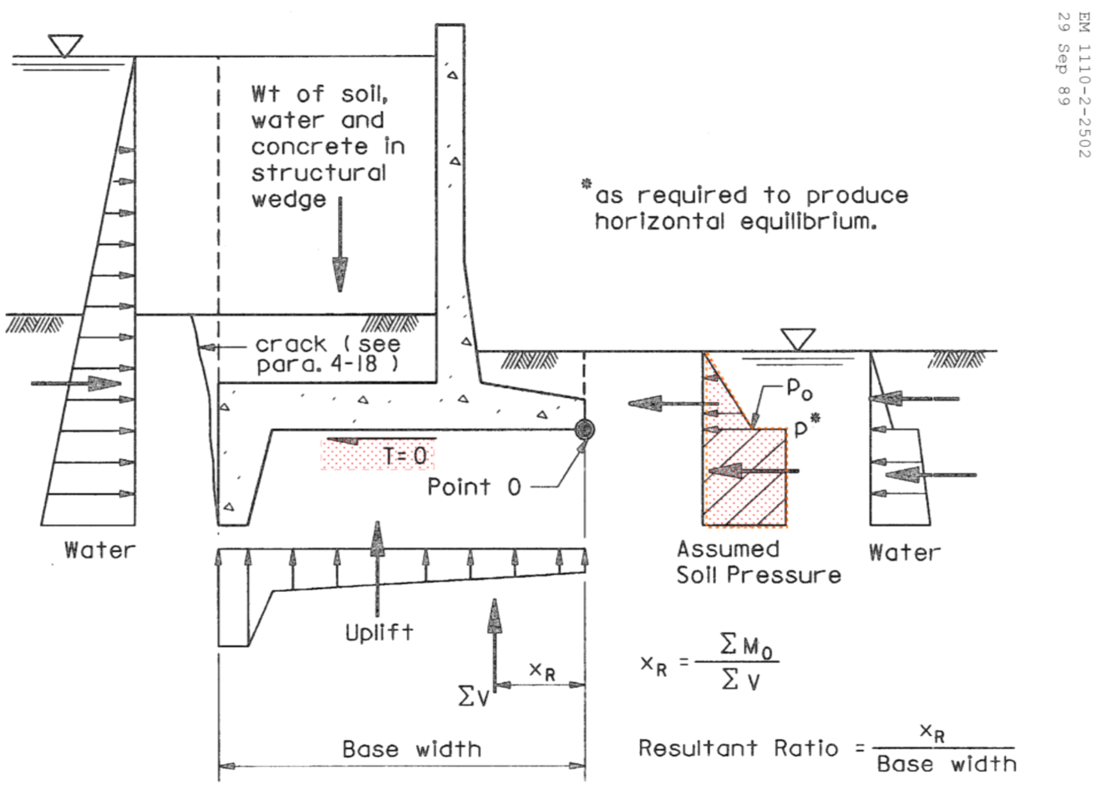

Figure 4-5. Forces for overturning analysis for wall with horizontal base and key

Modify Uplift for Overturning Analysis: **LOAD CASE UN2**

(Uplift is calculated along the concrete/rock contact using the Line of Creep method)

Water Pressure at h: $u_{h.UN2} := \Delta h_{g.hj.UN2} \cdot \gamma_w = 63.70 \cdot kPa$

Water Pressure at o: $u_{o.UN2} := \left(\Delta h_{g.no.UN2} - \frac{\Delta h_{g.r.UN2} \cdot L_{ho.UN2}}{L_{ho.UN2}} \right) \cdot \gamma_w = 44.1 \cdot kPa$

Head loss between point h and o: $\Delta h_{ho.UN2} := \Delta h_{g.r.UN2} \cdot \frac{L_{ho.UN2}}{L_{ho.UN2}} = 0\, m$

Length of concrete base (h -> o): $L_{baseho.UN2} := Key_{h.w} + Key_{h.d} + Key_{hdist} + Key_{t.d} + Key_{t.w} = 8\, m$

Head loss along h -> j: $\Delta h_{hj.UN2} := \Delta h_{ho.UN2} \cdot \frac{Key_{h.w}}{L_{baseho.UN2}} = 0\, m$

Water Pressure at j: $u_{j.UN2} := \left(\Delta h_{g.hj.UN2} - \Delta h_{hj.UN2} \right) \cdot \gamma_w = 63.70 \cdot kPa$

Head loss along h -> k: $\Delta h_{hjk.UN2} := \Delta h_{ho.UN2} \cdot \left(\frac{Key_{h.w} + Key_{h.d}}{L_{baseho.UN2}} \right) = 0\, m$

Water Pressure at k: $u_{k.UN2} := \left(\Delta h_{g.km.UN2} - \Delta h_{hjk.UN2} \right) \cdot \gamma_w = 44.10 \cdot kPa$

Head loss along h -> m: $\Delta h_{hjkm.UN2} := \Delta h_{ho.UN2} \cdot \left(\frac{Key_{h.w} + Key_{h.d} + Key_{hdist}}{L_{baseho.UN2}} \right) = 0\, m$

Water Pressure at m: $u_{m.UN2} := \left(\Delta h_{g.km.UN2} - \Delta h_{hjkm.UN2} \right) \cdot \gamma_w = 44.10 \cdot kPa$

Head loss along h -> n: $\Delta h_{hjkmn.UN2} := \Delta h_{ho.UN2} \cdot \left(\frac{Key_{h.w} + Key_{h.d} + Key_{hdist} + Key_{t.d}}{L_{baseho.UN2}} \right) = 0\, m$

Water Pressure at n: $u_{n.UN2} := \left(\Delta h_{g.no.UN2} - \Delta h_{hjkmn.UN2} \right) \cdot \gamma_w = 44.10 \cdot kPa$

Uplift under key at heel: $V_{ulkeyhUN2.OT} := \frac{\left(u_{h.UN2} + u_{j.UN2} \right) \cdot Key_{h.w}}{2} \cdot B \cdot -1 = -63.7 \cdot kN$

Moment Arm (from Point O): $V_{ulkeyhUN2loc.OT} := b - \frac{Key_{h.w} \cdot \left(2 \cdot u_{j.UN2} + u_{h.UN2} \right)}{3 \cdot \left(u_{j.UN2} + u_{h.UN2} \right)} = 5.5\, m$

Uplift under base: $V_{ulbaseUN2.OT} := \frac{\left(u_{k.UN2} + u_{m.UN2} \right) \cdot Key_{hdist}}{2} \cdot B \cdot -1 = -220.5 \cdot kN$

Moment Arm (from Point O): $V_{ulbaseUN2loc.OT} := b - Key_{h.w} - \frac{Key_{hdist} \cdot \left(2 \cdot u_{m.UN2} + u_{k.UN2} \right)}{3 \cdot \left(u_{m.UN2} + u_{k.UN2} \right)} = 2.5\, m$

Uplift under key at toe: $V_{ulkeytUN2.OT} := \frac{\left(u_{n.UN2} + u_{o.UN2} \right) \cdot Key_{t.w}}{2} \cdot B \cdot -1 = 0 \cdot kN$

Moment Arm (from Point O): $V_{ulkeytUN2loc.OT} := \frac{Key_{t.w} \cdot \left(2 \cdot u_{n.UN2} + u_{o.UN2} \right)}{3 \cdot \left(u_{n.UN2} + u_{o.UN2} \right)} = 0$

$$\Sigma V_{UpliftUN2.OT} := V_{ulkeyhUN2.OT} + V_{ulbaseUN2.OT} + V_{ulkeytUN2.OT} = -284 \cdot kN$$

$$U_{UN2.loc.OT} := \frac{V_{ulkeyhUN2.OT} \cdot V_{ulkeyhUN2loc.OT} + V_{ulbaseUN2.OT} \cdot V_{ulbaseUN2loc.OT} + V_{ulkeytUN2.OT} \cdot V_{ulkeytUN2loc.OT}}{\Sigma V_{UpliftUN2.OT}} = 3.17\, m$$

$$\Sigma M_{UpliftUN2.OT} := \Sigma V_{UpliftUN2.OT} \cdot U_{UN2.loc.OT} = -901.6 \cdot kN \cdot m$$

Modify Lateral Water Pressure (Resisting) for Overturning Analysis:

(Resisting water pressure is calculated using the Line of Creep method)

Water Load at Key (heel): $H_{h2UN2.OT} := \frac{u_{k.UN2} + u_{j.UN2}}{2} \cdot Key_{h.d} B = 107.8 \cdot kN$

Moment Arm (from Point O): $H_{h2locUN2.OT} := \frac{Key_{h.d} \cdot (2 \cdot u_{k.UN2} + u_{j.UN2})}{3(u_{k.UN2} + u_{j.UN2})} + Key_{vdist} = -1.06\ m$

Water Load at Key (toe): $H_{h6UN2.OT} := \frac{u_{o.UN2} \cdot (UWSEL_{UN2} - Bot_{ftg} + Key_{t.d})}{2} \cdot B = 99 \cdot kN$

Moment Arm (from Point O): $H_{h6locUN2.OT} := \frac{UWSEL_{UN2} - Bot_{ftg} + Key_{t.d}}{3} = 1.50\ m$

$$\Sigma H_{waterresistUN2.OT} := H_{h2UN2.OT} + H_{h6UN2.OT} = 207.03 \cdot kN$$

$$H_{waterresistlocUN2.OT} := \frac{H_{h2UN2.OT} \cdot H_{h2locUN2.OT} + H_{h6UN2.OT} \cdot H_{h6locUN2.OT}}{\Sigma H_{waterresistUN2.OT}} = 0.167\ m$$

$$\Sigma M_{waterresistUN2.OT} := \Sigma H_{waterresistUN2.OT} \cdot H_{waterresistlocUN2.OT} = 34.5 \cdot kN \cdot m$$

Modify Lateral Soil Loads for Overturning Analysis:

(Lateral soil loads are calculated down to Point O instead of bottom of shear key)

Driving Soil Load (Headwater Side):

Surcharge Load: $E_{s1UN2.OT} := S1_{UN2} \cdot K_o \cdot (H_w + Key_{h.d} + Key_{vdist}) \cdot B \cdot -1 = 0 \cdot kN$

Moment Arm (from Point O): $E_{s1locUN2.OT} := \frac{H_w + Key_{h.d} + Key_{vdist}}{2} = 2.25\ m$

Moist Soil Load above GWL: $E_{h1UN2.OT} := \frac{\gamma_m \cdot K_o \cdot h_{1UN2}^2}{2} B \cdot -1 = 0.0 \cdot kN$

Moment Arm (from Point O): $E_{h1locUN2.OT} := \frac{h_{1UN2}}{3} + h_{2UN2} + Key_{vdist} = 4.50\ m$

Saturated Soil Load below GWL: (rectangular component) $E_{h2UN2.OT} := (\gamma_m \cdot K_o \cdot h_{1UN2}) \cdot (h_{2UN2} + Key_{vdist}) \cdot B \cdot -1 = 0.0 \cdot kN$

Moment Arm (from Point O): $E_{h2locUN2.OT} := \frac{h_{2UN2} + Key_{vdist}}{2} = 2.25\ m$

Saturated Soil Load below GWL: (triangular component) $E_{h2aUN2.OT} := \frac{(\gamma_{sat} - \gamma_w) \cdot K_o \cdot (h_{2UN2} + Key_{vdist})^2}{2} \cdot B \cdot -1 = -67.4 \cdot kN$

Moment Arm (from Point O): $E_{h2alocUN2.OT} := \frac{h_{2UN2} + Key_{vdist}}{3} = 1.50\ m$

Resisting Soil Load (Tailwater Side):

(Determine resisting soil load based on depth variation between the keys (ie. Key_{vdist}). In case where key at heel is deeper than key at toe (ie. $Key_{vdist} < 0$), resisting soil load (p*) is assumed to produce horizontal equilibrium as per Figure 4-5 above. Resisting soil load (p_o) is neglected.)

Total Driving Force: $\Sigma H_{SoildriveUN2.OT} := E_{s1UN2.OT} + E_{h1UN2.OT} + E_{h2UN2.OT} + E_{h2aUN2.OT} + H_{h2UN2} = -274.5 \cdot kN$

Total Resisting Force: $\Sigma H_{waterresistUN2.OT} = 207.0 \cdot kN$

Assumed Soil Load p*: $E_{h8UN2a.OT} := \left(\Sigma H_{SoildriveUN2.OT} + \Sigma H_{waterresistUN2.OT}\right) \cdot -1 = 67.446 \cdot kN$

Moment Arm (from Point O): $E_{h8UN2a.loc.OT} := \dfrac{Key_{vdist}}{2} = -1\ m$

$$E_{h8UN2.OT} := \begin{cases} E_{h8UN2a.OT} & \text{if } Key_{vdist} < 0 \\ \Sigma H_{SoilresistUN2} - H_{h6UN2} - H_{h6aUN2} & \text{otherwise} \end{cases} = 67.446 \cdot kN$$

$$\Sigma M_{SoilresistUN2.OT} := \begin{cases} E_{h8UN2a.OT} \cdot E_{h8UN2a.loc.OT} & \text{if } Key_{vdist} < 0 \\ \Sigma M_{HorizSoilResistUN2} - H_{h6UN2} \cdot H_{h6locUN2} - H_{h6aUN2} \cdot H_{h6alocUN2} & \text{otherwise} \end{cases} = -67.446 \cdot kN \cdot m$$

Sum of Moment about Point O:

$$\Sigma M_{LateraldriveUN2.OT} := E_{s1UN2.OT} \cdot E_{s1locUN2.OT} + E_{h1UN2.OT} \cdot E_{h1locUN2.OT} + E_{h2UN2.OT} \cdot E_{h2locUN2.OT} \ldots + E_{h2aUN2.OT} \cdot E_{h2alocUN2.OT} + H_{h2UN2} \cdot H_{h2locUN2} = -135.7 \cdot kN \cdot m$$

$$\Sigma M_{LateralresistUN2.OT} := \Sigma M_{waterresistUN2.OT} + \Sigma M_{SoilresistUN2.OT} = -32.9 \cdot kN \cdot m$$

Total moment:

$$\Sigma M_{UN2.OT} := \Sigma M_{conc} + \Sigma M_{VertSoilWaterResistUN2} + \Sigma M_{UpliftUN2.OT} + \Sigma M_{LateraldriveUN2.OT} + \Sigma M_{LateralresistUN2.OT} = 941.4 \cdot kN \cdot m$$

Total Vertical Force: $\Sigma V_{UN2.OT} := \Sigma V_{conc} + \Sigma V_{SoilWaterUN2} + \Sigma V_{UpliftUN2.OT} = 289.0 \cdot kN$

Distance X_R: EM 1110-2-2502 Eq.4-1 $X_{R.UN2} := \dfrac{\Sigma M_{UN2.OT}}{\Sigma V_{UN2.OT}} = 3.257\ m$

Overturning Resultant Ratio $Ratio_{UN2.OT} := \dfrac{X_{R.UN2}}{b} = 0.54$

$$Ratio_{UN2.OT.check} := \begin{cases} \text{"OKAY "} & \text{if } Ratio_{UN2.OT} > X_{R.reqUN2} \\ \text{"Revise Structure""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

CHECK FOUNDATION ECCENTRICITY (HORIZONTAL PLANE):

Eccentricity (horizontal plan): $ex_{UN2.OT} := \dfrac{b}{2} - \dfrac{\Sigma M_{UN2.OT}}{\Sigma V_{UN2.OT}} = -0.26\ m$ $\quad Kern_{OT} = 1\ m$

Eccentricity Check:

$$e_{check.UN2.OT} := \begin{cases} \text{"Okay"} & \text{if } ex_{UN2} \le Kern_{OT} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"Okay"}$$

LOAD CASE UN2

CHECK FOUNDATION BEARING CAPACITY (HORIZONTAL PLANE):

Base Section Modulus: $S_{b.OT} = 6\,m^3$

Bearing Pressure Under Toe:

$$\sigma_{ToeUN2.OT} := \begin{cases} \left(\dfrac{\Sigma V_{UN2.OT}}{b \cdot B} + \dfrac{\Sigma V_{UN2.OT} \cdot ex_{UN2.OT}}{S_{b.OT}}\right) & \text{if } \dfrac{\Sigma V_{UN2.OT}}{b \cdot B} \geq \dfrac{\Sigma V_{UN2.OT} \cdot ex_{UN2.OT}}{S_{b.OT}} \\ \dfrac{2 \cdot \Sigma V_{UN2.OT}}{B \cdot 3\left(\dfrac{b}{2} - ex_{UN2.OT}\right)} & \text{otherwise} \end{cases} = 35.8 \cdot kPa$$

$$Bearing_{ChecktoeUN2.OT} := \begin{cases} \text{"OKAY "} & \text{if } \sigma_{ToeUN2.OT} < \sigma_{allowUN2} \\ \text{"NG - for reference only""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

Bearing Pressure Under Heel:

$$\sigma_{HeelUN2.OT} := \begin{cases} \left(\dfrac{\Sigma V_{UN2.OT}}{b \cdot B} - \dfrac{\Sigma V_{UN2.OT} \cdot ex_{UN2.OT}}{S_{b.OT}}\right) & \text{if } \dfrac{\Sigma V_{UN2.OT}}{b \cdot B} \geq \dfrac{\Sigma V_{UN2.OT} \cdot ex_{UN2.OT}}{S_{b.OT}} \\ 0 & \text{otherwise} \end{cases} = 60.6 \cdot kPa$$

$$Bearing_{CheckheelUN2.OT} := \left(\begin{cases} \text{"OKAY "} & \text{if } \sigma_{HeelUN2.OT} < \sigma_{allowUN2} \wedge \sigma_{HeelUN2.OT} > 0 \\ \text{"NG - for reference only""} & \text{otherwise} \end{cases}\right) = \text{"OKAY "}$$

SUMMARY OF STABILITY ASSESSMENT:

LOAD CASE UN2

Sliding Factor of Safety: (Horizontal Plane - Ref only)	$FS_{Horiz.SlidingUN2} = 0.59$	$FS_{Sliding.check1.UN2}$ = "NG - key req'"
Sliding Factor of Safety: (Inclined Plane)	$FS_{InclinedISlidingUN2} = 3.60$	$FS_{Sliding.check2.UN2}$ = "OKAY "
Eccentricity: (Inclined Plane)	$ex_{UN2} = 0.21\ m$	$e_{check.UN2}$ = "Okay"
Bearing Pressure At Heel: (Inclined Plane)	$\sigma_{HeelUN2} = 53 \cdot kPa$	$Bearing_{CheckheelUN2}$ = "OKAY "

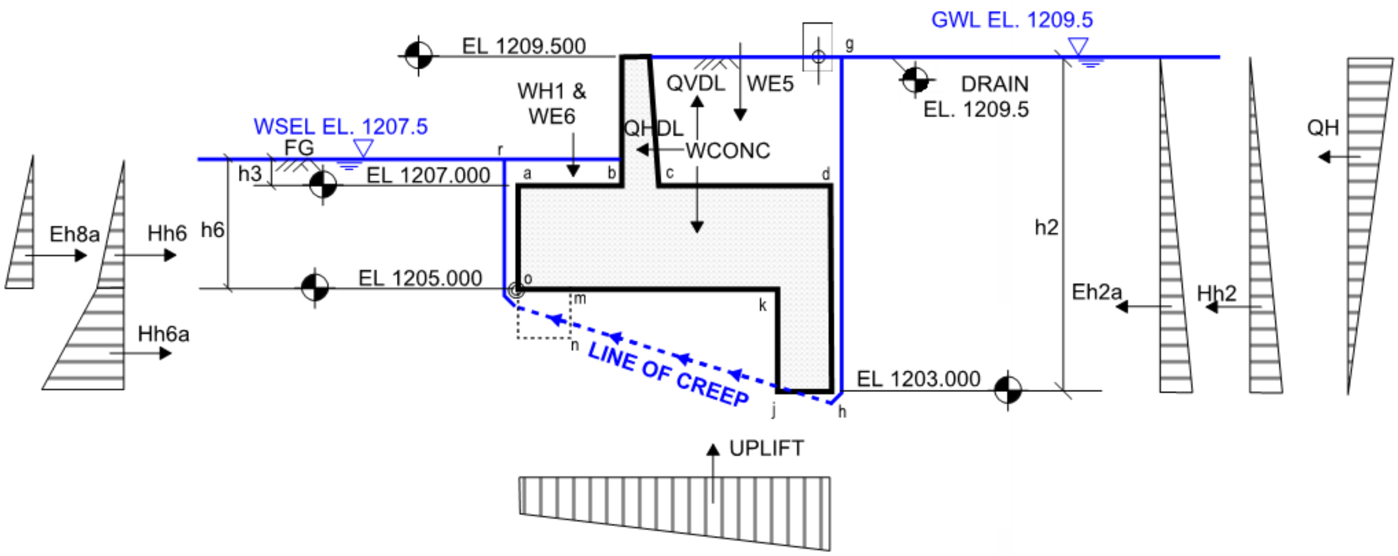
Flotation Factor of Safety (horizontal plane)	$FS_{FloatationUN2} = 1.77$	$FS_{Floatation.UN2.check}$ = "OKAY "
Overturning Resultant Ratio: (horizontal plane)	$Ratio_{UN2.OT} = 0.54$	$Ratio_{UN2.OT.check}$ = "OKAY "
Eccentricity: (horizontal plane - Ref only)	$ex_{UN2.OT} = -0.26\ m$	$e_{check.UN2.OT}$ = "Okay"
Bearing Pressure At Heel: (horizontal plane - Ref only)	$\sigma_{HeelUN2.OT} = 61 \cdot kPa$	$Bearing_{CheckheelUN2.OT}$ = "OKAY "
Bearing Pressure At Toe: (horizontal plane - Ref only)	$\sigma_{ToeUN2.OT} = 36 \cdot kPa$	$Bearing_{ChecktoeUN2.OT}$ = "OKAY "

LOAD CASE E1 - SEISMIC LOADING



E1 DESIGN CASE

LOAD CASE E1 ACCEPTANCE PARAMETERS

FS sliding:

Extreme (E) loading) 1.0 (without cohesion, seismic (Table 3-3, USACE EM 1110-2-2100)

Resultant Location:

Extremem (E) Inside middle half ~75% base in compression

Required Factor of Safety for Sliding: $FS_{sliding.reqE1} := 1.0$ (Without Cohesion)

Allowable rock bearing pressure: $\sigma_{allowE1} := 1740kPa$ (Section 5.2, Design Criteria EM 1110-2-2100 Section 3-10)

Overturning Required Resultant Ratio: $X_{R.reqE1} := 0.25$ (EM 1110-2-2502, Figure 4-4)

Required Factor of Safety for Floatation $FS_{req.E1.flt} := 1.1$

SOIL HEIGHTS and Water Levels:

LOAD CASE E1

Heel Conditions:

Groundwater Elevation at Heel: $GWL_{E1} := 1209.5m$

Distance from Finish Grade to Groundwater at Heel: $h_{1E1} := \left[T_w - GWL_{E1} + \left(L_{cd} + t_{wb} - t_{wt}\right)\cdot\tan(\beta)\right] = 0.00\ m$

Distance from Water Surface to Bottom of Footing at Heel: $h_{2E1} := GWL_{E1} - Bot_{ftg} + Key_{h.d} = 6.50\ m$

Toe Conditions:

Water Surface Elevation at Toe: $WSEL_{E1} := 1207.5m$

Water Surface Elevation at Toe for Uplift: $UWSEL_{E1} := 1207.5\cdot m$

Finish Grade at Toe providing lateral resistance: $FG_{toeE1} := 1207.5\cdot m$

Soil Depth Above top of footing: $h_{3aE1} := FG_{toeE1} - Top_{ftg} = 0.5\ m$

$$h_{3E1} := \begin{cases} h_{3aE1} & \text{if } FG_{toeE1} - Top_{ftg} \ge 0 \\ 0 & \text{otherwise} \end{cases} = 0.5$$

Resisting Fill at Toe: $h_{4E1} := FG_{toeE1} - Bot_{ftg} + Key_{t.d} = 2.50\ m$

Distance from Water Level to Top of Footing: $h_{5E1} := WSEL_{E1} - Top_{ftg} = 0.50\ m$

Distance from Water Surface to Bottom of Toe Key: $h_{6E1} := WSEL_{E1} - Bot_{ftg} + Key_{t.d} = 2.50\ m$

Soil Depth Above WSEL: $h_{7aE1} := FG_{toeE1} - WSEL_{E1} = 0\ m$

$$h_{7E1} := \begin{cases} h_{7aE1} & \text{if } FG_{toeE1} - WSEL_{E1} \ge 0 \\ 0 & \text{otherwise} \end{cases} = 0$$

Soil Depth Below WSEL:

$$h_{8E1} := \begin{cases} WSEL_{E1} - Bot_{ftg} + Key_{t.d} & \text{if } FG_{toeE1} - WSEL_{E1} \ge 0 \\ h_{4E1} & \text{otherwise} \end{cases} = 2.5$$

For Line of Creep Method: $L_{ho.E1} := \sqrt{b^2 + \left(Key_{h.d} - Key_{t.d}\right)^2} = 6.325\ m$

Head Loss from Point g:

$\Delta h_{g.hj.E1} := h_{2E1} = 6.5\ m$ (to point h & j)

$\Delta h_{g.km.E1} := GWL_{E1} - Bot_{ftg} = 4.5\ m$ (to point k & m)

$\Delta h_{g.no.E1} := GWL_{E1} - Bot_{ftg} + Key_{t.d} = 4.5\ m$ (to point n & o)

$\Delta h_{g.p.E1} := GWL_{E1} - FG_{toeE1} = 2\ m$ (to point p*)

$\Delta h_{g.r.E1} := GWL_{E1} - UWSEL_{E1} = 2\ m$ (to point r)

Surcharge

Surcharge on Heel: $S1_{E1} := 0.0\ \frac{kN}{m^2}$

* same as point "r" in this case

Calculate Soil Lateral Pressure Coefficients:

LOAD CASE E1

Calculate at-rest pressure coefficient K_o based on Jaky's (1944) equation.

Soil At Rest Static Coefficient:
(apply to resisting soil loads)

$$K_o := \frac{1 - \sin(\phi)}{1 + \sin(\beta)} = 0.546$$

(Eq. 3-6, USACE EM 1110-2-2502)

Calculate active pressure coefficient K_A based on Coulumb equations.

Determine Slope of Active Wedge: (cohesionless backfill with water table)

$$c_1 := 2 \cdot \tan(\phi) = 1.019 \qquad c_2 := 1 - \tan(\phi) \cdot \tan(\beta) - \frac{\tan(\beta)}{\tan(\phi)} = 1$$

(Eq. G-14 / G-15, USACE EM 1110-2-2100)

$$\alpha := \operatorname{atan}\left(\frac{c_1 + \sqrt{c_1^{\,2} + 4 \cdot c_2}}{2}\right) = 1.021 \qquad \alpha_{deg} := \alpha \cdot \frac{180}{\pi} = 58.5 \text{ degrees}$$

(Eq. G-13, USACE EM 1110-2-2100)

Soil Active Coefficient above GWL:

$$K_{Aagwt} := \left(\frac{1 - \tan(\phi) \cdot \cot(\alpha)}{1 + \tan(\phi) \cdot \tan(\alpha)}\right) \cdot \left(\frac{\tan(\alpha)}{\tan(\alpha) - \tan(\beta)}\right) = 0.376$$

Soil Active Coefficient below GWL:

$$K_{Abgwt} := \frac{1 - \tan(\phi) \cdot \cot(\alpha)}{1 + \tan(\phi) \cdot \tan(\alpha)} \cdot \left[1 + \left(\frac{\tan(\alpha)}{\tan(\alpha) - \tan(\beta)} - 1\right) \cdot \left(\frac{\gamma_m}{\gamma_{sat} - \gamma_w}\right)\right] = 0.376$$

(Eq. G-29, USACE EM 1110-2-2100)

Lateral - Driving Force

Static Copmonent : Active Pressure:

Surcharge Load:

$$E_{s1E1} := S1_{E1} \cdot K_{Aagwt} \cdot \left(H_w + Key_{h.d}\right) \cdot B \cdot -1 = 0 \cdot kN$$

Moment Arm (from Point O):

$$E_{s1locE1} := \frac{H_w + Key_{h.d}}{2} + Key_{vdist} = 1.25\,m$$

Moist Soil Load above GWL:

$$E_{h1E1} := \frac{\gamma_m \cdot K_{Aagwt} \cdot h_{1E1}^{\,2}}{2} \cdot B \cdot -1 = 0.0 \cdot kN$$

Moment Arm (from Point O):

$$E_{h1locE1} := \frac{h_{1E1}}{3} + h_{2E1} + Key_{vdist} = 4.50\,m$$

Saturated Soil Load below GWL:
(rectangular component)

$$E_{h2E1} := \left(\gamma_m \cdot K_{Abgwt} \cdot h_{1E1}\right) \cdot h_{2E1} \cdot B \cdot -1 = 0.0 \cdot kN$$

Moment Arm (from Point O):

$$E_{h2locE1} := \frac{h_{2E1}}{2} + Key_{vdist} = 1.25\,m$$

Saturated Soil Load below GWL:
(triangular component)

$$E_{h2aE1} := \frac{\left(\gamma_{sat} - \gamma_w\right) \cdot K_{Abgwt} \cdot h_{2E1}^{\,2}}{2} \cdot B \cdot -1 = -96.8 \cdot kN$$

Moment Arm (from Point O):

$$E_{h2alocE1} := \frac{h_{2E1}}{3} + Key_{vdist} = 0.17\,m$$

Lateral Water Load:

Water Load GWL to Bottom of Keys:

$$H_{h2E1} := \begin{cases} \dfrac{\gamma_w \cdot h_{2E1}^{\,2}}{2} \cdot B \cdot -1 & \text{if } Key_{vdist} < 0 \\ \dfrac{\gamma_w \cdot \left(h_{2E1} + Key_{vdist}\right)^2}{2} \cdot B \cdot -1 & \text{otherwise} \end{cases} = -207.0 \cdot kN$$

Moment Arm (from Point O):

$$H_{h2locE1} := \begin{cases} \dfrac{h_{2E1}}{3} + Key_{vdist} & \text{if } Key_{vdist} < 0 \\ \dfrac{h_{2E1} + Key_{vdist}}{3} & \text{otherwise} \end{cases} = 0.17 \cdot m$$

$$\Sigma H_{SoildriveE1} := E_{s1E1} + E_{h1E1} + E_{h2E1} + E_{h2aE1} + H_{h2E1} = -303.8 \cdot kN$$

$$\Sigma M_{LateralSoildriveE1} := E_{s1E1} \cdot E_{s1locE1} + E_{h1E1} \cdot E_{h1locE1} + E_{h2E1} \cdot E_{h2locE1} \ldots + E_{h2aE1} \cdot E_{h2alocE1} + H_{h2E1} \cdot H_{h2locE1} = -50.6\, m \cdot kN$$

Lateral - Resisting Force

LOAD CASE E1

Note: **Due to the relatively shallow depth of resisting soil/rock, a conservative apporach using at-rest coefficient in lieu of a passive wedge is used to calculate resisting forces.**

Lateral Water Load:

Water Load WSEL to Bot. of Toe Key: $H_{h6E1} := H_{h6U1} = 30.6 \cdot kN$

Moment Arm (from Point O): $H_{h6locE1} := H_{h6locU1} = 0.83\ m$

Water Load between Keys (if any):

$$H_{h6aE1} := \begin{cases} \dfrac{\left(h_{6E1} + h_{2E1}\right) \cdot -Key_{vdist}}{2} \cdot \gamma_w \cdot B & \text{if } Key_{vdist} < 0 \\ 0 & \text{otherwise} \end{cases} = 88.2 \cdot kN$$

Moment Arm (from Point O):

$$H_{h6alocE1} := \begin{cases} \dfrac{Key_{vdist} \cdot \left(2 \cdot h_{2E1} + h_{6E1}\right)}{3\left(h_{2E1} + h_{6E1}\right)} & \text{if } Key_{vdist} < 0 \\ 0 & \text{otherwise} \end{cases} = -1.15 \cdot m$$

Lateral Soil Load:

Moist Soil Load above WSEL: $E_{h7E1} := \dfrac{\gamma_m \cdot K_o \cdot h_{7E1}^{\,2}}{2} \cdot B = 0.0 \cdot kN$

Moment Arm (from bot. of toe key): $E_{h7locE1} := h_{6E1} + \dfrac{h_{7E1}}{3} + Key_{vdist} = 0.50\ m$

Saturated Soil Load below WSEL:
(rectangular component)

$E_{h8E1} := \left(\gamma_m \cdot K_o \cdot h_{7E1}\right) \cdot h_{8E1} \cdot B = 0.0 \cdot kN$

Moment Arm (from bot. of toe key): $E_{h8locE1} := \dfrac{h_{8E1}}{2} = 1.25\ m$

Saturated Soil Load below WSEL:
(triangular component)

$E_{h8aE1} := \dfrac{\left[\left(\gamma_{sat} - \gamma_w\right) \cdot K_o\right] \cdot h_{8E1}^{\,2}}{2} \cdot B = 20.8 \cdot kN$

Moment Arm (from bot. of footing): $E_{h8alocE1} := \dfrac{h_{8E1}}{3} = 0.83\ m$

$\Sigma H_{SoilresistE1} := H_{h6E1} + H_{h6aE1} + E_{h7E1} + E_{h8E1} + E_{h8aE1} = 139.6 \cdot kN$

$$\Sigma M_{HorizSoilResistE1} := H_{h6E1} \cdot H_{h6locE1} + H_{h6aE1} \cdot H_{h6alocE1} + E_{h7E1} \cdot E_{h7locE1} \ldots + E_{h8E1} \cdot E_{h8locE1} + E_{h8aE1} \cdot E_{h8alocE1} = -58.4\ m \cdot kN$$

Vertical Force:

UPLIFT: Linear distribution from water at heel to water at toe:

$$\Sigma V_{UpliftE1} := \left[\left(UWSEL_{E1} - Bot_{ftg} + Key_{t.d}\right) + h_{2E1}\right] \cdot \frac{b}{2} \cdot \gamma_w \cdot B \cdot -1 = -264.6 \cdot kN$$

Moment Arm (from Point O):

$$V_{UpliftE1aloc} := \frac{b \cdot \left[2 \cdot h_{2E1} + \left(UWSEL_{E1} - Bot_{ftg} + Key_{t.d}\right)\right]}{3\left[h_{2E1} + \left(UWSEL_{E1} - Bot_{ftg} + Key_{t.d}\right)\right]} = 3.444\ m$$

$\Sigma M_{UpliftE1} := \Sigma V_{UpliftE1} \cdot V_{UpliftE1aloc} = -911.4 \cdot kN \cdot m$

Weight of soil and water over toe:

Water Above the Top of Footing: $W_{H1E1} := \gamma_w \cdot h_{5E1} \cdot L_{ab} \cdot B = 9.8 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E1locE1} := \frac{L_{ab}}{2} = 1\ m$

Soil above top of footing: $W_{E6E1} := \gamma_b \cdot h_{3E1} \cdot L_{ab} \cdot B = 12.2 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E6locE1} := \frac{L_{ab}}{2} = 1\ m$

Vertical Load Due to Surcharge: $S_{E1} := S1_{E1} \cdot L_{cd} \cdot B = 0 \cdot kN$ $\quad S_{E1loc} := b - \frac{L_{cd}}{2} = 4.35\ m$

Weight of soil and water over heel:

Moist Soil for sloped grade above top of wall:

Length of sloped portion of soil above top of wall: $L_{E3E1} := \left(L_{cd} + t_{wb} - t_{wt}\right) = 3.50\ m$

Height of sloped soil above top of wall over heel: $h_{E3locE1} := \left(L_{E3E1}\right) \cdot \tan(\beta) = 0.00\ m$

Weight of sloped soil above top of wall: $W_{E3E1} := \frac{\gamma_m}{2} \cdot h_{E3locE1} \cdot L_{E3E1} \cdot B = 0.0 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E3locE1} := L_{ab} + t_{wt} + \frac{2}{3} \cdot L_{E3E1} = 4.83\ m$

Moist soil from top of wall to groundwater level:

Height of soil from top of wall and top of GWL: $h_{1E1} = 0.00\ m$

Length from edge of wall at GWL to edge of heel: $L_{E4E1} := L_{E3E1} - \left(h_{1E1} \cdot S_{batter}\right) = 3.50\ m$

Weight of soil over heel from top of wall to GWL: $W_{E4E1} := \gamma_m \cdot h_{1E1} \cdot \frac{\left(L_{E3E1} + L_{E4E1}\right)}{2} \cdot B = 0.0 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E4locE1} := b - \frac{L_{E3E1}^{\ 2} + L_{E3E1} \cdot L_{E4U1} + L_{E4E1}^{\ 2}}{3\left(L_{E3E1} + L_{E4E1}\right)} = 4.25\ m$

Saturated soil from groundwater to top of footing:

Height of soil from GWL to top of heel: $h_{E4E1} := h_{2E1} - t_{ftg} - Key_{h.d} = 2.50\ m$

Weight of soil over heel from GWL to top of heel: $W_{E5E1} := \left(\gamma_{sat}\right) \cdot h_{E4E1} \cdot \frac{\left(L_{E4E1} + L_{cd}\right)}{2} \cdot B = 187.1 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E5locE1} := b - \frac{L_{E4E1}^{\ 2} + L_{E4E1} \cdot L_{cd} + L_{cd}^{\ 2}}{3\left(L_{E4E1} + L_{cd}\right)} = 4.30\ m$

$\Sigma V_{SoilWaterE1} := W_{H1E1} + W_{E6E1} + W_{E3E1} + W_{E4E1} + W_{E5E1} + S_{E1} = 209.1 \cdot kN$

$\Sigma M_{VertSoilWaterResistE1} := W_{H1E1} \cdot W_{E1locE1} + W_{E6E1} \cdot W_{E6locE1} \cdots$
$+ W_{E3E1} \cdot W_{E3locE1} + W_{E4E1} \cdot W_{E4locE1} + W_{E5E1} \cdot W_{E5locE1} + S_{E1} \cdot S_{E1loc} = 826.3\ m \cdot kN$

SESIMIC ANALYSIS:

LOAD CASE E1

Seismic coefficient will be applied to dead loads to calculate seismic force and force is applied at center of gravity of the mass. Vertical and Horizontal loads are applied in the "destabilizing direction"

SEISMIC PARAMETERS:

(Section 7.9, Design Criteria)

Peak Ground Acceleration for Seismic Load $PGA_{Horiz} := 0.26$ $PGA_{Vert} := 0.56 \cdot PGA_{Horiz} = 0.146$

In accordance with USACE EM 1110-2-2100 Section 4-7.b, consider 2/3 PGA as seismic coefficient for stabilitiy.

Horizontal Seismic coefficient for stabilty: $K_{hE1} := \frac{2}{3} PGA_{Horiz} = 0.173$

Vertical Seismic coefficient for stabilty: $K_{vE1} := \frac{2}{3} PGA_{Vert} = 0.097$

SEISMIC ACCELERATION OF RIGID MASSES (Q_D):

Vertical Load Application:

$\Sigma V_{conc} = 364.1 \cdot kN$

$Q_{v.conc} := \Sigma V_{conc} \cdot K_{vE1} \cdot -1 = -35.3 \cdot kN$ (assume acting upwards for adverse sliding effect)

Moment arm for siesmic load application (From Toe): $H_{cent} = 3.255\,m$

$M_{Qv.conc} := Q_{v.conc} \cdot H_{cent} = -115.1 \cdot kN \cdot m$

Lateral Load Application:

$Q_{h.conc} := \Sigma V_{conc} \cdot K_{hE1} \cdot -1 = -63.1 \cdot kN$

Moment arm for siesmic load application (Above Base of Footing): $V_{Cent} = 0.952\,m$

$M_{Q.conc} := Q_{h.conc} \cdot V_{Cent} = -60.1 \cdot kN \cdot m$

SEISMIC ACCELERATION OF SOIL WEDGE + WATER (Q_{EH}):

Vertical Load Application:

$\Sigma V_{SoilWaterE1} = 209.1 \cdot kN$

$Q_{v.SoilWaterE1} := \Sigma V_{SoilWaterE1} \cdot K_{vE1} \cdot -1 = -20.3 \cdot kN$ (assume acting upwards for adverse sliding effect)

Moment arm for siesmic load application (From Toe): $e_{QE1} := \frac{\Sigma M_{VertSoilWaterResistE1}}{\Sigma V_{SoilWaterE1}} = 3.951\,m$

$M_{Qv.SoilWaterE1} := Q_{v.SoilWaterE1} \cdot e_{QE1} = -80.2 \cdot kN \cdot m$

Lateral Load Application:

Seismic soil load is calculated based on Mononobe-Okabe method to determine combined static and dynamic coefficient (K_{AE}). Coulomb's active component (K_A) is subtracted from K_{AE} to obtain the seismic coefficient (ΔK_{AE}) for dynamic component of soil force.

Glacial Till Internal Friction (radians): $\phi = 0.471$

Seismic Inertia Angle (radians): $\psi := \operatorname{atan}\left(\frac{K_{hE1}}{1 - K_{vE1}}\right) = 0.190$

Inclination of batter (radians): $\theta := 0.00$ assuming zero is conservative

Slope of retained ground surface: $\beta = 0.00$

$$K_{AE} := \frac{\cos(\phi - \psi - \theta) \cdot \cos(\phi - \psi - \theta)}{\cos(\psi) \cdot \cos(\theta) \cdot \cos(\theta)\ \cos(\psi + \theta) \cdot \left(1 + \sqrt{\frac{\sin(\phi)\ \sin(\phi - \psi - \beta)}{\cos(\beta - \theta) \cdot \cos(\psi + \theta)}}\right)^2} = 0.519$$

$\Delta K_{AE} := K_{AE} - K_{Abgwt} = 0.143$

Dynamic component of active seismic wedge:

$$Q_{h.SoilWaterE1} := \Delta K_{AE} \cdot \left[\frac{\gamma_m \cdot \left(H_w + Key_{h.d}\right)^2}{2 \cdot (\tan(\alpha) - \tan(\beta))} + \frac{\left(\gamma_{sat} - \gamma_m\right) \cdot h_{2E1}^{\ 2}}{2 \cdot \tan(\alpha)}\right] \cdot B \cdot -1 = -40.7 \cdot kN$$

(Eq. G-64, USACE EM 1110-2-2100)

Moment arm for siesmic load application (About Point O): $Q_{h.SoilWaterlocE1} := \frac{2}{3} \cdot \left(H_w + Key_{h.d}\right) + Key_{vdist} = 2.33\,m$

$M_{Q.h.SoilWaterE1} := Q_{h.SoilWaterE1} \cdot Q_{h.SoilWaterlocE1} = -95 \cdot kN \cdot m$

STABILITY ASSESSMENT:

LOAD CASE E1

CHECK SLIDING ALONG HORIZONTAL SLIDING PLANE:

Summation of the vertical forces: $\Sigma V_{E1} := \Sigma V_{conc} + \Sigma V_{SoilWaterE1} + \Sigma V_{UpliftE1} + Q_{v.conc} + Q_{v.SoilWaterE1} = 253.0 \cdot kN$

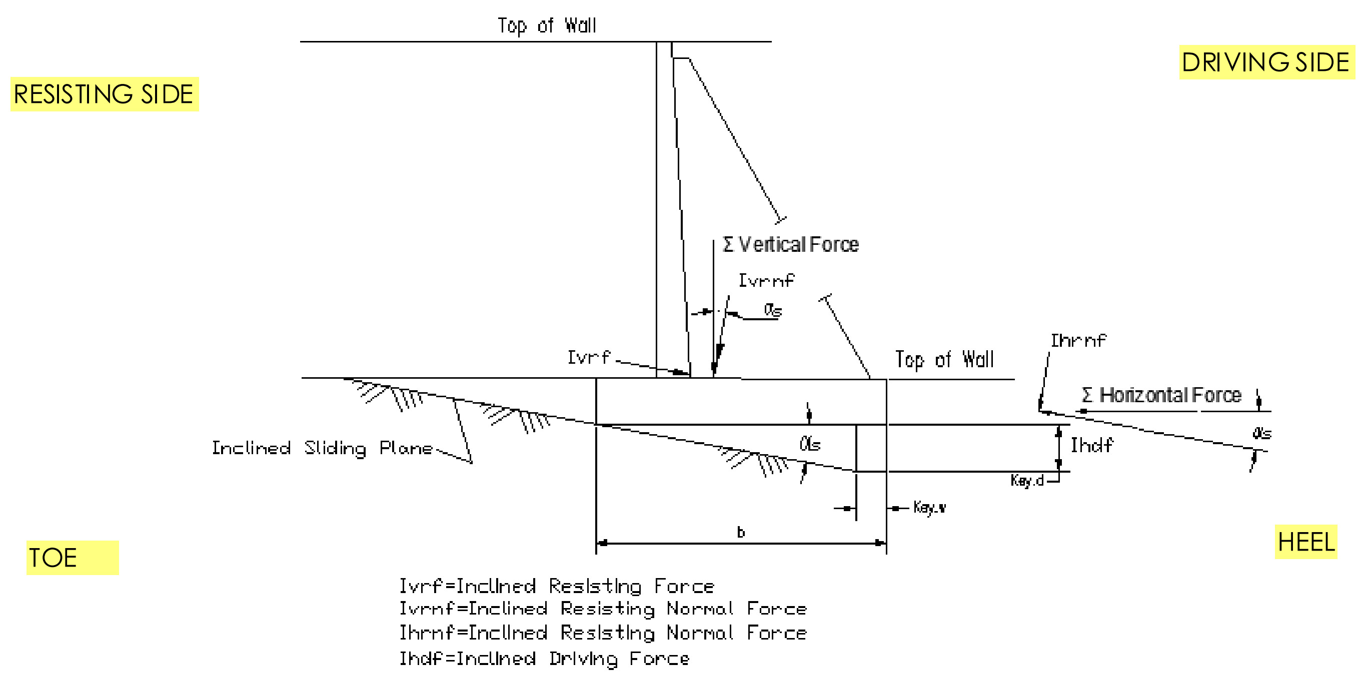
Summation of the horizontal forces: $\Sigma H_{E1} := \Sigma H_{SoildriveE1} + Q_{h.conc} + Q_{h.SoilWaterE1} + \Sigma H_{SoilresistE1} = -268.0 \cdot kN$

Safety Factor for Sliding Horizontal Failure Plane

$$FS_{Horiz.SlidingE1} := \frac{\left|\Sigma V_{E1}\right| \cdot \tan\left(\phi_{rock} \cdot \frac{\pi}{180}\right)}{\left|\Sigma H_{E1}\right|} = 0.46$$

$$FS_{Sliding.check1.E1} := \begin{array}{|l} \text{"OKAY" if } FS_{Horiz.SlidingE1} > FS_{sliding.reqE1} \\ \text{"NG - key req"" otherwise} \end{array} = \text{"NG - key req""}$$

CHECK FACTOR OF SAFETY SLIDING WITH KEY (INCLINED SLIDING PLANE):



(With properly engineered reinforced concrete Key, horizontal sliding plane thru Toe is protected, critical sliding plane is relocated to the INCLINED SLIDING PLANE FROM HEEL KEY To TOE, Bedrock Mass above this examing plane is mobilized by reinforced concrete key and combined into Structural Wedge.)

Resolve ΣV_{E1} & ΣH_{E1}

$$\Sigma V_{InclinedE1} := \cos(\alpha s) \cdot \left(\left|\Sigma V_{E1} + V_{rocksection}\right|\right) + \sin(\alpha s) \cdot \left|\Sigma H_{E1}\right| = 453.3 \cdot kN$$

$$\Sigma H_{InclinedE1} := \cos(\alpha s) \cdot \left|\Sigma H_{E1}\right| - \sin(\alpha s) \cdot \left(\left|\Sigma V_{E1} + V_{rocksection}\right|\right) = 107.3 \cdot kN$$

Safety Factor for Sliding Inclined Failure Plane

$$FS_{InclinedISlidingE1} := \frac{\Sigma V_{InclinedE1} \cdot \tan\left(\phi_r\right)}{\Sigma H_{InclinedE1}} = 1.88$$

$$FS_{Sliding.check2.E1} := \begin{array}{|l} \text{"OKAY" if } FS_{InclinedISlidingE1} > FS_{sliding.reqE1} \\ \text{"NG"" otherwise} \end{array} = \text{"OKAY"}$$

CHECK FOUNDATION ECCENTRICITY:

LOAD CASE E1

(Vertical seismic loads from concrete, soil and water are assumed acting downwards for adverse bearing effect)

Summation of the vertical forces: $\Sigma V_{seisE1} := \Sigma V_{conc} + \Sigma V_{SoilWaterE1} + \Sigma V_{UpliftE1} - Q_{v.conc} - Q_{v.SoilWaterE1} = 364.3 \cdot kN$

Summation of the horizontal forces: $\Sigma H_{seisE1} := \Sigma H_{E1} = -268.0 \cdot kN$

Resolve ΣV_{seisE1} & ΣH_{seisE1}

$$\Sigma V_{InclinedseisE1} := \cos(\alpha s) \cdot \left(\left|\Sigma V_{seisE1} + V_{rocksection}\right|\right) + \sin(\alpha s) \cdot \left|\Sigma H_{seisE1}\right| = 556.6 \cdot kN$$

$$\Sigma H_{InclinedseisE1} := \cos(\alpha s) \cdot \left|\Sigma H_{seisE1}\right| - \sin(\alpha s) \cdot \left(\left|\Sigma V_{seisE1} + V_{rocksection}\right|\right) = 66.0 \cdot kN$$

Summation of the resisting moments about the toe:

$$\Sigma M_{resE1} := \Sigma M_{conc} + \Sigma M_{VertSoilWaterResistE1} + \Sigma M_{HorizSoilResistE1} + \Sigma M_{rocksection} = 2380 \cdot kN \cdot m$$

Summation of seismic moments about the toe:

$$\Sigma M_{seisE1} := -M_{Qv.conc} + M_{Q.conc} - M_{Qv.SoilWaterE1} + M_{Q.h.SoilWaterE1} = 40 \cdot kN \cdot m$$

Summation of the overturning moments about the toe:

$$\Sigma M_{oE1} := \Sigma M_{LateralSoildriveE1} + \Sigma M_{UpliftE1} = -962 \cdot kN \cdot m$$

Total moment: $\Sigma M_{E1} := \Sigma M_{resE1} + \Sigma M_{seisE1} + \Sigma M_{oE1} = 1458.0 \cdot kN \cdot m$

Normal force to base: $\Sigma V_{InclinedseisE1} = 556.6 \cdot kN$

Inclined Sliding Plane Length: $L_{incline} = 6.5 \cdot m$

Eccentricity (inclined plane): $ex_{E1} := \frac{L_{incline}}{2} - \frac{\Sigma M_{E1}}{\Sigma V_{InclinedseisE1}} = 0.61\ m$ $\quad Kern_{E1} := \frac{L_{incline}}{4} = 1.616\ m$

Eccentricity Check:

$$e_{check.E1} := \begin{cases} \text{"Okay"} & \text{if } ex_{E1} \le Kern_{E1} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"Okay"}$$

CHECK FOUNDATION BEARING CAPACITY:

Base Section Modulus: $S_b = 6.96\ m^3$

Bearing Pressure Under Toe:

$$\sigma_{ToeE1} := \begin{cases} \left[\frac{\Sigma V_{InclinedE1}}{L_{incline} \cdot B} + \frac{\left(\Sigma V_{InclinedE1} \cdot ex_{E1}\right)}{S_b}\right] & \text{if } \frac{\Sigma V_{InclinedE1}}{L_{incline} \cdot B} \ge \frac{\Sigma V_{InclinedE1} \cdot ex_{E1}}{S_b} \\ \frac{2 \cdot \Sigma V_{InclinedE1}}{B \cdot 3 \left(\frac{b}{2} - ex_{E1}\right)} & \text{otherwise} \end{cases} = 110.0 \cdot kPa$$

$$Bearing_{ChecktoeE1} := \begin{cases} \text{"OKAY "} & \text{if } \sigma_{ToeE1} < \sigma_{allowE1} \\ \text{"NG""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

Bearing Pressure Under Heel:

$$\sigma_{HeelE1} := \begin{cases} \left[\frac{\Sigma V_{InclinedE1}}{L_{incline} \cdot B} - \frac{\left(\Sigma V_{InclinedE1} \cdot ex_{E1}\right)}{S_b}\right] & \text{if } \frac{\Sigma V_{InclinedE1}}{L_{incline} \cdot B} \ge \frac{\Sigma V_{InclinedE1} \cdot ex_{E1}}{S_b} \\ 0 & \text{otherwise} \end{cases} = 30.3 \cdot kPa$$

$$Bearing_{CheckheelE1} := \left(\begin{cases} \text{"OKAY "} & \text{if } \sigma_{HeelE1} < \sigma_{allowE1} \wedge \sigma_{HeelE1} > 0 \\ \text{"NG - perform cracked base analysis""} & \text{otherwise} \end{cases}\right) = \text{"OKAY "}$$

CHECK FLOATATION:

Safety Factor for Floatation:

$$FS_{FloatationE1} := \frac{\Sigma V_{conc} + \Sigma V_{SoilWaterE1} + Q_{v.conc} + Q_{v.SoilWaterE1}}{\left|\Sigma V_{UpliftE1}\right|} = 1.96$$

$$FS_{Floatation.E1.check} := \begin{cases} \text{"OKAY"} & \text{if } FS_{FloatationE1} > FS_{req.E1.flt} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

CHECK OVERTURNING

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stablity of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1

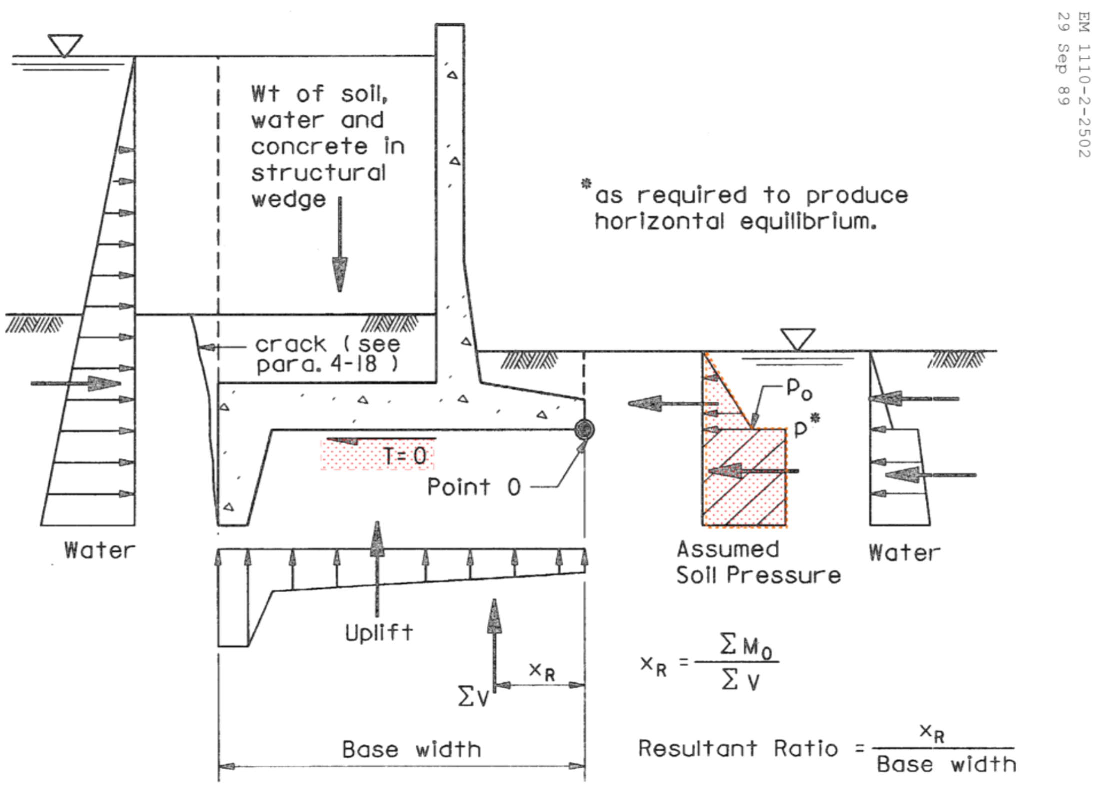


Figure 4-5. Forces for overturning analysis for wall with horizontal base and key

Modify Uplift for Overturning Analysis: **LOAD CASE E1**

(Uplift is calculated along the concrete/rock contact using the Line of Creep method)

Water Pressure at h: $u_{h.E1} := \Delta h_{g.hj.E1} \cdot \gamma_w = 63.70 \cdot kPa$

Water Pressure at o: $u_{o.E1} := \left(\Delta h_{g.no.E1} - \frac{\Delta h_{g.r.E1} \cdot L_{ho.E1}}{L_{ho.E1}}\right) \cdot \gamma_w = 24.5 \cdot kPa$

Head loss between point h and o: $\Delta h_{ho.E1} := \Delta h_{g.r.E1} \cdot \frac{L_{ho.E1}}{L_{ho.E1}} = 2\,m$

Length of concrete base (h -> o): $L_{baseho.E1} := Key_{h.w} + Key_{h.d} + Key_{hdist} + Key_{t.d} + Key_{t.w} = 8\,m$

Head loss along h -> j: $\Delta h_{hj.E1} := \Delta h_{ho.E1} \cdot \frac{Key_{h.w}}{L_{baseho.E1}} = 0.25\,m$

Water Pressure at j: $u_{j.E1} := \left(\Delta h_{g.hj.E1} - \Delta h_{hj.E1}\right) \cdot \gamma_w = 61.25 \cdot kPa$

Head loss along h -> k: $\Delta h_{hjk.E1} := \Delta h_{ho.E1} \cdot \left(\frac{Key_{h.w} + Key_{h.d}}{L_{baseho.E1}}\right) = 0.75\,m$

Water Pressure at k: $u_{k.E1} := \left(\Delta h_{g.km.E1} - \Delta h_{hjk.E1}\right) \cdot \gamma_w = 36.75 \cdot kPa$

Head loss along h -> m: $\Delta h_{hjkm.E1} := \Delta h_{ho.E1} \cdot \left(\frac{Key_{h.w} + Key_{h.d} + Key_{hdist}}{L_{baseho.E1}}\right) = 2\,m$

Water Pressure at m: $u_{m.E1} := \left(\Delta h_{g.km.E1} - \Delta h_{hjkm.E1}\right) \cdot \gamma_w = 24.50 \cdot kPa$

Head loss along h -> n: $\Delta h_{hjkmn.E1} := \Delta h_{ho.E1} \cdot \left(\frac{Key_{h.w} + Key_{h.d} + Key_{hdist} + Key_{t.d}}{L_{baseho.E1}}\right) = 2\,m$

Water Pressure at n: $u_{n.E1} := \left(\Delta h_{g.no.E1} - \Delta h_{hjkmn.E1}\right) \cdot \gamma_w = 24.50 \cdot kPa$

Uplift under key at heel: $V_{ulkeyhE1.OT} := \frac{\left(u_{h.E1} + u_{j.E1}\right) \cdot Key_{h.w}}{2} \cdot B \cdot -1 = -62.475 \cdot kN$

Moment Arm (from Point O): $V_{ulkeyhE1loc.OT} := b - \frac{Key_{h.w} \cdot \left(2 \cdot u_{j.E1} + u_{h.E1}\right)}{3 \cdot \left(u_{j.E1} + u_{h.E1}\right)} = 5.503\,m$

Uplift under base: $V_{ulbaseE1.OT} := \frac{\left(u_{k.E1} + u_{m.E1}\right) \cdot Key_{hdist}}{2} \cdot B \cdot -1 = -153.125 \cdot kN$

Moment Arm (from Point O): $V_{ulbaseE1loc.OT} := b - Key_{h.w} - \frac{Key_{hdist} \cdot \left(2 \cdot u_{m.E1} + u_{k.E1}\right)}{3 \cdot \left(u_{m.E1} + u_{k.E1}\right)} = 2.667\,m$

Uplift under key at toe: $V_{ulkeytE1.OT} := \frac{\left(u_{n.E1} + u_{o.E1}\right) \cdot Key_{t.w}}{2} \cdot B \cdot -1 = 0 \cdot kN$

Moment Arm (from Point O): $V_{ulkeytE1loc.OT} := \frac{Key_{t.w} \cdot \left(2 \cdot u_{n.E1} + u_{o.E1}\right)}{3 \cdot \left(u_{n.E1} + u_{o.E1}\right)} = 0$

$$\Sigma V_{UpliftE1.OT} := V_{ulkeyhE1.OT} + V_{ulbaseE1.OT} + V_{ulkeytE1.OT} = -216 \cdot kN$$

$$U_{E1.loc.OT} := \frac{V_{ulkeyhE1.OT} \cdot V_{ulkeyhE1loc.OT} + V_{ulbaseE1.OT} \cdot V_{ulbaseE1loc.OT} + V_{ulkeytE1.OT} \cdot V_{ulkeytE1loc.OT}}{\Sigma V_{UpliftE1.OT}} = 3.49\,m$$

$$\Sigma M_{UpliftE1.OT} := \Sigma V_{UpliftE1.OT} \cdot U_{E1.loc.OT} = -752.1 \cdot kN \cdot m$$

LOAD CASE E1

Modify Lateral Water Pressure (Resisting) for Overturning Analysis:

(Resisting water pressure is calculated using the Line of Creep method)

Water Load at Key (heel):

$$H_{h2E1.OT} := \frac{u_{k.E1} + u_{j.E1}}{2} \cdot Key_{h.d} B = 98.0 \cdot kN$$

Moment Arm (from Point O):

$$H_{h2locE1.OT} := \frac{Key_{h.d} \cdot (2 \cdot u_{k.E1} + u_{j.E1})}{3(u_{k.E1} + u_{j.E1})} + Key_{vdist} = -1.08\ m$$

Water Load at Key (toe):

$$H_{h6E1.OT} := \frac{u_{o.E1} \cdot (UWSEL_{E1} - Bot_{ftg} + Key_{t.d})}{2} \cdot B = 31 \cdot kN$$

Moment Arm (from Point O):

$$H_{h6locE1.OT} := \frac{UWSEL_{E1} - Bot_{ftg} + Key_{t.d}}{3} = 0.83\ m$$

$$\Sigma H_{waterresistE1.OT} := H_{h2E1.OT} + H_{h6E1.OT} = 128.63 \cdot kN$$

$$H_{waterresistlocE1.OT} := \frac{H_{h2E1.OT} \cdot H_{h2locE1.OT} + H_{h6E1.OT} \cdot H_{h6locE1.OT}}{\Sigma H_{waterresistE1.OT}} = -0.627\ m$$

$$\Sigma M_{waterresistE1.OT} := \Sigma H_{waterresistE1.OT} \cdot H_{waterresistlocE1.OT} = -80.65 \cdot kN \cdot m$$

Modify Lateral Soil Loads for Overturning Analysis:

(Lateral soil loads are calculated down to Point O instead of bottom of shear key)

Driving Soil Load (Headwater Side):

Surcharge Load:

$$E_{s1E1.OT} := S1_{E1} \cdot K_{Aagwt} \cdot (H_w + Key_{h.d} + Key_{vdist}) \cdot B \cdot -1 = 0 \cdot kN$$

Moment Arm (from Point O):

$$E_{s1locE1.OT} := \frac{H_w + Key_{h.d} + Key_{vdist}}{2} = 2.25\ m$$

Moist Soil Load above GWL:

$$E_{h1E1.OT} := \frac{\gamma_m \cdot K_{Aagwt} \cdot h_{1E1}^{\ 2}}{2} B \cdot -1 = 0.0 \cdot kN$$

Moment Arm (from Point O):

$$E_{h1locE1.OT} := \frac{h_{1E1}}{3} + h_{2E1} + Key_{vdist} = 4.50\ m$$

Saturated Soil Load below GWL:
(rectangular component)

$$E_{h2E1.OT} := (\gamma_m \cdot K_{Aagwt} \cdot h_{1E1}) \cdot (h_{2E1} + Key_{vdist}) \cdot B \cdot -1 = 0.0 \cdot kN$$

Moment Arm (from Point O):

$$E_{h2locE1.OT} := \frac{h_{2E1} + Key_{vdist}}{2} = 2.25\ m$$

Saturated Soil Load below GWL:
(triangular component)

$$E_{h2aE1.OT} := \frac{(\gamma_{sat} - \gamma_w) \cdot K_{Aagwt} \cdot (h_{2E1} + Key_{vdist})^2}{2} \cdot B \cdot -1 = -46.4 \cdot kN$$

Moment Arm (from Point O):

$$E_{h2alocE1.OT} := \frac{h_{2E1} + Key_{vdist}}{3} = 1.50\ m$$

Resisting Soil Load (Tailwater Side): **LOAD CASE E1**

(Determine resisting soil load based on depth variation between the keys (ie. Key_{vdist}). In case where key at heel is deeper than key at toe (ie. $Key_{vdist} < 0$), resisting soil load (p*) is assumed to produce horizontal equilibrium as per Figure 4-5 above. Resisting soil load (p_o) is neglected.)

Total Driving Force: $\Sigma H_{SoildriveE1.OT} := E_{s1E1.OT} + E_{h1E1.OT} + E_{h2E1.OT} + E_{h2aE1.OT} + H_{h2E1} \cdots + Q_{h.conc} + Q_{h.SoilWaterE1} = -357.3 \cdot kN$

Total Resisting Force: $\Sigma H_{waterresistE1.OT} = 128.625 \cdot kN$

Assumed Soil Load p*: $E_{h8E1a.OT} := (\Sigma H_{SoildriveE1.OT} + \Sigma H_{waterresistE1.OT}) \cdot -1 = 228.625 \cdot kN$

Moment Arm (from Point O): $E_{h8E1a.loc.OT} := \dfrac{Key_{vdist}}{2} = -1\,m$

$$E_{h8E1.OT} := \begin{cases} E_{h8E1a.OT} & \text{if } Key_{vdist} < 0 \\ \Sigma H_{SoilresistE1} - H_{h6E1} - H_{h6aE1} & \text{otherwise} \end{cases} = 228.625 \cdot kN$$

$$\Sigma M_{SoilresistE1.OT} := \begin{cases} E_{h8E1a.OT} \cdot E_{h8E1a.loc.OT} & \text{if } Key_{vdist} < 0 \\ \Sigma M_{HorizSoilResistE1} - H_{h6E1} \cdot H_{h6locE1} - H_{h6aE1} \cdot H_{h6alocE1} & \text{otherwise} \end{cases} = -228.625 \cdot kN \cdot m$$

Sum of Moment about Point O:

$$\Sigma M_{LateraldriveE1.OT} := E_{s1E1.OT} \cdot E_{s1locE1.OT} + E_{h1E1.OT} \cdot E_{h1locE1.OT} + E_{h2E1.OT} \cdot E_{h2locE1.OT} \cdots + E_{h2aE1.OT} \cdot E_{h2alocE1.OT} + H_{h2E1} \cdot H_{h2locE1} = -104.1 \cdot kN \cdot m$$

$$\Sigma M_{LateralresistE1.OT} := \Sigma M_{waterresistE1.OT} + \Sigma M_{SoilresistE1.OT} = -309.3 \cdot kN \cdot m$$

$$\Sigma M_{seisE1.OT} := M_{Qv.conc} + M_{Q.conc} + M_{Qv.SoilWaterE1} + M_{Q.h.SoilWaterE1} = -350 \cdot kN \cdot m$$

(seismic moment modified for the most adverse overturning effect)

Total moment:

$$\Sigma M_{E1.OT} := \Sigma M_{conc} + \Sigma M_{VertSoilWaterResistE1} + \Sigma M_{UpliftE1.OT} + \Sigma M_{LateraldriveE1.OT} + \Sigma M_{LateralresistE1.OT} + \Sigma M_{seisE1.OT} = 495.8 \cdot kN \cdot m$$

Total Vertical Force: $\Sigma V_{E1.OT} := \Sigma V_{conc} + \Sigma V_{SoilWaterE1} + \Sigma V_{UpliftE1.OT} + Q_{v.conc} + Q_{v.SoilWaterE1} = 302.0 \cdot kN$

Distance X_R: EM 1110-2-2502 Eq.4-1 $X_{R.E1} := \dfrac{\Sigma M_{E1.OT}}{\Sigma V_{E1.OT}} = 1.642\,m$

Overturning Resultant Ratio $Ratio_{E1.OT} := \dfrac{X_{R.E1}}{b} = 0.27$

$$Ratio_{E1.OT.check} := \begin{cases} \text{"OKAY "} & \text{if } Ratio_{E1.OT} > X_{R.reqE1} \\ \text{"Revise Structure""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

CHECK FOUNDATION ECCENTRICITY (HORIZONTAL PLANE):

Eccentricity (horizontal plan): $ex_{E1.OT} := \dfrac{b}{2} - \dfrac{\Sigma M_{E1.OT}}{\Sigma V_{E1.OT}} = 1.36\,m$ $Kern_{E1.OT} := \dfrac{b}{4} = 1.5\,m$

Eccentricity Check: $$e_{check.E1.OT} := \begin{cases} \text{"Okay"} & \text{if } ex_{E1.OT} \le Kern_{E1.OT} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"Okay"}$$

CHECK FOUNDATION BEARING CAPACITY (HORIZONTAL PLANE):

Base Section Modulus: $S_{b.OT} = 6\,m^3$

Bearing Pressure Under Toe:

$$\sigma_{ToeE1.OT} := \begin{cases} \left(\dfrac{\Sigma V_{E1.OT}}{b \cdot B} + \dfrac{\Sigma V_{E1.OT} \cdot ex_{E1.OT}}{S_{b.OT}}\right) & \text{if } \dfrac{\Sigma V_{E1.OT}}{b \cdot B} \geq \dfrac{\Sigma V_{E1.OT} \cdot ex_{E1.OT}}{S_{b.OT}} \\ \dfrac{2 \cdot \Sigma V_{E1.OT}}{B \cdot 3\left(\dfrac{b}{2} - ex_{E1.OT}\right)} & \text{otherwise} \end{cases} = 122.6 \cdot kPa$$

$$Bearing_{ChecktoeE1.OT} := \begin{cases} \text{"OKAY "} & \text{if } \sigma_{ToeE1.OT} < \sigma_{allowE1} \\ \text{"NG - for reference only""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

Bearing Pressure Under Heel:

$$\sigma_{HeelE1.OT} := \begin{cases} \left(\dfrac{\Sigma V_{E1.OT}}{b \cdot B} - \dfrac{\Sigma V_{E1.OT} \cdot ex_{E1.OT}}{S_{b.OT}}\right) & \text{if } \dfrac{\Sigma V_{E1.OT}}{b \cdot B} \geq \dfrac{\Sigma V_{E1.OT} \cdot ex_{E1.OT}}{S_{b.OT}} \\ 0 & \text{otherwise} \end{cases} = 0.0 \cdot kPa$$

$$Bearing_{CheckheelE1.OT} := \left(\begin{cases} \text{"OKAY "} & \text{if } \sigma_{HeelE1.OT} < \sigma_{allowE1} \wedge \sigma_{HeelE1.OT} > 0 \\ \text{"NG - for reference only""} & \text{otherwise} \end{cases}\right) = \text{"NG - for reference only""}$$

SUMMARY OF STABILITY ASSESSMENT:

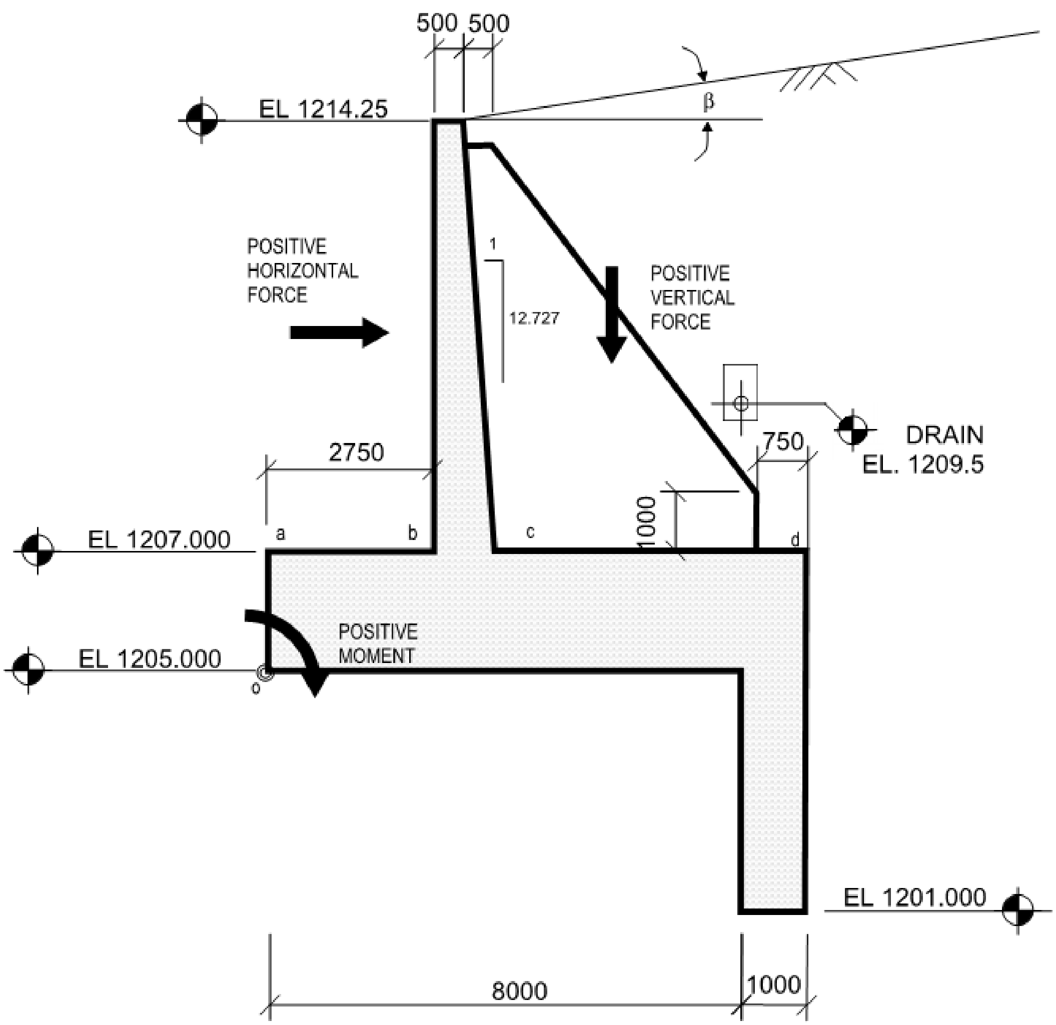
Calculation Section VII

DI-Block 5D (Midsection) Retaining Wall Stability Calculations

Project Number:	110773396		
Project Title:	SR1 - Diversion Structure		
Client:	Alberta Transportation		
Engineer:	Lawrence Choi	Date: 12/11/2018	
Checker:	Sean Xiao	Date: 12/18/2018	

Calculation for: Retaining Wall - Diversion Inlet Left - Block 5D (Mid-section)



(DIMENSIONS BASED ON MID SECTION)

REGION COLOR CONVENTION

User Input

Calulation Highlights

Results

WALL GEOMETRY:

Top of Wall Elevation: $T_w := 1214.25 \cdot m$

Top of Footing Elevation: $Top_{ftg} := 1207.0 \cdot m$

Thickness of Footing: $t_{ftg} := 2.0m$

Bottom of Footing Elevation: $Bot_{ftg} := Top_{ftg} - t_{ftg} = 1205\,m$

Overall Height of wall: $h_w := T_w - Bot_{ftg} = 9.25\,m$

Thickness of Wall: Base: $t_{wb} := 1.070 \cdot m$ Top: $t_{wt} := 0.5m$

Length of toe: $L_{ab} := 2.75m$

Total Length of Footing: $b := 9.0m$

Length of heel: $L_{cd} := b - L_{ab} - t_{wb} = 5.18\,m$

Unit Width of Wall for analysis: $B := 1.00m$

SHEAR KEY GEOMETRY:

	Toe	Heel
Key depth:	$Key_{t.d} := 0m$	$Key_{h.d} := 4.0m$
Key width:	$Key_{t.w} := 0m$	$Key_{h.w} := 1m$
Face of Key from Point O:	$Key_{t.loc} := 0 \cdot m$	$Key_{h.loc} := b - Key_{h.w} = 8\,m$

Horizontal Distance between Keys: $Key_{hdist} := Key_{h.loc} - Key_{t.loc} - Key_{t.w} = 8\,m$

Key Depth Diff. (from point O): $Key_{vdist} := -Key_{h.d} + Key_{t.d} = -4\,m$

BASE PROPERTIES:

Base Area: $A_b := b \cdot B = 9\,m^2$

Centroidal Distance for Footing (from Toe): $Y_t := \frac{b}{2} = 4.50\,m$

RETAINED SOIL GEOMETRY:

Slope of retained ground surface: $\beta := 0 \cdot \frac{\pi}{180} = 0.00$

Height of retained earth at heel: $H_w := T_w - Bot_{ftg} + \left(t_{wb} + L_{cd} - t_{wt}\right) \cdot \tan(\beta) = 9.25\,m$

RETAINING WALL GEOMETRY CHECKS:

(Foundation Analysis & Design Bowles)

$$t_{bcheck} := \begin{cases} \text{"OKAY"} & \text{if } t_{ftg} \ge \frac{H_w}{12} \\ \text{"Warning"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

$$t_{wcheck} := \begin{cases} \text{"OKAY"} & \text{if } t_{wb} \ge \frac{H_w}{12} \\ \text{"Warning"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

$$b_{check} := \begin{cases} \text{"OKAY"} & \text{if } \frac{b}{H_w} \ge .4 \wedge \frac{b}{H_w} \le 80 \\ \text{"Warning"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

$$L_{abcheck} := \begin{cases} \text{"OKAY"} & \text{if } \frac{L_{ab}}{b} \ge .25 \wedge \frac{L_{ab}}{b} \le .4 \\ \text{"Warning"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

Material Properties:

Unit Weight of Water: $\gamma_w := 9.8 \frac{kN}{m^3}$ (Section 7.2, Design Criteria)

Unit Weight of Concrete: $\gamma_c := 23.5 \frac{kN}{m^3}$

Unit Weight of Soil (Moist): $\gamma_m := 20.0 \frac{kN}{m^3}$ (Section 5.3, Design Criteria) assumed moisture content (w) = 5%

Unit Weight Soil (Saturated): $\gamma_{sat} := 22.0 \frac{kN}{m^3}$ (Assuming Specific Gravity = 2.7

Unit Weight Soil (buoyant): $\gamma_b := \gamma_{sat} - \gamma_w = 12.2 \cdot \frac{kN}{m^3}$

Weight of Soil/Concrete above toe: $\gamma_{toe} := 22.0 \frac{kN}{m^3}$

Unit Weight of Rock: $\gamma_r := 25.6 \frac{kN}{m^3}$ (Section 7.2, Design Criteria)

Foundation Parameters:

Glacial Till Internal Friction: $\phi := 27 \cdot \frac{\pi}{180} = 0.471$

Bedrock Internal Friction Angle: $\phi_r := 24 \cdot \frac{\pi}{180} = 0.419$

Friction Angle at Base
Concrete / Rock Interface: $\phi_{rock} := 26$

Base Friction Coefficient: $tan_{\phi rock} := \tan\left(\phi_{rock} \frac{\pi}{180}\right) = 0.488$ radians

Rip Rap Backfill, Refer Dwg. C-214 $\phi_{backfill} := \left(20 \frac{\pi}{180}\right) = 0.349$ radians

Shear strength along rock
Failure plane $s_r := \dfrac{13100 \frac{kN}{m^2}}{2} = 6550 \cdot \frac{kN}{m^2}$ (Stantec Design Memo 8/8/16)

CONCRETE DEAD LOAD:

Area of Footing: $A_{ftg} := t_{ftg} \cdot b = 18\,m^2$

Weight of Footing: $D_{ftg} := A_{ftg} \cdot B \cdot \gamma_c = 423 \cdot kN$

Area of Stem (without batter): $A_{w1} := t_{wt} \cdot \left(h_w - t_{ftg}\right) = 3.63\,m^2$

Weight of Stem: $D_{w1} := A_{w1} \cdot B \cdot \gamma_c = 85.2 \cdot kN$

Area of stem Batter: $A_{w2} := \dfrac{\left(t_{wb} - t_{wt}\right)}{2} \left(h_w - t_{ftg}\right) = 2.07\,m^2$

Weight of Batter: $D_{w2} := A_{w2} \cdot B \cdot \gamma_c = 48.6 \cdot kN$

Slope of batter: $S_{batter} := \dfrac{t_{wb} - t_{wt}}{h_w - t_{ftg}} = 0.079$

Area of Key $A_{t.key} := Key_{t.d} \cdot Key_{t.w} = 0$ $A_{h.key} := Key_{h.d} \cdot Key_{h.w} = 4\,m^2$

Weight of Key $D_{t.key} := A_{t.key} \cdot B \cdot \gamma_c = 0 \cdot kN$ $D_{h.key} := A_{h.key} \cdot B \cdot \gamma_c = 94 \cdot kN$

Centroidal Horizontal Distance of Wall (From Toe):

$$H_{cent} := \frac{A_{w1} \cdot \left(L_{ab} + \frac{t_{wt}}{2}\right) + A_{w2} \cdot \left(L_{ab} + t_{wt} + \frac{t_{wb} - t_{wt}}{3}\right) + A_{ftg} \cdot \frac{b}{2} + A_{t.key} \cdot \left(Key_{t.loc} + \frac{Key_{t.w}}{2}\right) + A_{h.key} \cdot \left(Key_{h.loc} + \frac{Key_{h.w}}{2}\right)}{A_{w1} + A_{w2} + A_{ftg} + A_{t.key} + A_{h.key}} = 4.80\,m$$

Centroidal Vertical Distance of Wall (Above Base of Footing):

$$V_{Cent} := \frac{A_{ftg} \cdot \frac{t_{ftg}}{2} + A_{w1} \cdot \left[t_{ftg} + \frac{\left(h_w - t_{ftg}\right)}{2}\right] + A_{w2} \cdot \left[t_{ftg} + \frac{\left(h_w - t_{ftg}\right)}{3}\right] + A_{t.key} \cdot \left(\frac{-Key_{t.d}}{2}\right) + A_{h.key} \cdot \left(\frac{-Key_{h.d}}{2}\right)}{A_{ftg} + A_{w1} + A_{w2} + A_{t.key} + A_{h.key}} = 1.43\,m$$

$\Sigma V_{conc} := D_{ftg} + D_{w1} + D_{w2} + D_{t.key} + D_{h.key} = 650.7 \cdot kN$

$\Sigma M_{conc} := \Sigma V_{conc} \cdot H_{cent} = 3125.1\,m \cdot kN$

ROCK SECTION MOBILIZED FOR INCLINDED SLIDING FAILURE

Area of Rock Section Mobilized: $A_{rocksection} := \left(Key_{t.d} + Key_{h.d}\right) \cdot \dfrac{Key_{hdist}}{2} = 16\,m^2$

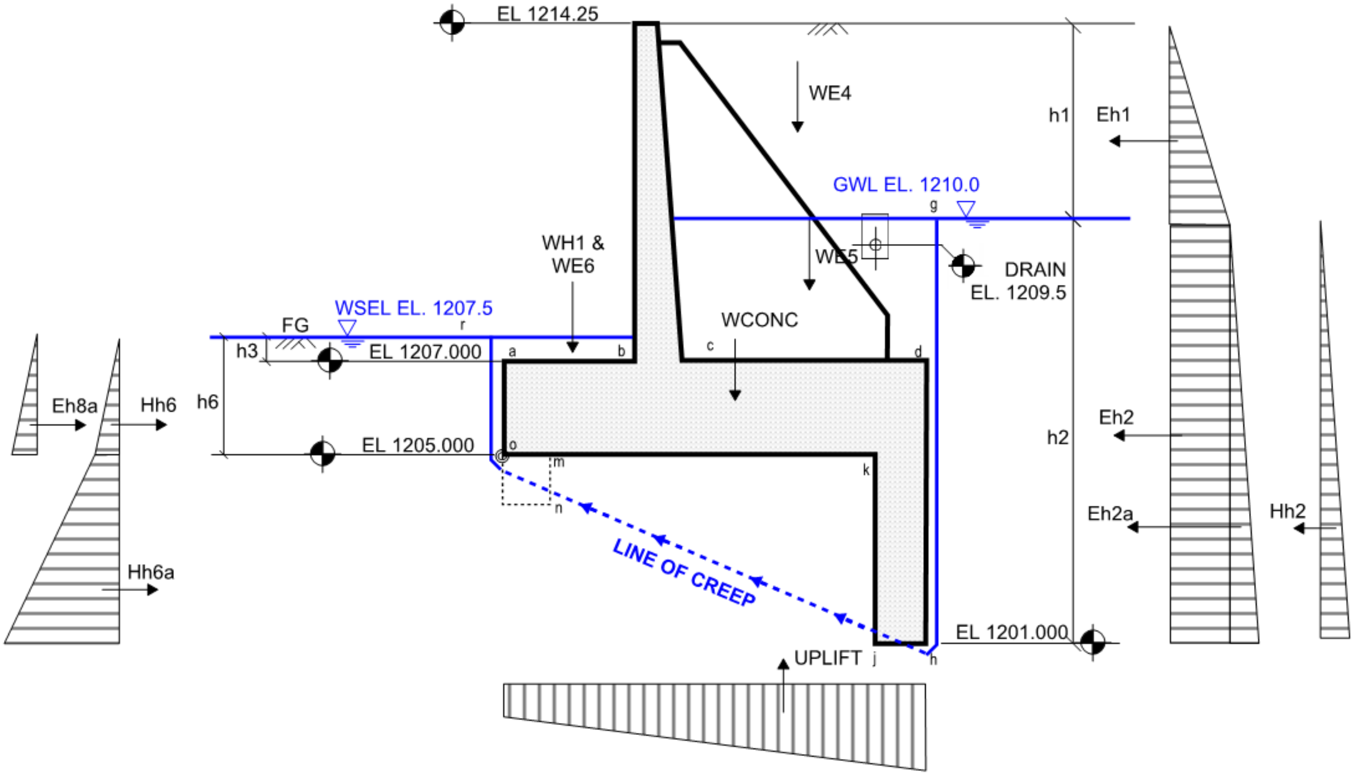
Rock Mass Mobilized: $V_{rocksection} := A_{rocksection} \cdot \gamma_r \cdot B = 409.6 \cdot kN$

(Pore pressure taken along assumed inclined sliding plane)

Distance from Toe to COG of Rock Section: $L_{rocksection} := \dfrac{Key_{hdist} \cdot \left(2 \cdot Key_{h.d} + Key_{t.d}\right)}{3\left(Key_{h.d} + Key_{t.d}\right)} + Key_{t.w} = 5.333\,m$

$\Sigma M_{rocksection} := V_{rocksection} \cdot L_{rocksection} = 2184.5\,m \cdot kN$

LOAD CASE U1 - NORMAL OPERATION



U1 DESIGN CASE

LOAD CASE U1 ACCEPTANCE PARAMETERS

FS sliding:

Usual (U) 1.5 (without cohesion) (Table 3-3, USACE EM 1110-2-2100)

Resultant Location:

Usual (U) Inside middle third ~100% base in compression

Required Factor of Safety for Sliding: $FS_{sliding.reqU1} := 1.5$ (Without Cohesion)

Allowable rock bearing pressure: $\sigma_{allowU1} := 1270kPa$ (Section 5.2, Design Criteria EM 1110-2-2100 Section 3-10)

Overturning Required Resultant Ratio: $X_{R.reqU1} := 0.333$ (EM 1110-2-2502, Figure 4-4)

Required Factor of Safety for Floatation $FS_{req.U1.flt} := 1.5$

SOIL HEIGHTS and Water Levels:

LOAD CASE U1

Heel Conditions:

Groundwater Elevation at Heel: $GWL_{U1} := 1210.0m$

Distance from Finish Grade to Groundwater at Heel: $h_{1U1} := \left[T_w - GWL_{U1} + \left(L_{cd} + t_{wb} - t_{wt}\right) \cdot \tan(\beta)\right] = 4.25\,m$

Distance from Water Surface to Bottom of Footing at Heel: $h_{2U1} := GWL_{U1} - Bot_{ftg} + Key_{h.d} = 9.00\,m$

Toe Conditions:

Water Surface Elevation at Toe: $WSEL_{U1} := 1207.5m$

Water Surface Elevation at Toe for Uplift: $UWSEL_{U1} := 1207.5 \cdot m$

Finish Grade at Toe providing lateral resistance: $FG_{toeU1} := 1207.5 \cdot m$

Soil Depth Above top of footing: $h_{3aU1} := FG_{toeU1} - Top_{ftg} = 0.5\,m$

$$h_{3U1} := \begin{vmatrix} h_{3aU1} \ \text{if} \ FG_{toeU1} - Top_{ftg} \geq 0 \\ 0 \ \text{otherwise} \end{vmatrix} = 0.5$$

Resisting Fill at Toe: $h_{4U1} := FG_{toeU1} - Bot_{ftg} + Key_{t.d} = 2.50\,m$

Distance from Water Level to Top of Footing: $h_{5U1} := WSEL_{U1} - Top_{ftg} = 0.50\,m$

Distance from Water Surface to Bottom of Toe Key: $h_{6U1} := WSEL_{U1} - Bot_{ftg} + Key_{t.d} = 2.50 \cdot m$

Soil Depth Above WSEL: $h_{7aU1} := FG_{toeU1} - WSEL_{U1} = 0\,m$

$$h_{7U1} := \begin{vmatrix} h_{7aU1} \ \text{if} \ FG_{toeU1} - WSEL_{U1} \geq 0 \\ 0 \ \text{otherwise} \end{vmatrix} = 0$$

Soil Depth Below WSEL:

$$h_{8U1} := \begin{vmatrix} WSEL_{U1} - Bot_{ftg} + Key_{t.d} \ \text{if} \ FG_{toeU1} - WSEL_{U1} \geq 0 \\ h_{4U1} \ \text{otherwise} \end{vmatrix} = 2.5$$

For Line of Creep Method: $L_{ho.U1} := \sqrt{b^2 + \left(Key_{h.d} - Key_{t.d}\right)^2} = 9.849\,m$

Head Loss from Point g:

$\Delta h_{g.hj.U1} := h_{2U1} = 9\,m$ (to point h & j)

$\Delta h_{g.km.U1} := GWL_{U1} - Bot_{ftg} = 5\,m$ (to point k & m)

$\Delta h_{g.no.U1} := GWL_{U1} - Bot_{ftg} + Key_{t.d} = 5\,m$ (to point n & o)

$\Delta h_{g.p.U1} := GWL_{U1} - FG_{toeU1} = 2.5\,m$ (to point p*)

$\Delta h_{g.r.U1} := GWL_{U1} - UWSEL_{U1} = 2.5\,m$ (to point r)

Surcharge

Surcharge on Heel: $S1_{U1} := 0.0 \frac{kN}{m^2}$

* same as point "a" in this case

Calculate Soil Lateral Pressure Coefficients:

LOAD CASE U1

For all load cases except seismic, soil loading to be based on At-Rest Condition.
Calculate at-rest pressure coefficient Ko based on Jaky's (1944) equation.

Soil At Rest Static Coefficient: $K_o := \dfrac{1 - \sin(\phi)}{1 + \sin(\beta)} = 0.546$ (Eq. 3-6, USACE EM 1110-2-2502)

Lateral - Driving Force (Headwater Side)

Lateral Soil Load:

Surcharge Load: $E_{s1U1} := S1_{U1} \cdot K_o \cdot \left(H_w + Key_{h.d}\right) \cdot B \cdot -1 = 0 \cdot kN$

Moment Arm (from Point O): $E_{s1locU1} := \dfrac{H_w + Key_{h.d}}{2} + Key_{vdist} = 2.63\ m$

Moist Soil Load above GWL: $E_{h1U1} := \dfrac{\gamma_m \cdot K_o \cdot h_{1U1}^{\ 2}}{2} B \cdot -1 = -98.6 \cdot kN$

Moment Arm (from Point O): $E_{h1locU1} := \dfrac{h_{1U1}}{3} + h_{2U1} + Key_{vdist} = 6.42\ m$

Saturated Soil Load below GWL:
(rectangular component) $E_{h2U1} := \left(\gamma_m \cdot K_o \cdot h_{1U1}\right) \cdot \left(h_{2U1}\right) \cdot B \cdot -1 = -417.7 \cdot kN$

Moment Arm (from Point O): $E_{h2locU1} := \dfrac{h_{2U1}}{2} + Key_{vdist} = 0.50\ m$

Saturated Soil Load below GWL:
(triangular component) $E_{h2aU1} := \dfrac{\left(\gamma_{sat} - \gamma_w\right) \cdot K_o \cdot h_{2U1}^{\ 2}}{2} \cdot B \cdot -1 = -269.8 \cdot kN$

Moment Arm (from Point O): $E_{h2alocU1} := \dfrac{h_{2U1}}{3} + Key_{vdist} = -1.00\ m$

Lateral Water Load:

Water Load GWL to Bottom of Keys:

$$H_{h2U1} := \begin{cases} \dfrac{\gamma_w \cdot h_{2U1}^{\ 2}}{2} \cdot B \cdot -1 & \text{if } Key_{vdist} < 0 \\ \dfrac{\gamma_w \cdot \left(h_{2U1} + Key_{vdist}\right)^2}{2} \cdot B \cdot -1 & \text{otherwise} \end{cases} = -396.9 \cdot kN$$

Moment Arm (from Point O):

$$H_{h2locU1} := \begin{cases} \dfrac{h_{2U1}}{3} + Key_{vdist} & \text{if } Key_{vdist} < 0 \\ \dfrac{h_{2U1} + Key_{vdist}}{3} & \text{otherwise} \end{cases} = -1.00 \cdot m$$

$$\Sigma H_{SoildriveU1} := E_{s1U1} + E_{h1U1} + E_{h2U1} + E_{h2aU1} + H_{h2U1} = -1183.0 \cdot kN$$

$$\Sigma M_{LateralSoildriveU1} := E_{s1U1} \cdot E_{s1locU1} + E_{h1U1} \cdot E_{h1locU1} + E_{h2U1} \cdot E_{h2locU1} \cdots + E_{h2aU1} \cdot E_{h2alocU1} + H_{h2U1} \cdot H_{h2locU1} = -175.0\ m \cdot kN$$

Lateral - Resisting Force (Tailwater Side)

LOAD CASE U1

Lateral Water Load:

Water Load WSEL to Bot. of Toe Key: $H_{h6U1} := \dfrac{\gamma_w \cdot h_{6U1}^2}{2} \cdot B = 30.6 \cdot kN$

Moment Arm (from Point O): $H_{h6locU1} := \dfrac{h_{6U1}}{3} = 0.83\ m$

Water Load between Keys (if any) $H_{h6aU1} := \begin{cases} \dfrac{\left(h_{6U1} + h_{2U1}\right) \cdot -Key_{vdist}}{2} \cdot \gamma_w \cdot B & \text{if } Key_{vdist} < 0 \\ 0 & \text{otherwise} \end{cases} = 225.4 \cdot kN$

Moment Arm (from Point O): $H_{h6alocU1} := \begin{cases} \dfrac{Key_{vdist} \cdot \left(2 \cdot h_{2U1} + h_{6U1}\right)}{3\left(h_{2U1} + h_{6U1}\right)} & \text{if } Key_{vdist} < 0 \\ 0 & \text{otherwise} \end{cases} = -2.38 \cdot m$

Lateral Soil Load:

Moist Soil Load above WSEL: $E_{h7U1} := \dfrac{\gamma_m \cdot K_o \cdot h_{7U1}^2}{2} B = 0.0 \cdot kN$

Moment Arm (from bot. of toe key): $E_{h7locU1} := h_{6U1} + \dfrac{h_{7U1}}{3} = 2.50\ m$

Saturated Soil Load below WSEL:
(rectangular component) $E_{h8U1} := \left(\gamma_m \cdot K_o \cdot h_{7U1}\right) \cdot h_{8U1} \cdot B = 0.0 \cdot kN$

Moment Arm (from bot. of toe key): $E_{h8locU1} := \dfrac{h_{8U1}}{2} = 1.25\ m$

Saturated Soil Load below WSEL:
(triangular component) $E_{h8aU1} := \dfrac{\left[\left(\gamma_{sat} - \gamma_w\right) \cdot K_o\right] \cdot h_{8U1}^2}{2} \cdot B = 20.8 \cdot kN$

Moment Arm (from bot. of footing): $E_{h8alocU1} := \dfrac{h_{8U1}}{3} = 0.83\ m$

$$\Sigma H_{SoilresistU1} := H_{h6U1} + H_{h6aU1} + E_{h7U1} + E_{h8U1} + E_{h8aU1} = 276.8 \cdot kN$$

$$\Sigma M_{HorizSoilResistU1} := H_{h6U1} \cdot H_{h6locU1} + H_{h6aU1} \cdot H_{h6alocU1} + E_{h7U1} \cdot E_{h7locU1} \dots + E_{h8U1} \cdot E_{h8locU1} + E_{h8aU1} \cdot E_{h8alocU1} = -492.9\ m \cdot kN$$

Vertical Force:

UPLIFT: Linear distribution from water at heel to water at toe:

$$\Sigma V_{UpliftU1} := \left[\left(UWSEL_{U1} - Bot_{ftg} + Key_{t.d}\right) + h_{2U1}\right] \cdot \frac{b}{2} \cdot \gamma_w \cdot B \cdot -1 = -507.15 \cdot kN$$

Moment Arm (from Point O): $V_{UpliftU1aloc} := \dfrac{b \cdot \left[2 \cdot h_{2U1} + \left(UWSEL_{U1} - Bot_{ftg} + Key_{t.d}\right)\right]}{3\left[h_{2U1} + \left(UWSEL_{U1} - Bot_{ftg} + Key_{t.d}\right)\right]} = 5.348\ m$

$$\Sigma M_{UpliftU1} := \Sigma V_{UpliftU1} \cdot V_{UpliftU1aloc} = -2712.15 \cdot kN \cdot m$$

Vertical Force (con't):

LOAD CASE U1

Weight of soil and water over toe:

Water Above the Top of Footing: $W_{H1U1} := \gamma_w \cdot h_{5U1} \cdot L_{ab} \cdot B = 13.475 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E1locU1} := \dfrac{L_{ab}}{2} = 1.375\,m$

Soil above top of footing: $W_{E6U1} := \gamma_b \cdot h_{3U1} \cdot L_{ab} \cdot B = 16.8 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E6locU1} := \dfrac{L_{ab}}{2} = 1.375\,m$

Vertical Load Due to Surcharge: $S_{U1} := S1_{U1} \cdot L_{cd} \cdot B = 0$ $\quad S_{U1loc} := b - \dfrac{L_{cd}}{2} = 6.41\,m$

Weight of soil and water over heel:

Moist Soil for sloped grade above top of wall:

Length of sloped portion of soil above top of wall: $L_{E3U1} := \left(L_{cd} + t_{wb} - t_{wt}\right) = 5.75\,m$

Height of sloped soil above top of wall over heel: $h_{E3locU1} := \left(L_{E3U1}\right) \cdot \tan(\beta) = 0.00\,m$

Weight of sloped soil above top of wall: $W_{E3U1} := \dfrac{\gamma_m}{2} \cdot h_{E3locU1} \cdot L_{E3U1} \cdot B = 0.0 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E3locU1} := L_{ab} + t_{wt} + \dfrac{2}{3} \cdot L_{E3U1} = 7.08\,m$

Moist soil from top of wall to groundwater level:

Height of soil from top of wall and top of GWL: $h_{1U1} = 4.25\,m$

Length from edge of wall at GWL to edge of heel: $L_{E4U1} := L_{E3U1} - \left(h_{1U1} \cdot S_{batter}\right) = 5.42\,m$

Weight of soil over heel from top of wall to GWL: $W_{E4U1} := \gamma_m \cdot h_{1U1} \cdot \dfrac{\left(L_{E3U1} + L_{E4U1}\right)}{2} \cdot B = 474.5 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E4locU1} := b - \dfrac{L_{E3U1}^2 + L_{E3U1} \cdot L_{E4U1} + L_{E4U1}^2}{3\left(L_{E3U1} + L_{E4U1}\right)} = 6.21\,m$

Saturated soil from groundwater to top of footing:

Height of soil from GWL to top of heel: $h_{E4U1} := h_{2U1} - t_{ftg} - Key_{h.d} = 3.00\,m$

Weight of soil over heel from GWL to top of heel: $W_{E5U1} := \left(\gamma_{sat}\right) \cdot h_{E4U1} \cdot \dfrac{\left(L_{E4U1} + L_{cd}\right)}{2} \cdot B = 349.7 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E5locU1} := b - \dfrac{L_{E4U1}^2 + L_{E4U1} \cdot L_{cd} + L_{cd}^2}{3\left(L_{E4U1} + L_{cd}\right)} = 6.35\,m$

$$\Sigma V_{SoilWaterU1} := W_{H1U1} + W_{E6U1} + W_{E3U1} + W_{E4U1} + W_{E5U1} + S_{U1} = 854.5 \cdot kN$$

$$\Sigma M_{VertSoilWaterResistU1} := W_{H1U1} \cdot W_{E1locU1} + W_{E6U1} \cdot W_{E6locU1} \cdots + W_{E3U1} \cdot W_{E3locU1} + W_{E4U1} \cdot W_{E4locU1} + W_{E5U1} \cdot W_{E5locU1} + S_{U1} \cdot S_{U1loc} = 5208.0\,m \cdot kN$$

STABILITY ASSESSMENT:

LOAD CASE U1

CHECK SLIDING ALONG HORIZONTAL SLIDING PLANE:

Summation of the vertical forces:

$$\Sigma V_{U1} := \Sigma V_{conc} + \Sigma V_{SoilWaterU1} + \Sigma V_{UpliftU1} = 998.1 \cdot kN$$

Summation of the horizontal forces:

$$\Sigma H_{U1} := \Sigma H_{SoildriveU1} + \Sigma H_{SoilresistU1} = -906.2 \cdot kN$$

Safety Factor for Sliding Horizontal Failure Plane

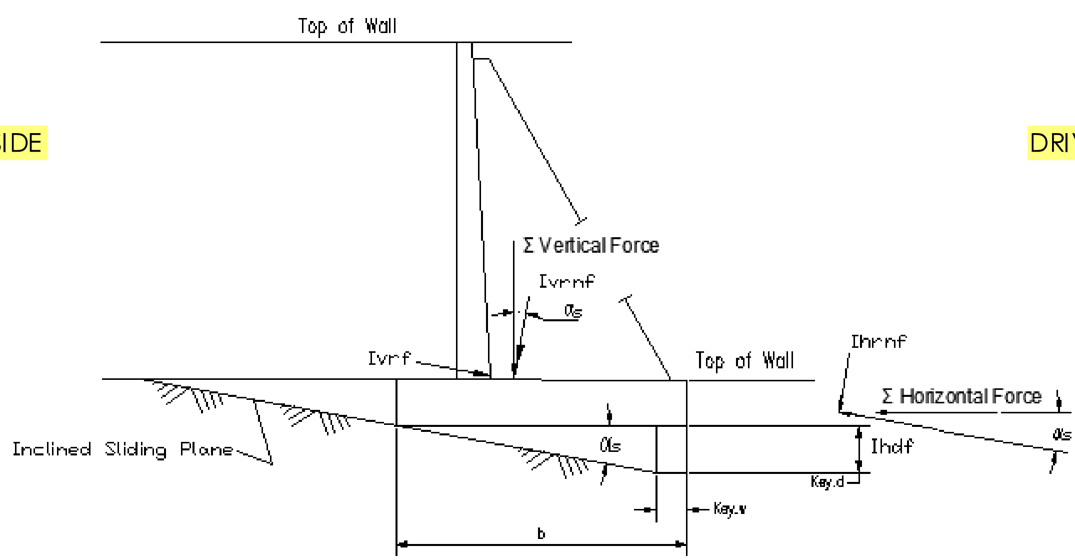
$$FS_{Horiz.SlidingU1} := \frac{\left|\Sigma V_{U1}\right| \cdot \tan\left(\phi_{rock} \cdot \frac{\pi}{180}\right)}{\left|\Sigma H_{U1}\right|} = 0.54$$

$$FS_{Sliding.check1.U1} := \begin{cases} \text{"OKAY "} & \text{if } FS_{Horiz.SlidingU1} > FS_{sliding.reqU1} \\ \text{"Key req'"} & \text{otherwise} \end{cases} = \text{"Key req'"}$$

CHECK FACTOR OF SAFETY SLIDING WITH KEY (INCLINED SLIDING PLANE):

RESISTING SIDE

DRIVING SIDE



TOE

HEEL

Ivrf=Inclined Resisting Force
Ivrnf=Inclined Resisting Normal Force
Ihrnf=Inclined Resisting Normal Force
Ihdf=Inclined Driving Force

$$\alpha s := \text{atan}\left(\frac{-Key_{vdist}}{Key_{hdist}}\right) = 0.464 \qquad \text{as degrees=} \qquad \alpha s \cdot \left(\frac{180}{\pi}\right) = 26.57$$

(With properly engineered reinforced concrete Key, horizontal sliding plane thru Toe is protected, critical sliding plane is relocated to the INCLINED SLIDING PLANE FROM HEEL KEY To TOE, Bedrock Mass above this examing plane is mobilized by reinforced concrete key and combined into Structural Wedge.)

Resolve ΣV_{U1} & ΣH_{U1}

$$\Sigma V_{InclinedU1} := \cos(\alpha s) \cdot \left(\left|\Sigma V_{U1} + V_{rocksection}\right|\right) + \sin(\alpha s) \cdot \left|\Sigma H_{U1}\right| = 1664.3 \cdot kN$$

$$\Sigma H_{InclinedU1} := \cos(\alpha s) \cdot \left|\Sigma H_{U1}\right| - \sin(\alpha s) \cdot \left(\left|\Sigma V_{U1} + V_{rocksection}\right|\right) = 181.0 \cdot kN$$

LOAD CASE U1

Safety Factor for Sliding Inclined Failure Plane

$$FS_{InclinedlSlidingU1} := \frac{\Sigma V_{InclinedU1} \cdot \tan(\phi_r)}{\Sigma H_{InclinedU1}} = 4.09$$

$$FS_{Sliding.check2.U1} := \left| \begin{array}{ll} \text{"OKAY "} & \text{if } FS_{InclinedlSlidingU1} > FS_{sliding.reqU1} \\ \text{"NG - Revise Structure""} & \text{otherwise} \end{array} \right. = \text{"OKAY "}$$

CHECK FOUNDATION ECCENTRICITY:

Summation of the resisting moments about the toe:

$$\Sigma M_{resU1} := \Sigma M_{conc} + \Sigma M_{VertSoilWaterResistU1} + \Sigma M_{HorizSoilResistU1} + \Sigma M_{rocksection} = 10025 \cdot kN \cdot m$$

Summation of the overturning moments about the toe:

$$\Sigma M_{oU1} := \Sigma M_{LateralSoildriveU1} + \Sigma M_{UpliftU1} = -2887 \cdot kN \cdot m$$

Total moment: $\Sigma M_{U1} := \Sigma M_{resU1} + \Sigma M_{oU1} = 7137.6 \cdot kN \cdot m$

Normal force to base: $\Sigma V_{InclinedU1} = 1664.3 \cdot kN$

Inclined Sliding Plane Length: $L_{incline} := \dfrac{b}{\cos(\alpha s)} = 10.1\ m$

Eccentricity (inclined plane): $ex_{U1} := \dfrac{L_{incline}}{2} - \dfrac{\Sigma M_{U1}}{\Sigma V_{InclinedU1}} = 0.74\ m$ $\qquad Kern := \dfrac{L_{incline}}{6} = 1.677\ m$

Eccentricity Check:

$$e_{check.U1} := \left| \begin{array}{ll} \text{"Okay"} & \text{if } ex_{U1} \le Kern \\ \text{"Revise Structure"} & \text{otherwise} \end{array} \right. = \text{"Okay"}$$

CHECK FOUNDATION BEARING CAPACITY:

Base Section Modulus: $S_b := \dfrac{1}{6}\left(B \cdot L_{incline}{}^2\right) = 16.88\ m^3$

Bearing Pressure Under Toe:

$$\sigma_{ToeU1} := \left| \begin{array}{ll} \left[\dfrac{\Sigma V_{InclinedU1}}{L_{incline} \cdot B} + \dfrac{\left(\Sigma V_{InclinedU1} \cdot ex_{U1}\right)}{S_b}\right] & \text{if } \dfrac{\Sigma V_{InclinedU1}}{L_{incline} \cdot B} \ge \dfrac{\Sigma V_{InclinedU1} \cdot ex_{U1}}{S_b} \\ \dfrac{2 \cdot \Sigma V_{InclinedU1}}{B \cdot 3\left(\dfrac{b}{2} - ex_{U1}\right)} & \text{otherwise} \end{array} \right. = 238.6 \cdot kPa$$

$$Bearing_{ChecktoeU1} := \left| \begin{array}{ll} \text{"OKAY "} & \text{if } \sigma_{ToeU1} < \sigma_{allowU1} \\ \text{"NG""} & \text{otherwise} \end{array} \right. = \text{"OKAY "}$$

Bearing Pressure Under Heel:

$$\sigma_{HeelU1} := \left| \begin{array}{ll} \left[\dfrac{\Sigma V_{InclinedU1}}{L_{incline} \cdot B} - \dfrac{\left(\Sigma V_{InclinedU1} \cdot ex_{U1}\right)}{S_b}\right] & \text{if } \dfrac{\Sigma V_{InclinedU1}}{L_{incline} \cdot B} \ge \dfrac{\Sigma V_{InclinedU1} \cdot ex_{U1}}{S_b} \\ 0 & \text{otherwise} \end{array} \right. = 92.2 \cdot kPa$$

$$Bearing_{CheckheelU1} := \left(\left| \begin{array}{ll} \text{"OKAY "} & \text{if } \sigma_{HeelU1} < \sigma_{allowU1} \wedge \sigma_{HeelU1} > 0 \\ \text{"NG - perform cracked base analysis""} & \text{otherwise} \end{array} \right. \right) = \text{"OKAY "}$$

CHECK FLOATATION:

Safety Factor for Floatation:

$$FS_{FloatationU1} := \frac{\Sigma V_{conc} + \Sigma V_{SoilWaterU1}}{\left|\Sigma V_{UpliftU1}\right|} = 2.97$$

$$FS_{Floatation.U1.check} := \begin{cases} \text{"OKAY "} & \text{if } FS_{FloatationU1} > FS_{req.U1.flt} \\ \text{"Revise Structure""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

CHECK OVERTURNING

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stablity of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1

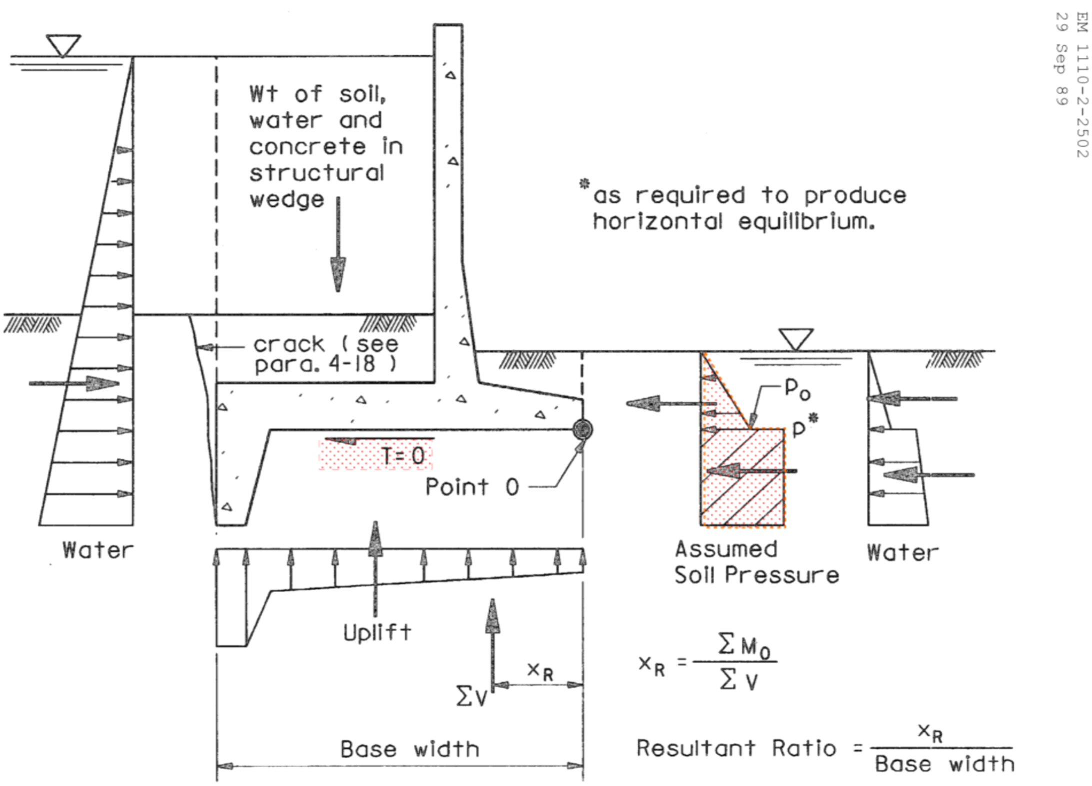


Figure 4-5. Forces for overturning analysis for wall with horizontal base and key

Modify Uplift for Overturning Analysis: **LOAD CASE U1**

(Uplift is calculated along the concrete/rock contact using the Line of Creep method)

Water Pressure at h: $u_{h.U1} := \Delta h_{g.hj.U1} \cdot \gamma_w = 88.20 \cdot kPa$

Water Pressure at o: $u_{o.U1} := \left(\Delta h_{g.no.U1} - \frac{\Delta h_{g.r.U1} \cdot L_{ho.U1}}{L_{ho.U1}}\right) \cdot \gamma_w = 24.5 \cdot kPa$

Head loss between point h and o: $\Delta h_{ho.U1} := \Delta h_{g.r.U1} \cdot \frac{L_{ho.U1}}{L_{ho.U1}} = 2.5\,m$

Length of concrete base (h -> o): $L_{baseho.U1} := Key_{h.w} + Key_{h.d} + Key_{hdist} + Key_{t.d} + Key_{t.w} = 13\,m$

Head loss along h -> j: $\Delta h_{hj.U1} := \Delta h_{ho.U1} \cdot \frac{Key_{h.w}}{L_{baseho.U1}} = 0.192\,m$

Water Pressure at j: $u_{j.U1} := \left(\Delta h_{g.hj.U1} - \Delta h_{hj.U1}\right) \cdot \gamma_w = 86.32 \cdot kPa$

Head loss along h -> k: $\Delta h_{hjk.U1} := \Delta h_{ho.U1} \cdot \left(\frac{Key_{h.w} + Key_{h.d}}{L_{baseho.U1}}\right) = 0.962\,m$

Water Pressure at k: $u_{k.U1} := \left(\Delta h_{g.km.U1} - \Delta h_{hjk.U1}\right) \cdot \gamma_w = 39.58 \cdot kPa$

Head loss along h -> m: $\Delta h_{hjkm.U1} := \Delta h_{ho.U1} \cdot \left(\frac{Key_{h.w} + Key_{h.d} + Key_{hdist}}{L_{baseho.U1}}\right) = 2.5\,m$

Water Pressure at m: $u_{m.U1} := \left(\Delta h_{g.km.U1} - \Delta h_{hjkm.U1}\right) \cdot \gamma_w = 24.50 \cdot kPa$

Head loss along h -> n: $\Delta h_{hjkmn.U1} := \Delta h_{ho.U1} \cdot \left(\frac{Key_{h.w} + Key_{h.d} + Key_{hdist} + Key_{t.d}}{L_{baseho.U1}}\right) = 2.5\,m$

Water Pressure at n: $u_{n.U1} := \left(\Delta h_{g.no.U1} - \Delta h_{hjkmn.U1}\right) \cdot \gamma_w = 24.50 \cdot kPa$

Uplift under key at heel: $V_{ulkeyhU1.OT} := \frac{\left(u_{h.U1} + u_{j.U1}\right) \cdot Key_{h.w}}{2} \cdot B \cdot -1 = -87.258 \cdot kN$

Moment Arm (from Point O): $V_{ulkeyhU1loc.OT} := b - \frac{Key_{h.w} \cdot \left(2 \cdot u_{j.U1} + u_{h.U1}\right)}{3 \cdot \left(u_{j.U1} + u_{h.U1}\right)} = 8.502\,m$

Uplift under base: $V_{ulbaseU1.OT} := \frac{\left(u_{k.U1} + u_{m.U1}\right) \cdot Key_{hdist}}{2} \cdot B \cdot -1 = -256.308 \cdot kN$

Moment Arm (from Point O): $V_{ulbaseU1loc.OT} := b - Key_{h.w} - \frac{Key_{hdist} \cdot \left(2 \cdot u_{m.U1} + u_{k.U1}\right)}{3 \cdot \left(u_{m.U1} + u_{k.U1}\right)} = 4.314\,m$

Uplift under key at toe: $V_{ulkeytU1.OT} := \frac{\left(u_{n.U1} + u_{o.U1}\right) \cdot Key_{t.w}}{2} \cdot B \cdot -1 = 0 \cdot kN$

Moment Arm (from Point O): $V_{ulkeytU1loc.OT} := \frac{Key_{t.w} \cdot \left(2 \cdot u_{n.U1} + u_{o.U1}\right)}{3 \cdot \left(u_{n.U1} + u_{o.U1}\right)} = 0$

$$\Sigma V_{UpliftU1.OT} := V_{ulkeyhU1.OT} + V_{ulbaseU1.OT} + V_{ulkeytU1.OT} = -344 \cdot kN$$

$$U_{U1.loc.OT} := \frac{V_{ulkeyhU1.OT} \cdot V_{ulkeyhU1loc.OT} + V_{ulbaseU1.OT} \cdot V_{ulbaseU1loc.OT} + V_{ulkeytU1.OT} \cdot V_{ulkeytU1loc.OT}}{\Sigma V_{UpliftU1.OT}} = 5.38\,m$$

$$\Sigma M_{UpliftU1.OT} := \Sigma V_{UpliftU1.OT} \cdot U_{U1.loc.OT} = -1847.5 \cdot kN \cdot m$$

Modify Lateral Water Pressure (Resisting) for Overturning Analysis:

(Resisting water pressure is calculated using the Line of Creep method)

Water Load at Key (heel):

$$H_{h2U1.OT} := \frac{u_{k.U1} + u_{j.U1}}{2} \cdot Key_{h.d} B = 251.8 \cdot kN$$

Moment Arm (from Point O):

$$H_{h2locU1.OT} := \frac{Key_{h.d} \cdot (2 \cdot u_{k.U1} + u_{j.U1})}{3(u_{k.U1} + u_{j.U1})} + Key_{vdist} = -2.25\ m$$

Water Load at Key (toe):

$$H_{h6U1.OT} := \frac{u_{o.U1} \cdot (UWSEL_{U1} - Bot_{ftg} + Key_{t.d})}{2} \cdot B = 31 \cdot kN$$

Moment Arm (from Point O):

$$H_{h6locU1.OT} := \frac{UWSEL_{U1} - Bot_{ftg} + Key_{t.d}}{3} = 0.83\ m$$

$$\Sigma H_{waterresistU1.OT} := H_{h2U1.OT} + H_{h6U1.OT} = 282.41 \cdot kN$$

$$H_{waterresistlocU1.OT} := \frac{H_{h2U1.OT} \cdot H_{h2locU1.OT} + H_{h6U1.OT} \cdot H_{h6locU1.OT}}{\Sigma H_{waterresistU1.OT}} = -1.913\ m$$

$$\Sigma M_{waterresistU1.OT} := \Sigma H_{waterresistU1.OT} \cdot H_{waterresistlocU1.OT} = -540.37 \cdot kN \cdot m$$

Modify Lateral Soil Loads for Overturning Analysis:

(Lateral soil loads are calculated down to Point O instead of bottom of shear key)

Driving Soil Load (Headwater Side):

Surcharge Load:

$$E_{s1U1.OT} := S1_{U1} \cdot K_o \cdot (H_w + Key_{h.d} + Key_{vdist}) \cdot B \cdot -1 = 0 \cdot kN$$

Moment Arm (from Point O):

$$E_{s1locU1.OT} := \frac{H_w + Key_{h.d} + Key_{vdist}}{2} = 4.63\ m$$

Moist Soil Load above GWL:

$$E_{h1U1.OT} := \frac{\gamma_m \cdot K_o \cdot h_{1U1}^{\ 2}}{2} B \cdot -1 = -98.6 \cdot kN$$

Moment Arm (from Point O):

$$E_{h1locU1.OT} := \frac{h_{1U1}}{3} + h_{2U1} + Key_{vdist} = 6.42\ m$$

Saturated Soil Load below GWL:
(rectangular component)

$$E_{h2U1.OT} := (\gamma_m \cdot K_o \cdot h_{1U1}) \cdot (h_{2U1} + Key_{vdist}) \cdot B \cdot -1 = -232.1 \cdot kN$$

Moment Arm (from Point O):

$$E_{h2locU1.OT} := \frac{h_{2U1} + Key_{vdist}}{2} = 2.50\ m$$

Saturated Soil Load below GWL:
(triangular component)

$$E_{h2aU1.OT} := \frac{(\gamma_{sat} - \gamma_w) \cdot K_o \cdot (h_{2U1} + Key_{vdist})^2}{2} \cdot B \cdot -1 = -83.3 \cdot kN$$

Moment Arm (from Point O):

$$E_{h2alocU1.OT} := \frac{h_{2U1} + Key_{vdist}}{3} = 1.67\ m$$

LOAD CASE U1

Resisting Soil Load (Tailwater Side):

(Determine resisting soil load based on depth variation between the keys (ie. Key_{vdist}). In case where key at heel is deeper than key at toe (ie. $Key_{vdist} < 0$), resisting soil load (p*) is assumed to produce horizontal equilibrium as per Figure 4-5 above. Resisting soil load (p_o) is neglected.)

Total Driving Force: $\Sigma H_{SoildriveU1.OT} := E_{s1U1.OT} + E_{h1U1.OT} + E_{h2U1.OT} + E_{h2aU1.OT} + H_{h2U1} = -810.8 \cdot kN$

Total Resisting Force: $\Sigma H_{waterresistU1.OT} = 282.4 \cdot kN$

Assumed Soil Load p*: $E_{h8U1a.OT} := \left(\Sigma H_{SoildriveU1.OT} + \Sigma H_{waterresistU1.OT}\right) \cdot -1 = 528.434 \cdot kN$

Moment Arm (from Point O): $E_{h8U1a.loc.OT} := \dfrac{Key_{vdist}}{2} = -2\,m$

$$E_{h8U1.OT} := \begin{cases} E_{h8U1a.OT} & \text{if } Key_{vdist} < 0 \\ \Sigma H_{SoilresistU1} - H_{h6U1} - H_{h6aU1} & \text{otherwise} \end{cases} = 528.434 \cdot kN$$

$$\Sigma M_{SoilresistU1.OT} := \begin{cases} E_{h8U1a.OT} \cdot E_{h8U1a.loc.OT} & \text{if } Key_{vdist} < 0 \\ \Sigma M_{HorizSoilResistU1} - H_{h6U1} \cdot H_{h6locU1} - H_{h6aU1} \cdot H_{h6alocU1} & \text{otherwise} \end{cases} = -1056.868 \cdot kN \cdot m$$

Sum of Moment about Point O:

$$\Sigma M_{LateraldriveU1.OT} := E_{s1U1.OT} \cdot E_{s1locU1.OT} + E_{h1U1.OT} \cdot E_{h1locU1.OT} + E_{h2U1.OT} \cdot E_{h2locU1.OT} \cdots + E_{h2aU1.OT} \cdot E_{h2alocU1.OT} + H_{h2U1} \cdot H_{h2locU1} = -954.8 \cdot kN \cdot m$$

$$\Sigma M_{LateralresistU1.OT} := \Sigma M_{waterresistU1.OT} + \Sigma M_{SoilresistU1.OT} = -1597.2 \cdot kN \cdot m$$

Total moment:

$$\Sigma M_{U1.OT} := \Sigma M_{conc} + \Sigma M_{VertSoilWaterResistU1} + \Sigma M_{UpliftU1.OT} + \Sigma M_{LateraldriveU1.OT} + \Sigma M_{LateralresistU1.OT} = 3933.6 \cdot kN \cdot m$$

Total Vertical Force: $\Sigma V_{U1.OT} := \Sigma V_{conc} + \Sigma V_{SoilWaterU1} + \Sigma V_{UpliftU1.OT} = 1161.6 \cdot kN$

Distance X_R: EM 1110-2-2502 Eq.4-1 $X_{R.U1} := \dfrac{\Sigma M_{U1.OT}}{\Sigma V_{U1.OT}} = 3.386\,m$

Overturning Resultant Ratio $Ratio_{U1.OT} := \dfrac{X_{R.U1}}{b} = 0.38$

$$Ratio_{U1.OT.check} := \begin{cases} \text{"OKAY "} & \text{if } Ratio_{U1.OT} > X_{R.reqU1} \\ \text{"Revise Structure""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

CHECK FOUNDATION ECCENTRICITY (HORIZONTAL PLANE):

Eccentricity (horizontal plan): $ex_{U1.OT} := \dfrac{b}{2} - \dfrac{\Sigma M_{U1.OT}}{\Sigma V_{U1.OT}} = 1.11\,m$ $Kern_{OT} := \dfrac{b}{6} = 1.5\,m$

Eccentricity Check:

$$e_{check.U1.OT} := \begin{cases} \text{"Okay"} & \text{if } ex_{U1} \le Kern_{OT} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"Okay"}$$

CHECK FOUNDATION BEARING CAPACITY (HORIZONTAL PLANE):

Base Section Modulus: $S_{b.OT} := \frac{1}{6}\left(B \cdot b^2\right) = 13.5\,m^3$

Bearing Pressure Under Toe:

$$\sigma_{ToeU1.OT} := \begin{cases} \left(\frac{\Sigma V_{U1.OT}}{b \cdot B} + \frac{\Sigma V_{U1.OT} \cdot ex_{U1.OT}}{S_{b.OT}}\right) & \text{if } \frac{\Sigma V_{U1.OT}}{b \cdot B} \geq \frac{\Sigma V_{U1.OT} \cdot ex_{U1.OT}}{S_{b.OT}} \\ \frac{2 \cdot \Sigma V_{U1.OT}}{B \cdot 3\left(\frac{b}{2} - ex_{U1.OT}\right)} & \text{otherwise} \end{cases} = 224.9 \cdot kPa$$

$$Bearing_{CheckToeU1.OT} := \begin{cases} \text{"OKAY "} & \text{if } \sigma_{ToeU1.OT} < \sigma_{allowU1} \\ \text{"NG - for reference only""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

Bearing Pressure Under Heel:

$$\sigma_{HeelU1.OT} := \begin{cases} \left(\frac{\Sigma V_{U1.OT}}{b \cdot B} - \frac{\Sigma V_{U1.OT} \cdot ex_{U1.OT}}{S_{b.OT}}\right) & \text{if } \frac{\Sigma V_{U1.OT}}{b \cdot B} \geq \frac{\Sigma V_{U1.OT} \cdot ex_{U1.OT}}{S_{b.OT}} \\ 0 & \text{otherwise} \end{cases} = 33.2 \cdot kPa$$

$$Bearing_{CheckheelU1.OT} := \left(\begin{cases} \text{"OKAY "} & \text{if } \sigma_{HeelU1.OT} < \sigma_{allowU1} \wedge \sigma_{HeelU1.OT} > 0 \\ \text{"NG - for reference only""} & \text{otherwise} \end{cases}\right) = \text{"OKAY "}$$

SUMMARY OF STABILITY ASSESSMENT:

UN1 DESIGN CASE

LOAD CASE UN1 ACCEPTANCE PARAMETERS

FS sliding:

Unusual (UN) 1.3 (without cohesion) (Table 3-3, USACE EM 1110-2-2100)

Resultant Location:

Unsual (UN) Inside middle third ~100% base in compression

Required Factor of Safety for Sliding: $FS_{sliding.reqUN1} := 1.3$ (Without Cohesion)

Allowable rock bearing pressure: $\sigma_{allowUN1} := 1470kPa$ (Section 5.2, Design Criteria EM 1110-2-2100 Section 3-10)

Overturning Required Resultant Ratio: $X_{R.reqUN1} := 0.333$ (EM 1110-2-2502, Figure 4-4)

Required Factor of Safety for Floatation $FS_{req.UN1.flt} := 1.3$

SOIL HEIGHTS and Water Levels:

LOAD CASE UN1

Heel Conditions:

Groundwater Elevation at Heel: $GWL_{UN1} := 1210.0m$

Distance from Finish Grade to Groundwater at Heel: $h_{1UN1} := \left[T_w - GWL_{UN1} + \left(L_{cd} + t_{wb} - t_{wt}\right)\cdot \tan(\beta)\right] = 4.25\,m$

Distance from Water Surface to Bottom of Footing at Heel: $h_{2UN1} := GWL_{UN1} - Bot_{ftg} + Key_{h.d} = 9.00\,m$

Toe Conditions:

Water Surface Elevation at Toe: $WSEL_{UN1} := 1207.5m$

Water Surface Elevation at Toe for Uplift: $UWSEL_{UN1} := 1207.5\cdot m$

Finish Grade at Toe providing lateral resistance: $FG_{toeUN1} := 1207.5\cdot m$

Soil Depth Above top of footing: $h_{3aUN1} := FG_{toeUN1} - Top_{ftg} = 0.5\,m$

$$h_{3UN1} := \begin{cases} h_{3aUN1} & \text{if } FG_{toeUN1} - Top_{ftg} \ge 0 \\ 0 & \text{otherwise} \end{cases} = 0.5$$

Resisting Fill at Toe: $h_{4UN1} := FG_{toeUN1} - Bot_{ftg} + Key_{t.d} = 2.50\,m$

Distance from Water Level to Top of Footing: $h_{5UN1} := WSEL_{UN1} - Top_{ftg} = 0.50\,m$

Distance from Water Surface to Bottom of Toe Key: $h_{6UN1} := WSEL_{UN1} - Bot_{ftg} + Key_{t.d} = 2.50\,m$

Soil Depth Above WSEL: $h_{7aUN1} := FG_{toeUN1} - WSEL_{UN1} = 0\,m$

$$h_{7UN1} := \begin{cases} h_{7aUN1} & \text{if } FG_{toeUN1} - WSEL_{UN1} \ge 0 \\ 0 & \text{otherwise} \end{cases} = 0$$

Soil Depth Below WSEL:

$$h_{8UN1} := \begin{cases} WSEL_{UN1} - Bot_{ftg} + Key_{t.d} & \text{if } FG_{toeUN1} - WSEL_{UN1} \ge 0 \\ h_{4UN1} & \text{otherwise} \end{cases} = 2.5$$

For Line of Creep Method: $L_{ho.UN1} := \sqrt{b^2 + \left(Key_{h.d} - Key_{t.d}\right)^2} = 9.849\,m$

Head Loss from Point g:

$\Delta h_{g.hj.UN1} := h_{2UN1} = 9\,m$ (to point h & j)

$\Delta h_{g.km.UN1} := GWL_{UN1} - Bot_{ftg} = 5\,m$ (to point k & m)

$\Delta h_{g.no.UN1} := GWL_{UN1} - Bot_{ftg} + Key_{t.d} = 5\,m$ (to point n & o)

$\Delta h_{g.p.UN1} := GWL_{UN1} - FG_{toeUN1} = 2.5\,m$ (to point p*)

$\Delta h_{g.r.UN1} := GWL_{UN1} - UWSEL_{UN1} = 2.5\,m$ (to point r)

Surcharge

Surcharge on Heel: $S1_{UN1} := 15.0\,\frac{kN}{m^2}$

* same as point "a" in this case

Calculate Soil Lateral Pressure Coefficients:

For all load cases except seismic, soil loading to be based on At-Rest Condition.
Calculate at-rest pressure coefficient Ko based on Jaky's (1944) equation.

Soil At Rest Static Coefficient: $K_o := \dfrac{1 - \sin(\phi)}{1 + \sin(\beta)} = 0.546$ (Eq. 3-6, USACE EM 1110-2-2502)

Lateral - Driving Force

Static At-Rest:

Surcharge Load: $E_{s1UN1} := S1_{UN1} \cdot K_o \cdot \left(H_w + Key_{h.d}\right) \cdot B \cdot -1 = -108.519 \cdot kN$

Moment Arm (from Point O): $E_{s1locUN1} := \dfrac{H_w + Key_{h.d}}{2} + Key_{vdist} = 2.63\ m$

Moist Soil Load above GWL: $E_{h1UN1} := \dfrac{\gamma_m \cdot K_o \cdot h_{1UN1}^{\ 2}}{2} \cdot B \cdot -1 = -98.6 \cdot kN$

Moment Arm (from Point O): $E_{h1locUN1} := \dfrac{h_{1UN1}}{3} + h_{2UN1} + Key_{vdist} = 6.42\ m$

Saturated Soil Load below GWL:
(rectangular component) $E_{h2UN1} := \left(\gamma_m \cdot K_o \cdot h_{1UN1}\right) \cdot \left(h_{2UN1}\right) \cdot B \cdot -1 = -417.7 \cdot kN$

Moment Arm (from Point O): $E_{h2locUN1} := \dfrac{h_{2UN1}}{2} + Key_{vdist} = 0.50\ m$

Saturated Soil Load below GWT:
(triangular L $E_{h2aUN1} := \dfrac{\left(\gamma_{sat} - \gamma_w\right) \cdot K_o \cdot h_{2UN1}^{\ 2}}{2} \cdot B \cdot -1 = -269.8 \cdot kN$

Moment Arm (from Point O): $E_{h2alocUN1} := \dfrac{h_{2UN1}}{3} + Key_{vdist} = -1.00\ m$

Lateral Water Load:

Water Load GWL to Bottom of Keys:

$$H_{h2UN1} := \begin{cases} \dfrac{\gamma_w \cdot h_{2UN1}^{\ 2}}{2} \cdot B \cdot -1 & \text{if } Key_{vdist} < 0 \\ \dfrac{\gamma_w \cdot \left(h_{2UN1} + Key_{vdist}\right)^2}{2} \cdot B \cdot -1 & \text{otherwise} \end{cases} = -396.9 \cdot kN$$

Moment Arm (from Point O):

$$H_{h2locUN1} := \begin{cases} \dfrac{h_{2UN1}}{3} + Key_{vdist} & \text{if } Key_{vdist} < 0 \\ \dfrac{h_{2UN1} + Key_{vdist}}{3} & \text{otherwise} \end{cases} = -1.00 \cdot m$$

$$\Sigma H_{SoildriveUN1} := E_{s1UN1} + E_{h1UN1} + E_{h2UN1} + E_{h2aUN1} + H_{h2UN1} = -1291.5 \cdot kN$$

$$\Sigma M_{LateralSoildriveUN1} := E_{s1UN1} \cdot E_{s1locUN1} + E_{h1UN1} \cdot E_{h1locUN1} + E_{h2UN1} \cdot E_{h2locUN1} \cdots + E_{h2aUN1} \cdot E_{h2alocUN1} + H_{h2UN1} \cdot H_{h2locUN1} = -459.9\ m \cdot kN$$

Lateral - Resisting Force

LOAD CASE UN1

Lateral Water Load:

Water Load WSEL to Bot. of Toe Key: $H_{h6UN1} := \frac{\gamma_w \cdot h_{6UN1}^2}{2} \cdot B = 30.6 \cdot kN$

Moment Arm (from Point O): $H_{h6locUN1} := \frac{h_{6UN1}}{3} = 0.83\ m$

Water Load between Keys (if any) $H_{h6aUN1} := \begin{cases} \frac{(h_{6UN1} + h_{2UN1}) \cdot -Key_{vdist}}{2} \cdot \gamma_w \cdot B & \text{if } Key_{vdist} < 0 \\ 0 & \text{otherwise} \end{cases} = 225.4 \cdot kN$

Moment Arm (from Point O): $H_{h6alocUN1} := \begin{cases} \frac{Key_{vdist} \cdot (2 \cdot h_{2UN1} + h_{6UN1})}{3(h_{2UN1} + h_{6UN1})} & \text{if } Key_{vdist} < 0 \\ 0 & \text{otherwise} \end{cases} = -2.38 \cdot m$

Lateral Soil Load:

Moist Soil Load above WSEL: $E_{h7UN1} := \frac{\gamma_m \cdot K_o \cdot h_{7UN1}^2}{2} B = 0.0 \cdot kN$

Moment Arm (from bot. of toe key): $E_{h7locUN1} := h_{6UN1} + \frac{h_{7UN1}}{3} + Key_{vdist} = -1.50\ m$

Saturated Soil Load below WSEL:
(rectangular component) $E_{h8UN1} := (\gamma_m \cdot K_o \cdot h_{7UN1}) \cdot h_{8UN1} \cdot B = 0.0 \cdot kN$

Moment Arm (from bot. of toe key): $E_{h8locUN1} := \frac{h_{8UN1}}{2} = 1.25\ m$

Saturated Soil Load below WSEL:
(triangular component) $E_{h8aUN1} := \frac{\left[(\gamma_{sat} - \gamma_w) \cdot K_o\right] \cdot h_{8UN1}^2}{2} \cdot B = 20.8 \cdot kN$

Moment Arm (from bot. of footing): $E_{h8alocUN1} := \frac{h_{8UN1}}{3} = 0.83\ m$

$\Sigma H_{SoilresistUN1} := H_{h6UN1} + H_{h6aUN1} + E_{h7UN1} + E_{h8UN1} + E_{h8aUN1} = 276.8 \cdot kN$

$\Sigma M_{HorizSoilResistUN1} := H_{h6UN1} \cdot H_{h6locUN1} + H_{h6aUN1} \cdot H_{h6alocUN1} + E_{h7UN1} \cdot E_{h7locUN1} \cdots + E_{h8UN1} \cdot E_{h8locUN1} + E_{h8aUN1} \cdot E_{h8alocUN1} = -492.9\ m \cdot kN$

Vertical Force:

UPLIFT: Linear distribution from water at heel to water at toe:

$\Sigma V_{UplliftUN1} := \left[(UWSEL_{UN1} - Bot_{ftg} + Key_{t.d}) + h_{2UN1}\right] \cdot \frac{b}{2} \cdot \gamma_w \cdot B \cdot -1 = -507.15 \cdot kN$

Moment Arm (from Point O): $V_{UpliftUN1aloc} := \frac{b \cdot \left[2 \cdot h_{2UN1} + (UWSEL_{UN1} - Bot_{ftg} + Key_{t.d})\right]}{3\left[h_{2UN1} + (UWSEL_{UN1} - Bot_{ftg} + Key_{t.d})\right]} = 5.348\ m$

$\Sigma M_{UpliftUN1} := \Sigma V_{UplliftUN1} \cdot V_{UpliftUN1aloc} = -2712.15 \cdot kN \cdot m$

Weight of soil and water over toe:

Water Above the Top of Footing: $W_{H1UN1} := \gamma_w \cdot h_{5UN1} \cdot L_{ab} \cdot B = 13.475 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E1locUN1} := \frac{L_{ab}}{2} = 1.375\,m$

Soil above top of footing: $W_{E6UN1} := \gamma_b \cdot h_{3UN1} \cdot L_{ab} \cdot B = 16.8 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E6locUN1} := \frac{L_{ab}}{2} = 1.375\,m$

Vertical Load Due to Surcharge: $S_{UN1} := S1_{UN1} \cdot L_{cd} \cdot B = 77.7 \cdot kN$ $\quad S_{UN1loc} := b - \frac{L_{cd}}{2} = 6.41\,m$

Weight of soil and water over heel:

Moist Soil for sloped grade above top of wall:

Length of sloped portion of soil above top of wall: $L_{E3UN1} := \left(L_{cd} + t_{wb} - t_{wt}\right) = 5.75\,m$

Height of sloped soil above top of wall over heel: $h_{E3locUN1} := \left(L_{E3UN1}\right) \cdot \tan(\beta) = 0.00\,m$

Weight of sloped soil above top of wall: $W_{E3UN1} := \frac{\gamma_m}{2} \cdot h_{E3locUN1} \cdot L_{E3UN1} \cdot B = 0.0 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E3locUN1} := L_{ab} + t_{wt} + \frac{2}{3} \cdot L_{E3UN1} = 7.08\,m$

Moist soil from top of wall to groundwater level:

Height of soil from top of wall and top of GWL: $h_{1UN1} = 4.25\,m$

Length from edge of wall at GWL to edge of heel: $L_{E4UN1} := L_{E3UN1} - \left(h_{1UN1} \cdot S_{batter}\right) = 5.42\,m$

Weight of soil over heel from top of wall to GWL: $W_{E4UN1} := \gamma_m \cdot h_{1UN1} \cdot \frac{\left(L_{E3UN1} + L_{E4UN1}\right)}{2} \cdot B = 474.5 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E4locUN1} := b - \frac{L_{E3UN1}^2 + L_{E3UN1} \cdot L_{E4UN1} + L_{E4UN1}^2}{3\left(L_{E3UN1} + L_{E4UN1}\right)} = 6.21\,m$

Saturated soil from groundwater to top of footing:

Height of soil from GWL to top of heel: $h_{E4UN1} := h_{2UN1} - t_{ftg} - Key_{h.d} = 3.00\,m$

Weight of soil over heel from GWL to top of heel: $W_{E5UN1} := \left(\gamma_{sat}\right) \cdot h_{E4UN1} \cdot \frac{\left(L_{E4UN1} + L_{cd}\right)}{2} \cdot B = 349.7 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E5locUN1} := b - \frac{L_{E4UN1}^2 + L_{E4UN1} \cdot L_{cd} + L_{cd}^2}{3\left(L_{E4UN1} + L_{cd}\right)} = 6.35\,m$

$$\Sigma V_{SoilWaterUN1} := W_{H1UN1} + W_{E6UN1} + W_{E3UN1} + W_{E4UN1} + W_{E5UN1} + S_{UN1} = 932.2 \cdot kN$$

$$\Sigma M_{VertSoilWaterResistUN1} := W_{H1UN1} \cdot W_{E1locUN1} + W_{E6UN1} \cdot W_{E6locUN1} \cdots + W_{E3UN1} \cdot W_{E3locUN1} + W_{E4UN1} \cdot W_{E4locUN1} + W_{E5UN1} \cdot W_{E5locUN1} + S_{UN1} \cdot S_{UN1loc} = 5706.1\,m \cdot kN$$

CHECK OVERTURNING

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stablity of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1

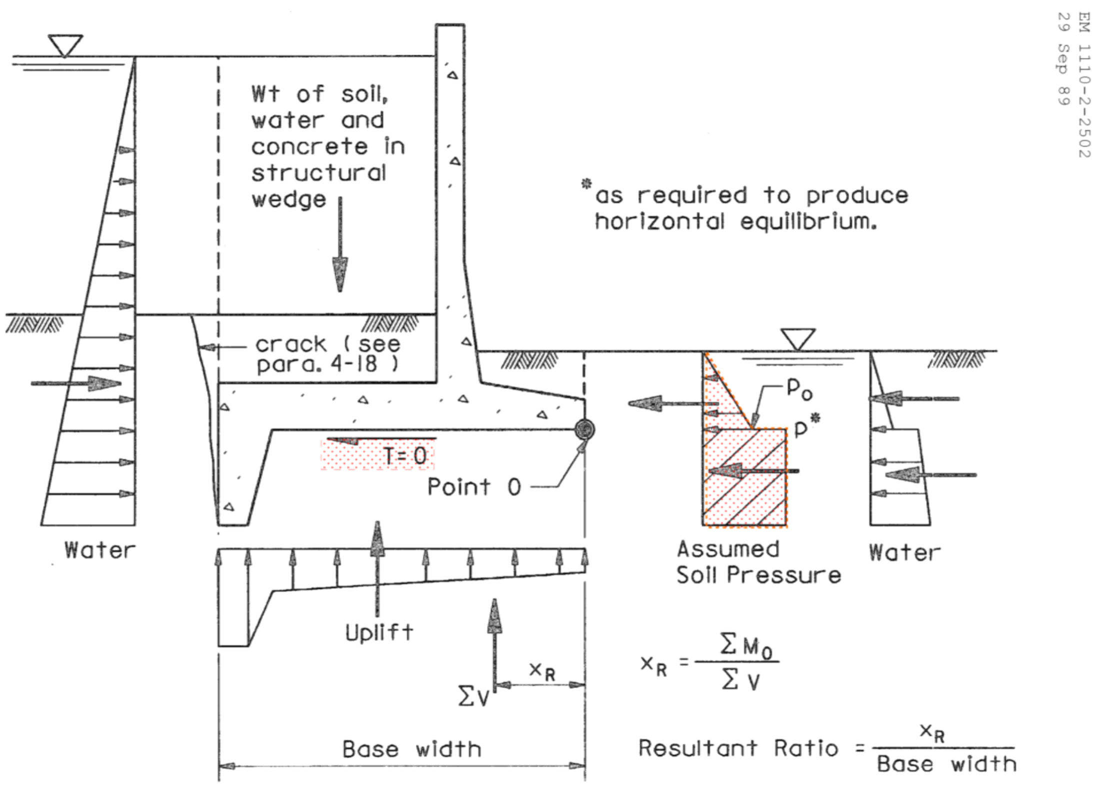

Figure 4-5. Forces for overturning analysis for wall with horizontal base and key

Modify Uplift for Overturning Analysis: **LOAD CASE UN1**

(Uplift is calculated along the concrete/rock contact using the Line of Creep method)

Water Pressure at h: $u_{h.UN1} := \Delta h_{g.hj.UN1} \cdot \gamma_w = 88.20 \cdot kPa$

Water Pressure at o: $u_{o.UN1} := \left(\Delta h_{g.no.UN1} - \frac{\Delta h_{g.r.UN1} \cdot L_{ho.UN1}}{L_{ho.UN1}} \right) \cdot \gamma_w = 24.5 \cdot kPa$

Head loss between point h and o: $\Delta h_{ho.UN1} := \Delta h_{g.r.UN1} \cdot \frac{L_{ho.UN1}}{L_{ho.UN1}} = 2.5\,m$

Length of concrete base (h -> o): $L_{baseho.UN1} := Key_{h.w} + Key_{h.d} + Key_{hdist} + Key_{t.d} + Key_{t.w} = 13\,m$

Head loss along h -> j: $\Delta h_{hj.UN1} := \Delta h_{ho.UN1} \cdot \frac{Key_{h.w}}{L_{baseho.UN1}} = 0.192\,m$

Water Pressure at j: $u_{j.UN1} := \left(\Delta h_{g.hj.UN1} - \Delta h_{hj.UN1} \right) \cdot \gamma_w = 86.32 \cdot kPa$

Head loss along h -> k: $\Delta h_{hjk.UN1} := \Delta h_{ho.UN1} \cdot \left(\frac{Key_{h.w} + Key_{h.d}}{L_{baseho.UN1}} \right) = 0.962\,m$

Water Pressure at k: $u_{k.UN1} := \left(\Delta h_{g.km.UN1} - \Delta h_{hjk.UN1} \right) \cdot \gamma_w = 39.58 \cdot kPa$

Head loss along h -> m: $\Delta h_{hjkm.UN1} := \Delta h_{ho.UN1} \cdot \left(\frac{Key_{h.w} + Key_{h.d} + Key_{hdist}}{L_{baseho.UN1}} \right) = 2.5\,m$

Water Pressure at m: $u_{m.UN1} := \left(\Delta h_{g.km.UN1} - \Delta h_{hjkm.UN1} \right) \cdot \gamma_w = 24.50 \cdot kPa$

Head loss along h -> n: $\Delta h_{hjkmn.UN1} := \Delta h_{ho.UN1} \cdot \left(\frac{Key_{h.w} + Key_{h.d} + Key_{hdist} + Key_{t.d}}{L_{baseho.UN1}} \right) = 2.5\,m$

Water Pressure at n: $u_{n.UN1} := \left(\Delta h_{g.no.UN1} - \Delta h_{hjkmn.UN1} \right) \cdot \gamma_w = 24.50 \cdot kPa$

Uplift under key at heel: $V_{ulkeyhUN1.OT} := \frac{\left(u_{h.UN1} + u_{j.UN1} \right) \cdot Key_{h.w}}{2} \cdot B \cdot -1 = -87.258 \cdot kN$

Moment Arm (from Point O): $V_{ulkeyhUN1loc.OT} := b - \frac{Key_{h.w} \cdot \left(2 \cdot u_{j.UN1} + u_{h.UN1} \right)}{3 \cdot \left(u_{j.UN1} + u_{h.UN1} \right)} = 8.502\,m$

Uplift under base: $V_{ulbaseUN1.OT} := \frac{\left(u_{k.UN1} + u_{m.UN1} \right) \cdot Key_{hdist}}{2} \cdot B \cdot -1 = -256.308 \cdot kN$

Moment Arm (from Point O): $V_{ulbaseUN1loc.OT} := b - Key_{h.w} - \frac{Key_{hdist} \cdot \left(2 \cdot u_{m.UN1} + u_{k.UN1} \right)}{3 \cdot \left(u_{m.UN1} + u_{k.UN1} \right)} = 4.314\,m$

Uplift under key at toe: $V_{ulkeytUN1.OT} := \frac{\left(u_{n.UN1} + u_{o.UN1} \right) \cdot Key_{t.w}}{2} \cdot B \cdot -1 = 0 \cdot kN$

Moment Arm (from Point O): $V_{ulkeytUN1loc.OT} := \frac{Key_{t.w} \cdot \left(2 \cdot u_{n.UN1} + u_{o.UN1} \right)}{3 \cdot \left(u_{n.UN1} + u_{o.UN1} \right)} = 0$

$$\Sigma V_{UpliftUN1.OT} := V_{ulkeyhUN1.OT} + V_{ulbaseUN1.OT} + V_{ulkeytUN1.OT} = -344 \cdot kN$$

$$U_{UN1.loc.OT} := \frac{V_{ulkeyhUN1.OT} \cdot V_{ulkeyhUN1loc.OT} + V_{ulbaseUN1.OT} \cdot V_{ulbaseUN1loc.OT} + V_{ulkeytUN1.OT} \cdot V_{ulkeytUN1loc.OT}}{\Sigma V_{UpliftUN1.OT}} = 5.38\,m$$

$$\Sigma M_{UpliftUN1.OT} := \Sigma V_{UpliftUN1.OT} \cdot U_{UN1.loc.OT} = -1847.5 \cdot kN \cdot m$$

Modify Lateral Water Pressure (Resisting) for Overturning Analysis:

(Resisting water pressure is calculated using the Line of Creep method)

Water Load at Key (heel): $H_{h2UN1.OT} := \frac{u_{k.UN1} + u_{j.UN1}}{2} \cdot Key_{h.d} B = 251.8 \cdot kN$

Moment Arm (from Point O): $H_{h2locUN1.OT} := \frac{Key_{h.d} \cdot (2 \cdot u_{k.UN1} + u_{j.UN1})}{3(u_{k.UN1} + u_{j.UN1})} + Key_{vdist} = -2.25\ m$

Water Load at Key (toe): $H_{h6UN1.OT} := \frac{u_{o.UN1} \cdot (UWSEL_{UN1} - Bot_{ftg} + Key_{t.d})}{2} \cdot B = 31 \cdot kN$

Moment Arm (from Point O): $H_{h6locUN1.OT} := \frac{UWSEL_{UN1} - Bot_{ftg} + Key_{t.d}}{3} = 0.83\ m$

$$\Sigma H_{waterresistUN1.OT} := H_{h2UN1.OT} + H_{h6UN1.OT} = 282.41 \cdot kN$$

$$H_{waterresistlocUN1.OT} := \frac{H_{h2UN1.OT} \cdot H_{h2locUN1.OT} + H_{h6UN1.OT} \cdot H_{h6locUN1.OT}}{\Sigma H_{waterresistUN1.OT}} = -1.913\ m$$

$$\Sigma M_{waterresistUN1.OT} := \Sigma H_{waterresistUN1.OT} \cdot H_{waterresistlocUN1.OT} = -540.37 \cdot kN \cdot m$$

Modify Lateral Soil Loads for Overturning Analysis:

(Lateral soil loads are calculated down to Point O instead of bottom of shear key)

Driving Soil Load (Headwater Side):

Surcharge Load: $E_{s1UN1.OT} := S1_{UN1} \cdot K_o \cdot (H_w + Key_{h.d} + Key_{vdist}) \cdot B \cdot -1 = -75.759 \cdot kN$

Moment Arm (from Point O): $E_{s1locUN1.OT} := \frac{H_w + Key_{h.d} + Key_{vdist}}{2} = 4.63\ m$

Moist Soil Load above GWL: $E_{h1UN1.OT} := \frac{\gamma_m \cdot K_o \cdot h_{1UN1}^{\ 2}}{2} B \cdot -1 = -98.6 \cdot kN$

Moment Arm (from Point O): $E_{h1locUN1.OT} := \frac{h_{1UN1}}{3} + h_{2UN1} + Key_{vdist} = 6.42\ m$

Saturated Soil Load below GWL: (rectangular component) $E_{h2UN1.OT} := (\gamma_m \cdot K_o \cdot h_{1UN1}) \cdot (h_{2UN1} + Key_{vdist}) \cdot B \cdot -1 = -232.1 \cdot kN$

Moment Arm (from Point O): $E_{h2locUN1.OT} := \frac{h_{2UN1} + Key_{vdist}}{2} = 2.50\ m$

Saturated Soil Load below GWL: (triangular component) $E_{h2aUN1.OT} := \frac{(\gamma_{sat} - \gamma_w) \cdot K_o \cdot (h_{2UN1} + Key_{vdist})^2}{2} \cdot B \cdot -1 = -83.3 \cdot kN$

Moment Arm (from Point O): $E_{h2alocUN1.OT} := \frac{h_{2UN1} + Key_{vdist}}{3} = 1.67\ m$

Resisting Soil Load (Tailwater Side):

(Determine resisting soil load based on depth variation between the keys (ie. Key_{vdist}). In case where key at heel is deeper than key at toe (ie. $Key_{vdist} < 0$), resisting soil load (p*) is assumed to produce horizontal equilibrium as per Figure 4-5 above. Resisting soil load (p_o) is neglected.)

Total Driving Force: $\Sigma H_{SoildriveUN1.OT} := E_{s1UN1.OT} + E_{h1UN1.OT} + E_{h2UN1.OT} + E_{h2aUN1.OT} + H_{h2UN1} = -886.6 \cdot kN$

Total Resisting Force: $\Sigma H_{waterresistUN1.OT} = 282.4 \cdot kN$

Assumed Soil Load p*: $E_{h8UN1a.OT} := \left(\Sigma H_{SoildriveUN1.OT} + \Sigma H_{waterresistU1.OT}\right) \cdot -1 = 604.193 \cdot kN$

Moment Arm (from Point O): $E_{h8UN1a.loc.OT} := \dfrac{Key_{vdist}}{2} = -2\,m$

$$E_{h8UN1.OT} := \begin{cases} E_{h8UN1a.OT} & \text{if } Key_{vdist} < 0 \\ \Sigma H_{SoilresistUN1} - H_{h6UN1} - H_{h6aUN1} & \text{otherwise} \end{cases} = 604.193 \cdot kN$$

$$\Sigma M_{SoilresistUN1.OT} := \begin{cases} E_{h8UN1a.OT} \cdot E_{h8UN1a.loc.OT} & \text{if } Key_{vdist} < 0 \\ \Sigma M_{HorizSoilResistUN1} - H_{h6UN1} \cdot H_{h6locUN1} - H_{h6aUN1} \cdot H_{h6alocUN1} & \text{otherwise} \end{cases} = -1208.385 \cdot kN \cdot m$$

Sum of Moment about Point O:

$$\Sigma M_{LateraldriveUN1.OT} := E_{s1UN1.OT} \cdot E_{s1locUN1.OT} + E_{h1UN1.OT} \cdot E_{h1locUN1.OT} + E_{h2UN1.OT} \cdot E_{h2locUN1.OT} \dots + E_{h2aUN1.OT} \cdot E_{h2alocUN1.OT} + H_{h2UN1} \cdot H_{h2locUN1} = -1305.2 \cdot kN \cdot m$$

$$\Sigma M_{LateralresistUN1.OT} := \Sigma M_{waterresistUN1.OT} + \Sigma M_{SoilresistUN1.OT} = -1748.8 \cdot kN \cdot m$$

Total moment:

$$\Sigma M_{UN1.OT} := \Sigma M_{conc} + \Sigma M_{VertSoilWaterResistUN1} + \Sigma M_{UpliftUN1.OT} + \Sigma M_{LateraldriveUN1.OT} + \Sigma M_{LateralresistUN1.OT} = 3929.7 \cdot kN \cdot m$$

Total Vertical Force: $\Sigma V_{UN1.OT} := \Sigma V_{conc} + \Sigma V_{SoilWaterUN1} + \Sigma V_{UpliftUN1.OT} = 1239.3 \cdot kN$

Distance X_R: EM 1110-2-2502 Eq.4-1 $X_{R.UN1} := \dfrac{\Sigma M_{UN1.OT}}{\Sigma V_{UN1.OT}} = 3.171\,m$

Overturning Resultant Ratio $Ratio_{UN1.OT} := \dfrac{X_{R.UN1}}{b} = 0.35$

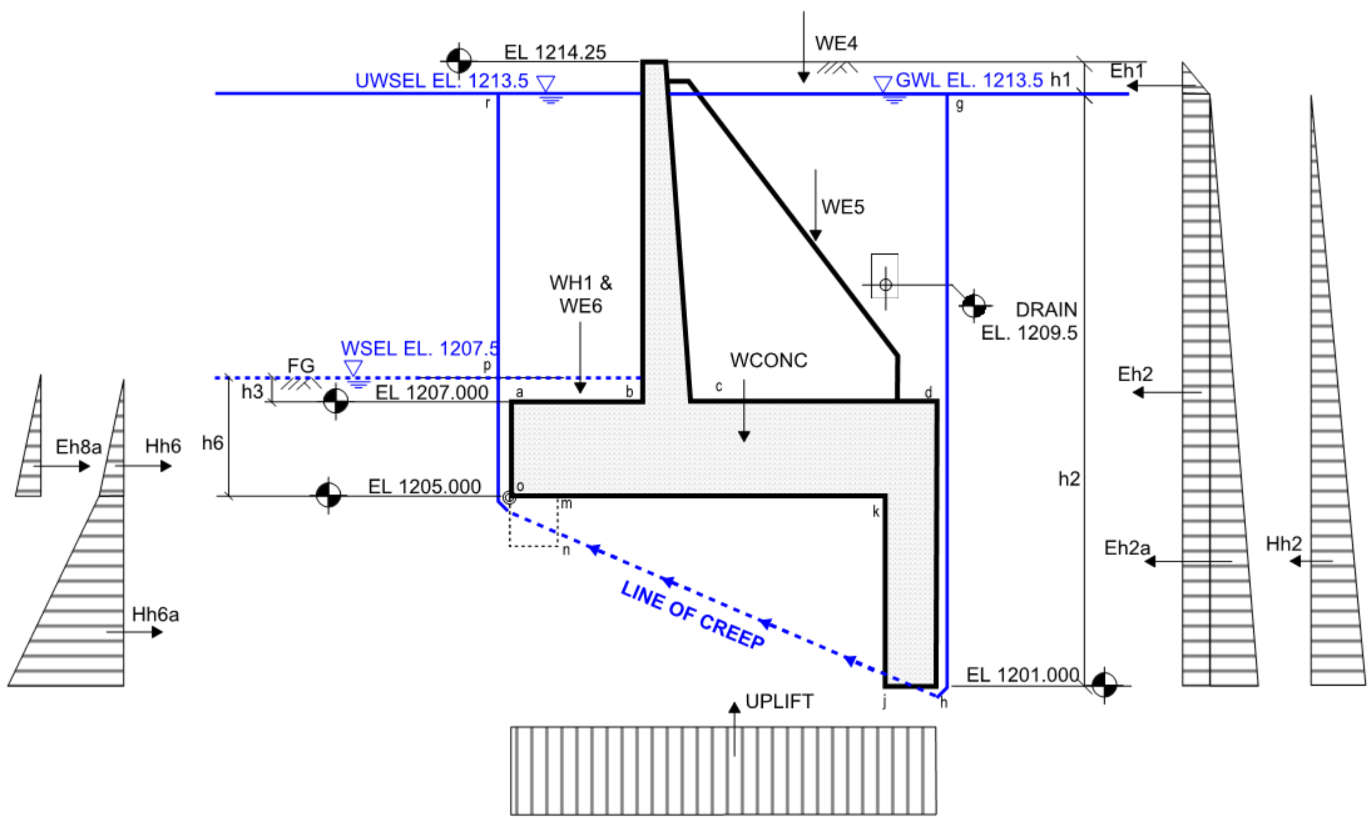
LOAD CASE UN2 - INEFFECTIVE DRAIN



UN2 DESIGN CASE

LOAD CASE UN2 ACCEPTANCE PARAMETERS

FS sliding:

Unusual (UN) 1.3 (without cohesion) (Table 3-3, USACE EM 1110-2-2100)

Resultant Location:

Unsual (UN) Inside middle third ~100% base in compression

Required Factor of Safety for Sliding: $FS_{sliding.reqUN2} := 1.3$ (Without Cohesion)

Allowable rock bearing pressure: $\sigma_{allowUN2} := 1470kPa$ (Section 5.2, Design Criteria EM 1110-2-2100 Section 3-10)

Overturning Required Resultant Ratio: $X_{R.reqUN2} := 0.333$ (EM 1110-2-2502, Figure 4-4)

Required Factor of Safety for Floatation $FS_{req.UN2.flt} := 1.3$

SOIL HEIGHTS and Water Levels:

LOAD CASE UN2

Heel Conditions:

Groundwater Elevation at Heel: $GWL_{UN2} := 1213.5m$

Distance from Finish Grade to Groundwater at Heel: $h_{1UN2} := \left[T_w - GWL_{UN2} + \left(L_{cd} + t_{wb} - t_{wt}\right)\cdot \tan(\beta)\right] = 0.75\,m$

Distance from Water Surface to Bottom of Footing at Heel: $h_{2UN2} := GWL_{UN2} - Bot_{ftg} + Key_{h.d} = 12.50\,m$

Toe Conditions:

Water Surface Elevation at Toe: $WSEL_{UN2} := 1207.5m$

Water Surface Elevation at Toe for Uplift: $UWSEL_{UN2} := 1213.5\cdot m$

Finish Grade at Toe providing lateral resistance: $FG_{toeUN2} := 1207.5\cdot m$

Soil Depth Above top of footing: $h_{3aUN2} := FG_{toeUN2} - Top_{ftg} = 0.5\,m$

$$h_{3UN2} := \begin{cases} h_{3aUN2} & \text{if } FG_{toeUN2} - Top_{ftg} \ge 0 \\ 0 & \text{otherwise} \end{cases} = 0.5$$

Resisting Fill at Toe: $h_{4UN2} := FG_{toeUN2} - Bot_{ftg} + Key_{t.d} = 2.50\,m$

Distance from Water Level to Top of Footing: $h_{5UN2} := WSEL_{UN2} - Top_{ftg} = 0.50\,m$

Distance from Water Surface to Bottom of Toe Key: $h_{6UN2} := WSEL_{UN2} - Bot_{ftg} + Key_{t.d} = 2.50\,m$

Soil Depth Above WSEL: $h_{7aUN2} := FG_{toeUN2} - WSEL_{UN2} = 0\,m$

$$h_{7UN2} := \begin{cases} h_{7aUN2} & \text{if } FG_{toeUN2} - WSEL_{UN2} \ge 0 \\ 0 & \text{otherwise} \end{cases} = 0$$

Soil Depth Below WSEL:

$$h_{8UN2} := \begin{cases} WSEL_{UN2} - Bot_{ftg} + Key_{t.d} & \text{if } FG_{toeUN2} - WSEL_{UN2} \ge 0 \\ h_{4UN2} & \text{otherwise} \end{cases} = 2.5$$

For Line of Creep Method: $L_{ho.UN2} := \sqrt{b^2 + \left(Key_{h.d} - Key_{t.d}\right)^2} = 9.849\,m$

Head Loss from Point g:

$\Delta h_{g.hj.UN2} := h_{2UN2} = 12.5\,m$ (to point h & j)

$\Delta h_{g.km.UN2} := GWL_{UN2} - Bot_{ftg} = 8.5\,m$ (to point k & m)

$\Delta h_{g.no.UN2} := GWL_{UN2} - Bot_{ftg} + Key_{t.d} = 8.5\,m$ (to point n & o)

$\Delta h_{g.p.UN2} := GWL_{UN2} - FG_{toeUN2} = 6\,m$ (to point p)

$\Delta h_{g.r.UN2} := GWL_{UN2} - UWSEL_{UN2} = 0\,m$ (to point r)

Surcharge

Surcharge on Heel: $S1_{UN2} := 0.0\,\dfrac{kN}{m^2}$

Calculate Soil Lateral Pressure Coefficients:

LOAD CASE UN2

For all load cases except seismic, soil loading to be based on At-Rest Condition.
Calculate at-rest pressure coefficient Ko based on Jaky's (1944) equation.

Soil At Rest Static Coefficient: $K_o := \dfrac{1 - \sin(\phi)}{1 + \sin(\beta)} = 0.546$ (Eq. 3-6, USACE EM 1110-2-2502)

Lateral - Driving Force

Static At-Rest:

Surcharge Load: $E_{s1UN2} := S1_{UN2} \cdot K_o \cdot \left(H_w + Key_{h.d}\right) \cdot B \cdot -1 = 0 \cdot kN$

Moment Arm (from Point O): $E_{s1locUN2} := \dfrac{H_w + Key_{h.d}}{2} + Key_{vdist} = 2.63\ m$

Moist Soil Load above GWL: $E_{h1UN2} := \dfrac{\gamma_m \cdot K_o \cdot h_{1UN2}^{\ 2}}{2} B \cdot -1 = -3.1 \cdot kN$

Moment Arm (from Point O): $E_{h1locUN2} := \dfrac{h_{1UN2}}{3} + h_{2UN2} + Key_{vdist} = 8.75\ m$

Saturated Soil Load below GWL:
(rectangular component) $E_{h2UN2} := \left(\gamma_m \cdot K_o \cdot h_{1UN2}\right) \cdot h_{2UN2} \cdot B \cdot -1 = -102.4 \cdot kN$

Moment Arm (from Point O): $E_{h2locUN2} := \dfrac{h_{2UN2}}{2} + Key_{vdist} = 2.25\ m$

Saturated Soil Load below GWL:
(triangular component) $E_{h2aUN2} := \dfrac{\left(\gamma_{sat} - \gamma_w\right) \cdot K_o \cdot h_{2UN2}^{\ 2}}{2} \cdot B \cdot -1 = -520.4 \cdot kN$

Moment Arm (from Point O): $E_{h2alocUN2} := \dfrac{h_{2UN2}}{3} + Key_{vdist} = 0.17\ m$

Lateral Water Load:

Water Load GWL to Bottom of Keys:

$$H_{h2UN2} := \begin{cases} \dfrac{\gamma_w \cdot h_{2UN2}^{\ 2}}{2} \cdot B \cdot -1 & \text{if } Key_{vdist} < 0 \\ \dfrac{\gamma_w \cdot \left(h_{2UN2} + Key_{vdist}\right)^2}{2} \cdot B \cdot -1 & \text{otherwise} \end{cases} = -765.6 \cdot kN$$

Moment Arm (from Point O):

$$H_{h2locUN2} := \begin{cases} \dfrac{h_{2UN2}}{3} + Key_{vdist} & \text{if } Key_{vdist} < 0 \\ \dfrac{h_{2UN2} + Key_{vdist}}{3} & \text{otherwise} \end{cases} = 0.17 \cdot m$$

$$\Sigma H_{SoildriveUN2} := E_{s1UN2} + E_{h1UN2} + E_{h2UN2} + E_{h2aUN2} + H_{h2UN2} = -1391.5 \cdot kN$$

$$\Sigma M_{LateralSoildriveUN2} := E_{s1UN2} \cdot E_{s1locUN2} + E_{h1UN2} \cdot E_{h1locUN2} + E_{h2UN2} \cdot E_{h2locUN2} \cdots + E_{h2aUN2} \cdot E_{h2alocUN2} + H_{h2UN2} \cdot H_{h2locUN2} = -471.6\ m \cdot kN$$

Lateral - Resisting Force

LOAD CASE UN2

Lateral Water Load:

Water Load WSEL to Bot. of Toe Key: $H_{h6UN2} := \frac{\gamma_w \cdot h_{6UN2}^2}{2} \cdot B = 30.6 \cdot kN$

Moment Arm (from Point O): $H_{h6locUN2} := \frac{h_{6UN2}}{3} = 0.83\ m$

Water Load between Keys (if any) $H_{h6aUN2} := \begin{cases} \frac{(h_{6UN2} + h_{2UN2}) \cdot -Key_{vdist}}{2} \cdot \gamma_w \cdot B & \text{if } Key_{vdist} < 0 \\ 0 & \text{otherwise} \end{cases} = 294.0 \cdot kN$

Moment Arm (from Point O): $H_{h6alocUN2} := \begin{cases} \frac{Key_{vdist} \cdot (2 \cdot h_{2UN2} + h_{6UN2})}{3(h_{2UN2} + h_{6UN2})} & \text{if } Key_{vdist} < 0 \\ 0 & \text{otherwise} \end{cases} = -2.44 \cdot m$

Lateral Soil Load:

Moist Soil Load above WSEL: $E_{h7UN2} := \frac{\gamma_m \cdot K_o \cdot h_{7UN2}^2}{2} \cdot B = 0.0 \cdot kN$

Moment Arm (from bot. of toe key): $E_{h7locUN2} := h_{6UN2} + \frac{h_{7UN2}}{3} + Key_{vdist} = -1.50\ m$

Saturated Soil Load below WSEL: (rectangular component) $E_{h8UN2} := (\gamma_m \cdot K_o \cdot h_{7UN2}) \cdot h_{8UN2} \cdot B = 0.0 \cdot kN$

Moment Arm (from bot. of toe key): $E_{h8locUN2} := \frac{h_{8UN2}}{2} = 1.25\ m$

Saturated Soil Load below WSEL: (triangular component) $E_{h8aUN2} := \frac{[(\gamma_{sat} - \gamma_w) \cdot K_o] \cdot h_{8UN2}^2}{2} \cdot B = 20.8 \cdot kN$

Moment Arm (from bot. of footing): $E_{h8alocUN2} := \frac{h_{8UN2}}{3} = 0.83\ m$

$\Sigma H_{SoilresistUN2} := H_{h6UN2} + H_{h6aUN2} + E_{h7UN2} + E_{h8UN2} + E_{h8aUN2} = 345.4 \cdot kN$

$$\Sigma M_{HorizSoilResistUN2} := H_{h6UN2} \cdot H_{h6locUN2} + H_{h6aUN2} \cdot H_{h6alocUN2} + E_{h7UN2} \cdot E_{h7locUN2} \cdots + E_{h8UN2} \cdot E_{h8locUN2} + E_{h8aUN2} \cdot E_{h8alocUN2} = -675.8\ m \cdot kN$$

Vertical Force:

UPLIFT: Linear distribution from water at heel to water at toe:

$\Sigma V_{UplliftUN2} := \left[(UWSEL_{UN2} - Bot_{ftg} + Key_{t.d}) + h_{2UN2}\right] \cdot \frac{b}{2} \cdot \gamma_w \cdot B \cdot -1 = -926.1 \cdot kN$

Moment Arm (from Point O): $V_{UpliftUN2aloc} := \frac{b \cdot \left[2 \cdot h_{2UN2} + (UWSEL_{UN2} - Bot_{ftg} + Key_{t.d})\right]}{3\left[h_{2UN2} + (UWSEL_{UN2} - Bot_{ftg} + Key_{t.d})\right]} = 4.786\ m$

$\Sigma M_{UpliftUN2} := \Sigma V_{UplliftUN2} \cdot V_{UpliftUN2aloc} = -4432.05 \cdot kN \cdot m$

Weight of soil and water over toe:

Water Above the Top of Footing: $W_{H1UN2} := \gamma_w \cdot h_{5UN2} \cdot L_{ab} \cdot B = 13.475 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E1locUN2} := \frac{L_{ab}}{2} = 1.375\,m$

Soil above top of footing: $W_{E6UN2} := \gamma_b \cdot h_{3UN2} \cdot L_{ab} \cdot B = 16.8 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E6locUN2} := \frac{L_{ab}}{2} = 1.375\,m$

Vertical Load Due to Surcharge: $S_{UN2} := S1_{UN2} \cdot L_{cd} \cdot B = 0 \cdot kN$ $\quad S_{UN2loc} := b - \frac{L_{cd}}{2} = 6.41\,m$

Weight of soil and water over heel:

Moist Soil for sloped grade above top of wall:

Length of sloped portion of soil above top of wall: $L_{E3UN2} := \left(L_{cd} + t_{wb} - t_{wt}\right) = 5.75\,m$

Height of sloped soil above top of wall over heel: $h_{E3locUN2} := \left(L_{E3UN2}\right) \cdot \tan(\beta) = 0.00\,m$

Weight of sloped soil above top of wall: $W_{E3UN2} := \frac{\gamma_m}{2} \cdot h_{E3locUN2} \cdot L_{E3UN2} \cdot B = 0.0 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E3locUN2} := L_{ab} + t_{wt} + \frac{2}{3} \cdot L_{E3UN2} = 7.08\,m$

Moist soil from top of wall to groundwater level:

Height of soil from top of wall and top of GWL: $h_{1UN2} = 0.75\,m$

Length from edge of wall at GWL to edge of heel: $L_{E4UN2} := L_{E3UN2} - \left(h_{1UN2} \cdot S_{batter}\right) = 5.69\,m$

Weight of soil over heel from top of wall to GWL: $W_{E4UN2} := \gamma_m \cdot h_{1UN2} \cdot \frac{\left(L_{E3UN2} + L_{E4UN2}\right)}{2} \cdot B = 85.8 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E4locUN2} := b - \frac{L_{E3UN2}^2 + L_{E3UN2} \cdot L_{E4UN2} + L_{E4UN2}^2}{3\left(L_{E3UN2} + L_{E4UN2}\right)} = 6.14\,m$

Saturated soil from groundwater to top of footing:

Height of soil from GWL to top of heel: $h_{E4UN2} := h_{2UN2} - t_{ftg} - Key_{h.d} = 6.50\,m$

Weight of soil over heel from GWL to top of heel: $W_{E5UN2} := \left(\gamma_{sat}\right) \cdot h_{E4UN2} \cdot \frac{\left(L_{E4UN2} + L_{cd}\right)}{2} \cdot B = 777.3 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E5locUN2} := b - \frac{L_{E4UN2}^2 + L_{E4UN2} \cdot L_{cd} + L_{cd}^2}{3\left(L_{E4UN2} + L_{cd}\right)} = 6.28\,m$

$$\Sigma V_{SoilWaterUN2} := W_{H1UN2} + W_{E6UN2} + W_{E3UN2} + W_{E4UN2} + W_{E5UN2} + S_{UN2} = 893.3 \cdot kN$$

$$\Sigma M_{VertSoilWaterResistUN2} := W_{H1UN2} \cdot W_{E1locUN2} + W_{E6UN2} \cdot W_{E6locUN2} \cdots + W_{E3UN2} \cdot W_{E3locUN2} + W_{E4UN2} \cdot W_{E4locUN2} + W_{E5UN2} \cdot W_{E5locUN2} + S_{UN2} \cdot S_{UN2loc} = 5449.9\,m \cdot kN$$

CHECK OVERTURNING

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stablity of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1

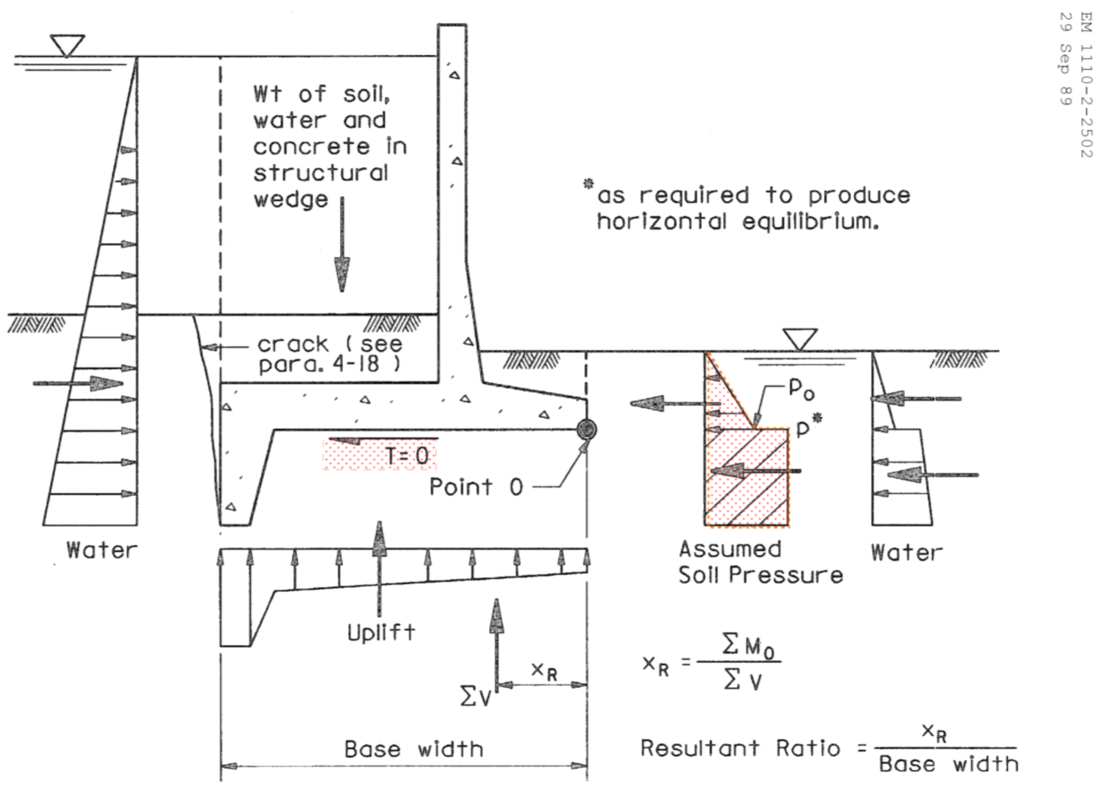

Figure 4-5. Forces for overturning analysis for wall with horizontal base and key

Modify Uplift for Overturning Analysis: **LOAD CASE UN2**

(Uplift is calculated along the concrete/rock contact using the Line of Creep method)

Water Pressure at h: $u_{h.UN2} := \Delta h_{g.hj.UN2} \cdot \gamma_w = 122.50 \cdot kPa$

Water Pressure at o: $u_{o.UN2} := \left(\Delta h_{g.no.UN2} - \frac{\Delta h_{g.r.UN2} \cdot L_{ho.UN2}}{L_{ho.UN2}}\right) \cdot \gamma_w = 83.3 \cdot kPa$

Head loss between point h and o: $\Delta h_{ho.UN2} := \Delta h_{g.r.UN2} \cdot \frac{L_{ho.UN2}}{L_{ho.UN2}} = 0\,m$

Length of concrete base (h -> o): $L_{baseho.UN2} := Key_{h.w} + Key_{h.d} + Key_{hdist} + Key_{t.d} + Key_{t.w} = 13\,m$

Head loss along h -> j: $\Delta h_{hj.UN2} := \Delta h_{ho.UN2} \cdot \frac{Key_{h.w}}{L_{baseho.UN2}} = 0\,m$

Water Pressure at j: $u_{j.UN2} := \left(\Delta h_{g.hj.UN2} - \Delta h_{hj.UN2}\right) \cdot \gamma_w = 122.50 \cdot kPa$

$$\Sigma M_{UpliftUN2.OT} := \Sigma V_{UpliftUN2.OT} \cdot U_{UN2.loc.OT} = -3706.9 \cdot kN \cdot m$$

Modify Lateral Water Pressure (Resisting) for Overturning Analysis:

(Resisting water pressure is calculated using the Line of Creep method)

Water Load at Key (heel):

$$H_{h2UN2.OT} := \frac{u_{k.UN2} + u_{j.UN2}}{2} \cdot Key_{h.d} B = 411.6 \cdot kN$$

Moment Arm (from Point O):

$$H_{h2locUN2.OT} := \frac{Key_{h.d} \cdot (2 \cdot u_{k.UN2} + u_{j.UN2})}{3(u_{k.UN2} + u_{j.UN2})} + Key_{vdist} = -2.13\ m$$

Water Load at Key (toe):

$$H_{h6UN2.OT} := \frac{u_{o.UN2} \cdot (UWSEL_{UN2} - Bot_{ftg} + Key_{t.d})}{2} \cdot B = 354 \cdot kN$$

Moment Arm (from Point O):

$$H_{h6locUN2.OT} := \frac{UWSEL_{UN2} - Bot_{ftg} + Key_{t.d}}{3} = 2.83\ m$$

$$\Sigma H_{waterresistUN2.OT} := H_{h2UN2.OT} + H_{h6UN2.OT} = 765.63 \cdot kN$$

$$H_{waterresistlocUN2.OT} := \frac{H_{h2UN2.OT} \cdot H_{h2locUN2.OT} + H_{h6UN2.OT} \cdot H_{h6locUN2.OT}}{\Sigma H_{waterresistUN2.OT}} = 0.167\ m$$

$$\Sigma M_{waterresistUN2.OT} := \Sigma H_{waterresistUN2.OT} \cdot H_{waterresistlocUN2.OT} = 127.6 \cdot kN \cdot m$$

Modify Lateral Soil Loads for Overturning Analysis:

(Lateral soil loads are calculated down to Point O instead of bottom of shear key)

__**Driving Soil Load (Headwater Side):**__

Surcharge Load:

$$E_{s1UN2.OT} := S1_{UN2} \cdot K_o \cdot (H_w + Key_{h.d} + Key_{vdist}) \cdot B \cdot -1 = 0 \cdot kN$$

Moment Arm (from Point O):

$$E_{s1locUN2.OT} := \frac{H_w + Key_{h.d} + Key_{vdist}}{2} = 4.63\ m$$

Moist Soil Load above GWL:

$$E_{h1UN2.OT} := \frac{\gamma_m \cdot K_o \cdot h_{1UN2}^{\ 2}}{2} B \cdot -1 = -3.1 \cdot kN$$

Moment Arm (from Point O):

$$E_{h1locUN2.OT} := \frac{h_{1UN2}}{3} + h_{2UN2} + Key_{vdist} = 8.75\ m$$

Saturated Soil Load below GWL:
(rectangular component)

$$E_{h2UN2.OT} := (\gamma_m \cdot K_o \cdot h_{1UN2}) \cdot (h_{2UN2} + Key_{vdist}) \cdot B \cdot -1 = -69.6 \cdot kN$$

Moment Arm (from Point O):

$$E_{h2locUN2.OT} := \frac{h_{2UN2} + Key_{vdist}}{2} = 4.25\ m$$

Saturated Soil Load below GWL:
(triangular component)

$$E_{h2aUN2.OT} := \frac{(\gamma_{sat} - \gamma_w) \cdot K_o \cdot (h_{2UN2} + Key_{vdist})^2}{2} \cdot B \cdot -1 = -240.6 \cdot kN$$

Moment Arm (from Point O):

$$E_{h2alocUN2.OT} := \frac{h_{2UN2} + Key_{vdist}}{3} = 2.83\ m$$

Resisting Soil Load (Tailwater Side):

(Determine resisting soil load based on depth variation between the keys (ie. Key_{vdist}). In case where key at heel is deeper than key at toe (ie. $Key_{vdist} < 0$), resisting soil load (p*) is assumed to produce horizontal equilibrium as per Figure 4-5 above. Resisting soil load (p_o) is neglected.)

Total Driving Force: $\Sigma H_{SoildriveUN2.OT} := E_{s1UN2.OT} + E_{h1UN2.OT} + E_{h2UN2.OT} + E_{h2aUN2.OT} + H_{h2UN2} = -1079.0 \cdot kN$

Total Resisting Force: $\Sigma H_{waterresistUN2.OT} = 765.6 \cdot kN$

Assumed Soil Load p*: $E_{h8UN2a.OT} := \left(\Sigma H_{SoildriveUN2.OT} + \Sigma H_{waterresistUN2.OT}\right) \cdot -1 = 313.328 \cdot kN$

Moment Arm (from Point O): $E_{h8UN2a.loc.OT} := \dfrac{Key_{vdist}}{2} = -2\,m$

$$E_{h8UN2.OT} := \begin{cases} E_{h8UN2a.OT} & \text{if } Key_{vdist} < 0 \\ \Sigma H_{SoilresistUN2} - H_{h6UN2} - H_{h6aUN2} & \text{otherwise} \end{cases} = 313.328 \cdot kN$$

$$\Sigma M_{SoilresistUN2.OT} := \begin{cases} E_{h8UN2a.OT} \cdot E_{h8UN2a.loc.OT} & \text{if } Key_{vdist} < 0 \\ \Sigma M_{HorizSoilResistUN2} - H_{h6UN2} \cdot H_{h6locUN2} - H_{h6aUN2} \cdot H_{h6alocUN2} & \text{otherwise} \end{cases} = -626.655 \cdot kN \cdot m$$

Sum of Moment about Point O:

$$\Sigma M_{LateraldriveUN2.OT} := E_{s1UN2.OT} \cdot E_{s1locUN2.OT} + E_{h1UN2.OT} \cdot E_{h1locUN2.OT} + E_{h2UN2.OT} \cdot E_{h2locUN2.OT} \cdots + E_{h2aUN2.OT} \cdot E_{h2alocUN2.OT} + H_{h2UN2} \cdot H_{h2locUN2} = -1132.2 \cdot kN \cdot m$$

$$\Sigma M_{LateralresistUN2.OT} := \Sigma M_{waterresistUN2.OT} + \Sigma M_{SoilresistUN2.OT} = -499.1 \cdot kN \cdot m$$

Total moment:

$$\Sigma M_{UN2.OT} := \Sigma M_{conc} + \Sigma M_{VertSoilWaterResistUN2} + \Sigma M_{UpliftUN2.OT} + \Sigma M_{LateraldriveUN2.OT} + \Sigma M_{LateralresistUN2.OT} = 3237.0 \cdot kN \cdot m$$

Total Vertical Force: $\Sigma V_{UN2.OT} := \Sigma V_{conc} + \Sigma V_{SoilWaterUN2} + \Sigma V_{UpliftUN2.OT} = 755.2 \cdot kN$

Distance X_R: EM 1110-2-2502 Eq.4-1 $X_{R.UN2} := \dfrac{\Sigma M_{UN2.OT}}{\Sigma V_{UN2.OT}} = 4.286\,m$

Overturning Resultant Ratio $Ratio_{UN2.OT} := \dfrac{X_{R.UN2}}{b} = 0.48$

$$Ratio_{UN2.OT.check} := \begin{cases} \text{"OKAY "} & \text{if } Ratio_{UN2.OT} > X_{R.reqUN2} \\ \text{"Revise Structure""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

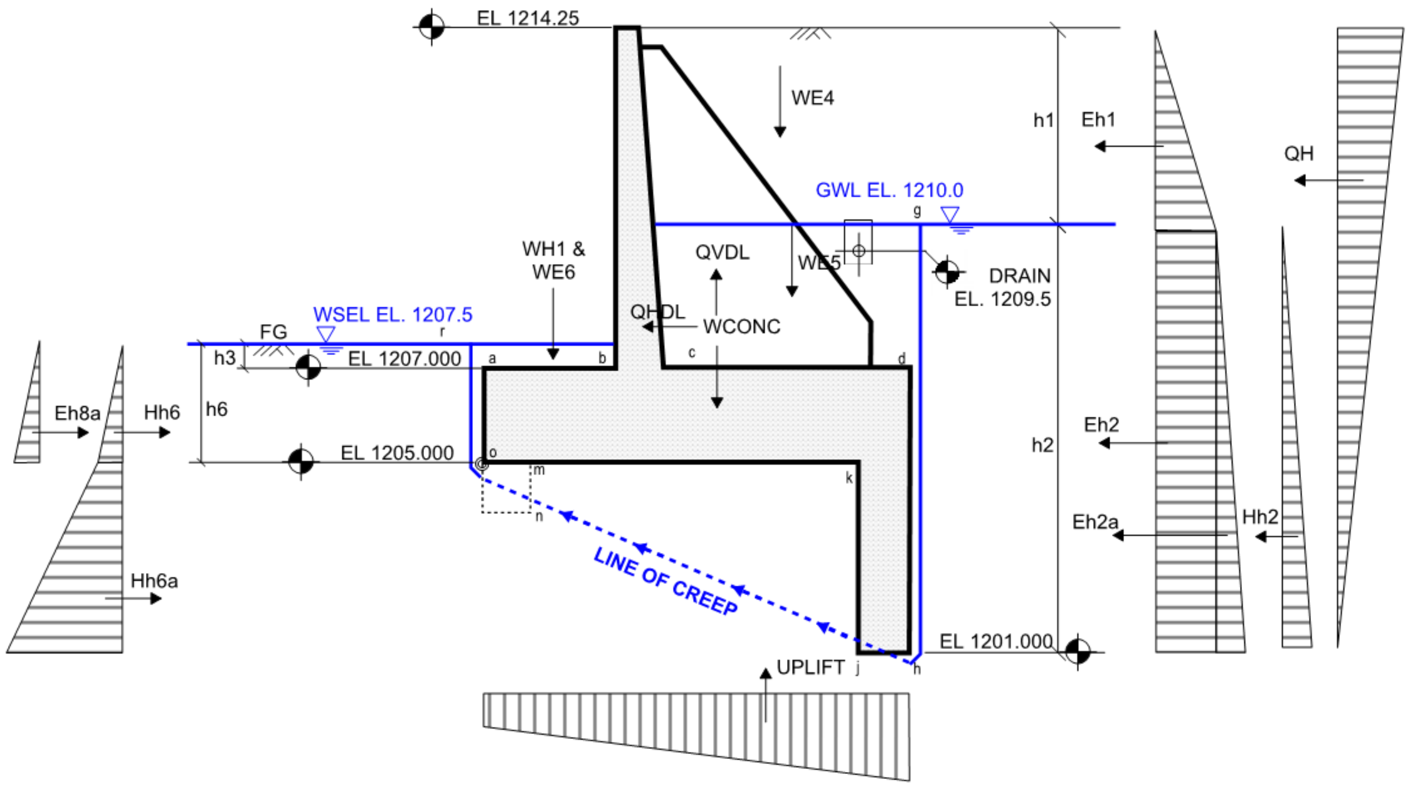
LOAD CASE E1 - SEISMIC LOADING



E1 DESIGN CASE

LOAD CASE E1 ACCEPTANCE PARAMETERS

FS sliding:

Extreme (E) loading) 1.0 (without cohesion, seismic (Table 3-3, USACE EM 1110-2-2100)

Resultant Location:

Extremem (E) Inside middle half ~75% base in compression

Required Factor of Safety for Sliding: $FS_{sliding.reqE1} := 1.0$ (Without Cohesion)

Allowable rock bearing pressure: $\sigma_{allowE1} := 1740kPa$ (Section 5.2, Design Criteria EM 1110-2-2100 Section 3-10)

Overturning Required Resultant Ratio: $X_{R.reqE1} := 0.25$ (EM 1110-2-2502, Figure 4-4)

Required Factor of Safety for Floatation $FS_{req.E1.flt} := 1.1$

SOIL HEIGHTS and Water Levels:

LOAD CASE E1

Heel Conditions:

Groundwater Elevation at Heel: $GWL_{E1} := 1210.0m$

Distance from Finish Grade to Groundwater at Heel: $h_{1E1} := \left[T_w - GWL_{E1} + \left(L_{cd} + t_{wb} - t_{wt}\right)\cdot \tan(\beta)\right] = 4.25\text{ m}$

Distance from Water Surface to Bottom of Footing at Heel: $h_{2E1} := GWL_{E1} - Bot_{ftg} + Key_{h.d} = 9.00\text{ m}$

Toe Conditions:

Water Surface Elevation at Toe: $WSEL_{E1} := 1207.5m$

Water Surface Elevation at Toe for Uplift: $UWSEL_{E1} := 1207.5\cdot m$

Finish Grade at Toe providing lateral resistance: $FG_{toeE1} := 1207.5\cdot m$

Soil Depth Above top of footing: $h_{3aE1} := FG_{toeE1} - Top_{ftg} = 0.5\text{ m}$

$$h_{3E1} := \begin{cases} h_{3aE1} & \text{if } FG_{toeE1} - Top_{ftg} \ge 0 \\ 0 & \text{otherwise} \end{cases} = 0.5$$

Resisting Fill at Toe: $h_{4E1} := FG_{toeE1} - Bot_{ftg} + Key_{t.d} = 2.50\text{ m}$

Distance from Water Level to Top of Footing: $h_{5E1} := WSEL_{E1} - Top_{ftg} = 0.50\text{ m}$

Distance from Water Surface to Bottom of Toe Key: $h_{6E1} := WSEL_{E1} - Bot_{ftg} + Key_{t.d} = 2.50\text{ m}$

Soil Depth Above WSEL: $h_{7aE1} := FG_{toeE1} - WSEL_{E1} = 0\text{ m}$

$$h_{7E1} := \begin{cases} h_{7aE1} & \text{if } FG_{toeE1} - WSEL_{E1} \ge 0 \\ 0 & \text{otherwise} \end{cases} = 0$$

Soil Depth Below WSEL:

$$h_{8E1} := \begin{cases} WSEL_{E1} - Bot_{ftg} + Key_{t.d} & \text{if } FG_{toeE1} - WSEL_{E1} \ge 0 \\ h_{4E1} & \text{otherwise} \end{cases} = 2.5$$

For Line of Creep Method: $L_{ho.E1} := \sqrt{b^2 + \left(Key_{h.d} - Key_{t.d}\right)^2} = 9.849\text{ m}$

Head Loss from Point g:

$\Delta h_{g.hj.E1} := h_{2E1} = 9\text{ m}$ (to point h & j)

$\Delta h_{g.km.E1} := GWL_{E1} - Bot_{ftg} = 5\text{ m}$ (to point k & m)

$\Delta h_{g.no.E1} := GWL_{E1} - Bot_{ftg} + Key_{t.d} = 5\text{ m}$ (to point n & o)

$\Delta h_{g.p.E1} := GWL_{E1} - FG_{toeE1} = 2.5\text{ m}$ (to point p*)

$\Delta h_{g.r.E1} := GWL_{E1} - UWSEL_{E1} = 2.5\text{ m}$ (to point r)

Surcharge

Surcharge on Heel: $S1_{E1} := 0.0 \dfrac{kN}{m^2}$

* same as point "a" in this case

Calculate Soil Lateral Pressure Coefficients:

LOAD CASE E1

Calculate at-rest pressure coefficient K_o based on Jaky's (1944) equation.

Soil At Rest Static Coefficient: (apply to resisting soil loads)

$$K_o := \frac{1 - \sin(\phi)}{1 + \sin(\beta)} = 0.546$$

(Eq. 3-6, USACE EM 1110-2-2502)

Calculate active pressure coefficient K_A based on Coulumb equations.

Determine Slope of Active Wedge: (cohesionless backfill with water table)

$$c_1 := 2\cdot\tan(\phi) = 1.019 \qquad c_2 := 1 - \tan(\phi)\cdot\tan(\beta) - \frac{\tan(\beta)}{\tan(\phi)} = 1$$

(Eq. G-14 / G-15, USACE EM 1110-2-2100)

$$\alpha := \operatorname{atan}\left(\frac{c_1 + \sqrt{c_1^{\,2} + 4\cdot c_2}}{2}\right) = 1.021 \qquad \alpha_{deg} := \alpha\cdot\frac{180}{\pi} = 58.5 \text{ degrees}$$

(Eq. G-13, USACE EM 1110-2-2100)

Soil Active Coefficient above GWL:

$$K_{Aagwt} := \left(\frac{1 - \tan(\phi)\cdot\cot(\alpha)}{1 + \tan(\phi)\cdot\tan(\alpha)}\right)\cdot\left(\frac{\tan(\alpha)}{\tan(\alpha) - \tan(\beta)}\right) = 0.376$$

Soil Active Coefficient below GWL:

$$K_{Abgwt} := \frac{1 - \tan(\phi)\cdot\cot(\alpha)}{1 + \tan(\phi)\cdot\tan(\alpha)}\cdot\left[1 + \left(\frac{\tan(\alpha)}{\tan(\alpha) - \tan(\beta)} - 1\right)\cdot\left(\frac{\gamma_m}{\gamma_{sat} - \gamma_w}\right)\right] = 0.376$$

(Eq. G-29, USACE EM 1110-2-2100)

Lateral - Driving Force

Static Copmonent : Active Pressure:

Surcharge Load:

$$E_{s1E1} := S1_{E1}\cdot K_{Aagwt}\cdot\left(H_w + Key_{h.d}\right)\cdot B\cdot -1 = 0\cdot kN$$

Moment Arm (from Point O):

$$E_{s1locE1} := \frac{H_w + Key_{h.d}}{2} + Key_{vdist} = 2.63\ m$$

Moist Soil Load above GWL:

$$E_{h1E1} := \frac{\gamma_m\cdot K_{Aagwt}\cdot h_{1E1}^{\,2}}{2}\cdot B\cdot -1 = -67.8\cdot kN$$

Moment Arm (from Point O):

$$E_{h1locE1} := \frac{h_{1E1}}{3} + h_{2E1} + Key_{vdist} = 6.42\ m$$

Saturated Soil Load below GWL: (rectangular component)

$$E_{h2E1} := \left(\gamma_m\cdot K_{Abgwt}\cdot h_{1E1}\right)\cdot h_{2E1}\cdot B\cdot -1 = -287.3\cdot kN$$

Moment Arm (from Point O):

$$E_{h2locE1} := \frac{h_{2E1}}{2} + Key_{vdist} = 0.50\ m$$

Saturated Soil Load below GWL: (triangular component)

$$E_{h2aE1} := \frac{\left(\gamma_{sat} - \gamma_w\right)\cdot K_{Abgwt}\cdot h_{2E1}^{\,2}}{2}\cdot B\cdot -1 = -185.5\cdot kN$$

Moment Arm (from Point O):

$$E_{h2alocE1} := \frac{h_{2E1}}{3} + Key_{vdist} = -1.00\ m$$

Lateral Water Load:

Water Load GWL to Bottom of Keys:

$$H_{h2E1} := \begin{cases} \dfrac{\gamma_w\cdot h_{2E1}^{\,2}}{2}\cdot B\cdot -1 & \text{if } Key_{vdist} < 0 \\[2ex] \dfrac{\gamma_w\cdot\left(h_{2E1} + Key_{vdist}\right)^2}{2}\cdot B\cdot -1 & \text{otherwise} \end{cases} = -396.9\cdot kN$$

Moment Arm (from Point O):

$$H_{h2locE1} := \begin{cases} \dfrac{h_{2E1}}{3} + Key_{vdist} & \text{if } Key_{vdist} < 0 \\[2ex] \dfrac{h_{2E1} + Key_{vdist}}{3} & \text{otherwise} \end{cases} = -1.00\cdot m$$

$$\Sigma H_{SoildriveE1} := E_{s1E1} + E_{h1E1} + E_{h2E1} + E_{h2aE1} + H_{h2E1} = -937.6\cdot kN$$

$$\Sigma M_{LateralSoildriveE1} := E_{s1E1}\cdot E_{s1locE1} + E_{h1E1}\cdot E_{h1locE1} + E_{h2E1}\cdot E_{h2locE1} \ldots + E_{h2aE1}\cdot E_{h2alocE1} + H_{h2E1}\cdot H_{h2locE1} = 3.6\ m\cdot kN$$

Lateral - Resisting Force

LOAD CASE E1

Note: **Due to the relatively shallow depth of resisting soil/rock, a conservative apporach using at-rest coefficient in lieu of a passive wedge is used to calculate resisting forces.**

Lateral Water Load:

Water Load WSEL to Bot. of Toe Key: $H_{h6E1} := H_{h6U1} = 30.6 \cdot kN$

Moment Arm (from Point O): $H_{h6locE1} := H_{h6locU1} = 0.83\ m$

Water Load between Keys (if any):

$$H_{h6aE1} := \begin{cases} \dfrac{\left(h_{6E1} + h_{2E1}\right) \cdot -Key_{vdist}}{2} \cdot \gamma_w \cdot B & \text{if } Key_{vdist} < 0 \\ 0 & \text{otherwise} \end{cases} = 225.4 \cdot kN$$

Moment Arm (from Point O):

$$H_{h6alocE1} := \begin{cases} \dfrac{Key_{vdist} \cdot \left(2 \cdot h_{2E1} + h_{6E1}\right)}{3\left(h_{2E1} + h_{6E1}\right)} & \text{if } Key_{vdist} < 0 \\ 0 & \text{otherwise} \end{cases} = -2.38 \cdot m$$

Lateral Soil Load:

Moist Soil Load above WSEL: $E_{h7E1} := \dfrac{\gamma_m \cdot K_o \cdot h_{7E1}^{\ 2}}{2} \cdot B = 0.0 \cdot kN$

Moment Arm (from bot. of toe key): $E_{h7locE1} := h_{6E1} + \dfrac{h_{7E1}}{3} + Key_{vdist} = -1.50\ m$

Saturated Soil Load below WSEL: (rectangular component) $E_{h8E1} := \left(\gamma_m \cdot K_o \cdot h_{7E1}\right) \cdot h_{8E1} \cdot B = 0.0 \cdot kN$

Moment Arm (from bot. of toe key): $E_{h8locE1} := \dfrac{h_{8E1}}{2} = 1.25\ m$

Saturated Soil Load below WSEL: (triangular component) $E_{h8aE1} := \dfrac{\left[\left(\gamma_{sat} - \gamma_w\right) \cdot K_o\right] \cdot h_{8E1}^{\ 2}}{2} \cdot B = 20.8 \cdot kN$

Moment Arm (from bot. of footing): $E_{h8alocE1} := \dfrac{h_{8E1}}{3} = 0.83\ m$

$$\Sigma H_{SoilresistE1} := H_{h6E1} + H_{h6aE1} + E_{h7E1} + E_{h8E1} + E_{h8aE1} = 276.8 \cdot kN$$

$$\Sigma M_{HorizSoilResistE1} := H_{h6E1} \cdot H_{h6locE1} + H_{h6aE1} \cdot H_{h6alocE1} + E_{h7E1} \cdot E_{h7locE1} \cdots + E_{h8E1} \cdot E_{h8locE1} + E_{h8aE1} \cdot E_{h8alocE1} = -492.9\ m \cdot kN$$

Vertical Force:

UPLIFT: Linear distribution from water at heel to water at toe:

$$\Sigma V_{UpliftE1} := \left[\left(UWSEL_{E1} - Bot_{ftg} + Key_{t.d}\right) + h_{2E1}\right] \cdot \frac{b}{2} \cdot \gamma_w \cdot B \cdot -1 = -507.15 \cdot kN$$

Moment Arm (from Point O):

$$V_{UpliftE1aloc} := \frac{b \cdot \left[2 \cdot h_{2E1} + \left(UWSEL_{E1} - Bot_{ftg} + Key_{t.d}\right)\right]}{3\left[h_{2E1} + \left(UWSEL_{E1} - Bot_{ftg} + Key_{t.d}\right)\right]} = 5.348\ m$$

$$\Sigma M_{UpliftE1} := \Sigma V_{UpliftE1} \cdot V_{UpliftE1aloc} = -2712.15 \cdot kN \cdot m$$

Weight of soil and water over toe:

Water Above the Top of Footing: $W_{H1E1} := \gamma_w \cdot h_{5E1} \cdot L_{ab} \cdot B = 13.475 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E1locE1} := \frac{L_{ab}}{2} = 1.375\,m$

Soil above top of footing: $W_{E6E1} := \gamma_b \cdot h_{3E1} \cdot L_{ab} \cdot B = 16.8 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E6locE1} := \frac{L_{ab}}{2} = 1.375\,m$

Vertical Load Due to Surcharge: $S_{E1} := S1_{E1} \cdot L_{cd} \cdot B = 0 \cdot kN$ $\quad S_{E1loc} := b - \frac{L_{cd}}{2} = 6.41\,m$

Weight of soil and water over heel:

Moist Soil for sloped grade above top of wall:

Length of sloped portion of soil above top of wall: $L_{E3E1} := \left(L_{cd} + t_{wb} - t_{wt}\right) = 5.75\,m$

Height of sloped soil above top of wall over heel: $h_{E3locE1} := \left(L_{E3E1}\right) \cdot \tan(\beta) = 0.00\,m$

Weight of sloped soil above top of wall: $W_{E3E1} := \frac{\gamma_m}{2} \cdot h_{E3locE1} \cdot L_{E3E1} \cdot B = 0.0 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E3locE1} := L_{ab} + t_{wt} + \frac{2}{3} \cdot L_{E3E1} = 7.08\,m$

Moist soil from top of wall to groundwater level:

Height of soil from top of wall and top of GWL: $h_{1E1} = 4.25\,m$

Length from edge of wall at GWL to edge of heel: $L_{E4E1} := L_{E3E1} - \left(h_{1E1} \cdot S_{batter}\right) = 5.42\,m$

Weight of soil over heel from top of wall to GWL: $W_{E4E1} := \gamma_m \cdot h_{1E1} \cdot \frac{\left(L_{E3E1} + L_{E4E1}\right)}{2} \cdot B = 474.5 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E4locE1} := b - \frac{L_{E3E1}^{\ 2} + L_{E3E1} \cdot L_{E4U1} + L_{E4E1}^{\ 2}}{3\left(L_{E3E1} + L_{E4E1}\right)} = 6.21\,m$

Saturated soil from groundwater to top of footing:

Height of soil from GWL to top of heel: $h_{E4E1} := h_{2E1} - t_{ftg} - Key_{h.d} = 3.00\,m$

Weight of soil over heel from GWL to top of heel: $W_{E5E1} := \left(\gamma_{sat}\right) \cdot h_{E4E1} \cdot \frac{\left(L_{E4E1} + L_{cd}\right)}{2} \cdot B = 349.7 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E5locE1} := b - \frac{L_{E4E1}^{\ 2} + L_{E4E1} \cdot L_{cd} + L_{cd}^{\ 2}}{3\left(L_{E4E1} + L_{cd}\right)} = 6.35\,m$

$\Sigma V_{SoilWaterE1} := W_{H1E1} + W_{E6E1} + W_{E3E1} + W_{E4E1} + W_{E5E1} + S_{E1} = 854.5 \cdot kN$

$\Sigma M_{VertSoilWaterResistE1} := W_{H1E1} \cdot W_{E1locE1} + W_{E6E1} \cdot W_{E6locE1} \cdots + W_{E3E1} \cdot W_{E3locE1} + W_{E4E1} \cdot W_{E4locE1} + W_{E5E1} \cdot W_{E5locE1} + S_{E1} \cdot S_{E1loc} = 5208.0\,m \cdot kN$

SESIMIC ANALYSIS:

LOAD CASE E1

Seismic coefficient will be applied to dead loads to calculate seismic force and force is applied at center of gravity of the mass. Vertical and Horizontal loads are applied in the "destabilizing direction"

SEISMIC PARAMETERS:

(Section 7.9, Design Criteria)

Peak Ground Acceleration for Seismic Load $PGA_{Horiz} := 0.26$ $PGA_{Vert} := 0.56 \cdot PGA_{Horiz} = 0.146$

In accordance with USACE EM 1110-2-2100 Section 4-7.b, consider 2/3 PGA as seismic coefficient for stabilitiy.

Horizontal Seismic coefficient for stabilty: $K_{hE1} := \frac{2}{3} PGA_{Horiz} = 0.173$

Vertical Seismic coefficient for stabilty: $K_{vE1} := \frac{2}{3} PGA_{Vert} = 0.097$

SEISMIC ACCELERATION OF RIGID MASSES (Q_D):

Vertical Load Application:

$\Sigma V_{conc} = 650.7 \cdot kN$

$Q_{v.conc} := \Sigma V_{conc} \cdot K_{vE1} \cdot -1 = -63.2 \cdot kN$ (assume acting upwards for adverse sliding effect)

Moment arm for siesmic load application (From Toe): $H_{cent} = 4.802\, m$

$M_{Qv.conc} := Q_{v.conc} \cdot H_{cent} = -303.3 \cdot kN \cdot m$

Lateral Load Application:

$Q_{h.conc} := \Sigma V_{conc} \cdot K_{hE1} \cdot -1 = -112.8 \cdot kN$

Moment arm for siesmic load application (Above Base of Footing): $V_{Cent} = 1.427\, m$

$M_{Q.conc} := Q_{h.conc} \cdot V_{Cent} = -161 \cdot kN \cdot m$

SEISMIC ACCELERATION OF SOIL WEDGE + WATER (Q_{EH}):

Vertical Load Application:

$\Sigma V_{SoilWaterE1} = 854.5 \cdot kN$

$Q_{v.SoilWaterE1} := \Sigma V_{SoilWaterE1} \cdot K_{vE1} \cdot -1 = -82.9 \cdot kN$ (assume acting upwards for adverse sliding effect)

Moment arm for siesmic load application (From Toe): $e_{QE1} := \dfrac{\Sigma M_{VertSoilWaterResistE1}}{\Sigma V_{SoilWaterE1}} = 6.095\, m$

$M_{Qv.SoilWaterE1} := Q_{v.SoilWaterE1} \cdot e_{QE1} = -505.5 \cdot kN \cdot m$

Lateral Load Application:

Seismic soil load is calculated based on Mononobe-Okabe method to determine combined static and dynamic coefficient (K_{AE}). Coulomb's active component (K_A) is subtracted from $K_{AE}$to obtain the seismic coefficient (ΔK_{AE}) for dynamic component of soil force.

Glacial Till Internal Friction (radians): $\phi = 0.471$

Seismic Inertia Angle (radians): $\psi := \operatorname{atan}\left(\dfrac{K_{hE1}}{1 - K_{vE1}}\right) = 0.190$

Inclination of batter (radians): $\theta := 0.00$ assuming zero is conservative

Slope of retained ground surface: $\beta = 0.00$

$$K_{AE} := \frac{\cos(\phi - \psi - \theta) \cdot \cos(\phi - \psi - \theta)}{\cos(\psi) \cdot \cos(\theta) \cdot \cos(\theta)\, \cos(\psi + \theta) \cdot \left(1 + \sqrt{\dfrac{\sin(\phi)\, \sin(\phi - \psi - \beta)}{\cos(\beta - \theta) \cdot \cos(\psi + \theta)}}\right)^2} = 0.519$$

$\Delta K_{AE} := K_{AE} - K_{Abgwt} = 0.143$

Dynamic component of active seismic wedge:

$$Q_{h.SoilWaterE1} := \Delta K_{AE} \cdot \left[\frac{\gamma_m \cdot \left(H_w + Key_{h.d}\right)^2}{2 \cdot (\tan(\alpha) - \tan(\beta))} + \frac{\left(\gamma_{sat} - \gamma_m\right) \cdot h_{2E1}{}^2}{2 \cdot \tan(\alpha)}\right] \cdot B \cdot -1 = -160.9 \cdot kN$$

(Eq. G-64, USACE EM 1110-2-2100)

Moment arm for siesmic load application (About Point O): $Q_{h.SoilWaterlocE1} := \frac{2}{3} \cdot \left(H_w + Key_{h.d}\right) + Key_{vdist} = 4.83\, m$

$M_{Q.h.SoilWaterE1} := Q_{h.SoilWaterE1} \cdot Q_{h.SoilWaterlocE1} = -777.8 \cdot kN \cdot m$

STABILITY ASSESSMENT:

LOAD CASE E1

CHECK SLIDING ALONG HORIZONTAL SLIDING PLANE:

Summation of the vertical forces: $\Sigma V_{E1} := \Sigma V_{conc} + \Sigma V_{SoilWaterE1} + \Sigma V_{UpliftE1} + Q_{v.conc} + Q_{v.SoilWaterE1} = 852.0 \cdot kN$

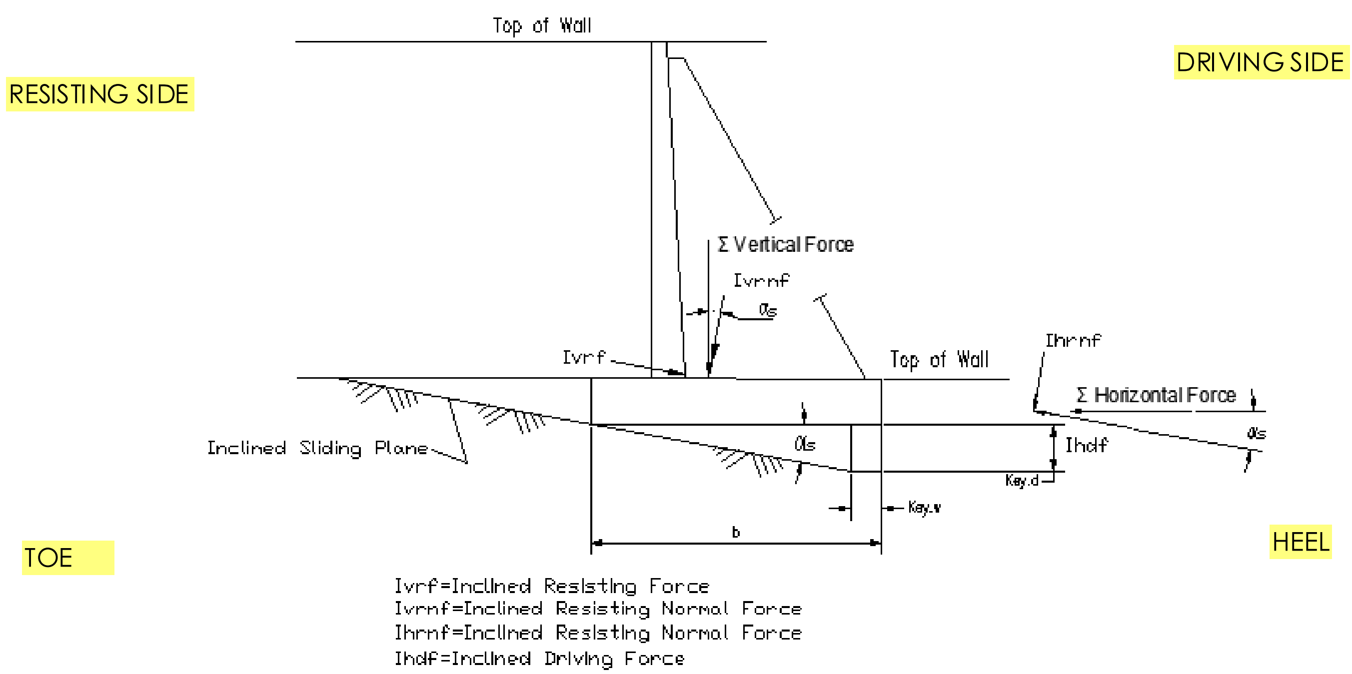
Summation of the horizontal forces: $\Sigma H_{E1} := \Sigma H_{SoildriveE1} + Q_{h.conc} + Q_{h.SoilWaterE1} + \Sigma H_{SoilresistE1} = -934.4 \cdot kN$

Safety Factor for Sliding Horizontal Failure Plane

$$FS_{Horiz.SlidingE1} := \frac{\left|\Sigma V_{E1}\right| \cdot \tan\left(\phi_{rock} \cdot \frac{\pi}{180}\right)}{\left|\Sigma H_{E1}\right|} = 0.44$$

$$FS_{Sliding.check1.E1} := \begin{vmatrix} \text{"OKAY " if } FS_{Horiz.SlidingE1} > FS_{sliding.reqE1} \\ \text{"NG - key req"" otherwise} \end{vmatrix} = \text{"NG - key req""}$$

CHECK FACTOR OF SAFETY SLIDING WITH KEY (INCLINED SLIDING PLANE):



(With properly engineered reinforced concrete Key, horizontal sliding plane thru Toe is protected, critical sliding plane is relocated to the INCLINED SLIDING PLANE FROM HEEL KEY To TOE, Bedrock Mass above this examing plane is mobilized by reinforced concrete key and combined into Structural Wedge.)

Resolve ΣV_{E1} & ΣH_{E1}

$$\Sigma V_{InclinedE1} := \cos(\alpha s) \cdot \left(\left|\Sigma V_{E1} + V_{rocksection}\right|\right) + \sin(\alpha s) \cdot \left|\Sigma H_{E1}\right| = 1546.3 \cdot kN$$

$$\Sigma H_{InclinedE1} := \cos(\alpha s) \cdot \left|\Sigma H_{E1}\right| - \sin(\alpha s) \cdot \left(\left|\Sigma V_{E1} + V_{rocksection}\right|\right) = 271.6 \cdot kN$$

Safety Factor for Sliding Inclined Failure Plane

$$FS_{InclinedISlidingE1} := \frac{\Sigma V_{InclinedE1} \cdot \tan\left(\phi_r\right)}{\Sigma H_{InclinedE1}} = 2.53$$

$$FS_{Sliding.check2.E1} := \begin{vmatrix} \text{"OKAY " if } FS_{InclinedISlidingE1} > FS_{sliding.reqE1} \\ \text{"NG"" otherwise} \end{vmatrix} = \text{"OKAY "}$$

CHECK FOUNDATION ECCENTRICITY:

LOAD CASE E1

(Vertical seismic loads from concrete, soil and water are assumed acting downwards for adverse bearing effect)

Summation of the vertical forces: $\Sigma V_{seisE1} := \Sigma V_{conc} + \Sigma V_{SoilWaterE1} + \Sigma V_{UpliftE1} - Q_{v.conc} - Q_{v.SoilWaterE1} = 1144.2 \cdot kN$

Summation of the horizontal forces: $\Sigma H_{seisE1} := \Sigma H_{E1} = -934.4 \cdot kN$

Resolve ΣV_{seisE1} & ΣH_{seisE1}

$$\Sigma V_{InclinedseisE1} := \cos(\alpha s) \cdot \left(\left| \Sigma V_{seisE1} + V_{rocksection} \right| \right) + \sin(\alpha s) \cdot \left| \Sigma H_{seisE1} \right| = 1807.6 \cdot kN$$

$$\Sigma H_{InclinedseisE1} := \cos(\alpha s) \cdot \left| \Sigma H_{seisE1} \right| - \sin(\alpha s) \cdot \left(\left| \Sigma V_{seisE1} + V_{rocksection} \right| \right) = 140.9 \cdot kN$$

Summation of the resisting moments about the toe:

$$\Sigma M_{resE1} := \Sigma M_{conc} + \Sigma M_{VertSoilWaterResistE1} + \Sigma M_{HorizSoilResistE1} + \Sigma M_{rocksection} = 10025 \cdot kN \cdot m$$

Summation of seismic moments about the toe:

$$\Sigma M_{seisE1} := -M_{Qv.conc} + M_{Q.conc} - M_{Qv.SoilWaterE1} + M_{Q.h.SoilWaterE1} = -130 \cdot kN \cdot m$$

Summation of the overturning moments about the toe:

$$\Sigma M_{oE1} := \Sigma M_{LateralSoildriveE1} + \Sigma M_{UpliftE1} = -2709 \cdot kN \cdot m$$

Total moment: $\Sigma M_{E1} := \Sigma M_{resE1} + \Sigma M_{seisE1} + \Sigma M_{oE1} = 7186.3 \cdot kN \cdot m$

Normal force to base: $\Sigma V_{InclinedseisE1} = 1807.6 \cdot kN$

Inclined Sliding Plane Length: $L_{incline} = 10.1 \cdot m$

Eccentricity (inclined plane): $ex_{E1} := \frac{L_{incline}}{2} - \frac{\Sigma M_{E1}}{\Sigma V_{InclinedseisE1}} = 1.06\,m$ $\quad Kern_{E1} := \frac{L_{incline}}{4} = 2.516\,m$

Eccentricity Check:

$$e_{check.E1} := \begin{cases} \text{"Okay"} & \text{if } ex_{E1} \le Kern_{E1} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"Okay"}$$

CHECK FOUNDATION BEARING CAPACITY:

Base Section Modulus: $S_b = 16.88\,m^3$

Bearing Pressure Under Toe:

$$\sigma_{ToeE1} := \begin{cases} \left[\frac{\Sigma V_{InclinedE1}}{L_{incline} \cdot B} + \frac{\left(\Sigma V_{InclinedE1} \cdot ex_{E1} \right)}{S_b} \right] & \text{if } \frac{\Sigma V_{InclinedE1}}{L_{incline} \cdot B} \ge \frac{\Sigma V_{InclinedE1} \cdot ex_{E1}}{S_b} \\ \frac{2 \cdot \Sigma V_{InclinedE1}}{B \cdot 3 \left(\frac{b}{2} - ex_{E1} \right)} & \text{otherwise} \end{cases} = 250.4 \cdot kPa$$

$$Bearing_{ChecktoeE1} := \begin{cases} \text{"OKAY "} & \text{if } \sigma_{ToeE1} < \sigma_{allowE1} \\ \text{"NG""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

Bearing Pressure Under Heel:

$$\sigma_{HeelE1} := \begin{cases} \left[\frac{\Sigma V_{InclinedE1}}{L_{incline} \cdot B} - \frac{\left(\Sigma V_{InclinedE1} \cdot ex_{E1} \right)}{S_b} \right] & \text{if } \frac{\Sigma V_{InclinedE1}}{L_{incline} \cdot B} \ge \frac{\Sigma V_{InclinedE1} \cdot ex_{E1}}{S_b} \\ 0 & \text{otherwise} \end{cases} = 56.9 \cdot kPa$$

$$Bearing_{CheckheelE1} := \left(\begin{cases} \text{"OKAY "} & \text{if } \sigma_{HeelE1} < \sigma_{allowE1} \wedge \sigma_{HeelE1} > 0 \\ \text{"NG - perform cracked base analysis""} & \text{otherwise} \end{cases} \right) = \text{"OKAY "}$$

CHECK FLOATATION:

Safety Factor for Floatation:

$$FS_{FloatationE1} := \frac{\Sigma V_{conc} + \Sigma V_{SoilWaterE1} + Q_{v.conc} + Q_{v.SoilWaterE1}}{\left|\Sigma V_{UpliftE1}\right|} = 2.68$$

$$FS_{Floatation.E1.check} := \begin{cases} \text{"OKAY"} & \text{if } FS_{FloatationE1} > FS_{req.E1.flt} \\ \text{"Revise Structure""} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

CHECK OVERTURNING

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stablity of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1

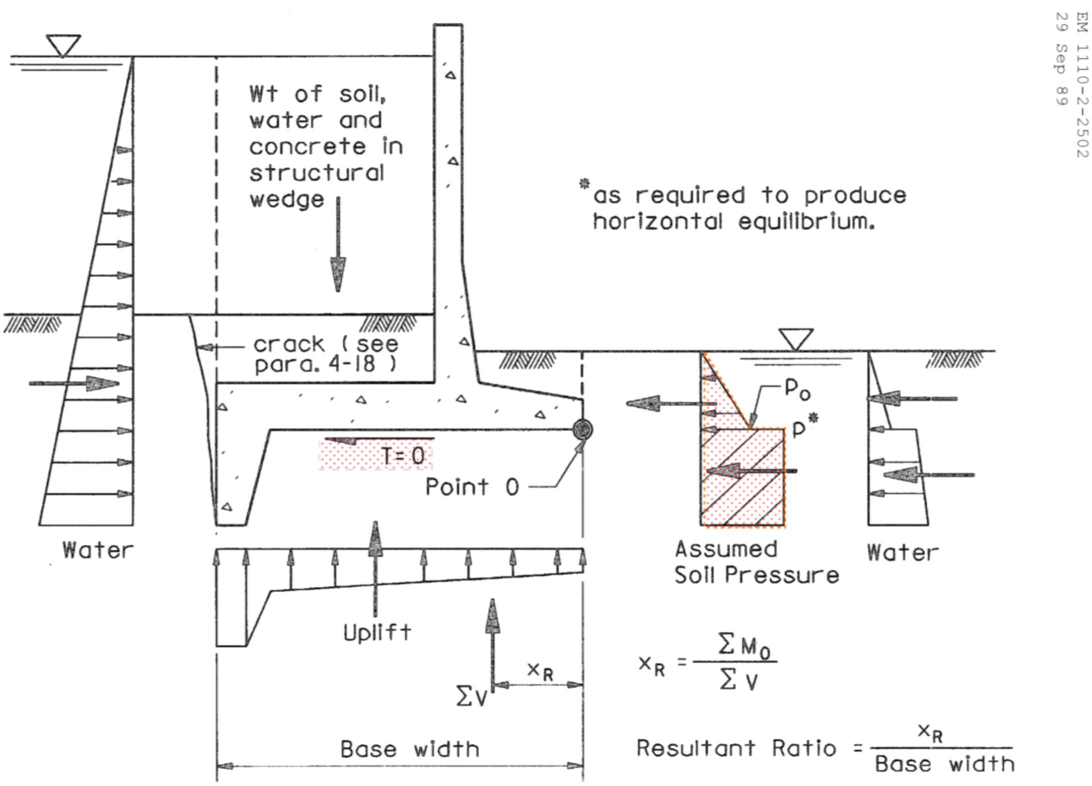


Figure 4-5. Forces for overturning analysis for wall with horizontal base and key

Modify Uplift for Overturning Analysis: **LOAD CASE E1**

(Uplift is calculated along the concrete/rock contact using the Line of Creep method)

Water Pressure at h: $u_{h.E1} := \Delta h_{g.hj.E1} \cdot \gamma_w = 88.20 \cdot kPa$

Water Pressure at o: $u_{o.E1} := \left(\Delta h_{g.no.E1} - \frac{\Delta h_{g.r.E1} \cdot L_{ho.E1}}{L_{ho.E1}}\right) \cdot \gamma_w = 24.5 \cdot kPa$

Head loss between point h and o: $\Delta h_{ho.E1} := \Delta h_{g.r.E1} \cdot \frac{L_{ho.E1}}{L_{ho.E1}} = 2.5\,m$

Length of concrete base (h -> o): $L_{baseho.E1} := Key_{h.w} + Key_{h.d} + Key_{hdist} + Key_{t.d} + Key_{t.w} = 13\,m$

Head loss along h -> j: $\Delta h_{hj.E1} := \Delta h_{ho.E1} \cdot \frac{Key_{h.w}}{L_{baseho.E1}} = 0.192\,m$

Water Pressure at j: $u_{j.E1} := \left(\Delta h_{g.hj.E1} - \Delta h_{hj.E1}\right) \cdot \gamma_w = 86.32 \cdot kPa$

Head loss along h -> k: $\Delta h_{hjk.E1} := \Delta h_{ho.E1} \cdot \left(\frac{Key_{h.w} + Key_{h.d}}{L_{baseho.E1}}\right) = 0.962\,m$

Water Pressure at k: $u_{k.E1} := \left(\Delta h_{g.km.E1} - \Delta h_{hjk.E1}\right) \cdot \gamma_w = 39.58 \cdot kPa$

Head loss along h -> m: $\Delta h_{hjkm.E1} := \Delta h_{ho.E1} \cdot \left(\frac{Key_{h.w} + Key_{h.d} + Key_{hdist}}{L_{baseho.E1}}\right) = 2.5\,m$

Water Pressure at m: $u_{m.E1} := \left(\Delta h_{g.km.E1} - \Delta h_{hjkm.E1}\right) \cdot \gamma_w = 24.50 \cdot kPa$

Head loss along h -> n: $\Delta h_{hjkmn.E1} := \Delta h_{ho.E1} \cdot \left(\frac{Key_{h.w} + Key_{h.d} + Key_{hdist} + Key_{t.d}}{L_{baseho.E1}}\right) = 2.5\,m$

Water Pressure at n: $u_{n.E1} := \left(\Delta h_{g.no.E1} - \Delta h_{hjkmn.E1}\right) \cdot \gamma_w = 24.50 \cdot kPa$

Uplift under key at heel: $V_{ulkeyhE1.OT} := \frac{\left(u_{h.E1} + u_{j.E1}\right) \cdot Key_{h.w}}{2} \cdot B \cdot -1 = -87.258 \cdot kN$

Moment Arm (from Point O): $V_{ulkeyhE1loc.OT} := b - \frac{Key_{h.w} \cdot \left(2 \cdot u_{j.E1} + u_{h.E1}\right)}{3 \cdot \left(u_{j.E1} + u_{h.E1}\right)} = 8.502\,m$

Uplift under base: $V_{ulbaseE1.OT} := \frac{\left(u_{k.E1} + u_{m.E1}\right) \cdot Key_{hdist}}{2} \cdot B \cdot -1 = -256.308 \cdot kN$

Moment Arm (from Point O): $V_{ulbaseE1loc.OT} := b - Key_{h.w} - \frac{Key_{hdist} \cdot \left(2 \cdot u_{m.E1} + u_{k.E1}\right)}{3 \cdot \left(u_{m.E1} + u_{k.E1}\right)} = 4.314\,m$

Uplift under key at toe: $V_{ulkeytE1.OT} := \frac{\left(u_{n.E1} + u_{o.E1}\right) \cdot Key_{t.w}}{2} \cdot B \cdot -1 = 0 \cdot kN$

Moment Arm (from Point O): $V_{ulkeytE1loc.OT} := \frac{Key_{t.w} \cdot \left(2 \cdot u_{n.E1} + u_{o.E1}\right)}{3 \cdot \left(u_{n.E1} + u_{o.E1}\right)} = 0$

$$\Sigma V_{UpliftE1.OT} := V_{ulkeyhE1.OT} + V_{ulbaseE1.OT} + V_{ulkeytE1.OT} = -344 \cdot kN$$

$$U_{E1.loc.OT} := \frac{V_{ulkeyhE1.OT} \cdot V_{ulkeyhE1loc.OT} + V_{ulbaseE1.OT} \cdot V_{ulbaseE1loc.OT} + V_{ulkeytE1.OT} \cdot V_{ulkeytE1loc.OT}}{\Sigma V_{UpliftE1.OT}} = 5.38\,m$$

$$\Sigma M_{UpliftE1.OT} := \Sigma V_{UpliftE1.OT} \cdot U_{E1.loc.OT} = -1847.5 \cdot kN \cdot m$$

LOAD CASE E1

Modify Lateral Water Pressure (Resisting) for Overturning Analysis:

(Resisting water pressure is calculated using the Line of Creep method)

Water Load at Key (heel): $H_{h2E1.OT} := \frac{u_{k.E1} + u_{j.E1}}{2} \cdot Key_{h.d} B = 251.8 \cdot kN$

Moment Arm (from Point O): $H_{h2locE1.OT} := \frac{Key_{h.d} \cdot \left(2 \cdot u_{k.E1} + u_{j.E1}\right)}{3\left(u_{k.E1} + u_{j.E1}\right)} + Key_{vdist} = -2.25\ m$

Water Load at Key (toe): $H_{h6E1.OT} := \frac{u_{o.E1} \cdot \left(UWSEL_{E1} - Bot_{ftg} + Key_{t.d}\right)}{2} \cdot B = 31 \cdot kN$

Moment Arm (from Point O): $H_{h6locE1.OT} := \frac{UWSEL_{E1} - Bot_{ftg} + Key_{t.d}}{3} = 0.83\ m$

$$\Sigma H_{waterresistE1.OT} := H_{h2E1.OT} + H_{h6E1.OT} = 282.41 \cdot kN$$

$$H_{waterresistlocE1.OT} := \frac{H_{h2E1.OT} \cdot H_{h2locE1.OT} + H_{h6E1.OT} \cdot H_{h6locE1.OT}}{\Sigma H_{waterresistE1.OT}} = -1.913\ m$$

$$\Sigma M_{waterresistE1.OT} := \Sigma H_{waterresistE1.OT} \cdot H_{waterresistlocE1.OT} = -540.37 \cdot kN \cdot m$$

Modify Lateral Soil Loads for Overturning Analysis:

(Lateral soil loads are calculated down to Point O instead of bottom of shear key)

Driving Soil Load (Headwater Side):

Surcharge Load: $E_{s1E1.OT} := S1_{E1} \cdot K_{Aagwt} \cdot \left(H_w + Key_{h.d} + Key_{vdist}\right) \cdot B \cdot -1 = 0 \cdot kN$

Moment Arm (from Point O): $E_{s1locE1.OT} := \frac{H_w + Key_{h.d} + Key_{vdist}}{2} = 4.63\ m$

Moist Soil Load above GWL: $E_{h1E1.OT} := \frac{\gamma_m \cdot K_{Aagwt} \cdot h_{1E1}^{\ 2}}{2} B \cdot -1 = -67.8 \cdot kN$

Moment Arm (from Point O): $E_{h1locE1.OT} := \frac{h_{1E1}}{3} + h_{2E1} + Key_{vdist} = 6.42\ m$

Saturated Soil Load below GWL: (rectangular component) $E_{h2E1.OT} := \left(\gamma_m \cdot K_{Aagwt} \cdot h_{1E1}\right) \cdot \left(h_{2E1} + Key_{vdist}\right) \cdot B \cdot -1 = -159.6 \cdot kN$

Moment Arm (from Point O): $E_{h2locE1.OT} := \frac{h_{2E1} + Key_{vdist}}{2} = 2.50\ m$

Saturated Soil Load below GWL: (triangular component) $E_{h2aE1.OT} := \frac{\left(\gamma_{sat} - \gamma_w\right) \cdot K_{Aagwt} \cdot \left(h_{2E1} + Key_{vdist}\right)^2}{2} \cdot B \cdot -1 = -57.3 \cdot kN$

Moment Arm (from Point O): $E_{h2alocE1.OT} := \frac{h_{2E1} + Key_{vdist}}{3} = 1.67\ m$

Resisting Soil Load (Tailwater Side):

LOAD CASE E1

(Determine resisting soil load based on depth variation between the keys (ie. Key_{vdist}). In case where key at heel is deeper than key at toe (ie. Key_{vdist}< 0), resisting soil load (p*) is assumed to produce horizontal equilibrium as per Figure 4-5 above. Resisting soil load (p_o) is neglected.)

Total Driving Force: $\Sigma H_{SoildriveE1.OT} := E_{s1E1.OT} + E_{h1E1.OT} + E_{h2E1.OT} + E_{h2aE1.OT} + H_{h2E1} \cdots + Q_{h.conc} + Q_{h.SoilWaterE1} = -955.3 \cdot kN$

Total Resisting Force: $\Sigma H_{waterresistE1.OT} = 282.41 \cdot kN$

Assumed Soil Load p*: $E_{h8E1a.OT} := \left(\Sigma H_{SoildriveE1.OT} + \Sigma H_{waterresistE1.OT}\right) \cdot -1 = 672.91 \cdot kN$

Moment Arm (from Point O): $E_{h8E1a.loc.OT} := \dfrac{Key_{vdist}}{2} = -2\,m$

$$E_{h8E1.OT} := \begin{cases} E_{h8E1a.OT} & \text{if } Key_{vdist} < 0 \\ \Sigma H_{SoilresistE1} - H_{h6E1} - H_{h6aE1} & \text{otherwise} \end{cases} = 672.91 \cdot kN$$

$$\Sigma M_{SoilresistE1.OT} := \begin{cases} E_{h8E1a.OT} \cdot E_{h8E1a.loc.OT} & \text{if } Key_{vdist} < 0 \\ \Sigma M_{HorizSoilResistE1} - H_{h6E1} \cdot H_{h6locE1} - H_{h6aE1} \cdot H_{h6alocE1} & \text{otherwise} \end{cases} = -1345.82 \cdot kN \cdot m$$

Sum of Moment about Point O:

$$\Sigma M_{LateraldriveE1.OT} := E_{s1E1.OT} \cdot E_{s1locE1.OT} + E_{h1E1.OT} \cdot E_{h1locE1.OT} + E_{h2E1.OT} \cdot E_{h2locE1.OT} \cdots + E_{h2aE1.OT} \cdot E_{h2alocE1.OT} + H_{h2E1} \cdot H_{h2locE1} = -532.8 \cdot kN \cdot m$$

$$\Sigma M_{LateralresistE1.OT} := \Sigma M_{waterresistE1.OT} + \Sigma M_{SoilresistE1.OT} = -1886.2 \cdot kN \cdot m$$

$$\Sigma M_{seisE1.OT} := M_{Qv.conc} + M_{Q.conc} + M_{Qv.SoilWaterE1} + M_{Q.h.SoilWaterE1} = -1748 \cdot kN \cdot m$$

(seismic moment modified for the most adverse overturning effect)

Total moment:

$$\Sigma M_{E1.OT} := \Sigma M_{conc} + \Sigma M_{VertSoilWaterResistE1} + \Sigma M_{UpliftE1.OT} + \Sigma M_{LateraldriveE1.OT} + \Sigma M_{LateralresistE1.OT} + \Sigma M_{seisE1.OT} = 2319.0 \cdot kN \cdot m$$

Total Vertical Force: $\Sigma V_{E1.OT} := \Sigma V_{conc} + \Sigma V_{SoilWaterE1} + \Sigma V_{UpliftE1.OT} + Q_{v.conc} + Q_{v.SoilWaterE1} = 1015.5 \cdot kN$

Distance X_R: EM 1110-2-2502 Eq.4-1 $X_{R.E1} := \dfrac{\Sigma M_{E1.OT}}{\Sigma V_{E1.OT}} = 2.284\,m$

Overturning Resultant Ratio $Ratio_{E1.OT} := \dfrac{X_{R.E1}}{b} = 0.25$

$$Ratio_{E1.OT.check} := \begin{cases} \text{"OKAY "} & \text{if } Ratio_{E1.OT} > X_{R.reqE1} \\ \text{"Revise Structure""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

CHECK FOUNDATION ECCENTRICITY (HORIZONTAL PLANE):

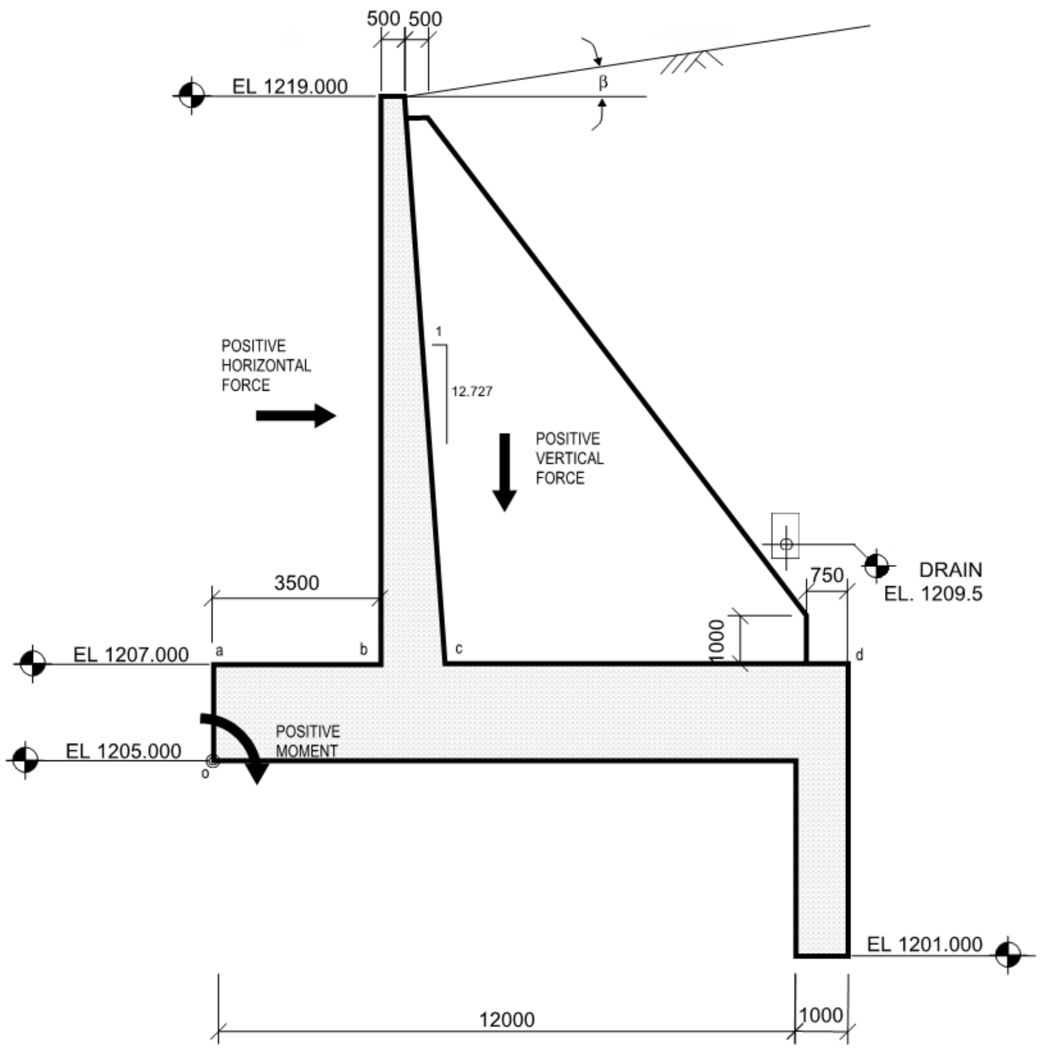
DI-Block 5D (Upstream) Retaining Wall Stability Calculations

Project Number:	110773396		
Project Title:	SR1 - Diversion Structure		
Client:	Alberta Transportation		
Engineer:	Lawrence Choi	Date: 12/11/2018	
Checker:	Sean Xiao	Date: 12/18/2018	

Calculation for: Retaining Wall - Diversion Inlet Left - Block 5D (Upstream)



(DIMENSIONS BASED ON UPSTREAM SECTION)

REGION COLOR CONVENTION

User Input

Calulation Highlights

Results

WALL GEOMETRY:

Top of Wall Elevation: $T_w := 1219.0 \cdot m$

Top of Footing Elevation: $Top_{ftg} := 1207.0 \cdot m$

Thickness of Footing: $t_{ftg} := 2.0m$

Bottom of Footing Elevation: $Bot_{ftg} := Top_{ftg} - t_{ftg} = 1205\, m$

Overall Height of wall: $h_w := T_w - Bot_{ftg} = 14.00\, m$

Thickness of Wall: Base: $t_{wb} := 1.443 \cdot m$ Top: $t_{wt} := 0.5m$

Length of toe: $L_{ab} := 3.5m$

Total Length of Footing: $b := 13.0m$

Length of heel: $L_{cd} := b - L_{ab} - t_{wb} = 8.057\, m$

Unit Width of Wall for analysis: $B := 1.00m$

SHEAR KEY GEOMETRY:

	Toe	Heel
Key depth:	$Key_{t.d} := 0m$	$Key_{h.d} := 4.0m$
Key width:	$Key_{t.w} := 0m$	$Key_{h.w} := 1m$
Face of Key from Point O:	$Key_{t.loc} := 0 \cdot m$	$Key_{h.loc} := b - Key_{h.w} = 12\, m$

Horizontal Distance between Keys: $Key_{hdist} := Key_{h.loc} - Key_{t.loc} - Key_{t.w} = 12\, m$

Key Depth Diff. (from point O): $Key_{vdist} := -Key_{h.d} + Key_{t.d} = -4\, m$

BASE PROPERTIES:

Base Area: $A_b := b \cdot B = 13\, m^2$

Centroidal Distance for Footing (from Toe): $Y_t := \frac{b}{2} = 6.50\, m$

RETAINED SOIL GEOMETRY:

Slope of retained ground surface: $\beta := 0 \cdot \frac{\pi}{180} = 0.00$

Height of retained earth at heel: $H_w := T_w - Bot_{ftg} + \left(t_{wb} + L_{cd} - t_{wt}\right) \cdot \tan(\beta) = 14.00\, m$

RETAINING WALL GEOMETRY CHECKS:

(Foundation Analysis & Design Bowles)

$$t_{bcheck} := \begin{cases} \text{"OKAY"} & \text{if } t_{ftg} \ge \frac{H_w}{12} \\ \text{"Warning"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

$$t_{wcheck} := \begin{cases} \text{"OKAY"} & \text{if } t_{wb} \ge \frac{H_w}{12} \\ \text{"Warning"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

$$b_{check} := \begin{cases} \text{"OKAY"} & \text{if } \frac{b}{H_w} \ge .4 \wedge \frac{b}{H_w} \le 80 \\ \text{"Warning"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

$$L_{abcheck} := \begin{cases} \text{"OKAY"} & \text{if } \frac{L_{ab}}{b} \ge .25 \wedge \frac{L_{ab}}{b} \le .4 \\ \text{"Warning"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

Material Properties:

Unit Weight of Water:	$\gamma_w := 9.8 \frac{kN}{m^3}$	(Section 7.2, Design Criteria)
Unit Weight of Concrete:	$\gamma_c := 23.5 \frac{kN}{m^3}$	
Unit Weight of Soil (Moist):	$\gamma_m := 20.0 \frac{kN}{m^3}$	(Section 5.3, Design Criteria) assumed moisture content (w) = 5%
Unit Weight Soil (Saturated):	$\gamma_{sat} := 22.0 \frac{kN}{m^3}$	(Assuming Specific Gravity = 2.7
Unit Weight Soil (buoyant):	$\gamma_b := \gamma_{sat} - \gamma_w = 12.2 \cdot \frac{kN}{m^3}$	
Weight of Soil/Concrete above toe:	$\gamma_{toe} := 22.0 \frac{kN}{m^3}$	
Unit Weight of Rock:	$\gamma_r := 25.6 \frac{kN}{m^3}$	(Section 7.2, Design Criteria)

Foundation Parameters:

Glacial Till Internal Friction:	$\phi := 27 \cdot \frac{\pi}{180} = 0.471$	
Bedrock Internal Friction Angle:	$\phi_r := 24 \cdot \frac{\pi}{180} = 0.419$	
Friction Angle at Base Concrete / Rock Interface:	$\phi_{rock} := 26$	
Base Friction Coefficient:	$tan_{\phi rock} := \tan\left(\phi_{rock} \frac{\pi}{180}\right) = 0.488$	radians
Rip Rap Backfill, Refer Dwg. C-214	$\phi_{backfill} := \left(20 \frac{\pi}{180}\right) = 0.349$	radians
Shear strength along rock Failure plane	$s_r := \frac{13100 \frac{kN}{m^2}}{2} = 6550 \cdot \frac{kN}{m^2}$	(Stantec Design Memo 8/8/16)

CONCRETE DEAD LOAD:

Area of Footing: $A_{ftg} := t_{ftg} \cdot b = 26\,m^2$

Weight of Footing: $D_{ftg} := A_{ftg} \cdot B \cdot \gamma_c = 611 \cdot kN$

Area of Stem (without batter): $A_{w1} := t_{wt} \cdot (h_w - t_{ftg}) = 6\,m^2$

Weight of Stem: $D_{w1} := A_{w1} \cdot B \cdot \gamma_c = 141 \cdot kN$

Area of stem Batter: $A_{w2} := \frac{(t_{wb} - t_{wt})}{2} (h_w - t_{ftg}) = 5.66\,m^2$

Weight of Batter: $D_{w2} := A_{w2} \cdot B \cdot \gamma_c = 133 \cdot kN$

Slope of batter: $S_{batter} := \frac{t_{wb} - t_{wt}}{h_w - t_{ftg}} = 0.079$

Area of Key $A_{t.key} := Key_{t.d} \cdot Key_{t.w} = 0$ $A_{h.key} := Key_{h.d} \cdot Key_{h.w} = 4\,m^2$

Weight of Key $D_{t.key} := A_{t.key} \cdot B \cdot \gamma_c = 0 \cdot kN$ $D_{h.key} := A_{h.key} \cdot B \cdot \gamma_c = 94 \cdot kN$

Centroidal Horizontal Distance of Wall (From Toe):

$$H_{cent} := \frac{A_{w1} \cdot \left(L_{ab} + \frac{t_{wt}}{2}\right) + A_{w2} \cdot \left(L_{ab} + t_{wt} + \frac{t_{wb} - t_{wt}}{3}\right) + A_{ftg} \cdot \frac{b}{2} + A_{t.key} \cdot \left(Key_{t.loc} + \frac{Key_{t.w}}{2}\right) + A_{h.key} \cdot \left(Key_{h.loc} + \frac{Key_{h.w}}{2}\right)}{A_{w1} + A_{w2} + A_{ftg} + A_{t.key} + A_{h.key}} = 6.38\,m$$

Centroidal Vertical Distance of Wall (Above Base of Footing):

$$V_{Cent} := \frac{A_{ftg} \cdot \frac{t_{ftg}}{2} + A_{w1} \cdot \left[t_{ftg} + \frac{(h_w - t_{ftg})}{2}\right] + A_{w2} \cdot \left[t_{ftg} + \frac{(h_w - t_{ftg})}{3}\right] + A_{t.key} \cdot \left(\frac{-Key_{t.d}}{2}\right) + A_{h.key} \cdot \left(\frac{-Key_{h.d}}{2}\right)}{A_{ftg} + A_{w1} + A_{w2} + A_{t.key} + A_{h.key}} = 2.40\,m$$

$\Sigma V_{conc} := D_{ftg} + D_{w1} + D_{w2} + D_{t.key} + D_{h.key} = 979 \cdot kN$

$\Sigma M_{conc} := \Sigma V_{conc} \cdot H_{cent} = 6248.9\,m \cdot kN$

ROCK SECTION MOBILIZED FOR INCLINDED SLIDING FAILURE

Area of Rock Section Mobilized: $A_{rocksection} := (Key_{t.d} + Key_{h.d}) \cdot \frac{Key_{hdist}}{2} = 24\,m^2$

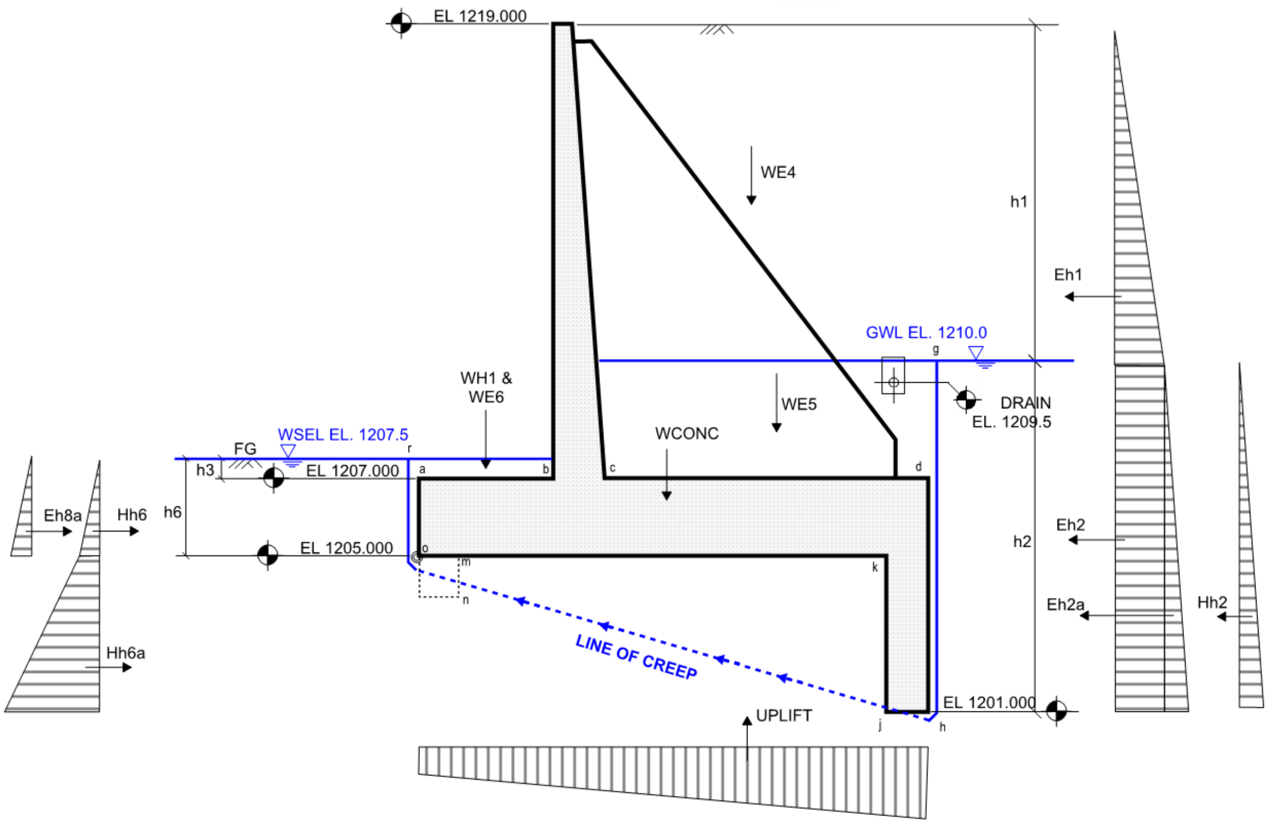
Rock Mass Mobilized: $V_{rocksection} := A_{rocksection} \cdot \gamma_r \cdot B = 614.4 \cdot kN$

(Pore pressure taken along assumed inclined sliding plane)

Distance from Toe to COG of Rock Section: $L_{rocksection} := \frac{Key_{hdist} \cdot (2 \cdot Key_{h.d} + Key_{t.d})}{3(Key_{h.d} + Key_{t.d})} + Key_{t.w} = 8\,m$

$\Sigma M_{rocksection} := V_{rocksection} \cdot L_{rocksection} = 4915.2\,m \cdot kN$

LOAD CASE U1 - NORMAL OPERATION



U1 DESIGN CASE

LOAD CASE U1 ACCEPTANCE PARAMETERS

FS sliding:

Usual (U) 1.5 (without cohesion) (Table 3-3, USACE EM 1110-2-2100)

Resultant Location:

Usual (U) Inside middle third ~100% base in compression

Required Factor of Safety for Sliding: $FS_{sliding.reqU1} := 1.5$ (Without Cohesion)

Allowable rock bearing pressure: $\sigma_{allowU1} := 1270\text{kPa}$ (Section 5.2, Design Criteria EM 1110-2-2100 Section 3-10)

Overturning Required Resultant Ratio: $X_{R.reqU1} := 0.333$ (EM 1110-2-2502, Figure 4-4)

Required Factor of Safety for Floatation $FS_{req.U1.flt} := 1.5$

SOIL HEIGHTS and Water Levels:

LOAD CASE U1

Heel Conditions:

Groundwater Elevation at Heel: $GWL_{U1} := 1210.0m$

Distance from Finish Grade to Groundwater at Heel: $h_{1U1} := \left[T_w - GWL_{U1} + \left(L_{cd} + t_{wb} - t_{wt}\right)\cdot\tan(\beta)\right] = 9.00\ m$

Distance from Water Surface to Bottom of Footing at Heel: $h_{2U1} := GWL_{U1} - Bot_{ftg} + Key_{h.d} = 9.00\ m$

Toe Conditions:

Water Surface Elevation at Toe: $WSEL_{U1} := 1207.5m$

Water Surface Elevation at Toe for Uplift: $UWSEL_{U1} := 1207.5\cdot m$

Finish Grade at Toe providing lateral resistance: $FG_{toeU1} := 1207.5\cdot m$

Soil Depth Above top of footing: $h_{3aU1} := FG_{toeU1} - Top_{ftg} = 0.5\ m$

$$h_{3U1} := \begin{cases} h_{3aU1} & \text{if } FG_{toeU1} - Top_{ftg} \geq 0 \\ 0 & \text{otherwise} \end{cases} = 0.5$$

Resisting Fill at Toe: $h_{4U1} := FG_{toeU1} - Bot_{ftg} + Key_{t.d} = 2.50\ m$

Distance from Water Level to Top of Footing: $h_{5U1} := WSEL_{U1} - Top_{ftg} = 0.50\ m$

Distance from Water Surface to Bottom of Toe Key: $h_{6U1} := WSEL_{U1} - Bot_{ftg} + Key_{t.d} = 2.50\cdot m$

Soil Depth Above WSEL: $h_{7aU1} := FG_{toeU1} - WSEL_{U1} = 0\ m$

$$h_{7U1} := \begin{cases} h_{7aU1} & \text{if } FG_{toeU1} - WSEL_{U1} \geq 0 \\ 0 & \text{otherwise} \end{cases} = 0$$

Soil Depth Below WSEL:

$$h_{8U1} := \begin{cases} WSEL_{U1} - Bot_{ftg} + Key_{t.d} & \text{if } FG_{toeU1} - WSEL_{U1} \geq 0 \\ h_{4U1} & \text{otherwise} \end{cases} = 2.5$$

For Line of Creep Method: $L_{ho.U1} := \sqrt{b^2 + \left(Key_{h.d} - Key_{t.d}\right)^2} = 13.601\ m$

Head Loss from Point g:

$\Delta h_{g.hj.U1} := h_{2U1} = 9\ m$ (to point h & j)

$\Delta h_{g.km.U1} := GWL_{U1} - Bot_{ftg} = 5\ m$ (to point k & m)

$\Delta h_{g.no.U1} := GWL_{U1} - Bot_{ftg} + Key_{t.d} = 5\ m$ (to point n & o)

$\Delta h_{g.p.U1} := GWL_{U1} - FG_{toeU1} = 2.5\ m$ (to point p*)

$\Delta h_{g.r.U1} := GWL_{U1} - UWSEL_{U1} = 2.5\ m$ (to point r)

Surcharge

Surcharge on Heel: $S1_{U1} := 0.0\ \frac{kN}{m^2}$

* same as point "r" in this case

Calculate Soil Lateral Pressure Coefficients:

For all load cases except seismic, soil loading to be based on At-Rest Condition.
Calculate at-rest pressure coefficient Ko based on Jaky's (1944) equation.

Soil At Rest Static Coefficient: $K_o := \frac{1 - \sin(\phi)}{1 + \sin(\beta)} = 0.546$ (Eq. 3-6, USACE EM 1110-2-2502)

Lateral - Driving Force (Headwater Side)

Lateral Soil Load:

Surcharge Load: $E_{s1U1} := S1_{U1} \cdot K_o \cdot \left(H_w + Key_{h.d}\right) \cdot B \cdot -1 = 0 \cdot kN$

Moment Arm (from Point O): $E_{s1locU1} := \frac{H_w + Key_{h.d}}{2} + Key_{vdist} = 5.00\ m$

Moist Soil Load above GWL: $E_{h1U1} := \frac{\gamma_m \cdot K_o \cdot h_{1U1}^{\ 2}}{2} B \cdot -1 = -442.3 \cdot kN$

Moment Arm (from Point O): $E_{h1locU1} := \frac{h_{1U1}}{3} + h_{2U1} + Key_{vdist} = 8.00\ m$

Saturated Soil Load below GWL:
(rectangular component) $E_{h2U1} := \left(\gamma_m \cdot K_o \cdot h_{1U1}\right) \cdot \left(h_{2U1}\right) \cdot B \cdot -1 = -884.5 \cdot kN$

Moment Arm (from Point O): $E_{h2locU1} := \frac{h_{2U1}}{2} + Key_{vdist} = 0.50\ m$

Saturated Soil Load below GWL:
(triangular component) $E_{h2aU1} := \frac{\left(\gamma_{sat} - \gamma_w\right) \cdot K_o \cdot h_{2U1}^{\ 2}}{2} \cdot B \cdot -1 = -269.8 \cdot kN$

Moment Arm (from Point O): $E_{h2alocU1} := \frac{h_{2U1}}{3} + Key_{vdist} = -1.00\ m$

Lateral Water Load:

Water Load GWL to Bottom of Keys:

$$H_{h2U1} := \left| \begin{array}{ll} \frac{\gamma_w \cdot h_{2U1}^{\ 2}}{2} \cdot B \cdot -1 & \text{if } Key_{vdist} < 0 \\ \frac{\gamma_w \cdot \left(h_{2U1} + Key_{vdist}\right)^2}{2} \cdot B \cdot -1 & \text{otherwise} \end{array} \right. = -396.9 \cdot kN$$

Moment Arm (from Point O):

$$H_{h2locU1} := \left| \begin{array}{ll} \frac{h_{2U1}}{3} + Key_{vdist} & \text{if } Key_{vdist} < 0 \\ \frac{h_{2U1} + Key_{vdist}}{3} & \text{otherwise} \end{array} \right. = -1.00 \cdot m$$

$$\Sigma H_{SoildriveU1} := E_{s1U1} + E_{h1U1} + E_{h2U1} + E_{h2aU1} + H_{h2U1} = -1993.5 \cdot kN$$

$$\Sigma M_{LateralSoildriveU1} := E_{s1U1} \cdot E_{s1locU1} + E_{h1U1} \cdot E_{h1locU1} + E_{h2U1} \cdot E_{h2locU1} \cdots + E_{h2aU1} \cdot E_{h2alocU1} + H_{h2U1} \cdot H_{h2locU1} = -3313.7\ m \cdot kN$$

Lateral - Resisting Force (Tailwater Side)

LOAD CASE U1

Lateral Water Load:

Water Load WSEL to Bot. of Toe Key: $H_{h6U1} := \frac{\gamma_w \cdot h_{6U1}^2}{2} \cdot B = 30.6 \cdot kN$

Moment Arm (from Point O): $H_{h6locU1} := \frac{h_{6U1}}{3} = 0.83\ m$

Water Load between Keys (if any) $H_{h6aU1} := \begin{cases} \frac{\left(h_{6U1} + h_{2U1}\right) \cdot -Key_{vdist}}{2} \cdot \gamma_w \cdot B & \text{if } Key_{vdist} < 0 \\ 0 & \text{otherwise} \end{cases} = 225.4 \cdot kN$

Moment Arm (from Point O): $H_{h6alocU1} := \begin{cases} \frac{Key_{vdist} \cdot \left(2 \cdot h_{2U1} + h_{6U1}\right)}{3\left(h_{2U1} + h_{6U1}\right)} & \text{if } Key_{vdist} < 0 \\ 0 & \text{otherwise} \end{cases} = -2.38 \cdot m$

Lateral Soil Load:

Moist Soil Load above WSEL: $E_{h7U1} := \frac{\gamma_m \cdot K_o \cdot h_{7U1}^2}{2} \cdot B = 0.0 \cdot kN$

Moment Arm (from bot. of toe key): $E_{h7locU1} := h_{6U1} + \frac{h_{7U1}}{3} = 2.50\ m$

Saturated Soil Load below WSEL:
(rectangular component) $E_{h8U1} := \left(\gamma_m \cdot K_o \cdot h_{7U1}\right) \cdot h_{8U1} \cdot B = 0.0 \cdot kN$

Moment Arm (from bot. of toe key): $E_{h8locU1} := \frac{h_{8U1}}{2} = 1.25\ m$

Saturated Soil Load below WSEL:
(triangular component) $E_{h8aU1} := \frac{\left[\left(\gamma_{sat} - \gamma_w\right) \cdot K_o\right] \cdot h_{8U1}^2}{2} \cdot B = 20.8 \cdot kN$

Moment Arm (from bot. of footing): $E_{h8alocU1} := \frac{h_{8U1}}{3} = 0.83\ m$

$\Sigma H_{SoilresistU1} := H_{h6U1} + H_{h6aU1} + E_{h7U1} + E_{h8U1} + E_{h8aU1} = 276.8 \cdot kN$

$$\Sigma M_{HorizSoilResistU1} := H_{h6U1} \cdot H_{h6locU1} + H_{h6aU1} \cdot H_{h6alocU1} + E_{h7U1} \cdot E_{h7locU1} \ldots + E_{h8U1} \cdot E_{h8locU1} + E_{h8aU1} \cdot E_{h8alocU1} = -492.9\ m \cdot kN$$

Vertical Force:

UPLIFT: Linear distribution from water at heel to water at toe:

$$\Sigma V_{UpliftU1} := \left[\left(UWSEL_{U1} - Bot_{ftg} + Key_{t.d}\right) + h_{2U1}\right] \cdot \frac{b}{2} \cdot \gamma_w \cdot B \cdot -1 = -732.55 \cdot kN$$

Moment Arm (from Point O): $V_{UpliftU1aloc} := \frac{b \cdot \left[2 \cdot h_{2U1} + \left(UWSEL_{U1} - Bot_{ftg} + Key_{t.d}\right)\right]}{3\left[h_{2U1} + \left(UWSEL_{U1} - Bot_{ftg} + Key_{t.d}\right)\right]} = 7.725\ m$

$\Sigma M_{UpliftU1} := \Sigma V_{UpliftU1} \cdot V_{UpliftU1aloc} = -5658.683 \cdot kN \cdot m$

Vertical Force (con't):

Weight of soil and water over toe:

Water Above the Top of Footing: $W_{H1U1} := \gamma_w \cdot h_{5U1} \cdot L_{ab} \cdot B = 17.15 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E1locU1} := \frac{L_{ab}}{2} = 1.75\, m$

Soil above top of footing: $W_{E6U1} := \gamma_b \cdot h_{3U1} \cdot L_{ab} \cdot B = 21.4 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E6locU1} := \frac{L_{ab}}{2} = 1.75\, m$

Vertical Load Due to Surcharge: $S_{U1} := S1_{U1} \cdot L_{cd} \cdot B = 0$ $\quad S_{U1loc} := b - \frac{L_{cd}}{2} = 8.97\, m$

Weight of soil and water over heel:

Moist Soil for sloped grade above top of wall:

Length of sloped portion of soil above top of wall: $L_{E3U1} := \left(L_{cd} + t_{wb} - t_{wt}\right) = 9.00\, m$

Height of sloped soil above top of wall over heel: $h_{E3locU1} := \left(L_{E3U1}\right) \cdot \tan(\beta) = 0.00\, m$

Weight of sloped soil above top of wall: $W_{E3U1} := \frac{\gamma_m}{2} \cdot h_{E3locU1} \cdot L_{E3U1} \cdot B = 0.0 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E3locU1} := L_{ab} + t_{wt} + \frac{2}{3} \cdot L_{E3U1} = 10.00\, m$

Moist soil from top of wall to groundwater level:

Height of soil from top of wall and top of GWL: $h_{1U1} = 9.00\, m$

Length from edge of wall at GWL to edge of heel: $L_{E4U1} := L_{E3U1} - \left(h_{1U1} \cdot S_{batter}\right) = 8.29\, m$

Weight of soil over heel from top of wall to GWL: $W_{E4U1} := \gamma_m \cdot h_{1U1} \cdot \frac{\left(L_{E3U1} + L_{E4U1}\right)}{2} \cdot B = 1556.3 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E4locU1} := b - \frac{L_{E3U1}^2 + L_{E3U1} \cdot L_{E4U1} + L_{E4U1}^2}{3\left(L_{E3U1} + L_{E4U1}\right)} = 8.67\, m$

Saturated soil from groundwater to top of footing:

Height of soil from GWL to top of heel: $h_{E4U1} := h_{2U1} - t_{ftg} - Key_{h.d} = 3.00\, m$

Weight of soil over heel from GWL to top of heel: $W_{E5U1} := \left(\gamma_{sat}\right) \cdot h_{E4U1} \cdot \frac{\left(L_{E4U1} + L_{cd}\right)}{2} \cdot B = 539.5 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E5locU1} := b - \frac{L_{E4U1}^2 + L_{E4U1} \cdot L_{cd} + L_{cd}^2}{3\left(L_{E4U1} + L_{cd}\right)} = 8.91\, m$

$\Sigma V_{SoilWaterU1} := W_{H1U1} + W_{E6U1} + W_{E3U1} + W_{E4U1} + W_{E5U1} + S_{U1} = 2134.4 \cdot kN$

$$\Sigma M_{VertSoilWaterResistU1} := W_{H1U1} \cdot W_{E1locU1} + W_{E6U1} \cdot W_{E6locU1} \cdots + W_{E3U1} \cdot W_{E3locU1} + W_{E4U1} \cdot W_{E4locU1} + W_{E5U1} \cdot W_{E5locU1} + S_{U1} \cdot S_{U1loc} = 18376.3\, m \cdot kN$$

CHECK OVERTURNING

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stablity of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1

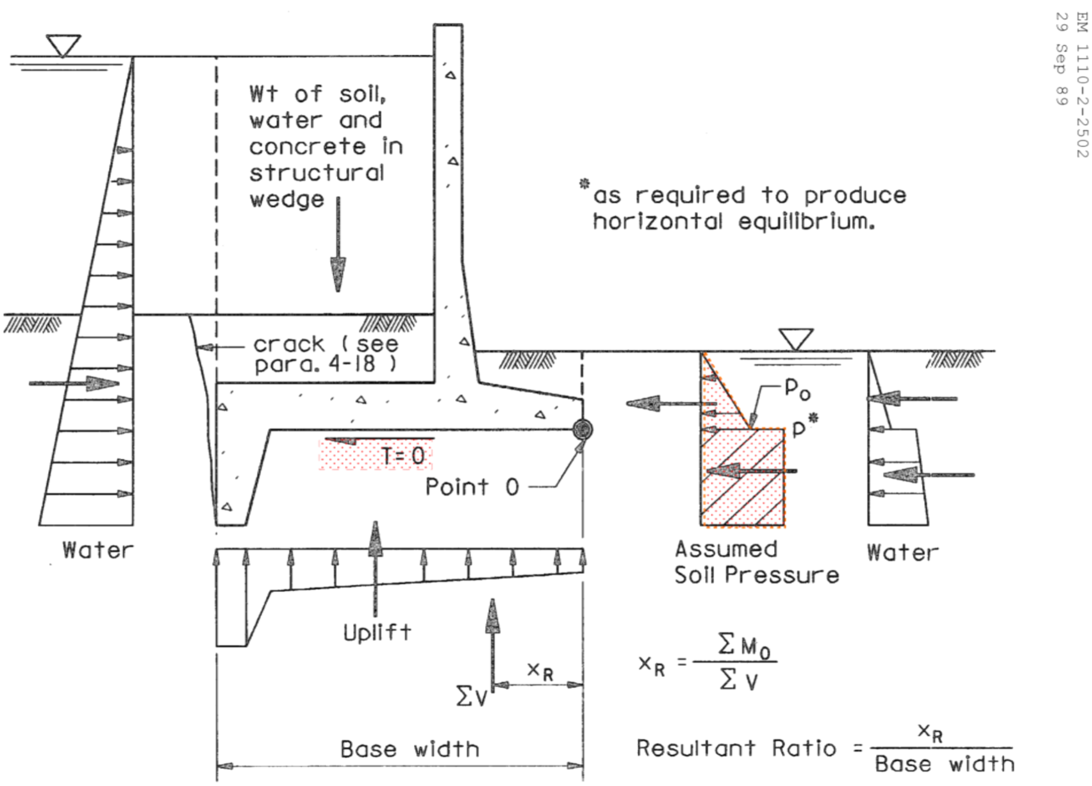

Figure 4-5. Forces for overturning analysis for wall with horizontal base and key

Modify Uplift for Overturning Analysis: **LOAD CASE U1**

(Uplift is calculated along the concrete/rock contact using the Line of Creep method)

Water Pressure at h: $u_{h.U1} := \Delta h_{g.hj.U1} \cdot \gamma_w = 88.20 \cdot kPa$

Water Pressure at o: $u_{o.U1} := \left(\Delta h_{g.no.U1} - \frac{\Delta h_{g.r.U1} \cdot L_{ho.U1}}{L_{ho.U1}}\right) \cdot \gamma_w = 24.5 \cdot kPa$

Head loss between point h and o: $\Delta h_{ho.U1} := \Delta h_{g.r.U1} \cdot \frac{L_{ho.U1}}{L_{ho.U1}} = 2.5\,m$

Length of concrete base (h -> o): $L_{baseho.U1} := Key_{h.w} + Key_{h.d} + Key_{hdist} + Key_{t.d} + Key_{t.w} = 17\,m$

Head loss along h -> j: $\Delta h_{hj.U1} := \Delta h_{ho.U1} \cdot \frac{Key_{h.w}}{L_{baseho.U1}} = 0.147\,m$

Water Pressure at j: $u_{j.U1} := \left(\Delta h_{g.hj.U1} - \Delta h_{hj.U1}\right) \cdot \gamma_w = 86.76 \cdot kPa$

Head loss along h -> k: $\Delta h_{hjk.U1} := \Delta h_{ho.U1} \cdot \left(\frac{Key_{h.w} + Key_{h.d}}{L_{baseho.U1}}\right) = 0.735\,m$

Water Pressure at k: $u_{k.U1} := \left(\Delta h_{g.km.U1} - \Delta h_{hjk.U1}\right) \cdot \gamma_w = 41.79 \cdot kPa$

Head loss along h -> m: $\Delta h_{hjkm.U1} := \Delta h_{ho.U1} \cdot \left(\frac{Key_{h.w} + Key_{h.d} + Key_{hdist}}{L_{baseho.U1}}\right) = 2.5\,m$

Water Pressure at m: $u_{m.U1} := \left(\Delta h_{g.km.U1} - \Delta h_{hjkm.U1}\right) \cdot \gamma_w = 24.50 \cdot kPa$

Head loss along h -> n: $\Delta h_{hjkmn.U1} := \Delta h_{ho.U1} \cdot \left(\frac{Key_{h.w} + Key_{h.d} + Key_{hdist} + Key_{t.d}}{L_{baseho.U1}}\right) = 2.5\,m$

Water Pressure at n: $u_{n.U1} := \left(\Delta h_{g.no.U1} - \Delta h_{hjkmn.U1}\right) \cdot \gamma_w = 24.50 \cdot kPa$

Uplift under key at heel: $V_{ulkeyhU1.OT} := \frac{\left(u_{h.U1} + u_{j.U1}\right) \cdot Key_{h.w}}{2} \cdot B \cdot -1 = -87.479 \cdot kN$

Moment Arm (from Point O): $V_{ulkeyhU1loc.OT} := b - \frac{Key_{h.w} \cdot \left(2 \cdot u_{j.U1} + u_{h.U1}\right)}{3 \cdot \left(u_{j.U1} + u_{h.U1}\right)} = 12.501\,m$

Uplift under base: $V_{ulbaseU1.OT} := \frac{\left(u_{k.U1} + u_{m.U1}\right) \cdot Key_{hdist}}{2} \cdot B \cdot -1 = -397.765 \cdot kN$

Moment Arm (from Point O): $V_{ulbaseU1loc.OT} := b - Key_{h.w} - \frac{Key_{hdist} \cdot \left(2 \cdot u_{m.U1} + u_{k.U1}\right)}{3 \cdot \left(u_{m.U1} + u_{k.U1}\right)} = 6.522\,m$

Uplift under key at toe: $V_{ulkeytU1.OT} := \frac{\left(u_{n.U1} + u_{o.U1}\right) \cdot Key_{t.w}}{2} \cdot B \cdot -1 = 0 \cdot kN$

Moment Arm (from Point O): $V_{ulkeytU1loc.OT} := \frac{Key_{t.w} \cdot \left(2 \cdot u_{n.U1} + u_{o.U1}\right)}{3 \cdot \left(u_{n.U1} + u_{o.U1}\right)} = 0$

$$\Sigma V_{UpliftU1.OT} := V_{ulkeyhU1.OT} + V_{ulbaseU1.OT} + V_{ulkeytU1.OT} = -485 \cdot kN$$

$$U_{U1.loc.OT} := \frac{V_{ulkeyhU1.OT} \cdot V_{ulkeyhU1loc.OT} + V_{ulbaseU1.OT} \cdot V_{ulbaseU1loc.OT} + V_{ulkeytU1.OT} \cdot V_{ulkeytU1loc.OT}}{\Sigma V_{UpliftU1.OT}} = 7.60\,m$$

$$\Sigma M_{UpliftU1.OT} := \Sigma V_{UpliftU1.OT} \cdot U_{U1.loc.OT} = -3687.7 \cdot kN \cdot m$$

Modify Lateral Water Pressure (Resisting) for Overturning Analysis:

(Resisting water pressure is calculated using the Line of Creep method)

Water Load at Key (heel):

$$H_{h2U1.OT} := \frac{\upsilon_{k.U1} + \upsilon_{j.U1}}{2} \cdot Key_{h.d} \cdot B = 257.1 \cdot kN$$

Moment Arm (from Point O):

$$H_{h2locU1.OT} := \frac{Key_{h.d} \cdot \left(2 \cdot \upsilon_{k.U1} + \upsilon_{j.U1}\right)}{3\left(\upsilon_{k.U1} + \upsilon_{j.U1}\right)} + Key_{vdist} = -2.23\ m$$

Water Load at Key (toe):

$$H_{h6U1.OT} := \frac{\upsilon_{o.U1} \cdot \left(UWSEL_{U1} - Bot_{ftg} + Key_{t.d}\right)}{2} \cdot B = 31 \cdot kN$$

Moment Arm (from Point O):

$$H_{h6locU1.OT} := \frac{UWSEL_{U1} - Bot_{ftg} + Key_{t.d}}{3} = 0.83\ m$$

$$\Sigma H_{waterresistU1.OT} := H_{h2U1.OT} + H_{h6U1.OT} = 287.73 \cdot kN$$

$$H_{waterresistlocU1.OT} := \frac{H_{h2U1.OT} \cdot H_{h2locU1.OT} + H_{h6U1.OT} \cdot H_{h6locU1.OT}}{\Sigma H_{waterresistU1.OT}} = -1.907\ m$$

$$\Sigma M_{waterresistU1.OT} := \Sigma H_{waterresistU1.OT} \cdot H_{waterresistlocU1.OT} = -548.64 \cdot kN \cdot m$$

Modify Lateral Soil Loads for Overturning Analysis:

(Lateral soil loads are calculated down to Point O instead of bottom of shear key)

<u>Driving Soil Load (Headwater Side):</u>

Surcharge Load:

$$E_{s1U1.OT} := S1_{U1} \cdot K_o \cdot \left(H_w + Key_{h.d} + Key_{vdist}\right) \cdot B \cdot -1 = 0 \cdot kN$$

Moment Arm (from Point O):

$$E_{s1locU1.OT} := \frac{H_w + Key_{h.d} + Key_{vdist}}{2} = 7.00\ m$$

Moist Soil Load above GWL:

$$E_{h1U1.OT} := \frac{\gamma_m \cdot K_o \cdot h_{1U1}^{\ 2}}{2} \cdot B \cdot -1 = -442.3 \cdot kN$$

Moment Arm (from Point O):

$$E_{h1locU1.OT} := \frac{h_{1U1}}{3} + h_{2U1} + Key_{vdist} = 8.00\ m$$

Saturated Soil Load below GWL:
(rectangular component)

$$E_{h2U1.OT} := \left(\gamma_m \cdot K_o \cdot h_{1U1}\right) \cdot \left(h_{2U1} + Key_{vdist}\right) \cdot B \cdot -1 = -491.4 \cdot kN$$

Moment Arm (from Point O):

$$E_{h2locU1.OT} := \frac{h_{2U1} + Key_{vdist}}{2} = 2.50\ m$$

Saturated Soil Load below GWL:
(triangular component)

$$E_{h2aU1.OT} := \frac{\left(\gamma_{sat} - \gamma_w\right) \cdot K_o \cdot \left(h_{2U1} + Key_{vdist}\right)^2}{2} \cdot B \cdot -1 = -83.3 \cdot kN$$

Moment Arm (from Point O):

$$E_{h2alocU1.OT} := \frac{h_{2U1} + Key_{vdist}}{3} = 1.67\ m$$

Resisting Soil Load (Tailwater Side):

(Determine resisting soil load based on depth variation between the keys (ie. Key_{vdist}). In case where key at heel is deeper than key at toe (ie. $Key_{vdist} < 0$), resisting soil load (p*) is assumed to produce horizontal equilibrium as per Figure 4-5 above. Resisting soil load (p_o) is neglected.)

Total Driving Force: $\Sigma H_{SoildriveU1.OT} := E_{s1U1.OT} + E_{h1U1.OT} + E_{h2U1.OT} + E_{h2aU1.OT} + H_{h2U1} = -1413.8 \cdot kN$

Total Resisting Force: $\Sigma H_{waterresistU1.OT} = 287.7 \cdot kN$

Assumed Soil Load p*: $E_{h8U1a.OT} := \left(\Sigma H_{SoildriveU1.OT} + \Sigma H_{waterresistU1.OT}\right) \cdot -1 = 1126.112 \cdot kN$

Moment Arm (from Point O): $E_{h8U1a.loc.OT} := \dfrac{Key_{vdist}}{2} = -2\,m$

$$E_{h8U1.OT} := \begin{cases} E_{h8U1a.OT} & \text{if } Key_{vdist} < 0 \\ \Sigma H_{SoilresistU1} - H_{h6U1} - H_{h6aU1} & \text{otherwise} \end{cases} = 1126.112 \cdot kN$$

$$\Sigma M_{SoilresistU1.OT} := \begin{cases} E_{h8U1a.OT} \cdot E_{h8U1a.loc.OT} & \text{if } Key_{vdist} < 0 \\ \Sigma M_{HorizSoilResistU1} - H_{h6U1} \cdot H_{h6locU1} - H_{h6aU1} \cdot H_{h6alocU1} & \text{otherwise} \end{cases} = -2252.224 \cdot kN \cdot m$$

Sum of Moment about Point O:

$$\Sigma M_{LateraldriveU1.OT} := E_{s1U1.OT} \cdot E_{s1locU1.OT} + E_{h1U1.OT} \cdot E_{h1locU1.OT} + E_{h2U1.OT} \cdot E_{h2locU1.OT} \dots + E_{h2aU1.OT} \cdot E_{h2alocU1.OT} + H_{h2U1} \cdot H_{h2locU1} = -4508.5 \cdot kN \cdot m$$

$$\Sigma M_{LateralresistU1.OT} := \Sigma M_{waterresistU1.OT} + \Sigma M_{SoilresistU1.OT} = -2800.9 \cdot kN \cdot m$$

Total moment:

$$\Sigma M_{U1.OT} := \Sigma M_{conc} + \Sigma M_{VertSoilWaterResistU1} + \Sigma M_{UpliftU1.OT} + \Sigma M_{LateraldriveU1.OT} + \Sigma M_{LateralresistU1.OT} = 13628.1 \cdot kN \cdot m$$

Total Vertical Force: $\Sigma V_{U1.OT} := \Sigma V_{conc} + \Sigma V_{SoilWaterU1} + \Sigma V_{UpliftU1.OT} = 2628.1 \cdot kN$

Distance X_R: EM 1110-2-2502 Eq.4-1 $X_{R.U1} := \dfrac{\Sigma M_{U1.OT}}{\Sigma V_{U1.OT}} = 5.186\,m$

Overturning Resultant Ratio $Ratio_{U1.OT} := \dfrac{X_{R.U1}}{b} = 0.4$

$$Ratio_{U1.OT.check} := \begin{cases} \text{"OKAY "} & \text{if } Ratio_{U1.OT} > X_{R.reqU1} \\ \text{"Revise Structure""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

CHECK FOUNDATION ECCENTRICITY (HORIZONTAL PLANE):

Eccentricity (horizontal plan): $ex_{U1.OT} := \dfrac{b}{2} - \dfrac{\Sigma M_{U1.OT}}{\Sigma V_{U1.OT}} = 1.31\,m$ $Kern_{OT} := \dfrac{b}{6} = 2.167\,m$

Eccentricity Check: $$e_{check.U1.OT} := \begin{cases} \text{"Okay"} & \text{if } ex_{U1} \le Kern_{OT} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"Okay"}$$

LOAD CASE U1

CHECK FOUNDATION BEARING CAPACITY (HORIZONTAL PLANE):

Base Section Modulus: $S_{b.OT} := \frac{1}{6}\left(B \cdot b^2\right) = 28.17\ m^3$

Bearing Pressure Under Toe:

$$\sigma_{ToeU1.OT} := \begin{cases} \left(\frac{\Sigma V_{U1.OT}}{b \cdot B} + \frac{\Sigma V_{U1.OT} \cdot ex_{U1.OT}}{S_{b.OT}}\right) & \text{if } \frac{\Sigma V_{U1.OT}}{b \cdot B} \geq \frac{\Sigma V_{U1.OT} \cdot ex_{U1.OT}}{S_{b.OT}} \\ \frac{2 \cdot \Sigma V_{U1.OT}}{B \cdot 3\left(\frac{b}{2} - ex_{U1.OT}\right)} & \text{otherwise} \end{cases} = 324.8 \cdot kPa$$

Required Factor of Safety for Sliding: $FS_{sliding.reqUN1} := 1.3$ (Without Cohesion)

Allowable rock bearing pressure: $\sigma_{allowUN1} := 1470kPa$ (Section 5.2, Design Criteria EM 1110-2-2100 Section 3-10)

Overturning Required Resultant Ratio: $X_{R.reqUN1} := 0.333$ (EM 1110-2-2502, Figure 4-4)

Required Factor of Safety for Floatation $FS_{req.UN1.flt} := 1.3$

SOIL HEIGHTS and Water Levels:

LOAD CASE UN1

Heel Conditions:

Groundwater Elevation at Heel: $GWL_{UN1} := 1210.0m$

Distance from Finish Grade to Groundwater at Heel: $h_{1UN1} := \left[T_w - GWL_{UN1} + \left(L_{cd} + t_{wb} - t_{wt}\right) \cdot \tan(\beta)\right] = 9.00\ m$

Distance from Water Surface to Bottom of Footing at Heel: $h_{2UN1} := GWL_{UN1} - Bot_{ftg} + Key_{h.d} = 9.00\ m$

Toe Conditions:

Water Surface Elevation at Toe: $WSEL_{UN1} := 1207.5m$

Water Surface Elevation at Toe for Uplift: $UWSEL_{UN1} := 1207.5 \cdot m$

Finish Grade at Toe providing lateral resistance: $FG_{toeUN1} := 1207.5 \cdot m$

Soil Depth Above top of footing: $h_{3aUN1} := FG_{toeUN1} - Top_{ftg} = 0.5\ m$

$$h_{3UN1} := \begin{vmatrix} h_{3aUN1} & \text{if } FG_{toeUN1} - Top_{ftg} \geq 0 \\ 0 & \text{otherwise} \end{vmatrix} = 0.5$$

Resisting Fill at Toe: $h_{4UN1} := FG_{toeUN1} - Bot_{ftg} + Key_{t.d} = 2.50\ m$

Distance from Water Level to Top of Footing: $h_{5UN1} := WSEL_{UN1} - Top_{ftg} = 0.50\ m$

Distance from Water Surface to Bottom of Toe Key: $h_{6UN1} := WSEL_{UN1} - Bot_{ftg} + Key_{t.d} = 2.50\ m$

Soil Depth Above WSEL: $h_{7aUN1} := FG_{toeUN1} - WSEL_{UN1} = 0\ m$

$$h_{7UN1} := \begin{vmatrix} h_{7aUN1} & \text{if } FG_{toeUN1} - WSEL_{UN1} \geq 0 \\ 0 & \text{otherwise} \end{vmatrix} = 0$$

Soil Depth Below WSEL:

$$h_{8UN1} := \begin{vmatrix} WSEL_{UN1} - Bot_{ftg} + Key_{t.d} & \text{if } FG_{toeUN1} - WSEL_{UN1} \geq 0 \\ h_{4UN1} & \text{otherwise} \end{vmatrix} = 2.5$$

For Line of Creep Method: $L_{ho.UN1} := \sqrt{b^2 + \left(Key_{h.d} - Key_{t.d}\right)^2} = 13.601\ m$

Head Loss from Point g:

$\Delta h_{g.hj.UN1} := h_{2UN1} = 9\ m$ (to point h & j)

$\Delta h_{g.km.UN1} := GWL_{UN1} - Bot_{ftg} = 5\ m$ (to point k & m)

$\Delta h_{g.no.UN1} := GWL_{UN1} - Bot_{ftg} + Key_{t.d} = 5\ m$ (to point n & o)

$\Delta h_{g.p.UN1} := GWL_{UN1} - FG_{toeUN1} = 2.5\ m$ (to point p*)

$\Delta h_{g.r.UN1} := GWL_{UN1} - UWSEL_{UN1} = 2.5\ m$ (to point r)

Surcharge

Surcharge on Heel: $S1_{UN1} := 15.0 \dfrac{kN}{m^2}$

* same as point "r" in this case

Calculate Soil Lateral Pressure Coefficients:

For all load cases except seismic, soil loading to be based on At-Rest Condition.
Calculate at-rest pressure coefficient Ko based on Jaky's (1944) equation.

Soil At Rest Static Coefficient: $K_o := \frac{1 - \sin(\phi)}{1 + \sin(\beta)} = 0.546$ (Eq. 3-6, USACE EM 1110-2-2502)

Lateral - Driving Force

Static At-Rest:

Surcharge Load: $E_{s1UN1} := S1_{UN1} \cdot K_o \cdot \left(H_w + Key_{h.d}\right) \cdot B \cdot -1 = -147.423 \cdot kN$

Moment Arm (from Point O): $E_{s1locUN1} := \frac{H_w + Key_{h.d}}{2} + Key_{vdist} = 5.00\ m$

Moist Soil Load above GWL: $E_{h1UN1} := \frac{\gamma_m \cdot K_o \cdot h_{1UN1}^{\ 2}}{2} \cdot B \cdot -1 = -442.3 \cdot kN$

Moment Arm (from Point O): $E_{h1locUN1} := \frac{h_{1UN1}}{3} + h_{2UN1} + Key_{vdist} = 8.00\ m$

Saturated Soil Load below GWL:
(rectangular component)

$E_{h2UN1} := \left(\gamma_m \cdot K_o \cdot h_{1UN1}\right) \cdot \left(h_{2UN1}\right) \cdot B \cdot -1 = -884.5 \cdot kN$

Moment Arm (from Point O): $E_{h2locUN1} := \frac{h_{2UN1}}{2} + Key_{vdist} = 0.50\ m$

Saturated Soil Load below GWT:
(triangular L

$E_{h2aUN1} := \frac{\left(\gamma_{sat} - \gamma_w\right) \cdot K_o \cdot h_{2UN1}^{\ 2}}{2} \cdot B \cdot -1 = -269.8 \cdot kN$

Moment Arm (from Point O): $E_{h2alocUN1} := \frac{h_{2UN1}}{3} + Key_{vdist} = -1.00\ m$

Lateral Water Load:

Water Load GWL to Bottom of Keys:

$$H_{h2UN1} := \begin{cases} \frac{\gamma_w \cdot h_{2UN1}^{\ 2}}{2} \cdot B \cdot -1 & \text{if } Key_{vdist} < 0 \\ \frac{\gamma_w \cdot \left(h_{2UN1} + Key_{vdist}\right)^2}{2} \cdot B \cdot -1 & \text{otherwise} \end{cases} = -396.9 \cdot kN$$

Moment Arm (from Point O):

$$H_{h2locUN1} := \begin{cases} \frac{h_{2UN1}}{3} + Key_{vdist} & \text{if } Key_{vdist} < 0 \\ \frac{h_{2UN1} + Key_{vdist}}{3} & \text{otherwise} \end{cases} = -1.00 \cdot m$$

$$\Sigma H_{SoildriveUN1} := E_{s1UN1} + E_{h1UN1} + E_{h2UN1} + E_{h2aUN1} + H_{h2UN1} = -2140.9 \cdot kN$$

$$\Sigma M_{LateralSoildriveUN1} := E_{s1UN1} \cdot E_{s1locUN1} + E_{h1UN1} \cdot E_{h1locUN1} + E_{h2UN1} \cdot E_{h2locUN1} \cdots + E_{h2aUN1} \cdot E_{h2alocUN1} + H_{h2UN1} \cdot H_{h2locUN1} = -4050.8\ m \cdot kN$$

Lateral - Resisting Force

LOAD CASE UN1

Lateral Water Load:

Water Load WSEL to Bot. of Toe Key: $H_{h6UN1} := \dfrac{\gamma_w \cdot h_{6UN1}^{\ 2}}{2} \cdot B = 30.6 \cdot kN$

Moment Arm (from Point O): $H_{h6locUN1} := \dfrac{h_{6UN1}}{3} = 0.83\ m$

Water Load between Keys (if any) $H_{h6aUN1} := \begin{cases} \dfrac{\left(h_{6UN1} + h_{2UN1}\right) \cdot -Key_{vdist}}{2} \cdot \gamma_w \cdot B & \text{if } Key_{vdist} < 0 \\ 0 & \text{otherwise} \end{cases} = 225.4 \cdot kN$

Moment Arm (from Point O): $H_{h6alocUN1} := \begin{cases} \dfrac{Key_{vdist} \cdot \left(2 \cdot h_{2UN1} + h_{6UN1}\right)}{3\left(h_{2UN1} + h_{6UN1}\right)} & \text{if } Key_{vdist} < 0 \\ 0 & \text{otherwise} \end{cases} = -2.38 \cdot m$

Lateral Soil Load:

Moist Soil Load above WSEL: $E_{h7UN1} := \dfrac{\gamma_m \cdot K_o \cdot h_{7UN1}^{\ 2}}{2} \cdot B = 0.0 \cdot kN$

Moment Arm (from bot. of toe key): $E_{h7locUN1} := h_{6UN1} + \dfrac{h_{7UN1}}{3} + Key_{vdist} = -1.50\ m$

Saturated Soil Load below WSEL:
(rectangular component) $E_{h8UN1} := \left(\gamma_m \cdot K_o \cdot h_{7UN1}\right) \cdot h_{8UN1} \cdot B = 0.0 \cdot kN$

Moment Arm (from bot. of toe key): $E_{h8locUN1} := \dfrac{h_{8UN1}}{2} = 1.25\ m$

Saturated Soil Load below WSEL:
(triangular component) $E_{h8aUN1} := \dfrac{\left[\left(\gamma_{sat} - \gamma_w\right) \cdot K_o\right] \cdot h_{8UN1}^{\ 2}}{2} \cdot B = 20.8 \cdot kN$

Moment Arm (from bot. of footing): $E_{h8alocUN1} := \dfrac{h_{8UN1}}{3} = 0.83\ m$

$\Sigma H_{SoilresistUN1} := H_{h6UN1} + H_{h6aUN1} + E_{h7UN1} + E_{h8UN1} + E_{h8aUN1} = 276.8 \cdot kN$

$$\Sigma M_{HorizSoilResistUN1} := H_{h6UN1} \cdot H_{h6locUN1} + H_{h6aUN1} \cdot H_{h6alocUN1} + E_{h7UN1} \cdot E_{h7locUN1} \cdots + E_{h8UN1} \cdot E_{h8locUN1} + E_{h8aUN1} \cdot E_{h8alocUN1} = -492.9\ m \cdot kN$$

Vertical Force:

UPLIFT: Linear distribution from water at heel to water at toe:

$$\Sigma V_{UplliftUN1} := \left[\left(UWSEL_{UN1} - Bot_{ftg} + Key_{t.d}\right) + h_{2UN1}\right] \cdot \frac{b}{2} \cdot \gamma_w \cdot B \cdot -1 = -732.55 \cdot kN$$

Moment Arm (from Point O): $V_{UpliftUN1aloc} := \dfrac{b \cdot \left[2 \cdot h_{2UN1} + \left(UWSEL_{UN1} - Bot_{ftg} + Key_{t.d}\right)\right]}{3\left[h_{2UN1} + \left(UWSEL_{UN1} - Bot_{ftg} + Key_{t.d}\right)\right]} = 7.725\ m$

$$\Sigma M_{UpliftUN1} := \Sigma V_{UplliftUN1} \cdot V_{UpliftUN1aloc} = -5658.683 \cdot kN \cdot m$$

Weight of soil and water over toe:

Water Above the Top of Footing: $W_{H1UN1} := \gamma_w \cdot h_{5UN1} \cdot L_{ab} \cdot B = 17.15 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E1locUN1} := \frac{L_{ab}}{2} = 1.75\ m$

Soil above top of footing: $W_{E6UN1} := \gamma_b \cdot h_{3UN1} \cdot L_{ab} \cdot B = 21.4 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E6locUN1} := \frac{L_{ab}}{2} = 1.75\ m$

Vertical Load Due to Surcharge: $S_{UN1} := S1_{UN1} \cdot L_{cd} \cdot B = 120.855 \cdot kN$ $\quad S_{UN1loc} := b - \frac{L_{cd}}{2} = 8.97\ m$

Weight of soil and water over heel:

Moist Soil for sloped grade above top of wall:

Length of sloped portion of soil above top of wall: $L_{E3UN1} := \left(L_{cd} + t_{wb} - t_{wt}\right) = 9.00\ m$

Height of sloped soil above top of wall over heel: $h_{E3locUN1} := \left(L_{E3UN1}\right) \cdot \tan(\beta) = 0.00\ m$

Weight of sloped soil above top of wall: $W_{E3UN1} := \frac{\gamma_m}{2} \cdot h_{E3locUN1} \cdot L_{E3UN1} \cdot B = 0.0 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E3locUN1} := L_{ab} + t_{wt} + \frac{2}{3} \cdot L_{E3UN1} = 10.00\ m$

Moist soil from top of wall to groundwater level:

Height of soil from top of wall and top of GWL: $h_{1UN1} = 9.00\ m$

Length from edge of wall at GWL to edge of heel: $L_{E4UN1} := L_{E3UN1} - \left(h_{1UN1} \cdot S_{batter}\right) = 8.29\ m$

Weight of soil over heel from top of wall to GWL: $W_{E4UN1} := \gamma_m \cdot h_{1UN1} \cdot \frac{\left(L_{E3UN1} + L_{E4UN1}\right)}{2} \cdot B = 1556.3 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E4locUN1} := b - \frac{L_{E3UN1}^2 + L_{E3UN1} \cdot L_{E4UN1} + L_{E4UN1}^2}{3\left(L_{E3UN1} + L_{E4UN1}\right)} = 8.67\ m$

Saturated soil from groundwater to top of footing:

Height of soil from GWL to top of heel: $h_{E4UN1} := h_{2UN1} - t_{ftg} - Key_{h.d} = 3.00\ m$

Weight of soil over heel from GWL to top of heel: $W_{E5UN1} := \left(\gamma_{sat}\right) \cdot h_{E4UN1} \cdot \frac{\left(L_{E4UN1} + L_{cd}\right)}{2} \cdot B = 539.5 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E5locUN1} := b - \frac{L_{E4UN1}^2 + L_{E4UN1} \cdot L_{cd} + L_{cd}^2}{3\left(L_{E4UN1} + L_{cd}\right)} = 8.91\ m$

$$\Sigma V_{SoilWaterUN1} := W_{H1UN1} + W_{E6UN1} + W_{E3UN1} + W_{E4UN1} + W_{E5UN1} + S_{UN1} = 2255.2 \cdot kN$$

$$\Sigma M_{VertSoilWaterResistUN1} := W_{H1UN1} \cdot W_{E1locUN1} + W_{E6UN1} \cdot W_{E6locUN1} \cdots + W_{E3UN1} \cdot W_{E3locUN1} + W_{E4UN1} \cdot W_{E4locUN1} + W_{E5UN1} \cdot W_{E5locUN1} + S_{UN1} \cdot S_{UN1loc} = 19460.6\ m \cdot kN$$

CHECK OVERTURNING

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stablity of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1

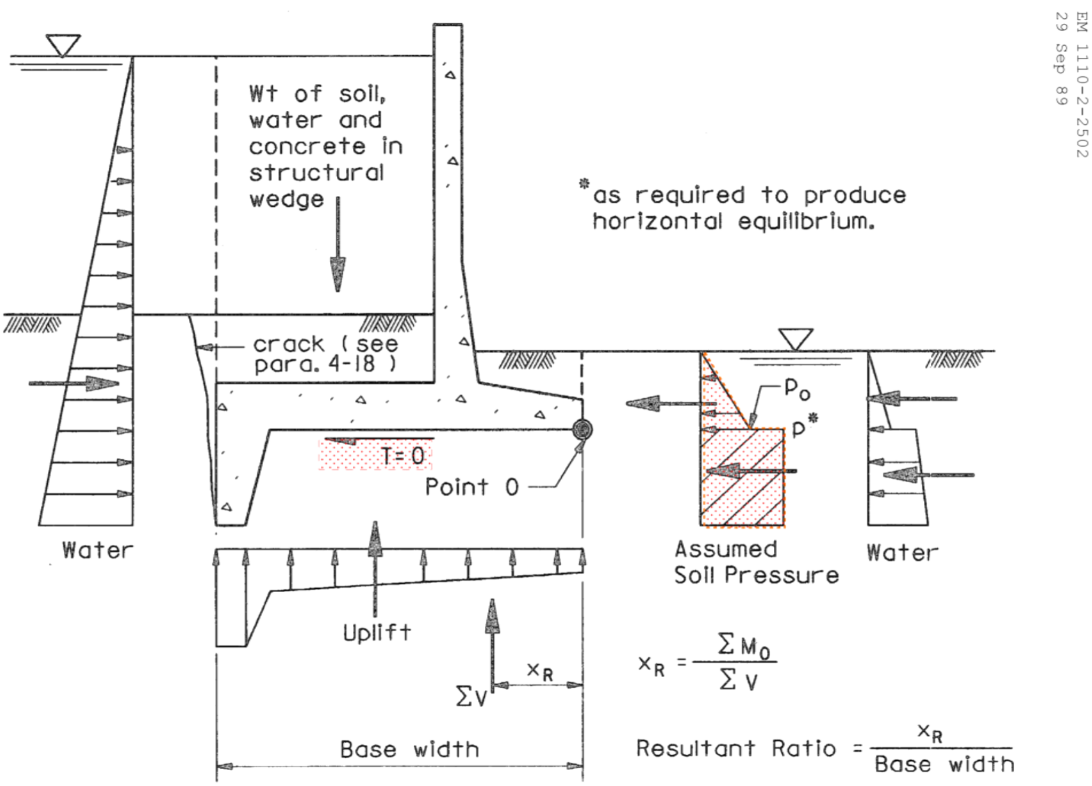

Figure 4-5. Forces for overturning analysis for wall with horizontal base and key

Modify Uplift for Overturning Analysis: **LOAD CASE UN1**

(Uplift is calculated along the concrete/rock contact using the Line of Creep method)

Water Pressure at h: $u_{h.UN1} := \Delta h_{g.hj.UN1} \cdot \gamma_w = 88.20 \cdot kPa$

Water Pressure at o: $u_{o.UN1} := \left(\Delta h_{g.no.UN1} - \frac{\Delta h_{g.r.UN1} \cdot L_{ho.UN1}}{L_{ho.UN1}}\right) \cdot \gamma_w = 24.5 \cdot kPa$

Head loss between point h and o: $\Delta h_{ho.UN1} := \Delta h_{g.r.UN1} \cdot \frac{L_{ho.UN1}}{L_{ho.UN1}} = 2.5\,m$

Length of concrete base (h -> o): $L_{baseho.UN1} := Key_{h.w} + Key_{h.d} + Key_{hdist} + Key_{t.d} + Key_{t.w} = 17\,m$

Head loss along h -> j: $\Delta h_{hj.UN1} := \Delta h_{ho.UN1} \cdot \frac{Key_{h.w}}{L_{baseho.UN1}} = 0.147\,m$

Water Pressure at j: $u_{j.UN1} := \left(\Delta h_{g.hj.UN1} - \Delta h_{hj.UN1}\right) \cdot \gamma_w = 86.76 \cdot kPa$

Head loss along h -> k: $\Delta h_{hjk.UN1} := \Delta h_{ho.UN1} \cdot \left(\frac{Key_{h.w} + Key_{h.d}}{L_{baseho.UN1}}\right) = 0.735\,m$

Water Pressure at k: $u_{k.UN1} := \left(\Delta h_{g.km.UN1} - \Delta h_{hjk.UN1}\right) \cdot \gamma_w = 41.79 \cdot kPa$

Head loss along h -> m: $\Delta h_{hjkm.UN1} := \Delta h_{ho.UN1} \cdot \left(\frac{Key_{h.w} + Key_{h.d} + Key_{hdist}}{L_{baseho.UN1}}\right) = 2.5\,m$

Water Pressure at m: $u_{m.UN1} := \left(\Delta h_{g.km.UN1} - \Delta h_{hjkm.UN1}\right) \cdot \gamma_w = 24.50 \cdot kPa$

Head loss along h -> n: $\Delta h_{hjkmn.UN1} := \Delta h_{ho.UN1} \cdot \left(\frac{Key_{h.w} + Key_{h.d} + Key_{hdist} + Key_{t.d}}{L_{baseho.UN1}}\right) = 2.5\,m$

Water Pressure at n: $u_{n.UN1} := \left(\Delta h_{g.no.UN1} - \Delta h_{hjkmn.UN1}\right) \cdot \gamma_w = 24.50 \cdot kPa$

Uplift under key at heel: $V_{ulkeyhUN1.OT} := \frac{\left(u_{h.UN1} + u_{j.UN1}\right) \cdot Key_{h.w}}{2} \cdot B \cdot -1 = -87.479 \cdot kN$

Moment Arm (from Point O): $V_{ulkeyhUN1loc.OT} := b - \frac{Key_{h.w} \cdot \left(2 \cdot u_{j.UN1} + u_{h.UN1}\right)}{3 \cdot \left(u_{j.UN1} + u_{h.UN1}\right)} = 12.501\,m$

Uplift under base: $V_{ulbaseUN1.OT} := \frac{\left(u_{k.UN1} + u_{m.UN1}\right) \cdot Key_{hdist}}{2} \cdot B \cdot -1 = -397.765 \cdot kN$

Moment Arm (from Point O): $V_{ulbaseUN1loc.OT} := b - Key_{h.w} - \frac{Key_{hdist} \cdot \left(2 \cdot u_{m.UN1} + u_{k.UN1}\right)}{3 \cdot \left(u_{m.UN1} + u_{k.UN1}\right)} = 6.522\,m$

Uplift under key at toe: $V_{ulkeytUN1.OT} := \frac{\left(u_{n.UN1} + u_{o.UN1}\right) \cdot Key_{t.w}}{2} \cdot B \cdot -1 = 0 \cdot kN$

Moment Arm (from Point O): $V_{ulkeytUN1loc.OT} := \frac{Key_{t.w} \cdot \left(2 \cdot u_{n.UN1} + u_{o.UN1}\right)}{3 \cdot \left(u_{n.UN1} + u_{o.UN1}\right)} = 0$

$$\Sigma V_{UpliftUN1.OT} := V_{ulkeyhUN1.OT} + V_{ulbaseUN1.OT} + V_{ulkeytUN1.OT} = -485 \cdot kN$$

$$U_{UN1.loc.OT} := \frac{V_{ulkeyhUN1.OT} \cdot V_{ulkeyhUN1loc.OT} + V_{ulbaseUN1.OT} \cdot V_{ulbaseUN1loc.OT} + V_{ulkeytUN1.OT} \cdot V_{ulkeytUN1loc.OT}}{\Sigma V_{UpliftUN1.OT}} = 7.60\,m$$

$$\Sigma M_{UpliftUN1.OT} := \Sigma V_{UpliftUN1.OT} \cdot U_{UN1.loc.OT} = -3687.7 \cdot kN \cdot m$$

Modify Lateral Water Pressure (Resisting) for Overturning Analysis:

(Resisting water pressure is calculated using the Line of Creep method)

Water Load at Key (heel):
$$H_{h2UN1.OT} := \frac{u_{k.UN1} + u_{j.UN1}}{2} \cdot Key_{h.d} B = 257.1 \cdot kN$$

Moment Arm (from Point O):
$$H_{h2locUN1.OT} := \frac{Key_{h.d} \cdot (2 \cdot u_{k.UN1} + u_{j.UN1})}{3(u_{k.UN1} + u_{j.UN1})} + Key_{vdist} = -2.23\ m$$

Water Load at Key (toe):
$$H_{h6UN1.OT} := \frac{u_{o.UN1} \cdot (UWSEL_{UN1} - Bot_{ftg} + Key_{t.d})}{2} \cdot B = 31 \cdot kN$$

Moment Arm (from Point O):
$$H_{h6locUN1.OT} := \frac{UWSEL_{UN1} - Bot_{ftg} + Key_{t.d}}{3} = 0.83\ m$$

$$\Sigma H_{waterresistUN1.OT} := H_{h2UN1.OT} + H_{h6UN1.OT} = 287.73 \cdot kN$$

$$H_{waterresistlocUN1.OT} := \frac{H_{h2UN1.OT} \cdot H_{h2locUN1.OT} + H_{h6UN1.OT} \cdot H_{h6locUN1.OT}}{\Sigma H_{waterresistUN1.OT}} = -1.907\ m$$

$$\Sigma M_{waterresistUN1.OT} := \Sigma H_{waterresistUN1.OT} \cdot H_{waterresistlocUN1.OT} = -548.64 \cdot kN \cdot m$$

Modify Lateral Soil Loads for Overturning Analysis:

(Lateral soil loads are calculated down to Point O instead of bottom of shear key)

Driving Soil Load (Headwater Side):

Surcharge Load:
$$E_{s1UN1.OT} := S1_{UN1} \cdot K_o \cdot (H_w + Key_{h.d} + Key_{vdist}) \cdot B \cdot -1 = -114.662 \cdot kN$$

Moment Arm (from Point O):
$$E_{s1locUN1.OT} := \frac{H_w + Key_{h.d} + Key_{vdist}}{2} = 7.00\ m$$

Moist Soil Load above GWL:
$$E_{h1UN1.OT} := \frac{\gamma_m \cdot K_o \cdot h_{1UN1}^{\ 2}}{2} B \cdot -1 = -442.3 \cdot kN$$

Moment Arm (from Point O):
$$E_{h1locUN1.OT} := \frac{h_{1UN1}}{3} + h_{2UN1} + Key_{vdist} = 8.00\ m$$

Saturated Soil Load below GWL: (rectangular component)
$$E_{h2UN1.OT} := (\gamma_m \cdot K_o \cdot h_{1UN1}) \cdot (h_{2UN1} + Key_{vdist}) \cdot B \cdot -1 = -491.4 \cdot kN$$

Moment Arm (from Point O):
$$E_{h2locUN1.OT} := \frac{h_{2UN1} + Key_{vdist}}{2} = 2.50\ m$$

Saturated Soil Load below GWL: (triangular component)
$$E_{h2aUN1.OT} := \frac{(\gamma_{sat} - \gamma_w) \cdot K_o \cdot (h_{2UN1} + Key_{vdist})^2}{2} \cdot B \cdot -1 = -83.3 \cdot kN$$

Moment Arm (from Point O):
$$E_{h2alocUN1.OT} := \frac{h_{2UN1} + Key_{vdist}}{3} = 1.67\ m$$

Resisting Soil Load (Tailwater Side):

(Determine resisting soil load based on depth variation between the keys (ie. Key_{vdist}). In case where key at heel is deeper than key at toe (ie. $Key_{vdist} < 0$), resisting soil load (p*) is assumed to produce horizontal equilibrium as per Figure 4-5 above. Resisting soil load (p_o) is neglected.)

Total Driving Force: $\Sigma H_{SoildriveUN1.OT} := E_{s1UN1.OT} + E_{h1UN1.OT} + E_{h2UN1.OT} + E_{h2aUN1.OT} + H_{h2UN1} = -1528.5 \cdot kN$

Total Resisting Force: $\Sigma H_{waterresistUN1.OT} = 287.7 \cdot kN$

Assumed Soil Load p*: $E_{h8UN1a.OT} := \left(\Sigma H_{SoildriveUN1.OT} + \Sigma H_{waterresistU1.OT}\right) \cdot -1 = 1240.774 \cdot kN$

Moment Arm (from Point O): $E_{h8UN1a.loc.OT} := \dfrac{Key_{vdist}}{2} = -2\, m$

$$E_{h8UN1.OT} := \begin{cases} E_{h8UN1a.OT} & \text{if } Key_{vdist} < 0 \\ \Sigma H_{SoilresistUN1} - H_{h6UN1} - H_{h6aUN1} & \text{otherwise} \end{cases} = 1240.774 \cdot kN$$

$$\Sigma M_{SoilresistUN1.OT} := \begin{cases} E_{h8UN1a.OT} \cdot E_{h8UN1a.loc.OT} & \text{if } Key_{vdist} < 0 \\ \Sigma M_{HorizSoilResistUN1} - H_{h6UN1} \cdot H_{h6locUN1} - H_{h6aUN1} \cdot H_{h6alocUN1} & \text{otherwise} \end{cases} = -2481.548 \cdot kN \cdot m$$

Sum of Moment about Point O:

$$\Sigma M_{LateraldriveUN1.OT} := E_{s1UN1.OT} \cdot E_{s1locUN1.OT} + E_{h1UN1.OT} \cdot E_{h1locUN1.OT} + E_{h2UN1.OT} \cdot E_{h2locUN1.OT} \dots + E_{h2aUN1.OT} \cdot E_{h2alocUN1.OT} + H_{h2UN1} \cdot H_{h2locUN1} = -5311.2 \cdot kN \cdot m$$

$$\Sigma M_{LateralresistUN1.OT} := \Sigma M_{waterresistUN1.OT} + \Sigma M_{SoilresistUN1.OT} = -3030.2 \cdot kN \cdot m$$

Total moment:

$$\Sigma M_{UN1.OT} := \Sigma M_{conc} + \Sigma M_{VertSoilWaterResistUN1} + \Sigma M_{UpliftUN1.OT} + \Sigma M_{LateraldriveUN1.OT} + \Sigma M_{LateralresistUN1.OT} = 13680.4 \cdot kN \cdot m$$

Total Vertical Force: $\Sigma V_{UN1.OT} := \Sigma V_{conc} + \Sigma V_{SoilWaterUN1} + \Sigma V_{UplliftUN1.OT} = 2749.0 \cdot kN$

Distance X_R: EM 1110-2-2502 Eq.4-1 $X_{R.UN1} := \dfrac{\Sigma M_{UN1.OT}}{\Sigma V_{UN1.OT}} = 4.977\, m$

Overturning Resultant Ratio $Ratio_{UN1.OT} := \dfrac{X_{R.UN1}}{b} = 0.38$

$$Ratio_{UN1.OT.check} := \begin{cases} \text{"OKAY "} & \text{if } Ratio_{UN1.OT} > X_{R.reqUN1} \\ \text{"Revise Structure""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

CHECK FOUNDATION ECCENTRICITY (HORIZONTAL PLANE):

Eccentricity (horizontal plan): $ex_{UN1.OT} := \dfrac{b}{2} - \dfrac{\Sigma M_{UN1.OT}}{\Sigma V_{UN1.OT}} = 1.52\, m$ $Kern_{OT} = 2.167\, m$

Eccentricity Check: $$e_{check.UN1.OT} := \begin{cases} \text{"Okay"} & \text{if } ex_{UN1} \le Kern_{OT} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"Okay"}$$

LOAD CASE UN1

CHECK FOUNDATION BEARING CAPACITY (HORIZONTAL PLANE):

Base Section Modulus: $S_{b.OT} = 28.17\,m^3$

Bearing Pressure Under Toe:

$$\sigma_{ToeUN1.OT} := \begin{cases} \left(\dfrac{\Sigma V_{UN1.OT}}{b \cdot B} + \dfrac{\Sigma V_{UN1.OT} \cdot ex_{UN1.OT}}{S_{b.OT}}\right) & \text{if } \dfrac{\Sigma V_{UN1.OT}}{b \cdot B} \geq \dfrac{\Sigma V_{UN1.OT} \cdot ex_{UN1.OT}}{S_{b.OT}} \\ \dfrac{2 \cdot \Sigma V_{UN1.OT}}{B \cdot 3\left(\dfrac{b}{2} - ex_{UN1.OT}\right)} & \text{otherwise} \end{cases} = 360.1 \cdot kPa$$

$$Bearing_{ChecktoeUN1.OT} := \begin{cases} \text{"OKAY "} & \text{if } \sigma_{ToeUN1.OT} < \sigma_{allowUN1} \\ \text{"NG - for reference only""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

Bearing Pressure Under Heel:

$$\sigma_{HeelUN1.OT} := \begin{cases} \left(\dfrac{\Sigma V_{UN1.OT}}{b \cdot B} - \dfrac{\Sigma V_{UN1.OT} \cdot ex_{UN1.OT}}{S_{b.OT}}\right) & \text{if } \dfrac{\Sigma V_{UN1.OT}}{b \cdot B} \geq \dfrac{\Sigma V_{UN1.OT} \cdot ex_{UN1.OT}}{S_{b.OT}} \\ 0 & \text{otherwise} \end{cases} = 62.8 \cdot kPa$$

$$Bearing_{CheckheelUN1.OT} := \left(\begin{cases} \text{"OKAY "} & \text{if } \sigma_{HeelUN1.OT} < \sigma_{allowUN1} \wedge \sigma_{HeelUN1.OT} > 0 \\ \text{"NG - for reference only""} & \text{otherwise} \end{cases}\right) = \text{"OKAY "}$$

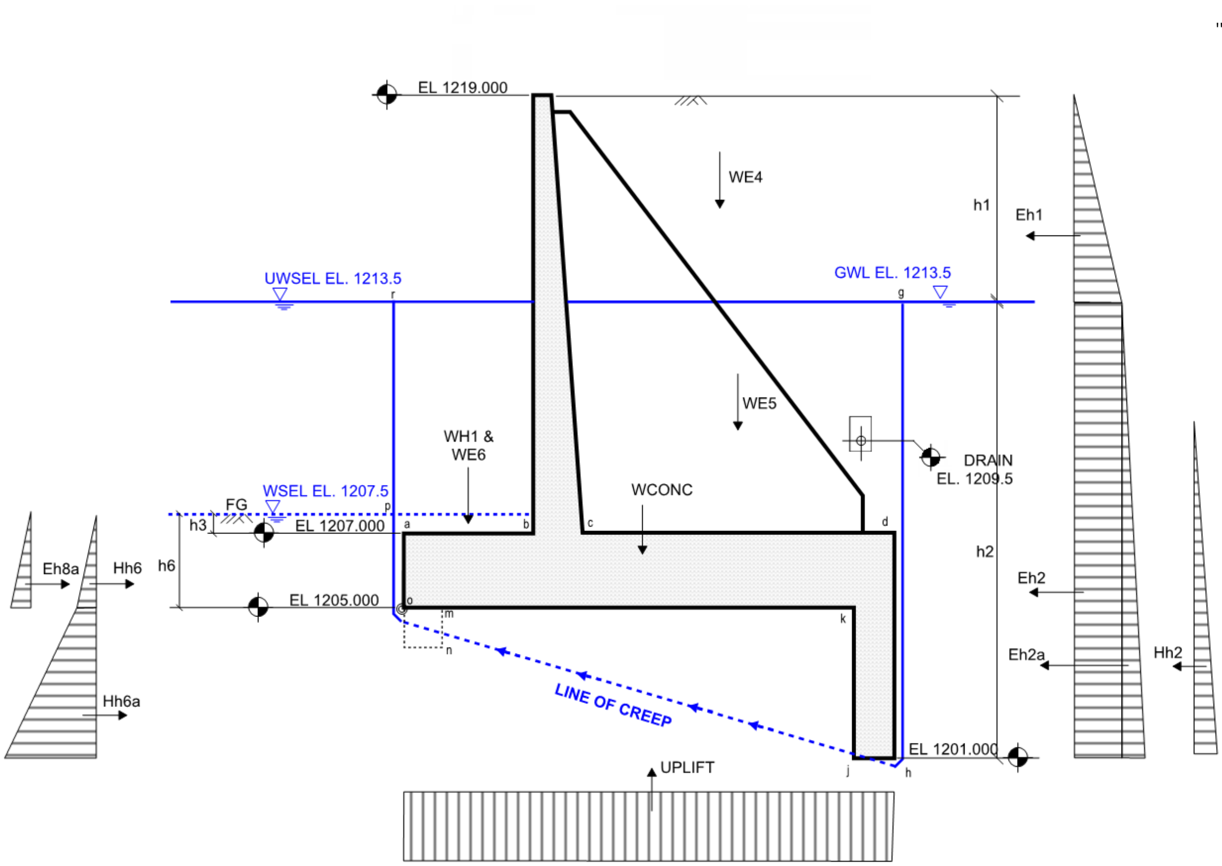
LOAD CASE UN2 - INEFFECTIVE DRAIN



UN2 DESIGN CASE

LOAD CASE UN2 ACCEPTANCE PARAMETERS

FS sliding:

Unusual (UN) 1.3 (without cohesion) (Table 3-3, USACE EM 1110-2-2100)

Resultant Location:

Unsual (UN) Inside middle third ~100% base in compression

Required Factor of Safety for Sliding: $FS_{sliding.reqUN2} := 1.3$ (Without Cohesion)

Allowable rock bearing pressure: $\sigma_{allowUN2} := 1470kPa$ (Section 5.2, Design Criteria EM 1110-2-2100 Section 3-10)

Overturning Required Resultant Ratio: $X_{R.reqUN2} := 0.333$ (EM 1110-2-2502, Figure 4-4)

Required Factor of Safety for Floatation $FS_{req.UN2.flt} := 1.3$

SOIL HEIGHTS and Water Levels:

LOAD CASE UN2

Heel Conditions:

Groundwater Elevation at Heel: $GWL_{UN2} := 1213.5m$

Distance from Finish Grade to Groundwater at Heel: $h_{1UN2} := \left[T_w - GWL_{UN2} + \left(L_{cd} + t_{wb} - t_{wt}\right) \cdot \tan(\beta)\right] = 5.50\ m$

Distance from Water Surface to Bottom of Footing at Heel: $h_{2UN2} := GWL_{UN2} - Bot_{ftg} + Key_{h.d} = 12.50\ m$

Toe Conditions:

Water Surface Elevation at Toe: $WSEL_{UN2} := 1207.5m$

Water Surface Elevation at Toe for Uplift: $UWSEL_{UN2} := 1213.5 \cdot m$

Finish Grade at Toe providing lateral resistance: $FG_{toeUN2} := 1207.5 \cdot m$

Soil Depth Above top of footing: $h_{3aUN2} := FG_{toeUN2} - Top_{ftg} = 0.5\ m$

$$h_{3UN2} := \begin{cases} h_{3aUN2} & \text{if } FG_{toeUN2} - Top_{ftg} \ge 0 \\ 0 & \text{otherwise} \end{cases} = 0.5$$

Resisting Fill at Toe: $h_{4UN2} := FG_{toeUN2} - Bot_{ftg} + Key_{t.d} = 2.50\ m$

Distance from Water Level to Top of Footing: $h_{5UN2} := WSEL_{UN2} - Top_{ftg} = 0.50\ m$

Distance from Water Surface to Bottom of Toe Key: $h_{6UN2} := WSEL_{UN2} - Bot_{ftg} + Key_{t.d} = 2.50\ m$

Soil Depth Above WSEL: $h_{7aUN2} := FG_{toeUN2} - WSEL_{UN2} = 0\ m$

$$h_{7UN2} := \begin{cases} h_{7aUN2} & \text{if } FG_{toeUN2} - WSEL_{UN2} \ge 0 \\ 0 & \text{otherwise} \end{cases} = 0$$

Soil Depth Below WSEL:

$$h_{8UN2} := \begin{cases} WSEL_{UN2} - Bot_{ftg} + Key_{t.d} & \text{if } FG_{toeUN2} - WSEL_{UN2} \ge 0 \\ h_{4UN2} & \text{otherwise} \end{cases} = 2.5$$

For Line of Creep Method: $L_{ho.UN2} := \sqrt{b^2 + \left(Key_{h.d} - Key_{t.d}\right)^2} = 13.601\ m$

Head Loss from Point g:

$\Delta h_{g.hj.UN2} := h_{2UN2} = 12.5\ m$ (to point h & j)

$\Delta h_{g.km.UN2} := GWL_{UN2} - Bot_{ftg} = 8.5\ m$ (to point k & m)

$\Delta h_{g.no.UN2} := GWL_{UN2} - Bot_{ftg} + Key_{t.d} = 8.5\ m$ (to point n & o)

$\Delta h_{g.p.UN2} := GWL_{UN2} - FG_{toeUN2} = 6\ m$ (to point p)

$\Delta h_{g.r.UN2} := GWL_{UN2} - UWSEL_{UN2} = 0\ m$ (to point r)

Surcharge

Surcharge on Heel: $S1_{UN2} := 0.0 \dfrac{kN}{m^2}$

Calculate Soil Lateral Pressure Coefficients:

For all load cases except seismic, soil loading to be based on At-Rest Condition.
Calculate at-rest pressure coefficient Ko based on Jaky's (1944) equation.

Soil At Rest Static Coefficient: $K_o := \frac{1 - \sin(\phi)}{1 + \sin(\beta)} = 0.546$ (Eq. 3-6, USACE EM 1110-2-2502)

Lateral - Driving Force

Static At-Rest:

Surcharge Load: $E_{s1UN2} := S1_{UN2} \cdot K_o \cdot \left(H_w + Key_{h.d}\right) \cdot B \cdot -1 = 0 \cdot kN$

Moment Arm (from Point O): $E_{s1locUN2} := \frac{H_w + Key_{h.d}}{2} + Key_{vdist} = 5.00\ m$

Moist Soil Load above GWL: $E_{h1UN2} := \frac{\gamma_m \cdot K_o \cdot h_{1UN2}^2}{2} B \cdot -1 = -165.2 \cdot kN$

Moment Arm (from Point O): $E_{h1locUN2} := \frac{h_{1UN2}}{3} + h_{2UN2} + Key_{vdist} = 10.33\ m$

Saturated Soil Load below GWL: (rectangular component) $E_{h2UN2} := \left(\gamma_m \cdot K_o \cdot h_{1UN2}\right) \cdot h_{2UN2} \cdot B \cdot -1 = -750.8 \cdot kN$

Moment Arm (from Point O): $E_{h2locUN2} := \frac{h_{2UN2}}{2} + Key_{vdist} = 2.25\ m$

Saturated Soil Load below GWL: (triangular component) $E_{h2aUN2} := \frac{\left(\gamma_{sat} - \gamma_w\right) \cdot K_o \cdot h_{2UN2}^2}{2} \cdot B \cdot -1 = -520.4 \cdot kN$

Moment Arm (from Point O): $E_{h2alocUN2} := \frac{h_{2UN2}}{3} + Key_{vdist} = 0.17\ m$

Lateral Water Load:

Water Load GWL to Bottom of Keys:

$$H_{h2UN2} := \begin{cases} \frac{\gamma_w \cdot h_{2UN2}^2}{2} \cdot B \cdot -1 & \text{if } Key_{vdist} < 0 \\ \frac{\gamma_w \cdot \left(h_{2UN2} + Key_{vdist}\right)^2}{2} \cdot B \cdot -1 & \text{otherwise} \end{cases} = -765.6 \cdot kN$$

Moment Arm (from Point O):

$$H_{h2locUN2} := \begin{cases} \frac{h_{2UN2}}{3} + Key_{vdist} & \text{if } Key_{vdist} < 0 \\ \frac{h_{2UN2} + Key_{vdist}}{3} & \text{otherwise} \end{cases} = 0.17 \cdot m$$

$$\Sigma H_{SoildriveUN2} := E_{s1UN2} + E_{h1UN2} + E_{h2UN2} + E_{h2aUN2} + H_{h2UN2} = -2202.0 \cdot kN$$

$$\Sigma M_{LateralSoildriveUN2} := E_{s1UN2} \cdot E_{s1locUN2} + E_{h1UN2} \cdot E_{h1locUN2} + E_{h2UN2} \cdot E_{h2locUN2} \cdots + E_{h2aUN2} \cdot E_{h2alocUN2} + H_{h2UN2} \cdot H_{h2locUN2} = -3610.3\ m \cdot kN$$

Lateral - Resisting Force

LOAD CASE UN2

Lateral Water Load:

Water Load WSEL to Bot. of Toe Key:
$$H_{h6UN2} := \frac{\gamma_w \cdot h_{6UN2}^2}{2} \cdot B = 30.6 \cdot kN$$

Moment Arm (from Point O):
$$H_{h6locUN2} := \frac{h_{6UN2}}{3} = 0.83\ m$$

Water Load between Keys (if any)
$$H_{h6aUN2} := \begin{cases} \frac{\left(h_{6UN2} + h_{2UN2}\right) \cdot -Key_{vdist}}{2} \cdot \gamma_w \cdot B & \text{if } Key_{vdist} < 0 \\ 0 & \text{otherwise} \end{cases} = 294.0 \cdot kN$$

Moment Arm (from Point O):
$$H_{h6alocUN2} := \begin{cases} \frac{Key_{vdist} \cdot \left(2 \cdot h_{2UN2} + h_{6UN2}\right)}{3\left(h_{2UN2} + h_{6UN2}\right)} & \text{if } Key_{vdist} < 0 \\ 0 & \text{otherwise} \end{cases} = -2.44 \cdot m$$

Lateral Soil Load:

Moist Soil Load above WSEL:
$$E_{h7UN2} := \frac{\gamma_m \cdot K_o \cdot h_{7UN2}^2}{2} B = 0.0 \cdot kN$$

Moment Arm (from bot. of toe key):
$$E_{h7locUN2} := h_{6UN2} + \frac{h_{7UN2}}{3} + Key_{vdist} = -1.50\ m$$

Saturated Soil Load below WSEL:
(rectangular component)
$$E_{h8UN2} := \left(\gamma_m \cdot K_o \cdot h_{7UN2}\right) \cdot h_{8UN2} \cdot B = 0.0 \cdot kN$$

Moment Arm (from bot. of toe key):
$$E_{h8locUN2} := \frac{h_{8UN2}}{2} = 1.25\ m$$

Saturated Soil Load below WSEL:
(triangular component)
$$E_{h8aUN2} := \frac{\left[\left(\gamma_{sat} - \gamma_w\right) \cdot K_o\right] \cdot h_{8UN2}^2}{2} \cdot B = 20.8 \cdot kN$$

Moment Arm (from bot. of footing):
$$E_{h8alocUN2} := \frac{h_{8UN2}}{3} = 0.83\ m$$

$$\Sigma H_{SoilresistUN2} := H_{h6UN2} + H_{h6aUN2} + E_{h7UN2} + E_{h8UN2} + E_{h8aUN2} = 345.4 \cdot kN$$

$$\Sigma M_{HorizSoilResistUN2} := H_{h6UN2} \cdot H_{h6locUN2} + H_{h6aUN2} \cdot H_{h6alocUN2} + E_{h7UN2} \cdot E_{h7locUN2} \cdots + E_{h8UN2} \cdot E_{h8locUN2} + E_{h8aUN2} \cdot E_{h8alocUN2} = -675.8\ m \cdot kN$$

Vertical Force:

UPLIFT: Linear distribution from water at heel to water at toe:

$$\Sigma V_{UpliftUN2} := \left[\left(UWSEL_{UN2} - Bot_{ftg} + Key_{t.d}\right) + h_{2UN2}\right] \cdot \frac{b}{2} \cdot \gamma_w \cdot B \cdot -1 = -1337.7 \cdot kN$$

Moment Arm (from Point O):
$$V_{UpliftUN2aloc} := \frac{b \cdot \left[2 \cdot h_{2UN2} + \left(UWSEL_{UN2} - Bot_{ftg} + Key_{t.d}\right)\right]}{3\left[h_{2UN2} + \left(UWSEL_{UN2} - Bot_{ftg} + Key_{t.d}\right)\right]} = 6.913\ m$$

$$\Sigma M_{UpliftUN2} := \Sigma V_{UpliftUN2} \cdot V_{UpliftUN2aloc} = -9247.117 \cdot kN \cdot m$$

Weight of soil and water over toe:

Water Above the Top of Footing: $W_{H1UN2} := \gamma_w \cdot h_{5UN2} \cdot L_{ab} \cdot B = 17.15 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E1locUN2} := \frac{L_{ab}}{2} = 1.75\ m$

Soil above top of footing: $W_{E6UN2} := \gamma_b \cdot h_{3UN2} \cdot L_{ab} \cdot B = 21.4 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E6locUN2} := \frac{L_{ab}}{2} = 1.75\ m$

Vertical Load Due to Surcharge: $S_{UN2} := S1_{UN2} \cdot L_{cd} \cdot B = 0 \cdot kN$ $\quad S_{UN2loc} := b - \frac{L_{cd}}{2} = 8.97\ m$

Weight of soil and water over heel:

Moist Soil for sloped grade above top of wall:

Length of sloped portion of soil above top of wall: $L_{E3UN2} := \left(L_{cd} + t_{wb} - t_{wt}\right) = 9.00\ m$

Height of sloped soil above top of wall over heel: $h_{E3locUN2} := \left(L_{E3UN2}\right) \cdot \tan(\beta) = 0.00\ m$

Weight of sloped soil above top of wall: $W_{E3UN2} := \frac{\gamma_m}{2} \cdot h_{E3locUN2} \cdot L_{E3UN2} \cdot B = 0.0 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E3locUN2} := L_{ab} + t_{wt} + \frac{2}{3} \cdot L_{E3UN2} = 10.00\ m$

Moist soil from top of wall to groundwater level:

Height of soil from top of wall and top of GWL: $h_{1UN2} = 5.50\ m$

Length from edge of wall at GWL to edge of heel: $L_{E4UN2} := L_{E3UN2} - \left(h_{1UN2} \cdot S_{batter}\right) = 8.57\ m$

Weight of soil over heel from top of wall to GWL: $W_{E4UN2} := \gamma_m \cdot h_{1UN2} \cdot \frac{\left(L_{E3UN2} + L_{E4UN2}\right)}{2} \cdot B = 966.2 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E4locUN2} := b - \frac{L_{E3UN2}^2 + L_{E3UN2} \cdot L_{E4UN2} + L_{E4UN2}^2}{3\left(L_{E3UN2} + L_{E4UN2}\right)} = 8.61\ m$

Saturated soil from groundwater to top of footing:

Height of soil from GWL to top of heel: $h_{E4UN2} := h_{2UN2} - t_{ftg} - Key_{h.d} = 6.50\ m$

Weight of soil over heel from GWL to top of heel: $W_{E5UN2} := \left(\gamma_{sat}\right) \cdot h_{E4UN2} \cdot \frac{\left(L_{E4UN2} + L_{cd}\right)}{2} \cdot B = 1188.7 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E5locUN2} := b - \frac{L_{E4UN2}^2 + L_{E4UN2} \cdot L_{cd} + L_{cd}^2}{3\left(L_{E4UN2} + L_{cd}\right)} = 8.84\ m$

$$\Sigma V_{SoilWaterUN2} := W_{H1UN2} + W_{E6UN2} + W_{E3UN2} + W_{E4UN2} + W_{E5UN2} + S_{UN2} = 2193.4 \cdot kN$$

$$\Sigma M_{VertSoilWaterResistUN2} := W_{H1UN2} \cdot W_{E1locUN2} + W_{E6UN2} \cdot W_{E6locUN2} \cdots + W_{E3UN2} \cdot W_{E3locUN2} + W_{E4UN2} \cdot W_{E4locUN2} + W_{E5UN2} \cdot W_{E5locUN2} + S_{UN2} \cdot S_{UN2loc} = 18894.7\ m \cdot kN$$

Ihrnf=Inclined Resisting Normal Force
Ihdf=Inclined Driving Force

$\alpha s = 0.322$ as degrees= $\alpha s \cdot \left(\frac{180}{\pi}\right) = 18.43$

(With properly engineered reinforced concrete Key, horizontal sliding plane thru Toe is protected, critical sliding plane is relocated to the INCLINED SLIDING PLANE FROM HEEL KEY To TOE, Bedrock Mass above this examing plane is mobilized by reinforced concrete key and combined into Structural Wedge.)

Resolve ΣV_{UN2} & ΣH_{UN2}

$$\Sigma V_{InclinedUN2} := \cos(\alpha s) \cdot \left(\left|\Sigma V_{UN2} + V_{rocksection}\right|\right) + \sin(\alpha s) \cdot \left|\Sigma H_{UN2}\right| = 2910.5 \cdot kN$$

$$\Sigma H_{InclinedUN2} := \cos(\alpha s) \cdot \left|\Sigma H_{UN2}\right| - \sin(\alpha s) \cdot \left(\left|\Sigma V_{UN2} + V_{rocksection}\right|\right) = 986.8 \cdot kN$$

Safety Factor for Sliding Inclined Failure Plane

$$FS_{InclinedISlidingUN2} := \frac{\Sigma V_{InclinedUN2} \cdot \tan(\phi_r)}{\Sigma H_{InclinedUN2}} = 1.31$$

$$FS_{Sliding.check2.UN2} := \begin{cases} \text{"OKAY"} & \text{if } FS_{InclinedISlidingUN2} > FS_{sliding.reqUN2} \\ \text{"NG - Revise Structure"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

CHECK FOUNDATION ECCENTRICITY:

Summation of the resisting moments about the toe:

$$\Sigma M_{resUN2} := \Sigma M_{conc} + \Sigma M_{VertSoilWaterResistUN2} + \Sigma M_{HorizSoilResistUN2} + \Sigma M_{rocksection} = 29383 \cdot kN \cdot m$$

Summation of the overturning moments about the toe:

$$\Sigma M_{oUN2} := \Sigma M_{LateralSoildriveUN2} + \Sigma M_{UpliftUN2} = -12857 \cdot kN \cdot m$$

Total moment: $\Sigma M_{UN2} := \Sigma M_{resUN2} + \Sigma M_{oUN2} = 16525.6\, m \cdot kN$

Normal force to base: $\Sigma V_{InclinedUN2} = 2910.5 \cdot kN$

Inclined Sliding Plane Length: $L_{incline} = 13.7 \cdot m$

Eccentricity (inclined plane): $ex_{UN2} := \frac{L_{incline}}{2} - \frac{\Sigma M_{UN2}}{\Sigma V_{InclinedUN2}} = 1.17\, m$ Kern = 2.284 m

Eccentricity Check: $e_{check.UN2} := \begin{cases} \text{"Okay"} & \text{if } ex_{UN2} \le Kern \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"Okay"}$

CHECK FOUNDATION BEARING CAPACITY:

Base Section Modulus: $S_b = 31.3\, m^3$

Bearing Pressure Under Toe:

$$\sigma_{ToeUN2} := \begin{cases} \left[\frac{\Sigma V_{InclinedUN2}}{L_{incline} \cdot B} + \frac{(\Sigma V_{InclinedUN2} \cdot ex_{UN2})}{S_b}\right] & \text{if } \frac{\Sigma V_{InclinedUN2}}{L_{incline} \cdot B} \ge \frac{\Sigma V_{InclinedUN2} \cdot ex_{UN2}}{S_b} \\ \frac{2 \cdot \Sigma V_{InclinedUN2}}{B \cdot 3\left(\frac{b}{2} - ex_{UN2}\right)} & \text{otherwise} \end{cases} = 321.5 \cdot kPa$$

$$Bearing_{ChecktoeUN2} := \begin{cases} \text{"OKAY"} & \text{if } \sigma_{ToeUN2} < \sigma_{allowUN2} \\ \text{"NG"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

Bearing Pressure Under Heel:

$$\sigma_{HeelUN2} := \begin{cases} \left[\frac{\Sigma V_{InclinedUN2}}{L_{incline} \cdot B} - \frac{(\Sigma V_{InclinedUN2} \cdot ex_{UN2})}{S_b}\right] & \text{if } \frac{\Sigma V_{InclinedUN2}}{L_{incline} \cdot B} \ge \frac{\Sigma V_{InclinedUN2} \cdot ex_{UN2}}{S_b} \\ 0 & \text{otherwise} \end{cases} = 103.2 \cdot kPa$$

$$Bearing_{CheckheelUN2} := \left(\begin{cases} \text{"OKAY"} & \text{if } \sigma_{HeelUN2} < \sigma_{allowUN2} \wedge \sigma_{HeelUN2} > 0 \\ \text{"NG - perform cracked base analysis"} & \text{otherwise} \end{cases}\right) = \text{"OKAY"}$$

CHECK FLOATATION:

Safety Factor for Floatation: $FS_{FloatationUN2} := \dfrac{\Sigma V_{conc} + \Sigma V_{SoilWaterUN2}}{\left|\Sigma V_{UpliftUN2}\right|} = 2.37$

$FS_{Floatation.UN2.check} := \begin{cases} \text{"OKAY "} & \text{if } FS_{FloatationUN2} > FS_{req.UN2.flt} \\ \text{"Revise Structure""} & \text{otherwise} \end{cases} = \text{"OKAY "}$

CHECK OVERTURNING

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stablity of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1

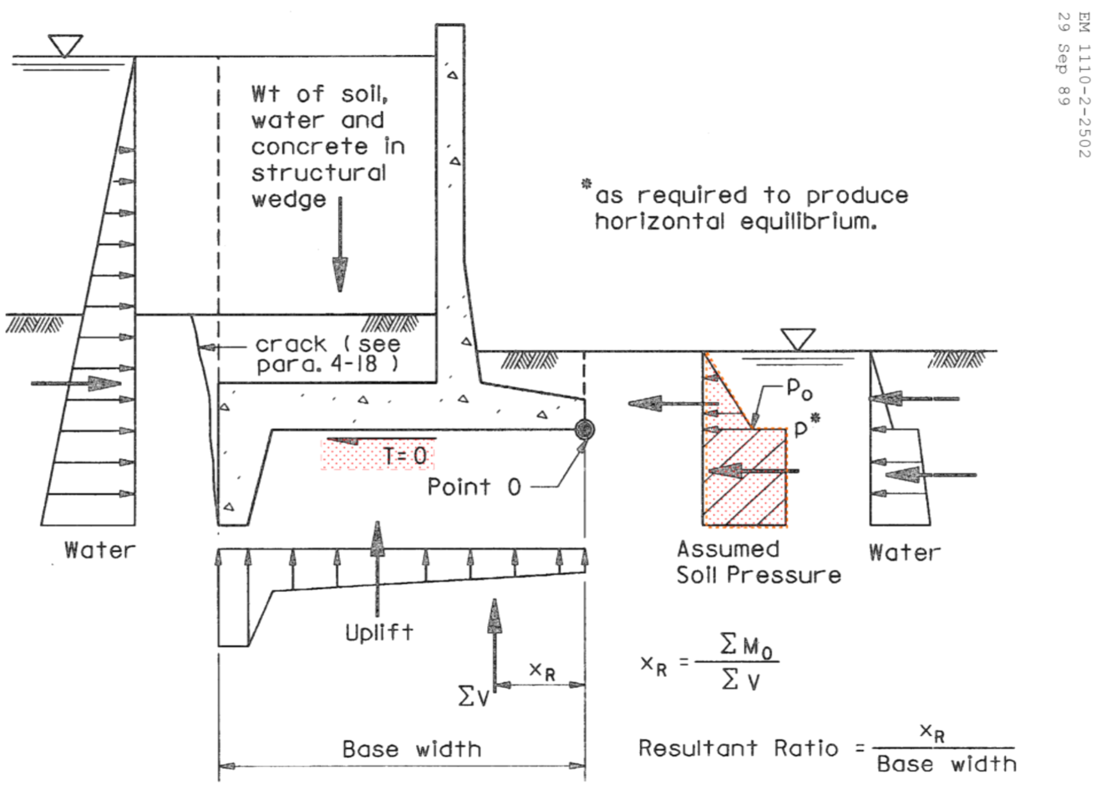

Figure 4-5. Forces for overturning analysis for wall with horizontal base and key

Modify Uplift for Overturning Analysis: **LOAD CASE UN2**

(Uplift is calculated along the concrete/rock contact using the Line of Creep method)

Water Pressure at h: $u_{h.UN2} := \Delta h_{g.hj.UN2} \cdot \gamma_w = 122.50 \cdot kPa$

Water Pressure at o: $u_{o.UN2} := \left(\Delta h_{g.no.UN2} - \frac{\Delta h_{g.r.UN2} \cdot L_{ho.UN2}}{L_{ho.UN2}}\right) \cdot \gamma_w = 83.3 \cdot kPa$

Head loss between point h and o: $\Delta h_{ho.UN2} := \Delta h_{g.r.UN2} \cdot \frac{L_{ho.UN2}}{L_{ho.UN2}} = 0\,m$

Length of concrete base (h -> o): $L_{baseho.UN2} := Key_{h.w} + Key_{h.d} + Key_{hdist} + Key_{t.d} + Key_{t.w} = 17\,m$

Head loss along h -> j: $\Delta h_{hj.UN2} := \Delta h_{ho.UN2} \cdot \frac{Key_{h.w}}{L_{baseho.UN2}} = 0\,m$

Water Pressure at j: $u_{j.UN2} := \left(\Delta h_{g.hj.UN2} - \Delta h_{hj.UN2}\right) \cdot \gamma_w = 122.50 \cdot kPa$

Head loss along h -> k: $\Delta h_{hjk.UN2} := \Delta h_{ho.UN2} \cdot \left(\frac{Key_{h.w} + Key_{h.d}}{L_{baseho.UN2}}\right) = 0\,m$

Water Pressure at k: $u_{k.UN2} := \left(\Delta h_{g.km.UN2} - \Delta h_{hjk.UN2}\right) \cdot \gamma_w = 83.30 \cdot kPa$

Head loss along h -> m: $\Delta h_{hjkm.UN2} := \Delta h_{ho.UN2} \cdot \left(\frac{Key_{h.w} + Key_{h.d} + Key_{hdist}}{L_{baseho.UN2}}\right) = 0\,m$

Water Pressure at m: $u_{m.UN2} := \left(\Delta h_{g.km.UN2} - \Delta h_{hjkm.UN2}\right) \cdot \gamma_w = 83.30 \cdot kPa$

Head loss along h -> n: $\Delta h_{hjkmn.UN2} := \Delta h_{ho.UN2} \cdot \left(\frac{Key_{h.w} + Key_{h.d} + Key_{hdist} + Key_{t.d}}{L_{baseho.UN2}}\right) = 0\,m$

Water Pressure at n: $u_{n.UN2} := \left(\Delta h_{g.no.UN2} - \Delta h_{hjkmn.UN2}\right) \cdot \gamma_w = 83.30 \cdot kPa$

Uplift under key at heel: $V_{ulkeyhUN2.OT} := \frac{\left(u_{h.UN2} + u_{j.UN2}\right) \cdot Key_{h.w}}{2} \cdot B \cdot -1 = -122.5 \cdot kN$

Moment Arm (from Point O): $V_{ulkeyhUN2loc.OT} := b - \frac{Key_{h.w} \cdot \left(2 \cdot u_{j.UN2} + u_{h.UN2}\right)}{3 \cdot \left(u_{j.UN2} + u_{h.UN2}\right)} = 12.5\,m$

Uplift under base: $V_{ulbaseUN2.OT} := \frac{\left(u_{k.UN2} + u_{m.UN2}\right) \cdot Key_{hdist}}{2} \cdot B \cdot -1 = -999.6 \cdot kN$

Moment Arm (from Point O): $V_{ulbaseUN2loc.OT} := b - Key_{h.w} - \frac{Key_{hdist} \cdot \left(2 \cdot u_{m.UN2} + u_{k.UN2}\right)}{3 \cdot \left(u_{m.UN2} + u_{k.UN2}\right)} = 6\,m$

Uplift under key at toe: $V_{ulkeytUN2.OT} := \frac{\left(u_{n.UN2} + u_{o.UN2}\right) \cdot Key_{t.w}}{2} \cdot B \cdot -1 = 0 \cdot kN$

Moment Arm (from Point O): $V_{ulkeytUN2loc.OT} := \frac{Key_{t.w} \cdot \left(2 \cdot u_{n.UN2} + u_{o.UN2}\right)}{3 \cdot \left(u_{n.UN2} + u_{o.UN2}\right)} = 0$

$$\Sigma V_{UpliftUN2.OT} := V_{ulkeyhUN2.OT} + V_{ulbaseUN2.OT} + V_{ulkeytUN2.OT} = -1122 \cdot kN$$

$$U_{UN2.loc.OT} := \frac{V_{ulkeyhUN2.OT} \cdot V_{ulkeyhUN2loc.OT} + V_{ulbaseUN2.OT} \cdot V_{ulbaseUN2loc.OT} + V_{ulkeytUN2.OT} \cdot V_{ulkeytUN2loc.OT}}{\Sigma V_{UpliftUN2.OT}} = 6.71\,m$$

$$\Sigma M_{UpliftUN2.OT} := \Sigma V_{UpliftUN2.OT} \cdot U_{UN2.loc.OT} = -7528.9 \cdot kN \cdot m$$

Modify Lateral Water Pressure (Resisting) for Overturning Analysis:

(Resisting water pressure is calculated using the Line of Creep method)

Water Load at Key (heel):
$$H_{h2UN2.OT} := \frac{u_{k.UN2} + u_{j.UN2}}{2} \cdot Key_{h.d}\, B = 411.6 \cdot kN$$

Moment Arm (from Point O):
$$H_{h2locUN2.OT} := \frac{Key_{h.d} \cdot \left(2 \cdot u_{k.UN2} + u_{j.UN2}\right)}{3\left(u_{k.UN2} + u_{j.UN2}\right)} + Key_{vdist} = -2.13\ m$$

Water Load at Key (toe):
$$H_{h6UN2.OT} := \frac{u_{o.UN2} \cdot \left(UWSEL_{UN2} - Bot_{ftg} + Key_{t.d}\right)}{2} \cdot B = 354 \cdot kN$$

Moment Arm (from Point O):
$$H_{h6locUN2.OT} := \frac{UWSEL_{UN2} - Bot_{ftg} + Key_{t.d}}{3} = 2.83\ m$$

$$\Sigma H_{waterresistUN2.OT} := H_{h2UN2.OT} + H_{h6UN2.OT} = 765.63 \cdot kN$$

$$H_{waterresistlocUN2.OT} := \frac{H_{h2UN2.OT} \cdot H_{h2locUN2.OT} + H_{h6UN2.OT} \cdot H_{h6locUN2.OT}}{\Sigma H_{waterresistUN2.OT}} = 0.167\ m$$

$$\Sigma M_{waterresistUN2.OT} := \Sigma H_{waterresistUN2.OT} \cdot H_{waterresistlocUN2.OT} = 127.6 \cdot kN \cdot m$$

Modify Lateral Soil Loads for Overturning Analysis:

(Lateral soil loads are calculated down to Point O instead of bottom of shear key)

Driving Soil Load (Headwater Side):

Surcharge Load:
$$E_{s1UN2.OT} := S1_{UN2} \cdot K_o \cdot \left(H_w + Key_{h.d} + Key_{vdist}\right) \cdot B \cdot -1 = 0 \cdot kN$$

Moment Arm (from Point O):
$$E_{s1locUN2.OT} := \frac{H_w + Key_{h.d} + Key_{vdist}}{2} = 7.00\ m$$

Moist Soil Load above GWL:
$$E_{h1UN2.OT} := \frac{\gamma_m \cdot K_o \cdot h_{1UN2}^{\ 2}}{2} B \cdot -1 = -165.2 \cdot kN$$

Moment Arm (from Point O):
$$E_{h1locUN2.OT} := \frac{h_{1UN2}}{3} + h_{2UN2} + Key_{vdist} = 10.33\ m$$

Saturated Soil Load below GWL:
(rectangular component)
$$E_{h2UN2.OT} := \left(\gamma_m \cdot K_o \cdot h_{1UN2}\right) \cdot \left(h_{2UN2} + Key_{vdist}\right) \cdot B \cdot -1 = -510.5 \cdot kN$$

Moment Arm (from Point O):
$$E_{h2locUN2.OT} := \frac{h_{2UN2} + Key_{vdist}}{2} = 4.25\ m$$

Saturated Soil Load below GWL:
(triangular component)
$$E_{h2aUN2.OT} := \frac{\left(\gamma_{sat} - \gamma_w\right) \cdot K_o \cdot \left(h_{2UN2} + Key_{vdist}\right)^2}{2} \cdot B \cdot -1 = -240.6 \cdot kN$$

Moment Arm (from Point O):
$$E_{h2alocUN2.OT} := \frac{h_{2UN2} + Key_{vdist}}{3} = 2.83\ m$$

Resisting Soil Load (Tailwater Side):

(Determine resisting soil load based on depth variation between the keys (ie. Key_{vdist}). In case where key at heel is deeper than key at toe (ie. $Key_{vdist} < 0$), resisting soil load (p*) is assumed to produce horizontal equilibrium as per Figure 4-5 above. Resisting soil load (p_o) is neglected.)

Total Driving Force: $\Sigma H_{SoildriveUN2.OT} := E_{s1UN2.OT} + E_{h1UN2.OT} + E_{h2UN2.OT} + E_{h2aUN2.OT} + H_{h2UN2} = -1682.0 \cdot kN$

Total Resisting Force: $\Sigma H_{waterresistUN2.OT} = 765.6 \cdot kN$

Assumed Soil Load p*: $E_{h8UN2a.OT} := \left(\Sigma H_{SoildriveUN2.OT} + \Sigma H_{waterresistUN2.OT}\right) \cdot -1 = 916.327 \cdot kN$

Moment Arm (from Point O): $E_{h8UN2a.loc.OT} := \dfrac{Key_{vdist}}{2} = -2\,m$

$$E_{h8UN2.OT} := \begin{cases} E_{h8UN2a.OT} & \text{if } Key_{vdist} < 0 \\ \Sigma H_{SoilresistUN2} - H_{h6UN2} - H_{h6aUN2} & \text{otherwise} \end{cases} = 916.327 \cdot kN$$

$$\Sigma M_{SoilresistUN2.OT} := \begin{cases} E_{h8UN2a.OT} \cdot E_{h8UN2a.loc.OT} & \text{if } Key_{vdist} < 0 \\ \Sigma M_{HorizSoilResistUN2} - H_{h6UN2} \cdot H_{h6locUN2} - H_{h6aUN2} \cdot H_{h6alocUN2} & \text{otherwise} \end{cases} = -1832.654 \cdot kN \cdot m$$

Sum of Moment about Point O:

$$\Sigma M_{LateraldriveUN2.OT} := E_{s1UN2.OT} \cdot E_{s1locUN2.OT} + E_{h1UN2.OT} \cdot E_{h1locUN2.OT} + E_{h2UN2.OT} \cdot E_{h2locUN2.OT} \cdots + E_{h2aUN2.OT} \cdot E_{h2alocUN2.OT} + H_{h2UN2} \cdot H_{h2locUN2} = -4685.9 \cdot kN \cdot m$$

$$\Sigma M_{LateralresistUN2.OT} := \Sigma M_{waterresistUN2.OT} + \Sigma M_{SoilresistUN2.OT} = -1705.0 \cdot kN \cdot m$$

Total moment:

$$\Sigma M_{UN2.OT} := \Sigma M_{conc} + \Sigma M_{VertSoilWaterResistUN2} + \Sigma M_{UpliftUN2.OT} + \Sigma M_{LateraldriveUN2.OT} + \Sigma M_{LateralresistUN2.OT} = 11223.8 \cdot kN \cdot m$$

Total Vertical Force: $\Sigma V_{UN2.OT} := \Sigma V_{conc} + \Sigma V_{SoilWaterUN2} + \Sigma V_{UplliftUN2.OT} = 2050.3 \cdot kN$

Distance X_R: EM 1110-2-2502 Eq.4-1 $X_{R.UN2} := \dfrac{\Sigma M_{UN2.OT}}{\Sigma V_{UN2.OT}} = 5.474\,m$

Overturning Resultant Ratio $Ratio_{UN2.OT} := \dfrac{X_{R.UN2}}{b} = 0.42$

$$Ratio_{UN2.OT.check} := \begin{cases} \text{"OKAY "} & \text{if } Ratio_{UN2.OT} > X_{R.reqUN2} \\ \text{"Revise Structure""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

CHECK FOUNDATION ECCENTRICITY (HORIZONTAL PLANE):

Eccentricity (horizontal plan): $ex_{UN2.OT} := \dfrac{b}{2} - \dfrac{\Sigma M_{UN2.OT}}{\Sigma V_{UN2.OT}} = 1.03\,m$ $Kern_{OT} = 2.167\,m$

Eccentricity Check:

$$e_{check.UN2.OT} := \begin{cases} \text{"Okay"} & \text{if } ex_{UN2} \le Kern_{OT} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"Okay"}$$

LOAD CASE UN2

CHECK FOUNDATION BEARING CAPACITY (HORIZONTAL PLANE):

Base Section Modulus: $S_{b.OT} = 28.17\,m^3$

Bearing Pressure Under Toe:

$$\sigma_{ToeUN2.OT} := \begin{cases} \left(\dfrac{\Sigma V_{UN2.OT}}{b \cdot B} + \dfrac{\Sigma V_{UN2.OT} \cdot ex_{UN2.OT}}{S_{b.OT}}\right) & \text{if } \dfrac{\Sigma V_{UN2.OT}}{b \cdot B} \geq \dfrac{\Sigma V_{UN2.OT} \cdot ex_{UN2.OT}}{S_{b.OT}} \\ \dfrac{2 \cdot \Sigma V_{UN2.OT}}{B \cdot 3\left(\dfrac{b}{2} - ex_{UN2.OT}\right)} & \text{otherwise} \end{cases} = 232.4 \cdot kPa$$

$$Bearing_{ChecktoeUN2.OT} := \begin{cases} \text{"OKAY "} & \text{if } \sigma_{ToeUN2.OT} < \sigma_{allowUN2} \\ \text{"NG - for reference only""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

Bearing Pressure Under Heel:

$$\sigma_{HeelUN2.OT} := \begin{cases} \left(\dfrac{\Sigma V_{UN2.OT}}{b \cdot B} - \dfrac{\Sigma V_{UN2.OT} \cdot ex_{UN2.OT}}{S_{b.OT}}\right) & \text{if } \dfrac{\Sigma V_{UN2.OT}}{b \cdot B} \geq \dfrac{\Sigma V_{UN2.OT} \cdot ex_{UN2.OT}}{S_{b.OT}} \\ 0 & \text{otherwise} \end{cases} = 83.1 \cdot kPa$$

$$Bearing_{CheckheelUN2.OT} := \left(\begin{cases} \text{"OKAY "} & \text{if } \sigma_{HeelUN2.OT} < \sigma_{allowUN2} \wedge \sigma_{HeelUN2.OT} > 0 \\ \text{"NG - for reference only""} & \text{otherwise} \end{cases} \right) = \text{"OKAY "}$$

SUMMARY OF STABILITY ASSESSMENT:

LOAD CASE UN2

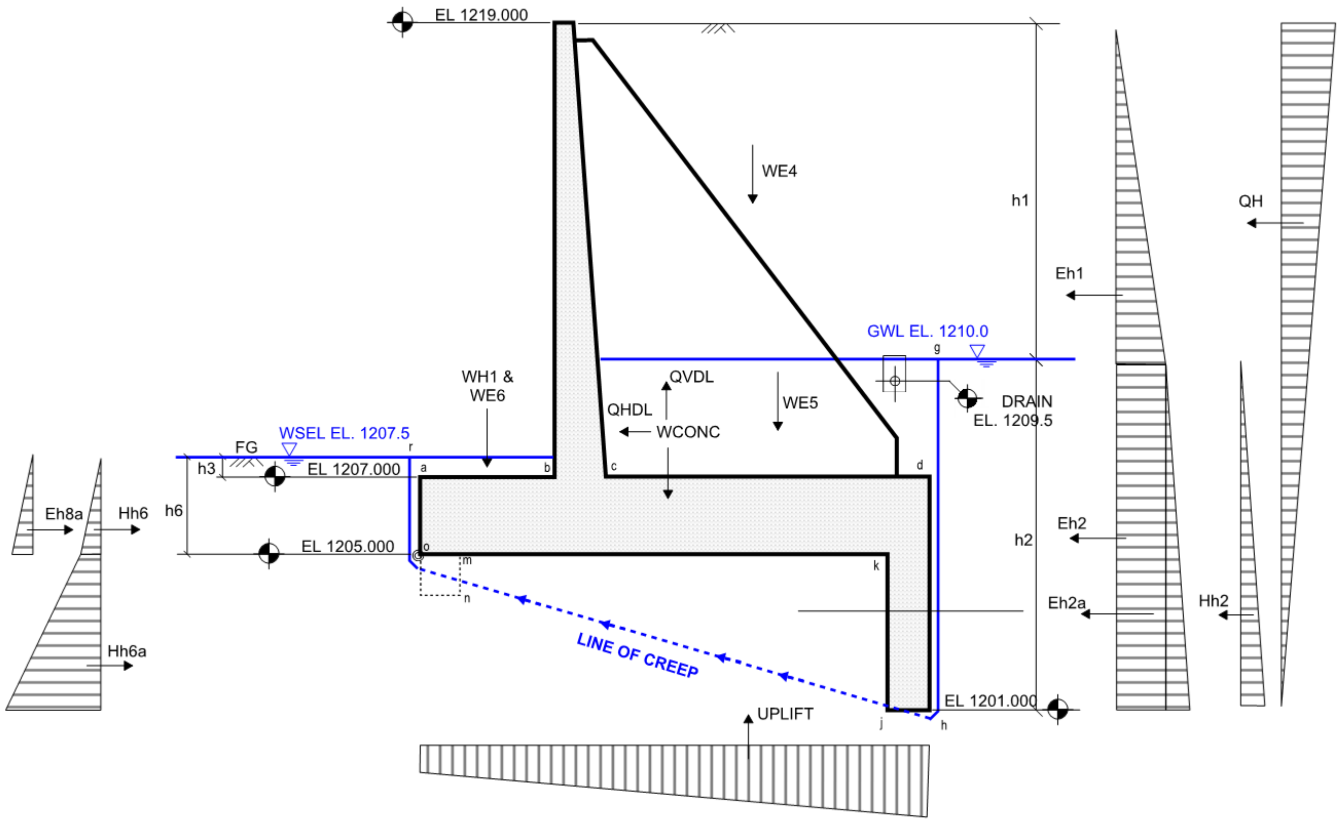
LOAD CASE E1 - SEISMIC LOADING



E1 DESIGN CASE

LOAD CASE E1 ACCEPTANCE PARAMETERS

FS sliding:

Extreme (E) loading)	1.0 (without cohesion, seismic	(Table 3-3, USACE EM 1110-2-2100)

Resultant Location:

Extremem (E) Inside middle half ~75% base in compression

Required Factor of Safety for Sliding: $FS_{sliding.reqE1} := 1.0$ (Without Cohesion)

Allowable rock bearing pressure: $\sigma_{allowE1} := 1740kPa$ (Section 5.2, Design Criteria EM 1110-2-2100 Section 3-10)

Overturning Required Resultant Ratio: $X_{R.reqE1} := 0.25$ (EM 1110-2-2502, Figure 4-4)

Required Factor of Safety for Floatation $FS_{req.E1.flt} := 1.1$

SOIL HEIGHTS and Water Levels:

LOAD CASE E1

Heel Conditions:

Groundwater Elevation at Heel: $GWL_{E1} := 1210.0m$

Distance from Finish Grade to Groundwater at Heel: $h_{1E1} := \left[T_w - GWL_{E1} + \left(L_{cd} + t_{wb} - t_{wt}\right)\cdot \tan(\beta)\right] = 9.00\ m$

Distance from Water Surface to Bottom of Footing at Heel: $h_{2E1} := GWL_{E1} - Bot_{ftg} + Key_{h.d} = 9.00\ m$

Toe Conditions:

Water Surface Elevation at Toe: $WSEL_{E1} := 1207.5m$

Water Surface Elevation at Toe for Uplift: $UWSEL_{E1} := 1207.5\cdot m$

Finish Grade at Toe providing lateral resistance: $FG_{toeE1} := 1207.5\cdot m$

Soil Depth Above top of footing: $h_{3aE1} := FG_{toeE1} - Top_{ftg} = 0.5\ m$

$$h_{3E1} := \begin{cases} h_{3aE1} & \text{if } FG_{toeE1} - Top_{ftg} \geq 0 \\ 0 & \text{otherwise} \end{cases} = 0.5$$

Resisting Fill at Toe: $h_{4E1} := FG_{toeE1} - Bot_{ftg} + Key_{t.d} = 2.50\ m$

Distance from Water Level to Top of Footing: $h_{5E1} := WSEL_{E1} - Top_{ftg} = 0.50\ m$

Distance from Water Surface to Bottom of Toe Key: $h_{6E1} := WSEL_{E1} - Bot_{ftg} + Key_{t.d} = 2.50\ m$

Soil Depth Above WSEL: $h_{7aE1} := FG_{toeE1} - WSEL_{E1} = 0\ m$

$$h_{7E1} := \begin{cases} h_{7aE1} & \text{if } FG_{toeE1} - WSEL_{E1} \geq 0 \\ 0 & \text{otherwise} \end{cases} = 0$$

Soil Depth Below WSEL:

$$h_{8E1} := \begin{cases} WSEL_{E1} - Bot_{ftg} + Key_{t.d} & \text{if } FG_{toeE1} - WSEL_{E1} \geq 0 \\ h_{4E1} & \text{otherwise} \end{cases} = 2.5$$

For Line of Creep Method: $L_{ho.E1} := \sqrt{b^2 + \left(Key_{h.d} - Key_{t.d}\right)^2} = 13.601\ m$

Head Loss from Point g:

$\Delta h_{g.hj.E1} := h_{2E1} = 9\ m$ (to point h & j)

$\Delta h_{g.km.E1} := GWL_{E1} - Bot_{ftg} = 5\ m$ (to point k & m)

$\Delta h_{g.no.E1} := GWL_{E1} - Bot_{ftg} + Key_{t.d} = 5\ m$ (to point n & o)

$\Delta h_{g.p.E1} := GWL_{E1} - FG_{toeE1} = 2.5\ m$ (to point p*)

$\Delta h_{g.r.E1} := GWL_{E1} - UWSEL_{E1} = 2.5\ m$ (to point r)

Surcharge

Surcharge on Heel: $S1_{E1} := 0.0\ \frac{kN}{m^2}$

* same as point "r" in this case

Calculate Soil Lateral Pressure Coefficients:

LOAD CASE E1

Calculate at-rest pressure coefficient K_o based on Jaky's (1944) equation.

Soil At Rest Static Coefficient:
(apply to resisting soil loads)

$$K_o := \frac{1 - \sin(\phi)}{1 + \sin(\beta)} = 0.546$$

(Eq. 3-6, USACE EM 1110-2-2502)

Calculate active pressure coefficient K_A based on Coulumb equations.

Determine Slope of Active Wedge: (cohesionless backfill with water table)

$$c_1 := 2 \cdot \tan(\phi) = 1.019 \qquad c_2 := 1 - \tan(\phi) \cdot \tan(\beta) - \frac{\tan(\beta)}{\tan(\phi)} = 1$$

(Eq. G-14 / G-15, USACE EM 1110-2-2100)

$$\alpha := \operatorname{atan}\left(\frac{c_1 + \sqrt{c_1^{\,2} + 4 \cdot c_2}}{2}\right) = 1.021 \qquad \alpha_{deg} := \alpha \cdot \frac{180}{\pi} = 58.5$$

degrees (Eq. G-13, USACE EM 1110-2-2100)

Soil Active Coefficient above GWL:

$$K_{Aagwt} := \left(\frac{1 - \tan(\phi) \cdot \cot(\alpha)}{1 + \tan(\phi) \cdot \tan(\alpha)}\right) \cdot \left(\frac{\tan(\alpha)}{\tan(\alpha) - \tan(\beta)}\right) = 0.376$$

Soil Active Coefficient below GWL:

$$K_{Abgwt} := \frac{1 - \tan(\phi) \cdot \cot(\alpha)}{1 + \tan(\phi) \cdot \tan(\alpha)} \cdot \left[1 + \left(\frac{\tan(\alpha)}{\tan(\alpha) - \tan(\beta)} - 1\right) \cdot \left(\frac{\gamma_m}{\gamma_{sat} - \gamma_w}\right)\right] = 0.376$$

Lateral - Driving Force

(Eq. G-29, USACE EM 1110-2-2100)

Static Copmonent : Active Pressure:

Surcharge Load:

$$E_{s1E1} := S1_{E1} \cdot K_{Aagwt} \cdot \left(H_w + Key_{h.d}\right) \cdot B \cdot -1 = 0 \cdot kN$$

Moment Arm (from Point O):

$$E_{s1locE1} := \frac{H_w + Key_{h.d}}{2} + Key_{vdist} = 5.00\ m$$

Moist Soil Load above GWL:

$$E_{h1E1} := \frac{\gamma_m \cdot K_{Aagwt} \cdot h_{1E1}^{\,2}}{2} \cdot B \cdot -1 = -304.2 \cdot kN$$

Moment Arm (from Point O):

$$E_{h1locE1} := \frac{h_{1E1}}{3} + h_{2E1} + Key_{vdist} = 8.00\ m$$

Saturated Soil Load below GWL:
(rectangular component)

$$E_{h2E1} := \left(\gamma_m \cdot K_{Abgwt} \cdot h_{1E1}\right) \cdot h_{2E1} \cdot B \cdot -1 = -608.4 \cdot kN$$

Moment Arm (from Point O):

$$E_{h2locE1} := \frac{h_{2E1}}{2} + Key_{vdist} = 0.50\ m$$

Saturated Soil Load below GWL:
(triangular component)

$$E_{h2aE1} := \frac{\left(\gamma_{sat} - \gamma_w\right) \cdot K_{Abgwt} \cdot h_{2E1}^{\,2}}{2} \cdot B \cdot -1 = -185.5 \cdot kN$$

Moment Arm (from Point O):

$$E_{h2alocE1} := \frac{h_{2E1}}{3} + Key_{vdist} = -1.00\ m$$

Lateral Water Load:

Water Load GWL to Bottom of Keys:

$$H_{h2E1} := \begin{cases} \dfrac{\gamma_w \cdot h_{2E1}^{\,2}}{2} \cdot B \cdot -1 & \text{if } Key_{vdist} < 0 \\ \dfrac{\gamma_w \cdot \left(h_{2E1} + Key_{vdist}\right)^2}{2} \cdot B \cdot -1 & \text{otherwise} \end{cases} = -396.9 \cdot kN$$

Moment Arm (from Point O):

$$H_{h2locE1} := \begin{cases} \dfrac{h_{2E1}}{3} + Key_{vdist} & \text{if } Key_{vdist} < 0 \\ \dfrac{h_{2E1} + Key_{vdist}}{3} & \text{otherwise} \end{cases} = -1.00 \cdot m$$

$$\Sigma H_{SoildriveE1} := E_{s1E1} + E_{h1E1} + E_{h2E1} + E_{h2aE1} + H_{h2E1} = -1495.0 \cdot kN$$

$$\Sigma M_{LateralSoildriveE1} := E_{s1E1} \cdot E_{s1locE1} + E_{h1E1} \cdot E_{h1locE1} + E_{h2E1} \cdot E_{h2locE1} \ldots + E_{h2aE1} \cdot E_{h2alocE1} + H_{h2E1} \cdot H_{h2locE1} = -2155.1\ m \cdot kN$$

Lateral - Resisting Force

LOAD CASE E1

Note: **Due to the relatively shallow depth of resisting soil/rock, a conservative apporach using at-rest coefficient in lieu of a passive wedge is used to calculate resisting forces.**

Lateral Water Load:

Water Load WSEL to Bot. of Toe Key: $H_{h6E1} := H_{h6U1} = 30.6 \cdot kN$

Moment Arm (from Point O): $H_{h6locE1} := H_{h6locU1} = 0.83\ m$

Water Load between Keys (if any)

$$H_{h6aE1} := \begin{cases} \frac{\left(h_{6E1} + h_{2E1}\right) \cdot -Key_{vdist}}{2} \cdot \gamma_w \cdot B & \text{if } Key_{vdist} < 0 \\ 0 & \text{otherwise} \end{cases} = 225.4 \cdot kN$$

Moment Arm (from Point O):

$$H_{h6alocE1} := \begin{cases} \frac{Key_{vdist} \cdot \left(2 \cdot h_{2E1} + h_{6E1}\right)}{3\left(h_{2E1} + h_{6E1}\right)} & \text{if } Key_{vdist} < 0 \\ 0 & \text{otherwise} \end{cases} = -2.38 \cdot m$$

Lateral Soil Load:

Moist Soil Load above WSEL:

$$E_{h7E1} := \frac{\gamma_m \cdot K_o \cdot h_{7E1}^{\ 2}}{2} B = 0.0 \cdot kN$$

Moment Arm (from bot. of toe key):

$$E_{h7locE1} := h_{6E1} + \frac{h_{7E1}}{3} + Key_{vdist} = -1.50\ m$$

Saturated Soil Load below WSEL: (rectangular component)

$$E_{h8E1} := \left(\gamma_m \cdot K_o \cdot h_{7E1}\right) \cdot h_{8E1} \cdot B = 0.0 \cdot kN$$

Moment Arm (from bot. of toe key):

$$E_{h8locE1} := \frac{h_{8E1}}{2} = 1.25\ m$$

Saturated Soil Load below WSEL: (triangular component)

$$E_{h8aE1} := \frac{\left[\left(\gamma_{sat} - \gamma_w\right) \cdot K_o\right] \cdot h_{8E1}^{\ 2}}{2} \cdot B = 20.8 \cdot kN$$

Moment Arm (from bot. of footing):

$$E_{h8alocE1} := \frac{h_{8E1}}{3} = 0.83\ m$$

$$\Sigma H_{SoilresistE1} := H_{h6E1} + H_{h6aE1} + E_{h7E1} + E_{h8E1} + E_{h8aE1} = 276.8 \cdot kN$$

$$\Sigma M_{HorizSoilResistE1} := H_{h6E1} \cdot H_{h6locE1} + H_{h6aE1} \cdot H_{h6alocE1} + E_{h7E1} \cdot E_{h7locE1} \dots + E_{h8E1} \cdot E_{h8locE1} + E_{h8aE1} \cdot E_{h8alocE1} = -492.9\ m \cdot kN$$

Vertical Force:

UPLIFT: Linear distribution from water at heel to water at toe:

$$\Sigma V_{UpliftE1} := \left[\left(UWSEL_{E1} - Bot_{ftg} + Key_{t.d}\right) + h_{2E1}\right] \cdot \frac{b}{2} \cdot \gamma_w \cdot B \cdot -1 = -732.55 \cdot kN$$

Moment Arm (from Point O):

$$V_{UpliftE1aloc} := \frac{b \cdot \left[2 \cdot h_{2E1} + \left(UWSEL_{E1} - Bot_{ftg} + Key_{t.d}\right)\right]}{3\left[h_{2E1} + \left(UWSEL_{E1} - Bot_{ftg} + Key_{t.d}\right)\right]} = 7.725\ m$$

$$\Sigma M_{UpliftE1} := \Sigma V_{UpliftE1} \cdot V_{UpliftE1aloc} = -5658.683 \cdot kN \cdot m$$

Weight of soil and water over toe:

Water Above the Top of Footing: $W_{H1E1} := \gamma_w \cdot h_{5E1} \cdot L_{ab} \cdot B = 17.15 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E1locE1} := \frac{L_{ab}}{2} = 1.75\ m$

Soil above top of footing: $W_{E6E1} := \gamma_b \cdot h_{3E1} \cdot L_{ab} \cdot B = 21.4 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E6locE1} := \frac{L_{ab}}{2} = 1.75\ m$

Vertical Load Due to Surcharge: $S_{E1} := S1_{E1} \cdot L_{cd} \cdot B = 0 \cdot kN$ $\quad S_{E1loc} := b - \frac{L_{cd}}{2} = 8.97\ m$

Weight of soil and water over heel:

Moist Soil for sloped grade above top of wall:

Length of sloped portion of soil above top of wall: $L_{E3E1} := \left(L_{cd} + t_{wb} - t_{wt}\right) = 9.00\ m$

Height of sloped soil above top of wall over heel: $h_{E3locE1} := \left(L_{E3E1}\right) \cdot \tan(\beta) = 0.00\ m$

Weight of sloped soil above top of wall: $W_{E3E1} := \frac{\gamma_m}{2} \cdot h_{E3locE1} \cdot L_{E3E1} \cdot B = 0.0 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E3locE1} := L_{ab} + t_{wt} + \frac{2}{3} \cdot L_{E3E1} = 10.00\ m$

Moist soil from top of wall to groundwater level:

Height of soil from top of wall and top of GWL: $h_{1E1} = 9.00\ m$

Length from edge of wall at GWL to edge of heel: $L_{E4E1} := L_{E3E1} - \left(h_{1E1} \cdot S_{batter}\right) = 8.29\ m$

Weight of soil over heel from top of wall to GWL: $W_{E4E1} := \gamma_m \cdot h_{1E1} \cdot \frac{\left(L_{E3E1} + L_{E4E1}\right)}{2} \cdot B = 1556.3 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E4locE1} := b - \frac{L_{E3E1}^2 + L_{E3E1} \cdot L_{E4U1} + L_{E4E1}^2}{3\left(L_{E3E1} + L_{E4E1}\right)} = 8.67\ m$

Saturated soil from groundwater to top of footing:

Height of soil from GWL to top of heel: $h_{E4E1} := h_{2E1} - t_{ftg} - Key_{h.d} = 3.00\ m$

Weight of soil over heel from GWL to top of heel: $W_{E5E1} := \left(\gamma_{sat}\right) \cdot h_{E4E1} \cdot \frac{\left(L_{E4E1} + L_{cd}\right)}{2} \cdot B = 539.5 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E5locE1} := b - \frac{L_{E4E1}^2 + L_{E4E1} \cdot L_{cd} + L_{cd}^2}{3\left(L_{E4E1} + L_{cd}\right)} = 8.91\ m$

$$\Sigma V_{SoilWaterE1} := W_{H1E1} + W_{E6E1} + W_{E3E1} + W_{E4E1} + W_{E5E1} + S_{E1} = 2134.4 \cdot kN$$

$$\Sigma M_{VertSoilWaterResistE1} := W_{H1E1} \cdot W_{E1locE1} + W_{E6E1} \cdot W_{E6locE1} \cdots + W_{E3E1} \cdot W_{E3locE1} + W_{E4E1} \cdot W_{E4locE1} + W_{E5E1} \cdot W_{E5locE1} + S_{E1} \cdot S_{E1loc} = 18376.3\ m \cdot kN$$

SESIMIC ANALYSIS:

LOAD CASE E1

Seismic coefficient will be applied to dead loads to calculate seismic force and force is applied at center of gravity of the mass. Vertical and Horizontal loads are applied in the "destabilizing direction"

SEISMIC PARAMETERS:

(Section 7.9, Design Criteria)

Peak Ground Acceleration for Seismic Load $PGA_{Horiz} := 0.26$ $PGA_{Vert} := 0.56 \cdot PGA_{Horiz} = 0.146$

In accordance with USACE EM 1110-2-2100 Section 4-7.b, consider 2/3 PGA as seismic coefficient for stabilitiy.

Horizontal Seismic coefficient for stabilty: $K_{hE1} := \frac{2}{3} PGA_{Horiz} = 0.173$

Vertical Seismic coefficient for stabilty: $K_{vE1} := \frac{2}{3} PGA_{Vert} = 0.097$

SEISMIC ACCELERATION OF RIGID MASSES (Q_D):

Vertical Load Application:

$\Sigma V_{conc} = 979 \cdot kN$

$Q_{v.conc} := \Sigma V_{conc} \cdot K_{vE1} \cdot -1 = -95 \cdot kN$ (assume acting upwards for adverse sliding effect)

Moment arm for siesmic load application (From Toe): $H_{cent} = 6.383\,m$

$M_{Qv.conc} := Q_{v.conc} \cdot H_{cent} = -606.6 \cdot kN \cdot m$

Lateral Load Application:

$Q_{h.conc} := \Sigma V_{conc} \cdot K_{hE1} \cdot -1 = -169.7 \cdot kN$

Moment arm for siesmic load application (Above Base of Footing): $V_{Cent} = 2.399\,m$

$M_{Q.conc} := Q_{h.conc} \cdot V_{Cent} = -407.1 \cdot kN \cdot m$

SEISMIC ACCELERATION OF SOIL WEDGE + WATER (Q_{EH}):

Vertical Load Application:

$\Sigma V_{SoilWaterE1} = 2134.4 \cdot kN$

$Q_{v.SoilWaterE1} := \Sigma V_{SoilWaterE1} \cdot K_{vE1} \cdot -1 = -207.2 \cdot kN$ (assume acting upwards for adverse sliding effect)

Moment arm for siesmic load application (From Toe): $e_{QE1} := \frac{\Sigma M_{VertSoilWaterResistE1}}{\Sigma V_{SoilWaterE1}} = 8.61\,m$

$M_{Qv.SoilWaterE1} := Q_{v.SoilWaterE1} \cdot e_{QE1} = -1783.7 \cdot kN \cdot m$

Lateral Load Application:

Seismic soil load is calculated based on Mononobe-Okabe method to determine combined static and dynamic coefficient (K_{AE}). Coulomb's active component (K_A) is subtracted from K_{AE} to obtain the seismic coefficient (ΔK_{AE}) for dynamic component of soil force.

Glacial Till Internal Friction (radians): $\phi = 0.471$

Seismic Inertia Angle (radians): $\psi := atan\left(\frac{K_{hE1}}{1 - K_{vE1}}\right) = 0.190$

Inclination of batter (radians): $\theta := 0.00$ assuming zero is conservative

Slope of retained ground surface: $\beta = 0.00$

$$K_{AE} := \frac{\cos(\phi - \psi - \theta) \cdot \cos(\phi - \psi - \theta)}{\cos(\psi) \cdot \cos(\theta) \cdot \cos(\theta)\, \cos(\psi + \theta) \cdot \left(1 + \sqrt{\frac{\sin(\phi)\, \sin(\phi - \psi - \beta)}{\cos(\beta - \theta) \cdot \cos(\psi + \theta)}}\right)^2} = 0.519$$

$\Delta K_{AE} := K_{AE} - K_{Abgwt} = 0.143$

Dynamic component of active seismic wedge:

$$Q_{h.SoilWaterE1} := \Delta K_{AE} \cdot \left[\frac{\gamma_m \cdot \left(H_w + Key_{h.d}\right)^2}{2 \cdot (\tan(\alpha) - \tan(\beta))} + \frac{\left(\gamma_{sat} - \gamma_m\right) \cdot h_{2E1}{}^2}{2 \cdot \tan(\alpha)}\right] \cdot B \cdot -1 = -291.0 \cdot kN$$

(Eq. G-64, USACE EM 1110-2-2100)

Moment arm for siesmic load application (About Point O): $Q_{h.SoilWaterlocE1} := \frac{2}{3} \cdot \left(H_w + Key_{h.d}\right) + Key_{vdist} = 8.00\,m$

$M_{Q.h.SoilWaterE1} := Q_{h.SoilWaterE1} \cdot Q_{h.SoilWaterlocE1} = -2327.9 \cdot kN \cdot m$

STABILITY ASSESSMENT:

LOAD CASE E1

CHECK SLIDING ALONG HORIZONTAL SLIDING PLANE:

Summation of the vertical forces: $\Sigma V_{E1} := \Sigma V_{conc} + \Sigma V_{SoilWaterE1} + \Sigma V_{UpliftE1} + Q_{v.conc} + Q_{v.SoilWaterE1} = 2078.6 \cdot kN$

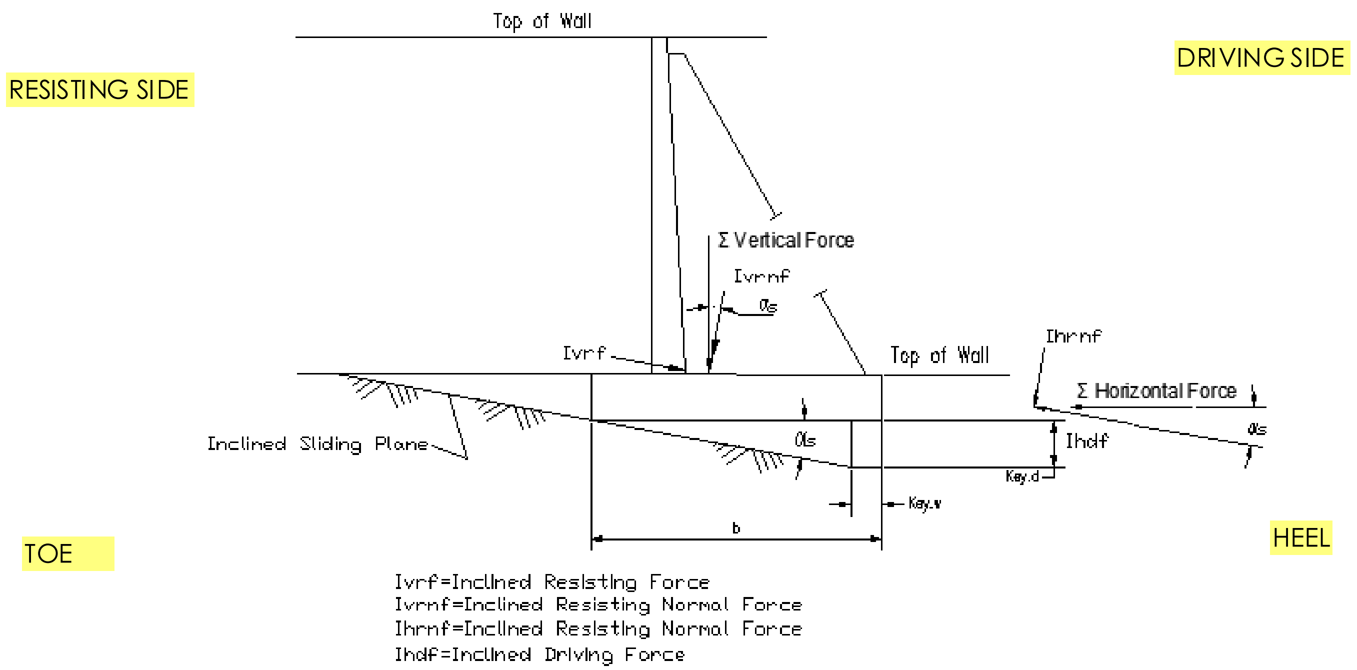
Summation of the horizontal forces: $\Sigma H_{E1} := \Sigma H_{SoildriveE1} + Q_{h.conc} + Q_{h.SoilWaterE1} + \Sigma H_{SoilresistE1} = -1678.8 \cdot kN$

Safety Factor for Sliding Horizontal Failure Plane

$$FS_{Horiz.SlidingE1} := \frac{\left|\Sigma V_{E1}\right| \cdot \tan\left(\phi_{rock} \cdot \frac{\pi}{180}\right)}{\left|\Sigma H_{E1}\right|} = 0.60$$

$$FS_{Sliding.check1.E1} := \begin{vmatrix} \text{"OKAY"} & \text{if } FS_{Horiz.SlidingE1} > FS_{sliding.reqE1} \\ \text{"NG - key req"} & \text{otherwise} \end{vmatrix} = \text{"NG - key req"}$$

CHECK FACTOR OF SAFETY SLIDING WITH KEY (INCLINED SLIDING PLANE):



(With properly engineered reinforced concrete Key, horizontal sliding plane thru Toe is protected, critical sliding plane is relocated to the INCLINED SLIDING PLANE FROM HEEL KEY To TOE, Bedrock Mass above this examing plane is mobilized by reinforced concrete key and combined into Structural Wedge.)

Resolve ΣV_{E1} & ΣH_{E1}

$$\Sigma V_{InclinedE1} := \cos(\alpha s) \cdot \left(\left|\Sigma V_{E1} + V_{rocksection}\right|\right) + \sin(\alpha s) \cdot \left|\Sigma H_{E1}\right| = 3085.7 \cdot kN$$

$$\Sigma H_{InclinedE1} := \cos(\alpha s) \cdot \left|\Sigma H_{E1}\right| - \sin(\alpha s) \cdot \left(\left|\Sigma V_{E1} + V_{rocksection}\right|\right) = 741.1 \cdot kN$$

Safety Factor for Sliding Inclined Failure Plane

$$FS_{InclinedISlidingE1} := \frac{\Sigma V_{InclinedE1} \cdot \tan\left(\phi_r\right)}{\Sigma H_{InclinedE1}} = 1.85$$

$$FS_{Sliding.check2.E1} := \begin{vmatrix} \text{"OKAY"} & \text{if } FS_{InclinedISlidingE1} > FS_{sliding.reqE1} \\ \text{"NG"} & \text{otherwise} \end{vmatrix} = \text{"OKAY"}$$

CHECK FOUNDATION ECCENTRICITY:

LOAD CASE E1

(Vertical seismic loads from concrete, soil and water are assumed acting downwards for adverse bearing effect)

Summation of the vertical forces: $\Sigma V_{seisE1} := \Sigma V_{conc} + \Sigma V_{SoilWaterE1} + \Sigma V_{UpliftE1} - Q_{v.conc} - Q_{v.SoilWaterE1} = 2683.0 \cdot kN$

Summation of the horizontal forces: $\Sigma H_{seisE1} := \Sigma H_{E1} = -1678.8 \cdot kN$

Resolve ΣV_{seisE1} & ΣH_{seisE1}

$$\Sigma V_{InclinedseisE1} := \cos(\alpha s) \cdot \left(\left|\Sigma V_{seisE1} + V_{rocksection}\right|\right) + \sin(\alpha s) \cdot \left|\Sigma H_{seisE1}\right| = 3659.1 \cdot kN$$

$$\Sigma H_{InclinedseisE1} := \cos(\alpha s) \cdot \left|\Sigma H_{seisE1}\right| - \sin(\alpha s) \cdot \left(\left|\Sigma V_{seisE1} + V_{rocksection}\right|\right) = 549.9 \cdot kN$$

Summation of the resisting moments about the toe:

$$\Sigma M_{resE1} := \Sigma M_{conc} + \Sigma M_{VertSoilWaterResistE1} + \Sigma M_{HorizSoilResistE1} + \Sigma M_{rocksection} = 29048 \cdot kN \cdot m$$

Summation of seismic moments about the toe:

$$\Sigma M_{seisE1} := -M_{Qv.conc} + M_{Q.conc} - M_{Qv.SoilWaterE1} + M_{Q.h.SoilWaterE1} = -345 \cdot kN \cdot m$$

Summation of the overturning moments about the toe:

$$\Sigma M_{oE1} := \Sigma M_{LateralSoildriveE1} + \Sigma M_{UpliftE1} = -7814 \cdot kN \cdot m$$

Total moment: $\Sigma M_{E1} := \Sigma M_{resE1} + \Sigma M_{seisE1} + \Sigma M_{oE1} = 20888.9 \cdot kN \cdot m$

Normal force to base: $\Sigma V_{InclinedseisE1} = 3659.1 \cdot kN$

Inclined Sliding Plane Length: $L_{incline} = 13.7 \cdot m$

Eccentricity (inclined plane): $ex_{E1} := \dfrac{L_{incline}}{2} - \dfrac{\Sigma M_{E1}}{\Sigma V_{InclinedseisE1}} = 1.14\,m$ $\qquad Kern_{E1} := \dfrac{L_{incline}}{4} = 3.426\,m$

Eccentricity Check:

$$e_{check.E1} := \begin{cases} \text{"Okay"} & \text{if } ex_{E1} \le Kern_{E1} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"Okay"}$$

CHECK FOUNDATION BEARING CAPACITY:

Base Section Modulus: $S_b = 31.3\,m^3$

Bearing Pressure Under Toe:

$$\sigma_{ToeE1} := \begin{cases} \left[\dfrac{\Sigma V_{InclinedE1}}{L_{incline} \cdot B} + \dfrac{\left(\Sigma V_{InclinedE1} \cdot ex_{E1}\right)}{S_b}\right] & \text{if } \dfrac{\Sigma V_{InclinedE1}}{L_{incline} \cdot B} \ge \dfrac{\Sigma V_{InclinedE1} \cdot ex_{E1}}{S_b} \\ \dfrac{2 \cdot \Sigma V_{InclinedE1}}{B \cdot 3\left(\dfrac{b}{2} - ex_{E1}\right)} & \text{otherwise} \end{cases} = 337.9 \cdot kPa$$

$$Bearing_{CheckToeE1} := \begin{cases} \text{"OKAY "} & \text{if } \sigma_{ToeE1} < \sigma_{allowE1} \\ \text{"NG""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

Bearing Pressure Under Heel:

$$\sigma_{HeelE1} := \begin{cases} \left[\dfrac{\Sigma V_{InclinedE1}}{L_{incline} \cdot B} - \dfrac{\left(\Sigma V_{InclinedE1} \cdot ex_{E1}\right)}{S_b}\right] & \text{if } \dfrac{\Sigma V_{InclinedE1}}{L_{incline} \cdot B} \ge \dfrac{\Sigma V_{InclinedE1} \cdot ex_{E1}}{S_b} \\ 0 & \text{otherwise} \end{cases} = 112.5 \cdot kPa$$

$$Bearing_{CheckheelE1} := \left(\begin{cases} \text{"OKAY "} & \text{if } \sigma_{HeelE1} < \sigma_{allowE1} \wedge \sigma_{HeelE1} > 0 \\ \text{"NG - perform cracked base analysis""} & \text{otherwise} \end{cases}\right) = \text{"OKAY "}$$

CHECK FLOATATION:

Safety Factor for Floatation:

$$FS_{FloatationE1} := \frac{\Sigma V_{conc} + \Sigma V_{SoilWaterE1} + Q_{v.conc} + Q_{v.SoilWaterE1}}{\left|\Sigma V_{UpliftE1}\right|} = 3.84$$

$$FS_{Floatation.E1.check} := \begin{cases} \text{"OKAY "} & \text{if } FS_{FloatationE1} > FS_{req.E1.flt} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

CHECK OVERTURNING

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stablity of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1

EM 1110-2-2502
29 Sep 89

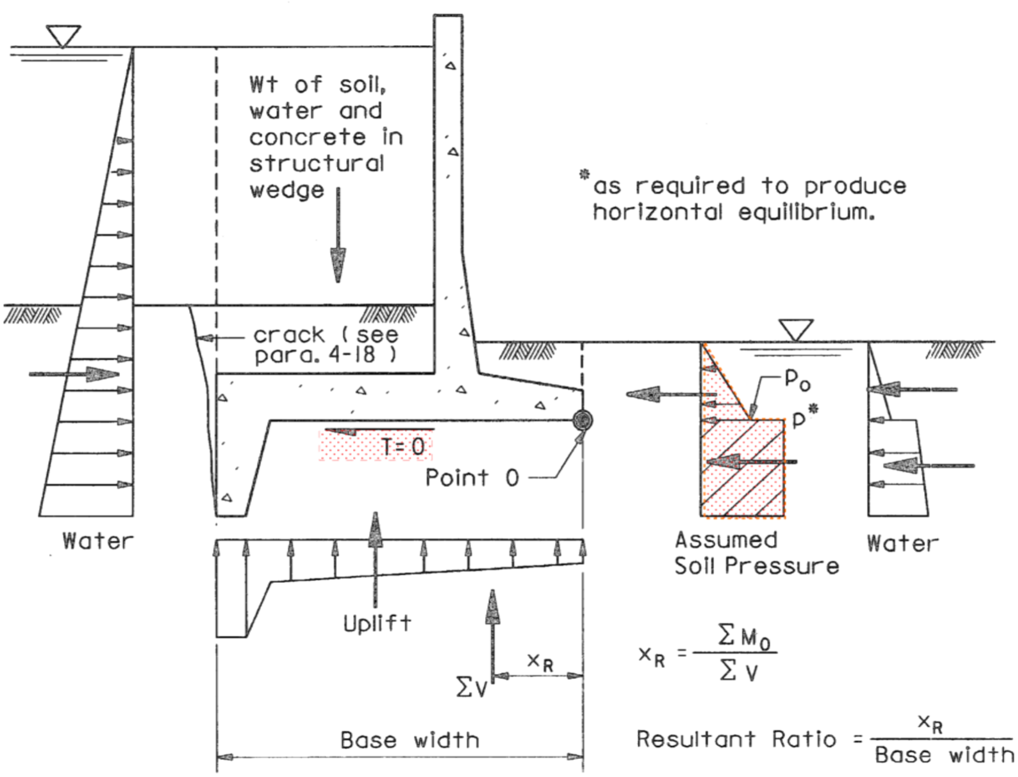


Figure 4-5. Forces for overturning analysis for wall with horizontal base and key

Modify Uplift for Overturning Analysis: **LOAD CASE E1**

(Uplift is calculated along the concrete/rock contact using the Line of Creep method)

Water Pressure at h: $u_{h.E1} := \Delta h_{g.hj.E1} \cdot \gamma_w = 88.20 \cdot kPa$

Water Pressure at o: $u_{o.E1} := \left(\Delta h_{g.no.E1} - \frac{\Delta h_{g.r.E1} \cdot L_{ho.E1}}{L_{ho.E1}}\right) \cdot \gamma_w = 24.5 \cdot kPa$

Head loss between point h and o: $\Delta h_{ho.E1} := \Delta h_{g.r.E1} \cdot \frac{L_{ho.E1}}{L_{ho.E1}} = 2.5\, m$

Length of concrete base (h -> o): $L_{baseho.E1} := Key_{h.w} + Key_{h.d} + Key_{hdist} + Key_{t.d} + Key_{t.w} = 17\, m$

Head loss along h -> j: $\Delta h_{hj.E1} := \Delta h_{ho.E1} \cdot \frac{Key_{h.w}}{L_{baseho.E1}} = 0.147\, m$

Water Pressure at j: $u_{j.E1} := \left(\Delta h_{g.hj.E1} - \Delta h_{hj.E1}\right) \cdot \gamma_w = 86.76 \cdot kPa$

Head loss along h -> k: $\Delta h_{hjk.E1} := \Delta h_{ho.E1} \cdot \left(\frac{Key_{h.w} + Key_{h.d}}{L_{baseho.E1}}\right) = 0.735\, m$

Water Pressure at k: $u_{k.E1} := \left(\Delta h_{g.km.E1} - \Delta h_{hjk.E1}\right) \cdot \gamma_w = 41.79 \cdot kPa$

Head loss along h -> m: $\Delta h_{hjkm.E1} := \Delta h_{ho.E1} \cdot \left(\frac{Key_{h.w} + Key_{h.d} + Key_{hdist}}{L_{baseho.E1}}\right) = 2.5\, m$

Water Pressure at m: $u_{m.E1} := \left(\Delta h_{g.km.E1} - \Delta h_{hjkm.E1}\right) \cdot \gamma_w = 24.50 \cdot kPa$

Head loss along h -> n: $\Delta h_{hjkmn.E1} := \Delta h_{ho.E1} \cdot \left(\frac{Key_{h.w} + Key_{h.d} + Key_{hdist} + Key_{t.d}}{L_{baseho.E1}}\right) = 2.5\, m$

Water Pressure at n: $u_{n.E1} := \left(\Delta h_{g.no.E1} - \Delta h_{hjkmn.E1}\right) \cdot \gamma_w = 24.50 \cdot kPa$

Uplift under key at heel: $V_{ulkeyhE1.OT} := \frac{\left(u_{h.E1} + u_{j.E1}\right) \cdot Key_{h.w}}{2} \cdot B \cdot -1 = -87.479 \cdot kN$

Moment Arm (from Point O): $V_{ulkeyhE1loc.OT} := b - \frac{Key_{h.w} \cdot \left(2 \cdot u_{j.E1} + u_{h.E1}\right)}{3 \cdot \left(u_{j.E1} + u_{h.E1}\right)} = 12.501\, m$

Uplift under base: $V_{ulbaseE1.OT} := \frac{\left(u_{k.E1} + u_{m.E1}\right) \cdot Key_{hdist}}{2} \cdot B \cdot -1 = -397.765 \cdot kN$

Moment Arm (from Point O): $V_{ulbaseE1loc.OT} := b - Key_{h.w} - \frac{Key_{hdist} \cdot \left(2 \cdot u_{m.E1} + u_{k.E1}\right)}{3 \cdot \left(u_{m.E1} + u_{k.E1}\right)} = 6.522\, m$

Uplift under key at toe $V_{ulkeytE1.OT} := \frac{\left(u_{n.E1} + u_{o.E1}\right) \cdot Key_{t.w}}{2} \cdot B \cdot -1 = 0 \cdot kN$

Moment Arm (from Point O): $V_{ulkeytE1loc.OT} := \frac{Key_{t.w} \cdot \left(2 \cdot u_{n.E1} + u_{o.E1}\right)}{3 \cdot \left(u_{n.E1} + u_{o.E1}\right)} = 0$

$$\Sigma V_{UpliftE1.OT} := V_{ulkeyhE1.OT} + V_{ulbaseE1.OT} + V_{ulkeytE1.OT} = -485 \cdot kN$$

$$U_{E1.loc.OT} := \frac{V_{ulkeyhE1.OT} \cdot V_{ulkeyhE1loc.OT} + V_{ulbaseE1.OT} \cdot V_{ulbaseE1loc.OT} + V_{ulkeytE1.OT} \cdot V_{ulkeytE1loc.OT}}{\Sigma V_{UpliftE1.OT}} = 7.60\, m$$

$$\Sigma M_{UpliftE1.OT} := \Sigma V_{UpliftE1.OT} \cdot U_{E1.loc.OT} = -3687.7 \cdot kN \cdot m$$

LOAD CASE E1

Modify Lateral Water Pressure (Resisting) for Overturning Analysis:

(Resisting water pressure is calculated using the Line of Creep method)

Water Load at Key (heel): $H_{h2E1.OT} := \frac{u_{k.E1} + u_{j.E1}}{2} \cdot Key_{h.d} B = 257.1 \cdot kN$

Moment Arm (from Point O): $H_{h2locE1.OT} := \frac{Key_{h.d} \cdot (2 \cdot u_{k.E1} + u_{j.E1})}{3(u_{k.E1} + u_{j.E1})} + Key_{vdist} = -2.23\ m$

Water Load at Key (toe): $H_{h6E1.OT} := \frac{u_{o.E1} \cdot (UWSEL_{E1} - Bot_{ftg} + Key_{t.d})}{2} \cdot B = 31 \cdot kN$

Moment Arm (from Point O): $H_{h6locE1.OT} := \frac{UWSEL_{E1} - Bot_{ftg} + Key_{t.d}}{3} = 0.83\ m$

$$\Sigma H_{waterresistE1.OT} := H_{h2E1.OT} + H_{h6E1.OT} = 287.73 \cdot kN$$

$$H_{waterresistlocE1.OT} := \frac{H_{h2E1.OT} \cdot H_{h2locE1.OT} + H_{h6E1.OT} \cdot H_{h6locE1.OT}}{\Sigma H_{waterresistE1.OT}} = -1.907\ m$$

$$\Sigma M_{waterresistE1.OT} := \Sigma H_{waterresistE1.OT} \cdot H_{waterresistlocE1.OT} = -548.64 \cdot kN \cdot m$$

Modify Lateral Soil Loads for Overturning Analysis:

(Lateral soil loads are calculated down to Point O instead of bottom of shear key)

Driving Soil Load (Headwater Side):

Surcharge Load: $E_{s1E1.OT} := S1_{E1} \cdot K_{Aagwt} \cdot (H_w + Key_{h.d} + Key_{vdist}) \cdot B \cdot -1 = 0 \cdot kN$

Moment Arm (from Point O): $E_{s1locE1.OT} := \frac{H_w + Key_{h.d} + Key_{vdist}}{2} = 7.00\ m$

Moist Soil Load above GWL: $E_{h1E1.OT} := \frac{\gamma_m \cdot K_{Aagwt} \cdot h_{1E1}^{\ 2}}{2} B \cdot -1 = -304.2 \cdot kN$

Moment Arm (from Point O): $E_{h1locE1.OT} := \frac{h_{1E1}}{3} + h_{2E1} + Key_{vdist} = 8.00\ m$

Saturated Soil Load below GWL: (rectangular component) $E_{h2E1.OT} := (\gamma_m \cdot K_{Aagwt} \cdot h_{1E1}) \cdot (h_{2E1} + Key_{vdist}) \cdot B \cdot -1 = -338.0 \cdot kN$

Moment Arm (from Point O): $E_{h2locE1.OT} := \frac{h_{2E1} + Key_{vdist}}{2} = 2.50\ m$

Saturated Soil Load below GWL: (triangular component) $E_{h2aE1.OT} := \frac{(\gamma_{sat} - \gamma_w) \cdot K_{Aagwt} \cdot (h_{2E1} + Key_{vdist})^2}{2} \cdot B \cdot -1 = -57.3 \cdot kN$

Moment Arm (from Point O): $E_{h2alocE1.OT} := \frac{h_{2E1} + Key_{vdist}}{3} = 1.67\ m$

Resisting Soil Load (Tailwater Side):

LOAD CASE E1

(Determine resisting soil load based on depth variation between the keys (ie. Key_{vdist}). In case where key at heel is deeper than key at toe (ie. $Key_{vdist} < 0$), resisting soil load (p*) is assumed to produce horizontal equilibrium as per Figure 4-5 above. Resisting soil load (p_o) is neglected.)

Total Driving Force: $\Sigma H_{SoildriveE1.OT} := E_{s1E1.OT} + E_{h1E1.OT} + E_{h2E1.OT} + E_{h2aE1.OT} + H_{h2E1} \cdots + Q_{h.conc} + Q_{h.SoilWaterE1} = -1557.0 \cdot kN$

Total Resisting Force: $\Sigma H_{waterresistE1.OT} = 287.731 \cdot kN$

Assumed Soil Load p*: $E_{h8E1a.OT} := \left(\Sigma H_{SoildriveE1.OT} + \Sigma H_{waterresistE1.OT}\right) \cdot -1 = 1269.265 \cdot kN$

Moment Arm (from Point O): $E_{h8E1a.loc.OT} := \dfrac{Key_{vdist}}{2} = -2\,m$

$$E_{h8E1.OT} := \begin{cases} E_{h8E1a.OT} & \text{if } Key_{vdist} < 0 \\ \Sigma H_{SoilresistE1} - H_{h6E1} - H_{h6aE1} & \text{otherwise} \end{cases} = 1269.265 \cdot kN$$

$$\Sigma M_{SoilresistE1.OT} := \begin{cases} E_{h8E1a.OT} \cdot E_{h8E1a.loc.OT} & \text{if } Key_{vdist} < 0 \\ \Sigma M_{HorizSoilResistE1} - H_{h6E1} \cdot H_{h6locE1} - H_{h6aE1} \cdot H_{h6alocE1} & \text{otherwise} \end{cases} = -2538.529 \cdot kN \cdot m$$

Sum of Moment about Point O:

$$\Sigma M_{LateraldriveE1.OT} := E_{s1E1.OT} \cdot E_{s1locE1.OT} + E_{h1E1.OT} \cdot E_{h1locE1.OT} + E_{h2E1.OT} \cdot E_{h2locE1.OT} \cdots + E_{h2aE1.OT} \cdot E_{h2alocE1.OT} + H_{h2E1} \cdot H_{h2locE1} = -2976.9 \cdot kN \cdot m$$

$$\Sigma M_{LateralresistE1.OT} := \Sigma M_{waterresistE1.OT} + \Sigma M_{SoilresistE1.OT} = -3087.2 \cdot kN \cdot m$$

$$\Sigma M_{seisE1.OT} := M_{Qv.conc} + M_{Q.conc} + M_{Qv.SoilWaterE1} + M_{Q.h.SoilWaterE1} = -5125 \cdot kN \cdot m$$

(seismic moment modified for the most adverse overturning effect)

Total moment:

$$\Sigma M_{E1.OT} := \Sigma M_{conc} + \Sigma M_{VertSoilWaterResistE1} + \Sigma M_{UpliftE1.OT} + \Sigma M_{LateraldriveE1.OT} + \Sigma M_{LateralresistE1.OT} + \Sigma M_{seisE1.OT} = 9748.1 \cdot kN \cdot m$$

Total Vertical Force: $\Sigma V_{E1.OT} := \Sigma V_{conc} + \Sigma V_{SoilWaterE1} + \Sigma V_{UpliftE1.OT} + Q_{v.conc} + Q_{v.SoilWaterE1} = 2325.9 \cdot kN$

Distance X_R: EM 1110-2-2502 Eq.4-1 $X_{R.E1} := \dfrac{\Sigma M_{E1.OT}}{\Sigma V_{E1.OT}} = 4.191\,m$

Overturning Resultant Ratio $Ratio_{E1.OT} := \dfrac{X_{R.E1}}{b} = 0.32$

$$Ratio_{E1.OT.check} := \begin{cases} \text{"OKAY "} & \text{if } Ratio_{E1.OT} > X_{R.reqE1} \\ \text{"Revise Structure""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

CHECK FOUNDATION ECCENTRICITY (HORIZONTAL PLANE):

Eccentricity (horizontal plan): $ex_{E1.OT} := \dfrac{b}{2} - \dfrac{\Sigma M_{E1.OT}}{\Sigma V_{E1.OT}} = 2.31\,m$ $Kern_{E1.OT} := \dfrac{b}{4} = 3.25\,m$

Eccentricity Check:

$$e_{check.E1.OT} := \begin{cases} \text{"Okay"} & \text{if } ex_{E1.OT} \le Kern_{E1.OT} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"Okay"}$$

LOAD CASE E1

CHECK FOUNDATION BEARING CAPACITY (HORIZONTAL PLANE):

Base Section Modulus: $S_{b.OT} = 28.17\,m^3$

Bearing Pressure Under Toe:

$$\sigma_{ToeE1.OT} := \begin{cases} \left(\frac{\Sigma V_{E1.OT}}{b \cdot B} + \frac{\Sigma V_{E1.OT} \cdot ex_{E1.OT}}{S_{b.OT}}\right) & \text{if } \frac{\Sigma V_{E1.OT}}{b \cdot B} \geq \frac{\Sigma V_{E1.OT} \cdot ex_{E1.OT}}{S_{b.OT}} \\ \frac{2 \cdot \Sigma V_{E1.OT}}{B \cdot 3\left(\frac{b}{2} - ex_{E1.OT}\right)} & \text{otherwise} \end{cases} = 370.0 \cdot kPa$$

$$Bearing_{ChecktoeE1.OT} := \begin{cases} \text{"OKAY "} & \text{if } \sigma_{ToeE1.OT} < \sigma_{allowE1} \\ \text{"NG - for reference only""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

Bearing Pressure Under Heel:

$$\sigma_{HeelE1.OT} := \begin{cases} \left(\frac{\Sigma V_{E1.OT}}{b \cdot B} - \frac{\Sigma V_{E1.OT} \cdot ex_{E1.OT}}{S_{b.OT}}\right) & \text{if } \frac{\Sigma V_{E1.OT}}{b \cdot B} \geq \frac{\Sigma V_{E1.OT} \cdot ex_{E1.OT}}{S_{b.OT}} \\ 0 & \text{otherwise} \end{cases} = 0.0 \cdot kPa$$

$$Bearing_{CheckheelE1.OT} := \left(\begin{cases} \text{"OKAY "} & \text{if } \sigma_{HeelE1.OT} < \sigma_{allowE1} \wedge \sigma_{HeelE1.OT} > 0 \\ \text{"NG - for reference only""} & \text{otherwise} \end{cases}\right) = \text{"NG - for reference only""}$$

SUMMARY OF STABILITY ASSESSMENT:

LOAD CASE E1

Sliding Factor of Safety: (Horizontal Plane - Ref only)	$FS_{Horiz.SlidingE1} = 0.60$	$FS_{Sliding.check1.E1}$ = "NG - key req""
Sliding Factor of Safety: (Inclined Plane)	$FS_{InclinedlSlidingE1} = 1.85$	$FS_{Sliding.check2.E1}$ = "OKAY "
Eccentricity: (Inclined Plane)	$ex_{E1} = 1.14\ m$	$e_{check.E1}$ = "Okay"
Bearing Pressure At Heel: (Inclined Plane)	$\sigma_{HeelE1} = 113 \cdot kPa$	$Bearing_{CheckheelE1}$ = "OKAY "
Bearing Pressure At Toe: (Inclined Plane)	$\sigma_{ToeE1} = 338 \cdot kPa$	$Bearing_{ChecktoeE1}$ = "OKAY "
Flotation Factor of Safety (horizontal plane)	$FS_{FloatationE1} = 3.84$	$FS_{Floatation.E1.check}$ = "OKAY "
Overturning Resultant Ratio: (horizontal plane)	$Ratio_{E1.OT} = 0.32$	$Ratio_{E1.OT.check}$ = "OKAY "
Eccentricity: (horizontal plane - Ref only)	$ex_{E1.OT} = 2.31\ m$	$e_{check.E1.OT}$ = "Okay"

1.0 INTRODUCTION

1.1 PURPOSE

This Structural Design Report (SDR) describes stability assessment, structural analyses and design of the Service Spillway, which is part of the Springbank Off-stream Storage Project (SR1). The SDR consolidates and documents the design philosophy, relevant criteria, primary design parameters, and reference source of data used for design. The Service Spillway was sized to meet stability requirements and major structural members were designed for conformance with structural criteria.

1.2 PROJECT OVERVIEW

SR1 is a flood diversion system comprised of a diversion structure, a diversion channel and off-stream dry storage reservoir (no permanent pool). When in operation, SR1 will divert and temporarily store excess flood water from the Elbow River and release it back into the river system in a controlled manner. SR1 will work in tandem with the downstream Glenmore Reservoir to limit flood flows downstream of Glenmore to less than 170 m^3/s for up to SR1's design event - the 2013 flood or its equivalent.

Elements of the project are:

- Diversion Structure on the Elbow River consisting of, from left to right when looking downstream, gated Diversion Inlet structure leading to a Diversion Channel, gated Service Spillway located on the Elbow River, adjacent Auxiliary Spillway and a Floodplain Berm. A Debris Deflection Barrier is in the headwater of the Diversion Structure to protect the Diversion Inlet from flood debris.

- Diversion Channel leading from the Elbow River at the Diversion Inlet to the Off-stream Storage Reservoir with an Emergency Spillway along the channel and Channel Outlet at end of the channel.

- Off-stream Storage Dam with Low-Level Outlet Works.

1.3 DESIGN OBJECTIVES

The primary objective of the Service Spillway is to regulate river flow and headpond elevation during flood events which is best accomplished with bottom-hinged overflow crest gates. Since the Diversion Inlet gates are not intended for operational control, the headpond water surface elevation immediately upstream of the Diversion Structure. The crest gates are normally in the open (lowered) position at Elevation 1210.0 m to allow "free flow" of the Elbow River. When the operations plan calls for diversion of flood flows, the crest gates are raised to desired position to retain water and control either headpond elevation or discharge flow depending on the operations plan for a given flood scenario.

The Service Spillway left abutment serves as a retaining wall for the left embankment, primary site access road, control building, parking, and work area. The right abutment provides a physical separation between Service Spillway flow and Auxiliary Spillway flow during discharge of extreme floods and acts as a training wall for the Service Spillway stilling basin.

Since the Service Spillway is the primary water conveyance and regulating structure, steps were taken to reduce the potential for debris hang-ups and flow obstruction. For this reason, vehicle and pedestrian access to the left abutment is not included across the Service Spillway. Although there is no river crossing at the site, the right abutment is accessible via an access road upstream of the Auxiliary Spillway under typical river conditions.

The retaining walls retain embankment fill, serve as water barriers to contain the Elbow River, and prevent overtopping during flood events. For this reason, the walls were designed as concrete hydraulic structures to address stability, strength, and serviceability considerations for multiple operating conditions.

1.4 GENERAL ARRANGEMENT

The Service Spillway is a gated concrete structure located on the main channel of the Elbow River serving as the regulating feature for river and diversion flow. The primary elements of the Service Spillway include:

- Left abutment retaining walls and embankment transitions;
- Concrete monoliths with two 24 m wide gate bays with a center pier divider wall and fixed crest at Elevation 1210.0 m;
- Two 24 m wide by 5 m high bottom hinged crest gates with pneumatic bladders for control;
- Stilling basin concrete monoliths with an end sill to provide energy dissipation and reduce channel erosion during gate operations; and
- Right abutment monoliths and training walls.

An isometric view of the Service Spillway is shown in Figure 1. A general arrangement of the Service Spillway is shown on Drawing S-150 and detailed drawings of the monoliths and retaining walls are depicted on Drawings S-200 through S-259.

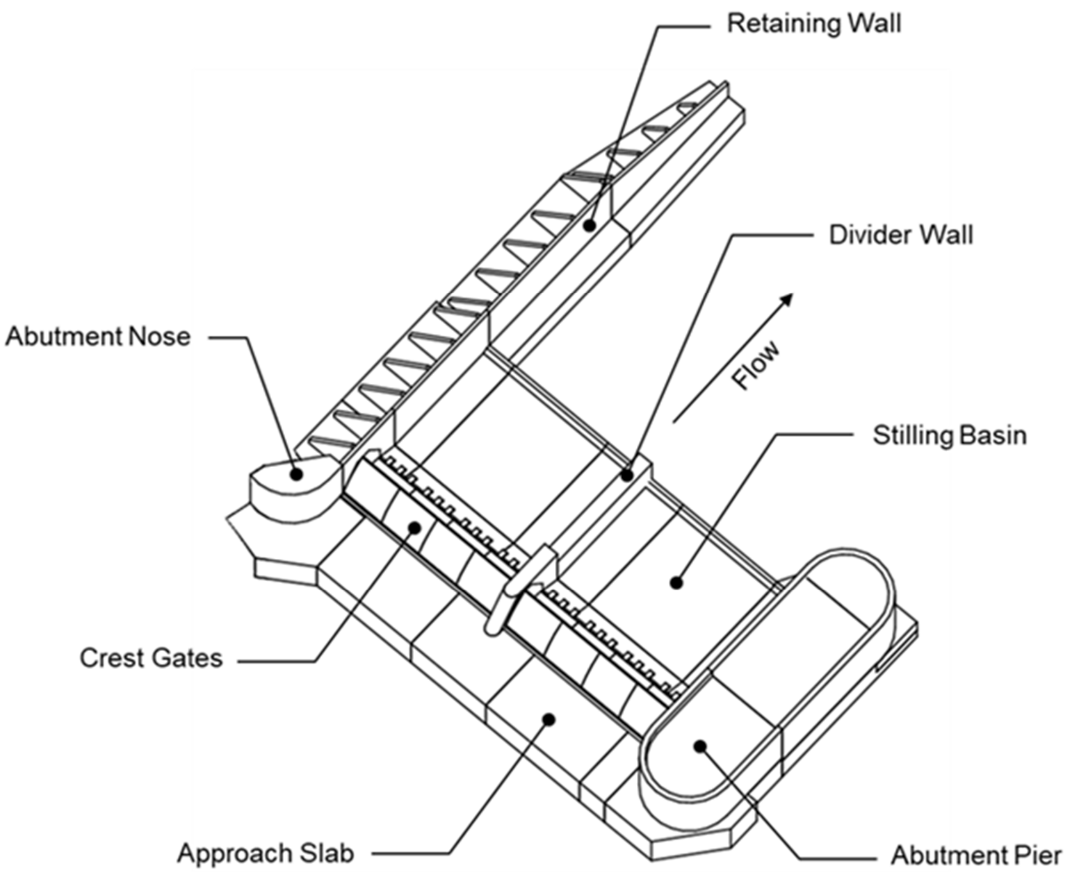

Figure 1. Service Spillway Structural Arrangement

1.5 BASIS FOR STRUCTURE LAYOUT

The Service Spillway layout and sizing were based on hydrotechnical evaluation to establish overall geometry, top of dam elevation, and hydraulic profiles to set crest elevation, stilling basin floors, and sizing of the gates.

The base elevation for each monolith or retaining wall was selected based on existing bedrock profile, stability requirements, and constructability considerations. Along the Service Spillway alignment, geotechnical evaluations identified approximate top of rock below the hydraulic profile and established an upper bound for the concrete/rock interface at or below Elevation 1207.0 m. The actual lower bound was determined based on concrete mass needed to provide stability. The concrete/rock interface was identified as a uniform bench to define the limit of excavation and simplify foundation preparation.

Lateral limits of individual monoliths and possible joint locations were selected to maintain base mat aspect ratios between 1:1 and 1.75:1, provide adequate toe for retaining wall and abutment segments, and satisfy stability requirements.

The abutments, approach walls, and training walls are concrete gravity structures using either counterfort or cantilever retaining walls depending on wall height. In general, walls with stem heights more than 6.5 m required counterforts to provide adequate stiffness and lateral load path.

2.0 CODES AND STANDARDS

In accordance with "Terms of Reference" for this project, the design complies with current Alberta Transportation (AT) Design Standards and current AT Design and Construction Bulletins. By reference in AT Standards, Canadian Dam Association (CDA) Dam Safety Guidelines and Technical Bulletin Nos. 1 through 9 provided primary guidance for design of the project including the hydraulic structures. Other recognized industry standards referenced in the AT/CDA Guidelines were used to supplement aspects of the design that the AT/CDA Guidelines do not address. Such references include the US Army Corps of Engineers (USACE) Engineering Manuals and US Bureau of Reclamation (USBR) Design Standards. In case of conflicting criteria, AT provisions were used unless a "more stringent" requirement was deemed appropriate based on engineering judgement.

Where referenced by AT and CDA, the National Building Code of Canada (NBCC) and Alberta Building Code (ABC) were used to obtain certain design loads (wind, snow, live, vehicle), and develop load combinations associated with strength and serviceability. NBCC and ABC provisions were used primarily for evaluation of individual elements such as gratings, ladders, and other ancillary structures.

The following codes, guidelines, and standards were identified for use on this project:

2.1 PROJECT STANDARDS

- Alberta Government, Terms of Reference (TOR0015997) for "Flood Mitigation Works, Springbank Off-Stream Storage Project (SR1) (WAC0078983), Addendum No. 2," August 1, 2014.
- AT's "Engineering Consultant Guidelines for Highway Bridge and Water Projects, Volume 1- Design & Tender" - 2011.
- AT's "Engineering Consultant Guidelines for Highway Bridge and Water Projects, Volume 2- Design & Tender" - 2011.
- AT's Civil Works Master Specifications for Construction of Provincial Water Management Projects.

2.2 DAM DESIGN AND SAFETY

- Province of Alberta Water Act – Water (Ministerial) Regulation - Regulation 205/98 (consolidated up to 185/2015).
- AT's "Water Control Structures Selected Design Guidelines" – Nov. 2004

- Canadian Dam Association Dam Safety Guidelines (CDA) 2007 with 2013 Revisions.
- CDA – Technical Bulletins:
    1. Inundation, Consequences, and Classification for Dam Safety, 2007
    2. Surveillance of Dam Facilities, 2007
    3. Flow Control Equipment for Dam Safety, 2007
    4. Retracted & Replaced by "Guidelines for Public Safety Around Dams," 2011
    5. Dam Safety Analysis and Assessment, 2007
    6. Hydrotechnical Considerations for Dam Safety, 2007
    7. Seismic Hazard Considerations for Dam Safety, 2007
    8. Geotechnical Considerations for Dam Safety, 2007
    9. Structural Considerations for Dam Safety, 2007
- USACE - Stability Analysis of Concrete Structures - EM 1110-2-2100, December 2005
- USACE – Earthquake Design and Evaluation of Concrete Hydraulic Structures - EM 1110-2-6053, 1 May 2007
- USACE - Gravity Dam Design - EM 1110-2-2200, June 1995
- USACE – Retaining and Flood Walls – EM 1110-2-2502, 29 September 1989
- USBR – Design Standards No. 14, Appurtenant Structures for Dams (Spillways and Outlet Works) Design Standards, Chapters 1 to 3, August 2014
- USBR – Design of Small Dams, 3rd Edition, 1987
- USBR – Design of Gravity Dams, 1976
- FEMA – Best Practices Technical Manuals

2.3 BUILDING CODE & PERSONNEL SAFETY

- Alberta Building Code (ABC) 2014
- National Building Code of Canada (NBCC) 2015
- Alberta Occupational Health and Safety Code (OHS code).

2.4 STRUCTURAL ANALYSIS, DESIGN AND MATERIAL SPECIFICATIONS

- Concrete Materials and Methods of Concrete Construction, CSA A23.1-14 & A23.2 -14
- Design of Concrete Structures, CSA A23.3-14
- Design of Steel Structures, CSA S16-14
- Welded Steel Construction, CSA W59-13
- Canadian Foundation Engineering Manual, Canadian Geotechnical Society – 4th Ed., 2006
- Canadian Highway Bridge Design Code, CSA S6-14
- Alberta Transportation Bridge Design Criteria
- Reinforcing Steel Institute of Canada, Standards Practice Manual

3.0 PROJECT DATA

3.1 LOCATION

The project is located in the Springbank area of Rocky View County, Alberta, CA, southwest of the City of Calgary in Township 24 (Range 04/03, W5M).

Latitude	51.050504 N
Longitude	114.401436 W
Elevation	1180 to 1220 m

3.2 FOUNDATION PARAMETERS

Site characterization is based on geologic assessment of the project site, exploratory borings, laboratory testing of project samples, and geotechnical engineering judgment. The following foundation parameters, derived from Brazeau formation data, are described in Preliminary Design Report (PDR), Appendix D - Geotechnical Assessment Report, Chapter 10.

Rock Classification sandstone/mudstone/shale/claystone

Recommended Concrete/Bedrock Interface	EL. 1207 or lower	
Bedrock Unit Weight	25.6 kN/m^3	
Bedrock Friction Angle (Rock/Rock Interface) (φ)	26 Deg.	
Concrete/Rock Interface Friction Angle (φ)	26 Deg.	
Cross Bed Friction Angle (φ) – Passive Wedge	24 Deg.	
Ultimate Bearing Capacity (σ_{ult})	1915 kPa	
Allowable Bearing Capacity – Usual	1270 kPa	(σ_{ult}/1.5 SF)
Allowable Bearing Capacity – Unusual	1470 kPa	(σ_{ult}/1.3 SF)
Allowable Bearing Capacity – Extreme	1740 kPa	(σ_{ult}/1.1 SF)

Cohesion: In accordance with CDA Guidelines Technical Bulletin No. 7 (Geotechnical) and Technical Bulletin No. 8 (Structural), cohesion was not included in the sliding stability analysis, and acceptance criteria is based on sliding factors for friction only resistance.

3.3 HYDROTECHNICAL PARAMETERS

Performance of the Diversion Structure and Diversion Channel was assessed using numerical and physical modeling. Hydraulic calculations and detailed modeling used in the design of individual hydraulic structures and other components are presented in the Preliminary Design Report, Appendices C and F. The various operating scenarios to be assessed for the Service Spillway were based on a High Hazard Dam Classification with the separation between the Usual and Unusual Conditions being the 50-year frequency flood and the 1000-year frequency flood dividing the Unusual and Extreme conditions.

Table 1 provides a summary of the hydrotechnical parameters for selected operating scenarios used in the design and stability analyses of the Service Spillway.

Table 1. Service Spillway Hydrotechnical Parameters

Operating Scenario	Service Spillway Discharge (m^3/s)	Headwater Elevation (m)	Tailwater Elevation (m)
Usual Condition			
Normal Operation (No Diversion) *160 m^3/s inflow*	160	1212.1	1211.8
Diversion Operation *50-Year Flood*	160	1214.6	1211.8
Unusual Condition			
Diversion Operation *2013 Flood*	640	1215.8	1213.1
Diversion Operation *2013 Flood* *Right Crest Gate Fails to Open*	565	1216.1	1213.0
No Diversion *1000-Year Flood*	1480	1217.0	1214.7
Construction / Maintenance *100-Year Flood*	320 (one bay)	1215.0	1212.5 with flow 1211.9 dewatered
Extreme - Flood			
IDF–DS (No Diversion) 2210 m^3/s inflow	1585	1217.3	1214.9
Extreme – Seismic (Post-Seismic Condition)			
EDGM – Normal Operation *160 m^3/s inflow*	160	1212.1	1211.8
EDGM – Diversion Operation *50-Year Flood*	160	1214.6	1211.8

3.4 CLIMATE DATA

3.4.1 Snow

Snow Load data for this project was obtained from Ontario Climate Centre – Environment Canada.

- Ground snow load, snow component (S_s) =1.7 kPa
- Ground snow load, rain component (S_r) =0.1 kPa
- Snow load, Importance factor I_s =1.25

3.4.2 Frost Considerations

Frost depth was determined in accordance with ABC and is shown in PDR, Appendix D - Geotechnical Assessment Report.

- Minimum design frost depth of 2.0 m
- Non-frost susceptible backfill - Gravel and clean sands

3.4.3 Temperature Variations

Monthly temperature data for use in the evaluation was obtained from the Calgary International Airport records, which is considered representative of typical temperature ranges at project site.

3.4.4 Wind

A wind load of 0.48 kPa was determined for use at the site based on the Alberta Building Code.

4.0 CONSTRUCTION MATERIALS

4.1 CONCRETE AND CONCRETE ACCESSORIES

- **Structural Concrete – Class A1**
  30 MPa @ 28 days, (AT Civil Works Specifications)
  General use reinforced concrete where thermal control and volume change are not a concern.

- **Structural Concrete – Class B1**
  30 MPa @ 90 days, (AT Civil Works Specifications)
  General use reinforced concrete where thermal control and volume change need to be considered (typically thickness > 600 mm)

- **Mass Concrete – Class M**
  20 MPa @ 90 days, 30 MPa @ 180 days (New mixture to be specified)
  Unreinforced concrete for monoliths, slabs, piers and retaining walls where thermal control and volume change need to be considered (typically thickness >1500 mm).

- **Foundation Concrete - Class F**
  15 MPa @ 28 days, (AT Civil Works Specifications)
  For use in foundation preparation such as mud mats and low strength fill.

- **Grout**
  Premixed structural non-shrink grout for equipment bases.

- **Preformed Expansion Joint Filler**
  ASTM D1752, Type I, Closed-cell sponge rubber.

- **Bond Breaker**
  Bituminous paint conforming to CGSB 37.2-88.

- **Waterstops**
  PVC ribbed profile with minimum rated hydrostatic head of 373 KPa based on joint type.

4.2 METALS

- **Steel Reinforcement** - CAN/CSA-G30.18, Grade 400W deformed bars
- **Structural Steel** - CSA-G40.21, Grade 300W or 350W
- **Stainless Steel** - ASTM A276
- **Miscellaneous Metals** (stairs, ladders, handrails) - Galvanized steel
- **Grating** - Galvanized steel – serrated bar grating

4.3 EARTHWORK MATERIALS

The Service Spillway structure will be constructed on a rock foundation. Soil backfill parameters are based on terminology in AT's Civil Works Master Specification 02330 – Earthwork Materials and described in the PDR, Appendix D - Geotechnical Assessment Report.

Design values for specified material include:

Impervious Fill

Unit Weight (-)	21 kN/m^3
Internal Friction Angle (-)	18 deg

Granular Fill

Unit Weight (-)	21 kN/m^3
Internal Friction Angle (-)	34 deg

Glacial Till

Unit Weight (-)	20 kN/m^3
Internal Friction Angle (-)	27 deg

Rock Fill

Unit Weight (-)	22 kN/m^3
Internal Friction Angle (-)	20 deg

Siltation (Equivalent Fluid)

Unit Weight Vertical (-)	19 kN/m^3
Unit Weight Horizontal (-)	13 kN/m^3

5.0 STRUCTURAL ANALYSIS APPROACH

For the purposes of analysis, the Service Spillway was divided into individual monoliths based on geometry, size, joint location, and loading considerations. The monoliths were analyzed as either concrete gravity sections (gate structures, piers and stilling basin) or retaining walls (wing walls, training walls, and abutments). Each monolith was evaluated for global stability, strength, and serviceability.

Global stability was assessed using the rigid body analysis method and application of unfactored loads. This method uses the summation of forces applied to the monolith to determine resultant location, foundation bearing pressures, and sliding resistance along identified potential failure plane(s). Analysis methodology and acceptance criteria are described in further detail in later sections of this report.

Reinforced concrete design of members was performed according to Design of Concrete Structures, CSA A23.3-14 with the additional requirements of the CSA's SEED Document – *Structural Design of Wastewater Treatment Plants-2018* for revisions addressing service load conditions, water tightness, shrinkage and temperature reinforcement, and crack control. The Seed Document contains references to ACI 350M-06 for modifying CSA A23.3-14.

Finite Element Models (FEMs) were used to validate manual calculations, identify potential stress concentrations, and assess additional serviceability concerns such as localized deflection, need for thermal stress relief, and stress redistribution not captured in manual calculations. Mitigation of alkali-aggregate reaction (AAR) potential and thermal crack control for mass concrete placements were addressed through design detailing and material specifications.

5.1 DESIGN TOOLS AND SOFTWARE

Microsoft Excel - 2010 - version: 14.0.7166.5000

Mathcad 15.0 - 2013 - version: MC15_M030_20131216

SAP2000 v21 version: 21.0.2

Revit 2019.2.1 version/build: 19.2.10.7

6.0 LOADS

6.1 DEAD LOADS (D)

Permanent loads on the structure include concrete structure weight, fixed equipment, backfill and water. Unit weights for principal materials are included in Table 2.

Table 2. Dead Load and Unit Weights

Material	Unit Weight	Source
Water	9.81 kN/m^3	CSA S6-14, Table 3.4
Concrete	23.5 kN/m^3	AT WCS Design Guide 4.2
Steel	77.0 kN/m^3	AT WCS Design Guide 4.2
Backfill – Glacial Till	20.0 kN/m^3 (moist unit weight)	4.3 - Earthwork Materials
"	22.0 kN/m^3 (saturated unit weight)	4.3 - Earthwork Materials
"	12.2 kN/m^3 (buoyant unit weight)	4.3 - Earthwork Materials

6.2 HYDROSTATIC LOADS (H)

Both horizontal and vertical components of water load were used based on water surface elevation for the load condition considered. Upstream and downstream water surface elevations are described in Hydrotechnical Parameters, Section 3.3. The water surface elevations were considered to be hydrostatic pressures without kinematic effects. Headwater was considered the water surface elevation at the upstream face of the structure. Tailwater elevation was either maximum tailwater indicated on tailwater rating curves, or a reduced tailwater elevation to account for hydraulic jump depending on load condition considered and which condition produced a more adverse effect on the structure.

6.3 UPLIFT PRESSURE (U)

The following uplift pressures were considered for analysis of sliding, floatation, bearing capacities and resultant location. For overflow weir monoliths and stilling basins, uplift was assumed to vary from 100 percent of headwater pressure at upstream edge of slab to 100 percent of tailwater pressure at downstream edge of slab applied over 100 percent of the base. For retaining walls, the uplift was assumed to vary from 100 percent of water pressure at face of the foundation heel to 100 percent of water pressure at face of the foundation toe applied over 100% of the base.

For analysis of overturning capacity and floatation for gravity structures, stilling basins and retaining walls, uplift pressure was considered to vary proportionally along the length of concrete structure/rock contact surface. For sliding and bearing capacity analysis of gravity structures and retaining walls, uplift was assumed to vary along the length of the linear sliding failure plane under consideration (horizontal concrete/rock contact, or through rock if structure contact with rock was keyed or sloped).

The foundation interface was assumed to have zero tensile capacity. For bases where stability calculations indicated bearing pressures less than zero, the foundation interface was assumed to crack, and 100 percent of the hydrostatic pressure was applied over the area of the cracked foundation, then vary linearly to 100 percent of tailwater pressure. For seismic evaluations, uplift loading remained unchanged from the pre-earthquake condition to the post-earthquake evaluation unless seismic loading resulted in a cracked foundation, in which case full hydrostatic pressure was applied to the entire area of the cracked foundation during the post-earthquake evaluation.

6.3.1 Seepage Reduction Measures

The underlying rock was identified as highly weathered and fractured. To minimize uplift potential, seepage reduction measures included using an upstream apron, cut-off keys, and drainage piping below the basin slab that discharges downstream in the Elbow River.

Where seepage reduction measures were provided, such as drains, a reduced uplift pressure was used for stability analyses for the Usual Load Condition only. For stability analyses of other load conditions, the seepage reduction measures were conservatively neglected.

6.4 EARTH PRESSURE (E)

Soil loads include both vertical and horizontal forces due to backfill, sediment, and siltation. Physical Model Sedimentation Studies indicate there is little accumulation of sediment adjacent to structures so loads associated with Sediment/Siltation were excluded from structural analysis.

Vertical force associated with soil mass above the structure was based on vertical projection of footing or structure below the soil. Soil mass was based on moist unit weight for material above the waterline and buoyant unit weight for material below the waterline. Vertical force associated with water above the structure was calculated separate from the soil mass.

Horizontal force associate with soil are based on at-rest condition represented by the empirical relationship:

$$K_o = 1 - \sin\theta$$

where: K_o = At-rest lateral pressure coefficient(*)
θ = Soil friction angle

In accordance with EM 1110-2-2100 and EM 1110-2-2502 to use At-Rest Coefficient (K_o).

6.5 LIVE LOADS (V)

The principal live loads on the Service Spillway include Vehicle Loads (V) or Heavy Equipment Loads adjacent to retaining walls, and Hoist/Equipment Loads associated with gate operation. Live Loads described in this section were considered transitory loads. Transitory loads were used for strength design of individual structure elements but were not included in stability analyses.

Vehicle Loads were obtained from CSA-S6-14, Section 3.8.3.

Vehicle (Vertical Application): CL-625

Vehicle (Horizontal Application): CL-625

Heavy Equipment Surcharge was applied to retaining wall design as a separate load condition to account for future modifications such as building additions, long-term material storage, or top-of-wall modifications. This load is not applied simultaneously with Vehicle Loads.

Heavy Equipment Surcharge: 15.0 kPa (Equivalent 0.75 m soil)

6.6 HYDRODYNAMIC LOADS (HD)

Hydrodynamic loads include wave action, sub-atmospheric pressure at the fixed crest, and hydraulic dissipater forces. For the Service Spillway, these forces have been excluded from stability analysis since they are considered insignificant or of a localized nature.

- Wave action is not included due to the short-term duration and relatively short fetch.
- Sub-atmospheric pressure is not included since there is insufficient head to develop sub-atmospheric pressure on the fixed crest.
- Hydraulic dissipater forces are localized forces addressed in the hydraulic design of stilling basin and end sill.

6.7 DEBRIS AND IMPACT LOADS

Impact loads associated with debris flows were based on geometry of the Service Spillway operating in conjunction with the Debris Deflection Barrier. Debris impact and drift loads were derived from 2D hydraulic modelling of the Service Spillway based on various flood events as described in PDR, Appendix C – Hydraulics.

6.8 ICE LOAD (I)

Three types of ice load to consider for the Service Spillway structure design include Static Ice Load (I_s), Dynamic Ice Loading (I_d), and Ice Accretion Load (I_v).

Static Ice Load (I_s) is a result of water surface freezing with application of horizontal load as an ice sheet expands and confinement increases. Static Ice Loading has the potential to occur at low flow conditions, particularly within the stilling basin. Static Ice Loading is applied in Usual Load Cases that address winter operating conditions.

Dynamic Ice Loading (I_d) is a result of moving ice floe impacting the structure. Dynamic Ice Loading was not considered as a design load case because the Diversion Structures do not have a permanent pool.

Ice Accretion Load (I_v) occurs when ice bonds to the structure and must be broken as water level rises. Ice Accretion Load associated with water level rise was not considered for the diversion structures due to small order of magnitude relative to hydrostatic loading and low probability of occurring simultaneous with spring and summer flooding.

Frost Heave. Vertical ice loading associated with "frost heave" is a realistic consideration. The structures are normally in a dewatered or low-water state with freeze/thaw action tending to open rock joints and concrete/rock interface and subject the structure to increased uplift potential. To minimize frost heave loading potential and remove this condition from the analysis, foundation interfaces will be located below the identified frost depth of 2.0 m for this site and drainage provided to reduce the formation of ice in the foundation.

Table 3. Ice Loads

Ice Condition	Load	Source
Static Ice (applied to structure)	150 kN/m @ 0.3 m below WS	AT WCS Design Guide 4.5.1.1
Static Ice (applied to gates)	75 kN/m @ 0.3 m below WS	AT WCS Design Guide 4.5.1.1
Ice Accretion	Per requirements of ABC for affected structures	ABC

6.9 SEISMIC - EARTHQUAKE LOADS (Q)

The seismic classification for the Service Spillway is based on Stantec's *Seismic Hazard Assessment - Springbank Off-Stream Dam and Reservoir Report* dated November 28, 2016. Since the hazard classification for this structure is High (Diversion Structure), the seismic parameters are based on an Earthquake Design Ground Motion (EDGM) with an Annual Exceedance Probability (AEP) of

1/10,000 resulting in Peak Ground Acceleration (PGA) of 0.26 g for horizontal application and PGA of 0.15 for vertical application.

This project site is situated in an area of low to moderate seismic activity. Consequently, CDA Guidelines, Section 6.5 allow for the seismic stability analysis of concrete gravity structures to be completed using a pseudo-static approach (coefficient method). This method applies a seismic force to a rigid body with the objective of determining sliding and overturning response of the structure. Since the pseudo-static method does not recognize the oscillatory nature of seismic loads, accepted practice is to perform the stability calculations using sustained acceleration values equivalent to 2/3 of the peak acceleration values.

When performing concrete stress analyses, the objective is to determine the tensile crack length induced by the inertia forces applied to the structure, so peak acceleration is used to calculate seismic coefficients. This approach assumes an instantaneous acceleration spike can induce cracking but is not sustained long enough to develop significant displacement along the crack plane. If no significant displacement occurs, the dynamic stability is maintained.

6.9.1 Seismic Effects on Concrete Mass

The horizontal force required to accelerate the concrete mass is calculated as:

$Q_h = k_h \times W$ where:

Q_h = Horizontal seismic load (kN)
k_h = Horizontal seismic coefficient
W = Structure mass (kg)
PGA = Peak ground acceleration= 0.26g

For Stability Analysis (Table 4): k_h = 2/3 x 0.26 = 0.17
For Member Analysis (Table 5): k_h = 1.0 x 0.26 = 0.26

The vertical force required to accelerate the concrete mass is calculated as:

$Q_v = k_v \times W$ where:

Q_v = Vertical seismic load (kN)
k_v = Horizontal seismic coefficient = 0.56*k_h
W = Structure mass (kg)

For Stability Analysis (Table 4): k_v = 2/3 x (0.56*k_h) = 0.10
For Member Analysis (Table 5): k_v = 1.0 x (0.56*k_h) = 0.15

Since an earthquake produces oscillating forces, the horizontal PGA and vertical PGA cannot occur at the same time. To account for this in the stability calculations, three separate combinations of vertical and horizontal seismic combinations were considered, but only the maximum value was reported. The three combinations of vertical and horizontal seismic load are as follows:

Table 4. Stability Analysis – Seismic Coefficients

Seismic Combination	Horizontal	Vertical
100% Horiz., No Vert.	$1.0*k_h = 0.17$	-
100% Horiz., 30% Vert.	$1.0*k_h = 0.17$	$0.3*k_v = 0.03$
30% Horiz., 100% Vert.	$0.3*k_h = 0.05$	$1.0*k_v = 0.10$

Table 5. Stress Analysis – Seismic Coefficients

Seismic Combination	Horizontal	Vertical
100% Horiz., No Vert.	$1.0*k_h = 0.26$	-
100% Horiz., 30% Vert Horiz.	$1.0*k_h = 0.26$	$0.3*k_v = 0.05$
30% Horiz., 100% Vert.	$0.3*k_h = 0.08$	$1.0*k_v = 0.15$

6.9.2 Seismic Effects on Water (H_E)

Using a pseudo-static method, hydrodynamic effects on water were approximated by using the Westergaard method to calculate the seismic water force (H_E). The calculated hydrodynamic force is additive to the hydrostatic water pressure force. The distribution is parabolic with the line of action for the force H_E at 0.4*h above the base of the water column. Detailed explanation of method can be found in Section 4-7.e, EM 1110-2-2100.

$$H_E = \left(\frac{7}{12}\right) * k_{h/v} * \gamma_w * h^2$$

where:
H_E = Seismic water force (kN)
$k_{h/v}$ = horizontal/vertical seismic coefficient
γ_w = unit weight of water (kN/m^3)
h = depth of water (m)

Note: The Westergaard method assumes an infinite waterbody length in the horizontal direction, which is a reasonable simplifying assumption for most conditions. For the unique case where seismic acceleration of water in the cross-stream direction is considered to evaluate divider walls and training walls, the Westergaard method will conservatively overestimate the hydrodynamic force.

6.9.3 Seismic Effect on Soils

Dynamic soil pressures and associated forces were analyzed assuming non-yielding backfills and an elastic response using the Wood's method. As referenced in Section 5-5.a.1, EM 1110-2-2100, and verified by project specific calculation (Appendix D), this method can be expected to have dynamic soil pressures greater than those predicted by the Mononobe-Okabe method for yielding backfills.

The use of Wood's method is considered reasonable and was used for analysis of gate bays that have relatively short backfills (<4 m) consisting primarily of rock fill for erosion protection. The use of Wood's method may be overly conservative for taller retaining walls with height ranging above 4 m with backfill consisting of granular fills and/or glacial till materials.

For conditions where seismic load cases control the wall design, dynamic soil pressures and associated forces were analyzed assuming yielding backfills and an elastic response using the Mononobe-Okabe method. This method uses active soil pressure during seismic conditions to assess stability.

Mononobe-Okabe Method for Yielding Backfill: This method assumes a wedge of soil bounded by the structure and an assumed soil failure plane moves as a rigid body with the same horizontal acceleration. The driving (active) wedge force is calculated based on a combined static and dynamic pressure coefficient (K_{AE}), but must then be divided into static and dynamic components for cases where the water table is above the backfill. Detailed explanation of this method can be found in Appendix G, EM 1110-2-2100.

$$P_{PE} = \frac{1}{2} K_{PE} \gamma (1 - k_v) h^2 \tag{G-3}$$

$$K_{PE} = \frac{\cos^2(\phi - \psi - \theta)}{\cos\psi \cos^2\theta \cos(\psi - \theta + \delta)\left[1 - \sqrt{\dfrac{\sin(\phi + \delta)\sin(\phi - \psi + \beta)}{\cos(\beta - \theta)\cos(\psi - \theta + \delta)}}\right]^2} \tag{G-4}$$

γ = unit weight of soil
k_v = vertical acceleration in g's
h = height of structure
ϕ = internal friction angle of soil

$$\psi = \tan\left(\frac{k_h}{1-k_v}\right) = \text{seismic inertia angle}$$

k_h = horizontal acceleration in g's
θ = inclination of interface with respect to vertical (this definition of θ is different from θ 1in Coulomb's equations)
δ = soil-structure friction angle
β = inclination of soil surface (upward slopes away from the structure are positive)

(c) Simplifying Conditions. For the usual case where k_v, δ, and θ are taken to be zero, the equations reduce to:

$$K_{AE} = \frac{\cos^2(\phi - \psi)}{\cos^2\psi\left[1 + \sqrt{\frac{\sin\phi\,\sin(\phi - \psi - \beta)}{\cos\beta\,\cos\psi}}\right]^2} \tag{G-5}$$

6.10 CLIMATIC CONDITIONS

6.10.1 Snow Loads (S)

Snow loads were considered insignificant compared to hydrostatic loads and were not considered for the Service Spillway.

6.10.2 Thermal Loads (T)

Temperature changes will influence the overflow weir monoliths and retaining walls. Thermal effects and measures, such as placement of expansion/contraction joints in concrete structures, to relieve thermal loads will be addressed during Final Design.

6.10.3 Wind (W)

Wind loads were considered insignificant compared to hydrostatic loads and were not considered for stability of the Service Spillway. Wind loads during construction (prior to placement of backfill) will be included for design of retaining walls and divider pier components. Wind Load data is listed in Section 3.4.4 above.

7.0 STABILITY ANALYSIS

Representative monoliths were analyzed for bearing and sliding for loading conditions applicable to the Service Spillway as identified in the tables presented in Section 7.3. Analysis methodology is as follows:

7.1 METHODOLOGY

7.1.1 Overturning and Bearing Stress

The Rigid Body Method (conventional gravity method) was used for the analysis of overturning and bearing stresses criteria. Overturning was evaluated as a percentage of base that remains in compression and not a safety factor. This method is outlined in Section 7.2 of CDA Technical Bulletin No. 9. It uses the vector summation of all forces, including uplift, acting on the monolith to determine the vector resultant force (V), resultant force eccentricity (e) within the base, and moment (Ve/S) based on an elastic and homogeneous rectangular beam analogy. Stresses were calculated as indicated below and stability was assured by maintaining the resultant force eccentricity within acceptance criteria limits for various loading conditions.

$$\sigma = \frac{V}{A} \pm \frac{Ve}{S}$$

Where: σ = Applied bearing pressure at each end of base (kN/m^2)
V = Summation of forces normal to base (kN)
A = Base area in compression (m^2)
e = Eccentricity of normal load about centroid of base in compression (m)
S = Section modulus of base area in compression (m^3)

7.1.2 Sliding

The sliding factor of safety was calculated for each load case using the limit equilibrium method as outlined in Section 7.2 of CDA Technical Bulletin No. 9. This method reduces to the equation shown below for a single wedge system with a horizontal sliding plane, along the concrete/rock interface (CRI) or through rock/rock failure plane as identified for each hydraulic structure. For inclined sliding planes projecting from the base of shear key to bottom base slab at the toe, vertical and horizontal forces are resolved into components normal and parallel to the sliding plane. Rock mass between the inclined plane and structure base is included in the dead load summation (EM 1110-2-2100). For this project, cohesion was conservatively assumed to be zero and acceptance criteria for sliding were based only on friction angle.

$$SSF = \frac{(V tan\varphi + c\ A)}{H}$$

Where: SSF = Sliding Safety Factor
V = Summation of vertical loads including uplift (kN)
$tan\ \varphi$ = Coefficient along sliding plane being considered
c = Cohesion at concrete/rock or rock/rock interface (assumed as 0) (kN/m^3)
A = Base area in compression (m^2)
H = Summation of horizontal forces (kN)

7.1.3 Floatation

The floatation factor of safety was determined for components of the project such as stilling basins and apron slabs as outlined in Section 8.5, AT WCS. The factor of safety against floatation is defined as ratio of resisting gravity force to driving uplift force. The possible resistance due to friction between adjacent structures or between structure and backfill was neglected unless shear provisions were provided.

$$FSF = \frac{\Sigma N}{\Sigma U}$$

Where: FSF = Factor of Safety against Floatation
ΣN = Summation of normal forces
ΣU = Summation of uplift forces

7.2 ACCEPTANCE CRITERIA

The following acceptance criteria are based on AT WCS Chapter 8, CDA Table 6-4, and CDA Technical Bulletin No. 8, Section 6.0. The load cases to be evaluated are divided into five categories as listed in Table 6:

Usual Condition: Those conditions under which the structure is intended to serve during normal operations and further defined as a condition that has a high likelihood of occurring within the design life of the structure. For the Service Spillway, this includes flood events up to the 50-year frequency flood (high hazard classified structures).

Unusual Condition: Those conditions that occur infrequently and may stress the structure more, under certain aspects, than normal conditions and may occur within the design life of the structure. Unusual load conditions include construction conditions, maintenance conditions, flood events between the 50-year and 1000-year frequency, infrequent earthquake events other than the MDE, and plugged drain conditions for Usual Load Cases.

Extreme – Flood: Extreme Load Conditions have a very remote likelihood of occurring with the design life of the structure. For the SR1 project, it is defined as those floods that occur from the 1000-year frequency event up to the structure's IDF. For the Service Spillway, it would occur when the IDF is considered with no diversion and the spillway gates open.

Extreme – Earthquake: For the SR1 project, the Extreme - Earthquake load condition to be assessed is the MDE as it has a very remote likelihood of occurring with the design life of the structure. The MDE is applied to the Usual Condition load cases. The Extreme – Earthquake condition is used to establish Post-Earthquake condition of the hydraulic structure. Thus, there are no stability acceptance criteria for this condition.

Post-Earthquake: The Post-Earthquake condition assesses the stability of the hydraulic structure following the applied seismic event based on earthquake induced cracking at the foundation structural interface and within the structure so that it is still capable of resisting the Usual Loading.

Table 6. Acceptance Criteria for Hydraulic Structures

Loading Combination	Position of Resultant Force (Percent of Base in Compression)[1]	Normal Compression Stress[2]	Sliding Safety Factor (Friction Only)	Floatation Safety Factor
Usual	Middle third of the base: 100% compression	<0.3 x f_c	≥1.5	≥1.5
Unusual	Middle third of the base: 100% compression	<0.5 x f_c	≥1.3	≥1.3
Extreme Flood	Within middle half of the base, and all other acceptance criteria must be met	<0.5 x f_c	≥1.1	≥1.1
Extreme Earthquake	Within the base, except where an instantaneous occurrence of resultant outside the base may be acceptable	<0.9 x f_c	Note [3]	
Post-Earthquake	Within middle half of the base	<0.5 x f_c	≥1.0	≥1.1

[1] Foundation bearing stress is compared to allowable stress determined from Geotechnical Investigation

[2] Where f_c = compressive strength of concrete

[3] The earthquake load case is used to establish post-earthquake condition of the structure

7.3 LOAD CONDITIONS

Load conditions varied for various Service Spillway structures based on configuration and location of applied load. The following sections summarize load conditions for various structures.

7.3.1 Service Spillway – Gate Structure

Table 7. Gate Structure – Load Conditions

Usual Load Cases		
U1	Usual Condition - Normal Operation Prior to Initiation of Diversion (Winter Condition) Design inflow 160 m³/s with no diversion + Ice (both crest gates open, EL 1210.0) Headwater: EL 1212.1 Tailwater: EL 1211.8	D+H+E+U+I
U2	Usual Condition - Diversion Operation – 50 Year Frequency Flood Inflow 530 m³/s with diversion of 370 m³/s + Debris Impact Regulating crest gate at EL 1212.1 and guard crest gate closed, EL 1215.0 Headwater: EL 1214.6 Tailwater: EL 1211.8	D+H+E+U
Unusual Load Cases		
UN1	Unusual Condition - Diversion Operation – 2013 Design Flood Inflow 1240 m³/s with diversion of 600 m³/s + Debris Impact Regulating crest gate open, EL 1210.0, and guard crest gate at EL 1213.5 Headwater: EL 1215.8 Tailwater: EL 1213.1	D+H+E+U+I
UN2	Unusual Condition – Crest Gate Failure - Diversion Operation – 2013 Design Flood Inflow 1240 m³/s with diversion of 600 m³/s + Debris Impact Regulating crest gate open, EL 1210.0, and guard crest gate closed, EL 1215.0 Headwater: EL 1216.1 Tailwater: EL 1213.0	D+H+E+U+I
UN3	Unusual Condition – No Diversion - 1000 Year Design Flood – Regulatory - Inflow 1930 m³/s with no diversion (Both crest gates open, EL 1210.0) Headwater: EL 1217.0 Tailwater: EL 1214.7	D+H+E+U
UN4	Unusual Condition – Construction/Maintenance - Single gate bay dewatered 100 Year Frequency Flood – Inflow 765 m³/s with diversion of 600 m³/s Headwater: EL 1215.0 Tailwater: EL 1211.9 dewatered; EL 1212.5 with flow	D+H+E+U
Extreme – Flood		
E1	Extreme Condition - IDF Inflow 2210 m³/s with no diversion, both crest gates open, EL 1210.0 Headwater: EL 1217.3 Tailwater: 1214.9	D+H+E+U+I
Extreme – Earthquake used to develop Post-Seismic Condition		
Post-Seismic		
E2	Extreme Condition – EDGM applied to U1 Load Case If E2 loading results in cracked base, modify structure to prevent cracked base. Headwater: EL 1212.1 Tailwater: EL 1211.8	Load Case$_{U1}$+ Q
E3	Extreme Condition – EDGM applied to U2 Load Case If E3 loading results in cracked base, modify structure to prevent cracked base. Headwater: EL 1214.6 Tailwater: EL 1211.8	Load Case$_{U2}$+ Q
Notes		
D	Dead Load: Includes weight of concrete (C), water (H), and gates (G)	
H	Hydrostatic Loads: See each load case for various Headwater and Tailwater conditions.	
E	Earth / Sediment / Siltation: Include horizontal and vertical loads	
U	Uplift Pressure	
I	Static Ice Load <u>or</u> Impact Load: Apply one or the other depending on load case	
Q	Seismic Load: Design Earthquake load * Seismic evaluation to consider simultaneous vertical and horizontal for three combinations.	

7.3.2 Service Spillway – Stilling Basins

Table 8. Stilling Basins – Load Conditions

F1 Usual	Usual Condition – Spillway Discharge 160 m³/s (crest gates open) Water Weight based on: TWEL = 1211.8 Linear Uplift based on: HWEL = 1212.1 (1211.8 – Drain Effective) TWEL = 1211.8	(D+H) / U
F2 Unusual	Unusual Condition – Flood Condition Spillway Discharge 640 m³/s Water Weight based on: TWEL = 1213.1 Linear Uplift based on: HWEL = 1215.8 TWEL = 1213.1	(D+H) / U
F3 Unusual	Unusual Condition – Construction /Maintenance/ single gate bay dewatered Water Weight: Not Included for this condition Linear Uplift based on: HWEL = 1214.6 TWEL = 1211.8	D / U
F4 Extreme	Extreme Condition – Drain Plugged with Crest Gates Closed and 160 m³/s discharge Water Weight based on: TWEL = 1211.8 Linear Uplift based on: HWEL = 1215.8 TWEL = 1211.8	(D+H) / U
Notes		
D	Dead Load: Includes concrete (C), water (H)	
H	Hydrostatic Loads: See each load case for various Headwater and Tailwater conditions.	
U	Uplift Load	

7.3.3 Service Spillway – Retaining Walls

Table 9. Retaining Walls – Load Conditions

Usual Load Cases		
U1	Usual Condition – At-Rest Soil Loading Groundwater at 0.5 m above drain centerline	D+H+E+U
Unusual Load Cases		
UN1	Unusual Condition – At-Rest Soil Loading + Equipment Surcharge Groundwater at 0.5 m above drain centerline	D+H+E+U+L
UN2	Unusual Condition – At-Rest Soil Loading – Ineffective Drain Groundwater and uplift at 2013 Design Flood HWEL or TWEL depending on location of wall Section being analyzed.	D+H+E+U
Seismic		
E1	Extreme Condition – Seismic Load Groundwater at 0.5 m above drain centerline	D+H+E+U+Q
Notes		
D	Dead Load: Includes concrete (C), backfill (E),	
H	Hydrostatic Load: Groundwater 0.5 m above drain centerline, use buoyant weight of soil on heel.	
E	Earth / Backfill / Sediment / Siltation: Include horizontal and vertical loads	
U	Uplift Load	
L	Live Loads: Equipment Surcharge	
Q	Seismic Load: Design Earthquake load * Seismic evaluation to consider simultaneous vertical and horizontal for three combinations.	

7.4 SUMMARY OF STABILITY ANALYSES

Stability analyses for the Service Spillway gate structures, stilling basins, retaining walls, and abutment / training walls were performed in accordance with criteria and procedures outlined in the CDA Technical Bulletin No. 9, "Structural Considerations for Dam Safety", and the USACE EM 1110-2-2100 "Stability Analysis of Concrete Structures." Each section was evaluated for Usual, Unusual, Extreme, and Post-Seismic loading conditions representing potential conditions the structure will experience during its design life. Summaries of the stability calculation results are presented in the sections that follow. Refer to the Appendices for stability calculations and results.

7.4.1 Gate Structure

The Service Spillway gate structures were analyzed as two distinct monoliths: Gate Crest Blocks (SS-2A & SS-4A) and Center Pier Block (SS-3A).

The Gate Crest Blocks consist of a 4 m thick apron slab at Elevation 1210.0 m with an upstream key extending down to Elevation 1204.0 m. The upstream key provides a seepage cut-off, erosion protection and additional sliding resistance. Downstream of the gate, the Gate Crest Block slopes down to the stilling basin floor, Elevation 1208.0 m. The crest gate is fixed to the apron slab and transfers load vertically but does not transfer load laterally to piers or abutments. The SS-2A and SS-4A Gate Crest Blocks were analyzed separately to account for the assumed operation of guard (right) gate and regulating (left) gate, respectively.

The Center Pier Block is supported on a foundation with the same geometry as the Gate Crest Blocks, but includes a 2.0 m wide center pier extending to Elevation 1216.0 m. The Center Pier divides the left and right spillway bays and acts as an abutment for the crest gates. This center monolith is subjected to the same loads as the gate crest blocks with the addition of lateral loads due to the divider wall. The divider wall was analyzed for lateral load associated with unbalanced water load on one side of wall during dewatered maintenance conditions and peak seismic acceleration in the cross-stream direction with unbalanced water load.

The stability analyses for the structures were performed using a Mathcad spreadsheet. Results of the analyses are summarized in Tables 10, 11, and 12 and calculations are included in Appendix E.2-1.

Stability analyses indicate a relatively light structure sensitive to sliding when crest gates are used to retain water during diversion operation. Stability calculations indicate results within the limits of acceptance criteria utilizing an inclined plane for analysis. For all loading conditions considered, floatation factors of safety were above required, 100 percent of the base was in compression, and sliding factors of safety were above required. Stability results indicate that sliding stability was the primary concern due to the low friction angle of the foundation rock. To ensure an inclined failure plane utilized in the analysis was valid, the upstream shear key was designed as a structural element. The controlling load case was Load Case E3 (EDGM applied during 50-Year Flood).

Table 10. Gate Crest Block 2A – Stability Analysis Summary

Load Case	Headwater Elevation (m)	Tailwater Elevation (m)	Critical Depth at Gate Lip (m)	Uplift Force (kN)	Floatation Safety Factor (FSF)		Sliding Safety Factor (SSF)		Foundation Bearing Stress		% Base in Compression

Notes:
7. See Appendix E.2-1 for definition of monolith description, analysis methodology, and stability calculations.
8. Analysis assumes inclined sliding plane, interface friction angle Φ = 26 degrees, and no cohesion.
9. Reported seismic results are controlling values for the three combinations of vertical and horizontal seismic load considered.

7.4.2 Stilling Basin

The Service Spillway Stilling Basins consist of a 2.0 m thick by 18.0 m long concrete slab with 0.6 m high end sill. The stilling basin floor is at Elevation 1208.0 m. A 1.0 m thick downstream cutoff wall extends to Elevation 1204.0 m. The upstream end of the slab supports the downstream end of the gate crest blocks and center pier block.

Where the required Floatation Safety Factor was unable to be met through the dead weight of the structure, the unit area anchor force required to resist the uplift pressure was calculated. The stability analyses for the structure were performed using a Mathcad spreadsheet. Results of the analyses are summarized in Table 13 and calculations are included in Appendix E.2-2.

Table 13. Stilling Basin (2B & 4B) – Floatation Stability Summary

Load Comb.	Σ Vert. Forces (kN)	Σ Uplift Forces (kN)	FS Req'd	FS Calc.	Required Anchor Force (kN/m^2)
F1 Usual Normal Operation	22123	15124	1.5	1.46	2.1
F2 Unusual 2013 Flood	25471	19973	1.3	1.28	1.9
F3 Unusual Constr./Dewatered	12338	14936	1.3	0.83	27.0
F4 Extreme Ineffective Drain	22123	17439	1.1	1.27	0.0

Stability analysis results indicate a need for anchorage of the stilling basin into the bedrock below, however the required anchor force is within the capability of conventional active or passive ground anchors. The controlling Load Case for the stilling basin anchors is F3 (Unusual - Single Bay Dewatered for Maintenance/Construction).

7.4.3 Right Abutment Pier

The Service Spillway Right Abutment Pier, Blocks 1A and 1B, serves as an abutment wall for the crest gate, a face form for the Auxiliary Spillway overflow weir; a retaining wall for the Auxiliary Spillway fuse plug and soil overlay; training wall for Service Spillway and Auxiliary Spillway, and potential hub for dewatering cofferdams during construction. Each block is designed as a gravity monolith that provides separation between Service Spillway and Auxiliary Spillway during operation. During certain phases of construction, the right abutment may be subjected to hydraulic loading during construction activity of the Auxiliary Spillway. The abutment base is monolithic with the gate structure and stilling basin base mats. No gate load is applied to the abutment wall. The top of wall is set at the PMF maximum headpond, Elevation 1218.0 m, with no freeboard since it can be overtopped without consequences. The right abutment pier was designed to resist embankment loads in the cross-stream direction from the Auxiliary Spillway.

Stability analyses were performed in accordance with structural design criteria outlined previously. The stability analyses were performed using a Mathcad spreadsheet. The nose component (Block 1A) was analyzed for Usual, Unusual, and Extreme loading conditions representing the potential range of conditions the structure will be exposed to during the design life. In accordance with guidelines for hydraulic structures, at-rest soil pressures were used for all load case calculations except active soil pressures were used when considering seismic load cases.

Results of the analyses are summarized in Table 14 and calculations are included in Appendix E.2-3.

Table 14. Right Abutment – Stability Analysis Summary

Notes:
10. See Appendix E.1 for definition of monolith description, analysis methodology, and stability calculations.
11. Reported seismic results are controlling values for the three combinations of vertical and horizontal seismic load considered.

The principal factors affecting the abutment pier design include significant seismic force associated with relatively high weight of the structure; poor rock quality along the foundation interface; and relatively weak material (glacial till) anticipated in the backfill zone of influence.

For all loading conditions considered, floatation factors of safety were above required, 100 percent of the base was in compression, and sliding factors of safety were above required. Stability results indicate that sliding stability was the primary concern due to the low friction angle at the rock/rock bedding planes. The controlling load case is Load Case E3 (Seismic Effects applied to Load Case U2 – Diversion Operation).

7.4.4 Left Abutment Retaining Walls

The retaining walls that serve as the left abutment for the Service Spillway consist of counterforted or cantilever retaining walls with varying thickness and a stepped top of footing.

Blocks 5A and 5B retaining walls enclose the Gate Blocks and Stilling Basins and serve as the left abutment for the crest gates. Analysis of Block 5B is considered critical due to the increased upstand height. The Block 5B retaining wall extends from top of footing Elevation 1208.5 m behind the wall and top of footing Elevation 1208.0 m at the front of the wall to top of wall Elevation 1219.0 m. The wall varies in thickness between 0.8 m thick and 0.5 m thick. The footing is 2.5 m thick (at the back of the wall) with a 2.0 m deep heel key. The wall has 0.5 m thick counterforts

Blocks 5C and 5D retaining walls extend 43.0 m downstream of the Service Spillway stilling basin. Block 5C retaining walls extend from top of footing Elevation 1207.0 m to top of wall, Elevation 1219.0 m. The footing is 2.5 m thick with a 3.0 m deep heel key. Block 5D retaining walls extend from top of footing Elevation 1207.0 m with top of wall elevation varying between 1219.0 m to 1216.6 m. The footing is 2.5 m thick with a heel key stepping from 3.0 m deep to 2.5 m deep. The wall has 0.5 m thick counterforts at spacing varying from 3.2 m to 3.7 m. The downstream end of the retaining wall does not require counterforts. Block 5D was analyzed at the downstream end and at midsection.

Three representative sections were identified to capture the range of wall geometry and loading conditions for the left abutment. Representative sections are indicated on Figure 2 and described as follows.

- Section SS-5B: Counterfort wall serving as the stilling basin training wall. Crest gates do not transfer load laterally, so the stem is similar to other wall sections, but the footing is thicker to match the stilling basin concrete profile.

- Section SS-5C: Counterfort training wall downstream of the stilling basin representing the tallest wall in the Service Spillway. This section was considered one of the critical wall sections due to retained soil height, retained groundwater depth, minimal resistance on the toe, and potential for vehicle and equipment surcharge.

- Section SS-5D: Counterfort or cantilever wall serving as a downstream training wall and slope protection. This location downstream of the Service Spillway is subjected to different water loading and increased potential for rock scour along the toe than the upstream Section SS-5C retaining wall. Section SS-5D was analyzed at two sections to account for the geometric variability of the monolith.

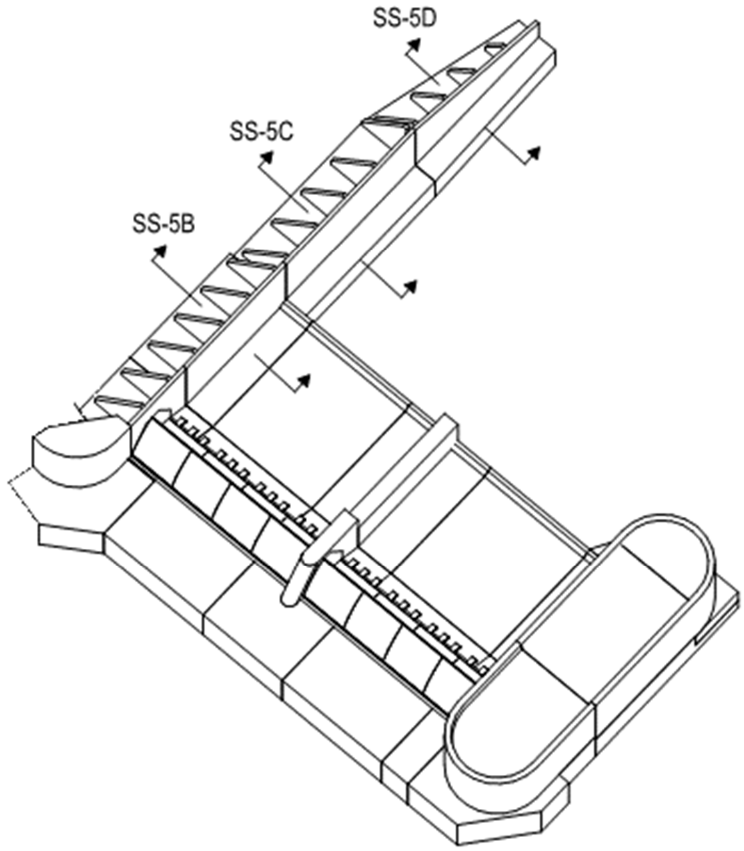

Figure 2. Service Spillway Retaining Wall Key Plan

Stability analyses were performed in accordance with the Structural Design Criteria outlined previously. The stability analyses for the structure were performed using an Excel spreadsheet. Each of the three representative wall sections was evaluated for Usual, Unusual, and Extreme loading conditions representing the potential range of conditions the structure will be exposed to during the design life. In accordance with guidelines for hydraulic structures, at-rest soil pressures were used for all Load Case calculations except active soil pressures were used when considering Seismic Load Cases. Results of the analyses are summarized in Table 15 and calculations are included in Appendix E.2-4.

Table 15. Left Abutment Retaining Walls – Stability Analysis Summary

Notes:
12. See Appendix E.2-3 for definition of wall section description, analysis methodology, and stability calculations.
13. Analysis assumes inclined sliding plane, interface friction angle Φ = 26 degrees, and no cohesion.
14. Seismic results utilize active soil pressure coefficients for stability values reported.

The principal factors affecting the retaining wall design include significant driving force associated with high groundwater conditions; poor rock quality along the foundation interface; relatively weak material (glacial till) anticipated in the backfill zone of influence; and potential for significant uplift pressure when water levels recede faster than pore pressure can dissipate. Preliminary design calculations indicate that retaining walls are most sensitive to groundwater conditions, concrete shear capacity of stem walls, and sliding stability provided by foundation shear keys.

For all loading conditions considered, floatation factors of safety were above required, 100 percent of the base was in compression, and sliding factors of safety were above required. Stability results indicate that sliding stability was the primary concern due to the low friction angle at the rock/rock bedding planes. To achieve stability results within the limits of acceptance criteria, a shear key at the heel of footing, and a wall drain system were required. The structural shear key ensures an inclined base sliding analysis is valid, and the wall drain system significantly reduces load associated with groundwater. The controlling load case is Load Case UN2 (high groundwater due to ineffective drains).

8.0 STRENGTH EVALUATION AND DESIGN

Strength evaluation of individual elements or members of structures and monoliths was used to verify member sizes based on application of factored loads as described in ABC with some adjustments for more severe conditions or loads not considered in the ABC.

Reinforced concrete design was performed according to Design of Concrete Structures, CSA A23.3-14 with the additional requirements of the CSA's SEED Document – *Structural Design of Wastewater Treatment Plants-2018* for revisions addressing service load conditions, water tightness, shrinkage and temperature reinforcement, and crack control. The Seed Document contains references to ACI 350M-06 for modifying CSA A23.3-14.

In general, structural analysis and design was performed manually using Mathcad or Excel spreadsheets. For complex structures, a commercial Three Dimensional- Finite Element Model (FEM) was used to evaluate multiple load combinations, identify stress concentrations, and generate shear and moment values for design of individual elements. The FEM was supplemented with manual calculations to verify/validate model results and where necessary, refine the analysis of individual elements. Based on model output, a combination of manual calculation and commercial software were used for strength design. Additional elements evaluated as part of strength design included joint detailing, equipment anchorage, and embedded parts.

The Service Spillway is designed as a mass concrete gravity structure sized primarily for stability. Most elements exceed 2 m in thickness and are surface reinforced for crack control and durability rather than strength. Each element is checked to ensure calculated stress from factored loads do not exceed member capacity. Some elements which are subjected to higher stress and controlled by strength design include:

- Divider wall pier which is a 6 m high cantilever wall subjected to unbalanced water load and lateral seismic loading in the cross-stream direction;
- Upstream shear keys which are a structural element required for sliding stability; and
- Crest gate hinge anchor bolts.

For each of these elements, preliminary strength calculations were performed to acquire order-of-magnitude stress and establish basis for preliminary member sizing. Strength calculations to develop reinforcement sizing and steel detailing will be performed during Final Design.

The retaining wall monoliths will be detailed during Final Design using commercially available finite element software with beam, shell, and solid elements where appropriate.

Footings were designed as a structural slab on an elastic foundation as the stability analysis concluded that the foundations are in compression based on the value of the subgrade modulus.

The critical sections considered for evaluation of shear and moment were at half the footing thickness as measured from the face of the wall for the toe and at the face of the wall for the heel. In general, footing geometry was dictated by the gate bay limit of excavation, and desired hydraulic profile resulting in footing thicknesses exceeding 1.5 to 2 m with relatively low stress at the critical sections.

Cantilever stem walls were designed as a cantilever beam fixed at the footing interface. The critical sections considered for evaluation were at the base of stem, 1/3 of the stem height, and 2/3 of the stem height. Wall thickness increases from top to bottom with thickness ranging from 0.5 to 2.0 m, respectively. Due to increased thickness and increased load near the base of walls, shear strength becomes a controlling factor, and transverse shear reinforcement (cross ties) will be required.

Counterfort stem walls were designed as continuous beams spanning horizontally between counterforts, with only the lower portions of the stem exhibiting plate action and designed as a cantilever from the footing to a height approximately half of the counterfort spacing.

Counterfort heels were designed with a similar load path as the stem. The portion of footing closest to the stem acts as a cantilever beam, and the portion which is further from the stem by more than half of counterfort spacing, was designed as a continuous beam spanning between counterforts.

Counterforts were designed as cantilever deep beams fixed at the footing interface. The wall serves as the beam flange, and the flange width was calculated as the lesser of 12 times the thickness of the wall or half the distance between the counterforts using equation 10.3.3 of CSA 23.3. The counterfort was considered to act as the stem of a tee beam and is fixed at its base. The tee beam was sized so that the neutral axis of the tee beam was located within the flange. The depth of the tee beam is the perpendicular distance between the sloping face of the counterfort and the vertical face of the retaining wall. Critical sections for evaluation of counterfort shear and moments include the foundation interface and the third points of the counterfort.

9.0 SERVICEABILITY

Serviceability concerns with the Service Spillway relate primarily to concrete durability, shrinkage control, and relief of internal stresses associated with volume changes.

Shrinkage control and volume changes are addressed primarily with placement sequence, mix design, surface reinforcement, and material specifications. The design includes joint locations that define monoliths with balanced aspect ratios and placements less than 12 m to 18 m in any one direction. Expanded guidance related to placement sequence and horizontal joint locations will be addressed during Final Design.

Allowance for thermal expansion/contraction is critical for gate operation. These effects are addressed primarily through clearance between gate and end walls with provisions for side seals and an embedded UHMW-PE (Ultra High Molecular Weight Polyethylene) wall plate to cover the full extent of gate travel.

Protection of the gate leaf is a serviceability concern due the heavy bed load of sand, gravel, and cobbles in the Elbow River. To protect the gate leaf from abrasion and premature deterioration, a surface skin of UHMW-PE is recommended on the crest gate.

Serviceability concerns for the retaining walls relate to concrete durability, shrinkage, crack control, volume changes and wall deflections. Durability, shrinkage, and crack control are achieved primarily through reinforcement placement, high reinforcement ratios, and use of high load factors that account for both strength and serviceability in accordance with the CSA SEED document. Volume changes are addressed primarily with placement sequence, mix design, surface reinforcement, and material specifications. The retaining walls include vertical joints at locations of footing geometry change, and at locations needed to maintain horizontal wall lengths less than 12 to 18 m. Expanded guidance related to placement sequence and horizontal joint locations will be addressed as part of Final Design.

Wall deflections are controlled using counterforts to provide rigidity, by reducing wall and footing spans, and using at-rest soil pressure when sizing wall elements. Locations where wall deflection is critical includes walls serving as gate bay abutments, walls adjacent to access roads and control building foundation, and walls along the upstream face which must maintain tight joints for water retention. Wall deflections will be addressed during Final Design.

10.0 CONSTRUCTION CONSIDERATIONS

Construction specifications and details for the Service Spillway will be furthered during Final Design. The following construction considerations are noted:

- Restricted periods for disturbance within the Elbow River are May 1 to July 16 and September 16 to April 14. This means that construction of a river diversion and the coffer-works for the Service Spillway must take place between April 15 and April 31 or July 15 and September 15.
- Dewatering of excavated areas will be required to sufficiently enable construction of the Service Spillway. The services of a specialist dewatering contractor may be needed.
- Excavation will be to competent bedrock. All soil, including alluvium, talus and other unconsolidated deposits should be removed to expose unweathered or slightly weathered bedrock. Excavation should be performed by mechanical means only; blasting will not be permitted.
- Foundation preparation will require special care in cleaning and preparation of concrete/rock interface. Care must be taken during excavation of the foundation to identify unsuitable rock conditions or weak bedding planes that could impact stability. Loose material and rock overhangs will need to be removed. Small voids will be filled with dental concrete. Once ready, foundation protection will be placed over exposed rock.
- If extensive jointing/fracturing is observed after excavation of the foundation, consolidation grouting may be required.
- Shear keys are required to maintain adequate sliding stability for gate monoliths and retaining walls. Care should be taken during excavation of the shear key trenches to identify unsuitable rock conditions or weak beading planes that could compromise capacity of the shear key.
- Anchors, along with a foundation underdrain to relieve uplift pressures, will be required to maintain adequate factors of safety against floatation in the stilling basin. These are envisioned as static anchors drilled and grouted in a grid pattern prior to placement of the stilling basin concrete.
- Lift joints in the base mats and footings will be required to reduce placement thickness, control heat of hydration, reduce crack potential, and develop hydraulic profile. Changes in mix design will be required to provide lower cement ratio and larger aggregate in mass concrete placements, with higher strength and smaller aggregate mix placed as part of the reinforced "surface skin".

- Vertical joints in gate bays and stilling basins will be spaced and detailed so that "closure grouting" needed to accommodate shrinkage during initial curing is not needed.

- Horizontal joints in the retaining wall stems will be required to reduce placement height to avoid potential for aggregate separation, ensure access for adequate vibration, reduce potential for form bulging, and allow for fill placement to progress in stages with wall construction.

- Joint preparation will require special attention to ensure proper installation of water stops, shear keys, dowels, and reinforcement. Joint alignment and water-tight integrity are critical for minimizing water levels on the back side of retaining walls.

- Hinge anchors, airlines, control lines, restraining strap pockets, and wall plates for Service Spillway crest gates will need to be considered during concrete preparation and placement. Placement tolerance for some of these items are tighter than typical heavy construction tolerance due to fit and operating clearance requirements.

- Procurement lead-time for gate embedments and components will likely be driven by steel availability and fabrication schedules. An allowance of 12 to 18 months is recommended to account for design, shop drawing review/approval, fabrication, testing, and delivery.

- The Service Spillway right abutment or the divider pier may serve as a component of the water control plan during construction. These need to be functional prior to completion of the Service Spillway. Many of these details are at the discretion of the Contractor but will need to be coordinated with the Engineer to ensure appropriate loading conditions have been considered in the water control plan design.

- Placement of free draining backfill, filter material, and drain systems are critical for minimizing groundwater levels behind the walls. Material selection and installation methods will require strict quality control and monitoring.

- Fill placement and compaction methods must be reviewed and monitored to ensure wall movement does not occur during construction.

- Construction sequencing will be required to ensure the Service Spillway and crest gates are fully functional before the Elbow River is diverted back through the Service Spillway.

Appendix E.2-1 GATE BLOCKS AND CENTER PIER

Calculation Section I

Results Summary Table (overview)

Table E2-1.1 – Service Spillway Centre Pier – Stability Analysis Summary

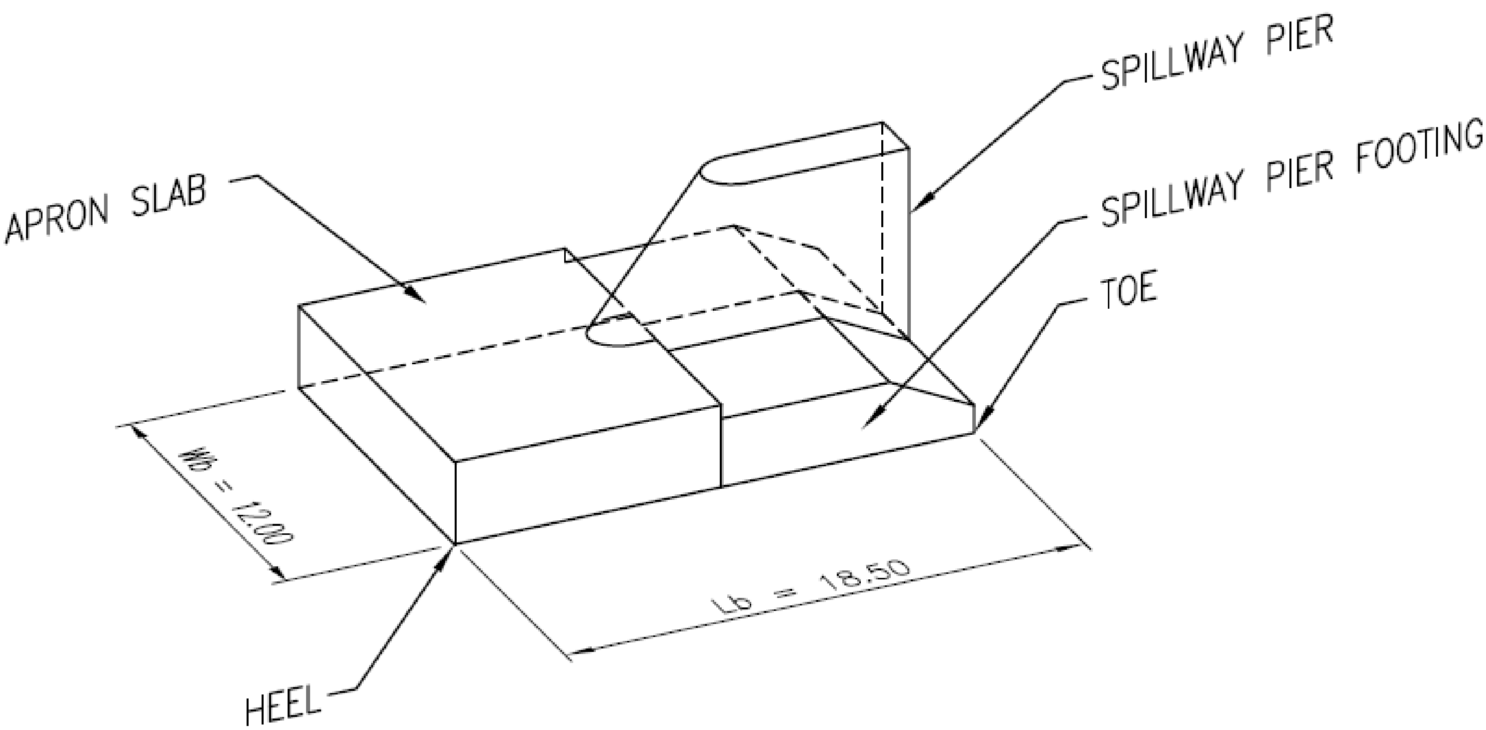
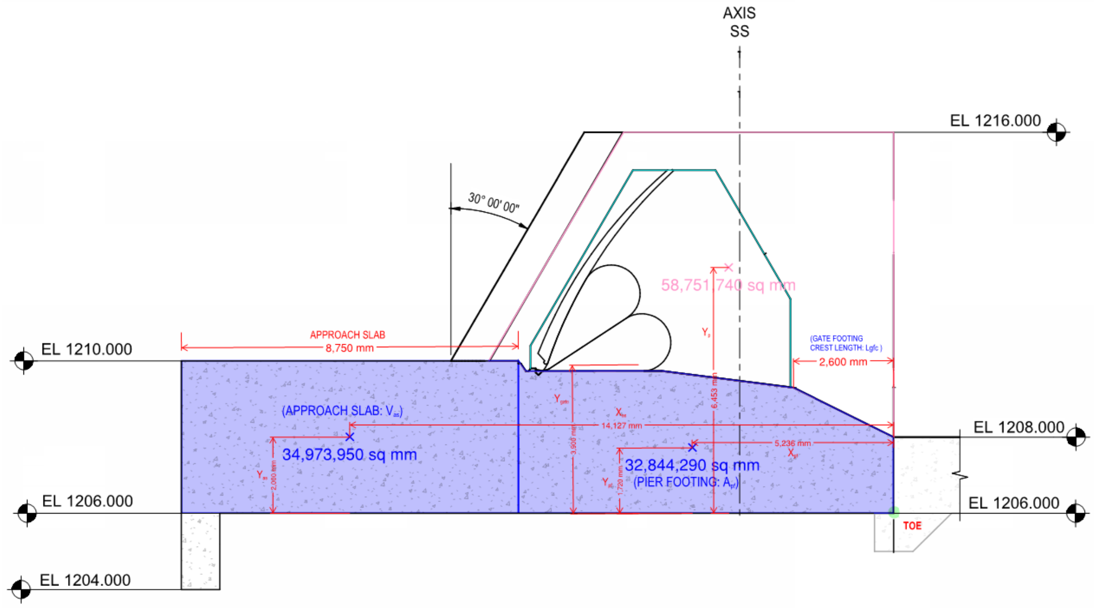
Structure Isometric:



SERVICE SPILLWAY - CENTER PIER - 3A

REGION COLOR CONVENTION User Input | Calculation Highlights | Results

SERVICE SPILLWAY DIMENSIONAL INPUT PARAMETERS



BASE SECTION PROPERTIES

Base Length: $L_b := 18.50\text{m}$ $\quad$ $\text{Kern} := \dfrac{L_b}{6} = 3.08\,\text{m}$

Stilling Basin Length: $L_{sb} := 17.0\text{m}$

Base Width: $W_b := 12.00\text{m}$

Area of Base: $A_b := L_b \cdot W_b = 222\,\text{m}^2$

Section Modulus of Base: $S_b := \dfrac{\left(W_b \cdot L_b^{\,2}\right)}{6} = 684.5\,\text{m}^3$

PIERS

Pier Cross Sectional Area: $Ap := 58.38\text{m}^2$ $\quad$ From Mass Properties ACAD Command

Pier Width: $w_p := 2.00\text{m}$

Volume of Pier Section: $V_p := Ap \cdot w_p = 116.76 \cdot \text{m}^3$

FOOTINGS (fixed crest and approach slab)

Pier Footing Cross Sectional Area: $A_{pf} := 32.84\text{m}^2$ $\quad$ From Mass Properties ACAD Command

Pier/Gate Footing Width/Length: $w_{pf} := W_b = 12.00\,\text{m}$ $\quad$ $L_{pf} := 11.5\text{m}$ $\quad$ $L_{gf} := 9.75\text{m}$

Total Fixed Crest Footing Volume: $V_{pf} := A_{pf} \cdot w_{pf} = 394.1 \cdot \text{m}^3$

Approach Slab Dimensions: $h_{as} := 4.00\text{m}$ $\quad$ $L_{as} := 8.75\text{m}$ $\quad$ $w_{as} := W_b = 12.00\,\text{m}$

Gate Footing Crest Length: $L_{gfc} := 2.6\text{m}$

Total Approach Slab Volume: $V_{as} := h_{as} \cdot w_{as} \cdot L_{as} = 420.0 \cdot \text{m}^3$

FOUNDATION PARAMETERS

Granular Fill Internal Angle of Friction: $\phi := 34 \cdot \dfrac{\pi}{180} = 0.593$ $\quad$ Radians $\quad$ (Section 5.3, Design Criteria)

Friction Angle at Base Concrete / Rock Interface: $\phi_{rock} := 26$ $\quad$ (Section 5.2, Design Criteria)

Base Friction Coefficient: $\tan_\phi := \tan\left(\phi_{rock} \dfrac{\pi}{180}\right) = 0.488$ $\quad$ radians

MATERIAL PROPERTIES

Unit Weight of Concrete: $\gamma_c := 23.5\ \frac{kN}{m^3}$ (Section 7.1, Design Criteria)

Unit Weight of Rock Fill: $\gamma_r := 22.0\ \frac{kN}{m^3}$ (Section 5.3, Design Criteria)

$\phi_{backfill} := \left(20\ \frac{\pi}{180}\right) = 0.35$ radians Assume Rip Rap Backfill

Unit Weight of Water: $\gamma_w := 9.81\ \frac{kN}{m^3}$ (Section 7.2, Design Criteria)

SHEAR KEY PARAMETERS

Key Depth: $d_{key} := 2.00m$

Key Width: $w_{key} := 1.00m$

CONCRETE DEAD LOADS

Pier: $D_p := V_p \cdot \gamma_c = 2743.9 \cdot kN$

Pier Footing (fixed crest): $D_{pf} := V_{pf} \cdot \gamma_c = 9260.88 \cdot kN$

Approach Slab: $D_{as} := V_{as} \cdot \gamma_c + d_{key} \cdot w_{key} \cdot w_{as} \cdot \gamma_c = 10434 \cdot kN$

Total Concrete Dead Loads: $D_{conc} := D_p + D_{pf} + D_{as} = 22438.74 \cdot kN$

Rock Section Mobilized for Inclined Sliding Failure:

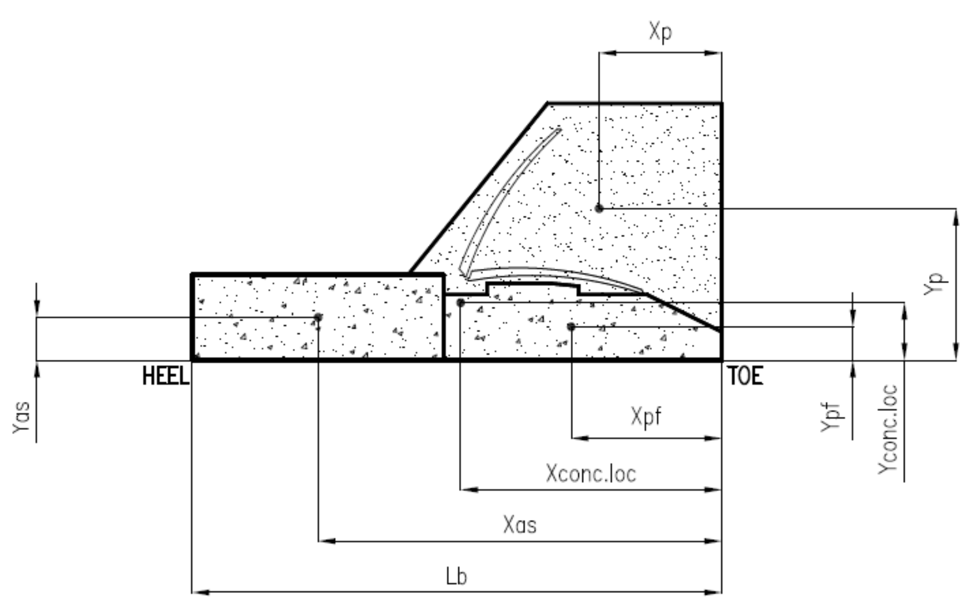
Area of Rock Section Mobilized: $A_{rs} := \frac{\left(L_b - w_{key}\right) \cdot d_{key}}{2} = 17.5\,m^2$

Rock Mass Mobilized: $V_{rs} := A_{rs} \cdot \gamma_r \cdot W_b = 4620 \cdot kN$

(Pore pressure taken along assumed inclined sliding plane)

Distance from Toe to COG of Rock Section: $L_{rs} := \frac{2}{3} \cdot \left(L_b - w_{key}\right) = 11.67\,m$ (From Bluebeam Measurement)

Rock Mass Mobilized Moment: $\Sigma M_{rs} := V_{rs} \cdot L_{rs} = 53900 \cdot kN \cdot m$



MOMENT ARM FROM TOE TO COG OF COMPONENT

Distance from Toe to COG of Pier: $X_p := 4.28\text{m}$ From Bluebeam Measurement

Dist. from Toe to COG of Pier Footing: $X_{pf} := 5.24\text{m}$ From Bluebeam Measurement

Dist. from Toe to COG of Approach Slab: $X_{as} := 14.33\text{m}$ From Bluebeam Measurement

Distance From Toe to COG of Concrete Dead Load :

$$X_{conc.loc} := \frac{\left(X_p \cdot D_p + X_{pf} \cdot D_{pf} + X_{as} \cdot D_{as}\right)}{D_{conc}} = 9.35\,\text{m}$$

MOMENT ARM FROM BASE OF FOOTING TO COG OF COMPONENT

Distance from Base to COG of Pier: $Y_p := 6.45\text{m}$ From Bluebeam Measurement

Dist. from Base to COG of Pier Footing: $Y_{pf} := 1.72\text{m}$ From Bluebeam Measurement

Dist. from Base to COG of Approach Slab: $Y_{as} := 2.00\text{m}$ From Bluebeam Measurement

Distance Above Base to COG of Concrete Dead Load:

$$Y_{conc.loc} := \frac{\left(Y_p \cdot D_p + Y_{pf} \cdot D_{pf} + Y_{as} \cdot D_{as}\right)}{D_{conc}} = 2.43\,\text{m}$$

CREST GATE (OBERMEYER)

Dead Load of Gates: $D_{Gate} := 140\text{kN}$ Vendor dwgs. Q-200 Series

Distance from Toe to COG of Gates: $X_{gate} := 9.50\text{m}$

Distance from Base to COG of Gates: $Y_{gate} := 3.90\text{m}$ Distance from base to top of Pier Footing

DEAD LOAD SUMMATION:

$\Sigma V_{DL} := D_{conc} + D_{Gate} = 22578.7 \cdot \text{kN}$

$\Sigma M_{DL} := D_{conc} \cdot X_{conc.loc} + D_{Gate} \cdot X_{gate} = 211119.95 \cdot \text{kN} \cdot \text{m}$

SERVICE SPILLWAY GATE STRUCTURE 2D HYDRAULIC MODEL RESULTS

Applicable or Relevent Scenarios: Service Spillway (SS) - Gate Structure

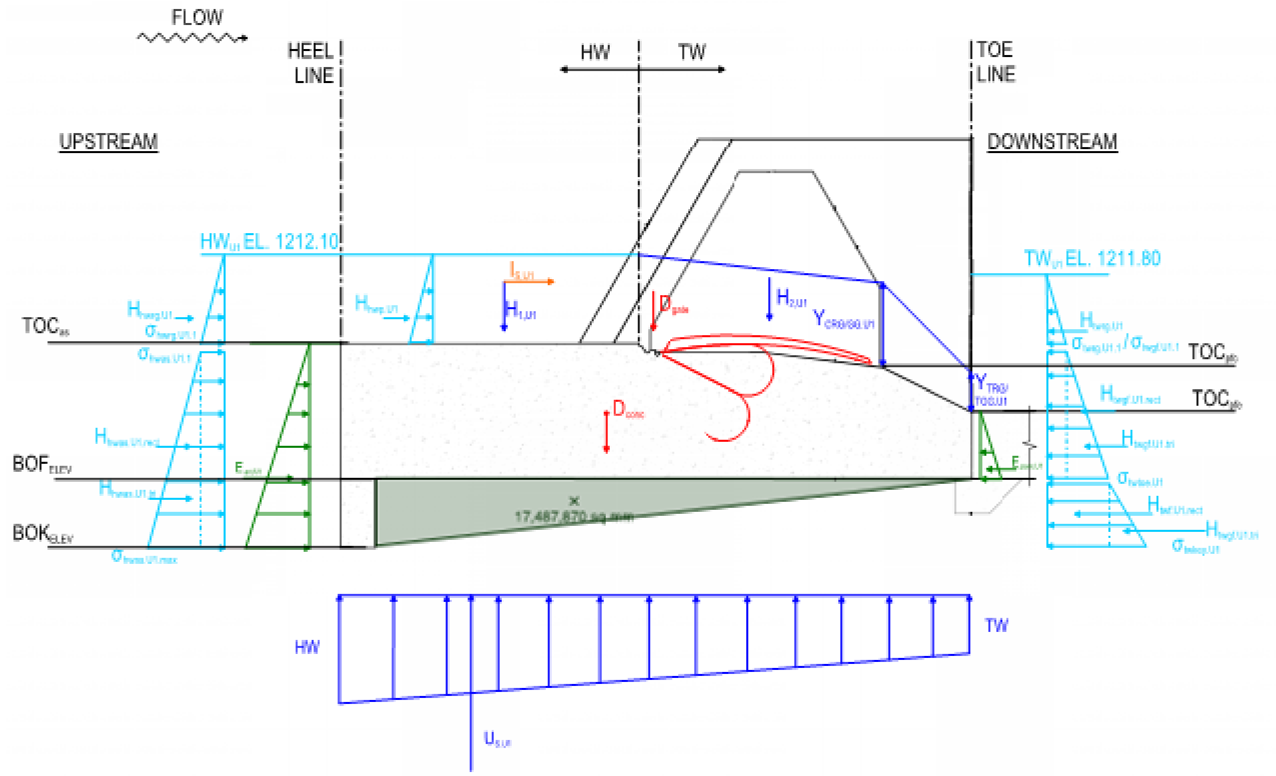
U1 DESIGN CASE



ACCEPTANCE PARAMETERS

Required Factor of Safety for Sliding: $FS_{req.U1.sl} := 1.5$ (Without Cohesion) (Section 8.1, Design Criteria)

Resultant Within Middle Third of Base: $e \le \frac{L_b}{6} \wedge e \ge \frac{-L_b}{6}$

Allowable Rock Bearing Pressure: $\sigma_{allow.U1} := 1270 \cdot \frac{kN}{m^2}$ (Section 5.2, Design Criteria)

INPUT PARAMETERS

Headwater Elevation: $HW_{U1} := 1212.10m$ (Section 8.3, Design Criteria)

Tailwater Elevation: $TW_{U1} := 1211.80m$ (Section 8.3, Design Criteria)

Bottom of Footing Elevation: $BOF_{elev} := 1206.00m$

Approach Slab Top of Concrete Elevation at Upstream Face: $TOC_{as} := 1210.00m$

Pier Footing Top of Concrete Elevation at Stilling Basin: $TOC_{pfe} := 1208.00m$

Pier Footing Top of Concrete Elevation at Center of Footing: $TOC_{pfc} := 1209.30m$

Top of Guard/ Regulating Gate Elevation: $TOP_{rg.U1} := 1210.00m$ $TOP_{gg.U1} := 1210.00m$

Bottom of Key Elevation: $BOK_{elev} := BOF_{elev} - d_{key} = 1204\,m$

Gates are open when top of gate elevation is at 1210.00m

Gates are closed/up when top of gate elevation is at 1215.0m

Crestwater Elevation Guard (Right) Gate: $EL_{CGG.U1} := 1211.4m$

$$Y_{C.gg.U1} := \begin{cases} (EL_{CGG.U1} - TOC_{pfc}) & \text{if } TOP_{gg.U1} \le HW_{U1} \\ (TW_{U1} - TOC_{pfc}) & \text{if } TOP_{gg.U1} > HW_{U1} \end{cases} = 2.1 \cdot m$$

Toewater Elevation Guard (Right) Gate: $EL_{TGG.U1} := 1208.46m$

$$Y_{TOE.gg.U1} := \begin{cases} (EL_{TGG.U1} - TOC_{pfe}) & \text{if } TOP_{gg.U1} \le HW_{U1} \\ (TW_{U1} - TOC_{pfe}) & \text{if } TOP_{gg.U1} > HW_{U1} \end{cases} = 0.46 \cdot m$$

Crestwater Elevation Regulating (Left) Gate:

$EL_{CRG.U1} := 1211.4m$

$$Y_{C.rg.U1} := \begin{cases} \left(EL_{CRG.U1} - TOC_{pfc}\right) & \text{if } TOP_{rg.U1} \le HW_{U1} \\ \left(TW_{U1} - TOC_{pfc}\right) & \text{if } TOP_{rg.U1} > HW_{U1} \end{cases} = 2.1 \cdot m$$

Toewater Elevation Regulating (Left) Gate:

$EL_{TRG.U1} := 1208.46m$

$$Y_{TOE.rg.U1} := \begin{cases} \left(EL_{TRG.U1} - TOC_{pfe}\right) & \text{if } TOP_{rg.U1} \le HW_{U1} \\ \left(TW_{U1} - TOC_{pfe}\right) & \text{if } TOP_{rg.U1} > HW_{U1} \end{cases} = 0.46 \cdot m$$

LATERAL WATER LOADS

HEADWATER (DRIVING):

Headwater Depth on Pier: $D_{hwp.U1} := HW_{U1} - TOC_{as} = 2.10\,m$

Headwater Load Unit Width on Pier: $W_{hwp.U1} := w_p = 2.00\,m$

Total Horizontal Headwater Load on Pier:

$$H_{hwp.U1} := \frac{-\left(\gamma_w \cdot D_{hwp.U1}{}^2\right)}{2} \cdot W_{hwp.U1} = -43.3 \cdot kN$$

Apply Total Pier Headwater Load at:

$$H_{hwp.U1.loc} := \frac{D_{hwp.U1}}{3} + \left(TOC_{as} - BOF_{elev}\right) = 4.70\,m$$

Headwater Depth on Gate Base: $D_{hwg.U1} := HW_{U1} - TOC_{as} = 2.10\,m$

Thickness of Approach Slab (Including Key): $T_{as} := \left(TOC_{as} - BOK_{elev}\right) = 6\,m$

Headwater Depth at Heel (U/S face): $D_{hwas.U1} := HW_{U1} - BOK_{elev} = 8.10\,m$

Headwater Load Unit Width on Approach Slab: $W_{hwas.U1} := W_b = 12.00\,m$

Headwater Unit Load At Top of Approach Slab:

$$H_{hwas.U1.1} := \frac{-\left(\gamma_w \cdot D_{hwg.U1}{}^2\right)}{2} \cdot W_{hwas.U1} = -259.57 \cdot kN$$

Headwater Unit Load At Bottom of Approach Key:

$$H_{hwas.U1.2} := \frac{-\left(\gamma_w \cdot D_{hwas.U1}{}^2\right)}{2} \cdot W_{hwas.U1} = -3861.8 \cdot kN$$

Headwater Line Load At Top of Approach Slab:

$$\sigma_{hwas.U1.1} := -\left(\gamma_w \cdot D_{hwg.U1}\right) = -20.6 \cdot kPa$$

Headwater Line Load At Bottom of Approach Key:

$$\sigma_{hwas.U1.2} := -\left(\gamma_w \cdot D_{hwas.U1}\right) = -79.46 \cdot kPa$$

Triangular Distribution Unit Load on Approach Slab and Key:

$$H_{hwas.U1.2.tri} := \left(\frac{\sigma_{hwas.U1.2} - \sigma_{hwas.U1.1}}{2}\right) \cdot \left(T_{as} \cdot W_{hwas.U1}\right) = -2118.96 \cdot kN$$

Rectangular Distribution Unit Load on Approach Slab and Key:

$$H_{hwas.U1.2.rect} := \sigma_{hwas.U1.1} \cdot \left(T_{as} \cdot W_{hwas.U1}\right) = -1483.27 \cdot kN$$

Total Horizontal Headwater Load on Approach Slab:

$$H_{hwas.U1} := H_{hwas.U1.2.tri} + H_{hwas.U1.2.rect} = -3602.23 \cdot kN$$

Apply Total Footing Headwater Load at:

$$H_{hwas.U1.loc} := \frac{\left[H_{hwas.U1.2.rect} \cdot \frac{\left(T_{as}\right)}{2} + H_{hwas.U1.2.tri} \cdot \frac{\left(T_{as}\right)}{3}\right]}{H_{hwas.U1.2.tri} + H_{hwas.U1.2.rect}} - d_{key} = 0.41\,m$$

LATERAL WATER LOADS (continued)

Regulating Gate (2A) Operating Condition:

Regulating Crest Gate Down/Open Condition: $A1_{U1} := TOP_{rg.U1} \le TOC_{as}$

Regulating Crest Gate Up/Closed, with Top of Gate Higher than HW Elevation: $B1_{U1} := TOP_{rg.U1} \ge HW_{U1} \wedge TOP_{rg.U1} > TOC_{as}$

Regulating Crest Gate Up/Closed, with Top of Gate Lower than HW Elevation: $C1_{U1} := TOP_{rg.U1} > TOC_{as} \wedge HW_{U1} > TOP_{rg.U1}$

Regulating Crest Gate Height: $H_{rg.U1} := TOP_{rg.U1} - TOC_{as} = 0\,m$

Headwater Depth at Regulating Crest Gate: $D_{hwrg.U1} := HW_{U1} - TOC_{as} = 2.10\,m$

Regulating Crest Gate Width: $W_{hwrg.U1} := 5.00m$

Lateral Headwater Pressure at Bottom of Regulating Crest Gate:

$$\sigma_{hwrg.U1.1} := \begin{cases} (0.0kPa) & \text{if } A1_{U1} \\ -(\gamma_w \cdot D_{hwrg.U1}) & \text{if } B1_{U1} \\ -(\gamma_w \cdot D_{hwrg.U1}) & \text{if } C1_{U1} \end{cases} = 0.0 \cdot kPa$$

Lateral Headwater Pressure at Top of Regulating Crest Gate: (Load at HW Elevation On Regulating Crest Gate if HW is below TOG_{rg})

$$\sigma_{hwrg.U1.2} := \begin{cases} (0.0kPa) & \text{if } A1_{U1} \\ 0.0kPa & \text{if } B1_{U1} \\ -\left[\gamma_w \cdot \left(HW_{U1} - TOP_{rg.U1}\right)\right] & \text{if } C1_{U1} \end{cases} = 0.0 \cdot kPa$$

Average Pressure acting on Regulating Gate:

$$\sigma_{hwrg.U1.avg} := \frac{\left(\sigma_{hwrg.U1.1} + \sigma_{hwrg.U1.2}\right)}{2} = 0 \cdot kPa$$

Total Area water acting on Regulating Crest Gate:

$$A_{hwrg.U1} := \begin{cases} D_{hwrg.U1} \cdot W_{hwrg.U1} & \text{if } A1_{U1} \\ D_{hwrg.U1} \cdot W_{hwrg.U1} & \text{if } B1_{U1} \\ H_{rg.U1} \cdot W_{hwrg.U1} & \text{if } C1_{U1} \end{cases} = 10.5 \cdot m^2$$

Total Horizontal Headwater Load on Regulating Crest Gate: $H_{hwrg.U1} := \sigma_{hwrg.U1.avg} \cdot A_{hwrg.U1} = 0.0 \cdot kN$

Apply Total Regulating Crest Gate Headwater Load at:

$$H_{hwrg.U1.loc} := \begin{cases} \left(TOC_{as} - BOF_{elev}\right) & \text{if } A1_{U1} \\ \left[\frac{\left(HW_{U1} - TOC_{as}\right)}{3} + \left(TOC_{as} - BOF_{elev}\right)\right] & \text{if } B1_{U1} \\ \left[\frac{\sigma_{hwrg.U1.2} \cdot A_{hwrg.U1} \cdot \frac{\left(H_{rg.U1}\right)}{2} + \frac{\left(\sigma_{hwrg.U1.1} - \sigma_{hwrg.U1.2}\right)}{2} \cdot A_{hwrg.U1} \cdot \frac{\left(H_{rg.U1}\right)}{3}}{\sigma_{hwrg.U1.2} \cdot A_{hwrg.U1} + \frac{\left(\sigma_{hwrg.U1.1} - \sigma_{hwrg.U1.2}\right)}{2} \cdot A_{hwrg.U1}} \ldots \\ + \left(TOC_{as} - BOF_{elev}\right)\right] & \text{if } C1_{U1} \end{cases} = 4.0 \cdot m$$

Guard Gate (4A) Operating Condition:

Guard Gate Down/Open Condition: $A2_{U1} := TOP_{gg.U1} \le TOC_{as}$

Guard Crest Gate Up/Closed, with Top of Gate Higher than HW Elevation: $B2_{U1} := TOP_{gg.U1} \ge HW_{U1} \wedge TOP_{gg.U1} > TOC_{as}$

Guard Crest Gate Up/Closed, with Top of Gate Lower than HW Elevation: $C2_{U1} := TOP_{gg.U1} > TOC_{as} \wedge HW_{U1} > TOP_{gg.U1}$

Guard Crest Gate Height: $H_{gg.U1} := TOP_{gg.U1} - TOC_{as} = 0\,m$

Headwater Depth at Guard Crest Gate: $D_{hwgg.U1} := HW_{U1} - TOC_{as} = 2.10\,m$

Guard Crest Gate Width: $W_{hwgg.U1} := 5.00m$

Lateral Headwater Pressure at Bottom of Guard Crest Gate:

$$\sigma_{hwgg.U1.1} := \begin{vmatrix} (0.0kPa) \text{ if } A2_{U1} \\ -(\gamma_w \cdot D_{hwgg.U1}) \text{ if } B2_{U1} \\ -(\gamma_w \cdot D_{hwgg.U1}) \text{ if } C2_{U1} \end{vmatrix} = 0.0 \cdot kPa$$

Lateral Headwater Pressure at Top of Guard Crest Gate:
(Load at HW Elevation On Guard Crest Gate if HW is below TOG_{rg})

$$\sigma_{hwgg.U1.2} := \begin{vmatrix} (0.0kPa) \text{ if } A2_{U1} \\ 0.0kPa \text{ if } B2_{U1} \\ -\left[\gamma_w \cdot (HW_{U1} - TOP_{gg.U1})\right] \text{ if } C2_{U1} \end{vmatrix} = 0.0 \cdot kPa$$

Average Pressure acting on Guard Crest Gate:

$$\sigma_{hwgg.U1.avg} := \frac{(\sigma_{hwgg.U1.1} + \sigma_{hwgg.U1.2})}{2} = 0 \cdot kPa$$

Total Area water acting on Crest Gate:

$$A_{hwgg.U1} := \begin{vmatrix} D_{hwgg.U1} \cdot W_{hwgg.U1} \text{ if } A2_{U1} \\ D_{hwgg.U1} \cdot W_{hwgg.U1} \text{ if } B2_{U1} \\ H_{gg.U1} \cdot W_{hwgg.U1} \text{ if } C2_{U1} \end{vmatrix} = 10.5 \cdot m^2$$

Total Horizontal Headwater Load on Guard Crest Gate: $H_{hwgg.U1} := \sigma_{hwgg.U1.avg} \cdot A_{hwgg.U1} = 0.0 \cdot kN$

Apply Total Guard Crest Gate Headwater Load at:

$$H_{hwgg.U1.loc} := \begin{vmatrix} (TOC_{as} - BOF_{elev}) \text{ if } A2_{U1} \\ \left[\frac{(HW_{U1} - TOC_{as})}{3} + (TOC_{as} - BOF_{elev})\right] \text{ if } B2_{U1} \\ \left[\frac{\sigma_{hwgg.U1.2} \cdot A_{hwgg.U1} \cdot \frac{(H_{gg.U1})}{2} + \frac{(\sigma_{hwgg.U1.1} - \sigma_{hwgg.U1.2})}{2} A_{hwgg.U1} \cdot \frac{(H_{gg.U1})}{3}}{\sigma_{hwgg.U1.2} \cdot A_{hwgg.U1} + \frac{(\sigma_{hwgg.U1.1} - \sigma_{hwgg.U1.2})}{2} \cdot A_{hwgg.U1}} \cdots \\ + (TOC_{as} - BOF_{elev}) \right] \text{ if } C2_{U1} \end{vmatrix} = 4.0 \cdot m$$

LATERAL TAILWATER (RESISTING) Applied to Downstream Side of Regulating Crest Gate:

U1 CASE

Regulating Crest Gate Down/Open Condition: $A3_{U1} := TOP_{rg.U1} \le TOC_{as}$

Regulating Crest Gate Up/Closed, with Top of Gate Higher than TW Elevation: $B3_{U1} := TOP_{rg.U1} \ge TW_{U1} \wedge TOP_{rg.U1} > TOC_{as}$

Regulating Crest Gate Up/Closed, with Top of Gate Lower than TW Elevation: $C3_{U1} := TOP_{rg.U1} > TOC_{as} \wedge TW_{U1} > TOP_{rg.U1}$

Regulating Crest Gate Height: $H_{rg.U1} = 0\,m$

Tailwater Depth at Regulating Crest Gate: $D_{twrg.U1} := TW_{U1} - TOC_{as} = 1.80\,m$

Regulating Crest Gate Width: $W_{twrg.U1} := 5m$

Lateral Tailwater Pressure at Bottom of Regulating Crest Gate:

$$\sigma_{twrg.U1.1} := \begin{cases} (0.0kPa) & \text{if } A3_{U1} \\ -(\gamma_w \cdot D_{twrg.U1}) & \text{if } B3_{U1} \\ -(\gamma_w \cdot D_{twrg.U1}) & \text{if } C3_{U1} \end{cases} = 0.0 \cdot kPa$$

Lateral Tailwater Pressure at Top of Regulating Crest Gate: (Load at TW Elevation On Regulating Crest Gate if TW is below TOG_{rg})

$$\sigma_{twrg.U1.2} := \begin{cases} (0.0kPa) & \text{if } A3_{U1} \\ 0.0kPa & \text{if } B3_{U1} \\ -[\gamma_w \cdot (TW_{U1} - TOP_{rg.U1})] & \text{if } C3_{U1} \end{cases} = 0.0 \cdot kPa$$

Average Pressure acting on Regulating Gate:

Total Area water acting on Regulating Crest Gate:

$$A_{twrg.U1} := \begin{cases} D_{twrg.U1} \cdot W_{twrg.U1} & \text{if } A3_{U1} \\ D_{twrg.U1} \cdot W_{twrg.U1} & \text{if } B3_{U1} \\ H_{rg.U1} \cdot W_{twrg.U1} & \text{if } C3_{U1} \end{cases} = 9 \cdot m^2$$

Total Horizontal Tailwater Load on Regulating Crest Gate: $H_{twrg.U1} := \sigma_{hwrg.U1.avg} \cdot A_{hwrg.U1} = 0.0 \cdot kN$

Apply Total Regulating Crest Gate Tailwater Load at:

$$H_{twrg.U1.loc} := \begin{cases} (TOC_{as} - BOF_{elev}) & \text{if } A3_{U1} \\ \left[\frac{(HW_{U1} - TOC_{as})}{3} + (TOC_{as} - BOF_{elev})\right] & \text{if } B3_{U1} \\ \left[\frac{\sigma_{hwrg.U1.2} \cdot A_{hwrg.U1} \cdot \frac{(H_{rg.U1})}{2} + \frac{(\sigma_{hwrg.U1.1} - \sigma_{hwrg.U1.2})}{2} A_{hwrg.U1} \cdot \frac{(H_{rg.U1})}{3}}{\sigma_{hwrg.U1.2} \cdot A_{hwrg.U1} + \frac{(\sigma_{hwrg.U1.1} - \sigma_{hwrg.U1.2})}{2} \cdot A_{hwrg.U1}} \ldots \\ + (TOC_{as} - BOF_{elev})\right] & \text{if } C3_{U1} \end{cases} = 4.0 \cdot m$$

LATERAL TAILWATER (RESISTING) Applied to Downstream Side of Guard Crest Gate:

U1 CASE

Guard Gate Down/Open Condition: $A4_{U1} := TOP_{gg.U1} \le TOC_{as}$

Guard Crest Gate Up/Closed, with Top of Gate Higher than TW Elevation: $B4_{U1} := TOP_{gg.U1} \ge TW_{U1} \wedge TOP_{gg.U1} > TOC_{as}$

Guard Crest Gate Up/Closed, with Top of Gate Lower than TW Elevation: $C4_{U1} := TOP_{gg.U1} > TOC_{as} \wedge TW_{U1} > TOP_{gg.U1}$

Tailwater Depth at Guard Crest Gate: $D_{twgg.U1} := TW_{U1} - TOC_{as} = 1.80\,m$

Guard Crest Gate Height: $H_{gg.U1} = 0\,m$

Guard Crest Gate Width: $W_{twgg.U1} := 5.00m$

Lateral Water Load at Bottom of Guard Crest Gate:

$$\sigma_{twgg.U1.1} := \begin{vmatrix} (0.0kPa) & \text{if } A4_{U1} \\ (\gamma_w \cdot D_{twgg.U1}) & \text{if } B4_{U1} \\ (\gamma_w \cdot D_{twgg.U1}) & \text{if } C4_{U1} \end{vmatrix} = 0.0 \cdot kPa$$

Lateral Water Load at Top of Guard Crest Gate:
(Load at TW Elevation On Guard Crest Gate if TW is below TOG_{gg})

$$\sigma_{twgg.U1.2} := \begin{vmatrix} (0.0kPa) & \text{if } A4_{U1} \\ 0.0kPa & \text{if } B4_{U1} \\ \left[\gamma_w \cdot (TW_{U1} - TOP_{gg.U1})\right] & \text{if } C4_{U1} \end{vmatrix} = 0.0 \cdot kPa$$

Average Pressure acting on Guard Crest Gate:

$$\sigma_{twgg.U1.avg} := \frac{(\sigma_{twgg.U1.1} + \sigma_{twgg.U1.2})}{2} = 0 \cdot kPa$$

Total Area water acting on Crest Gate:

$$A_{twgg.U1} := \begin{vmatrix} D_{twgg.U1} \cdot W_{twgg.U1} & \text{if } A4_{U1} \\ D_{twgg.U1} \cdot W_{twgg.U1} & \text{if } B4_{U1} \\ H_{gg.U1} \cdot W_{twgg.U1} & \text{if } C4_{U1} \end{vmatrix} = 9 \cdot m^2$$

Total Horizontal Tailwater Load on Guard Crest Gate: $H_{twgg.U1} := \sigma_{twgg.U1.avg} \cdot A_{twgg.U1} = 0.0 \cdot kN$

Apply Total Horiz. TW Load on Guard Gate at:

$$H_{twgg.U1.loc} := \begin{vmatrix} (TOC_{as} - BOF_{elev}) & \text{if } A4_{U1} \\ \left[\frac{(TW_{U1} - TOC_{as})}{3} + (TOC_{as} - BOF_{elev})\right] & \text{if } B4_{U1} \\ \left[\frac{\sigma_{twgg.U1.2} \cdot A_{twgg.U1} \cdot \frac{(H_{gg.U1})}{2} + \frac{(\sigma_{twgg.U1.1} - \sigma_{twgg.U1.2})}{2} A_{twgg.U1} \cdot \frac{(H_{gg.U1})}{3}}{\sigma_{twgg.U1.2} \cdot A_{twgg.U1} + \frac{(\sigma_{twgg.U1.1} - \sigma_{twgg.U1.2})}{2} \cdot A_{twgg.U1}} \ldots \\ + (TOC_{as} - BOF_{elev})\right] & \text{if } C4_{U1} \end{vmatrix} = 4.0 \cdot m$$

LATERAL WATER LOADS (continued)

U1 CASE

TAILWATER (RESISTING) Applied to Concrete Structure:

Tailwater Depth on Pier: $D_{twp.U1} := TW_{U1} - TOC_{as} = 1.80\,m$

Tailwater Load Unit Width on Pier: $W_{twp.U1} := w_p = 2.00\,m$

Total Horizontal Tailwater Load on Pier: $H_{twp.U1} := \frac{\left(\gamma_w \cdot D_{twp.U1}^{\ 2}\right)}{2} \cdot W_{twp.U1} = 31.8 \cdot kN$

Apply Total Pier Tailwater Load at: $H_{twp.U1.loc} := \frac{D_{twp.U1}}{3} + \left(TOC_{as} - BOF_{elev}\right) = 4.60\,m$

Tailwater Depth At top of Gate Base Footing Elevation: $D_{twgf.U1} := TW_{U1} - TOC_{as} = 1.80\,m$

Water Depth at bottom of Gate Base Footing (Excluding Key): $D_{twtoe.U1} := TW_{U1} - BOF_{elev} = 5.80\,m$

Footing Thickness for horizontal at Toe: $h_{toe} := TOC_{as} - BOF_{elev} = 4\,m$

Unit Width of D/S face of crest for application of Tailwater Load: $W_{tw.U1} := W_b = 12.00\,m$

Tailwater Pressure At Top of Gate Footing: $\sigma_{twgf.U1} := \left(\gamma_w \cdot D_{twgf.U1}\right) = 17.66 \cdot kPa$

Tailwater Pressure At Toe: $\sigma_{twtoe.U1} := \left(\gamma_w \cdot D_{twtoe.U1}\right) = 56.9 \cdot kPa$

Triangular Distribution Unit Load on Gate Footing Base: $H_{twgf.U1.tri} := \left(\frac{\sigma_{twtoe.U1} - \sigma_{twgf.U1}}{2}\right) \cdot \left[\left(T_{as} - d_{key}\right) \cdot W_{tw.U1}\right] = 941.76 \cdot kN$

Rectangular Distribution Unit Load on Gate Footing Base: $H_{twgf.U1.rect} := \sigma_{twgf.U1} \cdot \left[\left(T_{as} - d_{key}\right) \cdot W_{tw.U1}\right] = 847.58 \cdot kN$

Tailwater Pressure At Bottom of Sliding Failure Plane: $\sigma_{twbk.U1} := \left(HW_{U1} - BOK_{elev}\right) \cdot \gamma_w = 79.46 \cdot kPa$

Triangular Distribution Unit Load Below Footing: $H_{twbk.U1.tri} := \frac{\left(\sigma_{twbk.U1} - \sigma_{twtoe.U1}\right)}{2} \cdot d_{key} \cdot W_{tw.U1} = 270.76 \cdot kN$

Rectangular Distribution Load Below Footing Base: $H_{twbk.U1.rect} := \sigma_{twtoe.U1} \cdot d_{key} \cdot W_{tw.U1} = 1365.55 \cdot kN$

Total Horizontal Tailwater Headwater Load on Gate Footing (including key): $H_{twgk.U1} := H_{twgf.U1.tri} + H_{twgf.U1.rect} \cdots + \left(H_{twbk.U1.tri} + H_{twbk.U1.rect}\right) = 3425.65 \cdot kN$

Apply Total Gate Footing Tailwater Load at:

$$H_{twgk.U1.loc} := \frac{\left[H_{twgf.U1.rect} \cdot \left(\frac{h_{toe}}{2}\right) + H_{twgf.U1.tri} \cdot \left(\frac{h_{toe}}{3}\right) + H_{twbk.U1.tri} \cdot \left(-d_{key} \cdot \frac{2}{3}\right) + H_{twbk.U1.rect} \cdot \left(\frac{-d_{key}}{2}\right)\right]}{H_{twgf.U1.tri} + H_{twgf.U1.rect} + H_{twbk.U1.tri} + H_{twbk.U1.rect}} = 0.36\,m$$

SUMMATION OF LATERAL WATER LOADS:

$$\Sigma H_{Water.U1} := H_{hwp.U1} + H_{hwas.U1} + H_{hwrg.U1} + H_{hwgg.U1} + H_{twp.U1} + H_{twgk.U1} + H_{twrg.U1} + H_{twgg.U1} = -188.06 \cdot kN$$

$$\Sigma M_{Hwater.U1} := H_{hwp.U1} \cdot H_{hwp.U1.loc} + H_{hwas.U1} \cdot H_{hwas.U1.loc} + H_{hwrg.U1} \cdot H_{hwrg.U1.loc} + H_{hwgg.U1} \cdot H_{hwgg.U1.loc} \cdots + H_{twp.U1} \cdot H_{twp.U1.loc} + H_{twgk.U1} \cdot H_{twgk.U1.loc} + H_{twrg.U1} \cdot H_{twrg.U1.loc} + H_{twgg.U1} \cdot H_{twgg.U1.loc} = -316.11 \cdot kN \cdot m$$

VERTICAL WATER LOADS

U1 CASE

HEADWATER:

Water Depth on top of Approach Slab: $d_{hw.U1} := HW_{U1} - TOC_{as} = 2.10\,m$

Length of Approach Slab: $L_{as} = 8.75\,m$

Width of Approach Slab: $w_{as} = 12.00\,m$

Length from front of Gate to Heel: $L_{hg} := 8.75m$

Vertical Water Weight (H1) on Approach Slab: $H_{1.U1} := \left[w_{as} \cdot d_{hw.U1} \cdot L_{hg} - w_p \cdot d_{hw.U1} \cdot \left(L_{hg} - L_{as}\right)\right] \cdot \gamma_w = 2163.1 \cdot kN$

Moment Arm for Application of Water Weight (H1) from toe: $H_{1.U1.loc} := L_b - \dfrac{L_{hg}}{2} = 14.13\,m$

TAILWATER ABOVE GUARD GATE:

Trapezoid Volume Above Gate Footing from Approach Slab to Crest: $V_{asc.gg.U1} := \left(L_{gf} - L_{gfc}\right) W_{twgg.U1} \dfrac{d_{hw.U1} + Y_{C.gg.U1}}{2} = 75.08 \cdot m^3$

Trapezoid Volume Above Gate Footing Crest to End of Gate Footing: $V_{gfc.gg.U1} := \left(L_{gfc} \cdot W_{twgg.U1}\right) \dfrac{Y_{C.gg.U1} + Y_{TOE.gg.U1}}{2} = 16.64 \cdot m^3$

Load Above Gate Footing from Approach Slab to Crest: $H_{2.U1.asc.gg} := V_{asc.gg.U1} \cdot \gamma_w = 736.49 \cdot kN$

Load Acting Above Footing Crest from Toe: $H_{2.U1.asc.gg.loc} := \dfrac{\left(L_{gf} - L_{gfc}\right) \cdot \left(2 \cdot d_{hw.U1} + Y_{C.gg.U1}\right)}{3 \cdot \left(d_{hw.U1} + Y_{C.gg.U1}\right)} + L_{gfc} = 6.17\,m$

Load Above Gate Footing from Crest to End: $H_{2.U1.gfc.gg} := V_{gfc.gg.U1} \cdot \gamma_w = 163.24 \cdot kN$

Load Acting Above Gate Footing from Crest to End: $H_{2.U1.gfc.gg.loc} := \dfrac{\left(L_{gfc}\right) \cdot \left(2 \cdot Y_{C.gg.U1} + Y_{TOE.gg.U1}\right)}{3 \cdot \left(Y_{C.gg.U1} + Y_{TOE.gg.U1}\right)} = 1.58\,m$

Vertical Water Weight (H2) on Guard Gate Footing: $H_{2.U1.gg} := H_{2.U1.asc.gg} + H_{2.U1.gfc.gg} = 899.72 \cdot kN$

Moment Arm for Application of Water Weight (H2) from toe: $H_{2.U1.gg.loc} := \dfrac{H_{2.U1.asc.gg} \cdot H_{2.U1.asc.gg.loc} + H_{2.U1.gfc.gg} \cdot H_{2.U1.gfc.gg.loc}}{H_{2.U1.gg}} = 5.34\,m$

TAILWATER ABOVE REGULATING GATE:

Trapezoid Volume Above Gate Footing from Approach Slab to Crest: $V_{asc.rg.U1} := \left(L_{gf} - L_{gfc}\right) W_{twrg.U1} \dfrac{d_{hw.U1} + Y_{C.rg.U1}}{2} = 75.08 \cdot m^3$

Trapezoid Volume Above Gate Footing Crest to End of Gate Footing: $V_{gfc.rg.U1} := \left(L_{gfc} \cdot W_{twrg.U1}\right) \dfrac{Y_{C.rg.U1} + Y_{TOE.rg.U1}}{2} = 16.64 \cdot m^3$

Load Above Gate Footing from Approach Slab to Crest: $H_{2.U1.asc.rg} := V_{asc.rg.U1} \cdot \gamma_w = 736.49 \cdot kN$

Load Acting Above Footing Crest from Toe: $H_{2.U1.asc.rg.loc} := \dfrac{\left(L_{gf} - L_{gfc}\right) \cdot \left(2 \cdot d_{hw.U1} + Y_{C.rg.U1}\right)}{3 \cdot \left(d_{hw.U1} + Y_{C.rg.U1}\right)} + L_{gfc} = 6.17\,m$

Load Above Gate Footing from Crest to End: $H_{2.U1.gfc.rg} := V_{gfc.rg.U1} \cdot \gamma_w = 163.24 \cdot kN$

Load Acting Above Gate Footing from Crest to End: $H_{2.U1.gfc.rg.loc} := \dfrac{\left(L_{gfc}\right) \cdot \left(2 \cdot Y_{C.rg.U1} + Y_{TOE.rg.U1}\right)}{3 \cdot \left(Y_{C.rg.U1} + Y_{TOE.rg.U1}\right)} = 1.58\,m$

Vertical Water Weight (H2) on Regulating Gate Footing: $H_{2.U1.rg} := H_{2.U1.asc.rg} + H_{2.U1.gfc.rg} = 899.72 \cdot kN$

Moment Arm for Application of Water Weight (H2) from toe: $H_{2.U1.rg.loc} := \dfrac{H_{2.U1.asc.rg} \cdot H_{2.U1.asc.rg.loc} + H_{2.U1.gfc.rg} \cdot H_{2.U1.gfc.rg.loc}}{H_{2.U1.rg}} = 5.34\,m$

Uplift pressure at U/S Face (heel): $U_{HW.U1} := (D_{hwas.U1}) \cdot \gamma_w = 79.5 \cdot \frac{kN}{m^2}$

Uplift pressure at D/S Face Stilling Basin: $U_{TW.U1} := (D_{twtoe.U1}) \cdot \gamma_w = 56.9 \cdot \frac{kN}{m^2}$

Length from U/S of Gate Structure to U/S of Stilling Basin: $L_{overall.Usual} := L_b = 18.50\,m$

Difference between Uplift pressure at HW and TW: $U_{diff.U1} := U_{HW.U1} - U_{TW.U1} = 22.56 \cdot \frac{kN}{m^2}$

Slope of difference between between Uplift pressure at HW and TW: $U_{slope.U1} := \frac{U_{diff.U1}}{L_{overall.Usual}} = 1.22 \cdot \frac{kN}{m^2 \cdot m}$

Tailwater Pressure at toe of Gate Structure: $U_{press.toe.gs.U1} := U_{TW.U1} + (L_{overall.Usual} - L_b) \cdot U_{slope.U1} = 56.9 \cdot \frac{kN}{m^2}$

Uniform uplift force UA Under Gate Structure due to TW (rectangle): $U_{A.U1} := U_{press.toe.gs.U1} \cdot L_b \cdot W_b \cdot -1 = -12631.36 \cdot kN$

Moment Arm from Toe of Gate Structure for Uplift UA: $L_{A.U1} := \left(\frac{L_b}{2}\right) = 9.25\,m$

Linearly Decreasing Uplift Force U1B Under Gate Structure due to HW-TW Differential (triangle): $U_{B.U1} := \frac{1}{2} \cdot (U_{HW.U1} - U_{press.toe.gs.U1}) \cdot L_b \cdot W_b \cdot -1 = -2504.49 \cdot kN$

Moment Arm from Toe of Gate Structure for Uplift UB: $L_{B.U1} := \frac{2}{3} \cdot L_b = 12.33\,m$

Total Resultant Uplift force: $U_{U1} := U_{A.U1} + U_{B.U1} = -15135.85 \cdot kN$

Resultant Location from Toe: $U_{U1.loc} := \frac{(U_{A.U1} \cdot L_{A.U1} + U_{B.U1} \cdot L_{B.U1})}{(U_{A.U1} + U_{B.U1})} = 9.76\,m$

$\Sigma V_{water.U1} := H_{1.U1} + H_{2.U1.gg} + H_{2.U1.rg} + U_{U1} = -11173.3 \cdot kN$

$\Sigma M_{Vwater.U1} := H_{1.U1} \cdot H_{1.U1.loc} + H_{2.U1.gg} \cdot H_{2.U1.gg.loc} + H_{2.U1.rg} \cdot H_{2.U1.rg.loc} + U_{U1} \cdot U_{U1.loc} = -107564.28 \cdot kN \cdot m$

SOIL LOADS

U1 CASE

Equivalent Fluid Pressure (EFP):

At rest lateral pressure coefficient: $K_{o.U1} := 1 - \sin(\phi_{backfill}) = 0.658$ (Section 5.3, Design Criteria)

Headwater Pier Footing Unit Width: $W_{hwas.U1} = 12.00\,m$

Tailwater Pier Footing Unit Width: $W_{tw.U1} = 12.00\,m$

Pier Footing Thickness at Heel: $t_{hf.U1} := TOC_{as} - BOK_{elev} = 6.00\,m$

Fixed Crest Footing Thickness at Toe: $t_{tf.U1} := TOC_{pfe} - BOF_{elev} = 2.00\,m$

Lateral Driving Force (Headwater Side - at rest condition)

Structure Soil Load:

$$E_{act.U1} := \frac{K_{o.U1} \cdot t_{hf.U1}^{2}}{2} \cdot (\gamma_r - \gamma_w) \cdot W_{hwas.U1} \cdot -1 = -1732.49 \cdot kN$$

Acting at:

$$E_{act.U1.loc} := \frac{t_{hf.U1}}{3} - d_{key} = 0.00\,m$$

Lateral Resisting Force (Tailwater Side - at rest condition)

At-rest Soil Load:

$$E_{pass.U1} := \frac{K_{o.U1} \cdot t_{tf.U1}^{2}}{2} \cdot (\gamma_r - \gamma_w) \cdot W_{tw.U1} = 192.5 \cdot kN$$

Acting at:

$$E_{pass.U1.loc} := \frac{t_{tf.U1}}{3} = 0.67\,m$$

$$\Sigma H_{soil.U1} := E_{act.U1} + E_{pass.U1} = -1539.99 \cdot kN$$

$$\Sigma M_{soil.U1} := E_{act.U1} \cdot E_{act.U1.loc} + E_{pass.U1} \cdot E_{pass.U1.loc} = 128.33 \cdot kN \cdot m$$

ICE / IMPACT LOADS (ASSUME NO ICE LOADING ON TAILWATER SIDE)

Static Ice Loading on Structure: $I_{S.U1} := 150.0 \frac{kN}{m}$ (Section 7.7, Design Criteria)

Ice Loading Unit Width on Structure: $W_{S.U1} := 2.00m$

Static Ice load on Gates: (Section 7.7, Design Criteria)

$$I_{rg.U1} := \begin{cases} 0 \frac{kN}{m} & \text{if } TOP_{rg.U1} \le TOC_{as} \\ 75 \frac{kN}{m} & \text{if } TOP_{rg.U1} > TOC_{as} \end{cases} = 0$$

$$I_{gg.U1} := \begin{cases} 0 \frac{kN}{m} & \text{if } TOP_{gg.U1} \le TOC_{as} \\ 75 \frac{kN}{m} & \text{if } TOP_{gg.U1} > TOC_{as} \end{cases} = 0$$

Ice Loading Unit Width on Crest Gates: $W_{rg.U1} := 5m$ $W_{gg.U1} := 5m$ (Input value for load case)

Total Ice Load on Structure:

$$I_{U1} := (I_{S.U1} \cdot W_{S.U1} + I_{rg.U1} \cdot W_{rg.U1} + I_{gg.U1} \cdot W_{gg.U1}) \cdot -1 = -300 \cdot kN$$

Apply Ice load at:

$$I_{U1.loc} := (HW_{U1} - BOF_{elev} - 0.30m) = 5.80\,m$$

$$\Sigma H_{I.U1} := I_{U1} = -300 \cdot kN$$

$$\Sigma M_{I.U1} := I_{U1} \cdot I_{U1.loc} = -1740 \cdot kN \cdot m$$

SEISMIC LOAD (NOT APPLICABLE FOR THIS LOAD CASE)

U1 CASE

SUMMARY OF LOADS

	Loads	Moment Arm
Dead load of Concrete Structure:	$D_{conc} = 22438.7 \cdot kN$	$X_{conc.loc} = 9.35\,m$
Obermyer Gate Weight:	$D_{Gate} = 140.0 \cdot kN$	$X_{gate} = 9.50\,m$
HW Lateral Load on Pier:	$H_{hwp.U1} = -43.3 \cdot kN$	$H_{hwp.U1.loc} = 4.70\,m$
HW Lateral Load on Approach Slab:	$H_{hwas.U1} = -3602.2 \cdot kN$	$H_{hwas.U1.loc} = 0.41\,m$
HW Lateral Load on Regulating Gate:	$H_{hwrg.U1} = 0.0 \cdot kN$	$H_{hwrg.U1.loc} = 4.00\,m$
HW Lateral Load on Guard Gate:	$H_{hwgg.U1} = 0.0 \cdot kN$	$H_{hwgg.U1.loc} = 4.00\,m$
TW Lateral Load on Pier:	$H_{twp.U1} = 31.8 \cdot kN$	$H_{twp.U1.loc} = 4.60\,m$
TW Lateral Load on Pier Footing (including Key):	$H_{twgk.U1} = 3425.65 \cdot kN$	$H_{twgk.U1.loc} = 0.36\,m$
TW Lateral Load on Regulating Gate:	$H_{twrg.U1} = 0.0 \cdot kN$	$H_{twrg.U1.loc} = 4.00\,m$

Ice / Impact Load:	$I_{U1} = -300.0 \cdot kN$	$I_{U1.loc} = 5.80\,m$

STABILITY ASSESSMENT (SLIDNG, BEARING, FLOTATION AND OVERTURNING): U1 CASE

CHECK SLIDING ALONG HORIZONTAL PLANE THRU TOE,
IGNORING BEDROCK MOBILIZED BY STRUCTURAL HEEL KEY, OR VOID BEHIND KEY

Sum of Vertical Forces:

$\Sigma V_{U1} := \Sigma V_{DL} + \Sigma V_{water.U1} = 11405.4 \cdot kN$

Sum of Horizontal Forces:

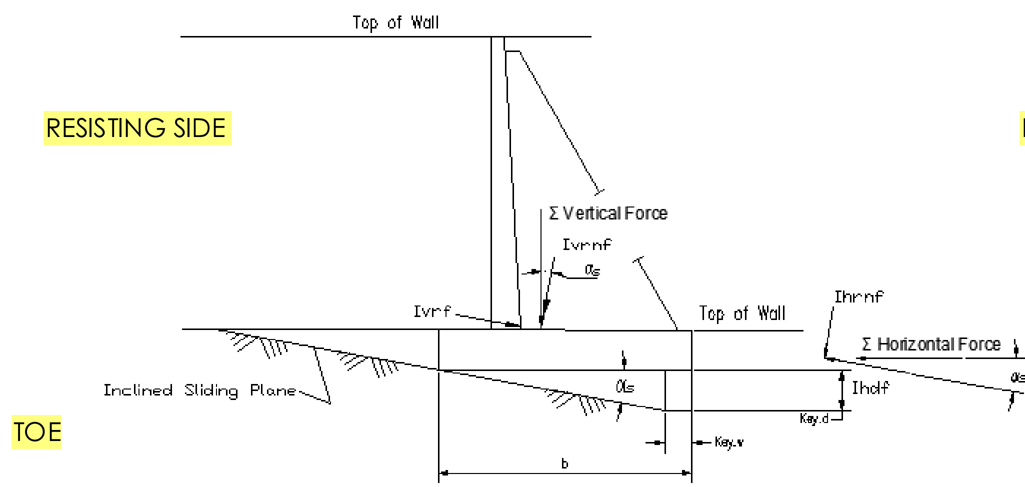
$\Sigma H_{U1} := \Sigma H_{Water.U1} + \Sigma H_{soil.U1} + \Sigma H_{I.U1} = -2028.05 \cdot kN$

Sliding Factor of Safety:

$$FS_{HorizSliding.U1} := \frac{\tan_{\phi} \cdot \Sigma V_{U1}}{|\Sigma H_{U1}|} = 2.74$$

$$FS_{HorizSliding.U1.Check} := \begin{cases} \text{"OKAY"} & \text{if } FS_{HorizSliding.U1} \geq FS_{req.U1.sl} \\ \text{"Check Inclined Sliding with Key"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

CHECK SLIDING ALONG INCLINED SLIDING PLANE FROM HEEL KEY TO TOE,
WITH BEDROCK MASS MOBILIZED BY REINFOCREDE CONCRETE KEY)



$\Sigma V_{U1} = 11405.44 \cdot kN$

$V_{rs} = 4620 \cdot kN$

$$\alpha s := \operatorname{atan}\left(\frac{d_{key}}{L_b - w_{key}}\right) = 0.11$$

Ivrf=Inclined Resisting Force
Ivrnf=Inclined Resisting Normal Force
Ihrnf=Inclined Resisting Normal Force
Ihdf=Inclined Driving Force

as degrees= $\alpha s \cdot \left(\frac{180}{\pi}\right) = 6.52$

Resolve $\Sigma Vert_{U1}$ & $\Sigma Horiz_{U1}$

$$\Sigma V_{InclinedU1} := \cos(\alpha s) \cdot (\Sigma V_{U1} + V_{rs}) + \sin(\alpha s) \cdot |\Sigma H_{U1}| = 16152.1 \cdot kN$$

$$\Sigma H_{InclinedU1} := \cos(\alpha s) \cdot |\Sigma H_{U1}| - \sin(\alpha s) \cdot (\Sigma V_{U1} + V_{rs}) = 195.3 \cdot kN$$

(With properly engineered reinforced concrete Key, horizontal sliding plane thru Toe is protected, critical sliding plane is relocated to the INCLINED SLIDING PLANE FROM HEEL KEY To TOE, Bedrock Mass above this examining plane is mobilized by reinforced concrete key and combined into Structural Wedge.)

Inclined Sliding Plane Length

$$L_{incline} := \left[L_b^{\,2} + (BOF_{elev} - BOK_{elev})^2\right]^{0.5} = 18.61 \, m$$

Safety Factor for Sliding
Inclined Failure Plane

$$FS_{InclinedlSlidingU1} := \frac{\Sigma V_{InclinedU1} \cdot \tan\left(\phi_{rock} \cdot \frac{\pi}{180}\right)}{|\Sigma H_{InclinedU1}|} = 40.34$$

$$FS_{InclinedSliding.check.U1} := \begin{cases} \text{"OKAY "} & \text{if } FS_{InclinedlSlidingU1} > FS_{req.U1.sl} \\ \text{"Revise Structure""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

$FS_{InclinedSliding.check.U1} = \text{"OKAY "}$

OVERTURNING STABILITY CHECK:

U1 CASE

CHECK ECCENTRICITY

Sum of the moments:

$$\Sigma M_{U1} := \Sigma M_{DL} + \Sigma M_{Hwater.U1} + \Sigma M_{Vwater.U1} + \Sigma M_{I.U1} + \Sigma M_{soil.U1} + \Sigma M_{rs} = 155528 \cdot kN \cdot m$$

Eccentricity:

$$e_{U1} := \left(\frac{L_{incline}}{2}\right) - \frac{\left(\Sigma M_{U1}\right)}{\Sigma V_{InclinedU1}} \cdot \cos(\alpha s) = -0.26\,m$$

Eccentricity Check:

$$e_{check.U1} := \begin{cases} \text{"Okay"} & \text{if } |e_{U1}| \le Kern \\ \text{"Revise Structure"} & \text{otherwise} \end{cases}$$

$$e_{check.U1} = \text{"Okay"}$$

Foundation Bearing Checks:

Incline Plane Area:

$$A_{b.incline} := L_{incline} \cdot W_b = 223.29\,m^2$$

Incline Plane Section Modulus:

$$S_{b.incline} := \frac{W_b \cdot L_{incline}^2}{6} = 692.5 \cdot m^3$$

Bearing Pressure at Heel:

$$\sigma_{heel.U1} := \frac{\Sigma V_{InclinedU1}}{A_{b.incline}} - \frac{\left(\Sigma V_{InclinedU1} \cdot e_{U1}\right)}{S_{b.incline}} = 78.5 \cdot \frac{kN}{m^2}$$

$$\sigma_{heel.U1.check} := \left(\begin{cases} \text{"Okay"} & \text{if } \sigma_{heel.U1} \le \sigma_{allow.U1} \\ \text{"Revise Structure"} & \text{if } \sigma_{heel.U1} < 0\,\frac{kN}{m^2} \end{cases} \right)$$

$$\sigma_{heel.U1.check} = \text{"Okay"}$$

Bearing Pressure at Toe:

$$\sigma_{toe.U1} := \frac{\Sigma V_{InclinedU1}}{A_{b.incline}} + \frac{\left(\Sigma V_{InclinedU1} \cdot e_{U1}\right)}{S_{b.incline}} = 66.2 \cdot \frac{kN}{m^2}$$

$$\sigma_{toe.U1.1.check} := \begin{cases} \text{"Okay"} & \text{if } \sigma_{toe.U1} \le \sigma_{allow.U1} \\ \text{"Revise Structure"} & \text{if } \sigma_{toe.U1} < 0\,\frac{kN}{m^2} \end{cases}$$

$$\sigma_{toe.U1.1.check} = \text{"Okay"}$$

FLOATATION ANALYSIS:

ACCEPTANCE PARAMETERS

Required Factor of Safety: $FS_{req.FU1} := 1.5$

VERTICAL LOADS RESISTING:

Dead Load: $\Sigma V_{DL} = 22578.74 \cdot kN$

Water Weight H1+H2: $\Sigma V_{H.FU1} := H_{1.U1} + H_{2.U1.gg} + H_{2.U1.rg} = 3962.55 \cdot kN$

Summation Vertical Resisting: $\Sigma V_{FU1} := \Sigma V_{DL} + \Sigma V_{H.FU1} = 26541.3 \cdot kN$

VERTICAL LOADS UPLIFT:

Uplift: $U_{U1} = -15135.85 \cdot kN$

Factor of Safety Floatation:

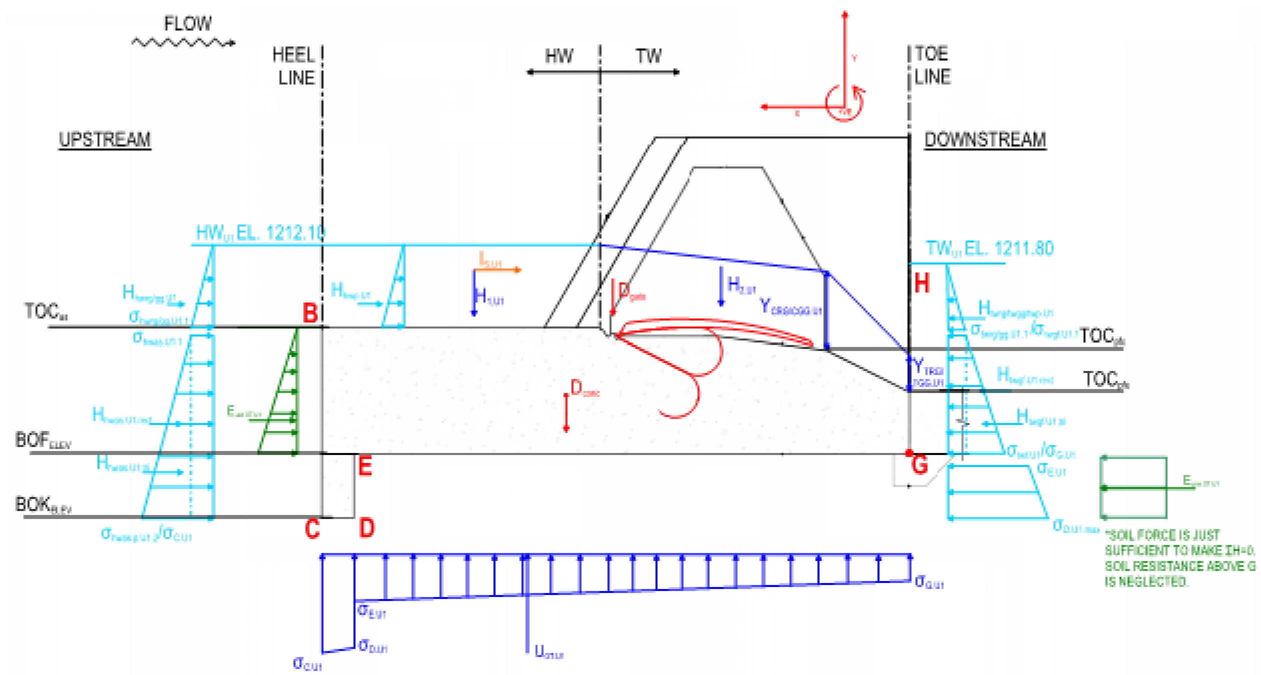
$$FS_{act.FU1} := \frac{\Sigma V_{FU1}}{|U_{U1}|} = 1.75$$

$$FS_{check.FU1} := \begin{cases} \text{"OKAY"} & \text{if } FS_{act.FU1} \ge FS_{req.FU1} \\ \text{"ANCHORS REQUIRED"} & \text{if } FS_{act.FU1} < FS_{req.FU1} \end{cases} = \text{"OKAY"}$$

MONOLITH OVERTURNING STABILITY ANALYSIS

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stability of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1 $Ratio_{OT.U1.min} := 0.33$ at Rock Foundation



Uplift Loads for Overturning Stability Analysis

Line of Creep:

Change in Water Head: $\Delta_{h.U1} := HW_{U1} - TW_{U1} = 0.3\ m$

Length from Point C to Point G: $L_{CG} := \sqrt{d_{key}^{\ 2} + L_b^{\ 2}} = 18.61\ m$

Length from Various Points to Points: $L_{CD} := w_{key} = 1\ m$ $L_{DE} := d_{key} = 2\ m$ $L_{EG} := L_b - L_{CD} = 17.5\ m$

$L_{GH} := TW_{U1} - BOF_{elev} = 5.8\ m$

Length from Point C, D, E to G: $L_{CDEG} := L_{CD} + L_{DE} + L_{EG} = 20.5\ m$ $L_{CDE} := L_{CD} + L_{DE} = 3\ m$

Water Pressure at Point C & G: $\sigma_{C.U1} := \sigma_{hwas.U1.2} = -79.46 \cdot kPa$ $\sigma_{G.U1} := \sigma_{twtoe.U1} \cdot -1 = -56.9 \cdot kPa$

Water Pressure at Point D:
$$\sigma_{D.U1} := -\gamma_w \cdot \left[\left(HW_{U1} - BOK_{elev}\right) - \frac{\Delta_{h.U1} \cdot L_{CD}}{L_{CDEG}}\right] = -79.32 \cdot kPa$$

Water Pressure at Point E:
$$\sigma_{E.U1} := -\gamma_w \cdot \left[\left(HW_{U1} - BOF_{elev}\right) - \frac{\Delta_{h.U1} \cdot L_{CDE}}{L_{CDEG}}\right] = -59.41 \cdot kPa$$

Uplift for Overturning Analysis on Bottom of Key:
$$U_{OT.U1.key} := \frac{\sigma_{C.U1} + \sigma_{D.U1}}{2} \cdot L_{CD} \cdot W_b = -952.67 \cdot kN$$

Acting at:
$$U_{OT.U1.key.loc} := \frac{L_{CD} \cdot \left(2 \cdot \sigma_{C.U1} + \sigma_{D.U1}\right)}{3\left(\sigma_{C.U1} + \sigma_{D.U1}\right)} + L_{EG} = 18\ m$$

Uplift for Overturning Analysis on Bottom of Footing:
$$U_{OT.U1.ftg} := \frac{\sigma_{E.U1} + \sigma_{G.U1}}{2} \cdot L_{EG} \cdot W_b = -12212.37 \cdot kN$$

Acting at:
$$U_{OT.U1.ftg.loc} := \frac{L_{EG} \cdot \left(\sigma_{G.U1} + 2 \cdot \sigma_{E.U1}\right)}{3\left(\sigma_{G.U1} + \sigma_{E.U1}\right)} = 8.81\ m$$

U1 CASE

Uplift Load for Overturning Analysis: $U_{OT.U1} := U_{OT.U1.key} + U_{OT.U1.ftg} = -13165.04 \cdot kN$

Uplift Load Acting from Toe:

$$U_{OT.U1.loc} := \frac{U_{OT.U1.key} \cdot U_{OT.U1.key.loc} + U_{OT.U1.ftg} \cdot U_{OT.U1.ftg.loc}}{U_{OT.U1}} = 9.48\,m$$

All Vertical Loads Applicable to Overturning Stability Analysis

Total Concrete Dead Loads:	$D_{conc} = 22438.74 \cdot kN$	at:	$X_{conc.loc} = 9.35\,m$
Dead Load of Gate:	$D_{Gate} = 140.0 \cdot kN$		$X_{gate} = 9.50\,m$
Water Weight (HW) on Apron Slab:	$H_{1.U1} = 2163.1 \cdot kN$		$H_{1.U1.loc} = 14.13\,m$
Water Weight (TW) on Gate Footing:	$H_{2.U1.rg} = 899.7 \cdot kN$		$H_{2.U1.rg.loc} = 5.34\,m$
Water Weight (TW) on Regulating Gate Footing:	$H_{2.U1.gg} = 899.7 \cdot kN$		$H_{2.U1.gg.loc} = 5.34\,m$
Uplift Load for Overturning Analysis:	$U_{OT.U1} = -13165.04 \cdot kN$		$U_{OT.U1.loc} = 9.48 \cdot m$

Sum of All Overturning Analysis Vertical Load:

$$\Sigma V_{U1.OT} := D_{conc} + D_{Gate} + H_{1.U1} + H_{2.U1.rg} + H_{2.U1.gg} + U_{OT.U1} = 13376.25 \cdot kN$$

Sum of All Overturning Analysis Vertical Load Moments:

$$\Sigma M_{V.U1.OT} := D_{conc} \cdot X_{conc.loc} + D_{Gate} \cdot X_{gate} + H_{1.U1} \cdot H_{1.U1.loc} + H_{2.U1.rg} \cdot H_{2.U1.rg.loc} \ldots = 126508.58 \cdot kN \cdot m$$
$$+ H_{2.U1.gg} \cdot H_{2.U1.gg.loc} + U_{OT.U1} \cdot U_{OT.U1.loc}$$

Lateral Tailwater Loads for Overturning Stability Analysis

TW Lateral Load on Gate Footing (No Key - Overturning Values Adjusted): $H_{twgf.U1} := H_{twgf.U1.tri} + H_{twgf.U1.rect} = 1789.34 \cdot kN$

Acting at:

$$H_{twgf.U1.loc} := \frac{\frac{h_{toe}}{3} \cdot H_{twgf.U1.tri} + \frac{h_{toe}}{2} \cdot H_{twgf.U1.rect}}{H_{twgf.U1}} = 1.65\,m$$

Horizontal Tailwater Pressure Top of Key (Overturning Analysis): $\sigma_{twtk.OT.U1} := \sigma_{E.U1} \cdot -1 = 59.41 \cdot kPa$

Horizontal Tailwater Pressure Bottom of Key (Overturning Analysis): $\sigma_{twbk.OT.U1} := \sigma_{D.U1} \cdot -1 = 79.32 \cdot kPa$

Triangular Distribution Unit Load Acting at Key:

$$H_{twbk.OT.U1.tri} := \frac{(\sigma_{twbk.OT.U1} - \sigma_{twtk.OT.U1})}{2} \cdot d_{key} \cdot W_{tw.U1} = 238.89 \cdot kN$$

Triangular Distribution Unit Load Acting at Key: $H_{twbk.OT.U1.rect} := \sigma_{twtk.OT.U1} \cdot d_{key} \cdot W_{tw.U1} = 1425.85 \cdot kN$

Total Horizontal Tailwater Load on Key (Overturning Values Adjusted): $H_{twkey.OT.U1} := H_{twbk.OT.U1.tri} + H_{twbk.OT.U1.rect} = 1664.73 \cdot kN$

Acting at:

$$H_{twkey.OT.U1.loc} := \frac{H_{twbk.OT.U1.tri} \cdot \frac{-2 \cdot d_{key}}{3} + H_{twbk.OT.U1.rect} \cdot \frac{-d_{key}}{2}}{H_{twkey.OT.U1}} = -1.05 \cdot m$$

Lateral Driving Earth Loads for Overturning Stability Analysis (at rest condition)

Depth of Driving Soil Loads (to top of key): $h_{E.OT.U1} := TOC_{as} - BOF_{elev} = 4\,m$

At-Rest Soil Load:

$$E_{act.OT.U1} := \frac{\left(K_{o.U1} \cdot h_{E.OT.U1}^{\,2}\right)}{2} \cdot (\gamma_r - \gamma_w) \cdot W_{hwas.U1} \cdot -1 = -769.99 \cdot kN$$

At Rest- Soil Load Acting from Toe:

$$E_{act.OT.U1.loc} := \frac{h_{E.OT.U1}}{3} = 1.33\,m$$

All Lateral Loads Applicable to Overturning Stability Analysis

HW Lateral Load on Approach Slab: $H_{hwas.U1} = -3602.2 \cdot kN$ $H_{hwas.U1.loc} = 0.41\,m$

HW Lateral Load on Regulating Gate: $H_{hwrg.U1} = 0.0 \cdot kN$ $H_{hwrg.U1.loc} = 4.00\,m$

HW Lateral Load on Guard Gate: $H_{hwgg.U1} = 0.0 \cdot kN$ $H_{hwgg.U1.loc} = 4.00\,m$

TW Lateral Load on Regulating Gate: $H_{twrg.U1} = 0.0 \cdot kN$ $H_{twrg.U1.loc} = 4.00\,m$

HW Lateral Load on Guard Gate: $H_{twgg.U1} = 0.0 \cdot kN$ $H_{twgg.U1.loc} = 4.00\,m$

TW Lateral Load on Gate Footing (No Key - Overturning Values Adjusted): $H_{twgf.U1} = 1789.34 \cdot kN$ $H_{twgf.U1.loc} = 1.65\,m$

TW Lateral Load on Key: $H_{twkey.OT.U1} = 1664.73 \cdot kN$ $H_{twkey.OT.U1.loc} = -1.05\,m$

Ice / Impact Load: $I_{U1} = -300.0 \cdot kN$ $I_{U1.loc} = 5.80\,m$

Lateral Soil Load (driving): $E_{act.OT.U1} = -770.0 \cdot kN$ $E_{act.OT.U1.loc} = 1.33\,m$

Resisting Lateral Soil Load as required to produce horizontal equilibrium:

$$E_{pas.OT.U1} := -\left(H_{hwas.U1} + H_{hwrg.U1} + H_{hwgg.U1} + H_{twrg.U1} + H_{twgg.U1} \cdots \atop + H_{twgf.U1} + H_{twkey.OT.U1} + I_{U1} + E_{act.OT.U1}\right) = 1218.15 \cdot kN$$

Acting at:

$$E_{pas.OT.U1.loc} := -1 \cdot \frac{d_{key}}{2} = -1\,m$$

Sum of All Overturning Analysis Horizontal Load (ΣH=0):

$$\Sigma H_{U1.OT} := H_{hwas.U1} + H_{hwrg.U1} + H_{hwgg.U1} + H_{twrg.U1} + H_{twgg.U1} + H_{twgf.U1} + H_{twkey.OT.U1} + I_{U1} + E_{act.OT.U1} + E_{pas.OT.U1} = 0 \cdot kN$$

Sum of All Overturning Analysis Horizontal Load Moments:

$$\begin{aligned}\Sigma M_{H.U1.OT} := {} & H_{hwas.U1} \cdot H_{hwas.U1.loc} + H_{hwrg.U1} \cdot H_{hwrg.U1.loc} + H_{hwgg.U1} \cdot H_{hwgg.U1.loc} \cdots \\ & + H_{twrg.U1} \cdot H_{twrg.U1.loc} + H_{twgg.U1} \cdot H_{twgg.U1.loc} + H_{twgf.U1} \cdot H_{twgf.U1.loc} \cdots \\ & + H_{twkey.OT.U1} \cdot H_{twkey.OT.U1.loc} + I_{U1} \cdot I_{U1.loc} + E_{act.OT.U1} \cdot E_{act.OT.U1.loc} + E_{pas.OT.U1} \cdot E_{pas.OT.U1.loc}\end{aligned} = -4261.59 \cdot kN \cdot m$$

Overturning Stability Analysis

$$\Sigma M_{U1.OT} := \Sigma M_{V.U1.OT} + \Sigma M_{H.U1.OT} = 122246.99 \cdot kN \cdot m$$

$$X_{R.U1} := \frac{\Sigma M_{U1.OT}}{\Sigma V_{U1.OT}} = 9.14\,m \qquad x_{OT.U1} := X_{R.U1} - \frac{L_b}{2} = -0.11\,m$$

Overturning Resultant Ratio

$$Ratio_{OT.U1} := \frac{X_{R.U1}}{L_b} = 0.49$$

$$Ratio_{OT.U1.check} := \begin{vmatrix} \text{"OKAY"} \quad \text{if} \quad Ratio_{OT.U1} \geq Ratio_{OT.U1.min} \\ \text{"Revise Structure"} \quad \text{otherwise} \end{vmatrix} = \text{"OKAY"}$$

$$x_{OT.check.U1} := \begin{vmatrix} \text{"OKAY"} \quad \text{if} \quad \left|x_{OT.U1}\right| \leq Kern \\ \text{"Revise Structure"} \quad \text{otherwise} \end{vmatrix} = \text{"OKAY"}$$

U1 CASE

CHECK FOUNDATION BEARING CAPACITY (HORIZONTAL PLANE):

Bearing Pressure Under Toe:

$$\sigma_{ToeU1.OT} := \frac{\Sigma V_{U1.OT}}{L_b \cdot W_b} + \frac{\left(\Sigma V_{U1.OT} \cdot x_{OT.U1}\right)}{S_b} = 58.1 \cdot kPa$$

$$Bearing_{CheckToeU1.OT} := \begin{cases} \text{"OKAY"} & \text{if } \sigma_{ToeU1.OT} < \sigma_{allow.U1} \\ \text{"NG"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

Bearing Pressure Under Heel:

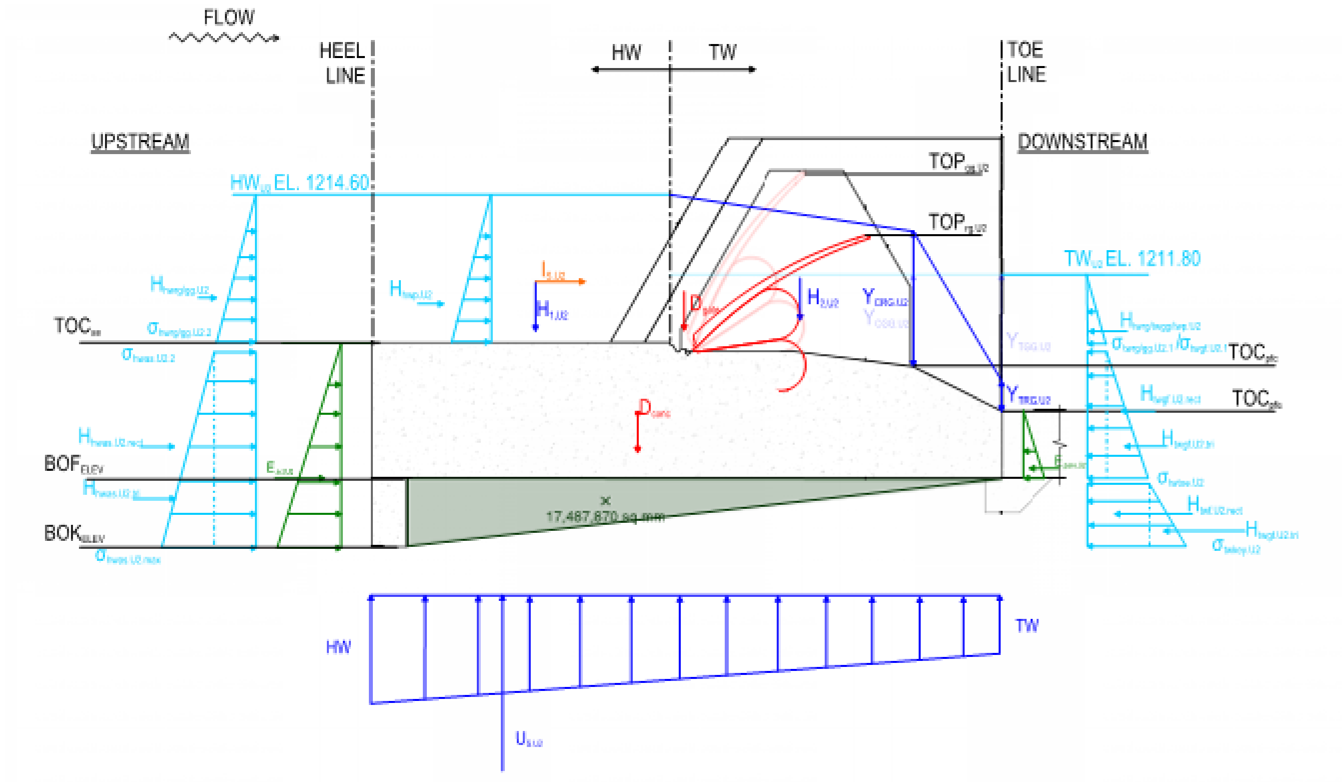
$$\sigma_{HeelU1.OT} := \frac{\Sigma V_{U1.OT}}{L_b \cdot W_b} - \frac{\left(\Sigma V_{U1.OT} \cdot x_{OT.U1}\right)}{S_b} = 62.4 \cdot kPa$$

$$Bearing_{CheckheelU1.OT} := \left(\begin{cases} \text{"OKAY"} & \text{if } \sigma_{HeelU1.OT} < \sigma_{allow.U1} \wedge \sigma_{HeelU1.OT} > 0 \\ \text{"NG"} & \text{otherwise} \end{cases} \right) = \text{"OKAY"}$$

SUMMARY OF STABILITY ASSESSMENT:

Sliding Factor of Safety: (Horizontal Plane)	$FS_{HorizSliding.U1} = 2.74$	$FS_{HorizSliding.U1.Check} = \text{"OKAY"}$
Sliding Factor of Safety: (Inclined Plane)	$FS_{InclinedlSlidingU1} = 40.34$	$FS_{InclinedSliding.check.U1} = \text{"OKAY"}$
Eccentricity: (Inclined Plane)	$e_{U1} = -0.26\,m$	$e_{check.U1} = \text{"Okay"}$
Bearing Pressure At Heel: (Inclined Plane)	$\sigma_{heel.U1} = 78 \cdot kPa$	$\sigma_{heel.U1.check} = \text{"Okay"}$
Bearing Pressure At Toe: (Inclined Plane)	$\sigma_{toe.U1} = 66 \cdot kPa$	$\sigma_{toe.U1.1.check} = \text{"Okay"}$
Flotation Factor of Safety (horizontal plane)	$FS_{act.FU1} = 1.75$	$FS_{check.FU1} = \text{"OKAY"}$
Overturning Resultant Ratio: (horizontal plane)	$Ratio_{OT.U1} = 0.49$	$Ratio_{OT.U1.check} = \text{"OKAY"}$
Eccentricity: (horizontal plane)	$x_{OT.U1} = -0.11\,m$	$x_{OT.check.U1} = \text{"OKAY"}$
Bearing Pressure At Heel: (horizontal plane)	$\sigma_{HeelU1.OT} = 62 \cdot kPa$	$Bearing_{CheckheelU1.OT} = \text{"OKAY"}$
Bearing Pressure At Toe: (horizontal plane)	$\sigma_{ToeU1.OT} = 58 \cdot kPa$	$Bearing_{ChecktoeU1.OT} = \text{"OKAY"}$

U2 DESIGN CASE



ACCEPTANCE PARAMETERS

Required Factor of Safety for Sliding: $FS_{req.U2.sl} := 1.5$ (Without Cohesion) (Section 8.1, Design Criteria)

Resultant Within Middle Third of Base: $e \le \frac{L_b}{6} \wedge e \ge \frac{-L_b}{6}$

Allowable Rock Bearing Pressure: $\sigma_{allow.U2} := 1270 \cdot \frac{kN}{m^2}$ (Section 5.2, Design Criteria)

INPUT PARAMETERS

Headwater Elevation: $HW_{U2} := 1214.60m$ (Section 8.3, Design Criteria)

Tailwater Elevation: $TW_{U2} := 1211.80m$ (Section 8.3, Design Criteria)

Bottom of Footing Elevation: $BOF_{elev} = 1206.00\,m$

Approach Slab Top of Concrete Elevation at Upstream Face: $TOC_{as} = 1210.00\,m$

Pier Footing Top of Concrete Elevation at Stilling Basin: $TOC_{pfe} = 1208.00\,m$

Pier Footing Top of Concrete Elevation at Center of Footing: $TOC_{pfc} = 1209.30\,m$

Top of Guard/ Regulating Gate Elevation: $TOP_{rg.U2} := 1212.10m$ $TOP_{gg.U2} := 1215.00m$

Bottom of Key Elevation: $BOK_{elev} = 1204\,m$

Gates are open when top of gate elevation is at 1210.00m

Gates are closed/up when top of gate elevation is at 1215.0m

Crestwater Elevation (Right) Guard Gate: $EL_{CGG.U2} := 1213.76m$

$$Y_{C.gg.U2} := \begin{cases} (EL_{CGG.U2} - TOC_{pfc}) & \text{if } TOP_{gg.U2} \le HW_{U2} \\ (TW_{U2} - TOC_{pfc}) & \text{if } TOP_{gg.U2} > HW_{U2} \end{cases} = 2.5 \cdot m$$

Toewater Elevation (Right) Guard Gate: $EL_{TGG.U2} := 1211.8m$

$$Y_{TOE.gg.U2} := \begin{cases} (EL_{TGG.U2} - TOC_{pfe}) & \text{if } TOP_{gg.U2} \le HW_{U2} \\ (TW_{U2} - TOC_{pfe}) & \text{if } TOP_{gg.U2} > HW_{U2} \end{cases} = 3.8 \cdot m$$

Crestwater Elevation Regulating (Left) Gate: $EL_{CRG.U2} := 1213.76m$

$$Y_{C.rg.U2} := \begin{cases} (EL_{CRG.U2} - TOC_{pfc}) & \text{if } TOP_{rg.U2} \le HW_{U2} \\ (TW_{U2} - TOC_{pfc}) & \text{if } TOP_{rg.U2} > HW_{U2} \end{cases} = 4.46 \cdot m$$

Toewater Elevation Regulating (Left) Gate: $EL_{TRG.U2} := 1208.58m$

$$Y_{TOE.rg.U2} := \begin{cases} (EL_{TRG.U2} - TOC_{pfe}) & \text{if } TOP_{rg.U2} \le HW_{U2} \\ (TW_{U2} - TOC_{pfe}) & \text{if } TOP_{rg.U2} > HW_{U2} \end{cases} = 0.58 \cdot m$$

LATERAL WATER LOADS

HEADWATER (DRIVING):

Headwater Depth on Pier: $D_{hwp.U2} := HW_{U2} - TOC_{as} = 4.60\,m$

Headwater Load Unit Width on Pier: $W_{hwp.U2} := w_p = 2.00\,m$

Total Horizontal Headwater Load on Pier:

$$H_{hwp.U2} := \frac{-\left(\gamma_w \cdot D_{hwp.U2}^{\;2}\right)}{2} \cdot W_{hwp.U2} = -207.6 \cdot kN$$

Apply Total Pier Headwater Load at:

$$H_{hwp.U2.loc} := \frac{D_{hwp.U2}}{3} + \left(TOC_{as} - BOF_{elev}\right) = 5.53\,m$$

Headwater Depth on Gate Base: $D_{hwg.U2} := HW_{U2} - TOC_{as} = 4.60\,m$

Thickness of Approach Slab (Including Key): $T_{as} = 6\,m$

Headwater Depth at Heel (U/S face): $D_{hwas.U2} := HW_{U2} - BOK_{elev} = 10.60\,m$

Headwater Load Unit Width on Approach Slab: $W_{hwas.U2} := W_b = 12.00\,m$

Headwater Unit Load At Top of Approach Slab:

$$H_{hwas.U2.1} := \frac{-\left(\gamma_w \cdot D_{hwg.U2}^{\;2}\right)}{2} \cdot W_{hwas.U2} = -1245.48 \cdot kN$$

Headwater Unit Load At Bottom of Approach Key:

$$H_{hwas.U2.2} := \frac{-\left(\gamma_w \cdot D_{hwas.U2}^{\;2}\right)}{2} \cdot W_{hwas.U2} = -6613.5 \cdot kN$$

Headwater Line Load At Top of Approach Slab:

$$\sigma_{hwas.U2.1} := -\left(\gamma_w \cdot D_{hwg.U2}\right) = -45.13 \cdot kPa$$

Headwater Line Load At Bottom of Approach Key:

$$\sigma_{hwas.U2.2} := -\left(\gamma_w \cdot D_{hwas.U2}\right) = -103.99 \cdot kPa$$

Triangular Distribution Unit Load on Approach Slab and Key:

$$H_{hwas.U2.2.tri} := \left(\frac{\sigma_{hwas.U2.2} - \sigma_{hwas.U2.1}}{2}\right) \cdot \left(T_{as} \cdot W_{hwas.U2}\right) = -2118.96 \cdot kN$$

Rectangular Distribution Unit Load on Approach Slab and Key:

$$H_{hwas.U2.2.rect} := \sigma_{hwas.U2.1} \cdot \left(T_{as} \cdot W_{hwas.U2}\right) = -3249.07 \cdot kN$$

Total Horizontal Headwater Load on Approach Slab:

$$H_{hwas.U2} := H_{hwas.U2.2.tri} + H_{hwas.U2.2.rect} = -5368.03 \cdot kN$$

Apply Total Footing Headwater Load at:

$$H_{hwas.U2.loc} := \frac{\left[H_{hwas.U2.2.rect} \cdot \frac{(T_{as})}{2} + H_{hwas.U2.2.tri} \cdot \frac{(T_{as})}{3}\right]}{H_{hwas.U2.2.tri} + H_{hwas.U2.2.rect}} - d_{key} = 0.61\,m$$

LATERAL WATER LOADS (continued)

Regulating Gate (2A) Operating Condition:

Regulating Crest Gate Down/Open Condition: $A1_{U2} := TOP_{rg.U2} \le TOC_{as}$

Regulating Crest Gate Up/Closed, with Top of Gate Higher than HW Elevation: $B1_{U2} := TOP_{rg.U2} \ge HW_{U2} \wedge TOP_{rg.U2} > TOC_{as}$

Regulating Crest Gate Up/Closed, with Top of Gate Lower than HW Elevation: $C1_{U2} := TOP_{rg.U2} > TOC_{as} \wedge HW_{U2} > TOP_{rg.U2}$

Regulating Crest Gate Height: $H_{rg.U2} := TOP_{rg.U2} - TOC_{as} = 2.1\ m$

Headwater Depth at Regulating Crest Gate: $D_{hwrg.U2} := HW_{U2} - TOC_{as} = 4.60\,m$

Regulating Crest Gate Width: $W_{hwrg.U2} := 5.00m$

Lateral Headwater Pressure at Bottom of Regulating Crest Gate:

$$\sigma_{hwrg.U2.1} := \begin{cases} (0.0kPa) & \text{if } A1_{U2} \\ -(\gamma_w \cdot D_{hwrg.U2}) & \text{if } B1_{U2} \\ -(\gamma_w \cdot D_{hwrg.U2}) & \text{if } C1_{U2} \end{cases} = -45.1 \cdot kPa$$

Lateral Headwater Pressure at Top of Regulating Crest Gate: (Load at HW Elevation On Regulating Crest Gate if HW is below TOG_{rg})

$$\sigma_{hwrg.U2.2} := \begin{cases} (0.0kPa) & \text{if } A1_{U2} \\ 0.0kPa & \text{if } B1_{U2} \\ -\left[\gamma_w \cdot (HW_{U2} - TOP_{rg.U2})\right] & \text{if } C1_{U2} \end{cases} = -24.5 \cdot kPa$$

Average Pressure acting on Regulating Gate:

$$\sigma_{hwrg.U2.avg} := \frac{(\sigma_{hwrg.U2.1} + \sigma_{hwrg.U2.2})}{2} = -34.83 \cdot kPa$$

Total Area water acting on Regulating Crest Gate:

$$A_{hwrg.U2} := \begin{cases} D_{hwrg.U2} \cdot W_{hwrg.U2} & \text{if } A1_{U2} \\ D_{hwrg.U2} \cdot W_{hwrg.U2} & \text{if } B1_{U2} \\ H_{rg.U2} \cdot W_{hwrg.U2} & \text{if } C1_{U2} \end{cases} = 10.5 \cdot m^2$$

Total Horizontal Headwater Load on Regulating Crest Gate: $H_{hwrg.U2} := \sigma_{hwrg.U2.avg} \cdot A_{hwrg.U2} = -365.7 \cdot kN$

Apply Total Regulating Crest Gate Headwater Load at:

$$H_{hwrg.U2.loc} := \begin{cases} (TOC_{as} - BOF_{elev}) & \text{if } A1_{U2} \\ \left[\frac{(HW_{U2} - TOC_{as})}{3} + (TOC_{as} - BOF_{elev})\right] & \text{if } B1_{U2} \\ \left[\frac{\sigma_{hwrg.U2.2} \cdot A_{hwrg.U2} \cdot \frac{(H_{rg.U2})}{2} + \frac{(\sigma_{hwrg.U2.1} - \sigma_{hwrg.U2.2})}{2} \cdot A_{hwrg.U2} \cdot \frac{(H_{rg.U2})}{3}}{\sigma_{hwrg.U2.2} \cdot A_{hwrg.U2} + \frac{(\sigma_{hwrg.U2.1} - \sigma_{hwrg.U2.2})}{2} \cdot A_{hwrg.U2}} \ldots \\ + (TOC_{as} - BOF_{elev})\right] & \text{if } C1_{U2} \end{cases} = 4.9 \cdot m$$

Guard Gate (4A) Operating Condition:

Guard Gate Down/Open Condition: $A2_{U2} := TOP_{gg.U2} \le TOC_{as}$

Guard Crest Gate Up/Closed, with Top of Gate Higher than HW Elevation: $B2_{U2} := TOP_{gg.U2} \ge HW_{U2} \wedge TOP_{gg.U2} > TOC_{as}$

Guard Crest Gate Up/Closed, with Top of Gate Lower than HW Elevation: $C2_{U2} := TOP_{gg.U2} > TOC_{as} \wedge HW_{U2} > TOP_{gg.U2}$

Guard Crest Gate Height: $H_{gg.U2} := TOP_{gg.U2} - TOC_{as} = 5\,m$

Headwater Depth at Guard Crest Gate: $D_{hwgg.U2} := HW_{U2} - TOC_{as} = 4.60\,m$

Guard Crest Gate Width: $W_{hwgg.U2} := 5.00m$

Lateral Headwater Pressure at Bottom of Guard Crest Gate:

$$\sigma_{hwgg.U2.1} := \begin{cases} (0.0kPa) & \text{if } A2_{U2} \\ -(\gamma_w \cdot D_{hwgg.U2}) & \text{if } B2_{U2} \\ -(\gamma_w \cdot D_{hwgg.U2}) & \text{if } C2_{U2} \end{cases} = -45.1 \cdot kPa$$

Lateral Headwater Pressure at Top of Guard Crest Gate: (Load at HW Elevation On Guard Crest Gate if HW is below TOG_{rg})

$$\sigma_{hwgg.U2.2} := \begin{cases} (0.0kPa) & \text{if } A2_{U2} \\ 0.0kPa & \text{if } B2_{U2} \\ -\left[\gamma_w \cdot (HW_{U2} - TOP_{gg.U2})\right] & \text{if } C2_{U2} \end{cases} = 0.0 \cdot kPa$$

Average Pressure acting on Guard Crest Gate:

$$\sigma_{hwgg.U2.avg} := \frac{(\sigma_{hwgg.U2.1} + \sigma_{hwgg.U2.2})}{2} = -22.56 \cdot kPa$$

Total Area water acting on Crest Gate:

$$A_{hwgg.U2} := \begin{cases} D_{hwgg.U2} \cdot W_{hwgg.U2} & \text{if } A2_{U2} \\ D_{hwgg.U2} \cdot W_{hwgg.U2} & \text{if } B2_{U2} \\ H_{gg.U2} \cdot W_{hwgg.U2} & \text{if } C2_{U2} \end{cases} = 23 \cdot m^2$$

Total Horizontal Headwater Load on Guard Crest Gate: $H_{hwgg.U2} := \sigma_{hwgg.U2.avg} \cdot A_{hwgg.U2} = -518.9 \cdot kN$

Apply Total Guard Crest Gate Headwater Load at:

$$H_{hwgg.U2.loc} := \begin{cases} (TOC_{as} - BOF_{elev}) & \text{if } A2_{U2} \\ \left[\frac{(HW_{U2} - TOC_{as})}{3} + (TOC_{as} - BOF_{elev})\right] & \text{if } B2_{U2} \\ \left[\frac{\sigma_{hwgg.U2.2} \cdot A_{hwgg.U2} \cdot \frac{(H_{gg.U2})}{2} + \frac{(\sigma_{hwgg.U2.1} - \sigma_{hwgg.U2.2})}{2} A_{hwgg.U2} \cdot \frac{(H_{gg.U2})}{3}}{\sigma_{hwgg.U2.2} \cdot A_{hwgg.U2} + \frac{(\sigma_{hwgg.U2.1} - \sigma_{hwgg.U2.2})}{2} \cdot A_{hwgg.U2}} \ldots \\ + (TOC_{as} - BOF_{elev})\right] & \text{if } C2_{U2} \end{cases} = 5.5 \cdot m$$

LATERAL TAILWATER (RESISTING) Applied to Downstream Side of Regulating Crest Gate:

Regulating Crest Gate Down/Open Condition: $A3_{U2} := TOP_{rg.U2} \le TOC_{as}$

Regulating Crest Gate Up/Closed, with Top of Gate Higher than TW Elevation: $B3_{U2} := TOP_{rg.U2} \ge TW_{U2} \wedge TOP_{rg.U2} > TOC_{as}$

Regulating Crest Gate Up/Closed, with Top of Gate Lower than TW Elevation: $C3_{U2} := TOP_{rg.U2} > TOC_{as} \wedge TW_{U2} > TOP_{rg.U2}$

Regulating Crest Gate Height: $H_{rg.U2} = 2.1\ m$

Tailwater Depth at Regulating Crest Gate: $D_{twrg.U2} := TW_{U2} - TOC_{as} = 1.80\,m$

Regulating Crest Gate Width: $W_{twrg.U2} := 5m$

Lateral Tailwater Pressure at Bottom of Regulating Crest Gate:

$$\sigma_{twrg.U2.1} := \begin{cases} (0.0kPa) & \text{if } A3_{U2} \\ -(\gamma_w \cdot D_{twrg.U2}) & \text{if } B3_{U2} \\ -(\gamma_w \cdot D_{twrg.U2}) & \text{if } C3_{U2} \end{cases} = -17.7 \cdot kPa$$

Lateral Tailwater Pressure at Top of Regulating Crest Gate: (Load at TW Elevation On Regulating Crest Gate if TW is below TOG_{rg})

$$\sigma_{twrg.U2.2} := \begin{cases} (0.0kPa) & \text{if } A3_{U2} \\ 0.0kPa & \text{if } B3_{U2} \\ -\left[\gamma_w \cdot (TW_{U2} - TOP_{rg.U2})\right] & \text{if } C3_{U2} \end{cases} = 0.0 \cdot kPa$$

Average Pressure acting on Regulating Gate:

$$\sigma_{twrg.U2.avg} := \frac{(\sigma_{twrg.U2.1} + \sigma_{twrg.U2.2})}{2} = -8.83 \cdot kPa$$

Total Area water acting on Regulating Crest Gate:

$$A_{twrg.U2} := \begin{cases} D_{twrg.U2} \cdot W_{twrg.U2} & \text{if } A3_{U2} \\ D_{twrg.U2} \cdot W_{twrg.U2} & \text{if } B3_{U2} \\ H_{rg.U2} \cdot W_{twrg.U2} & \text{if } C3_{U2} \end{cases} = 9 \cdot m^2$$

Total Horizontal Tailwater Load on Regulating Crest Gate: $H_{twrg.U2} := \sigma_{hwrg.U2.avg} \cdot A_{hwrg.U2} = -365.7 \cdot kN$

Apply Total Regulating Crest Gate Tailwater Load at:

$$H_{twrg.U2.loc} := \begin{cases} (TOC_{as} - BOF_{elev}) & \text{if } A3_{U2} \\ \left[\frac{(HW_{U2} - TOC_{as})}{3} + (TOC_{as} - BOF_{elev})\right] & \text{if } B3_{U2} \\ \left[\frac{\sigma_{hwrg.U2.2} \cdot A_{hwrg.U2} \cdot \frac{(H_{rg.U2})}{2} + \frac{(\sigma_{hwrg.U2.1} - \sigma_{hwrg.U2.2})}{2} A_{hwrg.U2} \cdot \frac{(H_{rg.U2})}{3}}{\sigma_{hwrg.U2.2} \cdot A_{hwrg.U2} + \frac{(\sigma_{hwrg.U2.1} - \sigma_{hwrg.U2.2})}{2} \cdot A_{hwrg.U2}} \ldots \\ + (TOC_{as} - BOF_{elev})\right] & \text{if } C3_{U2} \end{cases} = 5.5 \cdot m$$

LATERAL TAILWATER (RESISTING) Applied to Downstream Side of Guard Crest Gate:

U2 CASE

Guard Gate Down/Open Condition: $A4_{U2} := TOP_{gg.U2} \le TOC_{as}$

Guard Crest Gate Up/Closed, with Top of Gate Higher than TW Elevation: $B4_{U2} := TOP_{gg.U2} \ge TW_{U2} \wedge TOP_{gg.U2} > TOC_{as}$

Guard Crest Gate Up/Closed, with Top of Gate Lower than TW Elevation: $C4_{U2} := TOP_{gg.U2} > TOC_{as} \wedge TW_{U2} > TOP_{gg.U2}$

Tailwater Depth at Guard Crest Gate: $D_{twgg.U2} := TW_{U2} - TOC_{as} = 1.80\,m$

Guard Crest Gate Height: $H_{gg.U2} = 5\,m$

Guard Crest Gate Width: $W_{twgg.U2} := 5.00m$

Lateral Water Load at Bottom of Guard Crest Gate:

$$\sigma_{twgg.U2.1} := \begin{cases} (0.0kPa) & \text{if } A4_{U2} \\ (\gamma_w \cdot D_{twgg.U2}) & \text{if } B4_{U2} \\ (\gamma_w \cdot D_{twgg.U2}) & \text{if } C4_{U2} \end{cases} = 17.7 \cdot kPa$$

Lateral Water Load at Top of Guard Crest Gate:
(Load at TW Elevation On Guard Crest Gate if TW is below TOG_{gg})

$$\sigma_{twgg.U2.2} := \begin{cases} (0.0kPa) & \text{if } A4_{U2} \\ 0.0kPa & \text{if } B4_{U2} \\ \left[\gamma_w \cdot \left(TW_{U2} - TOP_{gg.U2}\right)\right] & \text{if } C4_{U2} \end{cases} = 0.0 \cdot kPa$$

Average Pressure acting on Guard Crest Gate:

$$\sigma_{twgg.U2.avg} := \frac{\left(\sigma_{twgg.U2.1} + \sigma_{twgg.U2.2}\right)}{2} = 8.83 \cdot kPa$$

Total Area water acting on Crest Gate:

Total Horizontal Tailwater Load on Guard Crest Gate:

$$H_{twgg.U2} := \sigma_{twgg.U2.avg} \cdot A_{twgg.U2} = 79.5 \cdot kN$$

Apply Total Horiz. TW Load on Guard Gate at:

$$H_{twgg.U2.loc} := \begin{cases} \left(TOC_{as} - BOF_{elev}\right) & \text{if } A4_{U2} \\ \left[\frac{\left(TW_{U2} - TOC_{as}\right)}{3} + \left(TOC_{as} - BOF_{elev}\right)\right] & \text{if } B4_{U2} \\ \left[\frac{\sigma_{twgg.U2.2} \cdot A_{twgg.U2} \cdot \frac{\left(H_{gg.U2}\right)}{2} + \frac{\left(\sigma_{twgg.U2.1} - \sigma_{twgg.U2.2}\right)}{2} A_{twgg.U2} \cdot \frac{\left(H_{gg.U2}\right)}{3}}{\sigma_{twgg.U2.2} \cdot A_{twgg.U2} + \frac{\left(\sigma_{twgg.U2.1} - \sigma_{twgg.U2.2}\right)}{2} \cdot A_{twgg.U2}} \ldots \\ + \left(TOC_{as} - BOF_{elev}\right) \right] & \text{if } C4_{U2} \end{cases} = 4.6 \cdot m$$

LATERAL WATER LOADS (continued)

U2 CASE

TAILWATER (RESISTING) Applied to Concrete Structure:

Tailwater Depth on Pier: $D_{twp.U2} := TW_{U2} - TOC_{as} = 1.80\,m$

Tailwater Load Unit Width on Pier: $W_{twp.U2} := w_p = 2.00\,m$

Total Horizontal Tailwater Load on Pier: $H_{twp.U2} := \dfrac{\left(\gamma_w \cdot D_{twp.U2}^{\,2}\right)}{2} \cdot W_{twp.U2} = 31.8 \cdot kN$

Apply Total Pier Tailwater Load at: $H_{twp.U2.loc} := \dfrac{D_{twp.U2}}{3} + \left(TOC_{as} - BOF_{elev}\right) = 4.60\,m$

Tailwater Depth At top of Gate Base Footing Elevation: $D_{twgf.U2} := TW_{U2} - TOC_{as} = 1.80\,m$

Water Depth at bottom of Gate Base Footing (Excluding Key): $D_{twtoe.U2} := TW_{U2} - BOF_{elev} = 5.80\,m$

Footing Thickness for horizontal at Toe: $h_{toe} = 4\,m$

Unit Width of D/S face of crest for application of Tailwater Load: $W_{tw.U2} := W_b = 12.00\,m$

Tailwater Pressure At Top of Gate Footing: $\sigma_{twgf.U2} := \left(\gamma_w \cdot D_{twgf.U2}\right) = 17.66 \cdot kPa$

Tailwater Pressure At Toe: $\sigma_{twtoe.U2} := \left(\gamma_w \cdot D_{twtoe.U2}\right) = 56.9 \cdot kPa$

Triangular Distribution Unit Load on Gate Footing Base: $H_{twgf.U2.tri} := \left(\dfrac{\sigma_{twtoe.U2} - \sigma_{twgf.U2}}{2}\right) \cdot \left[\left(T_{as} - d_{key}\right) \cdot W_{tw.U2}\right] = 941.76 \cdot kN$

Rectangular Distribution Unit Load on Gate Footing Base: $H_{twgf.U2.rect} := \sigma_{twgf.U2} \cdot \left[\left(T_{as} - d_{key}\right) \cdot W_{tw.U2}\right] = 847.58 \cdot kN$

Tailwater Pressure At Bottom of Sliding Failure Plane: $\sigma_{twbk.U2} := \left(HW_{U2} - BOK_{elev}\right) \cdot \gamma_w = 103.99 \cdot kPa$

Triangular Distribution Unit Load Below Footing: $H_{twbk.U2.tri} := \dfrac{\left(\sigma_{twbk.U2} - \sigma_{twtoe.U2}\right)}{2} \cdot d_{key} \cdot W_{tw.U2} = 565.06 \cdot kN$

Rectangular Distribution Load Below Footing Base: $H_{twbk.U2.rect} := \sigma_{twtoe.U2} \cdot d_{key} \cdot W_{tw.U2} = 1365.55 \cdot kN$

Total Horizontal Tailwater Headwater Load on Gate Footing (including key): $H_{twgk.U2} := H_{twgf.U2.tri} + H_{twgf.U2.rect} \cdots + H_{twbk.U2.tri} + H_{twbk.U2.rect} = 3719.95 \cdot kN$

Apply Total Gate Footing Tailwater Load at:

$$H_{twgk.U2.loc} := \frac{\left[H_{twgf.U2.rect} \cdot \dfrac{\left(h_{toe}\right)}{2} + H_{twgf.U2.tri} \cdot \dfrac{\left(h_{toe}\right)}{3} + H_{twbk.U2.tri} \cdot \left(-d_{key} \cdot \dfrac{2}{3}\right) + H_{twbk.U2.rect} \cdot \left(\dfrac{-d_{key}}{2}\right)\right]}{H_{twgf.U2.tri} + H_{twgf.U2.rect} + H_{twbk.U2.tri} + H_{twbk.U2.rect}} = 0.22\,m$$

SUMMATION OF LATERAL WATER LOADS:

$$\Sigma H_{Water.U2} := H_{hwp.U2} + H_{hwas.U2} + H_{hwrg.U2} + H_{hwgg.U2} + H_{twp.U2} + H_{twgk.U2} + H_{twrg.U2} + H_{twgg.U2} = -2994.7 \cdot kN$$

$$\Sigma M_{Hwater.U2} := H_{hwp.U2} \cdot H_{hwp.U2.loc} + H_{hwas.U2} \cdot H_{hwas.U2.loc} + H_{hwrg.U2} \cdot H_{hwrg.U2.loc} + H_{hwgg.U2} \cdot H_{hwgg.U2.loc} \cdots + H_{twp.U2} \cdot H_{twp.U2.loc} + H_{twgk.U2} \cdot H_{twgk.U2.loc} + H_{twrg.U2} \cdot H_{twrg.U2.loc} + H_{twgg.U2} \cdot H_{twgg.U2.loc} = -9757.71 \cdot kN \cdot m$$

VERTICAL WATER LOADS

U2 CASE

HEADWATER:

Water Depth on top of Approach Slab: $d_{hw.U2} := HW_{U2} - TOC_{as} = 4.60\,m$

Length of Approach Slab: $L_{as} = 8.75\,m$

Width of Approach Slab: $w_{as} = 12.00\,m$

Length from front of Gate to Heel: $L_{hg} = 8.75\,m$

Vertical Water Weight (H1) on Approach Slab:

$$H_{1.U2} := \left[w_{as} \cdot d_{hw.U2} \cdot L_{hg} - w_p \cdot d_{hw.U2} \cdot \left(L_{hg} - L_{as}\right)\right] \cdot \gamma_w = 4738.2 \cdot kN$$

Moment Arm for Application of Water Weight (H1) from toe:

$$H_{1.U2.loc} := L_b - \frac{L_{hg}}{2} = 14.13\,m$$

TAILWATER ABOVE GUARD GATE:

Trapezoid Volume Above Gate Footing from Approach Slab to Crest:

$$V_{asc.gg.U2} := \left(L_{gf} - L_{gfc}\right) W_{twgg.U2} \frac{d_{hw.U2} + Y_{C.gg.U2}}{2} = 126.91 \cdot m^3$$

Trapezoid Volume Above Gate Footing Crest to End of Gate Footing:

$$V_{gfc.gg.U2} := \left(L_{gfc} \cdot W_{twgg.U2}\right) \frac{Y_{C.gg.U2} + Y_{TOE.gg.U2}}{2} = 40.95 \cdot m^3$$

Load Above Gate Footing from Approach Slab to Crest:

$$H_{2.U2.asc.gg} := V_{asc.gg.U2} \cdot \gamma_w = 1245.01 \cdot kN$$

Load Acting Above Footing Crest from Toe:

$$H_{2.U2.asc.gg.loc} := \frac{\left(L_{gf} - L_{gfc}\right) \cdot \left(2 \cdot d_{hw.U2} + Y_{C.gg.U2}\right)}{3 \cdot \left(d_{hw.U2} + Y_{C.gg.U2}\right)} + L_{gfc} = 6.53\,m$$

Load Above Gate Footing from Crest to End:

$$H_{2.U2.gfc.gg} := V_{gfc.gg.U2} \cdot \gamma_w = 401.72 \cdot kN$$

Load Acting Above Gate Footing from Crest to End:

$$H_{2.U2.gfc.gg.loc} := \frac{\left(L_{gfc}\right) \cdot \left(2 \cdot Y_{C.gg.U2} + Y_{TOE.gg.U2}\right)}{3 \cdot \left(Y_{C.gg.U2} + Y_{TOE.gg.U2}\right)} = 1.21\,m$$

Vertical Water Weight (H2) on Guard Gate Footing:

$$H_{2.U2.gg} := H_{2.U2.asc.gg} + H_{2.U2.gfc.gg} = 1646.73 \cdot kN$$

Moment Arm for Application of Water Weight (H2) from toe:

$$H_{2.U2.gg.loc} := \frac{H_{2.U2.asc.gg} \cdot H_{2.U2.asc.gg.loc} \cdots + H_{2.U2.gfc.gg} \cdot H_{2.U2.gfc.gg.loc}}{H_{2.U2.gg}} = 5.23\,m$$

TAILWATER ABOVE REGULATING GATE:

Trapezoid Volume Above Gate Footing from Approach Slab to Crest:

$$V_{asc.rg.U2} := \left(L_{gf} - L_{gfc}\right) W_{twrg.U2} \frac{d_{hw.U2} + Y_{C.rg.U2}}{2} = 161.95 \cdot m^3$$

Trapezoid Volume Above Gate Footing Crest to End of Gate Footing:

$$V_{gfc.rg.U2} := \left(L_{gfc} \cdot W_{twrg.U2}\right) \frac{Y_{C.rg.U2} + Y_{TOE.rg.U2}}{2} = 32.76 \cdot m^3$$

Load Above Gate Footing from Approach Slab to Crest:

$$H_{2.U2.asc.rg} := V_{asc.rg.U2} \cdot \gamma_w = 1588.7 \cdot kN$$

Load Acting Above Footing Crest from Toe:

$$H_{2.U2.asc.rg.loc} := \frac{\left(L_{gf} - L_{gfc}\right) \cdot \left(2 \cdot d_{hw.U2} + Y_{C.rg.U2}\right)}{3 \cdot \left(d_{hw.U2} + Y_{C.rg.U2}\right)} + L_{gfc} = 6.19\,m$$

Load Above Gate Footing from Crest to End:

$$H_{2.U2.gfc.rg} := V_{gfc.rg.U2} \cdot \gamma_w = 321.38 \cdot kN$$

Load Acting Above Gate Footing from Crest to End:

$$H_{2.U2.gfc.rg.loc} := \frac{\left(L_{gfc}\right) \cdot \left(2 \cdot Y_{C.rg.U2} + Y_{TOE.rg.U2}\right)}{3 \cdot \left(Y_{C.rg.U2} + Y_{TOE.rg.U2}\right)} = 1.63\,m$$

Vertical Water Weight (H2) on Regulating Gate Footing:

$$H_{2.U2.rg} := H_{2.U2.asc.rg} + H_{2.U2.gfc.rg} = 1910.08 \cdot kN$$

Moment Arm for Application of Water Weight (H2) from toe:

$$H_{2.U2.rg.loc} := \frac{H_{2.U2.asc.rg} \cdot H_{2.U2.asc.rg.loc} \cdots + H_{2.U2.gfc.rg} \cdot H_{2.U2.gfc.rg.loc}}{H_{2.U2.rg}} = 5.43\,m$$

UPLIFT **U2 CASE**

Uplift pressure at U/S Face (heel): $U_{HW.U2} := (D_{hwas.U2}) \cdot \gamma_w = 104.0 \cdot \frac{kN}{m^2}$

Uplift pressure at D/S Face Stilling Basin: $U_{TW.U2} := (D_{twtoe.U2}) \cdot \gamma_w = 56.9 \cdot \frac{kN}{m^2}$

Length from U/S of Gate Structure to U/S of Stilling Basin: $L_{overall.Usual} = 18.50\,m$

Difference between Uplift pressure at HW and TW: $U_{diff.U2} := U_{HW.U2} - U_{TW.U2} = 47.09 \cdot \frac{kN}{m^2}$

Slope of difference between between Uplift pressure at HW and TW: $U_{slope.U2} := \frac{U_{diff.U2}}{L_{overall.Usual}} = 2.55 \cdot \frac{kN}{m^2 \cdot m}$

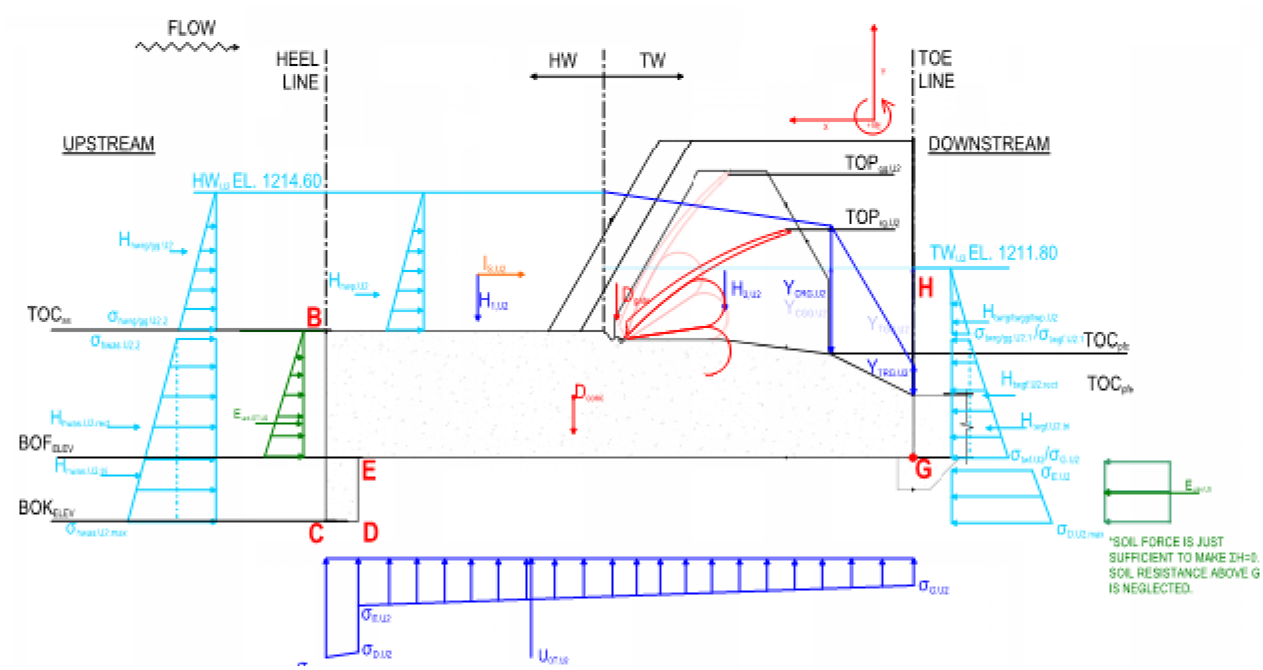
MONOLITH OVERTURNING STABILITY ANALYSIS

U2 CASE

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stability of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1 $Ratio_{OT.U2.min} := 0.33$ at Rock Foundation



Uplift Loads for Overturning Stability Analysis

Line of Creep:

Change in Water Head: $\Delta_{h.U2} := HW_{U2} - TW_{U2} = 2.8\,m$

Length from Point C to Point G: $L_{CG} = 18.61\,m$

Length from Various Points to Points: $L_{CD} = 1\,m$ $L_{DE} = 2\,m$ $L_{EG} = 17.5\,m$

$L_{GH.U2} := TW_{U2} - BOF_{elev} = 5.8\,m$

Length from Point C, D, E to G: $L_{CDEG} = 20.5\,m$ $L_{CDE} = 3\,m$

Water Pressure at Point C & G: $\sigma_{C.U2} := \sigma_{hwas.U2.2} = -103.99 \cdot kPa$ $\sigma_{G.U2} := \sigma_{twtoe.U2} \cdot -1 = -56.9 \cdot kPa$

Water Pressure at Point D:

$$\sigma_{D.U2} := -\gamma_w \cdot \left[\left(HW_{U2} - BOK_{elev}\right) - \frac{\Delta_{h.U2} \cdot L_{CD}}{L_{CDEG}}\right] = -102.65 \cdot kPa$$

Water Pressure at Point E:

$$\sigma_{E.U2} := -\gamma_w \cdot \left[\left(HW_{U2} - BOF_{elev}\right) - \frac{\Delta_{h.U2} \cdot L_{CDE}}{L_{CDEG}}\right] = -80.35 \cdot kPa$$

Uplift for Overturning Analysis on Bottom of Key:

$$U_{OT.U2.key} := \frac{\sigma_{C.U2} + \sigma_{D.U2}}{2} \cdot L_{CD} \cdot W_b = -1239.79 \cdot kN$$

Acting at:

$$U_{OT.U2.key.loc} := \frac{L_{CD} \cdot \left(2 \cdot \sigma_{C.U2} + \sigma_{D.U2}\right)}{3\left(\sigma_{C.U2} + \sigma_{D.U2}\right)} + L_{EG} = 18\,m$$

Uplift for Overturning Analysis on Bottom of Footing:

$$U_{OT.U2.ftg} := \frac{\sigma_{E.U2} + \sigma_{G.U2}}{2} \cdot L_{EG} \cdot W_b = -14410.65 \cdot kN$$

Acting at:

$$U_{OT.U2.ftg.loc} := \frac{L_{EG} \cdot \left(\sigma_{G.U2} + 2 \cdot \sigma_{E.U2}\right)}{3\left(\sigma_{G.U2} + \sigma_{E.U2}\right)} = 9.25\,m$$

U2 CASE

Uplift Load for Overturning Analysis: $U_{OT.U2} := U_{OT.U2.key} + U_{OT.U2.ftg} = -15650.44 \cdot kN$

Uplift Load Acting from Toe: $U_{OT.U2.loc} := \dfrac{U_{OT.U2.key} \cdot U_{OT.U2.key.loc} + U_{OT.U2.ftg} \cdot U_{OT.U2.ftg.loc}}{U_{OT.U2}} = 9.94\,m$

<u>All Vertical Loads Applicable to Overturning Stability Analysis</u>

Total Concrete Dead Loads:	$D_{conc} = 22438.74 \cdot kN$	at:	$X_{conc.loc} = 9.35\,m$
Dead Load of Gate:	$D_{Gate} = 140.0 \cdot kN$		$X_{gate} = 9.50\,m$
Water Weight (HW) on Apron Slab:	$H_{1.U2} = 4738.2 \cdot kN$		$H_{1.U2.loc} = 14.13\,m$
Water Weight (TW) on Gate Footing:	$H_{2.U2.rg} = 1910.1 \cdot kN$		$H_{2.U2.rg.loc} = 5.43\,m$
Water Weight (TW) on Regulating Gate Footing:	$H_{2.U2.gg} = 1646.7 \cdot kN$		$H_{2.U2.gg.loc} = 5.23\,m$
Uplift Load for Overturning Analysis:	$U_{OT.U2} = -15650.44 \cdot kN$		$U_{OT.U2.loc} = 9.94 \cdot m$

Sum of All Overturning Analysis Vertical Load:

$$\Sigma V_{U2.OT} := D_{conc} + D_{Gate} + H_{1.U2} + H_{2.U2.rg} + H_{2.U2.gg} + U_{OT.U2} = 15223.34 \cdot kN$$

Sum of All Overturning Analysis Vertical Load Moments:

$$\Sigma M_{V.U2.OT} := D_{conc} \cdot X_{conc.loc} + D_{Gate} \cdot X_{gate} + H_{1.U2} \cdot H_{1.U2.loc} + H_{2.U2.rg} \cdot H_{2.U2.rg.loc} \ldots = 141433.2 \cdot kN \cdot m$$
$$+ H_{2.U2.gg} \cdot H_{2.U2.gg.loc} + U_{OT.U2} \cdot U_{OT.U2.loc}$$

<u>Lateral Tailwater Loads for Overturning Stability Analysis</u>

TW Lateral Load on Gate Footing (No Key - Overturning Values Adjusted): $H_{twgf.U2} := H_{twgf.U2.tri} + H_{twgf.U2.rect} = 1789.34 \cdot kN$

Acting at: $H_{twgf.U2.loc} := \dfrac{\frac{h_{toe}}{3} \cdot H_{twgf.U2.tri} + \frac{h_{toe}}{2} \cdot H_{twgf.U2.rect}}{H_{twgf.U2}} = 1.65\,m$

Horizontal Tailwater Pressure Top of Key (Overturning Analysis): $\sigma_{twtk.OT.U2} := \sigma_{E.U2} \cdot -1 = 80.35 \cdot kPa$

Horizontal Tailwater Pressure Bottom of Key (Overturning Analysis): $\sigma_{twbk.OT.U2} := \sigma_{D.U2} \cdot -1 = 102.65 \cdot kPa$

Triangular Distribution Unit Load Acting at Key: $H_{twbk.OT.U2.tri} := \dfrac{(\sigma_{twbk.OT.U2} - \sigma_{twtk.OT.U2})}{2} \cdot d_{key} \cdot W_{tw.U2} = 267.6 \cdot kN$

Triangular Distribution Unit Load Acting at Key: $H_{twbk.OT.U2.rect} := \sigma_{twtk.OT.U2} \cdot d_{key} \cdot W_{tw.U2} = 1928.31 \cdot kN$

Total Horizontal Tailwater Load on Key (Overturning Values Adjusted): $H_{twkey.OT.U2} := H_{twbk.OT.U2.tri} + H_{twbk.OT.U2.rect} = 2195.91 \cdot kN$

Acting at: $H_{twkey.OT.U2.loc} := \dfrac{H_{twbk.OT.U2.tri} \cdot \frac{-2 \cdot d_{key}}{3} + H_{twbk.OT.U2.rect} \cdot \frac{-d_{key}}{2}}{H_{twkey.OT.U2}} = -1.04\,m$

<u>Lateral Driving Earth Loads for Overturning Stability Analysis (at rest condition)</u>

Depth of Driving Soil Loads (to top of key): $h_{E.OT.U2} := TOC_{as} - BOF_{elev} = 4\,m$

At-Rest Soil Load: $E_{act.OT.U2} := \dfrac{\left(K_{o.U2} \cdot h_{E.OT.U2}^{\;2}\right)}{2} \cdot (\gamma_r - \gamma_w) \cdot W_{hwas.U2} \cdot -1 = -769.99 \cdot kN$

At Rest- Soil Load Acting from Toe: $E_{act.OT.U2.loc} := \dfrac{h_{E.OT.U2}}{3} = 1.33\,m$

U2 CASE

All Lateral Loads Applicable to Overturning Stability Analysis

HW Lateral Load on Approach Slab:	$H_{hwas.U2} = -5368.0 \cdot kN$	$H_{hwas.U2.loc} = 0.61\,m$
HW Lateral Load on Regulating Gate:	$H_{hwrg.U2} = -365.7 \cdot kN$	$H_{hwrg.U2.loc} = 4.95\,m$
HW Lateral Load on Guard Gate:	$H_{hwgg.U2} = -518.9 \cdot kN$	$H_{hwgg.U2.loc} = 5.53\,m$

STABILITY ASSESSMENT (SLIDNG, BEARING, FLOTATION AND OVERTURNING): UN1 CASE

CHECK SLIDING ALONG HORIZONTAL PLANE THRU TOE,
IGNORING BEDROCK MOBILIZED BY STRUCTURAL HEEL KEY, OR VOID BEHIND KEY

Sum of Vertical Forces:

$\Sigma V_{UN1} := \Sigma V_{DL} + \Sigma V_{water.UN1} = 12624.6 \cdot kN$

Sum of Horizontal Forces:

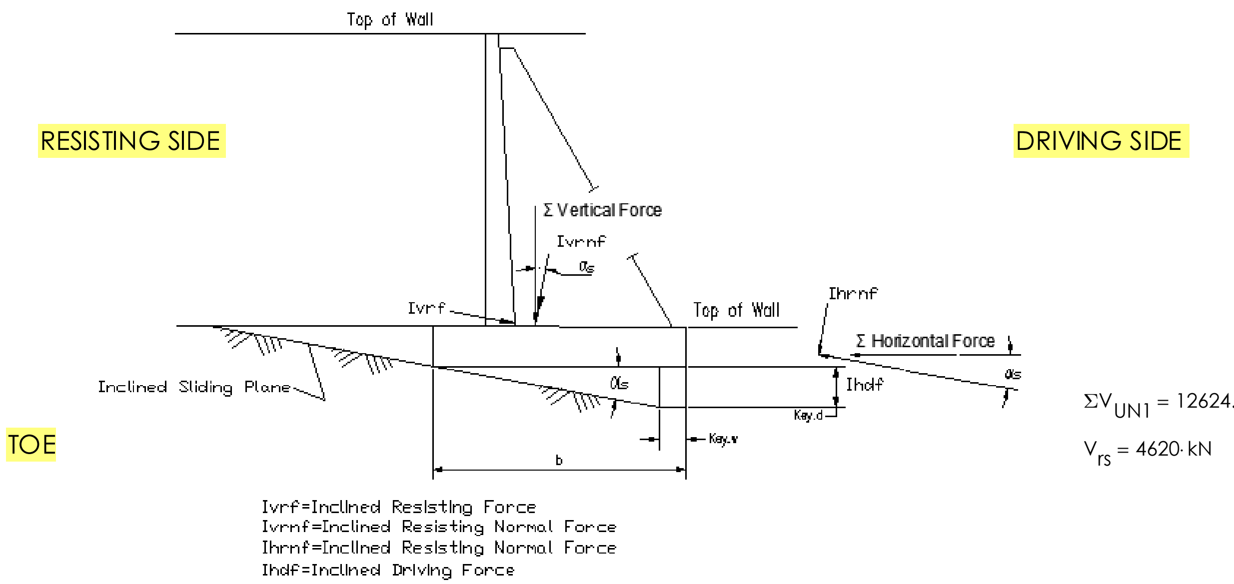
$\Sigma H_{UN1} := \Sigma H_{Water.UN1} + \Sigma H_{soil.UN1} + \Sigma H_{I.UN1} = -4874.54 \cdot kN$

Sliding Factor of Safety:

$$FS_{HorizSliding.UN1} := \frac{\tan_{\phi} \cdot \Sigma V_{UN1}}{\left|\Sigma H_{UN1}\right|} = 1.26$$

$$FS_{HorizSliding.UN1.Check} := \begin{cases} \text{"OKAY"} & \text{if } FS_{HorizSliding.UN1} \geq FS_{req.UN1.sl} \\ \text{"Check Inclined Sliding with Key"} & \text{otherwise} \end{cases} = \text{"Check Inclined Sliding with Key"}$$

CHECK SLIDING ALONG INCLINED SLIDING PLANE FROM HEEL KEY TO TOE,
WITH BEDROCK MASS MOBILIZED BY REINFOCREDE CONCRETE KEY)



$\Sigma V_{UN1} = 12624.61 \cdot kN$

$V_{rs} = 4620 \cdot kN$

$\alpha s = 0.11$

as degrees= $\alpha s \cdot \left(\frac{180}{\pi}\right) = 6.52$

Resolve $\Sigma Vert_{UN1}$ & $\Sigma Horiz_{UN1}$

$$\Sigma V_{InclinedUN1} := \cos(\alpha s) \cdot \left(\Sigma V_{UN1} + V_{rs}\right) + \sin(\alpha s) \cdot \left|\Sigma H_{UN1}\right| = 17686.6 \cdot kN$$

$$\Sigma H_{InclinedUN1} := \cos(\alpha s) \cdot \left|\Sigma H_{UN1}\right| - \sin(\alpha s) \cdot \left(\Sigma V_{UN1} + V_{rs}\right) = 2884.9 \cdot kN$$

(With properly engineered reinforced concrete Key, horizontal sliding plane thru Toe is protected, critical sliding plane is relocated to the INCLINED SLIDING PLANE FROM HEEL KEY To TOE, Bedrock Mass above this examined plane is mobilized by reinforced concrete key and combined into Structural Wedge.)

Inclined Sliding Plane Length

$L_{incline} = 18.61 \text{ m}$

Safety Factor for Sliding
Inclined Failure Plane

$$FS_{InclinedISlidingUN1} := \frac{\Sigma V_{InclinedUN1} \cdot \tan\left(\phi_{rock} \cdot \frac{\pi}{180}\right)}{\left|\Sigma H_{InclinedUN1}\right|} = 2.99$$

$$FS_{InclinedSliding.check.UN1} := \begin{cases} \text{"OKAY "} & \text{if } FS_{InclinedISlidingUN1} > FS_{req.UN1.sl} \\ \text{"Revise Structure""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

$FS_{InclinedSliding.check.UN1} = \text{"OKAY "}$

UN1 CASE

OVERTURNING STABILITY CHECK:

CHECK ECCENTRICITY

Sum of the moments:

$$\Sigma M_{UN1} := \Sigma M_{DL} + \Sigma M_{Hwater.UN1} + \Sigma M_{Vwater.UN1} + \Sigma M_{I.UN1} + \Sigma M_{soil.UN1} + \Sigma M_{rs} = 152218 \cdot kN \cdot m$$

Eccentricity:

$$e_{UN1} := \left(\frac{L_{incline}}{2}\right) - \frac{(\Sigma M_{UN1})}{\Sigma V_{InclinedUN1}} = 0.70\,m$$

Eccentricity Check:

$$e_{check.UN1} := \begin{cases} \text{"Okay"} & \text{if } e_{UN1} \le Kern \\ \text{"Revise Structure"} & \text{otherwise} \end{cases}$$

$$e_{check.UN1} = \text{"Okay"}$$

Foundation Bearing Checks:

Bearing Pressure at Heel:

$$\sigma_{heel.UN1} := \frac{\Sigma V_{InclinedUN1}}{A_{b.incline}} - \frac{(\Sigma V_{InclinedUN1} \cdot e_{UN1})}{S_{b.incline}} = 61.4 \cdot \frac{kN}{m^2}$$

$$\sigma_{heel.UN1.check} := \left(\begin{cases} \text{"Okay"} & \text{if } \sigma_{heel.UN1} \le \sigma_{allow.UN1} \\ \text{"Revise Structure"} & \text{if } \sigma_{heel.UN1} < 0 \frac{kN}{m^2} \end{cases} \right)$$

$$\sigma_{heel.UN1.check} = \text{"Okay"}$$

Bearing Pressure at Toe:

$$\sigma_{toe.UN1} := \frac{\Sigma V_{InclinedUN1}}{A_{b.incline}} + \frac{(\Sigma V_{InclinedUN1} \cdot e_{UN1})}{S_{b.incline}} = 97.0 \cdot \frac{kN}{m^2}$$

$$\sigma_{toe.UN1.1.check} := \begin{cases} \text{"Okay"} & \text{if } \sigma_{toe.UN1} \le \sigma_{allow.UN1} \\ \text{"Revise Structure"} & \text{if } \sigma_{toe.UN1} < 0 \frac{kN}{m^2} \end{cases}$$

$$\sigma_{toe.UN1.1.check} = \text{"Okay"}$$

FLOATATION ANALYSIS:

ACCEPTANCE PARAMETERS

Required Factor of Safety: $FS_{req.FUN1} := 1.3$

VERTICAL LOADS RESISTING:

Dead Load: $\Sigma V_{DL} = 22578.74 \cdot kN$

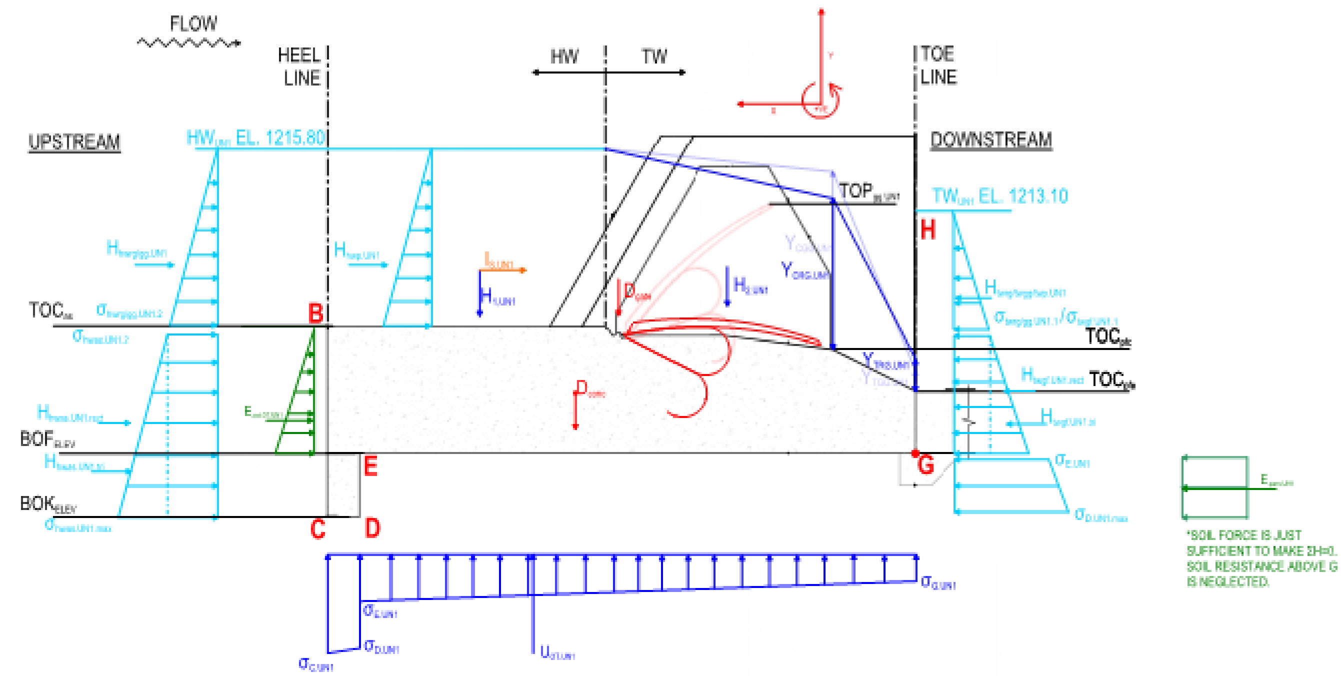
MONOLITH OVERTURNING STABILITY ANALYSIS

UN1 CASE

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stability of indeterminate forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1 $Ratio_{OT.UN1.min} := 0.33$ at Rock Foundation



Uplift Loads for Overturning Stability Analysis

Line of Creep:

Change in Water Head: $\Delta_{h.UN1} := HW_{UN1} - TW_{UN1} = 2.7\,m$

Length from Point C to Point G: $L_{CG} = 18.61\,m$

Length from Various Points to Points: $L_{CD} = 1\,m$ $L_{DE} = 2\,m$ $L_{EG} = 17.5\,m$

$L_{GH.UN1} := TW_{UN1} - BOF_{elev} = 7.1\,m$

Length from Point C, D, E to G: $L_{CDEG} = 20.5\,m$ $L_{CDE} = 3\,m$

Water Pressure at Point C & G: $\sigma_{C.UN1} := \sigma_{hwas.UN1.2} = -115.76\cdot kPa$ $\sigma_{G.UN1} := \sigma_{twtoe.UN1}\cdot -1 = -69.65\cdot kPa$

Water Pressure at Point D: $$\sigma_{D.UN1} := -\gamma_w \cdot \left[\left(HW_{UN1} - BOK_{elev}\right) - \frac{\Delta_{h.UN1}\cdot L_{CD}}{L_{CDEG}}\right] = -114.47\cdot kPa$$

Water Pressure at Point E: $$\sigma_{E.UN1} := -\gamma_w \cdot \left[\left(HW_{UN1} - BOF_{elev}\right) - \frac{\Delta_{h.UN1}\cdot L_{CDE}}{L_{CDEG}}\right] = -92.26\cdot kPa$$

Uplift for Overturning Analysis on Bottom of Key: $$U_{OT.UN1.key} := \frac{\sigma_{C.UN1} + \sigma_{D.UN1}}{2}\cdot L_{CD}\cdot W_b = -1381.34\cdot kN$$

Acting at: $$U_{OT.UN1.key.loc} := \frac{L_{CD}\cdot\left(2\cdot\sigma_{C.UN1} + \sigma_{D.UN1}\right)}{3\left(\sigma_{C.UN1} + \sigma_{D.UN1}\right)} + L_{EG} = 18\,m$$

Uplift for Overturning Analysis on Bottom of Footing: $$U_{OT.UN1.ftg} := \frac{\sigma_{E.UN1} + \sigma_{G.UN1}}{2}\cdot L_{EG}\cdot W_b = -17000.85\cdot kN$$

Acting at: $$U_{OT.UN1.ftg.loc} := \frac{L_{EG}\cdot\left(\sigma_{G.UN1} + 2\cdot\sigma_{E.UN1}\right)}{3\left(\sigma_{G.UN1} + \sigma_{E.UN1}\right)} = 9.16\,m$$

UN1 CASE

Uplift Load for Overturning Analysis: $U_{OT.UN1} := U_{OT.UN1.key} + U_{OT.UN1.ftg} = -18382.19 \cdot kN$

Uplift Load Acting from Toe: $U_{OT.UN1.loc} := \dfrac{U_{OT.UN1.key} \cdot U_{OT.UN1.key.loc} + U_{OT.UN1.ftg} \cdot U_{OT.UN1.ftg.loc}}{U_{OT.UN1}} = 9.82\,m$

All Vertical Loads Applicable to Overturning Stability Analysis

		at:	
Total Concrete Dead Loads:	$D_{conc} = 22438.74 \cdot kN$		$X_{conc.loc} = 9.35\,m$
Dead Load of Gate:	$D_{Gate} = 140.0 \cdot kN$		$X_{gate} = 9.50\,m$
Water Weight (HW) on Apron Slab:	$H_{1.UN1} = 5974.3 \cdot kN$		$H_{1.UN1.loc} = 14.13\,m$
Water Weight (TW) on Gate Footing:	$H_{2.UN1.rg} = 2234.2 \cdot kN$		$H_{2.UN1.rg.loc} = 5.42\,m$
Water Weight (TW) on Regulating Gate Footing:	$H_{2.UN1.gg} = 2417.8 \cdot kN$		$H_{2.UN1.gg.loc} = 5.44\,m$
Uplift Load for Overturning Analysis:	$U_{OT.UN1} = -18382.19 \cdot kN$		$U_{OT.UN1.loc} = 9.82 \cdot m$

Sum of All Overturning Analysis Vertical Load:

$$\Sigma V_{UN1.OT} := D_{conc} + D_{Gate} + H_{1.UN1} + H_{2.UN1.rg} + H_{2.UN1.gg} + U_{OT.UN1} = 14822.81 \cdot kN$$

Sum of All Overturning Analysis Vertical Load Moments:

$$\Sigma M_{V.UN1.OT} := D_{conc} \cdot X_{conc.loc} + D_{Gate} \cdot X_{gate} + H_{1.UN1} \cdot H_{1.UN1.loc} + H_{2.UN1.rg} \cdot H_{2.UN1.rg.loc} \ldots = 140217.2 \cdot kN \cdot m$$
$$+ H_{2.UN1.gg} \cdot H_{2.UN1.gg.loc} + U_{OT.UN1} \cdot U_{OT.UN1.loc}$$

Lateral Tailwater Loads for Overturning Stability Analysis

TW Lateral Load on Gate Footing (No Key - Overturning Values Adjusted): $H_{twgf.UN1} := H_{twgf.UN1.tri} + H_{twgf.UN1.rect} = 2401.49 \cdot kN$

Acting at: $H_{twgf.UN1.loc} := \dfrac{\frac{h_{toe}}{3} \cdot H_{twgf.UN1.tri} + \frac{h_{toe}}{2} \cdot H_{twgf.UN1.rect}}{H_{twgf.UN1}} = 1.74\,m$

Horizontal Tailwater Pressure Top of Key (Overturning Analysis): $\sigma_{twtk.OT.UN1} := \sigma_{E.UN1} \cdot -1 = 92.26 \cdot kPa$

Horizontal Tailwater Pressure Bottom of Key (Overturning Analysis): $\sigma_{twbk.OT.UN1} := \sigma_{D.UN1} \cdot -1 = 114.47 \cdot kPa$

Triangular Distribution Unit Load Acting at Key: $H_{twbk.OT.UN1.tri} := \dfrac{\left(\sigma_{twbk.OT.UN1} - \sigma_{twtk.OT.UN1}\right)}{2} \cdot d_{key} \cdot W_{tw.UN1} = 266.45 \cdot kN$

Triangular Distribution Unit Load Acting at Key: $H_{twbk.OT.UN1.rect} := \sigma_{twtk.OT.UN1} \cdot d_{key} \cdot W_{tw.UN1} = 2214.28 \cdot kN$

Total Horizontal Tailwater Load on Key (Overturning Values Adjusted): $H_{twkey.OT.UN1} := H_{twbk.OT.UN1.tri} + H_{twbk.OT.UN1.rect} = 2480.73 \cdot kN$

Acting at: $H_{twkey.OT.UN1.loc} := \dfrac{H_{twbk.OT.UN1.tri} \cdot \frac{-2 \cdot d_{key}}{3} + H_{twbk.OT.UN1.rect} \cdot \frac{-d_{key}}{2}}{H_{twkey.OT.UN1}} = -1.04 \cdot m$

Lateral Driving Earth Loads for Overturning Stability Analysis (at rest condition)

Depth of Driving Soil Loads (to top of key): $h_{E.OT.UN1} := TOC_{as} - BOF_{elev} = 4\,m$

At-Rest Soil Load: $E_{act.OT.UN1} := \dfrac{\left(K_{o.UN1} \cdot h_{E.OT.UN1}{}^{2}\right)}{2} \cdot \left(\gamma_r - \gamma_w\right) \cdot W_{hwas.UN1} \cdot -1 = -769.99 \cdot kN$

At Rest- Soil Load Acting from Toe: $E_{act.OT.UN1.loc} := \dfrac{h_{E.OT.UN1}}{3} = 1.33\,m$

All Lateral Loads Applicable to Overturning Stability Analysis

HW Lateral Load on Approach Slab:	$H_{hwas.UN1} = -6215.6 \cdot kN$	$H_{hwas.UN1.loc} = 0.66\,m$
HW Lateral Load on Regulating Gate:	$H_{hwrg.UN1} = 0.0 \cdot kN$	$H_{hwrg.UN1.loc} = 4.00\,m$
HW Lateral Load on Guard Gate:	$H_{hwgg.UN1} = -695.3 \cdot kN$	$H_{hwgg.UN1.loc} = 5.50\,m$
TW Lateral Load on Regulating Gate:	$H_{twrg.UN1} = 0.0 \cdot kN$	$H_{twrg.UN1.loc} = 4.00\,m$
HW Lateral Load on Guard Gate:	$H_{twgg.UN1} = 235.7 \cdot kN$	$H_{twgg.UN1.loc} = 5.03\,m$
TW Lateral Load on Gate Footing (No Key - Overturning Values Adjusted):	$H_{twgf.UN1} = 2401.49 \cdot kN$	$H_{twgf.UN1.loc} = 1.74\,m$
TW Lateral Load on Key:	$H_{twkey.OT.UN1} = 2480.73 \cdot kN$	$H_{twkey.OT.UN1.loc} = -1.04\,m$
Ice / Impact Load:	$I_{UN1} = -1050.0 \cdot kN$	$I_{UN1.loc} = 9.50\,m$
Lateral Soil Load (driving):	$E_{act.OT.UN1} = -770.0 \cdot kN$	$E_{act.OT.UN1.loc} = 1.33\,m$

Resisting Lateral Soil Load as required to produce horizontal equilibrium:

$$E_{pas.OT.UN1} := -\left(H_{hwas.UN1} + H_{hwrg.UN1} + H_{hwgg.UN1} + H_{twrg.UN1} + H_{twgg.UN1} \cdots \atop + H_{twgf.UN1} + H_{twkey.OT.UN1} + I_{UN1} + E_{act.OT.UN1}\right) = 3612.99 \cdot kN$$

$$E_{pas.OT.UN1.loc} := -1 \cdot \frac{d_{key}}{2} = -1\,m$$

Sum of All Overturning Analysis Horizontal Load (ΣH=0):

$$\Sigma H_{UN1.OT} := H_{hwas.UN1} + H_{hwrg.UN1} + H_{hwgg.UN1} + H_{twrg.UN1} + H_{twgg.UN1} \cdots + H_{twgf.UN1} + H_{twkey.OT.UN1} + I_{UN1} + E_{act.OT.UN1} + E_{pas.OT.UN1} = 0 \cdot kN$$

Sum of All Overturning Analysis Horizontal Load Moments:

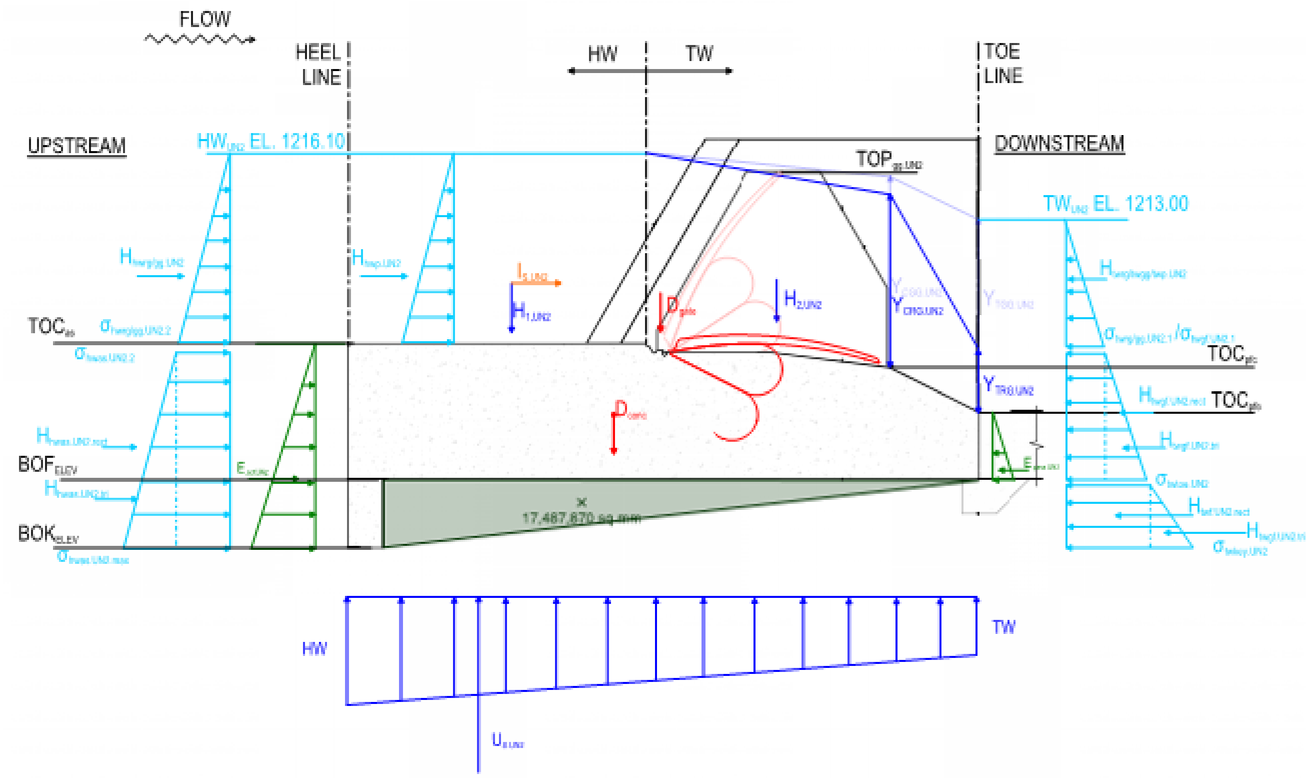
UN2 DESIGN CASE



ACCEPTANCE PARAMETERS

(Without Cohesion)

Required Factor of Safety for Sliding: $FS_{req.UN2.sl} := 1.3$ (Section 8.1, Design Criteria)

Resultant Within Middle Third of Base: $e \le \frac{L_b}{6} \wedge e \ge \frac{-L_b}{6}$

Allowable Rock Bearing Pressure: $\sigma_{allow.UN2} := 1470 \cdot \frac{kN}{m^2}$ (Section 5.2, Design Criteria)

INPUT PARAMETERS

Headwater Elevation: $HW_{UN2} := 1216.10m$ (Section 8.3, Design Criteria)

Tailwater Elevation: $TW_{UN2} := 1213.00m$ (Section 8.3, Design Criteria)

Bottom of Footing Elevation: $BOF_{elev} = 1206.00\,m$

Approach Slab Top of Concrete Elevation at Upstream Face: $TOC_{as} = 1210.00\,m$

Pier Footing Top of Concrete Elevation at Stilling Basin: $TOC_{pfe} = 1208.00\,m$

Pier Footing Top of Concrete Elevation at Center of Footing: $TOC_{pfc} = 1209.30\,m$

Gates are open when top of gate elevation is at 1210.00m

Top of Guard/ Regulating Gate Elevation: $TOP_{rg.UN2} := 1210.00m$ $TOP_{gg.UN2} := 1215.00m$

Gates are closed/up when top of gate elevation is at 1215.0m

Bottom of Key Elevation: $BOK_{elev} = 1204\,m$

Crestwater Elevation (Right) Guard Gate: $EL_{CGG.UN2} := 1215.73m$

$$Y_{C.gg.UN2} := \begin{cases} (EL_{CGG.UN2} - TOC_{pfc}) & \text{if } TOP_{gg.UN2} \le HW_{UN2} \\ (TW_{UN2} - TOC_{pfc}) & \text{if } TOP_{gg.UN2} > HW_{UN2} \end{cases} = 6.43 \cdot m$$

Toewater Elevation (Right) Guard Gate: $EL_{TGG.UN2} := 1213.00m$

$$Y_{TOE.gg.UN2} := \begin{cases} (EL_{TGG.UN2} - TOC_{pfe}) & \text{if } TOP_{gg.UN2} \le HW_{UN2} \\ (TW_{UN2} - TOC_{pfe}) & \text{if } TOP_{gg.UN2} > HW_{UN2} \end{cases} = 5 \cdot m$$

UN2 CASE

Crestwater Elevation Regulating (Left) Gate: $EL_{CRG.UN2} := 1214.07m$

$$Y_{C.rg.UN2} := \begin{cases} (EL_{CRG.UN2} - TOC_{pfc}) & \text{if } TOP_{rg.UN2} \le HW_{UN2} \\ (TW_{UN2} - TOC_{pfc}) & \text{if } TOP_{rg.UN2} > HW_{UN2} \end{cases} = 4.77 \cdot m$$

Toewater Elevation Regulating (Left) Gate: $EL_{TRG.UN2} := 1209.97m$

$$Y_{TOE.rg.UN2} := \begin{cases} (EL_{TRG.UN2} - TOC_{pfe}) & \text{if } TOP_{rg.UN2} \le HW_{UN2} \\ (TW_{UN2} - TOC_{pfe}) & \text{if } TOP_{rg.UN2} > HW_{UN2} \end{cases} = 1.97 \cdot m$$

LATERAL WATER LOADS

HEADWATER (DRIVING):

Headwater Depth on Pier: $D_{hwp.UN2} := HW_{UN2} - TOC_{as} = 6.10\,m$

Headwater Load Unit Width on Pier: $W_{hwp.UN2} := w_p = 2.00\,m$

Total Horizontal Headwater Load on Pier:

$$H_{hwp.UN2} := \frac{-\left(\gamma_w \cdot D_{hwp.UN2}^{\;2}\right)}{2} \cdot W_{hwp.UN2} = -365.0 \cdot kN$$

Apply Total Pier Headwater Load at:

$$H_{hwp.UN2.loc} := \frac{D_{hwp.UN2}}{3} + \left(TOC_{as} - BOF_{elev}\right) = 6.03\,m$$

Headwater Depth on Gate Base: $D_{hwg.UN2} := HW_{UN2} - TOC_{as} = 6.10\,m$

Thickness of Approach Slab (Including Key): $T_{as} = 6\,m$

Headwater Depth at Heel (U/S face): $D_{hwas.UN2} := HW_{UN2} - BOK_{elev} = 12.10\,m$

Headwater Load Unit Width on Approach Slab: $W_{hwas.UN2} := W_b = 12.00\,m$

Headwater Unit Load At Top of Approach Slab:

$$H_{hwas.UN2.1} := \frac{-\left(\gamma_w \cdot D_{hwg.UN2}^{\;2}\right)}{2} \cdot W_{hwas.UN2} = -2190.18 \cdot kN$$

Headwater Unit Load At Bottom of Approach Key:

$$H_{hwas.UN2.2} := \frac{-\left(\gamma_w \cdot D_{hwas.UN2}^{\;2}\right)}{2} \cdot W_{hwas.UN2} = -8617.7 \cdot kN$$

Headwater Line Load At Top of Approach Slab:

$$\sigma_{hwas.UN2.1} := -\left(\gamma_w \cdot D_{hwg.UN2}\right) = -59.84 \cdot kPa$$

Headwater Line Load At Bottom of Approach Key:

$$\sigma_{hwas.UN2.2} := -\left(\gamma_w \cdot D_{hwas.UN2}\right) = -118.7 \cdot kPa$$

Triangular Distribution Unit Load on Approach Slab and Key:

$$H_{hwas.UN2.2.tri} := \left(\frac{\sigma_{hwas.UN2.2} - \sigma_{hwas.UN2.1}}{2}\right) \cdot \left(T_{as} \cdot W_{hwas.UN2}\right) = -2118.96 \cdot kN$$

Rectangular Distribution Unit Load on Approach Slab and Key:

$$H_{hwas.UN2.2.rect} := \sigma_{hwas.UN2.1} \cdot \left(T_{as} \cdot W_{hwas.UN2}\right) = -4308.55 \cdot kN$$

Total Horizontal Headwater Load on Approach Slab:

$$H_{hwas.UN2} := H_{hwas.UN2.2.tri} + H_{hwas.UN2.2.rect} = -6427.51 \cdot kN$$

Apply Total Footing Headwater Load at:

$$H_{hwas.UN2.loc} := \frac{\left[H_{hwas.UN2.2.rect} \cdot \frac{\left(T_{as}\right)}{2} + H_{hwas.UN2.2.tri} \cdot \frac{\left(T_{as}\right)}{3}\right]}{H_{hwas.UN2.2.tri} + H_{hwas.UN2.2.rect}} - d_{key} = 0.67\,m$$

LATERAL WATER LOADS (continued)

UN2 CASE

Regulating Gate (2A) Operating Condition:

Regulating Crest Gate Down/Open Condition: $A1_{UN2} := TOP_{rg.UN2} \le TOC_{as}$

Regulating Crest Gate Up/Closed, with Top of Gate Higher than HW Elevation: $B1_{UN2} := TOP_{rg.UN2} \ge HW_{UN2} \wedge TOP_{rg.UN2} > TOC_{as}$

Regulating Crest Gate Up/Closed, with Top of Gate Lower than HW Elevation: $C1_{UN2} := TOP_{rg.UN2} > TOC_{as} \wedge HW_{UN2} > TOP_{rg.UN2}$

Regulating Crest Gate Height: $H_{rg.UN2} := TOP_{rg.UN2} - TOC_{as} = 0\,m$

Headwater Depth at Regulating Crest Gate: $D_{hwrg.UN2} := HW_{UN2} - TOC_{as} = 6.10\,m$

Regulating Crest Gate Width: $W_{hwrg.UN2} := 5.00m$

Lateral Headwater Pressure at Bottom of Regulating Crest Gate:

$$\sigma_{hwrg.UN2.1} := \begin{cases} (0.0kPa) & \text{if } A1_{UN2} \\ -(\gamma_w \cdot D_{hwrg.UN2}) & \text{if } B1_{UN2} \\ -(\gamma_w \cdot D_{hwrg.UN2}) & \text{if } C1_{UN2} \end{cases} = 0.0 \cdot kPa$$

Lateral Headwater Pressure at Top of Regulating Crest Gate: (Load at HW Elevation On Regulating Crest Gate if HW is below TOG_{rg})

Tailwater Depth At top of Gate Base Footing Elevation: $D_{twgf.UN2} := TW_{UN2} - TOC_{as} = 3.00\,m$

Water Depth at bottom of Gate Base Footing (Excluding Key): $D_{twtoe.UN2} := TW_{UN2} - BOF_{elev} = 7.00\,m$

Footing Thickness for horizontal at Toe: $h_{toe} = 4\,m$

Unit Width of D/S face of crest for application of Tailwater Load: $W_{tw.UN2} := W_b = 12.00\,m$

Tailwater Pressure At Top of Gate Footing: $\sigma_{twgf.UN2} := \left(\gamma_w \cdot D_{twgf.UN2}\right) = 29.43 \cdot kPa$

Tailwater Pressure At Toe: $\sigma_{twtoe.UN2} := \left(\gamma_w \cdot D_{twtoe.UN2}\right) = 68.67 \cdot kPa$

Triangular Distribution Unit Load on Gate Footing Base (including key): $H_{twgf.UN2.tri} := \left(\frac{\sigma_{twtoe.UN2} - \sigma_{twgf.UN2}}{2}\right) \cdot \left[\left(T_{as} - d_{key}\right) \cdot W_{tw.UN2}\right] = 941.76 \cdot kN$

Rectangular Distribution Unit Load on Gate Footing Base (including key): $H_{twgf.UN2.rect} := \sigma_{twgf.UN2} \cdot \left[\left(T_{as} - d_{key}\right) \cdot W_{tw.UN2}\right] = 1412.64 \cdot kN$

Tailwater Pressure At Bottom of Sliding Failure Plane: $\sigma_{twbk.UN2} := \left(HW_{UN2} - BOK_{elev}\right) \cdot \gamma_w = 118.7 \cdot kPa$

Triangular Distribution Unit Load Below Footing: $H_{twbk.UN2.tri} := \frac{\left(\sigma_{twbk.UN2} - \sigma_{twtoe.UN2}\right)}{2} \cdot d_{key} \cdot W_{tw.UN2} = 600.37 \cdot kN$

Rectangular Distribution Load Below Footing Base: $H_{twbk.UN2.rect} := \sigma_{twtoe.UN2} \cdot d_{key} \cdot W_{tw.UN2} = 1648.08 \cdot kN$

Total Horizontal Tailwater Headwater Load on Gate Footing (including key): $H_{twgk.UN2} := H_{twgf.UN2.tri} + H_{twgf.UN2.rect} + H_{twbk.UN2.tri} + H_{twbk.UN2.rect} = 4602.85 \cdot kN$

Apply Total Gate Footing Tailwater Load at:

$$H_{twgk.UN2.loc} := \frac{\left[H_{twgf.UN2.rect} \cdot \frac{\left(h_{toe}\right)}{2} + H_{twgf.UN2.tri} \cdot \frac{\left(h_{toe}\right)}{3} + H_{twbk.UN2.tri} \cdot \left(-d_{key} \cdot \frac{2}{3}\right) + H_{twbk.UN2.rect} \cdot \left(\frac{-d_{key}}{2}\right)\right]}{H_{twgf.UN2.tri} + H_{twgf.UN2.rect} + H_{twbk.UN2.tri} + H_{twbk.UN2.rect}} = 0.35\,m$$

SUMMATION OF LATERAL WATER LOADS:

$$\Sigma H_{Water.UN2} := H_{hwp.UN2} + H_{hwas.UN2} + H_{hwrg.UN2} + H_{hwgg.UN2} + H_{twp.UN2} + H_{twgk.UN2} + H_{twrg.UN2} + H_{twgg.UN2} = -2763.58 \cdot kN$$

$$\Sigma M_{Hwater.UN2} := H_{hwp.UN2} \cdot H_{hwp.UN2.loc} + H_{hwas.UN2} \cdot H_{hwas.UN2.loc} + H_{hwrg.UN2} \cdot H_{hwrg.UN2.loc} + H_{hwgg.UN2} \cdot H_{hwgg.UN2.loc} + H_{twp.UN2} \cdot H_{twp.UN2.loc} + H_{twgk.UN2} \cdot H_{twgk.UN2.loc} + H_{twrg.UN2} \cdot H_{twrg.UN2.loc} + H_{twgg.UN2} \cdot H_{twgg.UN2.loc} = -8561.35 \cdot kN \cdot m$$

VERTICAL WATER LOADS

UN2 CASE

HEADWATER:

Water Depth on top of Approach Slab: $d_{hw.UN2} := HW_{UN2} - TOC_{as} = 6.10\,m$

Length of Approach Slab: $L_{as} = 8.75\,m$

Width of Approach Slab: $w_{as} = 12.00\,m$

Length from front of Gate to Heel: $L_{hg} = 8.75\,m$

Vertical Water Weight (H1) on Approach Slab:

$$H_{1.UN2} := \left[w_{as} \cdot d_{hw.UN2} \cdot L_{hg} - w_p \cdot d_{hw.UN2} \cdot \left(L_{hg} - L_{as}\right)\right] \cdot \gamma_w = 6283.3 \cdot kN$$

Moment Arm for Application of Water Weight (H1) from toe:

$$H_{1.UN2.loc} := L_b - \frac{L_{hg}}{2} = 14.13\,m$$

TAILWATER ABOVE GUARD GATE:

Trapezoid Volume Above Gate Footing from Approach Slab to Crest:

$$V_{asc.gg.UN2} := \left(L_{gf} - L_{gfc}\right) W_{twgg.UN2} \frac{d_{hw.UN2} + Y_{C.gg.UN2}}{2} = 223.97 \cdot m^3$$

Trapezoid Volume Above Gate Footing Crest to End of Gate Footing:

$$V_{gfc.gg.UN2} := \left(L_{gfc} \cdot W_{twgg.UN2}\right) \frac{Y_{C.gg.UN2} + Y_{TOE.gg.UN2}}{2} = 74.3\,m^3$$

Load Above Gate Footing from Approach Slab to Crest:

$$H_{2.UN2.asc.gg} := V_{asc.gg.UN2} \cdot \gamma_w = 2197.18 \cdot kN$$

Load Acting Above Footing Crest from Toe:

$$H_{2.UN2.asc.gg.loc} := \frac{\left(L_{gf} - L_{gfc}\right) \cdot \left(2 \cdot d_{hw.UN2} + Y_{C.gg.UN2}\right)}{3 \cdot \left(d_{hw.UN2} + Y_{C.gg.UN2}\right)} + L_{gfc} = 6.14\,m$$

Load Above Gate Footing from Crest to End:

$$H_{2.UN2.gfc.gg} := V_{gfc.gg.UN2} \cdot \gamma_w = 728.83 \cdot kN$$

Load Acting Above Gate Footing from Crest to End:

$$H_{2.UN2.gfc.gg.loc} := \frac{\left(L_{gfc}\right) \cdot \left(2 \cdot Y_{C.gg.UN2} + Y_{TOE.gg.UN2}\right)}{3 \cdot \left(Y_{C.gg.UN2} + Y_{TOE.gg.UN2}\right)} = 1.35\,m$$

Vertical Water Weight (H2) on Guard Gate Footing:

$$H_{2.UN2.gg} := H_{2.UN2.asc.gg} + H_{2.UN2.gfc.gg} = 2926.02 \cdot kN$$

Moment Arm for Application of Water Weight (H2) from toe:

$$H_{2.UN2.gg.loc} := \frac{H_{2.UN2.asc.gg} \cdot H_{2.UN2.asc.gg.loc} + H_{2.UN2.gfc.gg} \cdot H_{2.UN2.gfc.gg.loc}}{H_{2.UN2.gg}} = 4.95\,m$$

TAILWATER ABOVE REGULATING GATE:

Trapezoid Volume Above Gate Footing from Approach Slab to Crest:

$$V_{asc.rg.UN2} := \left(L_{gf} - L_{gfc}\right) W_{twrg.UN2} \frac{d_{hw.UN2} + Y_{C.rg.UN2}}{2} = 194.3 \cdot m^3$$

Trapezoid Volume Above Gate Footing Crest to End of Gate Footing:

$$V_{gfc.rg.UN2} := \left(L_{gfc} \cdot W_{twrg.UN2}\right) \frac{Y_{C.rg.UN2} + Y_{TOE.rg.UN2}}{2} = 43.81 \cdot m^3$$

Load Above Gate Footing from Approach Slab to Crest:

$$H_{2.UN2.asc.rg} := V_{asc.rg.UN2} \cdot \gamma_w = 1906.1 \cdot kN$$

Load Acting Above Footing Crest from Toe:

$$H_{2.UN2.asc.rg.loc} := \frac{\left(L_{gf} - L_{gfc}\right) \cdot \left(2 \cdot d_{hw.UN2} + Y_{C.rg.UN2}\right)}{3 \cdot \left(d_{hw.UN2} + Y_{C.rg.UN2}\right)} + L_{gfc} = 6.32\,m$$

Load Above Gate Footing from Crest to End:

$$H_{2.UN2.gfc.rg} := V_{gfc.rg.UN2} \cdot \gamma_w = 429.78 \cdot kN$$

Load Acting Above Gate Footing from Crest to End:

$$H_{2.UN2.gfc.rg.loc} := \frac{\left(L_{gfc}\right) \cdot \left(2 \cdot Y_{C.rg.UN2} + Y_{TOE.rg.UN2}\right)}{3 \cdot \left(Y_{C.rg.UN2} + Y_{TOE.rg.UN2}\right)} = 1.48\,m$$

Vertical Water Weight (H2) on Regulating Gate Footing:

$$H_{2.UN2.rg} := H_{2.UN2.asc.rg} + H_{2.UN2.gfc.rg} = 2335.87 \cdot kN$$

Moment Arm for Application of Water Weight (H2) from toe:

$$H_{2.UN2.rg.loc} := \frac{H_{2.UN2.asc.rg} \cdot H_{2.UN2.asc.rg.loc} + H_{2.UN2.gfc.rg} \cdot H_{2.UN2.gfc.rg.loc}}{H_{2.UN2.rg}} = 5.43\,m$$

UPLIFT

UN2 CASE

Uplift pressure at U/S Face (heel): $U_{HW.UN2} := \left(D_{hwas.UN2}\right)\cdot\gamma_w = 118.7\cdot\frac{kN}{m^2}$

Uplift pressure at D/S Face Stilling Basin: $U_{TW.UN2} := \left(D_{twtoe.UN2}\right)\cdot\gamma_w = 68.67\cdot\frac{kN}{m^2}$

Difference between Uplift pressure at HW and TW: $U_{diff.UN2} := U_{HW.UN2} - U_{TW.UN2} = 50.03\cdot\frac{kN}{m^2}$

Slope of difference between between Uplift pressure at HW and TW: $U_{slope.UN2} := \frac{U_{diff.UN2}}{L_{overall}} = 2.70\cdot\frac{kN}{m^2\cdot m}$

Tailwater Pressure at toe of Gate Structure: $U_{press.toe.gs.UN2} := U_{TW.UN2} + \left(L_{overall} - L_b\right)\cdot U_{slope.UN2} = 68.67\cdot\frac{kN}{m^2}$

Uniform uplift force UA Under Gate Structure due to TW (rectangle): $U_{A.UN2} := U_{press.toe.gs.UN2}\cdot L_b\cdot W_b\cdot -1 = -15244.74\cdot kN$

Moment Arm from Toe of Gate Structure for Uplift UA: $L_{A.UN2} := \left(\frac{L_b}{2}\right) = 9.25\,m$

Linearly Decreasing Uplift Force UN2B Under Gate Structure due to HW-TW Differential (triangle): $U_{B.UN2} := \frac{1}{2}\cdot\left(U_{HW.UN2} - U_{press.toe.gs.UN2}\right)\cdot L_b\cdot W_b\cdot -1 = -5553.44\cdot kN$

Moment Arm from Toe of Gate Structure for Uplift UB: $L_{B.UN2} := \frac{2}{3}\cdot L_b = 12.33\,m$

Total Resultant Uplift force: $U_{UN2} := U_{A.UN2} + U_{B.UN2} = -20798.18\cdot kN$

Resultant Location from Toe: $U_{UN2.loc} := \frac{\left(U_{A.UN2}\cdot L_{A.UN2} + U_{B.UN2}\cdot L_{B.UN2}\right)}{\left(U_{A.UN2} + U_{B.UN2}\right)} = 10.07\,m$

$\Sigma V_{water.UN2} := H_{1.UN2} + H_{2.UN2.gg} + H_{2.UN2.rg} + U_{UN2} = -9252.99\cdot kN$

$\Sigma M_{Vwater.UN2} := H_{1.UN2}\cdot H_{1.UN2.loc} + H_{2.UN2.gg}\cdot H_{2.UN2.gg.loc} + H_{2.UN2.rg}\cdot H_{2.UN2.rg.loc} + U_{UN2}\cdot U_{UN2.loc} = -93584.82\cdot kN\cdot m$

SOIL LOADS

UN2 CASE

Equivalent Fluid Pressure (EFP):

At rest lateral pressure coefficient: $K_{o.UN2} := 1 - \sin(\phi_{backfill}) = 0.658$ (Section 5.3, Design Criteria)

Headwater Pier Footing Unit Width: $W_{hwas.UN2} = 12.00\,m$

Tailwater Pier Footing Unit Width: $W_{tw.UN2} = 12.00\,m$

Pier Footing Thickness at Heel: $t_{hf.UN2} := TOC_{as} - BOK_{elev} = 6.00\,m$

Fixed Crest Footing Thickness at Toe: $t_{tf.UN2} := TOC_{pfe} - BOF_{elev} = 2.00\,m$

Lateral Driving Force (Headwater Side - at rest condition)

Structure Soil Load:

$$E_{act.UN2} := \frac{\left(K_{o.UN2} \cdot t_{hf.UN2}^{\ 2}\right)}{2} \cdot \left(\gamma_r - \gamma_w\right) \cdot W_{hwas.UN2} \cdot -1 = -1732.49 \cdot kN$$

Acting at:

$$E_{act.UN2.loc} := \frac{t_{hf.UN2}}{3} - d_{key} = 0.00\,m$$

Lateral Resisting Force (Tailwater Side - at rest condition)

At-rest Soil Load:

$$E_{pass.UN2} := \frac{\left(K_{o.UN2} \cdot t_{tf.UN2}^{\ 2}\right)}{2} \cdot \left(\gamma_r - \gamma_w\right) \cdot W_{tw.UN2} = 192.5 \cdot kN$$

Acting at:

$$E_{pass.UN2.loc} := \frac{t_{tf.UN2}}{3} = 0.67\,m$$

$$\Sigma H_{soil.UN2} := E_{act.UN2} + E_{pass.UN2} = -1539.99 \cdot kN$$

$$\Sigma M_{soil.UN2} := E_{act.UN2} \cdot E_{act.UN2.loc} + E_{pass.UN2} \cdot E_{pass.UN2.loc} = 128.33 \cdot kN \cdot m$$

ICE / IMPACT LOADS (ASSUME NO ICE LOADING ON TAILWATER SIDE)

Static Ice Loading on Structure: $I_{S.UN2} := 150.0 \frac{kN}{m}$

Ice Loading Unit Width on Structure: $W_{S.UN2} := 2.00m$ (Section 7.7, Design Criteria)

Static Ice load on Gates: (Section 7.7, Design Criteria)

$$I_{rg.UN2} := \begin{cases} 0 \frac{kN}{m} & \text{if } TOP_{rg.UN2} \le TOC_{as} \\ 150 \frac{kN}{m} & \text{if } TOP_{rg.UN2} > TOC_{as} \end{cases} = 0 \cdot \frac{kN}{m}$$

$$I_{gg.UN2} := \begin{cases} 0 \frac{kN}{m} & \text{if } TOP_{rg.UN2} \le TOC_{as} \\ 150 \frac{kN}{m} & \text{if } TOP_{rg.UN2} > TOC_{as} \end{cases} = 0 \cdot \frac{kN}{m}$$

Ice Loading Unit Width on Crest Gates: $W_{rg.UN2} := 5m$ $W_{gg.UN2} := 5m$ (Input value for load case)

Total Ice Load on Structure: $I_{UN2} := \left(I_{S.UN2} \cdot W_{S.UN2} + I_{rg.UN2} \cdot W_{rg.UN2} + I_{gg.UN2} \cdot W_{gg.UN2}\right) \cdot -1 = -300 \cdot kN$

Apply Ice load at: $I_{UN2.loc} := \left(HW_{UN2} - BOF_{elev} - 0.30m\right) = 9.80\,m$

$$\Sigma H_{I.UN2} := I_{UN2} = -300 \cdot kN$$

$$\Sigma M_{I.UN2} := I_{UN2} \cdot I_{UN2.loc} = -2940 \cdot kN \cdot m$$

SEISMIC LOAD (NOT APPLICABLE FOR THIS LOAD CASE)

UN2 CASE

SUMMARY OF LOADS

	Loads	Moment Arm
Dead load of Concrete Structure:	$D_{conc} = 22438.7 \cdot kN$	$X_{conc.loc} = 9.35\,m$
Obermyer Gate Weight:	$D_{Gate} = 140.0 \cdot kN$	$X_{gate} = 9.50\,m$
HW Lateral Load on Pier:	$H_{hwp.UN2} = -365.0 \cdot kN$	$H_{hwp.UN2.loc} = 6.03\,m$
HW Lateral Load on Approach Slab:	$H_{hwas.UN2} = -6427.5 \cdot kN$	$H_{hwas.UN2.loc} = 0.67\,m$
HW Lateral Load on Regulating Gate:	$H_{hwrg.UN2} = 0.0 \cdot kN$	$H_{hwrg.UN2.loc} = 4.00\,m$
HW Lateral Load on Guard Gate:	$H_{hwgg.UN2} = -882.9 \cdot kN$	$H_{hwgg.UN2.loc} = 5.92\,m$
TW Lateral Load on Pier:	$H_{twp.UN2} = 88.3 \cdot kN$	$H_{twp.UN2.loc} = 5.00\,m$
TW Lateral Load on Pier Footing (including Key):	$H_{twgk.UN2} = 4602.85 \cdot kN$	$H_{twgk.UN2.loc} = 0.35\,m$

Uplift:	$U_{UN2} = -20798.2 \cdot kN$	$U_{UN2.loc} = 10.07\,m$
Lateral Soil Load (driving):	$E_{act.UN2} = -1732.5 \cdot kN$	$E_{act.UN2.loc} = 0.00\,m$
Lateral Soil Load (resisting):	$E_{pass.UN2} = 192.5 \cdot kN$	$E_{pass.UN2.loc} = 0.67\,m$
Ice / Impact Load:	$I_{UN2} = -300.0 \cdot kN$	$I_{UN2.loc} = 9.80\,m$

STABILITY ASSESSMENT (SLIDNG, BEARING, FLOTATION AND OVERTURNING): UN2 CASE

CHECK SLIDING ALONG HORIZONTAL PLANE THRU TOE,
IGNORING BEDROCK MOBILIZED BY STRUCTURAL HEEL KEY, OR VOID BEHIND KEY

Sum of Vertical Forces:

$\Sigma V_{UN2} := \Sigma V_{DL} + \Sigma V_{water.UN2} = 13325.8 \cdot kN$

Sum of Horizontal Forces:

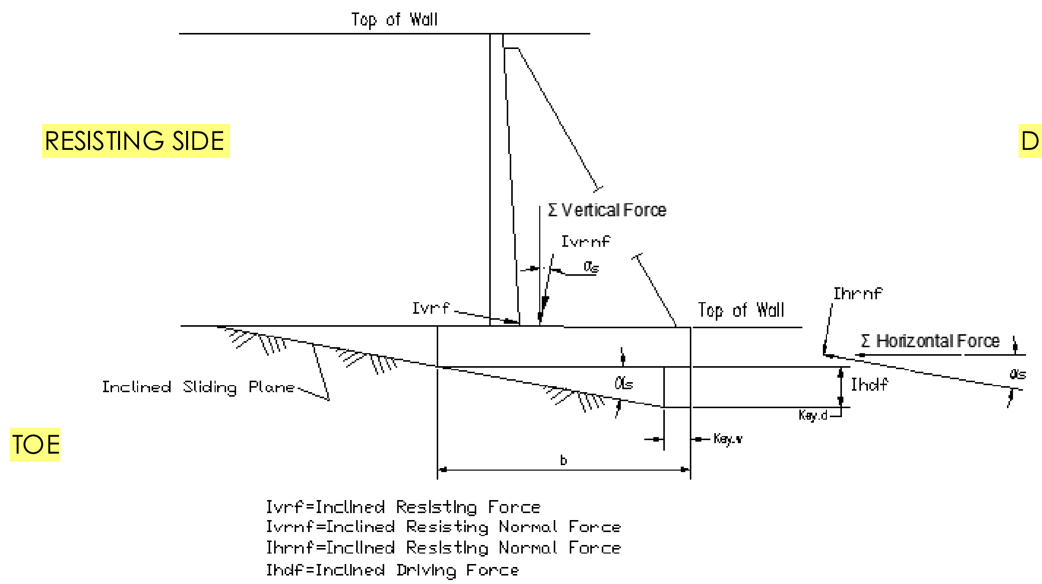
$\Sigma H_{UN2} := \Sigma H_{Water.UN2} + \Sigma H_{soil.UN2} + \Sigma H_{I.UN2} = -4603.56 \cdot kN$

Sliding Factor of Safety:

$$FS_{HorizSliding.UN2} := \frac{\tan_{\phi} \cdot \Sigma V_{UN2}}{\left|\Sigma H_{UN2}\right|} = 1.41$$

$FS_{HorizSliding.UN2.Check} :=$ | "OKAY" if $FS_{HorizSliding.UN2} \geq FS_{req.UN2.sl}$ = "OKAY"
| "Check Inclined Sliding with Key" otherwise

CHECK SLIDING ALONG INCLINED SLIDING PLANE FROM HEEL KEY TO TOE,
WITH BEDROCK MASS MOBILIZED BY REINFOCREDE CONCRETE KEY)



$\Sigma V_{UN2} = 13325.75 \cdot kN$

$V_{rs} = 4620 \cdot kN$

$\alpha s = 0.11$ as degrees= $\alpha s \cdot \left(\frac{180}{\pi}\right) = 6.52$

Resolve $\Sigma Vert_{UN2}$ & $\Sigma Horiz_{UN2}$

$$\Sigma V_{InclinedUN2} := \cos(\alpha s) \cdot \left(\Sigma V_{UN2} + V_{rs}\right) + \sin(\alpha s) \cdot \left|\Sigma H_{UN2}\right| = 18352.4 \cdot kN$$

$$\Sigma H_{InclinedUN2} := \cos(\alpha s) \cdot \left|\Sigma H_{UN2}\right| - \sin(\alpha s) \cdot \left(\Sigma V_{UN2} + V_{rs}\right) = 2536.1 \cdot kN$$

(With properly engineered reinforced concrete Key, horizontal sliding plane thru Toe is protected, critical sliding plane is relocated to the INCLINED SLIDING PLANE FROM HEEL KEY To TOE, Bedrock Mass above this examined plane is mobilized by reinforced concrete key and combined into Structural Wedge.)

Inclined Sliding Plane Length

$L_{incline} = 18.61 \, m$

Safety Factor for Sliding
Inclined Failure Plane

$$FS_{InclinedlSlidingUN2} := \frac{\Sigma V_{InclinedUN2} \cdot \tan\left(\phi_{rock} \cdot \frac{\pi}{180}\right)}{\left|\Sigma H_{InclinedUN2}\right|} = 3.53$$

$FS_{InclinedSliding.check.UN2} :=$ | "OKAY " if $FS_{InclinedlSlidingUN2} > FS_{req.UN2.sl}$ = "OKAY "
| "Revise Structure"" otherwise

$FS_{InclinedSliding.check.UN2}$ = "OKAY "

UN2 CASE

OVERTURNING STABILITY CHECK:

CHECK ECCENTRICITY

Sum of the moments:

$$\Sigma M_{UN2} := \Sigma M_{DL} + \Sigma M_{Hwater.UN2} + \Sigma M_{Vwater.UN2} + \Sigma M_{I.UN2} + \Sigma M_{soil.UN2} + \Sigma M_{rs} = 160062 \cdot kN \cdot m$$

Eccentricity:

$$e_{UN2} := \left(\frac{L_{incline}}{2}\right) - \frac{\left(\Sigma M_{UN2}\right)}{\Sigma V_{InclinedUN2}} = 0.58\,m$$

Eccentricity Check:

$$e_{check.UN2} := \begin{cases} \text{"Okay"} & \text{if } e_{UN2} \le Kern \\ \text{"Revise Structure"} & \text{otherwise} \end{cases}$$

$$e_{check.UN2} = \text{"Okay"}$$

Foundation Bearing Checks:

Bearing Pressure at Heel:

$$\sigma_{heel.UN2} := \frac{\Sigma V_{InclinedUN2}}{A_{b.incline}} - \frac{\left(\Sigma V_{InclinedUN2} \cdot e_{UN2}\right)}{S_{b.incline}} = 66.8 \cdot \frac{kN}{m^2}$$

$$\sigma_{heel.UN2.check} := \left(\begin{cases} \text{"Okay"} & \text{if } \sigma_{heel.UN2} \le \sigma_{allow.UN2} \\ \text{"Revise Structure"} & \text{if } \sigma_{heel.UN2} < 0 \frac{kN}{m^2} \end{cases} \right)$$

$$\sigma_{heel.UN2.check} = \text{"Okay"}$$

Bearing Pressure at Toe:

$$\sigma_{toe.UN2} := \frac{\Sigma V_{InclinedUN2}}{A_{b.incline}} + \frac{\left(\Sigma V_{InclinedUN2} \cdot e_{UN2}\right)}{S_{b.incline}} = 97.6 \cdot \frac{kN}{m^2}$$

$$\sigma_{toe.UN2.1.check} := \begin{cases} \text{"Okay"} & \text{if } \sigma_{toe.UN2} \le \sigma_{allow.UN2} \\ \text{"Revise Structure"} & \text{if } \sigma_{toe.UN2} < 0 \frac{kN}{m^2} \end{cases}$$

$$\sigma_{toe.UN2.1.check} = \text{"Okay"}$$

FLOATATION ANALYSIS:

ACCEPTANCE PARAMETERS

Required Factor of Safety: $FS_{req.FUN2} := 1.3$

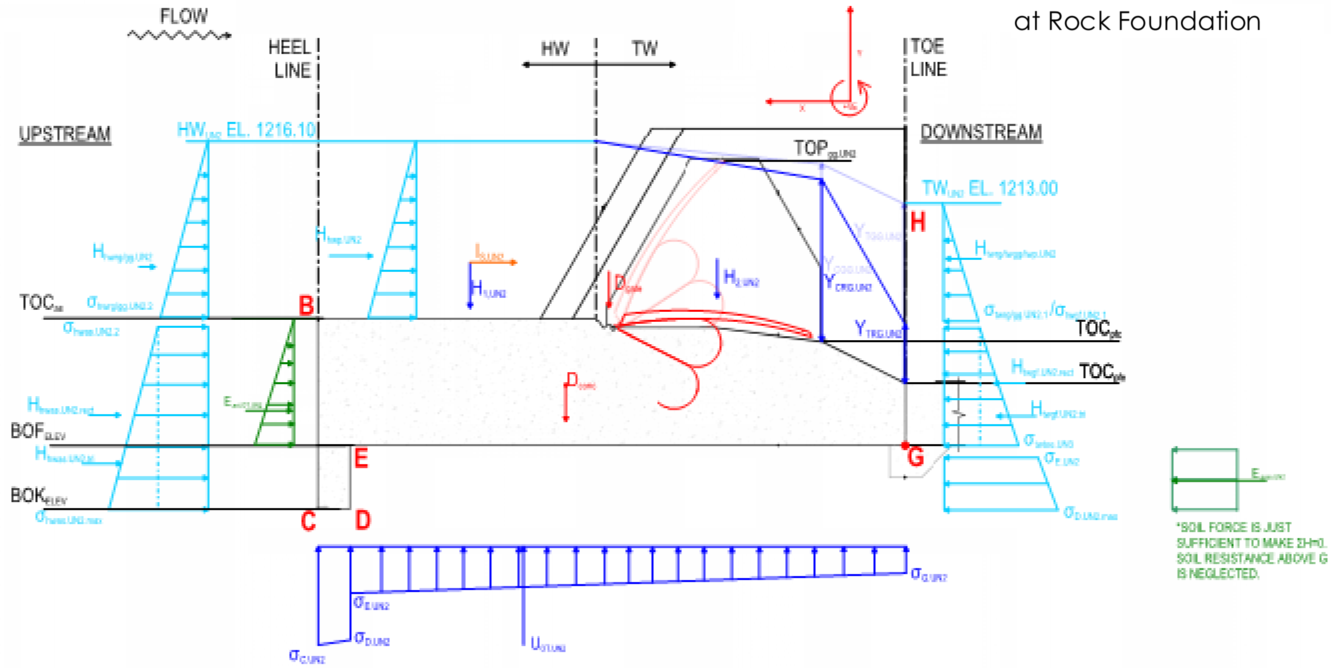
Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stability of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1 $Ratio_{OT.UN2.min} := 0.33$



Uplift Loads for Overturning Stability Analysis

Line of Creep:

Change in Water Head: $\Delta_{h.UN2} := HW_{UN2} - TW_{UN2} = 3.1\ m$

Length from Point C to Point G: $L_{CG} = 18.61\ m$

Length from Various Points to Points: $L_{CD} = 1\ m$ $L_{DE} = 2\ m$ $L_{EG} = 17.5\ m$

$L_{GH.UN2} := TW_{UN2} - BOF_{elev} = 7\ m$

Length from Point C, D, E to G: $L_{CDEG} = 20.5\ m$ $L_{CDE} = 3\ m$

Water Pressure at Point C & G: $\sigma_{C.UN2} := \sigma_{hwas.UN2.2} = -118.7 \cdot kPa$ $\sigma_{G.UN2} := \sigma_{twtoe.UN2} \cdot -1 = -68.67 \cdot kPa$

Water Pressure at Point D:

$$\sigma_{D.UN2} := -\gamma_w \cdot \left[\left(HW_{UN2} - BOK_{elev} \right) - \frac{\Delta_{h.UN2} \cdot L_{CD}}{L_{CDEG}} \right] = -117.22 \cdot kPa$$

Water Pressure at Point E:

$$\sigma_{E.UN2} := -\gamma_w \cdot \left[\left(HW_{UN2} - BOF_{elev} \right) - \frac{\Delta_{h.UN2} \cdot L_{CDE}}{L_{CDEG}} \right] = -94.63 \cdot kPa$$

Uplift for Overturning Analysis on Bottom of Key:

$$U_{OT.UN2.key} := \frac{\sigma_{C.UN2} + \sigma_{D.UN2}}{2} \cdot L_{CD} \cdot W_b = -1415.51 \cdot kN$$

Acting at:

$$U_{OT.UN2.key.loc} := \frac{L_{CD} \cdot \left(2 \cdot \sigma_{C.UN2} + \sigma_{D.UN2} \right)}{3 \left(\sigma_{C.UN2} + \sigma_{D.UN2} \right)} + L_{EG} = 18\ m$$

Uplift for Overturning Analysis on Bottom of Footing:

$$U_{OT.UN2.ftg} := \frac{\sigma_{E.UN2} + \sigma_{G.UN2}}{2} \cdot L_{EG} \cdot W_b = -17146.56 \cdot kN$$

Acting at:

$$U_{OT.UN2.ftg.loc} := \frac{L_{EG} \cdot \left(\sigma_{G.UN2} + 2 \cdot \sigma_{E.UN2} \right)}{3 \left(\sigma_{G.UN2} + \sigma_{E.UN2} \right)} = 9.21\ m$$

UN2 CASE

Uplift Load for Overturning Analysis: $U_{OT.UN2} := U_{OT.UN2.key} + U_{OT.UN2.ftg} = -18562.08 \cdot kN$

Uplift Load Acting from Toe: $U_{OT.UN2.loc} := \dfrac{U_{OT.UN2.key} \cdot U_{OT.UN2.key.loc} + U_{OT.UN2.ftg} \cdot U_{OT.UN2.ftg.loc}}{U_{OT.UN2}} = 9.88\, m$

All Vertical Loads Applicable to Overturning Stability Analysis

Total Concrete Dead Loads:	$D_{conc} = 22438.74 \cdot kN$	at: $X_{conc.loc} = 9.35\, m$
Dead Load of Gate:	$D_{Gate} = 140.0 \cdot kN$	$X_{gate} = 9.50\, m$
Water Weight (HW) on Apron Slab:	$H_{1.UN2} = 6283.3 \cdot kN$	$H_{1.UN2.loc} = 14.13\, m$
Water Weight (TW) on Gate Footing:	$H_{2.UN2.rg} = 2335.9 \cdot kN$	$H_{2.UN2.rg.loc} = 5.43\, m$
Water Weight (TW) on Regulating Gate Footing:	$H_{2.UN2.gg} = 2926.0 \cdot kN$	$H_{2.UN2.gg.loc} = 4.95\, m$
Uplift Load for Overturning Analysis:	$U_{OT.UN2} = -18562.08 \cdot kN$	$U_{OT.UN2.loc} = 9.88 \cdot m$

Sum of All Overtuming Analysis Vertical Load:

$$\Sigma V_{UN2.OT} := D_{conc} + D_{Gate} + H_{1.UN2} + H_{2.UN2.rg} + H_{2.UN2.gg} + U_{OT.UN2} = 15561.86 \cdot kN$$

Sum of All Overtuming Analysis Vertical Load Moments:

$$\Sigma M_{V.UN2.OT} := D_{conc} \cdot X_{conc.loc} + D_{Gate} \cdot X_{gate} + H_{1.UN2} \cdot H_{1.UN2.loc} + H_{2.UN2.rg} \cdot H_{2.UN2.rg.loc} \dots + H_{2.UN2.gg} \cdot H_{2.UN2.gg.loc} + U_{OT.UN2} \cdot U_{OT.UN2.loc} = 143577.86 \cdot kN \cdot m$$

Lateral Tailwater Loads for Overturning Stability Analysis

TW Lateral Load on Gate Footing (No Key - Overturning Values Adjusted): $H_{twgf.UN2} := H_{twgf.UN2.tri} + H_{twgf.UN2.rect} = 2354.4 \cdot kN$

Acting at: $H_{twgf.UN2.loc} := \dfrac{\frac{h_{toe}}{3} \cdot H_{twgf.UN2.tri} + \frac{h_{toe}}{2} \cdot H_{twgf.UN2.rect}}{H_{twgf.UN2}} = 1.73\, m$

Horizontal Tailwater Pressure Top of Key (Overturning Analysis): $\sigma_{twtk.OT.UN2} := \sigma_{E.UN2} \cdot -1 = 94.63 \cdot kPa$

Horizontal Tailwater Pressure Bottom of Key (Overturning Analysis): $\sigma_{twbk.OT.UN2} := \sigma_{D.UN2} \cdot -1 = 117.22 \cdot kPa$

Triangular Distribution Unit Load Acting at Key: $H_{twbk.OT.UN2.tri} := \dfrac{(\sigma_{twbk.OT.UN2} - \sigma_{twtk.OT.UN2})}{2} \cdot d_{key} \cdot W_{tw.UN2} = 271.04 \cdot kN$

Triangular Distribution Unit Load Acting at Key: $H_{twbk.OT.UN2.rect} := \sigma_{twtk.OT.UN2} \cdot d_{key} \cdot W_{tw.UN2} = 2271.13 \cdot kN$

Total Horizontal Tailwater Load on Key (Overturning Values Adjusted): $H_{twkey.OT.UN2} := H_{twbk.OT.UN2.tri} + H_{twbk.OT.UN2.rect} = 2542.18 \cdot kN$

Acting at: $H_{twkey.OT.UN2.loc} := \dfrac{H_{twbk.OT.UN2.tri} \cdot \frac{-2 \cdot d_{key}}{3} + H_{twbk.OT.UN2.rect} \cdot \frac{-d_{key}}{2}}{H_{twkey.OT.UN2}} = -1.04 \cdot m$

Lateral Driving Earth Loads for Overturning Stability Analysis (at rest condition)

Depth of Driving Soil Loads (to top of key): $h_{E.OT.UN2} := TOC_{as} - BOF_{elev} = 4\, m$

At-Rest Soil Load: $E_{act.OT.UN2} := \dfrac{\left(K_{o.UN2} \cdot h_{E.OT.UN2}^{\,2}\right)}{2} \cdot (\gamma_r - \gamma_w) \cdot W_{hwas.UN2} \cdot -1 = -769.99 \cdot kN$

At Rest- Soil Load Acting from Toe: $E_{act.OT.UN2.loc} := \dfrac{h_{E.OT.UN2}}{3} = 1.33\, m$

All Lateral Loads Applicable to Overturning Stability Analysis

HW Lateral Load on Approach Slab:	$H_{hwas.UN2} = -6427.5 \cdot kN$	$H_{hwas.UN2.loc} = 0.67\,m$
HW Lateral Load on Regulating Gate:	$H_{hwrg.UN2} = 0.0 \cdot kN$	$H_{hwrg.UN2.loc} = 4.00\,m$
HW Lateral Load on Guard Gate:	$H_{hwgg.UN2} = -882.9 \cdot kN$	$H_{hwgg.UN2.loc} = 5.92\,m$
TW Lateral Load on Regulating Gate:	$H_{twrg.UN2} = 0.0 \cdot kN$	$H_{twrg.UN2.loc} = 4.00\,m$
HW Lateral Load on Guard Gate:	$H_{twgg.UN2} = 220.7 \cdot kN$	$H_{twgg.UN2.loc} = 5.00\,m$
TW Lateral Load on Gate Footing (No Key - Overturning Values Adjusted):	$H_{twgf.UN2} = 2354.4 \cdot kN$	$H_{twgf.UN2.loc} = 1.73\,m$
TW Lateral Load on Key:	$H_{twkey.OT.UN2} = 2542.18 \cdot kN$	$H_{twkey.OT.UN2.loc} = -1.04\,m$
Ice / Impact Load:	$I_{UN2} = -300.0 \cdot kN$	$I_{UN2.loc} = 9.80\,m$
Lateral Soil Load (driving):	$E_{act.OT.UN2} = -770.0 \cdot kN$	$E_{act.OT.UN2.loc} = 1.33\,m$

Resisting Lateral Soil Load as required to produce horizontal equilibrium:

$$E_{pas.OT.UN2} := -\left(H_{hwas.UN2} + H_{hwrg.UN2} + H_{hwgg.UN2} + H_{twrg.UN2} + H_{twgg.UN2} \cdots + H_{twgf.UN2} + H_{twkey.OT.UN2} + I_{UN2} + E_{act.OT.UN2}\right) = 3263.1 \cdot kN$$

$$E_{pas.OT.UN2.loc} := -1 \cdot \frac{d_{key}}{2} = -1\,m$$

Sum of All Overturning Analysis Horizontal Load (ΣH=0):

$$\Sigma H_{UN2.OT} := H_{hwas.UN2} + H_{hwrg.UN2} + H_{hwgg.UN2} + H_{twrg.UN2} + H_{twgg.UN2} \cdots + H_{twgf.UN2} + H_{twkey.OT.UN2} + I_{UN2} + E_{act.OT.UN2} + E_{pas.OT.UN2} = 0 \cdot kN$$

Sum of All Overturning Analysis Horizontal Load Moments:

$$\Sigma M_{H.UN2.OT} := H_{hwas.UN2} \cdot H_{hwas.UN2.loc} + H_{hwrg.UN2} \cdot H_{hwrg.UN2.loc} + H_{hwgg.UN2} \cdot H_{hwgg.UN2.loc} \cdots + H_{twrg.UN2} \cdot H_{twrg.UN2.loc} + H_{twgg.UN2} \cdot H_{twgg.UN2.loc} + H_{twgf.UN2} \cdot H_{twgf.UN2.loc} \cdots + H_{twkey.OT.UN2} \cdot H_{twkey.OT.UN2.loc} + I_{UN2} \cdot I_{UN2.loc} + E_{act.OT.UN2} \cdot E_{act.OT.UN2.loc} \cdots + E_{pas.OT.UN2} \cdot E_{pas.OT.UN2.loc} = -14214.17 \cdot kN \cdot m$$

Overturning Stability Analysis

$$\Sigma M_{UN2.OT} := \Sigma M_{V.UN2.OT} + \Sigma M_{H.UN2.OT} = 129363.69 \cdot kN \cdot m$$

$$X_{R.UN2} := \frac{\Sigma M_{UN2.OT}}{\Sigma V_{UN2.OT}} = 8.31\,m \qquad x_{OT.UN2} := X_{R.UN2} - \frac{L_b}{2} = -0.94\,m$$

Overturning Resultant Ratio

$$Ratio_{OT.UN2} := \frac{X_{R.UN2}}{L_b} = 0.45$$

$$Ratio_{OT.UN2.check} := \begin{cases} \text{"OKAY"} & \text{if } Ratio_{OT.UN2} \ge Ratio_{OT.UN2.min} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

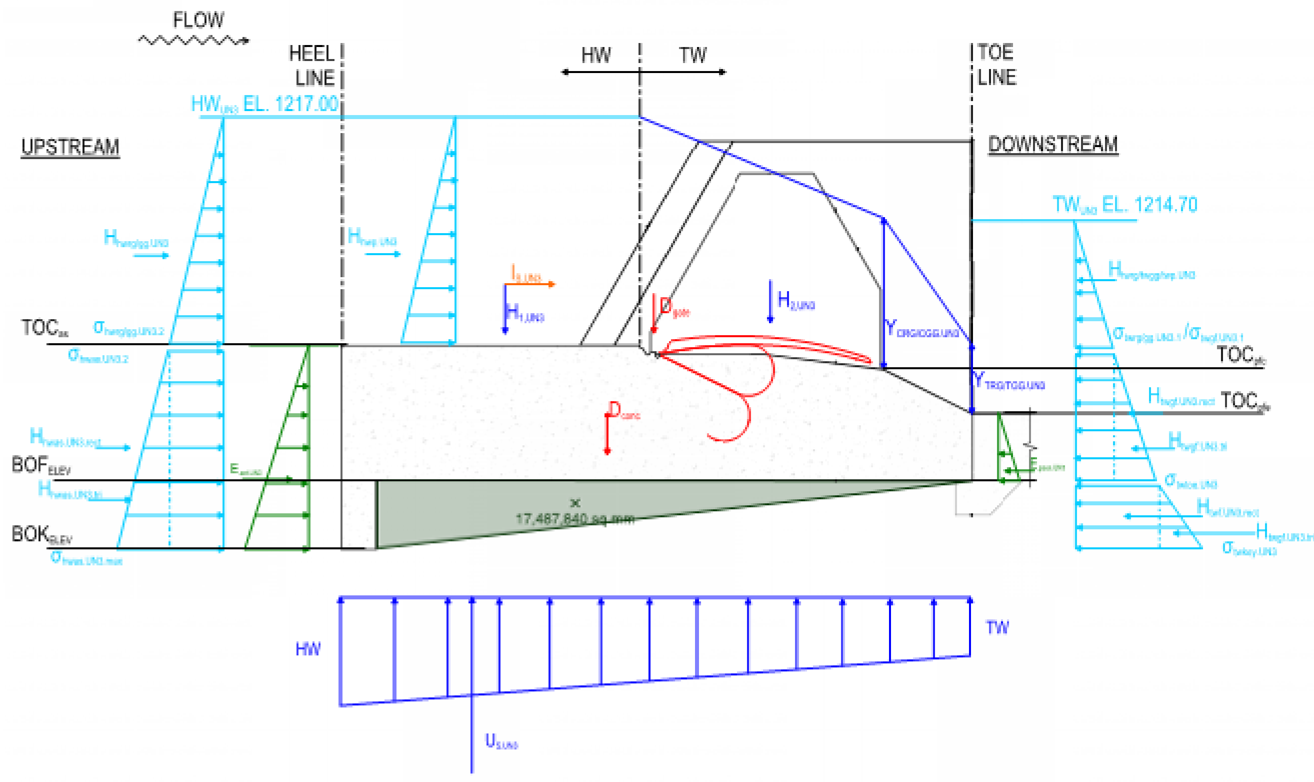
UN3 DESIGN CASE



ACCEPTANCE PARAMETERS

Required Factor of Safety for Sliding:	$FS_{req.UN3.sl} := 1.3$	(Without Cohesion) (Section 8.1, Design Criteria)
Resultant Within Middle Third of Base:	$e \le \frac{L_b}{6} \wedge e \ge \frac{-L_b}{6}$	
Allowable Rock Bearing Pressure:	$\sigma_{allow.UN3} := 1470 \cdot \frac{kN}{m^2}$	(Section 5.2, Design Criteria)

INPUT PARAMETERS

Headwater Elevation:	$HW_{UN3} := 1217.00m$	(Section 8.3, Design Criteria)
Tailwater Elevation:	$TW_{UN3} := 1214.70m$	(Section 8.3, Design Criteria)
Bottom of Footing Elevation:	$BOF_{elev} = 1206.00\,m$	
Approach Slab Top of Concrete Elevation at Upstream Face:	$TOC_{as} = 1210.00\,m$	
Pier Footing Top of Concrete Elevation at Stilling Basin:	$TOC_{pfe} = 1208.00\,m$	
Pier Footing Top of Concrete Elevation at Center of Footing:	$TOC_{pfc} = 1209.30\,m$	
Top of Guard/ Regulating Gate Elevation:	$TOP_{rg.UN3} := 1210.00m$ $\quad TOP_{gg.UN3} := 1210.00m$	
Bottom of Key Elevation:	$BOK_{elev} = 1204\,m$	

Gates are open when top of gate elevation is at 1210.00m

Gates are closed/up when top of gate elevation is at 1215.0m

Crestwater Elevation (Right) Guard Gate: $EL_{CGG.UN3} := 1214.67m$

$$Y_{C.gg.UN3} := \begin{cases} \left(EL_{CGG.UN3} - TOC_{pfc}\right) & \text{if } TOP_{gg.UN3} \le HW_{UN3} \\ \left(TW_{UN3} - TOC_{pfc}\right) & \text{if } TOP_{gg.UN3} > HW_{UN3} \end{cases} = 5.37 \cdot m$$

Toewater Elevation (Right) Guard Gate: $EL_{TGG.UN3} := 1210.89m$

$$Y_{TOE.gg.UN3} := \begin{cases} \left(EL_{TGG.UN3} - TOC_{pfe}\right) & \text{if } TOP_{gg.UN3} \le HW_{UN3} \\ \left(TW_{UN3} - TOC_{pfe}\right) & \text{if } TOP_{gg.UN3} > HW_{UN3} \end{cases} = 2.89 \cdot m$$

UN3 CASE

Crestwater Elevation Regulating (Left) Gate: $EL_{CRG.UN3} := 1214.67m$

$$Y_{C.rg.UN3} := \begin{cases} (EL_{CRG.UN3} - TOC_{pfc}) & \text{if } TOP_{rg.UN3} \le HW_{UN3} \\ (TW_{UN3} - TOC_{pfc}) & \text{if } TOP_{rg.UN3} > HW_{UN3} \end{cases} = 5.37 \cdot m$$

Toewater Elevation Regulating (Left) Gate: $EL_{TRG.UN3} := 1210.89m$

$$Y_{TOE.rg.UN3} := \begin{cases} (EL_{TRG.UN3} - TOC_{pfe}) & \text{if } TOP_{rg.UN3} \le HW_{UN3} \\ (TW_{UN3} - TOC_{pfe}) & \text{if } TOP_{rg.UN3} > HW_{UN3} \end{cases} = 2.89 \cdot m$$

LATERAL WATER LOADS

HEADWATER (DRIVING):

Headwater Depth on Pier: $D_{hwp.UN3} := HW_{UN3} - TOC_{as} = 7.00\,m$

Headwater Load Unit Width on Pier: $w_{hwp.UN3} := w_p = 2.00\,m$

Total Horizontal Headwater Load on Pier:

$$H_{hwp.UN3} := \frac{-\left(\gamma_w \cdot D_{hwp.UN3}^{\,2}\right)}{2} \cdot w_{hwp.UN3} = -480.7 \cdot kN$$

Apply Total Pier Headwater Load at:

$$H_{hwp.UN3.loc} := \frac{D_{hwp.UN3}}{3} + (TOC_{as} - BOF_{elev}) = 6.33\,m$$

Headwater Depth on Gate base: $D_{hwg.UN3} := HW_{UN3} - TOC_{as} = 7.00\,m$

Thickness of Approach Slab (Including Key): $T_{as} = 6\,m$

Headwater Depth at Heel (U/S face): $D_{hwas.UN3} := HW_{UN3} - BOK_{elev} = 13.00\,m$

Headwater Load Unit Width on Approach Slab: $w_{hwas.UN3} := w_b = 12.00\,m$

Headwater Unit Load At Top of Approach Slab:

$$H_{hwas.UN3.1} := \frac{-\left(\gamma_w \cdot D_{hwg.UN3}^{\,2}\right)}{2} \cdot w_{hwas.UN3} = -2884.14 \cdot kN$$

Headwater Unit Load At Bottom of Approach Key:

$$H_{hwas.UN3.2} := \frac{-\left(\gamma_w \cdot D_{hwas.UN3}^{\,2}\right)}{2} \cdot w_{hwas.UN3} = -9947.3 \cdot kN$$

Headwater Line Load At Top of Approach Slab:

$$\sigma_{hwas.UN3.1} := -\left(\gamma_w \cdot D_{hwg.UN3}\right) = -68.67 \cdot kPa$$

Headwater Line Load At Bottom of Approach Key:

$$\sigma_{hwas.UN3.2} := -\left(\gamma_w \cdot D_{hwas.UN3}\right) = -127.53 \cdot kPa$$

Triangular Distribution Unit Load on Approach Slab and Key:

$$H_{hwas.UN3.2.tri} := \left(\frac{\sigma_{hwas.UN3.2} - \sigma_{hwas.UN3.1}}{2}\right) \cdot \left(T_{as} \cdot w_{hwas.UN3}\right) = -2118.96 \cdot kN$$

Rectangular Distribution Unit Load on Approach Slab and Key:

$$H_{hwas.UN3.2.rect} := \sigma_{hwas.UN3.1} \cdot \left(T_{as} \cdot w_{hwas.UN3}\right) = -4944.24 \cdot kN$$

Total Horizontal Headwater Load on Approach Slab:

$$H_{hwas.UN3} := H_{hwas.UN3.2.tri} + H_{hwas.UN3.2.rect} = -7063.2 \cdot kN$$

Apply Total Footing Headwater Load at:

$$H_{hwas.UN3.loc} := \frac{\left[H_{hwas.UN3.2.rect} \cdot \frac{(T_{as})}{2} + H_{hwas.UN3.2.tri} \cdot \frac{(T_{as})}{3}\right]}{H_{hwas.UN3.2.tri} + H_{hwas.UN3.2.rect}} - d_{key} = 0.70\,m$$

LATERAL WATER LOADS (continued)

Regulating Gate (2A) Operating Condition:

Regulating Crest Gate Down/Open Condition: $A1_{UN3} := TOP_{rg.UN3} \le TOC_{as}$

Regulating Crest Gate Up/Closed, with Top of Gate Higher than HW Elevation: $B1_{UN3} := TOP_{rg.UN3} \ge HW_{UN3} \wedge TOP_{rg.UN3} > TOC_{as}$

Regulating Crest Gate Up/Closed, with Top of Gate Lower than HW Elevation: $C1_{UN3} := TOP_{rg.UN3} > TOC_{as} \wedge HW_{UN3} > TOP_{rg.UN3}$

Regulating Crest Gate Height: $H_{rg.UN3} := TOP_{rg.UN3} - TOC_{as} = 0\,m$

Headwater Depth at Regulating Crest Gate: $D_{hwrg.UN3} := HW_{UN3} - TOC_{as} = 7.00\,m$

Regulating Crest Gate Width: $W_{hwrg.UN3} := 5.00m$

Lateral Headwater Pressure at Bottom of Regulating Crest Gate:

$$\sigma_{hwrg.UN3.1} := \begin{vmatrix} (0.0kPa) & \text{if } A1_{UN3} \\ -(\gamma_w \cdot D_{hwrg.UN3}) & \text{if } B1_{UN3} \\ -(\gamma_w \cdot D_{hwrg.UN3}) & \text{if } C1_{UN3} \end{vmatrix} = 0.0 \cdot kPa$$

Lateral Headwater Pressure at Top of Regulating Crest Gate:
(Load at HW Elevation On Regulating Crest Gate if HW is below TOG_{rg})

$$\sigma_{hwrg.UN3.2} := \begin{vmatrix} (0.0kPa) & \text{if } A1_{UN3} \\ 0.0kPa & \text{if } B1_{UN3} \\ -\left[\gamma_w \cdot (HW_{UN3} - TOP_{rg.UN3})\right] & \text{if } C1_{UN3} \end{vmatrix} = 0.0 \cdot kPa$$

Average Pressure acting on Regulating Gate:

$$\sigma_{hwrg.UN3.avg} := \frac{(\sigma_{hwrg.UN3.1} + \sigma_{hwrg.UN3.2})}{2} = 0 \cdot kPa$$

Total Area water acting on Regulating Crest Gate:

$$A_{hwrg.UN3} := \begin{vmatrix} D_{hwrg.UN3} \cdot W_{hwrg.UN3} & \text{if } A1_{UN3} \\ D_{hwrg.UN3} \cdot W_{hwrg.UN3} & \text{if } B1_{UN3} \\ H_{rg.UN3} \cdot W_{hwrg.UN3} & \text{if } C1_{UN3} \end{vmatrix} = 35 \cdot m^2$$

Total Horizontal Headwater Load on Regulating Crest Gate:

$$H_{hwrg.UN3} := \sigma_{hwrg.UN3.avg} \cdot A_{hwrg.UN3} = 0.0 \cdot kN$$

Apply Total Regulating Crest Gate Headwater Load at:

$$H_{hwrg.UN3.loc} := \begin{vmatrix} (TOC_{as} - BOF_{elev}) & \text{if } A1_{UN3} \\ \left[\frac{(HW_{UN3} - TOC_{as})}{3} + (TOC_{as} - BOF_{elev})\right] & \text{if } B1_{UN3} \\ \left[\frac{\sigma_{hwrg.UN3.2} \cdot A_{hwrg.UN3} \cdot \frac{(H_{rg.UN3})}{2} + \frac{(\sigma_{hwrg.UN3.1} - \sigma_{hwrg.UN3.2})}{2} A_{hwrg.UN3} \cdot \frac{(H_{rg.UN3})}{3}}{\sigma_{hwrg.UN3.2} \cdot A_{hwrg.UN3} + \frac{(\sigma_{hwrg.UN3.1} - \sigma_{hwrg.UN3.2})}{2} \cdot A_{hwrg.UN3}} \ldots \\ + (TOC_{as} - BOF_{elev})\right] & \text{if } C1_{UN3} \end{vmatrix} = 4.0 \cdot m$$

Guard Gate (4A) Operating Condition:

Guard Gate Down/Open Condition: $A2_{UN3} := TOP_{gg.UN3} \le TOC_{as}$

Guard Crest Gate Up/Closed, with Top of Gate Higher than HW Elevation: $B2_{UN3} := TOP_{gg.UN3} \ge HW_{UN3} \wedge TOP_{gg.UN3} > TOC_{as}$

Guard Crest Gate Up/Closed, with Top of Gate Lower than HW Elevation: $C2_{UN3} := TOP_{gg.UN3} > TOC_{as} \wedge HW_{UN3} > TOP_{gg.UN3}$

Guard Crest Gate Height: $H_{gg.UN3} := TOP_{gg.UN3} - TOC_{as} = 0\,m$

Headwater Depth at Guard Crest Gate: $D_{hwgg.UN3} := HW_{UN3} - TOC_{as} = 7.00\,m$

Guard Crest Gate Width: $W_{hwgg.UN3} := 5.00m$

Lateral Headwater Pressure at Bottom of Guard Crest Gate:

$$\sigma_{hwgg.UN3.1} := \begin{cases} (0.0kPa) & \text{if } A2_{UN3} \\ -(\gamma_w \cdot D_{hwgg.UN3}) & \text{if } B2_{UN3} \\ -(\gamma_w \cdot D_{hwgg.UN3}) & \text{if } C2_{UN3} \end{cases} = 0.0 \cdot kPa$$

Lateral Headwater Pressure at Top of Guard Crest Gate: (Load at HW Elevation On Guard Crest Gate if HW is below TOG_{rg})

$$\sigma_{hwgg.UN3.2} := \begin{cases} (0.0kPa) & \text{if } A2_{UN3} \\ 0.0kPa & \text{if } B2_{UN3} \\ -\left[\gamma_w \cdot (HW_{UN3} - TOP_{gg.UN3})\right] & \text{if } C2_{UN3} \end{cases} = 0.0 \cdot kPa$$

Total Horizontal Headwater Load on Guard Crest Gate: $H_{hwgg.UN3} := \sigma_{hwgg.UN3.avg} \cdot A_{hwgg.UN3} = 0.0 \cdot kN$

Apply Total Guard Crest Gate Headwater Load at:

$$H_{hwgg.UN3.loc} := \begin{cases} (TOC_{as} - BOF_{elev}) & \text{if } A2_{UN3} \\ \left[\frac{(HW_{UN3} - TOC_{as})}{3} + (TOC_{as} - BOF_{elev})\right] & \text{if } B2_{UN3} \\ \left[\frac{\sigma_{hwgg.UN3.2} \cdot A_{hwgg.UN3} \cdot \frac{(H_{gg.UN3})}{2} + \frac{(\sigma_{hwgg.UN3.1} - \sigma_{hwgg.UN3.2})}{2} A_{hwgg.UN3} \cdot \frac{(H_{gg.UN3})}{3}}{\sigma_{hwgg.UN3.2} \cdot A_{hwgg.UN3} + \frac{(\sigma_{hwgg.UN3.1} - \sigma_{hwgg.UN3.2})}{2} \cdot A_{hwgg.UN3}} \ldots \\ + (TOC_{as} - BOF_{elev})\right] & \text{if } C2_{UN3} \end{cases} = 4.0 \cdot m$$

LATERAL TAILWATER (RESISTING) Applied to Downstream Side of Regulating Crest Gate:

UN3 CASE

Regulating Crest Gate Down/Open Condition: $A3_{UN3} := TOP_{rg.UN3} \le TOC_{as}$

Regulating Crest Gate Up/Closed, with Top of Gate Higher than TW Elevation: $B3_{UN3} := TOP_{rg.UN3} \ge TW_{UN3} \wedge TOP_{rg.UN3} > TOC_{as}$

Regulating Crest Gate Up/Closed, with Top of Gate Lower than TW Elevation: $C3_{UN3} := TOP_{rg.UN3} > TOC_{as} \wedge TW_{UN3} > TOP_{rg.UN3}$

Regulating Crest Gate Height: $H_{rg.UN3} = 0\,m$

Tailwater Depth at Regulating Crest Gate: $D_{twrg.UN3} := TW_{UN3} - TOC_{as} = 4.70\,m$

Regulating Crest Gate Width: $W_{twrg.UN3} := 5m$

Lateral Tailwater Pressure at Bottom of Regulating Crest Gate:

$$\sigma_{twrg.UN3.1} := \begin{cases} (0.0kPa) & \text{if } A3_{UN3} \\ -\left(\gamma_w \cdot D_{twrg.UN3}\right) & \text{if } B3_{UN3} \\ -\left(\gamma_w \cdot D_{twrg.UN3}\right) & \text{if } C3_{UN3} \end{cases} = 0.0 \cdot kPa$$

Lateral Tailwater Pressure at Top of Regulating Crest Gate: (Load at TW Elevation On Regulating Crest Gate if TW is below TOG_{rg})

$$\sigma_{twrg.UN3.2} := \begin{cases} (0.0kPa) & \text{if } A3_{UN3} \\ 0.0kPa & \text{if } B3_{UN3} \\ -\left[\gamma_w \cdot \left(TW_{UN3} - TOP_{rg.UN3}\right)\right] & \text{if } C3_{UN3} \end{cases} = 0.0 \cdot kPa$$

Average Pressure acting on Regulating Gate:

$$\sigma_{twrg.UN3.avg} := \frac{\left(\sigma_{twrg.UN3.1} + \sigma_{twrg.UN3.2}\right)}{2} = 0 \cdot kPa$$

Total Area water acting on Regulating Crest Gate:

$$A_{twrg.UN3} := \begin{cases} D_{twrg.UN3} \cdot W_{twrg.UN3} & \text{if } A3_{UN3} \\ D_{twrg.UN3} \cdot W_{twrg.UN3} & \text{if } B3_{UN3} \\ H_{rg.UN3} \cdot W_{twrg.UN3} & \text{if } C3_{UN3} \end{cases} = 23.5 \cdot m^2$$

Total Horizontal Tailwater Load on Regulating Crest Gate:

$$H_{twrg.UN3} := \sigma_{hwrg.UN3.avg} \cdot A_{hwrg.UN3} = 0.0 \cdot kN$$

Apply Total Regulating Crest Gate Tailwater Load at:

$$H_{twrg.UN3.loc} := \begin{cases} \left(TOC_{as} - BOF_{elev}\right) & \text{if } A3_{UN3} \\ \left[\dfrac{\left(HW_{UN3} - TOC_{as}\right)}{3} + \left(TOC_{as} - BOF_{elev}\right)\right] & \text{if } B3_{UN3} \\ \left[\dfrac{\sigma_{hwrg.UN3.2} \cdot A_{hwrg.UN3} \cdot \dfrac{\left(H_{rg.UN3}\right)}{2} + \dfrac{\left(\sigma_{hwrg.UN3.1} - \sigma_{hwrg.UN3.2}\right)}{2} A_{hwrg.UN3} \cdot \dfrac{\left(H_{rg.UN3}\right)}{3}}{\sigma_{hwrg.UN3.2} \cdot A_{hwrg.UN3} + \dfrac{\left(\sigma_{hwrg.UN3.1} - \sigma_{hwrg.UN3.2}\right)}{2} \cdot A_{hwrg.UN3}} \ldots \\ + \left(TOC_{as} - BOF_{elev}\right)\right] & \text{if } C3_{UN3} \end{cases} = 4.0 \cdot m$$

LATERAL TAILWATER (RESISTING) Applied to Downstream Side of Guard Crest Gate:

UN3 CASE

Guard Gate Down/Open Condition: $A4_{UN3} := TOP_{gg.UN3} \le TOC_{as}$

Guard Crest Gate Up/Closed, with Top of Gate Higher than TW Elevation: $B4_{UN3} := TOP_{gg.UN3} \ge TW_{UN3} \wedge TOP_{gg.UN3} > TOC_{as}$

Guard Crest Gate Up/Closed, with Top of Gate Lower than TW Elevation: $C4_{UN3} := TOP_{gg.UN3} > TOC_{as} \wedge TW_{UN3} > TOP_{gg.UN3}$

Tailwater Depth at Guard Crest Gate: $D_{twgg.UN3} := TW_{UN3} - TOC_{as} = 4.70\,m$

Guard Crest Gate Height: $H_{gg.UN3} = 0\,m$

Guard Crest Gate Width: $W_{twgg.UN3} := 5.00m$

Lateral Water Load at Bottom of Guard Crest Gate:

$$\sigma_{twgg.UN3.1} := \begin{cases} (0.0kPa) & \text{if } A4_{UN3} \\ (\gamma_w \cdot D_{twgg.UN3}) & \text{if } B4_{UN3} \\ (\gamma_w \cdot D_{twgg.UN3}) & \text{if } C4_{UN3} \end{cases} = 0.0 \cdot kPa$$

Lateral Water Load at Top of Guard Crest Gate:
(Load at TW Elevation On Guard Crest Gate if TW is below TOG_{gg})

$$\sigma_{twgg.UN3.2} := \begin{cases} (0.0kPa) & \text{if } A4_{UN3} \\ 0.0kPa & \text{if } B4_{UN3} \\ \left[\gamma_w \cdot (TW_{UN3} - TOP_{gg.UN3})\right] & \text{if } C4_{UN3} \end{cases} = 0.0 \cdot kPa$$

Average Pressure acting on Guard Crest Gate:

$$\sigma_{twgg.UN3.avg} := \frac{(\sigma_{twgg.UN3.1} + \sigma_{twgg.UN3.2})}{2} = 0 \cdot kPa$$

Total Area water acting on Crest Gate:

$$A_{twgg.UN3} := \begin{cases} D_{twgg.UN3} \cdot W_{twgg.UN3} & \text{if } A4_{UN3} \\ D_{twgg.UN3} \cdot W_{twgg.UN3} & \text{if } B4_{UN3} \\ H_{gg.UN3} \cdot W_{twgg.UN3} & \text{if } C4_{UN3} \end{cases} = 23.5 \cdot m^2$$

Total Horizontal Tailwater Load on Guard Crest Gate: $H_{twgg.UN3} := \sigma_{twgg.UN3.avg} \cdot A_{twgg.UN3} = 0.0 \cdot kN$

Apply Total Horiz. TW Load on Guard Gate at:

$$H_{twgg.UN3.loc} := \begin{cases} (TOC_{as} - BOF_{elev}) & \text{if } A4_{UN3} \\ \left[\frac{(TW_{UN3} - TOC_{as})}{3} + (TOC_{as} - BOF_{elev})\right] & \text{if } B4_{UN3} \\ \left[\frac{\sigma_{twgg.UN3.2} \cdot A_{twgg.UN3} \cdot \frac{(H_{gg.UN3})}{2} + \frac{(\sigma_{twgg.UN3.1} - \sigma_{twgg.UN3.2})}{2} A_{twgg.UN3} \cdot \frac{(H_{gg.UN3})}{3}}{\sigma_{twgg.UN3.2} \cdot A_{twgg.UN3} + \frac{(\sigma_{twgg.UN3.1} - \sigma_{twgg.UN3.2})}{2} \cdot A_{twgg.UN3}} \ldots \\ + (TOC_{as} - BOF_{elev})\right] & \text{if } C4_{UN3} \end{cases} = 4.0 \cdot m$$

LATERAL WATER LOADS (continued)

UN3 CASE

TAILWATER (RESISTING) Applied to Concrete Structure:

Tailwater Depth on Pier: $D_{twp.UN3} := TW_{UN3} - TOC_{as} = 4.70\,m$

Tailwater Load Unit Width on Pier: $w_{twp.UN3} := w_p = 2.00\,m$

Total Horizontal Tailwater Load on Pier: $H_{twp.UN3} := \frac{\left(\gamma_w \cdot D_{twp.UN3}{}^2\right)}{2} \cdot w_{twp.UN3} = 216.7 \cdot kN$

Apply Total Pier Tailwater Load at: $H_{twp.UN3.loc} := \frac{D_{twp.UN3}}{3} + \left(TOC_{as} - BOF_{elev}\right) = 5.57\,m$

Tailwater Depth At top of Gate Base Footing Elevation: $D_{twgf.UN3} := TW_{UN3} - TOC_{as} = 4.70\,m$

Water Depth at bottom of Gate Base Footing (Excluding Key): $D_{twtoe.UN3} := TW_{UN3} - BOF_{elev} = 8.70\,m$

Footing Thickness for horizontal at Toe: $h_{toe} = 4\,m$

Unit Width of D/S face of crest for application of Tailwater Load: $w_{tw.UN3} := w_b = 12.00\,m$

Tailwater Pressure At Top of Gate Footing: $\sigma_{twgf.UN3} := \left(\gamma_w \cdot D_{twgf.UN3}\right) = 46.11 \cdot kPa$

Tailwater Pressure At Toe: $\sigma_{twtoe.UN3} := \left(\gamma_w \cdot D_{twtoe.UN3}\right) = 85.35 \cdot kPa$

Triangular Distribution Unit Load on Gate Footing Base (including key): $H_{twgf.UN3.tri} := \left(\frac{\sigma_{twtoe.UN3} - \sigma_{twgf.UN3}}{2}\right) \cdot \left[\left(T_{as} - d_{key}\right) \cdot w_{tw.UN3}\right] = 941.76 \cdot kN$

Rectangular Distribution Unit Load on Gate Footing Base (including key): $H_{twgf.UN3.rect} := \sigma_{twgf.UN3} \cdot \left[\left(T_{as} - d_{key}\right) \cdot w_{tw.UN3}\right] = 2213.14 \cdot kN$

Tailwater Pressure At Bottom of Sliding Failure Plane: $\sigma_{twbk.UN3} := \left(HW_{UN3} - BOK_{elev}\right) \cdot \gamma_w = 127.53 \cdot kPa$

Triangular Distribution Unit Load Below Footing: $H_{twbk.UN3.tri} := \frac{\left(\sigma_{twbk.UN3} - \sigma_{twtoe.UN3}\right)}{2} \cdot d_{key} \cdot w_{tw.UN3} = 506.2 \cdot kN$

Rectangular Distribution Load Below Footing Base: $H_{twbk.UN3.rect} := \sigma_{twtoe.UN3} \cdot d_{key} \cdot w_{tw.UN3} = 2048.33 \cdot kN$

Total Horizontal Tailwater Headwater Load on Gate Footing (including key):

$$H_{twgk.UN3} := H_{twgf.UN3.tri} + H_{twgf.UN3.rect} \cdots + H_{twbk.UN3.tri} + H_{twbk.UN3.rect} = 5709.42 \cdot kN$$

Apply Total Gate Footing Tailwater Load at:

$$H_{twgk.UN3.loc} := \frac{\left[H_{twgf.UN3.rect} \cdot \frac{\left(h_{toe}\right)}{2} + H_{twgf.UN3.tri} \cdot \frac{\left(h_{toe}\right)}{3} + H_{twbk.UN3.tri} \cdot \left(-d_{key} \cdot \frac{2}{3}\right) + H_{twbk.UN3.rect} \cdot \left(\frac{-d_{key}}{2}\right)\right]}{H_{twgf.UN3.tri} + H_{twgf.UN3.rect} + H_{twbk.UN3.tri} + H_{twbk.UN3.rect}} = 0.52\,m$$

SUMMATION OF LATERAL WATER LOADS:

$$\Sigma H_{Water.UN3} := H_{hwp.UN3} + H_{hwas.UN3} + H_{hwrg.UN3} + H_{hwgg.UN3} + H_{twp.UN3} + H_{twgk.UN3} + H_{twrg.UN3} + H_{twgg.UN3} = -1617.77 \cdot kN$$

$$\Sigma M_{Hwater.UN3} := H_{hwp.UN3} \cdot H_{hwp.UN3.loc} + H_{hwas.UN3} \cdot H_{hwas.UN3.loc} + H_{hwrg.UN3} \cdot H_{hwrg.UN3.loc} \cdots + H_{hwgg.UN3} \cdot H_{hwgg.UN3.loc} + H_{twp.UN3} \cdot H_{twp.UN3.loc} + H_{twgk.UN3} \cdot H_{twgk.UN3.loc} \cdots + H_{twrg.UN3} \cdot H_{twrg.UN3.loc} + H_{twgg.UN3} \cdot H_{twgg.UN3.loc} = -3823.6 \cdot kN \cdot m$$

VERTICAL WATER LOADS

UN3 CASE

HEADWATER:

Water Depth on top of Approach Slab: $d_{hw.UN3} := HW_{UN3} - TOC_{as} = 7.00\,m$

Length of Approach Slab: $L_{as} = 8.75\,m$

Width of Approach Slab: $w_{as} = 12.00\,m$

Length from front of Gate to Heel: $L_{hg} = 8.75\,m$

Vertical Water Weight (H1) on Approach Slab:

$$H_{1.UN3} := \left[w_{as} \cdot d_{hw.UN3} \cdot L_{hg} - w_p \cdot d_{hw.UN3} \cdot \left(L_{hg} - L_{as}\right)\right] \cdot \gamma_w = 7210.4 \cdot kN$$

Moment Arm for Application of Water Weight (H1) from toe:

$$H_{1.UN3.loc} := L_b - \frac{L_{hg}}{2} = 14.13\,m$$

TAILWATER ABOVE GUARD GATE:

Trapezoid Volume Above Gate Footing from Approach Slab to Crest:

$$V_{asc.gg.UN3} := \left(L_{gf} - L_{gfc}\right) W_{twgg.UN3} \frac{d_{hw.UN3} + Y_{C.gg.UN3}}{2} = 221.11 \cdot m^3$$

Trapezoid Volume Above Gate Footing Crest to End of Gate Footing:

$$V_{gfc.gg.UN3} := \left(L_{gfc} \cdot W_{twgg.UN3}\right) \frac{Y_{C.gg.UN3} + Y_{TOE.gg.UN3}}{2} = 53.69 \cdot m^3$$

Load Above Gate Footing from Approach Slab to Crest:

$$H_{2.UN3.asc.gg} := V_{asc.gg.UN3} \cdot \gamma_w = 2169.13 \cdot kN$$

Load Acting Above Footing Crest from Toe:

$$H_{2.UN3.asc.gg.loc} := \frac{\left(L_{gf} - L_{gfc}\right) \cdot \left(2 \cdot d_{hw.UN3} + Y_{C.gg.UN3}\right)}{3 \cdot \left(d_{hw.UN3} + Y_{C.gg.UN3}\right)} + L_{gfc} = 6.33\,m$$

Load Above Gate Footing from Crest to End:

$$H_{2.UN3.gfc.gg} := V_{gfc.gg.UN3} \cdot \gamma_w = 526.7 \cdot kN$$

Load Acting Above Gate Footing from Crest to End:

$$H_{2.UN3.gfc.gg.loc} := \frac{\left(L_{gfc}\right) \cdot \left(2 \cdot Y_{C.gg.UN3} + Y_{TOE.gg.UN3}\right)}{3 \cdot \left(Y_{C.gg.UN3} + Y_{TOE.gg.UN3}\right)} = 1.43\,m$$

Vertical Water Weight (H2) on Guard Gate Footing:

$$H_{2.UN3.gg} := H_{2.UN3.asc.gg} + H_{2.UN3.gfc.gg} = 2695.82 \cdot kN$$

Moment Arm for Application of Water Weight (H2) from toe:

$$H_{2.UN3.gg.loc} := \frac{H_{2.UN3.asc.gg} \cdot H_{2.UN3.asc.gg.loc} \cdots + H_{2.UN3.gfc.gg} \cdot H_{2.UN3.gfc.gg.loc}}{H_{2.UN3.gg}} = 5.37\,m$$

TAILWATER ABOVE REGULATING GATE:

Trapezoid Volume Above Gate Footing from Approach Slab to Crest:

$$V_{asc.rg.UN3} := \left(L_{gf} - L_{gfc}\right) W_{twrg.UN3} \frac{d_{hw.UN3} + Y_{C.rg.UN3}}{2} = 221.11 \cdot m^3$$

Trapezoid Volume Above Gate Footing Crest to End of Gate Footing:

$$V_{gfc.rg.UN3} := \left(L_{gfc} \cdot W_{twrg.UN3}\right) \frac{Y_{C.rg.UN3} + Y_{TOE.rg.UN3}}{2} = 53.69 \cdot m^3$$

Load Above Gate Footing from Approach Slab to Crest:

$$H_{2.UN3.asc.rg} := V_{asc.rg.UN3} \cdot \gamma_w = 2169.13 \cdot kN$$

Load Acting Above Footing Crest from Toe:

$$H_{2.UN3.asc.rg.loc} := \frac{\left(L_{gf} - L_{gfc}\right) \cdot \left(2 \cdot d_{hw.UN3} + Y_{C.rg.UN3}\right)}{3 \cdot \left(d_{hw.UN3} + Y_{C.rg.UN3}\right)} + L_{gfc} = 6.33\,m$$

Load Above Gate Footing from Crest to End:

$$H_{2.UN3.gfc.rg} := V_{gfc.rg.UN3} \cdot \gamma_w = 526.7 \cdot kN$$

Load Acting Above Gate Footing from Crest to End:

$$H_{2.UN3.gfc.rg.loc} := \frac{\left(L_{gfc}\right) \cdot \left(2 \cdot Y_{C.rg.UN3} + Y_{TOE.rg.UN3}\right)}{3 \cdot \left(Y_{C.rg.UN3} + Y_{TOE.rg.UN3}\right)} = 1.43\,m$$

Vertical Water Weight (H2) on Regulating Gate Footing:

$$H_{2.UN3.rg} := H_{2.UN3.asc.rg} + H_{2.UN3.gfc.rg} = 2695.82 \cdot kN$$

Moment Arm for Application of Water Weight (H2) from toe:

$$H_{2.UN3.rg.loc} := \frac{H_{2.UN3.asc.rg} \cdot H_{2.UN3.asc.rg.loc} \cdots + H_{2.UN3.gfc.rg} \cdot H_{2.UN3.gfc.rg.loc}}{H_{2.UN3.rg}} = 5.37\,m$$

UPLIFT

UN3 CASE

Uplift pressure at U/S Face (heel): $U_{HW.UN3} := \left(D_{hwas.UN3}\right)\cdot\gamma_w = 127.5\cdot\frac{kN}{m^2}$

Uplift pressure at D/S Face Stilling Basin: $U_{TW.UN3} := \left(D_{twtoe.UN3}\right)\cdot\gamma_w = 85.35\cdot\frac{kN}{m^2}$

$L_{overall} = 18.50\,m$

Difference between Uplift pressure at HW and TW: $U_{diff.UN3} := U_{HW.UN3} - U_{TW.UN3} = 42.18\cdot\frac{kN}{m^2}$

Slope of difference between between Uplift pressure at HW and TW: $U_{slope.UN3} := \frac{U_{diff.UN3}}{L_{overall}} = 2.28\cdot\frac{kN}{m^2\cdot m}$

Tailwater Pressure at toe of Gate Structure: $U_{press.toe.gs.UN3} := U_{TW.UN3} + \left(L_{overall} - L_b\right)\cdot U_{slope.UN3} = 85.35\cdot\frac{kN}{m^2}$

Uniform uplift force UA Under Gate Structure due to TW (rectangle): $U_{A.UN3} := U_{press.toe.gs.UN3}\cdot L_b\cdot W_b\cdot -1 = -18947.03\cdot kN$

Moment Arm from Toe of Gate Structure for Uplift UA: $L_{A.UN3} := \left(\frac{L_b}{2}\right) = 9.25\,m$

Linearly Decreasing Uplift Force UN3B Under Gate Structure due to HW-TW Differential (triangle): $U_{B.UN3} := \frac{1}{2}\cdot\left(U_{HW.UN3} - U_{press.toe.gs.UN3}\right)\cdot L_b\cdot W_b\cdot -1 = -4682.31\cdot kN$

Moment Arm from Toe of Gate Structure for Uplift UB: $L_{B.UN3} := \frac{2}{3}\cdot L_b = 12.33\,m$

Total Resultant Uplift force: $U_{UN3} := U_{A.UN3} + U_{B.UN3} = -23629.35\cdot kN$

Resultant Location from Toe: $U_{UN3.loc} := \frac{\left(U_{A.UN3}\cdot L_{A.UN3} + U_{B.UN3}\cdot L_{B.UN3}\right)}{\left(U_{A.UN3} + U_{B.UN3}\right)} = 9.86\,m$

$\Sigma V_{water.UN3} := H_{1.UN3} + H_{2.UN3.gg} + H_{2.UN3.rg} + U_{UN3} = -11027.35\cdot kN$

$\Sigma M_{Vwater.UN3} := H_{1.UN3}\cdot H_{1.UN3.loc} + H_{2.UN3.gg}\cdot H_{2.UN3.gg.loc} + H_{2.UN3.rg}\cdot H_{2.UN3.rg.loc} + U_{UN3}\cdot U_{UN3.loc} = -102186\cdot kN\cdot m$

SOIL LOADS

UN3 CASE

Equivalent Fluid Pressure (EFP):

At rest lateral pressure coefficient: $K_{o.UN3} := 1 - \sin(\phi_{backfill}) = 0.658$ (Section 5.3, Design Criteria)

Headwater Pier Footing Unit Width: $W_{hwas.UN3} = 12.00\,m$

Tailwater Pier Footing Unit Width: $W_{tw.UN3} = 12.00\,m$

Pier Footing Thickness at Heel: $t_{hf.UN3} := TOC_{as} - BOK_{elev} = 6.00\,m$

Fixed Crest Footing Thickness at Toe: $t_{tf.UN3} := TOC_{pfe} - BOF_{elev} = 2.00\,m$

Lateral Driving Force (Headwater Side - at rest condition)

Structure Soil Load:

$$E_{act.UN3} := \frac{\left(K_{o.UN3} \cdot t_{hf.UN3}^{\ 2}\right)}{2} \cdot \left(\gamma_r - \gamma_w\right) \cdot W_{hwas.UN3} \cdot -1 = -1732.49 \cdot kN$$

Acting at:

$$E_{act.UN3.loc} := \frac{t_{hf.UN3}}{3} - d_{key} = 0.00\,m$$

Lateral Resisting Force (Tailwater Side - at rest condition)

At-rest Soil Load:

$$E_{pass.UN3} := \frac{\left(K_{o.UN3} \cdot t_{tf.UN3}^{\ 2}\right)}{2} \cdot \left(\gamma_r - \gamma_w\right) \cdot W_{tw.UN3} = 192.5 \cdot kN$$

Acting at:

$$E_{pass.UN3.loc} := \frac{t_{tf.UN3}}{3} = 0.67\,m$$

$$\Sigma H_{soil.UN3} := E_{act.UN3} + E_{pass.UN3} = -1539.99 \cdot kN$$

$$\Sigma M_{soil.UN3} := E_{act.UN3} \cdot E_{act.UN3.loc} + E_{pass.UN3} \cdot E_{pass.UN3.loc} = 128.33 \cdot kN \cdot m$$

ICE / IMPACT LOADS (ASSUME NO ICE LOADING ON TAILWATER SIDE)

ICE & IMPACT LOADS DO NOT APPLY FOR THIS LOAD CASE

Static Ice Loading on Structure: $I_{S.UN3} := 0 \frac{kN}{m}$ (Section 7.7, Design Criteria)

Static Ice load on Gates: $I_{G.UN3} := 0 \frac{kN}{m}$ (Section 7.7, Design Criteria)

Ice Loading Unit Width on Structure: $W_{S.UN3} := 2.00m$

Ice Loading Unit Width on Regulating Gate: $W_{rg.UN3} := 0m$ (Input value for load case)

Ice Loading Unit Width on Guard Gate: $W_{gg.UN3} := 0m$ (Input value for load case)

Total Ice Load on Structure:

$$I_{UN3} := \left(I_{S.UN3} \cdot W_{S.UN3} + I_{G.UN3} \cdot W_{rg.UN3} + I_{G.UN3} \cdot W_{gg.UN3}\right) \cdot -1 = 0 \cdot kN$$

Apply Ice load at:

$$I_{UN3.loc} := \left(HW_{UN3} - BOF_{elev} - 0.30m\right) = 10.70\,m$$

$$\Sigma H_{I.UN3} := I_{UN3} = 0 \cdot kN$$

$$\Sigma M_{I.UN3} := I_{UN3} \cdot I_{UN3.loc} = 0 \cdot kN \cdot m$$

SEISMIC LOAD (NOT APPLICABLE FOR THIS LOAD CASE)

UN3 CASE

SUMMARY OF LOADS

	Loads	Moment Arm
Dead load of Concrete Structure:	$D_{conc} = 22438.7 \cdot kN$	$X_{conc.loc} = 9.35\,m$
Obermyer Gate Weight:	$D_{Gate} = 140.0 \cdot kN$	$X_{gate} = 9.50\,m$
HW Lateral Load on Pier:	$H_{hwp.UN3} = -480.7 \cdot kN$	$H_{hwp.UN3.loc} = 6.33\,m$
HW Lateral Load on Approach Slab:	$H_{hwas.UN3} = -7063.2 \cdot kN$	$H_{hwas.UN3.loc} = 0.70\,m$
HW Lateral Load on Regulating Gate:	$H_{hwrg.UN3} = 0.0 \cdot kN$	$H_{hwrg.UN3.loc} = 4.00\,m$
HW Lateral Load on Guard Gate:	$H_{hwgg.UN3} = 0.0 \cdot kN$	$H_{hwgg.UN3.loc} = 4.00\,m$
TW Lateral Load on Pier:	$H_{twp.UN3} = 216.7 \cdot kN$	$H_{twp.UN3.loc} = 5.57\,m$
TW Lateral Load on Pier Footing (including Key):	$H_{twgk.UN3} = 5709.42 \cdot kN$	$H_{twgk.UN3.loc} = 0.52\,m$
TW Lateral Load on Regulating Gate:	$H_{twrg.UN3} = 0.0 \cdot kN$	$H_{twrg.UN3.loc} = 4.00\,m$
TW Lateral Load on Guard Gate:	$H_{twgg.UN3} = 0.0 \cdot kN$	$H_{twgg.UN3.loc} = 4.00\,m$
Vertical HW Load on Approach Slab:	$H_{1.UN3} = 7210.4 \cdot kN$	$H_{1.UN3.loc} = 14.13\,m$
Vertical TW Load on Regulating Gate:	$H_{2.UN3.rg} = 2695.8 \cdot kN$	$H_{2.UN3.rg.loc} = 5.37\,m$
Vertical TW Load on Guard Gate:	$H_{2.UN3.gg} = 2695.8 \cdot kN$	$H_{2.UN3.gg.loc} = 5.37\,m$
Uplift:	$U_{UN3} = -23629.3 \cdot kN$	$U_{UN3.loc} = 9.86\,m$
Lateral Soil Load (driving):	$E_{act.UN3} = -1732.5 \cdot kN$	$E_{act.UN3.loc} = 0.00\,m$
Lateral Soil Load (resisting):	$E_{pass.UN3} = 192.5 \cdot kN$	$E_{pass.UN3.loc} = 0.67\,m$
Ice / Impact Load:	$I_{UN3} = 0.0 \cdot kN$	$I_{UN3.loc} = 10.70\,m$

STABILITY ASSESSMENT (SLIDNG, BEARING, FLOTATION AND OVERTURNING): UN3 CASE

CHECK SLIDING ALONG HORIZONTAL PLANE THRU TOE,
IGNORING BEDROCK MOBILIZED BY STRUCTURAL HEEL KEY, OR VOID BEHIND KEY

Sum of Vertical Forces:

$\Sigma V_{UN3} := \Sigma V_{DL} + \Sigma V_{water.UN3} = 11551.4 \cdot kN$

Sum of Horizontal Forces:

$\Sigma H_{UN3} := \Sigma H_{Water.UN3} + \Sigma H_{soil.UN3} + \Sigma H_{I.UN3} = -3157.76 \cdot kN$

Sliding Factor of Safety:

$$FS_{HorizSliding.UN3} := \frac{\tan_{\phi} \cdot \Sigma V_{UN3}}{\left|\Sigma H_{UN3}\right|} = 1.78$$

$$FS_{HorizSliding.UN3.Check} := \begin{array}{|l} \text{"OKAY"} \quad \text{if} \quad FS_{HorizSliding.UN3} \geq FS_{req.UN3.sl} \\ \text{"Check Inclined Sliding with Key"} \end{array} = \text{"Check Inclined Sliding with Key"}$$

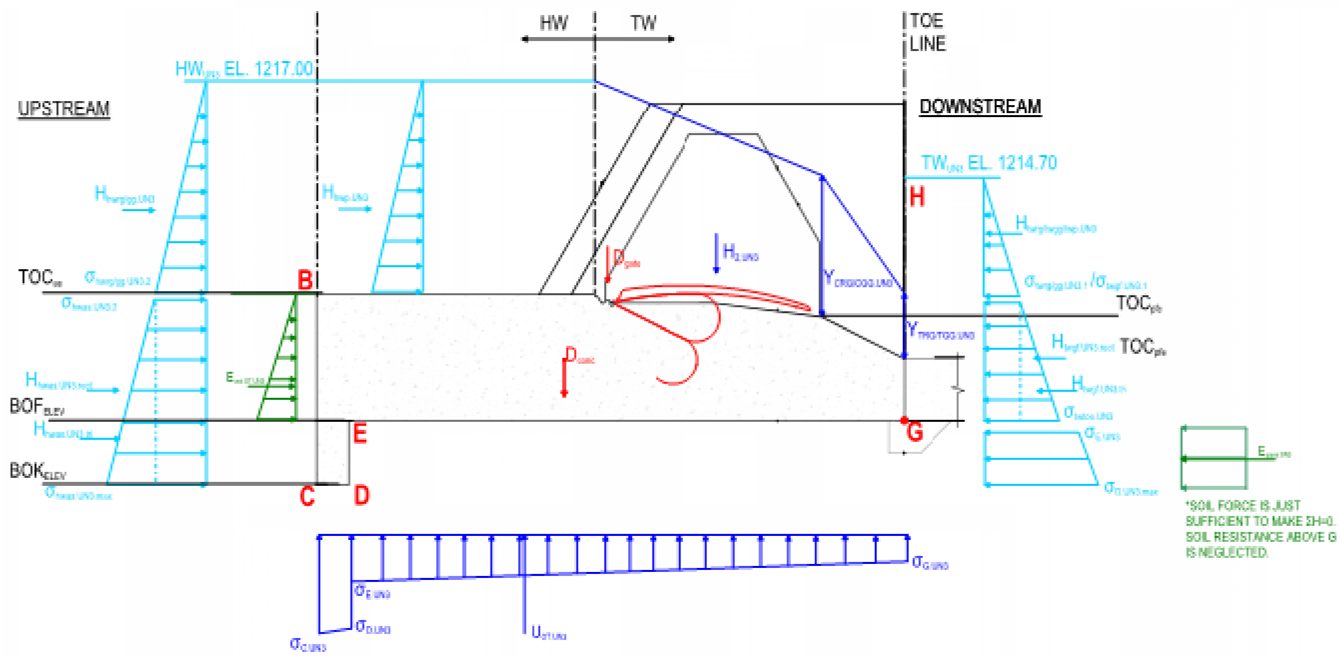
MONOLITH OVERTURNING STABILITY ANALYSIS

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stability of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1 $Ratio_{OT.UN3.min} := 0.33$



Uplift Loads for Overturning Stability Analysis

Line of Creep:

Change in Water Head: $\Delta_{h.UN3} := HW_{UN3} - TW_{UN3} = 2.3\,m$

Length from Point C to Point G: $L_{CG} = 18.61\,m$

Length from Various Points to Points: $L_{CD} = 1\,m$ $L_{DE} = 2\,m$ $L_{EG} = 17.5\,m$

$L_{GH.UN3} := TW_{UN3} - BOF_{elev} = 8.7\,m$

Length from Point C, D, E to G: $L_{CDEG} = 20.5\,m$ $L_{CDE} = 3\,m$

Water Pressure at Point C & G: $\sigma_{C.UN3} := \sigma_{hwas.UN3.2} = -127.53 \cdot kPa$ $\sigma_{G.UN3} := \sigma_{twtoe.UN3} \cdot -1 = -85.35 \cdot kPa$

Water Pressure at Point D: $$\sigma_{D.UN3} := -\gamma_w \cdot \left[\left(HW_{UN3} - BOK_{elev}\right) - \frac{\Delta_{h.UN3} \cdot L_{CD}}{L_{CDEG}}\right] = -126.43 \cdot kPa$$

Water Pressure at Point E: $$\sigma_{E.UN3} := -\gamma_w \cdot \left[\left(HW_{UN3} - BOF_{elev}\right) - \frac{\Delta_{h.UN3} \cdot L_{CDE}}{L_{CDEG}}\right] = -104.61 \cdot kPa$$

Uplift for Overturning Analysis on Bottom of Key: $$U_{OT.UN3.key} := \frac{\sigma_{C.UN3} + \sigma_{D.UN3}}{2} \cdot L_{CD} \cdot W_b = -1523.76 \cdot kN$$

Acting at: $$U_{OT.UN3.key.loc} := \frac{L_{CD} \cdot \left(2 \cdot \sigma_{C.UN3} + \sigma_{D.UN3}\right)}{3\left(\sigma_{C.UN3} + \sigma_{D.UN3}\right)} + L_{EG} = 18\,m$$

Uplift for Overturning Analysis on Bottom of Footing: $$U_{OT.UN3.ftg} := \frac{\sigma_{E.UN3} + \sigma_{G.UN3}}{2} \cdot L_{EG} \cdot W_b = -19945.29 \cdot kN$$

Acting at: $$U_{OT.UN3.ftg.loc} := \frac{L_{EG} \cdot \left(\sigma_{G.UN3} + 2 \cdot \sigma_{E.UN3}\right)}{3\left(\sigma_{G.UN3} + \sigma_{E.UN3}\right)} = 9.05\,m$$

UN3 CASE

Uplift Load for Overturning Analysis: $U_{OT.UN3} := U_{OT.UN3.key} + U_{OT.UN3.ftg} = -21469.04 \cdot kN$

Uplift Load Acting from Toe: $U_{OT.UN3.loc} := \dfrac{U_{OT.UN3.key} \cdot U_{OT.UN3.key.loc} + U_{OT.UN3.ftg} \cdot U_{OT.UN3.ftg.loc}}{U_{OT.UN3}} = 9.68\,m$

All Vertical Loads Applicable to Overturning Stability Analysis

		at:	
Total Concrete Dead Loads:	$D_{conc} = 22438.74 \cdot kN$		$X_{conc.loc} = 9.35\,m$
Dead Load of Gate:	$D_{Gate} = 140.0 \cdot kN$		$X_{gate} = 9.50\,m$
Water Weight (HW) on Apron Slab:	$H_{1.UN3} = 7210.4 \cdot kN$		$H_{1.UN3.loc} = 14.13\,m$
Water Weight (TW) on Gate Footing:	$H_{2.UN3.rg} = 2695.8 \cdot kN$		$H_{2.UN3.rg.loc} = 5.37\,m$
Water Weight (TW) on Regulating Gate Footing:	$H_{2.UN3.gg} = 2695.8 \cdot kN$		$H_{2.UN3.gg.loc} = 5.37\,m$
Uplift Load for Overturning Analysis:	$U_{OT.UN3} = -21469.04 \cdot kN$		$U_{OT.UN3.loc} = 9.68 \cdot m$

Sum of All Overturning Analysis Vertical Load:

$$\Sigma V_{UN3.OT} := D_{conc} + D_{Gate} + H_{1.UN3} + H_{2.UN3.rg} + H_{2.UN3.gg} + U_{OT.UN3} = 13711.7 \cdot kN$$

Sum of All Overturning Analysis Vertical Load Moments:

$$\Sigma M_{V.UN3.OT} := D_{conc} \cdot X_{conc.loc} + D_{Gate} \cdot X_{gate} + H_{1.UN3} \cdot H_{1.UN3.loc} + H_{2.UN3.rg} \cdot H_{2.UN3.rg.loc} \ldots + H_{2.UN3.gg} \cdot H_{2.UN3.gg.loc} + U_{OT.UN3} \cdot U_{OT.UN3.loc} = 134093.87 \cdot kN \cdot m$$

Lateral Tailwater Loads for Overturning Stability Analysis

TW Lateral Load on Gate Footing (No Key - Overturning Values Adjusted): $H_{twgf.UN3} := H_{twgf.UN3.tri} + H_{twgf.UN3.rect} = 3154.9 \cdot kN$

Acting at: $H_{twgf.UN3.loc} := \dfrac{\frac{h_{toe}}{3} \cdot H_{twgf.UN3.tri} + \frac{h_{toe}}{2} \cdot H_{twgf.UN3.rect}}{H_{twgf.UN3}} = 1.8\,m$

Horizontal Tailwater Pressure Top of Key (Overturning Analysis): $\sigma_{twtk.OT.UN3} := \sigma_{E.UN3} \cdot -1 = 104.61 \cdot kPa$

Horizontal Tailwater Pressure Bottom of Key (Overturning Analysis): $\sigma_{twbk.OT.UN3} := \sigma_{D.UN3} \cdot -1 = 126.43 \cdot kPa$

Triangular Distribution Unit Load Acting at Key: $H_{twbk.OT.UN3.tri} := \dfrac{\left(\sigma_{twbk.OT.UN3} - \sigma_{twtk.OT.UN3}\right)}{2} \cdot d_{key} \cdot W_{tw.UN3} = 261.86 \cdot kN$

Triangular Distribution Unit Load Acting at Key: $H_{twbk.OT.UN3.rect} := \sigma_{twtk.OT.UN3} \cdot d_{key} \cdot W_{tw.UN3} = 2510.59 \cdot kN$

Total Horizontal Tailwater Load on Key (Overturning Values Adjusted): $H_{twkey.OT.UN3} := H_{twbk.OT.UN3.tri} + H_{twbk.OT.UN3.rect} = 2772.45 \cdot kN$

Acting at: $H_{twkey.OT.UN3.loc} := \dfrac{H_{twbk.OT.UN3.tri} \cdot \frac{-2 \cdot d_{key}}{3} + H_{twbk.OT.UN3.rect} \cdot \frac{-d_{key}}{2}}{H_{twkey.OT.UN3}} = -1.03 \cdot m$

Lateral Driving Earth Loads for Overturning Stability Analysis (at rest condition)

Depth of Driving Soil Loads (to top of key): $h_{E.OT.UN3} := TOC_{as} - BOF_{elev} = 4\,m$

At-Rest Soil Load: $E_{act.OT.UN3} := \dfrac{\left(K_{o.UN3} \cdot h_{E.OT.UN3}^{\;2}\right)}{2} \cdot \left(\gamma_r - \gamma_w\right) \cdot W_{hwas.UN3} \cdot -1 = -769.99 \cdot kN$

At Rest- Soil Load Acting from Toe: $E_{act.OT.UN3.loc} := \dfrac{h_{E.OT.UN3}}{3} = 1.33\,m$

All Lateral Loads Applicable to Overturning Stability Analysis

HW Lateral Load on Approach Slab:	$H_{hwas.UN3} = -7063.2 \cdot kN$	$H_{hwas.UN3.loc} = 0.70\,m$
HW Lateral Load on Regulating Gate:	$H_{hwrg.UN3} = 0.0 \cdot kN$	$H_{hwrg.UN3.loc} = 4.00\,m$
HW Lateral Load on Guard Gate:	$H_{hwgg.UN3} = 0.0 \cdot kN$	$H_{hwgg.UN3.loc} = 4.00\,m$

Total Horizontal Tailwater Load on Guard Crest Gate: $H_{twgg.UN4} := \sigma_{twgg.UN4.avg} \cdot A_{twgg.UN4} = 88.5 \cdot kN$

Apply Total Horiz. TW Load on Guard Gate at:

$$H_{twgg.UN4.loc} := \begin{cases} (TOC_{as} - BOF_{elev}) & \text{if } A4_{UN4} \\ \left[\frac{(TW_{UN4} - TOC_{as})}{3} + (TOC_{as} - BOF_{elev})\right] & \text{if } B4_{UN4} \\ \left[\frac{\sigma_{twgg.UN4.2} \cdot A_{twgg.UN4} \cdot \frac{(H_{gg.UN4})}{2} + \frac{(\sigma_{twgg.UN4.1} - \sigma_{twgg.UN4.2})}{2} A_{twgg.UN4} \cdot \frac{(H_{gg.UN4})}{3}}{\sigma_{twgg.UN4.2} \cdot A_{twgg.UN4} + \frac{(\sigma_{twgg.UN4.1} - \sigma_{twgg.UN4.2})}{2} \cdot A_{twgg.UN4}} \cdots \\ + (TOC_{as} - BOF_{elev})\right] & \text{if } C4_{UN4} \end{cases} = 4.6 \cdot m$$

LATERAL WATER LOADS (continued)

UN4 CASE

TAILWATER (RESISTING) Applied to Concrete Structure:

Tailwater Depth on Pier: $D_{twp.UN4} := TW_{UN4} - TOC_{as} = 1.90\,m$

Tailwater Load Unit Width on Pier: $W_{twp.UN4} := W_{hwp.UN4} = 2.00\,m$

Total Horizontal Tailwater Load on Pier: $H_{twp.UN4} := \frac{\left(\gamma_w \cdot D_{twp.UN4}{}^2\right)}{2} \cdot W_{twp.UN4} = 35.4 \cdot kN$

Apply Total Pier Tailwater Load at: $H_{twp.UN4.loc} := \frac{D_{twp.UN4}}{3} + \left(TOC_{as} - BOF_{elev}\right) = 4.63\,m$

Tailwater Depth At top of Gate Base Footing Elevation: $D_{twgf.UN4} := TW_{UN4} - TOC_{as} = 1.90\,m$

Water Depth at bottom of Gate Base Footing (Excluding Key): $D_{twtoe.UN4} := TW_{UN4} - BOF_{elev} = 5.90\,m$

Footing Thickness for horizontal at Toe: $h_{toe} = 4\,m$

Unit Width of D/S face of crest for application of Tailwater Load: $W_{tw.UN4} := W_b = 12.00\,m$

Tailwater Pressure At Top of Gate Footing: $\sigma_{twgf.UN4} := \left(\gamma_w \cdot D_{twgf.UN4}\right) = 18.64 \cdot kPa$

Tailwater Pressure At Toe: $\sigma_{twtoe.UN4} := \left(\gamma_w \cdot D_{twtoe.UN4}\right) = 57.88 \cdot kPa$

Triangular Distribution Unit Load on Gate Footing Base (including key): $H_{twgf.UN4.tri} := \left(\frac{\sigma_{twtoe.UN4} - \sigma_{twgf.UN4}}{2}\right) \cdot \left[\left(T_{as} - d_{key}\right) \cdot W_{tw.UN4}\right] = 941.76 \cdot kN$

Rectangular Distribution Unit Load on Gate Footing Base (including key): $H_{twgf.UN4.rect} := \sigma_{twgf.UN4} \cdot \left[\left(T_{as} - d_{key}\right) \cdot W_{tw.UN4}\right] = 894.67 \cdot kN$

Tailwater Pressure At Bottom of Sliding Failure Plane: $\sigma_{twbk.UN4} := \left(HW_{UN4} - BOK_{elev}\right) \cdot \gamma_w = 107.91 \cdot kPa$

Triangular Distribution Unit Load Below Footing: $H_{twbk.UN4.tri} := \frac{\left(\sigma_{twbk.UN4} - \sigma_{twtoe.UN4}\right)}{2} \cdot d_{key} \cdot W_{tw.UN4} = 600.37 \cdot kN$

Rectangular Distribution Load Below Footing Base: $H_{twbk.UN4.rect} := \sigma_{twtoe.UN4} \cdot d_{key} \cdot W_{tw.UN4} = 1389.1 \cdot kN$

Total Horizontal Tailwater Headwater Load on Gate Footing (including key):

$$H_{twgk.UN4} := H_{twgf.UN4.tri} + H_{twgf.UN4.rect} \cdots + H_{twbk.UN4.tri} + H_{twbk.UN4.rect} = 3825.9 \cdot kN$$

Apply Total Gate Footing Tailwater Load at:

$$H_{twgk.UN4.loc} := \frac{\left[H_{twgf.UN4.rect} \cdot \frac{\left(h_{toe}\right)}{2} + H_{twgf.UN4.tri} \cdot \frac{\left(h_{toe}\right)}{3} + H_{twbk.UN4.tri} \cdot \left(-d_{key} \cdot \frac{2}{3}\right) + H_{twbk.UN4.rect} \cdot \left(\frac{-d_{key}}{2}\right)\right]}{H_{twgf.UN4.tri} + H_{twgf.UN4.rect} + H_{twbk.UN4.tri} + H_{twbk.UN4.rect}} = 0.22\,m$$

SUMMATION OF LATERAL WATER LOADS:

$$\Sigma H_{Water.UN4} := H_{hwp.UN4} + H_{hwas.UN4} + H_{hwrg.UN4} + H_{hwgg.UN4} + H_{twp.UN4} + H_{twgk.UN4} + H_{twrg.UN4} + H_{twgg.UN4} = -2960.81 \cdot kN$$

$$\Sigma M_{Hwater.UN4} := H_{hwp.UN4} \cdot H_{hwp.UN4.loc} + H_{hwas.UN4} \cdot H_{hwas.UN4.loc} + H_{hwrg.UN4} \cdot H_{hwrg.UN4.loc} \cdots + H_{hwgg.UN4} \cdot H_{hwgg.UN4.loc} + H_{twp.UN4} \cdot H_{twp.UN4.loc} + H_{twgk.UN4} \cdot H_{twgk.UN4.loc} \cdots + H_{twrg.UN4} \cdot H_{twrg.UN4.loc} + H_{twgg.UN4} \cdot H_{twgg.UN4.loc} = -8747.69 \cdot kN \cdot m$$

VERTICAL WATER LOADS

UN4 CASE

HEADWATER:

Water Depth on top of Approach Slab: $d_{hw.UN4} := HW_{UN4} - TOC_{as} = 5.00\,m$

Length of Approach Slab: $L_{as} = 8.75\,m$

Width of Approach Slab: $w_{as} = 12.00\,m$

Length from front of Gate to Heel: $L_{hg} = 8.75\,m$

Weight on Apron is req for stability. Coffer U/S of pier nose must include fill to offset reduced water load.

Vertical Water Weight (H1) on Approach Slab:

$$H_{1.UN4} := \left[w_{as} \cdot d_{hw.UN4} \cdot L_{as} - w_p \cdot d_{hw.UN4} \cdot \left(L_{hg} - L_{as}\right)\right] \cdot \gamma_w \cdot \frac{3}{4} = 3862.7 \cdot kN$$

Moment Arm for Application of Water Weight (H1) from toe:

$$H_{1.UN4.loc} := L_b - \frac{L_{as}}{2} = 14.13\,m$$

TAILWATER ABOVE GUARD GATE:

Trapezoid Volume Above Gate Footing from Approach Slab to Crest:

$$V_{asc.gg.UN4} := \left(L_{gf} - L_{gfc}\right) W_{twgg.UN4} \frac{d_{hw.UN4} + Y_{C.gg.UN4}}{2} = 146.58 \cdot m^3$$

Trapezoid Volume Above Gate Footing Crest to End of Gate Footing:

$$V_{gfc.gg.UN4} := \left(L_{gfc} \cdot W_{twgg.UN4}\right) \frac{Y_{C.gg.UN4} + Y_{TOE.gg.UN4}}{2} = 50.05 \cdot m^3$$

Load Above Gate Footing from Approach Slab to Crest:

$$H_{2.UN4.asc.gg} := V_{asc.gg.UN4} \cdot \gamma_w = 1437.9 \cdot kN$$

Load Acting Above Footing Crest from Toe:

$$H_{2.UN4.asc.gg.loc} := \frac{\left(L_{gf} - L_{gfc}\right) \cdot \left(2 \cdot d_{hw.UN4} + Y_{C.gg.UN4}\right)}{3 \cdot \left(d_{hw.UN4} + Y_{C.gg.UN4}\right)} + L_{gfc} = 6.44\,m$$

Load Above Gate Footing from Crest to End:

$$H_{2.UN4.gfc.gg} := V_{gfc.gg.UN4} \cdot \gamma_w = 490.99 \cdot kN$$

Load Acting Above Gate Footing from Crest to End:

$$H_{2.UN4.gfc.gg.loc} := \frac{\left(L_{gfc}\right) \cdot \left(2 \cdot Y_{C.gg.UN4} + Y_{TOE.gg.UN4}\right)}{3 \cdot \left(Y_{C.gg.UN4} + Y_{TOE.gg.UN4}\right)} = 1.23\,m$$

Vertical Water Weight (H2) on Guard Gate Footing:

$$H_{2.UN4.gg} := H_{2.UN4.asc.gg} + H_{2.UN4.gfc.gg} = 1928.89 \cdot kN$$

Moment Arm for Application of Water Weight (H2) from toe:

$$H_{2.UN4.gg.loc} := \frac{H_{2.UN4.asc.gg} \cdot H_{2.UN4.asc.gg.loc} \cdots + H_{2.UN4.gfc.gg} \cdot H_{2.UN4.gfc.gg.loc}}{H_{2.UN4.gg}} = 5.11\,m$$

TAILWATER ABOVE REGULATING GATE:

Trapezoid Volume Above Gate Footing from Approach Slab to Crest:

$$V_{asc.rg.UN4} := \left(L_{gf} - L_{gfc}\right) W_{twrg.UN4} \frac{d_{hw.UN4} + Y_{C.rg.UN4}}{2} = 166.77 \cdot m^3$$

Trapezoid Volume Above Gate Footing Crest to End of Gate Footing:

$$V_{gfc.rg.UN4} := \left(L_{gfc} \cdot W_{twrg.UN4}\right) \frac{Y_{C.rg.UN4} + Y_{TOE.rg.UN4}}{2} = 36.14 \cdot m^3$$

Load Above Gate Footing from Approach Slab to Crest:

$$H_{2.UN4.asc.rg} := V_{asc.rg.UN4} \cdot \gamma_w = 1636.05 \cdot kN$$

Load Acting Above Footing Crest from Toe:

$$H_{2.UN4.asc.rg.loc} := \frac{\left(L_{gf} - L_{gfc}\right) \cdot \left(2 \cdot d_{hw.UN4} + Y_{C.rg.UN4}\right)}{3 \cdot \left(d_{hw.UN4} + Y_{C.rg.UN4}\right)} + L_{gfc} = 6.26\,m$$

Load Above Gate Footing from Crest to End:

$$H_{2.UN4.gfc.rg} := V_{gfc.rg.UN4} \cdot \gamma_w = 354.53 \cdot kN$$

Load Acting Above Gate Footing from Crest to End:

$$H_{2.UN4.gfc.rg.loc} := \frac{\left(L_{gfc}\right) \cdot \left(2 \cdot Y_{C.rg.UN4} + Y_{TOE.rg.UN4}\right)}{3 \cdot \left(Y_{C.rg.UN4} + Y_{TOE.rg.UN4}\right)} = 1.54\,m$$

Vertical Water Weight (H2) on Regulating Gate Footing:

$$H_{2.UN4.rg} := H_{2.UN4.asc.rg} + H_{2.UN4.gfc.rg} = 1990.58 \cdot kN$$

Moment Arm for Application of Water Weight (H2) from toe:

$$H_{2.UN4.rg.loc} := \frac{H_{2.UN4.asc.rg} \cdot H_{2.UN4.asc.rg.loc} \cdots + H_{2.UN4.gfc.rg} \cdot H_{2.UN4.gfc.rg.loc}}{H_{2.UN4.rg}} = 5.42\,m$$

UPLIFT **UN4 CASE**

Uplift pressure at U/S Face (heel):	$U_{HW.UN4} := \left(D_{hwas.UN4}\right)\cdot\gamma_w = 107.9\cdot\frac{kN}{m^2}$

SOIL LOADS

UN4 CASE

Equivalent Fluid Pressure (EFP):

At rest lateral pressure coefficient: $K_{o.UN4} := 1 - \sin(\phi_{backfill}) = 0.658$ (Section 5.3, Design Criteria)

Headwater Pier Footing Unit Width: $W_{hwas.UN4} = 12.00\,m$

Tailwater Pier Footing Unit Width: $W_{tw.UN4} = 12.00\,m$

Pier Footing Thickness at Heel: $t_{hf.UN4} := TOC_{as} - BOK_{elev} = 6.00\,m$

Fixed Crest Footing Thickness at Toe: $t_{tf.UN4} := TOC_{pfe} - BOF_{elev} = 2.00\,m$

Lateral Driving Force (Headwater Side - at rest condition)

Structure Soil Load:

$$E_{act.UN4} := \frac{\left(K_{o.UN4} \cdot t_{hf.UN4}{}^2\right)}{2} \cdot \left(\gamma_r - \gamma_w\right) \cdot W_{hwas.UN4} \cdot -1 = -1732.49 \cdot kN$$

Acting at:

$$E_{act.UN4.loc} := \frac{t_{hf.UN4}}{3} - d_{key} = 0.00\,m$$

Lateral Resisting Force (Tailwater Side - at rest condition)

At-rest Soil Load:

$$E_{pass.UN4} := \frac{\left(K_{o.UN4} \cdot t_{tf.UN4}{}^2\right)}{2} \cdot \left(\gamma_r - \gamma_w\right) \cdot W_{tw.UN4} = 192.5 \cdot kN$$

Acting at:

$$E_{pass.UN4.loc} := \frac{t_{tf.UN4}}{3} = 0.67\,m$$

$$\Sigma H_{soil.UN4} := E_{act.UN4} + E_{pass.UN4} = -1539.99 \cdot kN$$

$$\Sigma M_{soil.UN4} := E_{act.UN4} \cdot E_{act.UN4.loc} + E_{pass.UN4} \cdot E_{pass.UN4.loc} = 128.33 \cdot kN \cdot m$$

ICE / IMPACT LOADS (ASSUME NO ICE LOADING ON TAILWATER SIDE)

ICE & IMPACT LOADS DO NOT APPLY FOR THIS LOAD CASE

Static Ice Loading on Structure: $I_{S.UN4} := 0 \frac{kN}{m}$ (Section 7.7, Design Criteria)

Static Ice load on Gates: $I_{G.UN4} := 0 \frac{kN}{m}$ (Section 7.7, Design Criteria)

Ice Loading Unit Width on Structure: $W_{S.UN4} := 2.00m$

Ice Loading Unit Width on Regulating Gate: $W_{rg.UN4} := 0m$ (Input value for load case)

Ice Loading Unit Width on Guard Gate: $W_{gg.UN4} := 5m$ (Input value for load case)

Total Ice Load on Structure:

$$I_{UN4} := \left(I_{S.UN4} \cdot W_{S.UN4} + I_{G.UN4} \cdot W_{rg.UN4} + I_{G.UN4} \cdot W_{gg.UN4}\right) \cdot -1 = 0 \cdot kN$$

Apply Ice load at:

$$I_{UN4.loc} := \left(HW_{UN4} - BOF_{elev} - 0.30m\right) = 8.70\,m$$

$$\Sigma H_{I.UN4} := I_{UN4} = 0 \cdot kN$$

$$\Sigma M_{I.UN4} := I_{UN4} \cdot I_{UN4.loc} = 0 \cdot kN \cdot m$$

SEISMIC LOAD (NOT APPLICABLE FOR THIS LOAD CASE)

UN4 CASE

SUMMARY OF LOADS	Loads	Moment Arm
Dead load of Concrete Structure:	$D_{conc} = 22438.7 \cdot kN$	$X_{conc.loc} = 9.35\,m$

Ice / Impact Load:	$I_{UN4} = 0.0 \cdot kN$	$I_{UN4.loc} = 8.70\,m$

STABILITY ASSESSMENT (SLIDNG, BEARING, FLOTATION AND OVERTURNING): UN4 CASE

CHECK SLIDING ALONG HORIZONTAL PLANE THRU TOE,
IGNORING BEDROCK MOBILIZED BY STRUCTURAL HEEL KEY, OR VOID BEHIND KEY

Sum of Vertical Forces:

$\Sigma V_{UN4} := \Sigma V_{DL} + \Sigma V_{water.UN4} = 11958.3 \cdot kN$

Sum of Horizontal Forces:

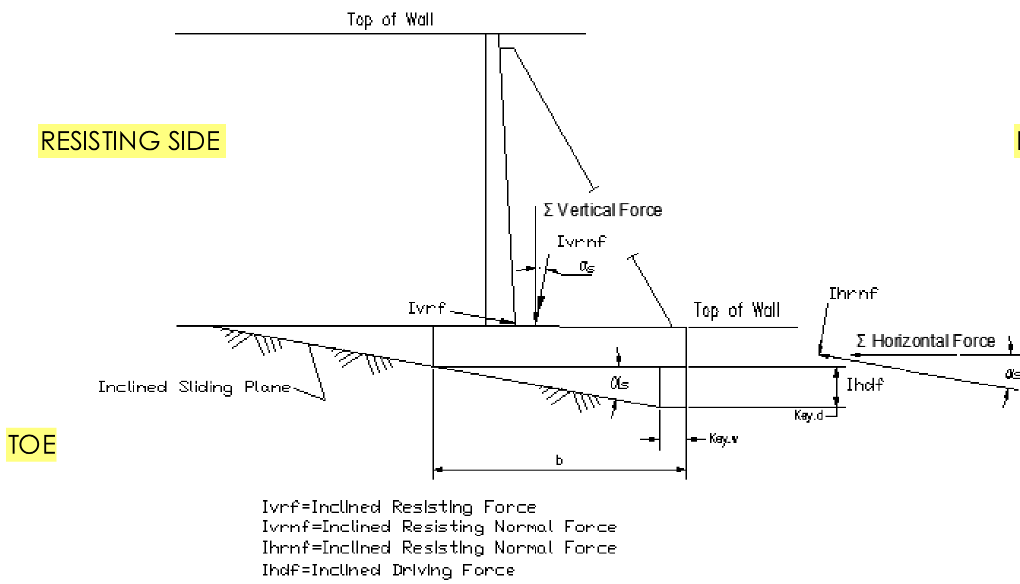
$\Sigma H_{UN4} := \Sigma H_{Water.UN4} + \Sigma H_{soil.UN4} + \Sigma H_{I.UN4} = -4500.79 \cdot kN$

Sliding Factor of Safety:

$$FS_{HorizSliding.UN4} := \frac{\tan_{\phi} \cdot \Sigma V_{UN4}}{|\Sigma H_{UN4}|} = 1.30$$

$$FS_{HorizSliding.UN4.Check} := \begin{vmatrix} \text{"OKAY"} & \text{if } FS_{HorizSliding.UN4} \geq FS_{req.UN4.sl} \\ \text{"Check Inclined Sliding with Key"} & \text{otherwise} \end{vmatrix} = \text{"Check Inclined Sliding with Key"}$$

CHECK SLIDING ALONG INCLINED SLIDING PLANE FROM HEEL KEY TO TOE,
WITH BEDROCK MASS MOBILIZED BY REINFOCREDE CONCRETE KEY)



$\Sigma V_{UN4} = 11958.32 \cdot kN$

$V_{rs} = 4620 \cdot kN$

$\alpha s = 0.11$

as degrees= $\alpha s \cdot \left(\frac{180}{\pi}\right) = 6.52$

Resolve $\Sigma Vert_{UN4}$ & $\Sigma Horiz_{UN4}$

$$\Sigma V_{InclinedUN4} := \cos(\alpha s) \cdot (\Sigma V_{UN4} + V_{rs}) + \sin(\alpha s) \cdot |\Sigma H_{UN4}| = 16982.2 \cdot kN$$

$$\Sigma H_{InclinedUN4} := \cos(\alpha s) \cdot |\Sigma H_{UN4}| - \sin(\alpha s) \cdot (\Sigma V_{UN4} + V_{rs}) = 2589.3 \cdot kN$$

(With properly engineered reinforced concrete Key, horizontal sliding plane thru Toe is protected, critical sliding plane is relocated to the INCLINED SLIDING PLANE FROM HEEL KEY To TOE, Bedrock Mass above this examined plane is mobilized by reinforced concrete key and combined into Structural Wedge.)

Inclined Sliding Plane Length

$L_{incline} = 18.61\ m$

Safety Factor for Sliding
Inclined Failure Plane

$$FS_{InclinedlSlidingUN4} := \frac{\Sigma V_{InclinedUN4} \cdot \tan\left(\phi_{rock} \cdot \frac{\pi}{180}\right)}{|\Sigma H_{InclinedUN4}|} = 3.20$$

$$FS_{InclinedSliding.check.UN4} := \begin{vmatrix} \text{"OKAY "} & \text{if } FS_{InclinedlSlidingUN4} > FS_{req.UN4.sl} \\ \text{"Revise Structure""} & \text{otherwise} \end{vmatrix} = \text{"OKAY "}$$

$FS_{InclinedSliding.check.UN4} = \text{"OKAY "}$

OVERTURNING STABILITY CHECK:

CHECK ECCENTRICITY

Sum of the moments:

$$\Sigma M_{UN4} := \Sigma M_{DL.UN4} + \Sigma M_{Hwater.UN4} + \Sigma M_{Vwater.UN4} + \Sigma M_{I.UN4} + \Sigma M_{soil.UN4} + \Sigma M_{rs} = 143596 \cdot kN \cdot m$$

Eccentricity:

$$e_{UN4} := \left(\frac{L_{incline}}{2}\right) - \frac{(\Sigma M_{UN4})}{\Sigma V_{InclinedUN4}} = 0.85\,m$$

Eccentricity Check:

$$e_{check.UN4} := \begin{cases} \text{"Okay"} & \text{if } e_{UN4} \le Kern \\ \text{"Revise Structure"} & \text{otherwise} \end{cases}$$

$$e_{check.UN4} = \text{"Okay"}$$

Foundation Bearing Checks:

Bearing Pressure at Heel:

$$\sigma_{heel.UN4} := \frac{\Sigma V_{InclinedUN4}}{A_{b.incline}} - \frac{(\Sigma V_{InclinedUN4} \cdot e_{UN4})}{S_{b.incline}} = 55.3 \cdot \frac{kN}{m^2}$$

$$\sigma_{heel.UN4.check} := \left(\begin{cases} \text{"Okay"} & \text{if } \sigma_{heel.UN4} \le \sigma_{allow.UN4} \\ \text{"Revise Structure"} & \text{if } \sigma_{heel.UN4} < 0 \frac{kN}{m^2} \end{cases} \right)$$

$$\sigma_{heel.UN4.check} = \text{"Okay"}$$

Bearing Pressure at Toe:

$$\sigma_{toe.UN4} := \frac{\Sigma V_{InclinedUN4}}{A_{b.incline}} + \frac{(\Sigma V_{InclinedUN4} \cdot e_{UN4})}{S_{b.incline}} = 96.9 \cdot \frac{kN}{m^2}$$

$$\sigma_{toe.UN4.1.check} := \begin{cases} \text{"Okay"} & \text{if } \sigma_{toe.UN4} \le \sigma_{allow.UN4} \\ \text{"Revise Structure"} & \text{if } \sigma_{toe.UN4} < 0 \frac{kN}{m^2} \end{cases}$$

$$\sigma_{toe.UN4.1.check} = \text{"Okay"}$$

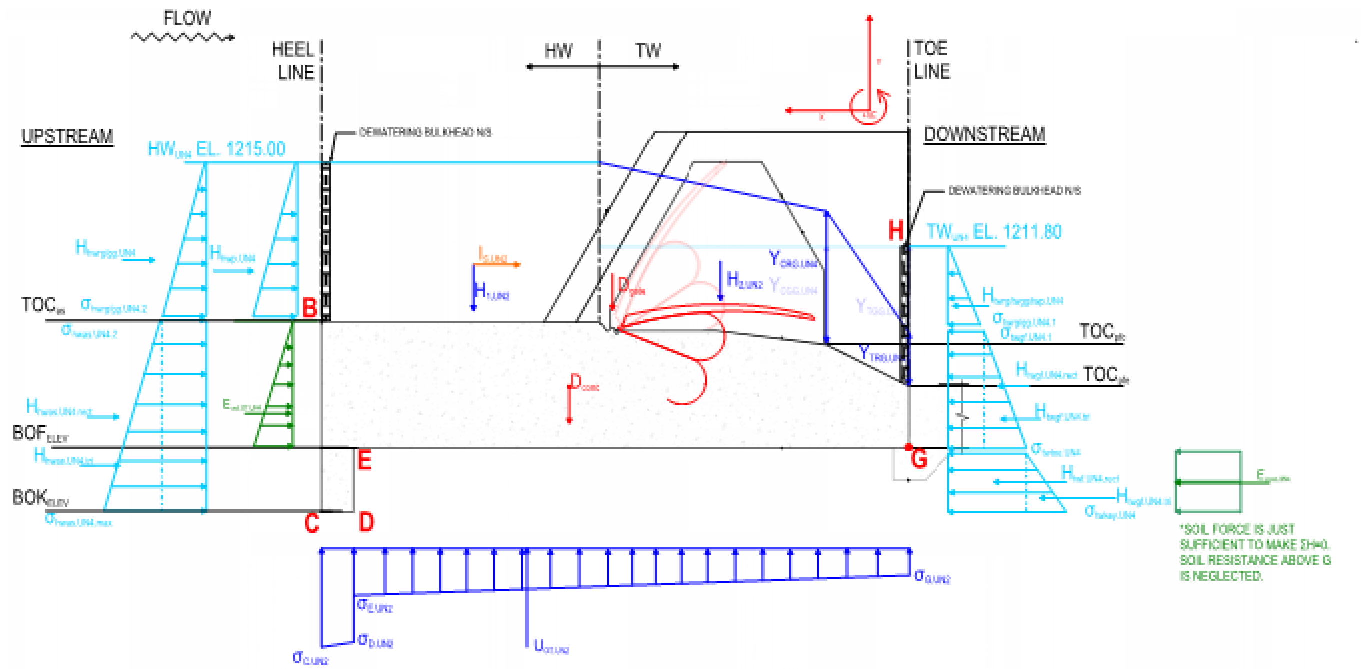
MONOLITH OVERTURNING STABILITY ANALYSIS

UN4 CASE

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stability of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1 $Ratio_{OT.UN4.min} := 0.33$



Uplift Loads for Overturning Stability Analysis

Line of Creep:

Change in Water Head: $\Delta_{h.UN4} := HW_{UN4} - TW_{UN4} = 3.1\ m$

Length from Point C to Point G: $L_{CG} = 18.61\ m$

Length from Various Points to Points: $L_{CD} = 1\ m$ $\quad L_{DE} = 2\ m$ $\quad L_{EG} = 17.5\ m$

$L_{GH.UN4} := TW_{UN4} - BOF_{elev} = 5.9\ m$

Length from Point C, D, E to G: $L_{CDEG} = 20.5\ m$ $\quad L_{CDE} = 3\ m$

Water Pressure at Point C & G: $\sigma_{C.UN4} := \sigma_{hwas.UN4.2} = -107.91 \cdot kPa$ $\quad \sigma_{G.UN4} := \sigma_{twtoe.UN4} \cdot -1 = -57.88 \cdot kPa$

Water Pressure at Point D:

$$\sigma_{D.UN4} := -\gamma_w \cdot \left[\left(HW_{UN4} - BOK_{elev} \right) - \frac{\Delta_{h.UN4} \cdot L_{CD}}{L_{CDEG}} \right] = -106.43 \cdot kPa$$

Water Pressure at Point E:

$$\sigma_{E.UN4} := -\gamma_w \cdot \left[\left(HW_{UN4} - BOF_{elev} \right) - \frac{\Delta_{h.UN4} \cdot L_{CDE}}{L_{CDEG}} \right] = -83.84 \cdot kPa$$

Uplift for Overturning Analysis on Bottom of Key:

$$U_{OT.UN4.key} := \frac{\sigma_{C.UN4} + \sigma_{D.UN4}}{2} \cdot L_{CD} \cdot W_b = -1286.02 \cdot kN$$

Acting at:

$$U_{OT.UN4.key.loc} := \frac{L_{CD} \cdot \left(2 \cdot \sigma_{C.UN4} + \sigma_{D.UN4} \right)}{3 \left(\sigma_{C.UN4} + \sigma_{D.UN4} \right)} + L_{EG} = 18\ m$$

Uplift for Overturning Analysis on Bottom of Footing:

$$U_{OT.UN4.ftg} := \frac{\sigma_{E.UN4} + \sigma_{G.UN4}}{2} \cdot L_{EG} \cdot W_b = -14880.45 \cdot kN$$

Acting at:

$$U_{OT.UN4.ftg.loc} := \frac{L_{EG} \cdot \left(\sigma_{G.UN4} + 2 \cdot \sigma_{E.UN4} \right)}{3 \left(\sigma_{G.UN4} + \sigma_{E.UN4} \right)} = 9.28\ m$$

UN4 CASE

Uplift Load for Overturning Analysis: $U_{OT.UN4} := U_{OT.UN4.key} + U_{OT.UN4.ftg} = -16166.47 \cdot kN$

Uplift Load Acting from Toe: $U_{OT.UN4.loc} := \dfrac{U_{OT.UN4.key} \cdot U_{OT.UN4.key.loc} + U_{OT.UN4.ftg} \cdot U_{OT.UN4.ftg.loc}}{U_{OT.UN4}} = 9.98\,m$

<u>All Vertical Loads Applicable to Overturning Stability Analysis</u>

		at:	
Total Concrete Dead Loads:	$D_{conc} = 22438.74 \cdot kN$		$X_{conc.loc} = 9.35\,m$
Dead Load of Gate:	$D_{Gate} = 140.0 \cdot kN$		$X_{gate} = 9.50\,m$
Water Weight (HW) on Apron Slab:	$H_{1.UN4} = 3862.7 \cdot kN$		$H_{1.UN4.loc} = 14.13\,m$
Water Weight (TW) on Gate Footing:	$H_{2.UN4.rg} = 1990.6 \cdot kN$		$H_{2.UN4.rg.loc} = 5.42\,m$
Water Weight (TW) on Regulating Gate Footing:	$H_{2.UN4.gg} = 1928.9 \cdot kN$		$H_{2.UN4.gg.loc} = 5.11\,m$
Uplift Load for Overturning Analysis:	$U_{OT.UN4} = -16166.47 \cdot kN$		$U_{OT.UN4.loc} = 9.98 \cdot m$

Sum of All Overturning Analysis Vertical Load:

$$\Sigma V_{UN4.OT} := D_{conc} + D_{Gate} + H_{1.UN4} + H_{2.UN4.rg} + H_{2.UN4.gg} + U_{OT.UN4} = 14194.43 \cdot kN$$

Sum of All Overturning Analysis Vertical Load Moments:

$$\Sigma M_{V.UN4.OT} := D_{conc} \cdot X_{conc.loc} + D_{Gate} \cdot X_{gate} + H_{1.UN4} \cdot H_{1.UN4.loc} + H_{2.UN4.rg} \cdot H_{2.UN4.rg.loc} \ldots + H_{2.UN4.gg} \cdot H_{2.UN4.gg.loc} + U_{OT.UN4} \cdot U_{OT.UN4.loc} = 125022.88 \cdot kN \cdot m$$

<u>Lateral Tailwater Loads for Overturning Stability Analysis</u>

TW Lateral Load on Gate Footing (No Key - Overturning Values Adjusted): $H_{twgf.UN4} := H_{twgf.UN4.tri} + H_{twgf.UN4.rect} = 1836.43 \cdot kN$

Acting at: $H_{twgf.UN4.loc} := \dfrac{\frac{h_{toe}}{3} \cdot H_{twgf.UN4.tri} + \frac{h_{toe}}{2} \cdot H_{twgf.UN4.rect}}{H_{twgf.UN4}} = 1.66\,m$

Horizontal Tailwater Pressure Top of Key (Overturning Analysis): $\sigma_{twtk.OT.UN4} := \sigma_{E.UN4} \cdot -1 = 83.84 \cdot kPa$

Horizontal Tailwater Pressure Bottom of Key (Overturning Analysis): $\sigma_{twbk.OT.UN4} := \sigma_{D.UN4} \cdot -1 = 106.43 \cdot kPa$

Triangular Distribution Unit Load Acting at Key: $H_{twbk.OT.UN4.tri} := \dfrac{\left(\sigma_{twbk.OT.UN4} - \sigma_{twtk.OT.UN4}\right)}{2} \cdot d_{key} \cdot W_{tw.UN4} = 271.04 \cdot kN$

Triangular Distribution Unit Load Acting at Key: $H_{twbk.OT.UN4.rect} := \sigma_{twtk.OT.UN4} \cdot d_{key} \cdot W_{tw.UN4} = 2012.15 \cdot kN$

Total Horizontal Tailwater Load on Key (Overturning Values Adjusted): $H_{twkey.OT.UN4} := H_{twbk.OT.UN4.tri} + H_{twbk.OT.UN4.rect} = 2283.19 \cdot kN$

Acting at: $H_{twkey.OT.UN4.loc} := \dfrac{H_{twbk.OT.UN4.tri} \cdot \frac{-2 \cdot d_{key}}{3} + H_{twbk.OT.UN4.rect} \cdot \frac{-d_{key}}{2}}{H_{twkey.OT.UN4}} = -1.04 \cdot m$

<u>Lateral Driving Earth Loads for Overturning Stability Analysis (at rest condition)</u>

Depth of Driving Soil Loads (to top of key): $h_{E.OT.UN4} := TOC_{as} - BOF_{elev} = 4\,m$

At-Rest Soil Load: $E_{act.OT.UN4} := \dfrac{\left(K_{o.UN4} \cdot h_{E.OT.UN4}^{\;2}\right)}{2} \cdot \left(\gamma_r - \gamma_w\right) \cdot W_{hwas.UN4} \cdot -1 = -769.99 \cdot kN$

At Rest- Soil Load Acting from Toe: $E_{act.OT.UN4.loc} := \dfrac{h_{E.OT.UN4}}{3} = 1.33\,m$

All Lateral Loads Applicable to Overturning Stability Analysis

HW Lateral Load on Approach Slab:	$H_{hwas.UN4} = -5650.6 \cdot kN$	$H_{hwas.UN4.loc} = 0.63\,m$
HW Lateral Load on Regulating Gate:	$H_{hwrg.UN4} = -200.9 \cdot kN$	$H_{hwrg.UN4.loc} = 4.44\,m$
HW Lateral Load on Guard Gate:	$H_{hwgg.UN4} = -613.1 \cdot kN$	$H_{hwgg.UN4.loc} = 5.67\,m$
TW Lateral Load on Regulating Gate:	$H_{twrg.UN4} = -200.9 \cdot kN$	$H_{twrg.UN4.loc} = 4.44\,m$
HW Lateral Load on Guard Gate:	$H_{twgg.UN4} = 88.5 \cdot kN$	$H_{twgg.UN4.loc} = 4.63\,m$
TW Lateral Load on Gate Footing (No Key - Overturning Values Adjusted):	$H_{twgf.UN4} = 1836.43 \cdot kN$	$H_{twgf.UN4.loc} = 1.66\,m$
TW Lateral Load on Key:	$H_{twkey.OT.UN4} = 2283.19 \cdot kN$	$H_{twkey.OT.UN4.loc} = -1.04\,m$
Ice / Impact Load:	$I_{UN4} = 0.0 \cdot kN$	$I_{UN4.loc} = 8.70\,m$
Lateral Soil Load (driving):	$E_{act.OT.UN4} = -770.0 \cdot kN$	$E_{act.OT.UN4.loc} = 1.33\,m$

Resisting Lateral Soil Load as required to produce horizontal equilibrium:

$$E_{pas.OT.UN4} := -\left(H_{hwas.UN4} + H_{hwrg.UN4} + H_{hwgg.UN4} + H_{twrg.UN4} + H_{twgg.UN4} \cdots + H_{twgf.UN4} + H_{twkey.OT.UN4} + I_{UN4} + E_{act.OT.UN4}\right) = 3227.24 \cdot kN$$

$$E_{pas.OT.UN4.loc} := -1 \cdot \frac{d_{key}}{2} = -1\,m$$

Sum of All Overturning Analysis Horizontal Load (ΣH=0):

$$\Sigma H_{UN4.OT} := H_{hwas.UN4} + H_{hwrg.UN4} + H_{hwgg.UN4} + H_{twrg.UN4} + H_{twgg.UN4} \cdots + H_{twgf.UN4} + H_{twkey.OT.UN4} + I_{UN4} + E_{act.OT.UN4} + E_{pas.OT.UN4} = 0 \cdot kN$$

Sum of All Overturning Analysis Horizontal Load Moments:

$$\Sigma M_{H.UN4.OT} := H_{hwas.UN4} \cdot H_{hwas.UN4.loc} + H_{hwrg.UN4} \cdot H_{hwrg.UN4.loc} + H_{hwgg.UN4} \cdot H_{hwgg.UN4.loc} \cdots + H_{twrg.UN4} \cdot H_{twrg.UN4.loc} + H_{twgg.UN4} \cdot H_{twgg.UN4.loc} + H_{twgf.UN4} \cdot H_{twgf.UN4.loc} \cdots + H_{twkey.OT.UN4} \cdot H_{twkey.OT.UN4.loc} + I_{UN4} \cdot I_{UN4.loc} + E_{act.OT.UN4} \cdot E_{act.OT.UN4.loc} \cdots + E_{pas.OT.UN4} \cdot E_{pas.OT.UN4.loc} = -11959.87 \cdot kN \cdot m$$

Overturning Stability Analysis

$$\Sigma M_{UN4.OT} := \Sigma M_{V.UN4.OT} + \Sigma M_{H.UN4.OT} = 113063.01 \cdot kN \cdot m$$

$$X_{R.UN4} := \frac{\Sigma M_{UN4.OT}}{\Sigma V_{UN4.OT}} = 7.97\,m \qquad x_{OT.UN4} := X_{R.UN4} - \frac{L_b}{2} = -1.28\,m$$

Overturning Resultant Ratio

$$Ratio_{OT.UN4} := \frac{X_{R.UN4}}{L_b} = 0.43$$

$$Ratio_{OT.UN4.check} := \begin{cases} \text{"OKAY"} & \text{if } Ratio_{OT.UN4} \geq Ratio_{OT.UN4.min} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

$$x_{OT.check.UN4} := \begin{cases} \text{"OKAY"} & \text{if } \left|x_{OT.UN4}\right| \leq Kern \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

CHECK FOUNDATION BEARING CAPACITY (HORIZONTAL PLANE):

UN4 CASE

Bearing Pressure Under Toe:

$$\sigma_{ToeUN4.OT} := \frac{\Sigma V_{UN4.OT}}{L_b \cdot W_b} + \frac{\left(\Sigma V_{UN4.OT} \cdot x_{OT.UN4}\right)}{S_b} = 37.3 \cdot kPa$$

$$Bearing_{ChecktoeUN4.OT} := \begin{vmatrix} \text{"OKAY "} & \text{if } \sigma_{ToeUN4.OT} < \sigma_{allow.UN4} \\ \text{"NG""} & \text{otherwise} \end{vmatrix} = \text{"OKAY "}$$

Bearing Pressure Under Heel:

$$\sigma_{HeelUN4.OT} := \frac{\Sigma V_{UN4.OT}}{L_b \cdot W_b} - \frac{\left(\Sigma V_{UN4.OT} \cdot x_{OT.UN4}\right)}{S_b} = 90.6 \cdot kPa$$

$$Bearing_{CheckheelUN4.OT} := \left(\begin{vmatrix} \text{"OKAY "} & \text{if } \sigma_{HeelUN4.OT} < \sigma_{allow.UN4} \wedge \sigma_{HeelUN4.OT} > 0 \\ \text{"NG""} & \text{otherwise} \end{vmatrix} \right) = \text{"OKAY "}$$

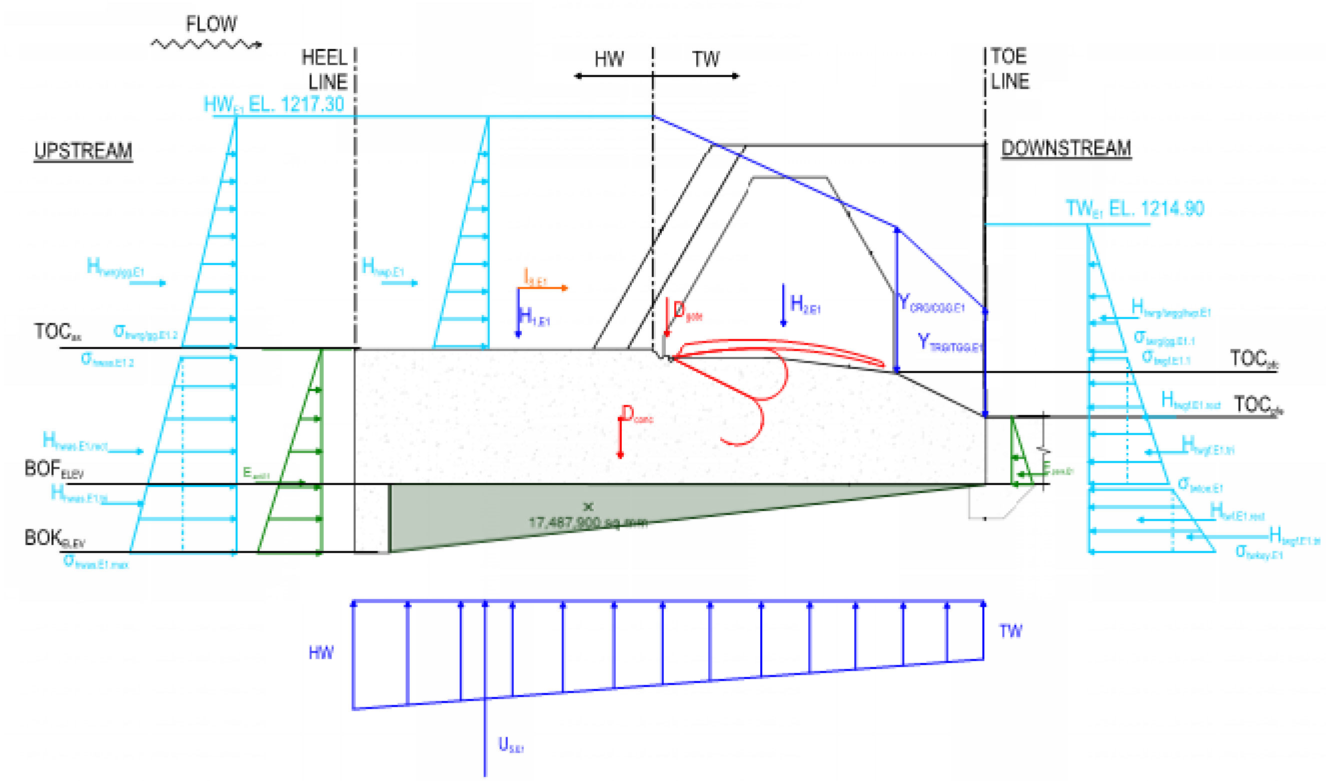
E1 DESIGN CASE



ACCEPTANCE PARAMETERS

Required Factor of Safety for Sliding: $FS_{req.E1.sl} := 1.1$ (Without Cohesion)

(Section 8.1, Design Criteria)

Resultant Within Middle Third of Base: $e \le \frac{L_b}{6} \wedge e \ge \frac{-L_b}{6}$

Allowable Rock Bearing Pressure: $\sigma_{allow.E1} := 1740 \cdot \frac{kN}{m^2}$ (Section 5.2, Design Criteria)

INPUT PARAMETERS

Headwater Elevation: $HW_{E1} := 1217.30m$ (Section 8.3, Design Criteria)

Tailwater Elevation: $TW_{E1} := 1214.90m$ (Section 8.3, Design Criteria)

Bottom of Footing Elevation: $BOF_{elev} = 1206.00\,m$

Approach Slab Top of Concrete Elevation at Upstream Face: $TOC_{as} = 1210.00\,m$

Pier Footing Top of Concrete Elevation at Stilling Basin: $TOC_{pfe} = 1208.00\,m$

Pier Footing Top of Concrete Elevation at Center of Footing: $TOC_{pfc} = 1209.30\,m$

Top of Guard/ Regulating Gate Elevation: $TOP_{rg.E1} := 1210.00m$ $TOP_{gg.E1} := 1210.00m$

Bottom of Key Elevation: $BOK_{elev} = 1204\,m$

Gates are open when top of gate elevation is at 1210.00m

Gates are closed/up when top of gate elevation is at 1215.0m

Crestwater Elevation (Right) Guard Gate: $EL_{CGG.E1} := 1214.87m$

$$Y_{C.gg.E1} := \begin{cases} (EL_{CGG.E1} - TOC_{pfc}) & \text{if } TOP_{gg.E1} \le HW_{E1} \\ (TW_{E1} - TOC_{pfc}) & \text{if } TOP_{gg.E1} > HW_{E1} \end{cases} = 5.57 \cdot m$$

Toewater Elevation (Right) Guard Gate: $EL_{TGG.E1} := 1210.89m$

$$Y_{TOE.gg.E1} := \begin{cases} (EL_{TGG.E1} - TOC_{pfe}) & \text{if } TOP_{gg.E1} \le HW_{E1} \\ (TW_{E1} - TOC_{pfe}) & \text{if } TOP_{gg.E1} > HW_{E1} \end{cases} = 2.89 \cdot m$$

E1 CASE

Crestwater Elevation (Left) Regulating Gate: $EL_{CRG.E1} := 1214.87m$

$$Y_{C.rg.E1} := \begin{vmatrix} (EL_{CRG.E1} - TOC_{pfc}) & \text{if } TOP_{rg.E1} \le HW_{E1} \\ (TW_{E1} - TOC_{pfc}) & \text{if } TOP_{rg.E1} > HW_{E1} \end{vmatrix} = 5.57 \cdot m$$

Toewater Elevation (Left) Regulating Gate: $EL_{TRG.E1} := 1210.89m$

$$Y_{TOE.rg.E1} := \begin{vmatrix} (EL_{TRG.E1} - TOC_{pfe}) & \text{if } TOP_{rg.E1} \le HW_{E1} \\ (TW_{E1} - TOC_{pfe}) & \text{if } TOP_{rg.E1} > HW_{E1} \end{vmatrix} = 2.89 \cdot m$$

LATERAL WATER LOADS

HEADWATER (DRIVING):

Headwater Depth on Pier: $D_{hwp.E1} := HW_{E1} - TOC_{as} = 7.30\,m$

Headwater Load Unit Width on Pier: $W_{hwp.E1} := w_p = 2.00\,m$

Total Horizontal Headwater Load on Pier:

$$H_{hwp.E1} := \frac{-\left(\gamma_w \cdot D_{hwp.E1}^{\ 2}\right)}{2} \cdot W_{hwp.E1} = -522.8 \cdot kN$$

Apply Total Pier Headwater Load at:

$$H_{hwp.E1.loc} := \frac{D_{hwp.E1}}{3} + \left(TOC_{as} - BOF_{elev}\right) = 6.43\,m$$

Headwater Depth on Gate base: $D_{hwg.E1} := HW_{E1} - TOC_{as} = 7.30\,m$

Thickness of Approach Slab (Including Key): $T_{as} = 6\,m$

Headwater Depth at Heel (U/S face): $D_{hwas.E1} := HW_{E1} - BOK_{elev} = 13.30\,m$

Headwater Load Unit Width on Approach Slab: $W_{hwas.E1} := W_b = 12.00\,m$

Headwater Unit Load At Top of Approach Slab:

$$H_{hwas.E1.1} := \frac{-\left(\gamma_w \cdot D_{hwg.E1}^{\ 2}\right)}{2} \cdot W_{hwas.E1} = -3136.65 \cdot kN$$

Headwater Unit Load At Bottom of Approach Key:

$$H_{hwas.E1.2} := \frac{-\left(\gamma_w \cdot D_{hwas.E1}^{\ 2}\right)}{2} \cdot W_{hwas.E1} = -10411.7 \cdot kN$$

Headwater Line Load At Top of Approach Slab:

$$\sigma_{hwas.E1.1} := -\left(\gamma_w \cdot D_{hwg.E1}\right) = -71.61 \cdot kPa$$

Headwater Line Load At Bottom of Approach Key:

$$\sigma_{hwas.E1.2} := -\left(\gamma_w \cdot D_{hwas.E1}\right) = -130.47 \cdot kPa$$

Triangular Distribution Unit Load on Approach Slab and Key:

$$H_{hwas.E1.2.tri} := \left(\frac{\sigma_{hwas.E1.2} - \sigma_{hwas.E1.1}}{2}\right) \cdot \left(T_{as} \cdot W_{hwas.E1}\right) = -2118.96 \cdot kN$$

Rectangular Distribution Unit Load on Approach Slab and Key:

$$H_{hwas.E1.2.rect} := \sigma_{hwas.E1.1} \cdot \left(T_{as} \cdot W_{hwas.E1}\right) = -5156.14 \cdot kN$$

Total Horizontal Headwater Load on Approach Slab:

$$H_{hwas.E1} := H_{hwas.E1.2.tri} + H_{hwas.E1.2.rect} = -7275.1 \cdot kN$$

Apply Total Footing Headwater Load at:

$$H_{hwas.E1.loc} := \frac{\left[H_{hwas.E1.2.rect} \cdot \left(\frac{T_{as}}{2}\right) + H_{hwas.E1.2.tri} \cdot \left(\frac{T_{as}}{3}\right)\right]}{H_{hwas.E1.2.tri} + H_{hwas.E1.2.rect}} - d_{key} = 0.71\,m$$

LATERAL WATER LOADS (continued)

Regulating Gate (2A) Operating Condition:

Regulating Crest Gate Down/Open Condition: $A1_{E1} := TOP_{rg.E1} \le TOC_{as}$

Regulating Crest Gate Up/Closed, with Top of Gate Higher than HW Elevation: $B1_{E1} := TOP_{rg.E1} \ge HW_{E1} \wedge TOP_{rg.E1} > TOC_{as}$

Regulating Crest Gate Up/Closed, with Top of Gate Lower than HW Elevation: $C1_{E1} := TOP_{rg.E1} > TOC_{as} \wedge HW_{E1} > TOP_{rg.E1}$

Regulating Crest Gate Height: $H_{rg.E1} := TOP_{rg.E1} - TOC_{as} = 0\,m$

Headwater Depth at Regulating Crest Gate: $D_{hwrg.E1} := HW_{E1} - TOC_{as} = 7.30\,m$

Regulating Crest Gate Width: $W_{hwrg.E1} := 5.00m$

Lateral Headwater Pressure at Bottom of Regulating Crest Gate:

$$\sigma_{hwrg.E1.1} := \begin{vmatrix} (0.0kPa) & \text{if } A1_{E1} \\ -(\gamma_w \cdot D_{hwrg.E1}) & \text{if } B1_{E1} \\ -(\gamma_w \cdot D_{hwrg.E1}) & \text{if } C1_{E1} \end{vmatrix} = 0.0 \cdot kPa$$

Lateral Headwater Pressure at Top of Regulating Crest Gate: (Load at HW Elevation On Regulating Crest Gate if HW is below TOG_{rg})

$$\sigma_{hwrg.E1.2} := \begin{vmatrix} (0.0kPa) & \text{if } A1_{E1} \\ 0.0kPa & \text{if } B1_{E1} \\ -\left[\gamma_w \cdot (HW_{E1} - TOP_{rg.E1})\right] & \text{if } C1_{E1} \end{vmatrix} = 0.0 \cdot kPa$$

Average Pressure acting on Regulating Gate:

$$\sigma_{hwrg.E1.avg} := \frac{(\sigma_{hwrg.E1.1} + \sigma_{hwrg.E1.2})}{2} = 0 \cdot kPa$$

Total Area water acting on Regulating Crest Gate:

$$A_{hwrg.E1} := \begin{vmatrix} D_{hwrg.E1} \cdot W_{hwrg.E1} & \text{if } A1_{E1} \\ D_{hwrg.E1} \cdot W_{hwrg.E1} & \text{if } B1_{E1} \\ H_{rg.E1} \cdot W_{hwrg.E1} & \text{if } C1_{E1} \end{vmatrix} = 36.5 \cdot m^2$$

Total Horizontal Headwater Load on Regulating Crest Gate: $H_{hwrg.E1} := \sigma_{hwrg.E1.avg} \cdot A_{hwrg.E1} = 0.0 \cdot kN$

Apply Total Regulating Crest Gate Headwater Load at:

$$H_{hwrg.E1.loc} := \begin{vmatrix} (TOC_{as} - BOF_{elev}) & \text{if } A1_{E1} \\ \left[\frac{(HW_{E1} - TOC_{as})}{3} + (TOC_{as} - BOF_{elev})\right] & \text{if } B1_{E1} \\ \left[\frac{\sigma_{hwrg.E1.2} \cdot A_{hwrg.E1} \cdot \frac{(H_{rg.E1})}{2} + \frac{(\sigma_{hwrg.E1.1} - \sigma_{hwrg.E1.2})}{2} A_{hwrg.E1} \cdot \frac{(H_{rg.E1})}{3}}{\sigma_{hwrg.E1.2} \cdot A_{hwrg.E1} + \frac{(\sigma_{hwrg.E1.1} - \sigma_{hwrg.E1.2})}{2} \cdot A_{hwrg.E1}} \ldots \\ + (TOC_{as} - BOF_{elev})\right] & \text{if } C1_{E1} \end{vmatrix} = 4.0 \cdot m$$

Guard Gate (4A) Operating Condition:

Guard Gate Down/Open Condition: $A2_{E1} := TOP_{gg.E1} \le TOC_{as}$

Guard Crest Gate Up/Closed, with Top of Gate Higher than HW Elevation: $B2_{E1} := TOP_{gg.E1} \ge HW_{E1} \wedge TOP_{gg.E1} > TOC_{as}$

Guard Crest Gate Up/Closed, with Top of Gate Lower than HW Elevation: $C2_{E1} := TOP_{gg.E1} > TOC_{as} \wedge HW_{E1} > TOP_{gg.E1}$

Guard Crest Gate Height: $H_{gg.E1} := TOP_{gg.E1} - TOC_{as} = 0\,m$

Headwater Depth at Guard Crest Gate: $D_{hwgg.E1} := HW_{E1} - TOC_{as} = 7.30\,m$

Guard Crest Gate Width: $W_{hwgg.E1} := 5.00m$

Lateral Headwater Pressure at Bottom of Guard Crest Gate:

Total Horizontal Tailwater Load on Guard Crest Gate: $H_{twgg.E1} := \sigma_{twgg.E1.avg} \cdot A_{twgg.E1} = 0.0 \cdot kN$

Apply Total Horiz. TW Load on Guard Gate at:

$$H_{twgg.E1.loc} := \begin{vmatrix} (TOC_{as} - BOF_{elev}) \quad \text{if} \quad A4_{E1} \\ \left[\frac{(TW_{E1} - TOC_{as})}{3} + (TOC_{as} - BOF_{elev})\right] \quad \text{if} \quad B4_{E1} \\ \left[\frac{\sigma_{twgg.E1.2} \cdot A_{twgg.E1} \cdot \frac{(H_{gg.E1})}{2} + \frac{(\sigma_{twgg.E1.1} - \sigma_{twgg.E1.2})}{2} A_{twgg.E1} \cdot \frac{(H_{gg.E1})}{3}}{\sigma_{twgg.E1.2} \cdot A_{twgg.E1} + \frac{(\sigma_{twgg.E1.1} - \sigma_{twgg.E1.2})}{2} \cdot A_{twgg.E1}} \ldots \\ + (TOC_{as} - BOF_{elev}) \right] \quad \text{if} \quad C4_{E1} \end{vmatrix} = 4.0 \cdot m$$

LATERAL WATER LOADS (continued)

TAILWATER (RESISTING) Applied to Concrete Structure:

Tailwater Depth on Pier: $D_{twp.E1} := TW_{E1} - TOC_{as} = 4.90\,m$

Tailwater Load Unit Width on Pier: $W_{twp.E1} := w_p = 2.00\,m$

Total Horizontal Tailwater Load on Pier: $H_{twp.E1} := \frac{\left(\gamma_w \cdot D_{twp.E1}{}^2\right)}{2} \cdot W_{twp.E1} = 235.5 \cdot kN$

Apply Total Pier Tailwater Load at: $H_{twp.E1.loc} := \frac{D_{twp.E1}}{3} + \left(TOC_{as} - BOF_{elev}\right) = 5.63\,m$

Tailwater Depth At top of Gate Base Footing Elevation: $D_{twgf.E1} := TW_{E1} - TOC_{as}$

Water Depth at bottom of Gate Base Footing (Excluding Key): $D_{twtoe.E1} := TW_{E1} - BOF_{elev} = 8.90\,m$

Footing Thickness for horizontal at Toe: $h_{toe} = 4\,m$

Unit Width of D/S face of crest for application of Tailwater Load: $W_{tw.E1} := W_b = 12.00\,m$

Tailwater Pressure At Top of Gate Footing: $\sigma_{twgf.E1} := \left(\gamma_w \cdot D_{twgf.E1}\right) = 48.07 \cdot kPa$

Tailwater Pressure At Toe: $\sigma_{twtoe.E1} := \left(\gamma_w \cdot D_{twtoe.E1}\right) = 87.31 \cdot kPa$

Triangular Distribution Unit Load on Gate Footing Base (including key): $H_{twgf.E1.tri} := \left(\frac{\sigma_{twtoe.E1} - \sigma_{twgf.E1}}{2}\right) \cdot \left[\left(T_{as} - d_{key}\right) \cdot W_{tw.E1}\right] = 941.76 \cdot kN$

Rectangular Distribution Unit Load on Gate Footing Base (including key): $H_{twgf.E1.rect} := \sigma_{twgf.E1} \cdot \left[\left(T_{as} - d_{key}\right) \cdot W_{tw.E1}\right] = 2307.31 \cdot kN$

Tailwater Pressure At Bottom of Sliding Failure Plane: $\sigma_{twbk.E1} := \left(HW_{E1} - BOK_{elev}\right) \cdot \gamma_w = 130.47 \cdot kPa$

Triangular Distribution Unit Load Below Footing: $H_{twbk.E1.tri} := \frac{\left(\sigma_{twbk.E1} - \sigma_{twtoe.E1}\right)}{2} \cdot d_{key} \cdot W_{tw.E1} = 517.97 \cdot kN$

Rectangular Distribution Load Below Footing Base: $H_{twbk.E1.rect} := \sigma_{twtoe.E1} \cdot d_{key} \cdot W_{tw.E1} = 2095.42 \cdot kN$

Total Horizontal Tailwater Headwater Load on Gate Footing (including key): $H_{twgk.E1} := H_{twgf.E1.tri} + H_{twgf.E1.rect} + H_{twbk.E1.tri} + H_{twbk.E1.rect} = 5862.46 \cdot kN$

Apply Total Gate Footing Tailwater Load at:

$$H_{twgk.E1.loc} := \frac{\left[H_{twgf.E1.rect} \cdot \frac{\left(h_{toe}\right)}{2} + H_{twgf.E1.tri} \cdot \frac{\left(h_{toe}\right)}{3} + H_{twbk.E1.tri} \cdot \left(-d_{key} \cdot \frac{2}{3}\right) + H_{twbk.E1.rect} \cdot \left(\frac{-d_{key}}{2}\right)\right]}{H_{twgf.E1.tri} + H_{twgf.E1.rect} + H_{twbk.E1.tri} + H_{twbk.E1.rect}} = 0.53\,m$$

SUMMATION OF LATERAL WATER LOADS:

$$\Sigma H_{Water.E1} := H_{hwp.E1} + H_{hwas.E1} + H_{hwrg.E1} + H_{hwgg.E1} + H_{twp.E1} + H_{twgk.E1} + H_{twrg.E1} + H_{twgg.E1} = -1699.88 \cdot kN$$

$$\Sigma M_{Hwater.E1} := H_{hwp.E1} \cdot H_{hwp.E1.loc} + H_{hwas.E1} \cdot H_{hwas.E1.loc} + H_{hwrg.E1} \cdot H_{hwrg.E1.loc} + H_{hwgg.E1} \cdot H_{hwgg.E1.loc} + H_{twp.E1} \cdot H_{twp.E1.loc} + H_{twgk.E1} \cdot H_{twgk.E1.loc} + H_{twrg.E1} \cdot H_{twrg.E1.loc} + H_{twgg.E1} \cdot H_{twgg.E1.loc} = -4108.19 \cdot kN \cdot m$$

VERTICAL WATER LOADS

E1 CASE

HEADWATER:

Water Depth on top of Approach Slab: $d_{hw.E1} := HW_{E1} - TOC_{as} = 7.30\,m$

Length of Approach Slab: $L_{as} = 8.75\,m$

Width of Approach Slab: $w_{as} = 12.00\,m$

Length from front of Gate to Heel: $L_{hg} = 8.75\,m$

Vertical Water Weight (H1) on Approach Slab:

$$H_{1.E1} := \left[w_{as} \cdot d_{hw.E1} \cdot L_{hg} - w_p \cdot d_{hw.E1} \cdot \left(L_{hg} - L_{as}\right)\right] \cdot \gamma_w = 7519.4 \cdot kN$$

Moment Arm for Application of Water Weight (H1) from toe:

$$H_{1.E1.loc} := L_b - \frac{L_{hg}}{2} = 14.13\,m$$

TAILWATER ABOVE GUARD GATE:

Trapezoid Volume Above Gate Footing from Approach Slab to Crest:

$$V_{asc.gg.E1} := \left(L_{gf} - L_{gfc}\right) W_{twgg.E1} \frac{d_{hw.E1} + Y_{C.gg.E1}}{2} = 230.05 \cdot m^3$$

Trapezoid Volume Above Gate Footing Crest to End of Gate Footing:

$$V_{gfc.gg.E1} := \left(L_{gfc} \cdot W_{twgg.E1}\right) \frac{Y_{C.gg.E1} + Y_{TOE.gg.E1}}{2} = 54.99 \cdot m^3$$

Load Above Gate Footing from Approach Slab to Crest:

$$H_{2.E1.asc.gg} := V_{asc.gg.E1} \cdot \gamma_w = 2256.8 \cdot kN$$

Load Acting Above Footing Crest from Toe:

$$H_{2.E1.asc.gg.loc} := \frac{\left(L_{gf} - L_{gfc}\right) \cdot \left(2 \cdot d_{hw.E1} + Y_{C.gg.E1}\right)}{3 \cdot \left(d_{hw.E1} + Y_{C.gg.E1}\right)} + L_{gfc} = 6.34\,m$$

Load Above Gate Footing from Crest to End:

$$H_{2.E1.gfc.gg} := V_{gfc.gg.E1} \cdot \gamma_w = 539.45 \cdot kN$$

Load Acting Above Gate Footing from Crest to End:

$$H_{2.E1.gfc.gg.loc} := \frac{\left(L_{gfc}\right) \cdot \left(2 \cdot Y_{C.gg.E1} + Y_{TOE.gg.E1}\right)}{3 \cdot \left(Y_{C.gg.E1} + Y_{TOE.gg.E1}\right)} = 1.44\,m$$

Vertical Water Weight (H2) on Guard Gate Footing:

$$H_{2.E1.gg} := H_{2.E1.asc.gg} + H_{2.E1.gfc.gg} = 2796.25 \cdot kN$$

Moment Arm for Application of Water Weight (H2) from toe:

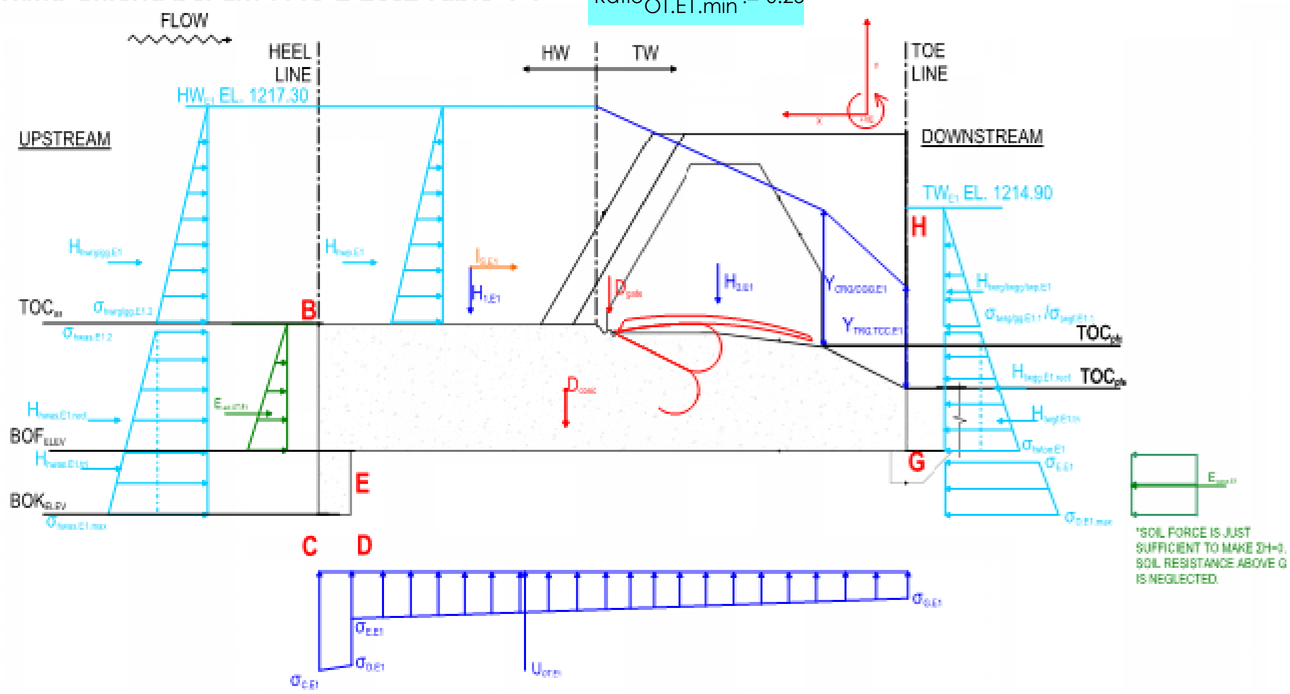
MONOLITH OVERTURNING STABILITY ANALYSIS

E1 CASE

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stability of indeterminate forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1 $Ratio_{OT.E1.min} := 0.25$



Uplift Loads for Overturning Stability Analysis

Line of Creep:

Change in Water Head: $\Delta_{h.E1} := HW_{E1} - TW_{E1} = 2.4\,m$

Length from Point C to Point G: $L_{CG} = 18.61\,m$

Length from Various Points to Points: $L_{CD} = 1\,m$ $L_{DE} = 2\,m$ $L_{EG} = 17.5\,m$

$L_{GH.E1} := TW_{E1} - BOF_{elev} = 8.9\,m$

Length from Point C, D, E to G: $L_{CDEG} = 20.5\,m$ $L_{CDE} = 3\,m$

Water Pressure at Point C & G: $\sigma_{C.E1} := \sigma_{hwas.E1.2} = -130.47 \cdot kPa$ $\sigma_{G.E1} := \sigma_{twtoe.E1} \cdot -1 = -87.31 \cdot kPa$

Water Pressure at Point D:

$$\sigma_{D.E1} := -\gamma_w \cdot \left[\left(HW_{E1} - BOK_{elev}\right) - \frac{\Delta_{h.E1} \cdot L_{CD}}{L_{CDEG}}\right] = -129.32 \cdot kPa$$

Water Pressure at Point E:

$$\sigma_{E.E1} := -\gamma_w \cdot \left[\left(HW_{E1} - BOF_{elev}\right) - \frac{\Delta_{h.E1} \cdot L_{CDE}}{L_{CDEG}}\right] = -107.41 \cdot kPa$$

Uplift for Overturning Analysis on Bottom of Key:

$$U_{OT.E1.key} := \frac{\sigma_{C.E1} + \sigma_{D.E1}}{2} \cdot L_{CD} \cdot W_b = -1558.79 \cdot kN$$

Acting at:

$$U_{OT.E1.key.loc} := \frac{L_{CD} \cdot \left(2 \cdot \sigma_{C.E1} + \sigma_{D.E1}\right)}{3\left(\sigma_{C.E1} + \sigma_{D.E1}\right)} + L_{EG} = 18\,m$$

Uplift for Overturning Analysis on Bottom of Footing:

$$U_{OT.E1.ftg} := \frac{\sigma_{E.E1} + \sigma_{G.E1}}{2} \cdot L_{EG} \cdot W_b = -20445.24 \cdot kN$$

Acting at:

$$U_{OT.E1.ftg.loc} := \frac{L_{EG} \cdot \left(\sigma_{G.E1} + 2 \cdot \sigma_{E.E1}\right)}{3\left(\sigma_{G.E1} + \sigma_{E.E1}\right)} = 9.05\,m$$

E1 CASE

Uplift Load for Overturning Analysis: $U_{OT.E1} := U_{OT.E1.key} + U_{OT.E1.ftg} = -22004.02 \cdot kN$

Uplift Load Acting from Toe: $U_{OT.E1.loc} := \dfrac{U_{OT.E1.key} \cdot U_{OT.E1.key.loc} + U_{OT.E1.ftg} \cdot U_{OT.E1.ftg.loc}}{U_{OT.E1}} = 9.69\,m$

All Vertical Loads Applicable to Overturning Stability Analysis

		at:	
Total Concrete Dead Loads:	$D_{conc} = 22438.74 \cdot kN$		$X_{conc.loc} = 9.35\,m$
Dead Load of Gate:	$D_{Gate} = 140.0 \cdot kN$		$X_{gate} = 9.50\,m$
Water Weight (HW) on Apron Slab:	$H_{1.E1} = 7519.4 \cdot kN$		$H_{1.E1.loc} = 14.13\,m$
Water Weight (TW) on Gate Footing:	$H_{2.E1.rg} = 2796.3 \cdot kN$		$H_{2.E1.rg.loc} = 5.39\,m$
Water Weight (TW) on Regulating Gate Footing:	$H_{2.E1.gg} = 2796.3 \cdot kN$		$H_{2.E1.gg.loc} = 5.39\,m$
Uplift Load for Overturning Analysis:	$U_{OT.E1} = -22004.02 \cdot kN$		$U_{OT.E1.loc} = 9.69 \cdot m$

Sum of All Overturning Analysis Vertical Load:

$$\Sigma V_{E1.OT} := D_{conc} + D_{Gate} + H_{1.E1} + H_{2.E1.rg} + H_{2.E1.gg} + U_{OT.E1} = 13686.59 \cdot kN$$

Sum of All Overturning Analysis Vertical Load Moments:

$$\Sigma M_{V.E1.OT} := D_{conc} \cdot X_{conc.loc} + D_{Gate} \cdot X_{gate} + H_{1.E1} \cdot H_{1.E1.loc} + H_{2.E1.rg} \cdot H_{2.E1.rg.loc} \cdots + H_{2.E1.gg} \cdot H_{2.E1.gg.loc} + U_{OT.E1} \cdot U_{OT.E1.loc} = 134365.91 \cdot kN \cdot m$$

Lateral Tailwater Loads for Overturning Stability Analysis

TW Lateral Load on Gate Footing (No Key - Overturning Values Adjusted): $H_{twgf.E1} := H_{twgf.E1.tri} + H_{twgf.E1.rect} = 3249.07 \cdot kN$

Acting at: $H_{twgf.E1.loc} := \dfrac{\frac{h_{toe}}{3} \cdot H_{twgf.E1.tri} + \frac{h_{toe}}{2} \cdot H_{twgf.E1.rect}}{H_{twgf.E1}} = 1.81\,m$

Horizontal Tailwater Pressure Top of Key (Overturning Analysis): $\sigma_{twtk.OT.E1} := \sigma_{E.E1} \cdot -1 = 107.41 \cdot kPa$

Horizontal Tailwater Pressure Bottom of Key (Overturning Analysis): $\sigma_{twbk.OT.E1} := \sigma_{D.E1} \cdot -1 = 129.32 \cdot kPa$

Triangular Distribution Unit Load Acting at Key: $H_{twbk.OT.E1.tri} := \dfrac{(\sigma_{twbk.OT.E1} - \sigma_{twtk.OT.E1})}{2} \cdot d_{key} \cdot W_{tw.E1} = 263 \cdot kN$

Triangular Distribution Unit Load Acting at Key: $H_{twbk.OT.E1.rect} := \sigma_{twtk.OT.E1} \cdot d_{key} \cdot W_{tw.E1} = 2577.78 \cdot kN$

Total Horizontal Tailwater Load on Key (Overturning Values Adjusted): $H_{twkey.OT.E1} := H_{twbk.OT.E1.tri} + H_{twbk.OT.E1.rect} = 2840.78 \cdot kN$

Acting at: $H_{twkey.OT.E1.loc} := \dfrac{H_{twbk.OT.E1.tri} \cdot \frac{-2 \cdot d_{key}}{3} + H_{twbk.OT.E1.rect} \cdot \frac{-d_{key}}{2}}{H_{twkey.OT.E1}} = -1.03 \cdot m$

Lateral Driving Earth Loads for Overturning Stability Analysis (at rest condition)

Depth of Driving Soil Loads (to top of key): $h_{E.OT.E1} := TOC_{as} - BOF_{elev} = 4\,m$

At-Rest Soil Load: $E_{act.OT.E1} := \dfrac{(K_{o.E1} \cdot h_{E.OT.E1}{}^2)}{2} \cdot (\gamma_r - \gamma_w) \cdot W_{hwas.E1} \cdot -1 = -769.99 \cdot kN$

At Rest- Soil Load Acting from Toe: $E_{act.OT.E1.loc} := \dfrac{h_{E.OT.E1}}{3} = 1.33\,m$

All Lateral Loads Applicable to Overturning Stability Analysis

HW Lateral Load on Approach Slab:	$H_{hwas.E1} = -7275.1 \cdot kN$	$H_{hwas.E1.loc} = 0.71\,m$

E2.1 CASE

MONOLITH OVERTURNING STABILITY ANALYSIS

Seismic Case $Q_{E2.1}$: 100% Horizontal Seismic Force, No Vertical

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stability of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1 $Ratio_{overturning.allow.Extreme} := 0.0$ Resultant within Base

E2.2 CASE

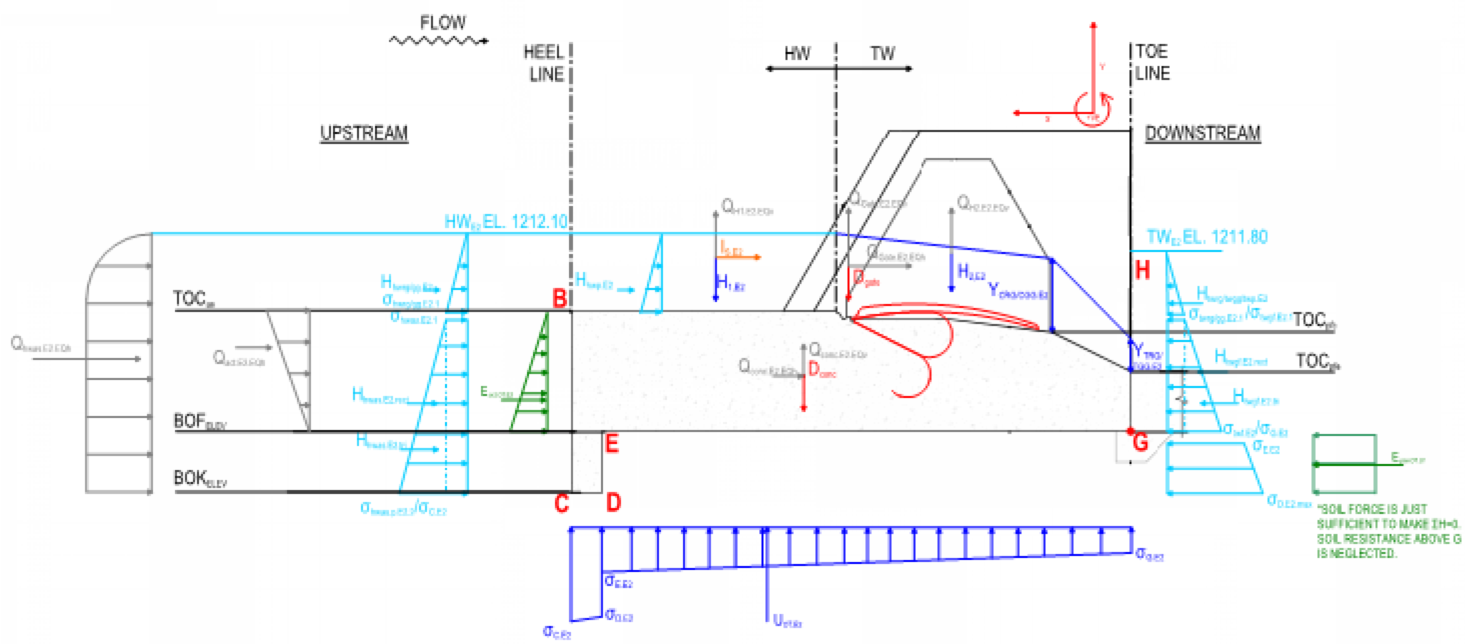
MONOLITH OVERTURNING STABILITY ANALYSIS

Seismic Case $Q_{E2.2}$: 100% Horizontal Seismic Force, 30% Vertical

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stability of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1 $Ratio_{overturning.allow.Extreme} = 0$ Resultant within Base



All Vertical Loads Appliable to Overturning Stability Analysis

Total Concrete Dead Loads:	$D_{conc} = 22438.74 \cdot kN$	at:	$X_{conc.loc} = 9.35\,m$
Dead Load of Gate:	$D_{Gate} = 140.0 \cdot kN$		$X_{gate} = 9.50\,m$
Water Weight (HW) on Apron Slab:	$H_{1.U1} = 2163.1 \cdot kN$		$H_{1.U1.loc} = 14.13\,m$
Water Weight (TW) on Gate Footing:	$H_{2.U1} = 1799.4 \cdot kN$		$H_{2.U1.loc} = 5.34\,m$
Uplift Load for Overturning Analysis:	$U_{OT.U1} = -13165.04 \cdot kN$		$U_{OT.U1.loc} = 9.48 \cdot m$
Vertical Seismic Component of Concrete Structure:	$Q_{conc.E2.EQv.2} = -673.16 \cdot kN$		$X_{conc.loc} = 9.35\,m$
Vertical Seismic Component of Crest Gate:	$Q_{Gate.E2.EQv.2} = -4.2 \cdot kN$		$X_{gate} = 9.50\,m$
Vertical Seismic Component of Headwater over Apron Slab:	$Q_{H1.E2.EQv.2} = -64.89 \cdot kN$		$H_{1.U1.loc} = 14.13\,m$
Vertical Seismic Component of Headwater over Fixed Crest Slab:	$Q_{H2.E2.EQv.2} = -53.98 \cdot kN$		$H_{2.U1.loc} = 5.34\,m$

Sum of All Overturning Analysis Vertical Load:

$$\Sigma V_{E2.OT.2} := D_{conc} + D_{Gate} + H_{1.U1} + H_{2.U1} + U_{OT.U1} + \Sigma V_{Q.E2.EQv.2} = 12580.01 \cdot kN$$

Sum of All Overturning Analysis Vertical Load Moments:

$$\Sigma M_{V.E2.OT.2} := D_{conc} \cdot X_{conc.loc} + D_{Gate} \cdot X_{gate} + H_{1.U1} \cdot H_{1.U1.loc} + H_{2.U1} \cdot H_{2.U1.loc} + U_{OT.U1} \cdot U_{OT.U1.loc} = 126508.58 \cdot kN \cdot m$$

Lateral Driving Earth Loads for Overturning Stability Analysis (at rest condition)

E2.2 CASE

Depth of Driving Soil Loads (to top of key): $h_{E.OT.E2.2} := TOC_{as} - BOF_{elev} = 4\,m$

Applicable Soil Load: $E_{act.OT.E2.2} := \frac{\left(K_{o.U1} \cdot h_{E.OT.U1}\right)^2}{2} \cdot \left(\gamma_r - \gamma_w\right) \cdot W_{hwas.U1} \cdot -1 = -769.99 \cdot kN$

At Rest- Soil Load Acting from Toe: $E_{act.OT.E2.2.loc} := \frac{h_{E.OT.U1}}{3} = 1.33\,m$

All Lateral Loads Applicable to Overturning Stability Analysis

HW Lateral Load on Approach Slab:	$H_{hwas.U1} = -3602.2 \cdot kN$	$H_{hwas.U1.loc} = 0.41\,m$
HW Lateral Load on Guard Gate:	$H_{hwgg.U1} = 0.0 \cdot kN$	$H_{hwgg.U1.loc} = 4.00\,m$
TW Lateral Load on Guard Gate:	$H_{twgg.U1} = 0.0 \cdot kN$	$H_{twgg.U1.loc} = 4.00\,m$
TW Lateral Load on Gate Footing (No Key - Overturning Values Adjusted):	$H_{twgf.U1} = 1789.34 \cdot kN$	$H_{twgf.U1.loc} = 1.65\,m$
TW Lateral Load on Key:	$H_{twkey.OT.U1} = 1664.73 \cdot kN$	$H_{twkey.OT.U1.loc} = -1.05\,m$
Ice / Impact Load:	$I_{U1} = -300.0 \cdot kN$	$I_{U1.loc} = 5.80\,m$
Lateral Soil Load (driving):	$E_{act.OT.U1} = -770.0 \cdot kN$	$E_{act.OT.U1.loc} = 1.33\,m$
Horizontal Seismic Component of Concrete Structure:	$Q_{conc.E2.EQh.2} = -3814.59 \cdot kN$	$Y_{conc.loc} = 2.43\,m$
Horizontal Seismic Component of Vertical Lift Gate:	$Q_{Gate.E2.EQh.2} = -23.8 \cdot kN$	$Y_{gate} = 3.90\,m$
Horizontal Seismic Component of Headwater on Slab Footing:	$Q_{hwas.E2.EQh.2} = -765.92 \cdot kN$	$Y_{HWg.E2} = 1.24\,m$
Horizontal Seismic Component of Active Soil: (Section 5-5, USACE EM_1110-2-2100)	$Q_{act.E2.EQh.2} = -397.88 \cdot kN$	$Y_{E.act.E2} = 2.52\,m$

Resisting Lateral Soil Load as required to produce horizontal equilibrium:

$$E_{pas.OT.E2.2} := -\left(H_{hwas.U1} + H_{hwgg.U1} + H_{twgg.U1} + H_{twgf.U1} + H_{twkey.OT.U1} + I_{U1} + E_{act.OT.U1} + \Sigma H_{Q.E2.EQh.2.OT}\right) = 6717.69 \cdot kN$$

Acting at: $E_{pas.OT.E2.2.loc} := -1 \cdot \frac{d_{key}}{2} = -1\,m$

Sum of All Overturning Analysis Horizontal Load (ΣH=0):

$$\Sigma H_{E2.OT.2} := H_{hwas.U1} + H_{hwgg.U1} + H_{twgg.U1} + H_{twgf.U1} + H_{twkey.OT.U1} + I_{U1} + E_{act.OT.U1} + E_{pas.OT.E2.2} + \Sigma H_{Q.E2.EQh.2.OT} = 0 \cdot kN$$

STABILITY ASSESSMENT (SLIDNG, BEARING, FLOTATION AND OVERTURNING):

E2.3 CASE

CHECK SLIDING ALONG HORIZONTAL PLANE THRU TOE,
IGNORING BEDROCK MOBILIZED BY STRUCTURAL HEEL KEY, OR VOID BEHIND KEY

Sum of Vertical Forces:

$\Sigma V_{E2.3} := \Sigma V_{U1} + \Sigma V_{Q.E2.EQv.3} = 8751.3 \cdot kN$

Sum of Horizontal Forces:

$\Sigma H_{E2.3} := \Sigma H_{U1} - I_{U1} + \Sigma H_{Q.E2.EQh.3} = -3199.28 \cdot kN$

Sliding Factor of Safety:

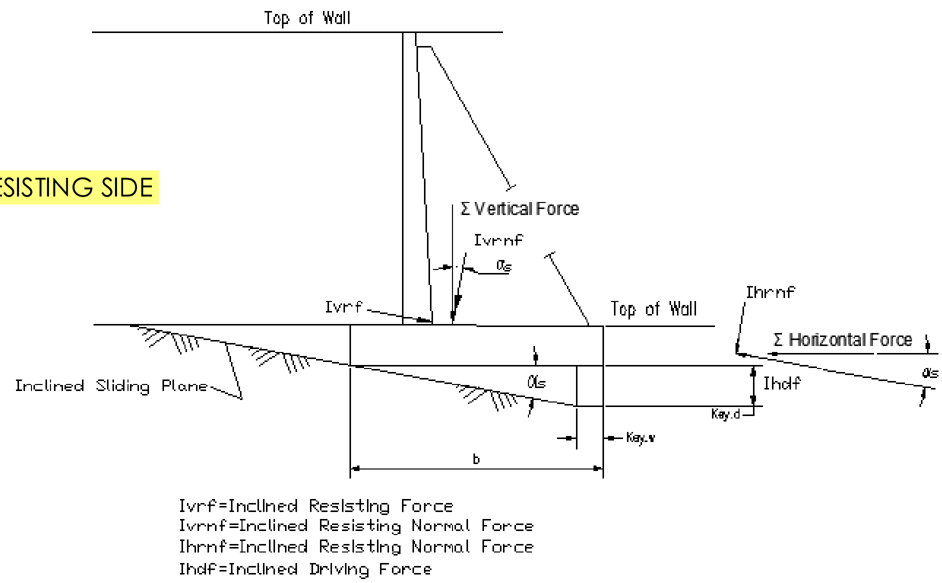
$$FS_{HorizSliding.E2.3} := \frac{\tan_{\phi} \cdot \Sigma V_{E2.3}}{\left|\Sigma H_{E2.3}\right|} = 1.33$$

$FS_{HorizSliding.E2.3.Check} :=$ | "OKAY" if $FS_{HorizSliding.E2.3} \geq FS_{req.E2.sl}$ = "OKAY"
"Horizontal Sliding (No Key or Void Behind Key) Fail ! Revise Structure !" otherwise

CHECK SLIDING ALONG INCLINED SLIDING PLANE FROM HEEL KEY TO TOE,
WITH BEDROCK MASS MOBILIZED BY REINFOCREDE CONCRETE KEY)

RESISTING SIDE

DRIVING SIDE



TOE

$\Sigma V_{E2.3} = 8751.31 \cdot kN$

$V_{rs} = 4620 \cdot kN$

$\alpha s = 0.11$

as degrees= $\alpha s \cdot \left(\frac{180}{\pi}\right) = 6.52$

Resolve $\Sigma Vert_{E2.3}$ & $\Sigma Horiz_{E2.3}$

$\Sigma V_{InclinedE2.3} := \cos(\alpha s) \cdot \left(\Sigma V_{E2.3} + V_{rs}\right) + \sin(\alpha s) \cdot \left|\Sigma H_{E2.3}\right| = 13648.1 \cdot kN$

$\Sigma H_{InclinedE2.3} := \cos(\alpha s) \cdot \left|\Sigma H_{E2.3}\right| - \sin(\alpha s) \cdot \left(\Sigma V_{E2.3} + V_{rs}\right) = 1660.3 \cdot kN$

(With properly engineered reinforced concrete Key, horizontal sliding plane thru Toe is protected, critical sliding plane is relocated to the INCLINED SLIDING PLANE FROM HEEL KEY To TOE, Bedrock Mass above this examined plane is mobilized by reinforced concrete key and combined into Structural Wedge.)

Inclined Sliding Plane Length

$L_{incline} = 18.61 \, m$

Safety Factor for Sliding
Inclined Failure Plane

$$FS_{InclinedlSlidingE2.3} := \frac{\Sigma V_{InclinedE2.3} \cdot \tan\left(\phi_{rock} \cdot \frac{\pi}{180}\right)}{\left|\Sigma H_{InclinedE2.3}\right|} = 4.01$$

$FS_{InclinedSliding.check.E2.3} :=$ | "OKAY " if $FS_{InclinedlSlidingE2.3} > FS_{req.E2.sl}$ = "OKAY "
"Revise Structure"" otherwise

$FS_{InclinedSliding.check.E2.3} =$ "OKAY "

E2.3 CASE

OVERTURNING STABILITY CHECK:

CHECK ECCENTRICITY

Sum of the moments:

$$\Sigma M_{E2.3} := \left(\Sigma M_{U1} + \Sigma M_{Q.E2.3}\right) = 126899 \cdot kN \cdot m$$

Eccentricity:

$$e_{E2.3} := \left(\frac{L_{incline}}{2}\right) - \frac{\left(\Sigma M_{E2.3}\right)}{\Sigma V_{InclinedE3.3}} = 0.93\,m$$

Eccentricity Check:

$$e_{check.E2.3} := \begin{cases} \text{"Okay"} & \text{if } e_{E2.3} \le Kern \\ \text{"Revise Structure"} & \text{otherwise} \end{cases}$$

$$e_{check.E2.3} = \text{"Okay"}$$

Foundation Bearing Checks:

Bearing Pressure at Heel:

$$\sigma_{heel.E2.3} := \frac{\Sigma V_{InclinedE3.3}}{A_{b.incline}} - \frac{\left(\Sigma V_{InclinedE3.3} \cdot e_{E2.3}\right)}{S_{b.incline}} = 47.5 \cdot \frac{kN}{m^2}$$

$$\sigma_{heel.E2.3.check} := \left(\begin{cases} \text{"Okay"} & \text{if } \sigma_{heel.E2.3} \le \sigma_{allow.E2} \\ \text{"Revise Structure"} & \text{if } \sigma_{heel.E2.3} < 0\,\frac{kN}{m^2} \end{cases}\right)$$

$$\sigma_{heel.E2.3.check} = \text{"Okay"}$$

Bearing Pressure at Toe:

$$\sigma_{toe.E2.3} := \frac{\Sigma V_{InclinedE3.3}}{A_{b.incline}} + \frac{\left(\Sigma V_{InclinedE3.3} \cdot e_{E2.3}\right)}{S_{b.incline}} = 88.2 \cdot \frac{kN}{m^2}$$

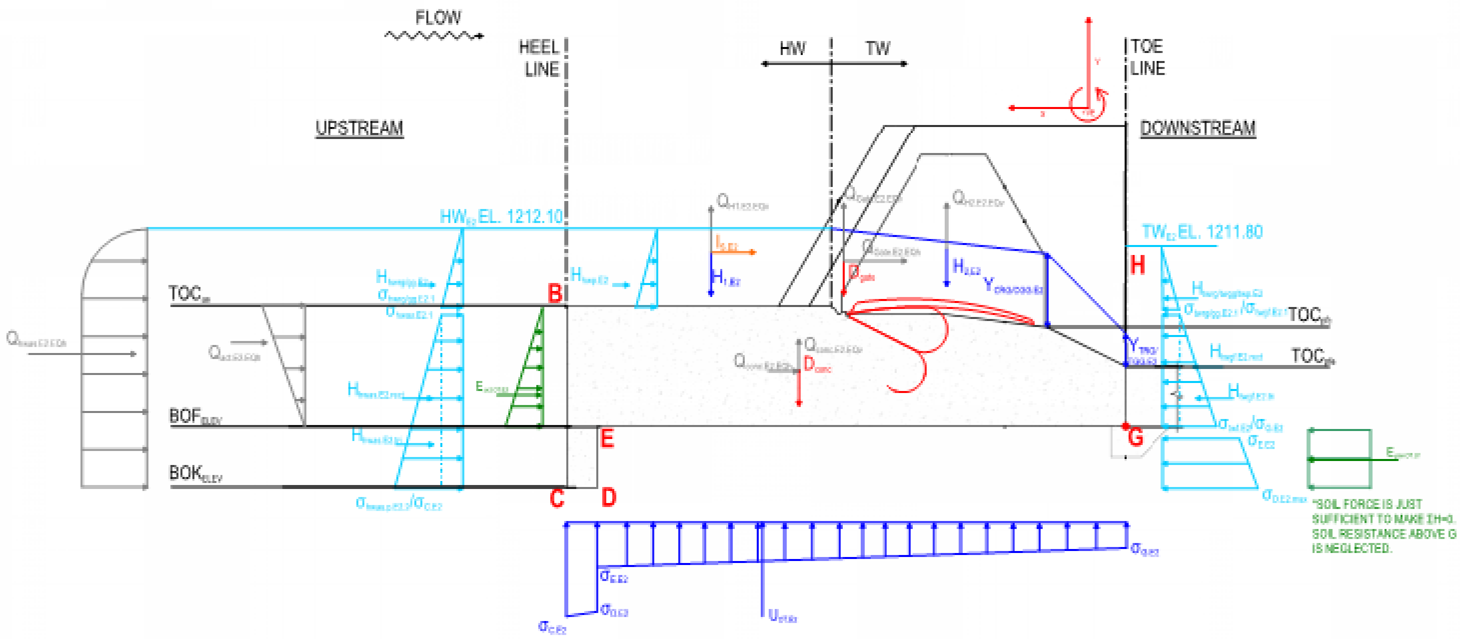
MONOLITH OVERTURNING STABILITY ANALYSIS

Seismic Case $Q_{E2.3}$: 30% Horizontal Seismic Force, 100% Vertical

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stability of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1 $Ratio_{overturning.allow.Extreme} = 0$ Resultant within Base



All Vertical Loads Applicable to Overturning Stability Analysis

Total Concrete Dead Loads:	$D_{conc} = 22438.74 \cdot kN$	at:	$X_{conc.loc} = 9.35\,m$
Dead Load of Gate:	$D_{Gate} = 140.0 \cdot kN$		$X_{gate} = 9.50\,m$
Water Weight (HW) on Apron Slab:	$H_{1.U1} = 2163.1 \cdot kN$		$H_{1.U1.loc} = 14.13\,m$
Water Weight (TW) on Gate Footing:	$H_{2.U1} = 1799.4 \cdot kN$		$H_{2.U1.loc} = 5.34\,m$
Uplift Load for Overturning Analysis:	$U_{OT.U1} = -13165.04 \cdot kN$		$U_{OT.U1.loc} = 9.48 \cdot m$
Vertical Seismic Component of Concrete Structure:	$Q_{conc.E2.EQv.3} = -2243.87 \cdot kN$		$X_{conc.loc} = 9.35\,m$
Vertical Seismic Component of Crest Gate:	$Q_{Gate.E2.EQv.3} = -14 \cdot kN$		$X_{gate} = 9.50\,m$
Vertical Seismic Component of Headwater over Apron Slab:	$Q_{H1.E2.EQv.3} = -216.31 \cdot kN$		$H_{1.U1.loc} = 14.13\,m$
Vertical Seismic Component of Headwater over Fixed Crest Slab:	$Q_{H2.E2.EQv.3} = -179.94 \cdot kN$		$H_{2.U1.loc} = 5.34\,m$

Sum of All Overtuming Analysis Vertical Load:

$$\Sigma V_{E2.OT.3} := D_{conc} + D_{Gate} + H_{1.U1} + H_{2.U1} + U_{OT.U1} + \Sigma V_{Q.E2.EQv.3} = 10722.12 \cdot kN$$

Sum of All Overtuming Analysis Vertical Load Moments:

$$\Sigma M_{V.E2.OT.3} := D_{conc} \cdot X_{conc.loc} + D_{Gate} \cdot X_{gate} + H_{1.U1} \cdot H_{1.U1.loc} + H_{2.U1} \cdot H_{2.U1.loc} + U_{OT.U1} \cdot U_{OT.U1.loc} = 126508.58 \cdot kN \cdot m$$

Lateral Driving Earth Loads for Overturning Stability Analysis (at rest condition)

E2.3 CASE

Depth of Driving Soil Loads (to top of key): $h_{E.OT.E2.3} := TOC_{as} - BOF_{elev} = 4\,m$

Applicable Soil Load: $E_{act.OT.E2.3} := \frac{\left(K_{o.U1} \cdot h_{E.OT.U1}^{2}\right)}{2} \cdot \left(\gamma_r - \gamma_w\right) \cdot W_{hwas.U1} \cdot -1 = -769.99 \cdot kN$

At Rest- Soil Load Acting from Toe: $E_{act.OT.E2.3.loc} := \frac{h_{E.OT.U1}}{3} = 1.33\,m$

All Lateral Loads Applicable to Overturning Stability Analysis

HW Lateral Load on Approach Slab:	$H_{hwas.U1} = -3602.2 \cdot kN$	$H_{hwas.U1.loc} = 0.41\,m$
HW Lateral Load on Guard Gate:	$H_{hwgg.U1} = 0.0 \cdot kN$	$H_{hwgg.U1.loc} = 4.00\,m$
TW Lateral Load on Guard Gate:	$H_{twgg.U1} = 0.0 \cdot kN$	$H_{twgg.U1.loc} = 4.00\,m$
TW Lateral Load on Gate Footing (No Key - Overturning Values Adjusted):	$H_{twgf.U1} = 1789.34 \cdot kN$	$H_{twgf.U1.loc} = 1.65\,m$
TW Lateral Load on Key:	$H_{twkey.OT.U1} = 1664.73 \cdot kN$	$H_{twkey.OT.U1.loc} = -1.05\,m$
Ice / Impact Load:	$I_{U1} = -300.0 \cdot kN$	$I_{U1.loc} = 5.80\,m$
Lateral Soil Load (driving):	$E_{act.OT.U1} = -770.0 \cdot kN$	$E_{act.OT.U1.loc} = 1.33\,m$
Horizontal Seismic Component of Concrete Structure:	$Q_{conc.E2.EQh.3} = -1121.94 \cdot kN$	$Y_{conc.loc} = 2.43\,m$
Horizontal Seismic Component of Vertical Lift Gate:	$Q_{Gate.E2.EQh.3} = -7 \cdot kN$	$Y_{gate} = 3.90\,m$
Horizontal Seismic Component of Headwater on Slab Footing:	$Q_{hwas.E2.EQh.3} = -225.27 \cdot kN$	$Y_{HWg.E2} = 1.24\,m$
Horizontal Seismic Component of Active Soil: (Section 5-5, USACE EM_1110-2-2100)	$Q_{act.E2.EQh.3} = -117.02 \cdot kN$	$Y_{E.act.E2} = 2.52\,m$

Resisting Lateral Soil Load as required to produce horizontal equilibrium:

$$E_{pas.OT.E2.3} := -\left(H_{hwas.U1} + H_{hwgg.U1} + H_{twgg.U1} + H_{twgf.U1} + H_{twkey.OT.U1} + I_{U1} + E_{act.OT.U1} + \Sigma H_{Q.E2.EQh.3.OT}\right) = 2835.66 \cdot kN$$

Acting at: $E_{pas.OT.E2.3.loc} := -1 \cdot \frac{d_{key}}{2} = -1\,m$

Sum of All Overtuming Analysis Horizontal Load (ΣH=0):

$$\Sigma H_{E2.OT.3} := H_{hwas.U1} + H_{hwgg.U1} + H_{twgg.U1} + H_{twgf.U1} + H_{twkey.OT.U1} + I_{U1} + E_{act.OT.U1} + E_{pas.OT.E2.3} + \Sigma H_{Q.E2.EQh.3.OT} = 0 \cdot kN$$

Sum of All Overtuming Analysis Horizontal Load Moments:

$$\Sigma M_{H.E2.OT.3} := H_{hwas.U1} \cdot H_{hwas.U1.loc} + H_{hwgg.U1} \cdot H_{hwgg.U1.loc} + H_{twgg.U1} \cdot H_{twgg.U1.loc} \cdots + H_{twgf.U1} \cdot H_{twgf.U1.loc} + H_{twkey.OT.U1} \cdot H_{twkey.OT.U1.loc} + I_{U1} \cdot I_{U1.loc} \cdots + E_{act.OT.U1} \cdot E_{act.OT.U1.loc} + E_{pas.OT.U1} \cdot E_{pas.OT.U1.loc} + \Sigma M_{Q.E2.3} = -32890.09 \cdot kN \cdot m$$

Overturning Stability Analysis

$\Sigma M_{E2.OT.3} := \Sigma M_{V.E2.OT.3} + \Sigma M_{H.E2.OT.3} = 93618.49 \cdot kN \cdot m$

$X_{R.E2.3} := \frac{\Sigma M_{E2.OT.3}}{\Sigma V_{E2.OT.3}} = 8.73\,m$ $\quad x_{OT.E2.3} := X_{R.E2.3} - \frac{L_b}{2} = -0.52\,m$

Overturning Resultant Ratio

$Ratio_{OT.E2.3} := \frac{X_{R.E2.3}}{L_b} = 0.47$

$Ratio_{OT.E2.3.check} := \begin{cases} \text{"OKAY"} & \text{if } Ratio_{OT.E2.3} \ge Ratio_{overturning.allow.Extreme} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"OKAY"}$

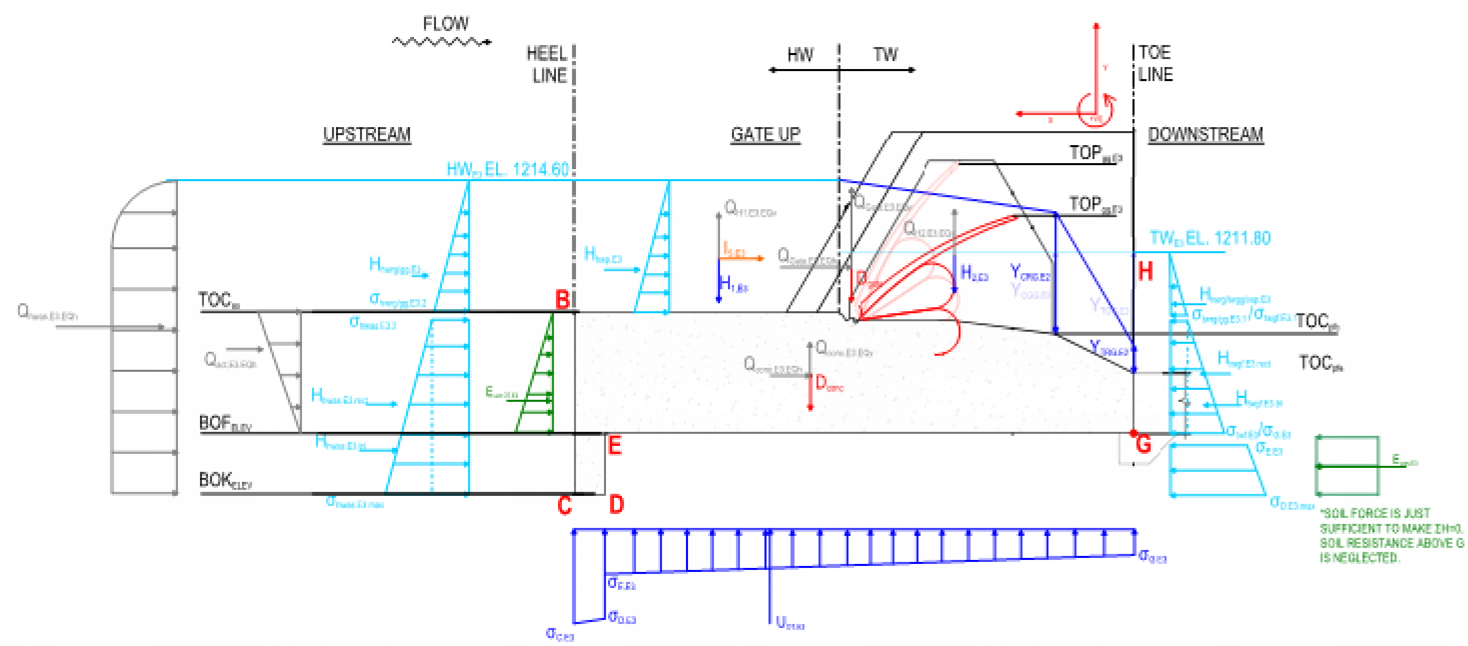
MONOLITH OVERTURNING STABILITY ANALYSIS

E3.1 CASE

Seismic Case $Q_{E3.1}$: 100% Horizontal Seismic Force, No Vertical

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stability of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1 $Ratio_{overturning.allow.Extreme} = 0$ Resultant within Base



All Vertical Loads Applicable to Overturning Stability Analysis

Total Concrete Dead Loads:	$D_{conc} = 22438.74 \cdot kN$	at:	$X_{conc.loc} = 9.35\,m$
Dead Load of Gate:	$D_{Gate} = 140.0 \cdot kN$		$X_{gate} = 9.50\,m$

MONOLITH OVERTURNING STABILITY ANALYSIS

Seismic Case $Q_{E3.2}$: 100% Horizontal Seismic Force, 30% Vertical

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
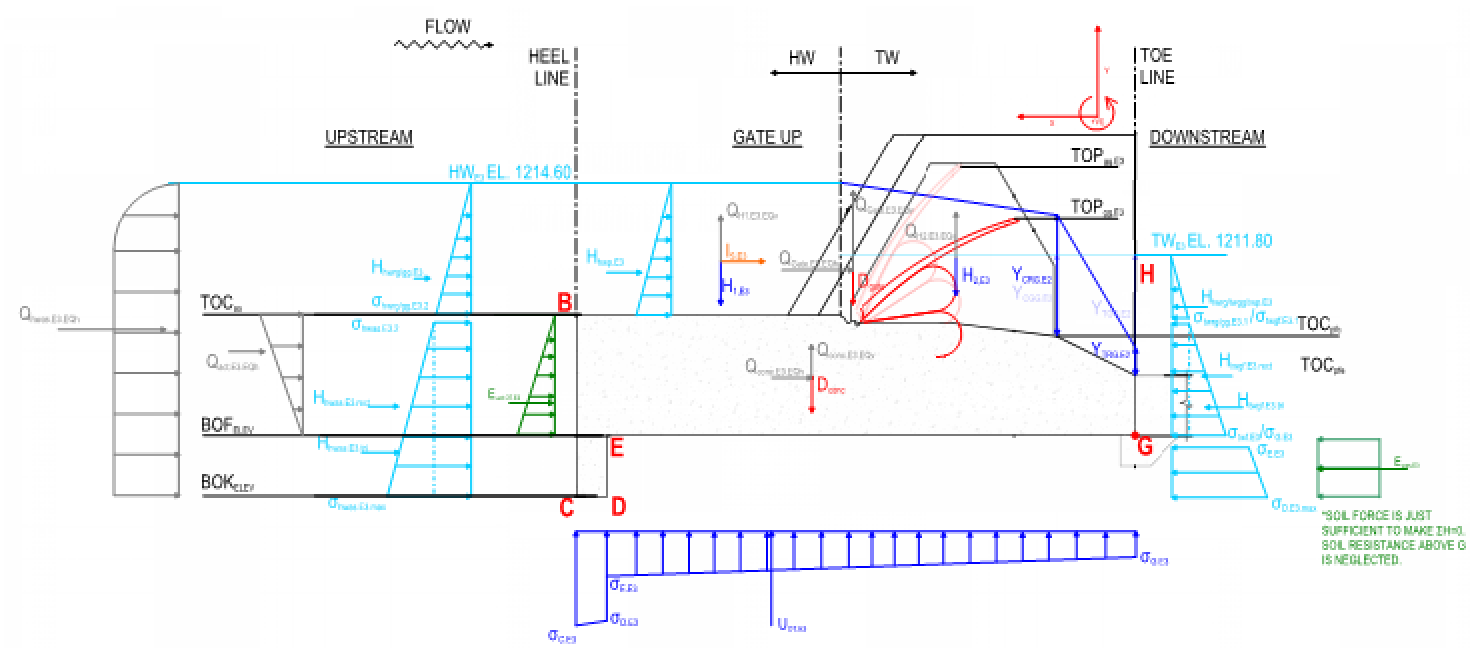
Assumptions are made in order to compute overturning stability of indeterminate forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1 $Ratio_{overturning.allow.Extreme} = 0$ Resultant within Base



All Vertical Loads Applicable to Overturning Stability Analysis

Total Concrete Dead Loads:	$D_{conc} = 22438.74 \cdot kN$	at:	$X_{conc.loc} = 9.35\,m$
Dead Load of Gate:	$D_{Gate} = 140.0 \cdot kN$		$X_{gate} = 9.50\,m$

Calculation Section IV

SS-2A Gate Blocks Stability Calculations

Stantec

Project Number: 110773396

Project Title: SR1 Project

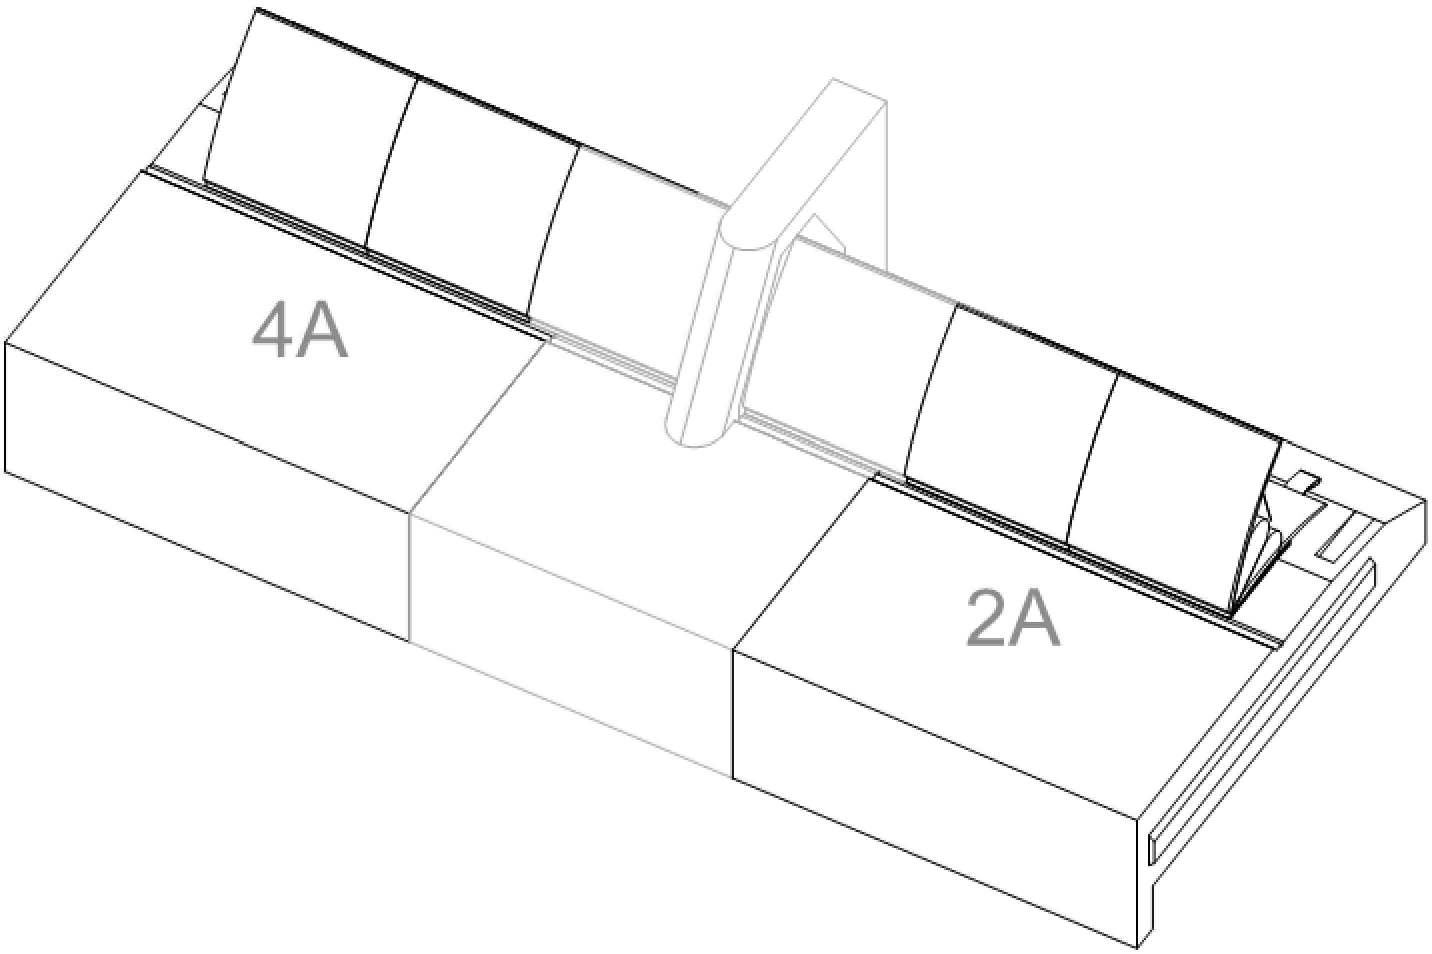
Client: Alberta Transportation

Engineer: Dave Crawford, Derek Cheuk   Date: 12/14/2018

Checker: Sean Xiao   Date: 01/10/2019

Calculation for: Service Spillway Gate 2A - Guard Gate Structure

Structure Isometric:



SERVICE SPILLWAY - Guard Gate 2A Monolith

REGION COLOR CONVENTION   User Input   Calculation Highlights   Results

SERVICE SPILLWAY DEIMENSIONAL INPUT PARAMETERS

BASE SECTION PROPERTIES

Base Length: $L_b := 18.50m$ (Refer to Dwg. S-220 PLAN)

Stilling Basin Length: $L_{sb} := 17.0m$

$Kern := \frac{L_b}{6} = 3.08\,m$

Base Width: $W_b := 15.00m$

Area of Base: $A_b := L_b \cdot W_b = 277.5\,m^2$

$Midhalf := \frac{L_b}{4} = 4.63\,m$

Section Modulus of Base: $S_b := \frac{W_b \cdot L_b^2}{6} = 855.6\,m^3$

FOOTINGS (fixed crest and approach slab, geometry below)

Footing Cross Sectional Area: $A_{gf} := 32.84m^2$ (From Bluebeam Measurement)

Block Footing Width: $w_{gf} := W_b = 15.00\,m$

Total Fixed Crest Footing Volume: $V_{gf} := A_{gf} \cdot w_{gf} = 492.6 \cdot m^3$

Pier Width: $w_p := 0m$

Approach Slab Height: $h_{as} := 4.00m$

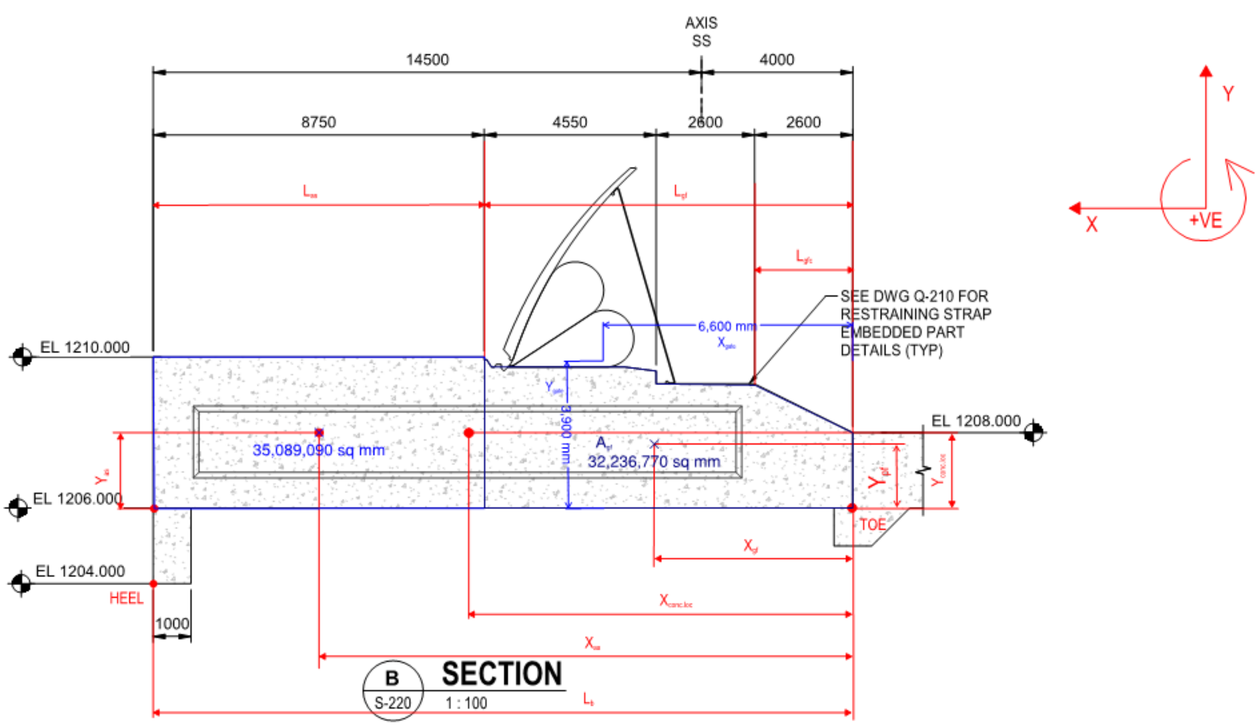
Approach Slab Width: $w_{as} := W_b = 15.00\,m$

Approach Slab Length: $L_{as} := 8.75m$

Gate Footing Length: $L_{gf} := L_b - L_{as} = 9.75\,m$

Gate Footing Crest Length: $L_{gfc} := 2.6m$

Total Approach Slab Volume: $V_{as} := h_{as} \cdot w_{as} \cdot L_{as} = 525.0 \cdot m^3$



SHEAR KEY PARAMETERS

Key depth: $d_{key} := 2.00m$

Key width: $w_{key} := 1.00m$

FOUNDATION PARAMETERS

Granular Fill Internal Angle of Friction: $\phi := 34 \cdot \frac{\pi}{180} = 0.59$ Radians (Section 5.3, Design Criteria)

Friction Angle at Base Concrete / Rock Interface: $\phi_{rock} := 26$ (Section 5.2, Design Criteria)

Base Friction Coefficient: $\tan_{\phi} := \tan\left(\phi_{rock} \frac{\pi}{180}\right) = 0.488$ radians

MATERIAL PROPERTIES

Unit Weight of Concrete: $\gamma_c := 23.5 \frac{kN}{m^3}$ (Section 7.1, Design Criteria)

Unit Weight of Rock Fill: $\gamma_r := 22.0 \frac{kN}{m^3}$ (Section 5.3, Design Criteria)

$\phi_{backfill} := \left(20 \frac{\pi}{180}\right) = 0.35$ radians Assume Rip Rap Backfill

Unit Weight of Water: $\gamma_w := 9.81 \frac{kN}{m^3}$ (Section 7.2, Design Criteria)

CONCRETE DEAD LOADS

Gate Footing (fixed crest): $D_{gf} := V_{gf} \cdot \gamma_c = 11576.1 \cdot kN$

Approach Slab: $D_{as} := V_{as} \cdot \gamma_c + d_{key} \cdot w_{key} \cdot w_{as} \cdot \gamma_c = 13042.5 \cdot kN$

Total Concrete Dead Loads: $D_{conc} := D_{gf} + D_{as} = 24618.6 \cdot kN$

Rock Section Mobilized for Inclined Sliding Failure:

Soil Volume Below Footing (Triangle): $V_{E.tri} := W_b \cdot \frac{1}{2} \cdot d_{key} \cdot \left(L_b - w_{key}\right) = 262.5 \cdot m^3$ $\quad X_{E.tri} := \left(L_b - w_{key}\right) \cdot \frac{2}{3} = 11.67\, m$

Vertical Soil Weight: $E_{v.tri} := V_{E.tri} \cdot \left(\gamma_r\right) = 5775 \cdot kN$ $\quad \Sigma V_{soil} := E_{v.tri} = 5775 \cdot kN$ $\quad \Sigma M_{soil} := E_{v.tri} \cdot X_{E.tri} = 67375 \cdot kN \cdot m$

MOMENT ARM FROM TOE TO COG OF COMPONENT

Dist. from Toe to COG of Gate Footing: $X_{gf} := 5.24m$ (From Bluebeam Measurement)

Dist. from Toe to COG of Approach Slab: $X_{as} := 14.33m$ (From Bluebeam Measurement)

Distance From Toe to COG of Concrete Dead Load : $X_{conc.loc} := \frac{\left(X_{gf} \cdot D_{gf} + X_{as} \cdot D_{as}\right)}{D_{conc}} = 10.06\, m$

MOMENT ARM FROM BASE OF FOOTING TO COG OF COMPONENT

Dist. from Base to COG of Footing: $Y_{gf} := 1.72m$ (From Bluebeam Measurement)

Dist. from Base to COG of Approach Slab: $Y_{as} := 2.0m$ (Center of Approach Slab)

Distance Above Base to COG of Concrete Dead Load:

$$Y_{conc.loc} := \frac{\left(Y_{gf} \cdot D_{gf} + Y_{as} \cdot D_{as}\right)}{D_{conc}} = 1.87\, m$$

CREST GATE (OBERMEYER)

Dead Load of Gates: $D_{Gate} := 140kN \cdot \frac{15}{10} \cdot \frac{m}{m} = 210 \cdot kN$

(Vendor supplied, Dwg. Q-200 Series)

Distance from Toe to COG of Gates: $X_{gate} := 6.60m$ (From Bluebeam Measurement)

Distance from Base to COG of Gates: $Y_{gate} := 3.90m$

(Distance from base to top of Gate Footing, conservative value at Gate Closed)

DEAD LOAD SUMMATION:

$\Sigma V_{DL} := D_{conc} + D_{Gate} = 24828.6 \cdot kN$

$\Sigma M_{DL} := D_{conc} \cdot X_{conc.loc} + D_{Gate} \cdot X_{gate} = 248943.79 \cdot kN \cdot m$

ROCK SECTION MOBILIZED FOR INCLINDED SLIDING FAILURE

Area of Rock Section Mobilized: $A_{rs} := \frac{\left(L_b - w_{key}\right) \cdot d_{key}}{2} = 17.5\,m^2$

Rock Mass Mobilized: $V_{rs} := A_{rs} \cdot \gamma_r \cdot W_b = 5775 \cdot kN$

(Pore pressure taken along assumed inclined sliding plane)

Distance from Toe to COG of Rock Section: $L_{rs} := \frac{2}{3} \cdot \left(L_b - w_{key}\right) = 11.67\,m$

Sum of Moments of Rock Section: $\Sigma M_{rs} := V_{rs} \cdot L_{rs} = 67375 \cdot kN \cdot m$

SERVICE SPILLWAY GATE STRUCTURE 2D HYDRAULIC MODEL RESULTS

Applicable or Relevent Scenarios: Service Spillway (SS) - Gate Structure

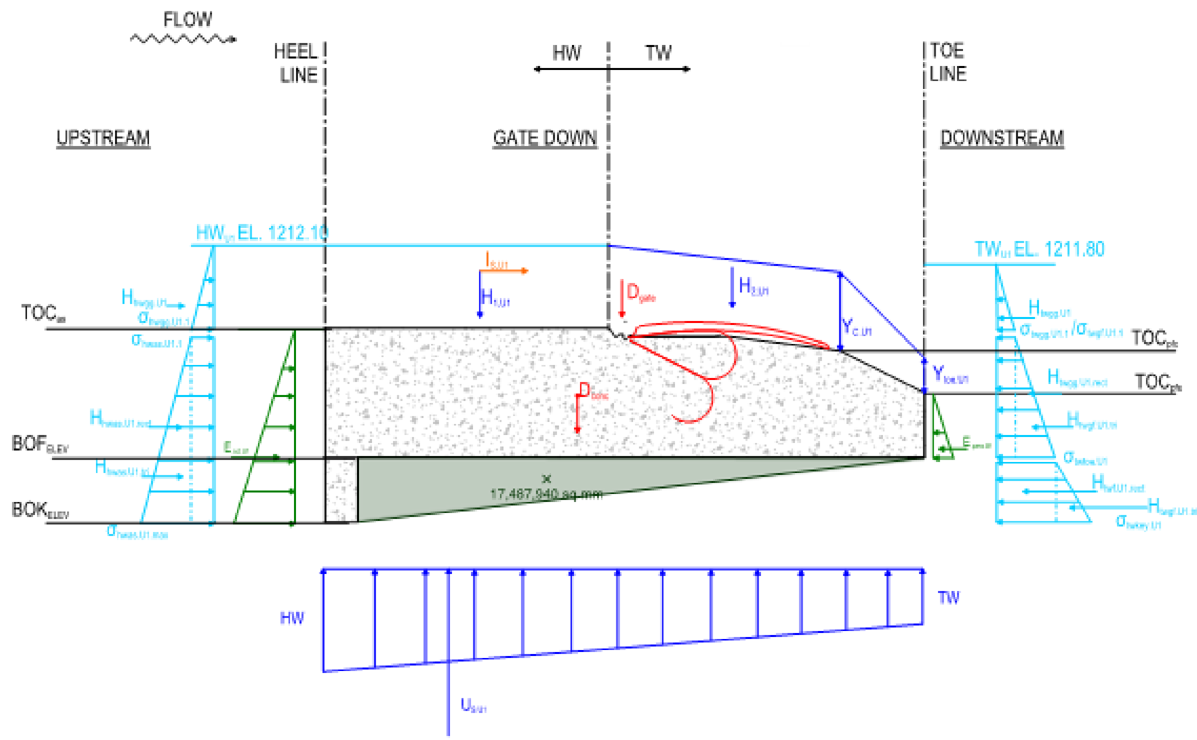
U1 DESIGN CASE



ACCEPTANCE PARAMETERS

Required Factor of Safety for Sliding: $FS_{req.U1.sl} := 1.5$ (Without Cohesion)

(Section 8.1, Design Criteria)

Resultant Within Middle Third of Base: $e \le \frac{L_b}{6} \wedge e \ge \frac{-L_b}{6}$

Allowable Rock Bearing Pressure: $\sigma_{allow.U1} := 1270 \cdot \frac{kN}{m^2}$ (Section 5.2, Design Criteria)

INPUT PARAMETERS

Headwater Elevation: $HW_{U1} := 1212.10m$ (Section 8.3, Design Criteria)

Tailwater Elevation: $TW_{U1} := 1211.80m$ (2D Hydraulic Results see page above, typ.)

Bottom of Footing Elevation: $BOF_{elev} := 1206.00m$

Approach Slab Top of Concrete Elevation at Upstream Face: $TOC_{as} := 1210.00m$

Footing Top of Concrete Elevation at Stilling Basin: $TOC_{pfe} := 1208.00m$

Footing Top of Concrete Elevation at Center of Footing: $TOC_{pfc} := 1209.30m$

Top of Guard/Regulating Gate Elevation: $TOP_{rg.U1} := 1210.00m$ $TOP_{gg.U1} := 1210.00m$

Gates are open when top of gate elevation is at 1210.00m

Gates are closed/up when top of gate elevation is at 1215.0m

Bottom of Key Elevation: $BOK_{elev} := BOF_{elev} - d_{key} = 1204\,m$

Water Elevation above Crest of Guard Gate: $EL_{C.U1} := 1211.4m$

$$Y_{C.U1} := \begin{cases} (EL_{C.U1} - TOC_{pfc}) & \text{if } TOP_{gg.U1} \le HW_{U1} \\ (TW_{U1} - TOC_{pfc}) & \text{if } TOP_{gg.U1} > HW_{U1} \end{cases} = 2.1 \cdot m$$

Water Elevation above Guard Gate Toe: $EL_{TOE.U1} := 1208.46m$

$$Y_{TOE.U1} := \begin{cases} (EL_{TOE.U1} - TOC_{pfe}) & \text{if } TOP_{gg.U1} \le HW_{U1} \\ (TW_{U1} - TOC_{pfe}) & \text{if } TOP_{gg.U1} > HW_{U1} \end{cases} = 0.46 \cdot m$$

LATERAL WATER LOADS

U1 CASE

HEADWATER (APPROACH SLAB DRIVING):

Headwater Depth on Gate: $D_{hwg.U1} := HW_{U1} - TOC_{as} = 2.10\,m$

Thickness of Approach Slab (Including Key): $T_{as} := \left(TOC_{as} - BOK_{elev}\right) = 6\,m$

Headwater Depth at Heel (U/S face): $D_{hwas.U1} := HW_{U1} - BOK_{elev} = 8.10\,m$

T_{as} taken to bottom of Key for loading, Not for structural thickness parameter.

Headwater Load Unit Width on Approach Slab: $W_{hwas.U1} := W_b = 15.00\,m$

Headwater Unit Load At Top of Approach Slab:

$$H_{hwas.U1.1} := \frac{-\left(\gamma_w \cdot D_{hwg.U1}{}^2\right)}{2} \cdot W_{hwas.U1} = -324.47 \cdot kN$$

Headwater Unit Load At Bottom of Approach Key:

$$H_{hwas.U1.2} := \frac{-\left(\gamma_w \cdot D_{hwas.U1}{}^2\right)}{2} \cdot W_{hwas.U1} = -4827.3 \cdot kN$$

Headwater Line Load At Top of Approach Slab:

$$\sigma_{hwas.U1.1} := -\left(\gamma_w \cdot D_{hwg.U1}\right) = -20.6 \cdot kPa$$

Headwater Line Load At Bottom of Approach Key:

$$\sigma_{hwas.U1.2} := -\left(\gamma_w \cdot D_{hwas.U1}\right) = -79.46 \cdot kPa$$

Triangular Distribution Unit Load on Approach Slab and Key:

$$H_{hwas.U1.2.tri} := \left(\frac{\sigma_{hwas.U1.2} - \sigma_{hwas.U1.1}}{2}\right) \cdot \left(T_{as} \cdot W_{hwas.U1}\right) = -2648.7 \cdot kN$$

Rectangular Distribution Unit Load on Approach Slab and Key:

$$H_{hwas.U1.2.rect} := \sigma_{hwas.U1.1} \cdot \left(T_{as} \cdot W_{hwas.U1}\right) = -1854.09 \cdot kN$$

Total Horizontal Headwater Load on Approach Slab:

$$H_{hwas.U1} := H_{hwas.U1.2.tri} + H_{hwas.U1.2.rect} = -4502.79 \cdot kN$$

Apply Total Footing Headwater Load at:

$$H_{hwas.U1.loc} := \frac{\left(H_{hwas.U1.2.rect} \cdot \frac{T_{as}}{2} + H_{hwas.U1.2.tri} \cdot \frac{T_{as}}{3}\right)}{H_{hwas.U1.2.tri} + H_{hwas.U1.2.rect}} - d_{key} = 0.41\,m$$

Guard Gate (2A) Operating Condition:

Guard Gate Down/Open Condition: $A1_{U1} := TOP_{gg.U1} \le TOC_{as}$

Guard Crest Gate Up/Closed, with Top of Gate Higher than HW Elevation: $B1_{U1} := TOP_{gg.U1} \ge HW_{U1} \wedge TOP_{gg.U1} > TOC_{as}$

Guard Crest Gate Up/Closed, with Top of Gate Lower than HW Elevation: $C1_{U1} := TOP_{gg.U1} > TOC_{as} \wedge HW_{U1} > TOP_{gg.U1}$

Guard Crest Gate Height: $H_{gg.U1} := TOP_{gg.U1} - TOC_{as} = 0\,m$

Headwater Depth at Guard Crest Gate: $D_{hwgg.U1} := HW_{U1} - TOC_{as} = 2.10\,m$

Guard Crest Gate Width: $W_{hwgg.U1} := 15.00m$

Lateral Headwater Pressure at Bottom of Guard Crest Gate:

$$\sigma_{hwgg.U1.1} := \begin{cases} (0.0kPa) & \text{if } A1_{U1} \\ -(\gamma_w \cdot D_{hwgg.U1}) & \text{if } B1_{U1} \\ -(\gamma_w \cdot D_{hwgg.U1}) & \text{if } C1_{U1} \end{cases} = 0.0 \cdot kPa$$

Lateral Headwater Pressure at Top of Guard Crest Gate:
(Load at HW Elevation On Guard Crest Gate if HW is below TOG_{rg})

$$\sigma_{hwgg.U1.2} := \begin{cases} (0.0kPa) & \text{if } A1_{U1} \\ 0.0kPa & \text{if } B1_{U1} \\ -[\gamma_w \cdot (HW_{U1} - TOP_{gg.U1})] & \text{if } C1_{U1} \end{cases} = 0.0 \cdot kPa$$

Average Pressure acting on Guard Crest Gate:

$$\sigma_{hwgg.U1.avg} := \frac{(\sigma_{hwgg.U1.1} + \sigma_{hwgg.U1.2})}{2} = 0 \cdot kPa$$

Total Area water acting on Crest Gate:

$$A_{hwgg.U1} := \begin{cases} D_{hwgg.U1} \cdot W_{hwgg.U1} & \text{if } A1_{U1} \\ D_{hwgg.U1} \cdot W_{hwgg.U1} & \text{if } B1_{U1} \\ H_{gg.U1} \cdot W_{hwgg.U1} & \text{if } C1_{U1} \end{cases} = 31.5 \cdot m^2$$

Total Horizontal Headwater Load on Guard Crest Gate: $H_{hwgg.U1} := \sigma_{hwgg.U1.avg} \cdot A_{hwgg.U1} = 0.0 \cdot kN$

Apply Total Guard Crest Gate Headwater Load at:

$$H_{hwgg.U1.loc} := \begin{cases} (TOC_{as} - BOF_{elev}) & \text{if } A1_{U1} \\ \left[\frac{(HW_{U1} - TOC_{as})}{3} + (TOC_{as} - BOF_{elev})\right] & \text{if } B1_{U1} \\ \left[\frac{\sigma_{hwgg.U1.2} \cdot A_{hwgg.U1} \cdot \frac{(H_{gg.U1})}{2} + \frac{(\sigma_{hwgg.U1.1} - \sigma_{hwgg.U1.2})}{2} A_{hwgg.U1} \cdot \frac{(H_{gg.U1})}{3}}{\sigma_{hwgg.U1.2} \cdot A_{hwgg.U1} + \frac{(\sigma_{hwgg.U1.1} - \sigma_{hwgg.U1.2})}{2} \cdot A_{hwgg.U1}} \ldots \\ + (TOC_{as} - BOF_{elev})\right] & \text{if } C1_{U1} \end{cases} = 4.0 \cdot m$$

LATERAL TAILWATER (RESISTING) Applied to Downstream Side of Guard Crest Gate: U1 CASE

Guard Gate Down/Open Condition: $A2_{U1} := TOP_{gg.U1} \le TOC_{as}$

Guard Crest Gate Up/Closed, with Top of Gate Higher than TW Elevation: $B2_{U1} := TOP_{gg.U1} \ge TW_{U1} \land TOP_{gg.U1} > TOC_{as}$

Guard Crest Gate Up/Closed, with Top of Gate Lower than TW Elevation: $C2_{U1} := TOP_{gg.U1} > TOC_{as} \land TW_{U1} > TOP_{gg.U1}$

Tailwater Depth at Guard Crest Gate: $D_{twgg.U1} := TW_{U1} - TOC_{as} = 1.80\,m$

Guard Crest Gate Width: $W_{twgg.U1} := 15.00m$

Lateral Water Load at Bottom of Guard Crest Gate:

$$\sigma_{twgg.U1.1} := \begin{cases} (0.0kPa) & \text{if } A2_{U1} \\ (\gamma_w \cdot D_{twgg.U1}) & \text{if } B2_{U1} \\ (\gamma_w \cdot D_{twgg.U1}) & \text{if } C2_{U1} \end{cases} = 0.0 \cdot kPa$$

Lateral Water Load at Top of Guard Crest Gate:
(Load at TW Elevation On Guard Crest Gate if TW is below TOG_{gg})

$$\sigma_{twgg.U1.2} := \begin{cases} (0.0kPa) & \text{if } A2_{U1} \\ 0.0kPa & \text{if } B2_{U1} \\ \left[\gamma_w \cdot \left(TW_{U1} - TOP_{gg.U1}\right)\right] & \text{if } C2_{U1} \end{cases} = 0.0 \cdot kPa$$

Average Pressure acting on Guard Crest Gate:

$$\sigma_{twgg.U1.avg} := \frac{\left(\sigma_{twgg.U1.1} + \sigma_{twgg.U1.2}\right)}{2} = 0 \cdot kPa$$

Total Area water acting on Crest Gate:

$$A_{twgg.U1} := \begin{cases} D_{twgg.U1} \cdot W_{twgg.U1} & \text{if } A2_{U1} \\ D_{twgg.U1} \cdot W_{twgg.U1} & \text{if } B2_{U1} \\ H_{gg.U1} \cdot W_{twgg.U1} & \text{if } C2_{U1} \end{cases} = 27 \cdot m^2$$

Total Horizontal Tailwater Load on Guard Crest Gate: $H_{twgg.U1} := \sigma_{twgg.U1.avg} \cdot A_{twgg.U1} = 0.0 \cdot kN$

Apply Total Horiz. TW Load on Guard Gate at:

$$H_{twgg.U1.loc} := \begin{cases} \left(TOC_{as} - BOF_{elev}\right) & \text{if } A2_{U1} \\ \left[\dfrac{\left(TW_{U1} - TOC_{as}\right)}{3} + \left(TOC_{as} - BOF_{elev}\right)\right] & \text{if } B2_{U1} \\ \left[\dfrac{\sigma_{twgg.U1.2} \cdot A_{twgg.U1} \cdot \dfrac{\left(H_{gg.U1}\right)}{2} + \dfrac{\left(\sigma_{twgg.U1.1} - \sigma_{twgg.U1.2}\right)}{2} A_{twgg.U1} \cdot \dfrac{\left(H_{gg.U1}\right)}{3}}{\sigma_{twgg.U1.2} \cdot A_{twgg.U1} + \dfrac{\left(\sigma_{twgg.U1.1} - \sigma_{twgg.U1.2}\right)}{2} \cdot A_{twgg.U1}} \dots \\ + \left(TOC_{as} - BOF_{elev}\right)\right] & \text{if } C2_{U1} \end{cases} = 4.0 \cdot m$$

LATERAL WATER LOADS (continued)

U1 CASE

TAILWATER (RESISTING) Applied to Concrete Structure:

Tailwater Depth At top of Gate Base Footing Elevation: $D_{twgf.U1} := TW_{U1} - TOC_{as} = 1.80\,m$

Water Depth at bottom of Gate Base Footing: $D_{twtoe.U1} := TW_{U1} - BOF_{elev} = 5.80\,m$

Footing Thickness for horizontal at Toe: $h_{toe} := TOC_{as} - BOF_{elev} = 4\,m$

Unit Width of D/S face of crest for application of Tailwater Load: $W_{tw.U1} := W_b = 15.00\,m$

Tailwater Pressure At Top of Gate Footing: $\sigma_{twgf.U1} := \left(\gamma_w \cdot D_{twgf.U1}\right) = 17.66 \cdot kPa$

Tailwater Line Load At Bottom of Gate Footing: $\sigma_{twtoe.U1} := \left(\gamma_w \cdot D_{twtoe.U1}\right) = 56.9 \cdot kPa$

Triangular Distribution Unit Load on Gate Footing Base:

$$H_{twgf.U1.tri} := \left(\frac{\sigma_{twtoe.U1} - \sigma_{twgf.U1}}{2}\right) \cdot \left(h_{toe} \cdot W_{tw.U1}\right) = 1177.2 \cdot kN$$

Rectangular Distribution Unit Load on Gate Footing Base:

$$H_{twgf.U1.rect} := \sigma_{twgf.U1} \cdot \left(h_{toe} \cdot W_{tw.U1}\right) = 1059.48 \cdot kN$$

Tailwater Pressure At Bottom of Sliding Failure Plane:

$$\sigma_{twbk.U1} := \left(HW_{U1} - BOK_{elev}\right) \cdot \gamma_w = 79.46 \cdot kPa$$

Triangular Distribution Unit Load Below Footing:

$$H_{twbk.U1.tri} := \frac{\left(\sigma_{twbk.U1} - \sigma_{twtoe.U1}\right)}{2} \cdot d_{key} \cdot W_{tw.U1} = 338.44 \cdot kN$$

Rectangular Distribution Load Below Footing Base:

$$H_{twbk.U1.rect} := \sigma_{twtoe.U1} \cdot d_{key} \cdot W_{tw.U1} = 1706.94 \cdot kN$$

Total Horizontal Tailwater Load on Gate Footing (including key):

$$H_{twgk.U1} := H_{twgf.U1.tri} + H_{twgf.U1.rect} + H_{twbk.U1.tri} + H_{twbk.U1.rect} = 4282.06 \cdot kN$$

Apply Total Gate Footing Tailwater Load From Toe at:

$$H_{twgk.U1.loc} := \frac{\left[H_{twgf.U1.rect} \cdot \frac{\left(h_{toe}\right)}{2} + H_{twgf.U1.tri} \cdot \frac{\left(h_{toe}\right)}{3} + H_{twbk.U1.tri} \cdot \left(-d_{key} \cdot \frac{2}{3}\right) + H_{twbk.U1.rect} \cdot \left(\frac{-d_{key}}{2}\right)\right]}{H_{twgf.U1.tri} + H_{twgf.U1.rect} + H_{twbk.U1.tri} + H_{twbk.U1.rect}} = 0.36\,m$$

SUMMATION OF LATERAL WATER LOADS:

$$\Sigma H_{Water.U1} := H_{hwas.U1} + H_{hwgg.U1} + H_{twgk.U1} + H_{twgg.U1} = -220.72 \cdot kN$$

$$\Sigma M_{Hwater.U1} := H_{hwas.U1} \cdot H_{hwas.U1.loc} + H_{hwgg.U1} \cdot H_{hwgg.U1.loc} \cdots + H_{twgk.U1} \cdot H_{twgk.U1.loc} + H_{twgg.U1} \cdot H_{twgg.U1.loc} = -323.73 \cdot kN \cdot m$$

VERTICAL WATER LOADS

U1 CASE

HEADWATER:

Water Depth on top of Approach Slab: $d_{hw.U1} := HW_{U1} - TOC_{as} = 2.10\,m$

Length of Approach Slab: $L_{as} = 8.75\,m$

Width of Approach Slab: $w_{as} = 15.00\,m$

Vertical Water Weight (H1) on Approach Slab: $H_{1.U1} := \left(w_{as} \cdot d_{hw.U1} \cdot L_{as}\right) \cdot \gamma_w = 2703.9 \cdot kN$

Moment Arm for Application of Water Weight (H1) from toe: $H_{1.U1.loc} := L_b - \dfrac{L_{as}}{2} = 14.13\,m$

TAILWATER:

Trapezoid Volume Above Gate Footing from Approach Slab to Crest: $V_{asc.U1} := \left(L_{gf} - L_{gfc}\right) W_b \dfrac{d_{hw.U1} + Y_{C.U1}}{2} = 225.23 \cdot m^3$

Trapezoid Volume Above Gate Footing Crest to End of Gate Footing: $V_{gfc.U1} := \left(L_{gfc} \cdot W_b\right) \dfrac{Y_{C.U1} + Y_{TOE.U1}}{2} = 49.92 \cdot m^3$

Load Above Gate Footing from Approach Slab to Crest: $H_{2.U1.asc} := V_{asc.U1} \cdot \gamma_w = 2209.46 \cdot kN$

Load Acting Above Footing Crest from Toe: $H_{2.U1.asc.loc} := \dfrac{\left(L_{gf} - L_{gfc}\right) \cdot \left(2 \cdot d_{hw.U1} + Y_{C.U1}\right)}{3 \cdot \left(d_{hw.U1} + Y_{C.U1}\right)} + L_{gfc} = 6.17\,m$

Load Above Gate Footing from Crest to End: $H_{2.U1.gfc} := V_{gfc.U1} \cdot \gamma_w = 489.72 \cdot kN$

Load Acting Above Gate Footing from Crest to End: $H_{2.U1.gfc.loc} := \dfrac{\left(L_{gfc}\right) \cdot \left(2 \cdot Y_{C.U1} + Y_{TOE.U1}\right)}{3 \cdot \left(Y_{C.U1} + Y_{TOE.U1}\right)} = 1.58\,m$

Vertical Water Weight (H2) on Gate Footing: $H_{2.U1} := H_{2.U1.asc} + H_{2.U1.gfc} = 2699.17 \cdot kN$

Moment Arm for Application of Water Weight (H2) from toe: $H_{2.U1.loc} := \dfrac{H_{2.U1.asc} \cdot H_{2.U1.asc.loc} + H_{2.U1.gfc} \cdot H_{2.U1.gfc.loc}}{H_{2.U1}} = 5.34\,m$

U1 CASE

UPLIFT AT INCLINE SLIDING PLANE

Uplift pressure at U/S Face (heel): $U_{HW.U1} := D_{hwas.U1} \cdot \gamma_w = 79.5 \cdot \frac{kN}{m^2}$

Uplift pressure at D/S Face Stilling Basin: $U_{TW.U1} := \left(D_{twtoe.U1}\right) \cdot \gamma_w = 56.9 \cdot \frac{kN}{m^2}$

Length from U/S of Gate Structure to U/S of Stilling Basin: $L_{overall.Usual} := L_b = 18.50\,m$

Difference between Uplift pressure at HW and TW: $U_{diff.U1} := U_{HW.U1} - U_{TW.U1} = 22.56 \cdot \frac{kN}{m^2}$

Slope of difference between between Uplift pressure at HW and TW: $U_{slope.U1} := \frac{U_{diff.U1}}{L_{overall.Usual}} = 1.22 \cdot \frac{kN}{m^2 \cdot m}$

Tailwater Pressure at toe of Gate Structure: $U_{press.toe.gs.U1} := U_{TW.U1} + \left(L_{overall.Usual} - L_b\right) \cdot U_{slope.U1} = 56.9 \cdot \frac{kN}{m^2}$

Uniform uplift force UA Under Gate Structure due to TW (rectangle): $U_{A.U1} := U_{press.toe.gs.U1} \cdot L_b \cdot W_b \cdot -1 = -15789.19 \cdot kN$

Moment Arm from Toe of Gate Structure for Uplift UA: $L_{A.U1} := \left(\frac{L_b}{2}\right) = 9.25\,m$

Linearly Decreasing Uplift Force U1B Under Gate Structure due to HW-TW Differential (triangle): $U_{B.U1} := \frac{1}{2} \cdot \left(U_{HW.U1} - U_{press.toe.gs.U1}\right) \cdot L_b \cdot W_b \cdot -1 = -3130.62 \cdot kN$

Moment Arm from Toe of Gate Structure for Uplift UB: $L_{B.U1} := \frac{2}{3} \cdot L_b = 12.33\,m$

Total Resultant Uplift force Sliding Check: $U_{S.U1} := U_{A.U1} + U_{B.U1} = -18919.81 \cdot kN$

Resultant Location from Toe: $U_{S.U1.loc} := \frac{U_{A.U1} \cdot L_{A.U1} + U_{B.U1} \cdot L_{B.U1}}{U_{A.U1} + U_{B.U1}} = 9.76\,m$

$\Sigma V_{water.U1} := H_{1.U1} + H_{2.U1} + U_{S.U1} = -13516.76 \cdot kN$

$\Sigma M_{Vwater.U1} := H_{1.U1} \cdot H_{1.U1.loc} + H_{2.U1} \cdot H_{2.U1.loc} + U_{S.U1} \cdot U_{S.U1.loc} = -132052.69 \cdot kN \cdot m$

SOIL LOADS

U1 CASE

Equivalent Fluid Pressure (EFP):

At rest lateral pressure coefficient: $K_{o.U1} := 1 - \sin(\phi_{backfill}) = 0.658$ (Section 5.3, Design Criteria)

Headwater Footing Unit Width: $W_{hwas.U1} = 15.00\,m$

Tailwater Footing Unit Width: $W_{tw.U1} = 15.00\,m$

Footing Thickness at Heel: $t_{hf.U1} := TOC_{as} - BOK_{elev} = 6.00\,m$

Fixed Crest Footing Thickness at Toe: $t_{tf.U1} := TOC_{pfe} - BOF_{elev} = 2.00\,m$

Lateral Driving Force (Headwater Side - at rest condition)

At-Rest Soil Load:

$$E_{act.U1} := \frac{K_{o.U1} \cdot t_{hf.U1}^{\,2}}{2} \cdot (\gamma_r - \gamma_w) \cdot W_{hwas.U1} \cdot -1 = -2165.61 \cdot kN$$

At Rest- Soil Load Acting from Toe:

$$E_{act.U1.loc} := \frac{t_{hf.U1}}{3} - d_{key} = 0.00\,m$$

Lateral Resisting Force (Tailwater Side - at rest condition)

At-rest Soil Load:

$$E_{pass.U1} := \frac{K_{o.U1} \cdot t_{tf.U1}^{\,2}}{2} \cdot (\gamma_r - \gamma_w) \cdot W_{tw.U1} = 240.62 \cdot kN$$

Acting at:

$$E_{pass.U1.loc} := \frac{t_{tf.U1}}{3} = 0.67\,m$$

$$\Sigma H_{soil.U1} := E_{act.U1} + E_{pass.U1} = -1924.99 \cdot kN$$

$$\Sigma M_{soil.U1} := E_{act.U1} \cdot E_{act.U1.loc} + E_{pass.U1} \cdot E_{pass.U1.loc} = 160.42 \cdot kN \cdot m$$

ICE / IMPACT LOADS (ASSUME NO ICE LOADING ON TAILWATER SIDE)

Static Ice load on Gates:

$$I_{G.U1} := \begin{cases} 0\,\frac{kN}{m} & \text{if } TOP_{gg.U1} \le TOC_{as} \\ 75\,\frac{kN}{m} & \text{if } TOP_{gg.U1} > TOC_{as} \end{cases} = 0$$

(Section 7.7, Design Criteria)

Ice Loading Unit Width on Guard Gate: $W_{gg.U1} := 15m$ (Input value for load case)

Total Ice Load on Structure:

$$I_{U1} := -(I_{G.U1} \cdot W_{gg.U1}) = 0 \cdot kN$$

Apply Ice load at:

$$I_{U1.loc} := (TOC_{as} - BOF_{elev}) - 0.3m = 3.70\,m$$

$$\Sigma H_{I.U1} := I_{U1} = 0 \cdot kN$$

$$\Sigma M_{I.U1} := I_{U1} \cdot I_{U1.loc} = 0 \cdot kN \cdot m$$

SEISMIC LOAD (NOT APPLICABLE FOR THIS LOAD CASE)

U1 CASE

SUMMARY OF LOADS

	Loads	Moment Arm
Dead load of Concrete Structure:	$D_{conc} = 24618.6 \cdot kN$	$X_{conc.loc} = 10.06\,m$
Obermyer Gate Weight:	$D_{Gate} = 210.0 \cdot kN$	$X_{gate} = 6.60\,m$
HW Lateral Load on Approach Slab:	$H_{hwas.U1} = -4502.8 \cdot kN$	$H_{hwas.U1.loc} = 0.41\,m$
HW Lateral Load on Guard Gate:	$H_{hwgg.U1} = 0.0 \cdot kN$	$H_{hwgg.U1.loc} = 4.00\,m$
TW Lateral Load on Gate Footing (Including Key - Sliding Check Loads):	$H_{twgk.U1} = 4282.06 \cdot kN$	$H_{twgk.U1.loc} = 0.36\,m$
TW Lateral Load on Guard Gate:	$H_{twgg.U1} = 0.0 \cdot kN$	$H_{twgg.U1.loc} = 4.00\,m$
Vertical HW Load on Approach Slab:	$H_{1.U1} = 2703.9 \cdot kN$	$H_{1.U1.loc} = 14.13\,m$
Vertical TW Load on Pier Footing (crest):	$H_{2.U1} = 2699.2 \cdot kN$	$H_{2.U1.loc} = 5.34\,m$
Uplift:	$U_{S.U1} = -18919.8 \cdot kN$	$U_{S.U1.loc} = 9.76\,m$
Lateral Soil Load (driving):	$E_{act.U1} = -2165.6 \cdot kN$	$E_{act.U1.loc} = 0.00\,m$
Lateral Soil Load (resisting):	$E_{pass.U1} = 240.62 \cdot kN$	$E_{pass.U1.loc} = 0.67\,m$
Ice / Impact Load:	$I_{U1} = 0.0 \cdot kN$	$I_{U1.loc} = 3.70\,m$

STABILITY ASSESSMENT (SLIDNG, BEARING, FLOTATION AND OVERTURNING):

U1 CASE

CHECK SLIDING ALONG HORIZONTAL PLANE THRU TOE, IGNORING BEDROCK MOBILIZED BY STRUCTURAL HEEL KEY, OR VOID BEHIND KEY

Sum of Vertical Forces:

$$\Sigma V_{U1} := \Sigma V_{DL} + \Sigma V_{water.U1} = 11311.8 \cdot kN$$

Sum of Horizontal Forces:

$$\Sigma H_{U1} := \Sigma H_{Water.U1} + \Sigma H_{soil.U1} + \Sigma H_{I.U1} = -2145.71 \cdot kN$$

Sliding Factor of Safety:

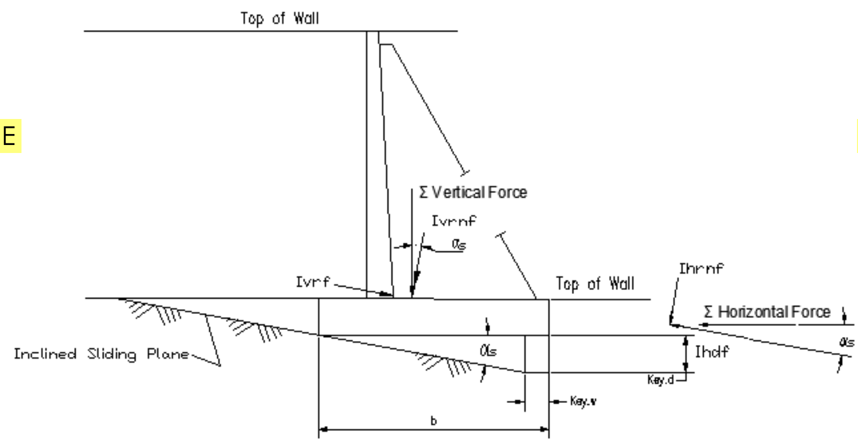
$$FS_{HorizSliding.U1} := \frac{\tan_{\phi} \cdot \Sigma V_{U1}}{\left|\Sigma H_{U1}\right|} = 2.57$$

$$FS_{HorizSliding.U1.Check} := \begin{array}{|l} \text{"OKAY"} \quad \text{if} \quad FS_{HorizSliding.U1} \geq FS_{req.U1.sl} \\ \text{"Horizontal Sliding (No Key or Void Behind Key) Fail ! Revise Structure !"} \quad \text{otherwise} \end{array} = \text{"OKAY"}$$

CHECK SLIDING ALONG INCLINED SLIDING PLANE FROM HEEL KEY TO TOE, WITH BEDROCK MASS MOBILIZED BY REINFOCREDE CONCRETE KEY)

RESISTING SIDE

DRIVING SIDE



TOE

HEEL

Ivrf=Inclined Resisting Force

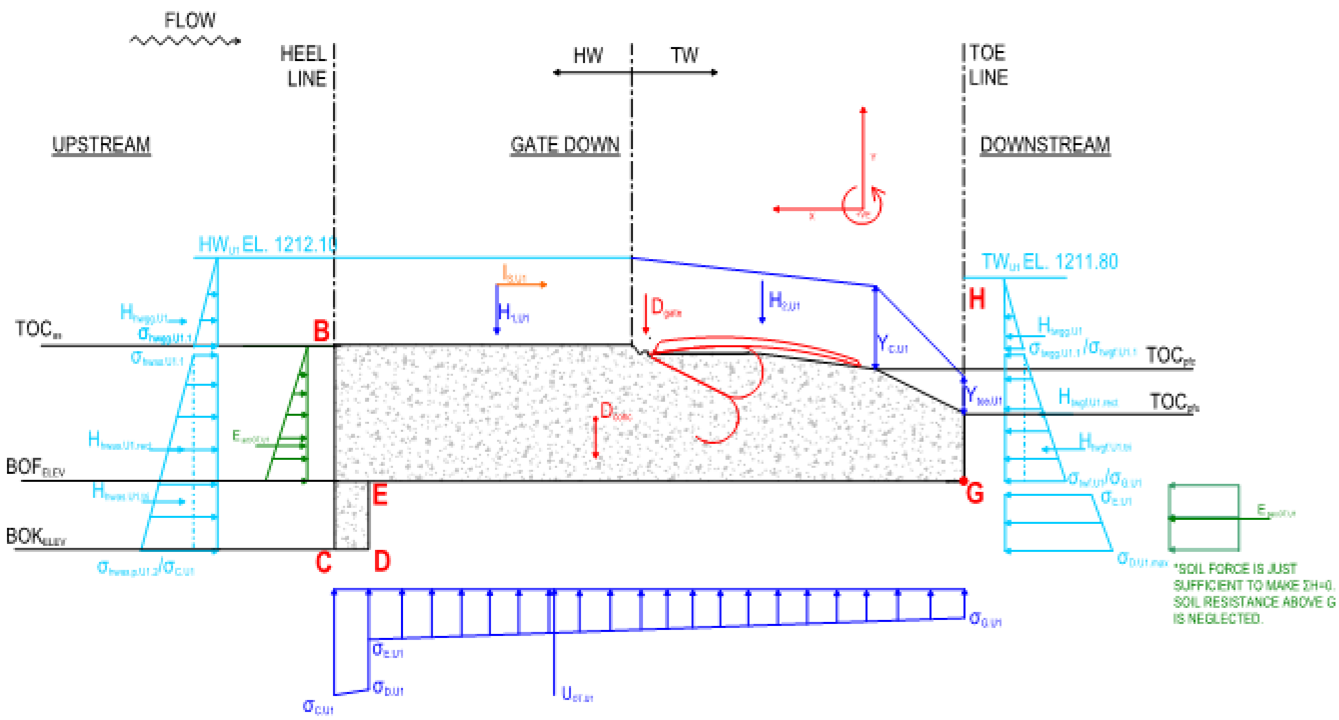
MONOLITH OVERTURNING STABILITY ANALYSIS

U1 CASE

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stability of indeterminate forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1 $Ratio_{OT.U1.min} := 0.33$ Resultant at Middle Third



Uplift Loads for Overturning Stability Analysis

Line of Creep:

Change in Water Head: $\Delta_{h.U1} := HW_{U1} - TW_{U1} = 0.3\,m$

Length from Point C to Point G: $L_{CG} := \sqrt{d_{key}^2 + L_b^2} = 18.61\,m$

Length from Various Points to Points: $L_{CD} := w_{key} = 1\,m$ $L_{DE} := d_{key} = 2\,m$ $L_{EG} := L_b - L_{CD} = 17.5\,m$

$L_{GH.U1} := TW_{U1} - BOF_{elev} = 5.8\,m$

Length from Point C, D, E to G: $L_{CDEG} := L_{CD} + L_{DE} + L_{EG} = 20.5\,m$ $L_{CDE} := L_{CD} + L_{DE} = 3\,m$

Water Pressure at Point C: $\sigma_{C.U1} := \sigma_{hwas.U1.2} = -79.46 \cdot kPa$

Water Pressure at Point G: $\sigma_{G.U1} := \sigma_{twtoe.U1} \cdot -1 = -56.9 \cdot kPa$

Water Pressure at Point D: $\sigma_{D.U1} := -\gamma_w \cdot \left[\left(HW_{U1} - BOK_{elev}\right) - \frac{\Delta_{h.U1} \cdot L_{CD}}{L_{CDEG}}\right] = -79.32 \cdot kPa$

Water Pressure at Point E: $\sigma_{E.U1} := -\gamma_w \cdot \left[\left(HW_{U1} - BOF_{elev}\right) - \frac{\Delta_{h.U1} \cdot L_{CDE}}{L_{CDEG}}\right] = -59.41 \cdot kPa$

Uplift for Overturning Analysis on Bottom of Key: $U_{OT.U1.key} := \frac{\sigma_{C.U1} + \sigma_{D.U1}}{2} \cdot L_{CD} \cdot W_b = -1190.84 \cdot kN$

Acting at: $U_{OT.U1.key.loc} := \frac{L_{CD} \cdot \left(2 \cdot \sigma_{C.U1} + \sigma_{D.U1}\right)}{3\left(\sigma_{C.U1} + \sigma_{D.U1}\right)} + L_{EG} = 18\,m$

U1 CASE

Uplift for Overturning Analysis on Bottom of Footing:

$$U_{OT.U1.ftg} := \frac{\sigma_{E.U1} + \sigma_{G.U1}}{2} \cdot L_{EG} \cdot W_b = -15265.47 \cdot kN$$

Acting at:

$$U_{OT.U1.ftg.loc} := \frac{L_{EG} \cdot \left(\sigma_{G.U1} + 2 \cdot \sigma_{E.U1}\right)}{3\left(\sigma_{G.U1} + \sigma_{E.U1}\right)} = 8.81\,m$$

Uplift Load for Overturning Analysis:

$$U_{OT.U1} := U_{OT.U1.key} + U_{OT.U1.ftg} = -16456.3 \cdot kN$$

Uplift Load Acting from Toe:

$$U_{OT.U1.loc} := \frac{U_{OT.U1.key} \cdot U_{OT.U1.key.loc} + U_{OT.U1.ftg} \cdot U_{OT.U1.ftg.loc}}{U_{OT.U1}} = 9.48\,m$$

All Vertical Loads Applicable to Overturning Stability Analysis

Total Concrete Dead Loads:	$D_{conc} = 24618.6 \cdot kN$	at:	$X_{conc.loc} = 10.06\,m$
Dead Load of Gate:	$D_{Gate} = 210.0 \cdot kN$		$X_{gate} = 6.60\,m$
Water Weight (HW) on Apron Slab:	$H_{1.U1} = 2703.9 \cdot kN$		$H_{1.U1.loc} = 14.13\,m$
Water Weight (TW) on Gate Footing:	$H_{2.U1} = 2699.2 \cdot kN$		$H_{2.U1.loc} = 5.34\,m$
Uplift Load for Overturning Analysis:	$U_{OT.U1} = -16456.3 \cdot kN$		$U_{OT.U1.loc} = 9.48 \cdot m$

Sum of All Overturning Analysis Vertical Load:

$$\Sigma V_{U1.OT} := D_{conc} + D_{Gate} + H_{1.U1} + H_{2.U1} + U_{OT.U1} = 13775.35 \cdot kN$$

Sum of All Overturning Analysis Vertical Load Moments:

$$\Sigma M_{V.U1.OT} := D_{conc} \cdot X_{conc.loc} + D_{Gate} \cdot X_{gate} + H_{1.U1} \cdot H_{1.U1.loc} + H_{2.U1} \cdot H_{2.U1.loc} + U_{OT.U1} \cdot U_{OT.U1.loc} = 145582.24 \cdot kN \cdot m$$

Lateral Tailwater Loads for Overturning Stability Analysis

TW Lateral Load on Gate Footing (No Key - Overturning Values Adjusted):

$$H_{twgf.U1} := H_{twgf.U1.tri} + H_{twgf.U1.rect} = 2236.68 \cdot kN$$

Acting at:

$$H_{twgf.U1.loc} := \frac{\frac{h_{toe}}{3} \cdot H_{twgf.U1.tri} + \frac{h_{toe}}{2} \cdot H_{twgf.U1.rect}}{H_{twgf.U1}} = 1.65\,m$$

Horizontal Tailwater Pressure Top of Key (Overturning Analysis):

$$\sigma_{twtk.OT.U1} := \sigma_{E.U1} \cdot -1 = 59.41 \cdot kPa$$

Horizontal Tailwater Pressure Bottom of Key (Overturning Analysis):

$$\sigma_{twbk.OT.U1} := \sigma_{D.U1} \cdot -1 = 79.32 \cdot kPa$$

Triangular Distribution Unit Load Acting at Key:

$$H_{twbk.OT.U1.tri} := \frac{\left(\sigma_{twbk.OT.U1} - \sigma_{twtk.OT.U1}\right)}{2} \cdot d_{key} \cdot W_{tw.U1} = 298.61 \cdot kN$$

Triangular Distribution Unit Load Acting at Key:

$$H_{twbk.OT.U1.rect} := \sigma_{twtk.OT.U1} \cdot d_{key} \cdot W_{tw.U1} = 1782.31 \cdot kN$$

Total Horizontal Tailwater Load on Key (Overturning Values Adjusted):

$$H_{twkey.OT.U1} := H_{twbk.OT.U1.tri} + H_{twbk.OT.U1.rect} = 2080.92 \cdot kN$$

Acting at:

$$H_{twkey.OT.U1.loc} := \frac{H_{twbk.OT.U1.tri} \cdot \frac{-2 \cdot d_{key}}{3} + H_{twbk.OT.U1.rect} \cdot \frac{-d_{key}}{2}}{H_{twkey.OT.U1}} = -1.05\,m$$

Lateral Driving Earth Loads for Overturning Stability Analysis (at rest condition)

U1 CASE

Depth of Driving Soil Loads (to top of key): $h_{E.OT.U1} := TOC_{as} - BOF_{elev} = 4\,m$

At-Rest Soil Load: $E_{act.OT.U1} := \frac{K_{o.U1} \cdot h_{E.OT.U1}^{2}}{2} \cdot (\gamma_r - \gamma_w) \cdot W_{hwas.U1} \cdot -1 = -962.49 \cdot kN$

At Rest- Soil Load Acting from Toe: $E_{act.OT.U1.loc} := \frac{h_{E.OT.U1}}{3} = 1.33\,m$

All Lateral Loads Applicable to Overturning Stability Analysis

HW Lateral Load on Approach Slab:	$H_{hwas.U1} = -4502.8 \cdot kN$	$H_{hwas.U1.loc} = 0.41\,m$
HW Lateral Load on Guard Gate:	$H_{hwgg.U1} = 0.0 \cdot kN$	$H_{hwgg.U1.loc} = 4.00\,m$
TW Lateral Load on Guard Gate:	$H_{twgg.U1} = 0.0 \cdot kN$	$H_{twgg.U1.loc} = 4.00\,m$
TW Lateral Load on Gate Footing (No Key - Overturning Values Adjusted):	$H_{twgf.U1} = 2236.68 \cdot kN$	$H_{twgf.U1.loc} = 1.65\,m$
TW Lateral Load on Key:	$H_{twkey.OT.U1} = 2080.92 \cdot kN$	$H_{twkey.OT.U1.loc} = -1.05\,m$
Ice / Impact Load:	$I_{U1} = 0.0 \cdot kN$	$I_{U1.loc} = 3.70\,m$
Lateral Soil Load (driving):	$E_{act.OT.U1} = -962.5 \cdot kN$	$E_{act.OT.U1.loc} = 1.33\,m$

Resisting Lateral Soil Load as required to produce horizontal equilibrium:

$$E_{pas.OT.U1} := -(H_{hwas.U1} + H_{hwgg.U1} + H_{twgg.U1} + H_{twgf.U1} + H_{twkey.OT.U1} + I_{U1} + E_{act.OT.U1}) = 1147.69 \cdot kN$$

Acting at:

$$E_{pas.OT.U1.loc} := -1 \cdot \frac{d_{key}}{2} = -1\,m$$

Sum of All Overturning Analysis Horizontal Load (ΣH=0):

$$\Sigma H_{U1.OT} := H_{hwas.U1} + H_{hwgg.U1} + H_{twgg.U1} + H_{twgf.U1} + H_{twkey.OT.U1} + I_{U1} + E_{act.OT.U1} + E_{pas.OT.U1} = 0 \cdot kN$$

Sum of All Overturning Analysis Horizontal Load Moments:

$$\Sigma M_{H.U1.OT} := H_{hwas.U1} \cdot H_{hwas.U1.loc} + H_{hwgg.U1} \cdot H_{hwgg.U1.loc} + H_{twgg.U1} \cdot H_{twgg.U1.loc} + H_{twgf.U1} \cdot H_{twgf.U1.loc} \cdots + H_{twkey.OT.U1} \cdot H_{twkey.OT.U1.loc} + I_{U1} \cdot I_{U1.loc} + E_{act.OT.U1} \cdot E_{act.OT.U1.loc} + E_{pas.OT.U1} \cdot E_{pas.OT.U1.loc} = -2776.99 \cdot kN \cdot m$$

Overturning Stability Analysis

$$\Sigma M_{U1.OT} := \Sigma M_{V.U1.OT} + \Sigma M_{H.U1.OT} = 142805.25 \cdot kN \cdot m$$

$$X_{R.U1} := \frac{\Sigma M_{U1.OT}}{\Sigma V_{U1.OT}} = 10.37\,m \qquad x_{OT.U1} := X_{R.U1} - \frac{L_b}{2} = 1.12\,m$$

Overturning Resultant Ratio $Ratio_{OT.U1} := \frac{X_{R.U1}}{L_b} = 0.56$

$$Ratio_{OT.U1.check} := \begin{cases} \text{"OKAY"} & \text{if } Ratio_{OT.U1} \geq Ratio_{OT.U1.min} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

$$x_{OT.check.U1} := \begin{cases} \text{"OKAY"} & \text{if } |x_{OT.U1}| \leq Kern \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

CHECK FOUNDATION BEARING CAPACITY (HORIZONTAL PLANE):

U1 CASE

Bearing Pressure Under Toe:

$$\sigma_{ToeU1.OT} := \frac{\Sigma V_{U1.OT}}{L_b \cdot W_b} + \frac{\left(\Sigma V_{U1.OT} \cdot x_{OT.U1}\right)}{S_b} = 67.6 \cdot kPa$$

$$Bearing_{ChecktoeU1.OT} := \begin{vmatrix} \text{"OKAY "} & \text{if} \quad \sigma_{ToeU1.OT} < \sigma_{allow.U1} \\ \text{"NG""} & \text{otherwise} \end{vmatrix} = \text{"OKAY "}$$

Bearing Pressure Under Heel:

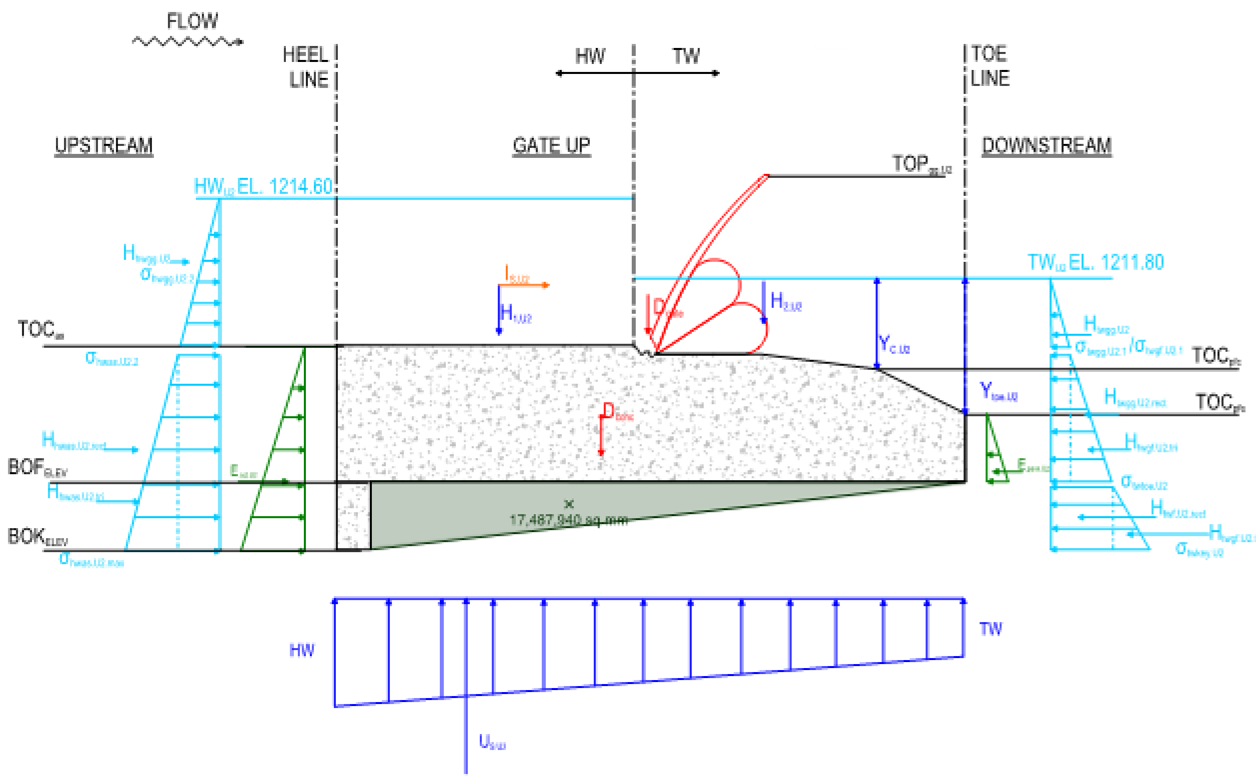
$$\sigma_{HeelU1.OT} := \frac{\Sigma V_{U1.OT}}{L_b \cdot W_b} - \frac{\left(\Sigma V_{U1.OT} \cdot x_{OT.U1}\right)}{S_b} = 31.7 \cdot kPa$$

$$Bearing_{CheckheelU1.OT} := \left(\begin{vmatrix} \text{"OKAY "} & \text{if} \quad \sigma_{HeelU1.OT} < \sigma_{allow.U1} \wedge \sigma_{HeelU1.OT} > 0 \\ \text{"NG""} & \text{otherwise} \end{vmatrix} \right) = \text{"OKAY "}$$

SUMMARY OF STABILITY ASSESSMENT:

Sliding Factor of Safety: (Horizontal Plane)	$FS_{HorizSliding.U1} = 2.57$	$FS_{HorizSliding.U1.Check} = \text{"OKAY"}$
Sliding Factor of Safety: (Inclined Plane)	$FS_{InclinedlSlidingU1} = 43.82$	$FS_{InclinedSliding.check.U1} = \text{"OKAY "}$
Eccentricity: (Inclined Plane)	$e_{U1} = -1.39\,m$	$e_{check.U1} = \text{"Okay"}$
Bearing Pressure At Heel: (Inclined Plane)	$\sigma_{heel.U1} = 89 \cdot kPa$	$\sigma_{heel.U1.check} = \text{"Okay"}$
Bearing Pressure At Toe: (Inclined Plane)	$\sigma_{toe.U1} = 34 \cdot kPa$	$\sigma_{toe.U1.1.check} = \text{"Okay"}$
Flotation Factor of Safety (horizontal plane)	$FS_{act.FU1} = 1.6$	$FS_{check.FU1} = \text{"OKAY"}$
Overturning Resultant Ratio: (horizontal plane)	$Ratio_{OT.U1} = 0.56$	$Ratio_{OT.U1.check} = \text{"OKAY"}$
Eccentricity: (horizontal plane)	$x_{OT.U1} = 1.12\,m$	$x_{OT.check.U1} = \text{"OKAY"}$
Bearing Pressure At Heel: (horizontal plane)	$\sigma_{HeelU1.OT} = 32 \cdot kPa$	$Bearing_{CheckheelU1.OT} = \text{"OKAY "}$
Bearing Pressure At Toe: (horizontal plane)	$\sigma_{ToeU1.OT} = 68 \cdot kPa$	$Bearing_{ChecktoeU1.OT} = \text{"OKAY "}$

U2 DESIGN CASE



ACCEPTANCE PARAMETERS

Required Factor of Safety for Sliding: $FS_{req.U2.sl} := 1.5$ (Without Cohesion) (Section 8.1, Design Criteria)

Resultant Within Middle Third of Base: $e \le \frac{L_b}{6} \wedge e \ge \frac{-L_b}{6}$

Allowable Rock Bearing Pressure: $\sigma_{allow.U2} := 1270 \cdot \frac{kN}{m^2}$ (Section 5.2, Design Criteria)

INPUT PARAMETERS

Headwater Elevation: $HW_{U2} := 1214.60m$ (Section 8.3, Design Criteria)

Tailwater Elevation: $TW_{U2} := 1211.80m$ (Section 8.3, Design Criteria)

Bottom of Footing Elevation: $BOF_{elev} = 1206\,m$

Approach Slab Top of Concrete Elevation at Upstream Face: $TOC_{as} = 1210\,m$

Footing Top of Concrete Elevation at Stilling Basin: $TOC_{pfe} = 1208\,m$

Footing Top of Concrete Elevation at Center of Footing: $TOC_{pfc} = 1209.3\,m$

Top of Guard/Regulating Gate Elevation: $TOP_{rg.U2} := 1212.1m$ $\quad TOP_{gg.U2} := 1215.00m$

Gates are open when top of gate elevation is at 1210.00m

Gates are closed/up when top of gate elevation is at 1215.0m

Bottom of Key Elevation: $BOK_{elev} = 1204\,m$

Crestwater Elevation: Dynamic Flow $EL_{C.U2} := 1211.80m$

$$Y_{C.U2} := \begin{cases} (EL_{C.U2} - TOC_{pfc}) & \text{if } TOP_{gg.U2} \le HW_{U2} \\ (TW_{U2} - TOC_{pfc}) & \text{if } TOP_{gg.U2} > HW_{U2} \end{cases} = 2.5 \cdot m$$

Toewater Elevation: $EL_{TOE.U2} := 1211.80m$

$$Y_{TOE.U2} := \begin{cases} (EL_{TOE.U2} - TOC_{pfe}) & \text{if } TOP_{gg.U2} \le HW_{U2} \\ (TW_{U2} - TOC_{pfe}) & \text{if } TOP_{gg.U2} > HW_{U2} \end{cases} = 3.8 \cdot m$$

LATERAL WATER LOADS

U2 CASE

HEADWATER (APPROACH SLAB DRIVING):

Headwater Depth on Gate: $D_{hwg.U2} := HW_{U2} - TOC_{as} = 4.60\,m$

Thickness of Approach Slab (Including Key): $T_{as} = 6\,m$

Headwater Depth at Heel (U/S face): $D_{hwas.U2} := HW_{U2} - BOK_{elev} = 10.60\,m$

Headwater Load Unit Width on Approach Slab: $W_{hwas.U2} := W_b = 15.00\,m$

Headwater Unit Load At Top of Approach Slab:

$$H_{hwas.U2.1} := \frac{-\left(\gamma_w \cdot D_{hwg.U2}^{\;2}\right)}{2} \cdot W_{hwas.U2} = -1556.85 \cdot kN$$

Headwater Unit Load At Bottom of Approach Key:

$$H_{hwas.U2.2} := \frac{-\left(\gamma_w \cdot D_{hwas.U2}^{\;2}\right)}{2} \cdot W_{hwas.U2} = -8266.9 \cdot kN$$

Headwater Line Load At Top of Approach Slab:

$$\sigma_{hwas.U2.1} := -\left(\gamma_w \cdot D_{hwg.U2}\right) = -45.13 \cdot kPa$$

Headwater Line Load At Bottom of Approach Key:

$$\sigma_{hwas.U2.2} := -\left(\gamma_w \cdot D_{hwas.U2}\right) = -103.99 \cdot kPa$$

Triangular Distribution Unit Load on Approach Slab and Key:

$$H_{hwas.U2.2.tri} := \left(\frac{\sigma_{hwas.U2.2} - \sigma_{hwas.U2.1}}{2}\right) \cdot \left(T_{as} \cdot W_{hwas.U2}\right) = -2648.7 \cdot kN$$

Rectangular Distribution Unit Load on Approach Slab and Key:

$$H_{hwas.U2.2.rect} := \sigma_{hwas.U2.1} \cdot \left(T_{as} \cdot W_{hwas.U2}\right) = -4061.34 \cdot kN$$

Total Horizontal Headwater Load on Approach Slab:

$$H_{hwas.U2} := H_{hwas.U2.2.tri} + H_{hwas.U2.2.rect} = -6710.04 \cdot kN$$

Apply Total Footing Headwater Load at:

$$H_{hwas.U2.loc} := \frac{\left(H_{hwas.U2.2.rect} \cdot \frac{T_{as}}{2} + H_{hwas.U2.2.tri} \cdot \frac{T_{as}}{3}\right)}{H_{hwas.U2.2.tri} + H_{hwas.U2.2.rect}} - d_{key} = 0.61\,m$$

LATERAL WATER LOADS (continued)

U2 CASE

Guard Gate (2A) Operating Condition:

Guard Gate Down/Open Condition: $A1_{U2} := TOP_{gg.U2} \le TOC_{as}$

Guard Crest Gate Up/Closed, with Top of Gate Higher than HW Elevation: $B1_{U2} := TOP_{gg.U2} \ge HW_{U2} \wedge TOP_{gg.U2} > TOC_{as}$

Guard Crest Gate Up/Closed, with Top of Gate Lower than HW Elevation: $C1_{U2} := TOP_{gg.U2} > TOC_{as} \wedge HW_{U2} > TOP_{gg.U2}$

Guard Crest Gate Height: $H_{gg.U2} := TOP_{gg.U2} - TOC_{as} = 5\,m$

Headwater Depth at Guard Crest Gate: $D_{hwgg.U2} := HW_{U2} - TOC_{as} = 4.60\,m$

Guard Crest Gate Width: $W_{hwgg.U2} := 15.00m$

Lateral Headwater Pressure at Bottom of Guard Crest Gate:

$$\sigma_{hwgg.U2.1} := \begin{cases} (0.0kPa) & \text{if } A1_{U2} \\ -(\gamma_w \cdot D_{hwgg.U2}) & \text{if } B1_{U2} \\ -(\gamma_w \cdot D_{hwgg.U2}) & \text{if } C1_{U2} \end{cases} = -45.1 \cdot kPa$$

Lateral Headwater Pressure at Top of Guard Crest Gate: (Load at HW Elevation On Guard Crest Gate if HW is below TOG_{rg})

$$\sigma_{hwgg.U2.2} := \begin{cases} (0.0kPa) & \text{if } A1_{U2} \\ 0.0kPa & \text{if } B1_{U2} \\ -\left[\gamma_w \cdot (HW_{U2} - TOP_{gg.U2})\right] & \text{if } C1_{U2} \end{cases} = 0.0 \cdot kPa$$

Average Pressure acting on Guard Crest Gate:

$$\sigma_{hwgg.U2.avg} := \frac{(\sigma_{hwgg.U2.1} + \sigma_{hwgg.U2.2})}{2} = -22.56 \cdot kPa$$

Total Area of Crest Gate:

$$A_{hwgg.U2} := \begin{cases} D_{hwgg.U2} \cdot W_{hwgg.U2} & \text{if } A1_{U2} \\ D_{hwgg.U2} \cdot W_{hwgg.U2} & \text{if } B1_{U2} \\ H_{gg.U2} \cdot W_{hwgg.U2} & \text{if } C1_{U2} \end{cases} = 69 \cdot m^2$$

Total Horizontal Headwater Load on Guard Crest Gate: $H_{hwgg.U2} := \sigma_{hwgg.U2.avg} \cdot A_{hwgg.U2} = -1556.8 \cdot kN$

Apply Total Guard Crest Gate Headwater Load at:

$$H_{hwgg.U2.loc} := \begin{cases} (TOC_{as} - BOF_{elev}) & \text{if } A1_{U2} \\ \left[\frac{(HW_{U2} - TOC_{as})}{3} + (TOC_{as} - BOF_{elev})\right] & \text{if } B1_{U2} \\ \left[\frac{\sigma_{hwgg.U2.2} \cdot A_{hwgg.U2} \cdot \frac{(H_{gg.U2})}{2} + \frac{(\sigma_{hwgg.U2.1} - \sigma_{hwgg.U2.2})}{2} A_{hwgg.U1} \cdot \frac{(H_{gg.U2})}{3}}{\sigma_{hwgg.U2.2} \cdot A_{hwgg.U2} + \frac{(\sigma_{hwgg.U2.1} - \sigma_{hwgg.U2.2})}{2} \cdot A_{hwgg.U1}} \cdots \\ + (TOC_{as} - BOF_{elev})\right] & \text{if } C1_{U2} \end{cases} = 5.5 \cdot m$$

LATERAL TAILWATER (RESISTING) Applied to Downstream Side of Guard Crest Gate: U2 CASE

Guard Gate Down/Open Condition: $A2_{U2} := TOP_{gg.U2} \le TOC_{as}$

Guard Crest Gate Up/Closed, with Top of Gate Higher than TW Elevation: $B2_{U2} := TOP_{gg.U2} \ge TW_{U2} \wedge TOP_{gg.U2} > TOC_{as}$

Guard Crest Gate Up/Closed, with Top of Gate Lower than TW Elevation: $C2_{U2} := TOP_{gg.U2} > TOC_{as} \wedge TW_{U2} > TOP_{gg.U2}$

Tailwater Depth at Guard Crest Gate: $D_{twgg.U2} := TW_{U2} - TOC_{as} = 1.80\,m$

Guard Crest Gate Width: $W_{twgg.U2} := 15.00m$

Lateral Water Load at Bottom of Guard Crest Gate:

$$\sigma_{twgg.U2.1} := \begin{cases} (0.0kPa) & \text{if } A2_{U2} \\ (\gamma_w \cdot D_{twgg.U2}) & \text{if } B2_{U2} \\ (\gamma_w \cdot D_{twgg.U2}) & \text{if } C2_{U2} \end{cases} = 17.7 \cdot kPa$$

Lateral Water Load at Top of Guard Crest Gate:
(Load at TW Elevation On Guard Crest Gate if TW is below TOG_{gg})

$$\sigma_{twgg.U2.2} := \begin{cases} (0.0kPa) & \text{if } A2_{U2} \\ 0.0kPa & \text{if } B2_{U2} \\ \left[\gamma_w \cdot (TW_{U2} - TOP_{gg.U2})\right] & \text{if } C2_{U2} \end{cases} = 0.0 \cdot kPa$$

Average Pressure acting on Guard Crest Gate:

$$\sigma_{twgg.U2.avg} := \frac{(\sigma_{twgg.U2.1} + \sigma_{twgg.U2.2})}{2} = 8.83 \cdot kPa$$

Total Area water acting on Crest Gate:

$$A_{twgg.U2} := \begin{cases} D_{twgg.U2} \cdot W_{twgg.U2} & \text{if } A2_{U2} \\ D_{twgg.U2} \cdot W_{twgg.U2} & \text{if } B2_{U2} \\ H_{gg.U2} \cdot W_{twgg.U2} & \text{if } C2_{U2} \end{cases} = 27 \cdot m^2$$

Total Horizontal Tailwater Load on Guard Crest Gate: $H_{twgg.U2} := \sigma_{twgg.U2.avg} \cdot A_{twgg.U2} = 238.4 \cdot kN$

Apply Total Horiz. TW Load on Guard Gate at:

$$H_{twgg.U2.loc} := \begin{cases} (TOC_{as} - BOF_{elev}) & \text{if } A2_{U2} \\ \left[\frac{(TW_{U2} - TOC_{as})}{3} + (TOC_{as} - BOF_{elev})\right] & \text{if } B2_{U2} \\ \left[\frac{\sigma_{twgg.U2.2} \cdot A_{twgg.U2} \cdot \frac{(H_{gg.U2})}{2} + \frac{(\sigma_{twgg.U2.1} - \sigma_{twgg.U2.2})}{2} A_{twgg.U2} \cdot \frac{(H_{gg.U2})}{3}}{\sigma_{twgg.U2.2} \cdot A_{twgg.U2} + \frac{(\sigma_{twgg.U2.1} - \sigma_{twgg.U2.2})}{2} \cdot A_{twgg.U2}} \ldots \\ + (TOC_{as} - BOF_{elev})\right] & \text{if } C2_{U2} \end{cases} = 4.6 \cdot m$$

TAILWATER (RESISTING) Applied to Concrete Structure:

Tailwater Depth At top of Gate Base Footing Elevation: $D_{twgf.U2} := TW_{U2} - TOC_{as} = 1.80\,m$

Water Depth at bottom of Gate Base Footing: $D_{twtoe.U2} := TW_{U2} - BOF_{elev} = 5.80\,m$

Footing Thickness at Toe $h_{toe} = 4\,m$

Unit Width of D/S face of crest for application of Tailwater Load: $W_{tw.U2} := W_b = 15.00\,m$

Tailwater Pressure At Top of Gate Footing: $\sigma_{twgf.U2} := \left(\gamma_w \cdot D_{twgf.U2}\right) = 17.66 \cdot kPa$

Tailwater Line Load At Bottom of Gate Footing: $\sigma_{twtoe.U2} := \left(\gamma_w \cdot D_{twtoe.U2}\right) = 56.9 \cdot kPa$

Triangular Distribution Unit Load on Gate Footing Base:

$$H_{twgf.U2.tri} := \left(\frac{\sigma_{twtoe.U2} - \sigma_{twgf.U2}}{2}\right) \cdot \left(h_{toe} \cdot W_{tw.U2}\right) = 1177.2 \cdot kN$$

Rectangular Distribution Unit Load on Gate Footing Base:

$$H_{twgf.U2.rect} := \sigma_{twgf.U2} \cdot \left(h_{toe} \cdot W_{tw.U2}\right) = 1059.48 \cdot kN$$

Tailwater Pressure At Bottom of Sliding Failure Plane:

$$\sigma_{twbk.U2} := \left(HW_{U2} - BOK_{elev}\right) \cdot \gamma_w = 103.99 \cdot kPa$$

Triangular Distribution Unit Load Below Footing:

$$H_{twbk.U2.tri} := \frac{\left(\sigma_{twbk.U2} - \sigma_{twtoe.U2}\right)}{2} \cdot d_{key} \cdot W_{tw.U2} = 706.32 \cdot kN$$

Rectangular Distribution Load Below Footing Base:

$$H_{twbk.U2.rect} := \sigma_{twtoe.U2} \cdot d_{key} \cdot W_{tw.U2} = 1706.94 \cdot kN$$

Total Horizontal Tailwater Load on Gate Footing (including key):

$$H_{twgk.U2} := H_{twgf.U2.tri} + H_{twgf.U2.rect} + H_{twbk.U2.tri} + H_{twbk.U2.rect} = 4649.94 \cdot kN$$

Apply Total Gate Footing Tailwater Load at:

$$H_{twgk.U2.loc} := \frac{\left[H_{twgf.U2.rect} \cdot \frac{\left(h_{toe}\right)}{2} + H_{twgf.U2.tri} \cdot \frac{\left(h_{toe}\right)}{3} + H_{twbk.U2.tri} \cdot \left(-d_{key} \cdot \frac{2}{3}\right) + H_{twbk.U2.rect} \cdot \left(\frac{-d_{key}}{2}\right)\right]}{H_{twgf.U2.tri} + H_{twgf.U2.rect} + H_{twbk.U2.tri} + H_{twbk.U2.rect}} = 0.22\,m$$

SUMMATION OF LATERAL WATER LOADS:

$$\Sigma H_{Water.U2} := H_{hwas.U2} + H_{hwgg.U2} + H_{twgk.U2} + H_{twgg.U2} = -3378.56 \cdot kN$$

$$\Sigma M_{Hwater.U2} := H_{hwas.U2} \cdot H_{hwas.U2.loc} + H_{hwgg.U2} \cdot H_{hwgg.U2.loc} \cdots + H_{twgk.U2} \cdot H_{twgk.U2.loc} + H_{twgg.U2} \cdot H_{twgg.U2.loc} = -10539.47 \cdot kN \cdot m$$

VERTICAL WATER LOADS

U2 CASE

HEADWATER:

Water Depth on top of Approach Slab: $d_{hw.U2} := HW_{U2} - TOC_{as} = 4.60\,m$

Length of Approach Slab: $L_{as} = 8.75\,m$

Width of Approach Slab: $w_{as} = 15.00\,m$

Vertical Water Weight (H1) on Approach Slab: $H_{1.U2} := \left(w_{as} \cdot d_{hw.U2} \cdot L_{as}\right) \cdot \gamma_w = 5922.8 \cdot kN$

Moment Arm for Application of Water Weight (H1) from toe: $H_{1.U2.loc} := L_b - \dfrac{L_{as}}{2} = 14.13\,m$

TAILWATER:

Trapezoid Volume Above Gate Footing from Approach Slab to Crest: $V_{asc.U2} := \left(L_{gf} - L_{gfc}\right) W_b \dfrac{d_{hw.U2} + Y_{C.U2}}{2} = 380.74 \cdot m^3$
