U2 CASE

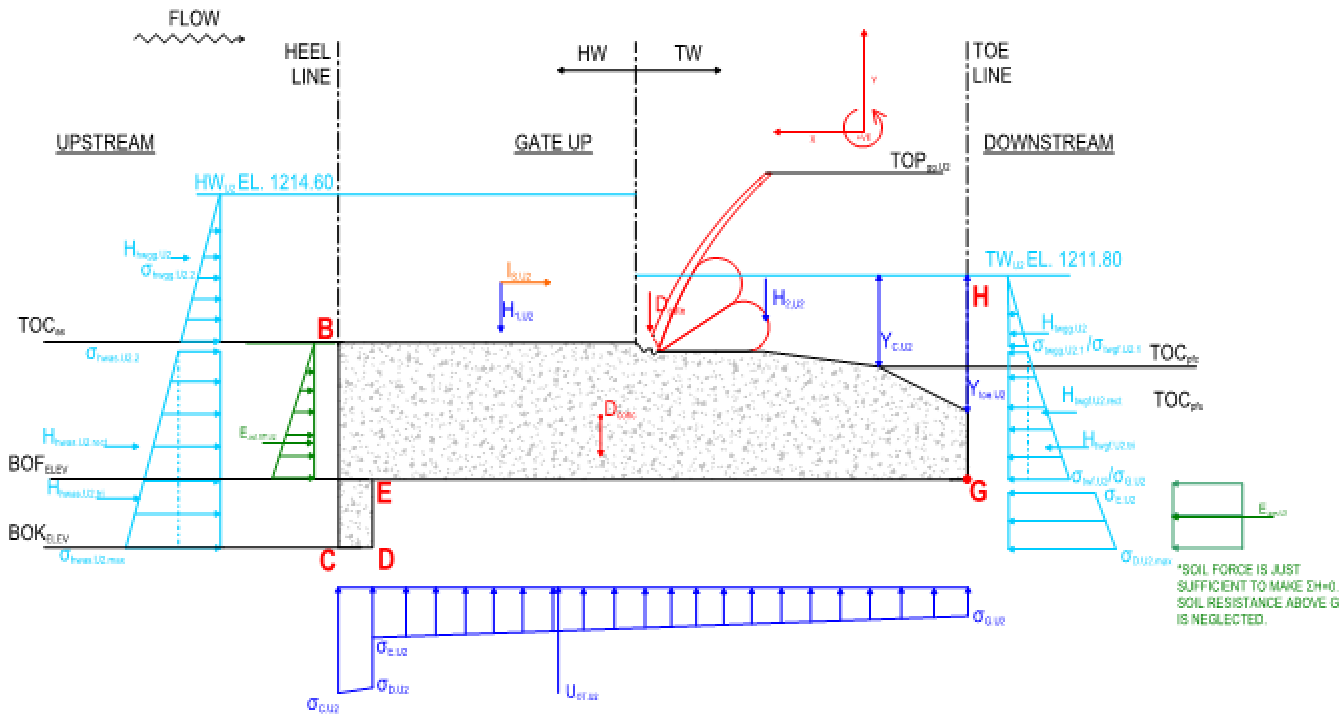
MONOLITH OVERTURNING STABILITY ANALYSIS

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stability of indeterminate forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1 $Ratio_{OT.U2.min} := 0.33$ Resultant at Middle Third



Uplift Loads for Overturning Stability Analysis

Line of Creep:

Change in Water Head: $\Delta_{h.U2} := HW_{U2} - TW_{U2} = 2.8\,m$

Length from Point C to Point G: $L_{CG} = 18.61\,m$

Length from Various Points to Points: $L_{CD} = 1\,m$ $L_{DE} = 2\,m$ $L_{EG} = 17.5\,m$

$L_{GH.U2} := TW_{U2} - BOF_{elev} = 5.8\,m$

Length from Point C, D, E to G: $L_{CDEG} = 20.5\,m$ $L_{CDE} = 3\,m$

Water Pressure at Point C: $\sigma_{C.U2} := \sigma_{hwas.U2.2} = -103.99 \cdot kPa$

Water Pressure at Point G: $\sigma_{G.U2} := \sigma_{twtoe.U2} \cdot -1 = -56.9 \cdot kPa$

Water Pressure at Point D: $$\sigma_{D.U2} := -\gamma_w \cdot \left[\left(HW_{U2} - BOK_{elev}\right) - \frac{\Delta_{h.U2} \cdot L_{CD}}{L_{CDEG}}\right] = -102.65 \cdot kPa$$

Water Pressure at Point E: $$\sigma_{E.U2} := -\gamma_w \cdot \left[\left(HW_{U2} - BOF_{elev}\right) - \frac{\Delta_{h.U2} \cdot L_{CDE}}{L_{CDEG}}\right] = -80.35 \cdot kPa$$

Uplift for Overturning Analysis on Bottom of Key: $$U_{OT.U2.key} := \frac{\sigma_{C.U2} + \sigma_{D.U2}}{2} \cdot L_{CD} \cdot W_b = -1549.74 \cdot kN$$

Acting at: $$U_{OT.U2.key.loc} := \frac{L_{CD} \cdot \left(2 \cdot \sigma_{C.U2} + \sigma_{D.U2}\right)}{3\left(\sigma_{C.U2} + \sigma_{D.U2}\right)} + L_{EG} = 18\,m$$

U2 CASE

Uplift for Overturning Analysis on Bottom of Footing:

$$U_{OT.U2.ftg} := \frac{\sigma_{E.U2} + \sigma_{G.U2}}{2} \cdot L_{EG} \cdot W_b = -18013.31 \cdot kN$$

Acting at:

$$U_{OT.U2.ftg.loc} := \frac{L_{EG} \cdot \left(\sigma_{G.U2} + 2 \cdot \sigma_{E.U2}\right)}{3\left(\sigma_{G.U2} + \sigma_{E.U2}\right)} = 9.25\,m$$

Uplift Load for Overturning Analysis:

$$U_{OT.U2} := U_{OT.U2.key} + U_{OT.U2.ftg} = -19563.05 \cdot kN$$

Uplift Load Acting from Toe:

$$U_{OT.U2.loc} := \frac{U_{OT.U2.key} \cdot U_{OT.U2.key.loc} + U_{OT.U2.ftg} \cdot U_{OT.U2.ftg.loc}}{U_{OT.U2}} = 9.94\,m$$

<u>All Vertical Loads Applicable to Overturning Stability Analysis</u>

Total Concrete Dead Loads:	$D_{conc} = 24618.6 \cdot kN$	at:	$X_{conc.loc} = 10.06\,m$
Dead Load of Gate:	$D_{Gate} = 210.0 \cdot kN$		$X_{gate} = 6.60\,m$
Water Weight (HW) on Apron Slab:	$H_{1.U2} = 5922.8 \cdot kN$		$H_{1.U2.loc} = 14.13\,m$
Water Weight (TW) on Gate Footing:	$H_{2.U2} = 4940.2 \cdot kN$		$H_{2.U2.loc} = 5.23\,m$
Uplift Load for Overturning Analysis:	$U_{OT.U2} = -19563.05 \cdot kN$		$U_{OT.U2.loc} = 9.94 \cdot m$

Sum of All Overtuming Analysis Vertical Load:

$$\Sigma V_{U2.OT} := D_{conc} + D_{Gate} + H_{1.U2} + H_{2.U2} + U_{OT.U2} = 16128.53 \cdot kN$$

Sum of All Overtuming Analysis Vertical Load Moments:

$$\Sigma M_{V.U2.OT} := D_{conc} \cdot X_{conc.loc} + D_{Gate} \cdot X_{gate} + H_{1.U2} \cdot H_{1.U2.loc} + H_{2.U2} \cdot H_{2.U2.loc} + U_{OT.U2} \cdot U_{OT.U2.loc} = 163952.61 \cdot kN \cdot m$$

<u>Lateral Tailwater Loads for Overturning Stability Analysis</u>

TW Lateral Load on Gate Footing (No Key - Overturning Values Adjusted):

$$H_{twgf.U2} := H_{twgf.U2.tri} + H_{twgf.U2.rect} = 2236.68 \cdot kN$$

Acting at:

$$H_{twgf.U2.loc} := \frac{\frac{h_{toe}}{3} \cdot H_{twgf.U2.tri} + \frac{h_{toe}}{2} \cdot H_{twgf.U2.rect}}{H_{twgf.U2}} = 1.65\,m$$

Horizontal Tailwater Pressure Top of Key (Overturning Analysis):

$$\sigma_{twtk.OT.U2} := \sigma_{E.U2} \cdot -1 = 80.35 \cdot kPa$$

Horizontal Tailwater Pressure Bottom of Key (Overturning Analysis):

$$\sigma_{twbk.OT.U2} := \sigma_{D.U2} \cdot -1 = 102.65 \cdot kPa$$

Triangular Distribution Unit Load Acting at Key:

$$H_{twbk.OT.U2.tri} := \frac{\left(\sigma_{twbk.OT.U2} - \sigma_{twtk.OT.U2}\right)}{2} \cdot d_{key} \cdot W_{tw.U2} = 334.5 \cdot kN$$

Triangular Distribution Unit Load Acting at Key:

$$H_{twbk.OT.U2.rect} := \sigma_{twtk.OT.U2} \cdot d_{key} \cdot W_{tw.U2} = 2410.39 \cdot kN$$

Total Horizontal Tailwater Load on Key (Overturning Values Adjusted):

$$H_{twkey.OT.U2} := H_{twbk.OT.U2.tri} + H_{twbk.OT.U2.rect} = 2744.89 \cdot kN$$

Acting at:

$$H_{twkey.OT.U2.loc} := \frac{H_{twbk.OT.U2.tri} \cdot \frac{-2 \cdot d_{key}}{3} + H_{twbk.OT.U2.rect} \cdot \frac{-d_{key}}{2}}{H_{twkey.OT.U2}} = -1.04 \cdot m$$

U2 CASE

Lateral Driving Earth Loads for Overturning Stability Analysis (at rest condition)

Depth of Driving Soil Loads (to top of key): $h_{E.OT.U2} := TOC_{as} - BOF_{elev} = 4\,m$

At-Rest Soil Load: $E_{act.OT.U2} := \frac{\left(K_{o.U2} \cdot h_{E.OT.U2}^{2}\right)}{2} \cdot \left(\gamma_r - \gamma_w\right) \cdot W_{hwas.U2} \cdot -1 = -962.49 \cdot kN$

At Rest- Soil Load Acting from Toe: $E_{act.OT.U2.loc} := \frac{h_{E.OT.U2}}{3} = 1.33\,m$

All Lateral Loads Applicable to Overturning Stability Analysis

HW Lateral Load on Approach Slab:	$H_{hwas.U2} = -6710.0 \cdot kN$	$H_{hwas.U2.loc} = 0.61\,m$
HW Lateral Load on Guard Gate:	$H_{hwgg.U2} = -1556.8 \cdot kN$	$H_{hwgg.U2.loc} = 5.53\,m$
TW Lateral Load on Guard Gate:	$H_{twgg.U2} = 238.4 \cdot kN$	$H_{twgg.U2.loc} = 4.60\,m$
TW Lateral Load on Gate Footing (No Key - Overturning Values Adjusted):	$H_{twgf.U2} = 2236.68 \cdot kN$	$H_{twgf.U2.loc} = 1.65\,m$
TW Lateral Load on Key:	$H_{twkey.OT.U2} = 2744.89 \cdot kN$	$H_{twkey.OT.U2.loc} = -1.04\,m$
Ice / Impact Load:	$I_{U2} = -1125.0 \cdot kN$	$I_{U2.loc} = 8.70\,m$
Lateral Soil Load (driving):	$E_{act.OT.U2} = -962.5 \cdot kN$	$E_{act.OT.U2.loc} = 1.33\,m$

Resisting Lateral Soil Load as required to produce horizontal equilibrium:

$$E_{pas.OT.U2} := -\left(H_{hwas.U2} + H_{hwgg.U2} + H_{twgg.U2} + H_{twgf.U2} + H_{twkey.OT.U2} + I_{U2} + E_{act.OT.U2}\right) = 5134.43 \cdot kN$$

Acting at:

$$E_{pas.OT.U2.loc} := -1 \cdot \frac{d_{key}}{2} = -1\,m$$

Sum of All Overturning Analysis Horizontal Load (ΣH=0):

$$\Sigma H_{U2.OT} := H_{hwas.U2} + H_{hwgg.U2} + H_{twgg.U2} + H_{twgf.U2} + H_{twkey.OT.U2} + I_{U2} + E_{act.OT.U2} + E_{pas.OT.U2} = 0 \cdot kN$$

Sum of All Overturning Analysis Horizontal Load Moments:

$$\Sigma M_{H.U2.OT} := H_{hwas.U2} \cdot H_{hwas.U2.loc} + H_{hwgg.U2} \cdot H_{hwgg.U2.loc} + H_{twgg.U2} \cdot H_{twgg.U2.loc} + H_{twgf.U2} \cdot H_{twgf.U2.loc} \cdots + H_{twkey.OT.U2} \cdot H_{twkey.OT.U2.loc} + I_{U2} \cdot I_{U2.loc} + E_{act.OT.U2} \cdot E_{act.OT.U2.loc} + E_{pas.OT.U2} \cdot E_{pas.OT.U2.loc} = -26952.41 \cdot kN \cdot m$$

Overturning Stability Analysis

$$\Sigma M_{U2.OT} := \Sigma M_{V.U2.OT} + \Sigma M_{H.U2.OT} = 137000.2 \cdot kN \cdot m$$

U2 CASE

CHECK FOUNDATION BEARING CAPACITY (HORIZONTAL PLANE):

Bearing Pressure Under Toe:

$$\sigma_{ToeU2.OT} := \frac{\Sigma V_{U2.OT}}{L_b \cdot W_b} + \frac{\left(\Sigma V_{U2.OT} \cdot x_{OT.U2}\right)}{S_b} = 43.9 \cdot kPa$$

$$Bearing_{ChecktoeU2.OT} := \begin{cases} \text{"OKAY "} & \text{if } \sigma_{ToeU2.OT} < \sigma_{allow.U2} \\ \text{"NG""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

Bearing Pressure Under Heel:

$$\sigma_{HeelU2.OT} := \frac{\Sigma V_{U2.OT}}{L_b \cdot W_b} - \frac{\left(\Sigma V_{U2.OT} \cdot x_{OT.U2}\right)}{S_b} = 72.4 \cdot kPa$$

$$Bearing_{CheckheelU2.OT} := \left(\begin{cases} \text{"OKAY "} & \text{if } \sigma_{HeelU2.OT} < \sigma_{allow.U2} \wedge \sigma_{HeelU2.OT} > 0 \\ \text{"NG""} & \text{otherwise} \end{cases} \right) = \text{"OKAY "}$$

SUMMARY OF STABILITY ASSESSMENT:

Sliding Factor of Safety:
(Horizontal Plane)

$FS_{HorizSliding.U2} = 1.01$

$FS_{HorizSliding.U2.Check}$ = "Horizontal Sliding (No Key or Void Behind Key) Fail ! Revise Structure !"

Sliding Factor of Safety:
(Inclined Plane)

$FS_{InclinedlSlidingU2} = 2.29$ — $FS_{InclinedSliding.check.U2}$ = "OKAY "

Eccentricity:
(Inclined Plane)

$e_{U2} = 0.46\,m$ — $e_{check.U2}$ = "Okay"

Bearing Pressure At Heel:
(Inclined Plane)

$\sigma_{heel.U2} = 60 \cdot kPa$ — $\sigma_{heel.U2.check}$ = "Okay"

Bearing Pressure At Toe:
(Inclined Plane)

$\sigma_{toe.U2} = 81 \cdot kPa$ — $\sigma_{toe.U2.1.check}$ = "Okay"

Flotation Factor of Safety
(horizontal plane)

$FS_{act.FU2} = 1.6$ — $FS_{check.FU2}$ = "OKAY"

Overturning Resultant Ratio:
(horizontal plane)

$Ratio_{OT.U2} = 0.46$ — $Ratio_{OT.U2.check}$ = "OKAY"

Eccentricity:
(horizontal plane)

$x_{OT.U2} = -0.76\,m$ — $x_{OT.check.U2}$ = "OKAY"

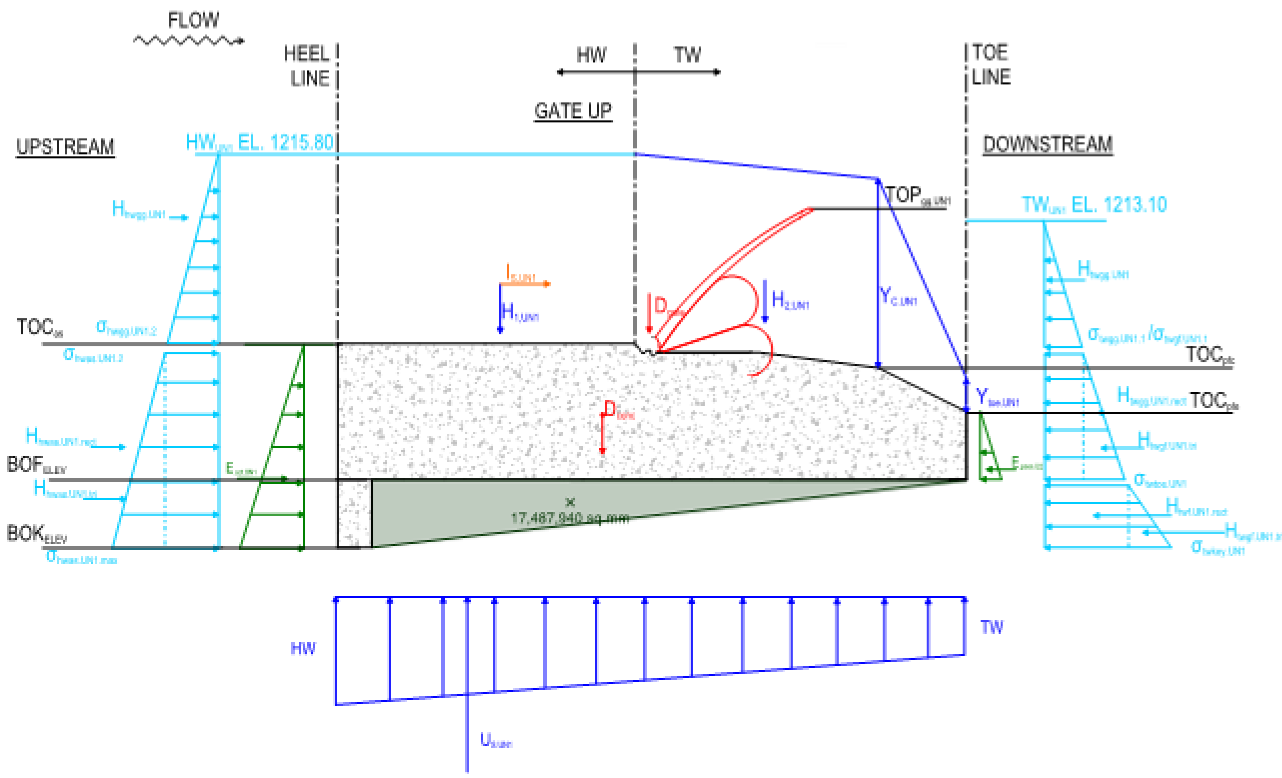
Bearing Pressure At Heel:
(horizontal plane)

$\sigma_{HeelU2.OT} = 72 \cdot kPa$ — $Bearing_{CheckheelU2.OT}$ = "OKAY "

Bearing Pressure At Toe:
(horizontal plane)

$\sigma_{ToeU2.OT} = 44 \cdot kPa$ — $Bearing_{ChecktoeU2.OT}$ = "OKAY "

UN1 DESIGN CASE



ACCEPTANCE PARAMETERS

Required Factor of Safety for Sliding: $FS_{req.UN1.sl} := 1.3$ (Without Cohesion)

(Section 8.1, Design Criteria)

Resultant Within Middle Third of Base: $e \le \frac{L_b}{6} \wedge e \ge \frac{-L_b}{6}$

Allowable Rock Bearing Pressure: $\sigma_{allow.UN1} := 1470 \cdot \frac{kN}{m^2}$ (Section 5.2, Design Criteria)

INPUT PARAMETERS

Headwater Elevation: $HW_{UN1} := 1215.8m$ (Section 8.3, Design Criteria)

Tailwater Elevation: $TW_{UN1} := 1213.1m$ (Section 8.3, Design Criteria)

Bottom of Footing Elevation: $BOF_{elev} = 1206\, m$

Approach Slab Top of Concrete Elevation at Upstream Face: $TOC_{as} = 1210\, m$

Footing Top of Concrete Elevation at Stilling Basin: $TOC_{pfe} = 1208\, m$

Footing Top of Concrete Elevation at Center of Footing: $TOC_{pfc} = 1209.3\, m$

Top of Guard/Regulating Gate Elevation: $TOP_{rg.UN1} := 1210.00m$ $TOP_{gg.UN1} := 1213.50m$

Gates are open when top of gate elevation is at 1210.00m

Gates are closed/up when top of gate elevation is at 1215.0m

Bottom of Key Elevation: $BOK_{elev} = 1204\, m$

Crestwater Elevation: Dynamic Flow $EL_{C.UN1} := 1215.03m$

$$Y_{C.UN1} := \begin{cases} (EL_{C.UN1} - TOC_{pfc}) & \text{if } TOP_{gg.UN1} \le HW_{UN1} \\ (TW_{UN1} - TOC_{pfc}) & \text{if } TOP_{gg.UN1} > HW_{UN1} \end{cases} = 5.73 \cdot m$$

Toewater Elevation: $EL_{TOE.UN1} := 1208.48m$

$$Y_{TOE.UN1} := \begin{cases} (EL_{TOE.UN1} - TOC_{pfe}) & \text{if } TOP_{gg.UN1} \le HW_{UN1} \\ (TW_{UN1} - TOC_{pfe}) & \text{if } TOP_{gg.UN1} > HW_{UN1} \end{cases} = 0.48 \cdot m$$

LATERAL WATER LOADS

UN1 CASE

HEADWATER (DRIVING):

Headwater Depth on Gate: $D_{hwg.UN1} := HW_{UN1} - TOC_{as} = 5.80\,m$

Thickness of Approach Slab (Including Key): $T_{as} = 6\,m$

Headwater Depth at Heel (U/S face): $D_{hwas.UN1} := HW_{UN1} - BOK_{elev} = 11.80\,m$

Headwater Load Unit Width on Approach Slab: $W_{hwas.UN1} := W_b = 15.00\,m$

Headwater Unit Load At Top of Approach Slab: $H_{hwas.UN1.1} := \frac{-\left(\gamma_w \cdot D_{hwg.UN1}^{\;2}\right)}{2} \cdot W_{hwas.UN1} = -2475.06 \cdot kN$

Headwater Unit Load At Bottom of Approach Key: $H_{hwas.UN1.2} := \frac{-\left(\gamma_w \cdot D_{hwas.UN1}^{\;2}\right)}{2} \cdot W_{hwas.UN1} = -10244.6 \cdot kN$

Headwater Line Load At Top of Approach Slab: $\sigma_{hwas.UN1.1} := -\left(\gamma_w \cdot D_{hwg.UN1}\right) = -56.9 \cdot kPa$

Headwater Line Load At Bottom of Approach Key: $\sigma_{hwas.UN1.2} := -\left(\gamma_w \cdot D_{hwas.UN1}\right) = -115.76 \cdot kPa$

Triangular Distribution Unit Load on Approach Slab and Key: $H_{hwas.UN1.2.tri} := \left(\frac{\sigma_{hwas.UN1.2} - \sigma_{hwas.UN1.1}}{2}\right) \cdot \left(T_{as} \cdot W_{hwas.UN1}\right) = -2648.7 \cdot kN$

Rectangular Distribution Unit Load on Approach Slab and Key: $H_{hwas.UN1.2.rect} := \sigma_{hwas.UN1.1} \cdot \left(T_{as} \cdot W_{hwas.UN1}\right) = -5120.82 \cdot kN$

Total Horizontal Headwater Load on Approach Slab: $H_{hwas.UN1} := H_{hwas.UN1.2.tri} + H_{hwas.UN1.2.rect} = -7769.52 \cdot kN$

Apply Total Footing Headwater Load at:

$$H_{hwas.UN1.loc} := \frac{\left[H_{hwas.UN1.2.rect} \cdot \frac{\left(T_{as}\right)}{2} + H_{hwas.UN1.2.tri} \cdot \frac{\left(T_{as}\right)}{3}\right]}{H_{hwas.UN1.2.tri} + H_{hwas.UN1.2.rect}} - d_{key} = 0.66\,m$$

Guard Gate Operating Condition:

Guard Gate Down/Open Condition: $A1_{UN1} := TOP_{gg.UN1} \le TOC_{as}$

Guard Crest Gate Up/Closed, with Top of Gate Higher than HW Elevation: $B1_{UN1} := TOP_{gg.UN1} \ge HW_{UN1} \wedge TOP_{gg.UN1} > TOC_{as}$

Guard Crest Gate Up/Closed, with Top of Gate Lower than HW Elevation: $C1_{UN1} := TOP_{gg.UN1} > TOC_{as} \wedge HW_{UN1} > TOP_{gg.UN1} = 1$

Guard Crest Gate Height: $H_{gg.UN1} := TOP_{gg.UN1} - TOC_{as} = 3.5\,m$

Headwater Depth at Guard Crest Gate: $D_{hwgg.UN1} := HW_{UN1} - TOC_{as} = 5.80\,m$

Guard Crest Gate Width: $W_{hwgg.UN1} := 15.00m$

Lateral Headwater Pressure at Bottom of Guard Crest Gate:

$$\sigma_{hwgg.UN1.1} := \left| \begin{array}{ll} (0.0kPa) & \text{if } A1_{UN1} \\ -(\gamma_w \cdot D_{hwgg.UN1}) & \text{if } B1_{UN1} \\ -(\gamma_w \cdot D_{hwgg.UN1}) & \text{if } C1_{UN1} \end{array} \right. = -56.9 \cdot kPa$$

Lateral Headwater Pressure at Top of Guard Crest Gate:
(Load at HW Elevation On Guard Crest Gate if HW is below TOG_{rg})

$$\sigma_{hwgg.UN1.2} := \left| \begin{array}{ll} (0.0kPa) & \text{if } A1_{UN1} \\ 0.0kPa & \text{if } B1_{UN1} \\ -\left[\gamma_w \cdot (HW_{UN1} - TOP_{gg.UN1})\right] & \text{if } C1_{UN1} \end{array} \right. = -22.6 \cdot kPa$$

Average Pressure acting on Guard Crest Gate:

$$\sigma_{hwgg.UN1.avg} := \frac{(\sigma_{hwgg.UN1.1} + \sigma_{hwgg.UN1.2})}{2} = -39.73 \cdot kPa$$

Total Area of Crest Gate:

$$A_{hwgg.UN1} := \left| \begin{array}{ll} D_{hwgg.UN1} \cdot W_{hwgg.UN1} & \text{if } A1_{UN1} \\ D_{hwgg.UN1} \cdot W_{hwgg.UN1} & \text{if } B1_{UN1} \\ H_{gg.UN1} \cdot W_{hwgg.UN1} & \text{if } C1_{UN1} \end{array} \right. = 52.5 \cdot m^2$$

Total Horizontal Headwater Load on Guard Crest Gate: $H_{hwgg.UN1} := \sigma_{hwgg.UN1.avg} \cdot A_{hwgg.UN1} = -2085.9 \cdot kN$

Apply Total Guard Crest Gate Headwater Load at:

$$H_{hwgg.UN1.loc} := \left| \begin{array}{ll} (TOC_{as} - BOF_{elev}) & \text{if } A1_{UN1} \\ \left[\frac{(HW_{UN1} - TOC_{as})}{3} + (TOC_{as} - BOF_{elev})\right] & \text{if } B1_{UN1} \\ \left[\frac{\sigma_{hwgg.UN1.2} \cdot A_{hwgg.UN1} \cdot \frac{(H_{gg.UN1})}{2} + \frac{(\sigma_{hwgg.UN1.1} - \sigma_{hwgg.UN1.2})}{2} A_{hwgg.UN1} \cdot \frac{(H_{gg.UN1})}{3}}{\sigma_{hwgg.UN1.2} \cdot A_{hwgg.UN1} + \frac{(\sigma_{hwgg.UN1.1} - \sigma_{hwgg.UN1.2})}{2} \cdot A_{hwgg.UN1}} \cdots \\ + (TOC_{as} - BOF_{elev}) \right] & \text{if } C1_{UN1} \end{array} \right. = 5.5 \cdot m$$

LATERAL TAILWATER (RESISTING) Applied to Downstream Side of Guard Crest Gate: UN1 CASE

Guard Gate Down/Open Condition: $A2_{UN1} := TOP_{gg.UN1} \le TOC_{as}$

Guard Crest Gate Up/Closed, with Top of Gate Higher than TW Elevation: $B2_{UN1} := TOP_{gg.UN1} \ge TW_{UN1} \wedge TOP_{gg.UN1} > TOC_{as}$

Guard Crest Gate Up/Closed, with Top of Gate Lower than TW Elevation: $C2_{UN1} := TOP_{gg.UN1} > TOC_{as} \wedge TW_{UN1} > TOP_{gg.UN1}$

Tailwater Depth at Guard Crest Gate: $D_{twgg.UN1} := TW_{UN1} - TOC_{as} = 3.10\,m$

Guard Crest Gate Width: $W_{twgg.UN1} := 15.00m$

Lateral Water Load at Bottom of Guard Crest Gate:

$$\sigma_{twgg.UN1.1} := \begin{cases} (0.0kPa) & \text{if } A2_{UN1} \\ (\gamma_w \cdot D_{twgg.UN1}) & \text{if } B2_{UN1} \\ (\gamma_w \cdot D_{twgg.UN1}) & \text{if } C2_{UN1} \end{cases} = 30.4 \cdot kPa$$

Lateral Water Load at Top of Guard Crest Gate:
(Load at TW Elevation On Guard Crest Gate if TW is below TOG_{gg})

$$\sigma_{twgg.UN1.2} := \begin{cases} (0.0kPa) & \text{if } A2_{UN1} \\ 0.0kPa & \text{if } B2_{UN1} \\ \left[\gamma_w \cdot (TW_{UN1} - TOP_{gg.UN1})\right] & \text{if } C2_{UN1} \end{cases} = 0.0 \cdot kPa$$

Average Pressure acting on Guard Crest Gate:

$$\sigma_{twgg.UN1.avg} := \frac{(\sigma_{twgg.UN1.1} + \sigma_{twgg.UN1.2})}{2} = 15.21 \cdot kPa$$

Total Area water acting on Crest Gate:

$$A_{twgg.UN1} := \begin{cases} D_{twgg.UN1} \cdot W_{twgg.UN1} & \text{if } A2_{UN1} \\ D_{twgg.UN1} \cdot W_{twgg.UN1} & \text{if } B2_{UN1} \\ H_{gg.UN1} \cdot W_{twgg.UN1} & \text{if } C2_{UN1} \end{cases} = 46.5 \cdot m^2$$

Total Horizontal Tailwater Load on Guard Crest Gate: $H_{twgg.UN1} := \sigma_{twgg.UN1.avg} \cdot A_{twgg.UN1} = 707.1 \cdot kN$

Apply Total Horiz. TW Load on Guard Gate at:

$$H_{twgg.UN1.loc} := \begin{cases} (TOC_{as} - BOF_{elev}) & \text{if } A2_{UN1} \\ \left[\frac{(TW_{UN1} - TOC_{as})}{3} + (TOC_{as} - BOF_{elev})\right] & \text{if } B2_{UN1} \\ \left[\frac{\sigma_{twgg.UN1.2} \cdot A_{twgg.UN1} \cdot \frac{(H_{gg.UN1})}{2} + \frac{(\sigma_{twgg.UN1.1} - \sigma_{twgg.UN1.2})}{2} A_{twgg.UN1} \cdot \frac{(H_{gg.UN1})}{3}}{\sigma_{twgg.UN1.2} \cdot A_{twgg.UN1} + \frac{(\sigma_{twgg.UN1.1} - \sigma_{twgg.UN1.2})}{2} \cdot A_{twgg.UN1}} \ldots \\ + (TOC_{as} - BOF_{elev})\right] & \text{if } C2_{UN1} \end{cases} = 5.0 \cdot m$$

TAILWATER (RESISTING) Applied to Concrete Structure:

Tailwater Depth At top of Gate Base Footing Elevation: $D_{twgf.UN1} := TW_{UN1} - TOC_{as} = 3.10\,m$

Water Depth at bottom of Gate Base Footing: $D_{twtoe.UN1} := TW_{UN1} - BOF_{elev} = 7.10\,m$

Footing Thickness at Toe $h_{toe} = 4\,m$

Unit Width of D/S face of crest for application of Tailwater Load: $W_{tw.UN1} := W_b = 15.00\,m$

Tailwater Pressure At Top of Gate Footing: $\sigma_{twgf.UN1} := \left(\gamma_w \cdot D_{twgf.UN1}\right) = 30.41 \cdot kPa$

Tailwater Line Load At Bottom of Gate Footing: $\sigma_{twtoe.UN1} := \left(\gamma_w \cdot D_{twtoe.UN1}\right) = 69.65 \cdot kPa$

Triangular Distribution Unit Load on Gate Footing Base:

$$H_{twgf.UN1.tri} := \left(\frac{\sigma_{twtoe.UN1} - \sigma_{twgf.UN1}}{2}\right) \cdot \left(h_{toe} \cdot W_{tw.UN1}\right) = 1177.2 \cdot kN$$

Rectangular Distribution Unit Load on Gate Footing Base:

$$H_{twgf.UN1.rect} := \sigma_{twgf.UN1} \cdot \left(h_{toe} \cdot W_{tw.UN1}\right) = 1824.66 \cdot kN$$

Tailwater Pressure At Bottom of Sliding Failure Plane:

$$\sigma_{twbk.UN1} := \left(HW_{UN1} - BOK_{elev}\right) \cdot \gamma_w = 115.76 \cdot kPa$$

Triangular Distribution Unit Load Below Footing:

$$H_{twbk.UN1.tri} := \frac{\left(\sigma_{twbk.UN1} - \sigma_{twtoe.UN1}\right)}{2} \cdot d_{key} \cdot W_{tw.UN1} = 691.61 \cdot kN$$

Rectangular Distribution Load Below Footing Base:

$$H_{twbk.UN1.rect} := \sigma_{twtoe.UN1} \cdot d_{key} \cdot W_{tw.UN1} = 2089.53 \cdot kN$$

Total Horizontal Tailwater Load on Gate Footing (including key):

$$H_{twgk.UN1} := H_{twgf.UN1.tri} + H_{twgf.UN1.rect} + H_{twbk.UN1.tri} + H_{twbk.UN1.rect} = 5782.99 \cdot kN$$

Apply Total Gate Footing Tailwater Load at:

$$H_{twgk.UN1.loc} := \frac{\left[H_{twgf.UN1.rect} \cdot \frac{\left(h_{toe}\right)}{2} + H_{twgf.UN1.tri} \cdot \frac{\left(h_{toe}\right)}{3} + H_{twbk.UN1.tri} \cdot \left(-d_{key} \cdot \frac{2}{3}\right) + H_{twbk.UN1.rect} \cdot \left(\frac{-d_{key}}{2}\right)\right]}{H_{twgf.UN1.tri} + H_{twgf.UN1.rect} + H_{twbk.UN1.tri} + H_{twbk.UN1.rect}} = 0.38\,m$$

SUMMATION OF LATERAL WATER LOADS:

$$\Sigma H_{Water.UN1} := H_{hwas.UN1} + H_{hwgg.UN1} + H_{twgk.UN1} + H_{twgg.UN1} = -3365.32 \cdot kN$$

$$\Sigma M_{Hwater.UN1} := H_{hwas.UN1} \cdot H_{hwas.UN1.loc} + H_{hwgg.UN1} \cdot H_{hwgg.UN1.loc} \cdots + H_{twgk.UN1} \cdot H_{twgk.UN1.loc} + H_{twgg.UN1} \cdot H_{twgg.UN1.loc} = -10822.61 \cdot kN \cdot m$$

VERTICAL WATER LOADS

UN1 CASE

HEADWATER:

Water Depth on top of Approach Slab: $d_{hw.UN1} := HW_{UN1} - TOC_{as} = 5.80\,m$

Length of Approach Slab: $L_{as} = 8.75\,m$

Width of Approach Slab: $w_{as} = 15.00\,m$

Vertical Water Weight (H1) on Approach Slab: $H_{1.UN1} := \left(w_{as} \cdot d_{hw.UN1} \cdot L_{as}\right) \cdot \gamma_w = 7467.9 \cdot kN$

Moment Arm for Application of Water Weight (H1) from toe: $H_{1.UN1.loc} := L_b - \dfrac{L_{as}}{2} = 14.13\,m$

TAILWATER:

Trapezoid Volume Above Gate Footing from Approach Slab to Crest: $V_{asc.UN1} := \left(L_{gf} - L_{gfc}\right) W_b \dfrac{d_{hw.UN1} + Y_{C.UN1}}{2} = 618.3 \cdot m^3$

Trapezoid Volume Above Gate Footing Crest to End of Gate Footing: $V_{gfc.UN1} := \left(L_{gfc} \cdot W_b\right) \dfrac{Y_{C.UN1} + Y_{TOE.UN1}}{2} = 121.1 \cdot m^3$

Load Above Gate Footing from Approach Slab to Crest: $H_{2.UN1.asc} := V_{asc.UN1} \cdot \gamma_w = 6065.49 \cdot kN$

Load Acting Above Footing Crest from Toe: $H_{2.UN1.asc.loc} := \dfrac{\left(L_{gf} - L_{gfc}\right) \cdot \left(2 \cdot d_{hw.UN1} + Y_{C.UN1}\right)}{3 \cdot \left(d_{hw.UN1} + Y_{C.UN1}\right)} + L_{gfc} = 6.18\,m$

Load Above Gate Footing from Crest to End: $H_{2.UN1.gfc} := V_{gfc.UN1} \cdot \gamma_w = 1187.94 \cdot kN$

Load Acting Above Gate Footing from Crest to End: $H_{2.UN1.gfc.loc} := \dfrac{\left(L_{gfc}\right) \cdot \left(2 \cdot Y_{C.UN1} + Y_{TOE.UN1}\right)}{3 \cdot \left(Y_{C.UN1} + Y_{TOE.UN1}\right)} = 1.67\,m$

Vertical Water Weight (H2) on Gate Footing: $H_{2.UN1} := H_{2.UN1.asc} + H_{2.UN1.gfc} = 7253.43 \cdot kN$

Moment Arm for Application of Water Weight (H2) from toe: $H_{2.UN1.loc} := \dfrac{H_{2.UN1.asc} \cdot H_{2.UN1.asc.loc} + H_{2.UN1.gfc} \cdot H_{2.UN1.gfc.loc}}{H_{2.UN1}} = 5.44\,m$

UPLIFT AT INCLINE SLIDING PLANE

UN1 CASE

Uplift pressure at U/S Face (heel):	$U_{HW.UN1} := D_{hwas.UN1} \cdot \gamma_w = 115.8 \cdot \frac{kN}{m^2}$
Uplift pressure at D/S Face Stilling Basin:	$U_{TW.UN1} := \left(D_{twtoe.UN1}\right) \cdot \gamma_w = 69.65 \cdot \frac{kN}{m^2}$
Length from U/S of Gate Structure to D/S of Stilling Basin:	$L_{overall} := L_b = 18.50\,m$
Difference between Uplift pressure at HW and TW:	$U_{diff.UN1} := U_{HW.UN1} - U_{TW.UN1} = 46.11 \cdot \frac{kN}{m^2}$
Slope of difference between between Uplift pressure at HW and TW:	$U_{slope.UN1} := \frac{U_{diff.UN1}}{L_{overall}} = 2.49 \cdot \frac{kN}{m^2 \cdot m}$
Tailwater Pressure at toe of Gate Structure:	$U_{press.toe.gs.UN1} := U_{TW.UN1} + \left(L_{overall} - L_b\right) \cdot U_{slope.UN1} = 69.65 \cdot \frac{kN}{m^2}$
Uniform uplift force UA Under Gate Structure due to TW (rectangle):	$U_{A.UN1} := U_{press.toe.gs.UN1} \cdot L_b \cdot W_b \cdot -1 = -19328.15 \cdot kN$
Moment Arm from Toe of Gate Structure for Uplift UA:	$L_{A.UN1} := \left(\frac{L_b}{2}\right) = 9.25\,m$
Linearly Decreasing Uplift Force UN1B Under Gate Structure due to HW-TW Differential (triangle):	$U_{B.UN1} := \frac{1}{2} \cdot \left(U_{HW.UN1} - U_{press.toe.gs.UN1}\right) \cdot L_b \cdot W_b \cdot -1 = -6397.35 \cdot kN$
Moment Arm from Toe of Gate Structure for Uplift UB:	$L_{B.UN1} := \frac{2}{3} \cdot L_b = 12.33\,m$
Total Resultant Uplift force:	$U_{UN1} := U_{A.UN1} + U_{B.UN1} = -25725.5 \cdot kN$
Resultant Location from Toe:	$U_{UN1.loc} := \frac{\left(U_{A.UN1} \cdot L_{A.UN1} + U_{B.UN1} \cdot L_{B.UN1}\right)}{\left(U_{A.UN1} + U_{B.UN1}\right)} = 10.02\,m$

$$\Sigma V_{water.UN1} := H_{1.UN1} + H_{2.UN1} + U_{UN1} = -11004.21 \cdot kN$$

$$\Sigma M_{Vwater.UN1} := H_{1.UN1} \cdot H_{1.UN1.loc} + H_{2.UN1} \cdot H_{2.UN1.loc} + U_{UN1} \cdot U_{UN1.loc} = -112724.68 \cdot kN \cdot m$$

SOIL LOADS

UN1 CASE

Equivalent Fluid Pressure (EFP):

At rest lateral pressure coefficient: $K_{o.UN1} := 1 - \sin(\phi_{backfill}) = 0.658$ (Section 5.3, Design Criteria)

Headwater Pier Footing Unit Width: $W_{hwas.UN1} = 15.00\,m$

Tailwater Pier Footing Unit Width: $W_{tw.UN1} = 15.00\,m$

Pier Footing Thickness at Heel: $t_{hf.UN1} := TOC_{as} - BOK_{elev} = 6.00\,m$

Fixed Crest Footing Thickness at Toe: $t_{tf.UN1} := TOC_{pfe} - BOF_{elev} = 2.00\,m$

Lateral Driving Force (Headwater Side - at rest condition)

At-Rest Soil Load: $E_{act.UN1} := \frac{\left(K_{o.UN1} \cdot t_{hf.UN1}^{\ 2}\right)}{2} \cdot (\gamma_r - \gamma_w) \cdot W_{hwas.UN1} \cdot -1 = -2165.61 \cdot kN$

Acting at: $E_{act.UN1.loc} := \frac{t_{hf.UN1}}{3} = 2.00\,m$

Lateral Resisting Force (Tailwater Side - at rest condition)

At-rest Soil Load: $E_{pass.UN1} := \frac{\left(K_{o.UN1} \cdot t_{tf.UN1}^{\ 2}\right)}{2} \cdot (\gamma_r - \gamma_w) \cdot W_{tw.UN1} = 240.62 \cdot kN$

Acting at: $E_{pass.UN1.loc} := \frac{t_{tf.UN1}}{3} = 0.67\,m$

$\Sigma H_{soil.UN1} := E_{act.UN1} + E_{pass.UN1} = -1924.99 \cdot kN$

$\Sigma M_{soil.UN1} := E_{act.UN1} \cdot E_{act.UN1.loc} + E_{pass.UN1} \cdot E_{pass.UN1.loc} = -4170.8 \cdot kN \cdot m$

ICE / IMPACT LOADS (ASSUME NO ICE LOADING ON TAILWATER SIDE)

Static Ice load on Gates:

$$I_{G.UN1} := \begin{cases} 00 \frac{kN}{m} & \text{if } TOP_{gg.UN1} \le TOC_{as} \\ 0 \frac{kN}{m} & \text{if } TOP_{gg.UN1} > TOC_{as} \end{cases} = 0 \cdot \frac{kN}{m}$$

(Section 7.7, Design Criteria)

Ice Loading Unit Width on Guard Gate: $W_{gg.UN1} := 15.00 m$ (Input value for load case)

Total Ice Load on Structure: $I_{UN1} := -\left(I_{G.UN1} \cdot W_{gg.UN1}\right) = 0 \cdot kN$

Apply Ice load at: $I_{UN1.loc} := \left(TOP_{gg.UN1} - BOF_{elev} - 0.30m\right) = 7.20\,m$

$\Sigma H_{I.UN1} := I_{UN1} = 0 \cdot kN$

$\Sigma M_{I.UN1} := I_{UN1} \cdot I_{UN1.loc} = 0 \cdot kN \cdot m$

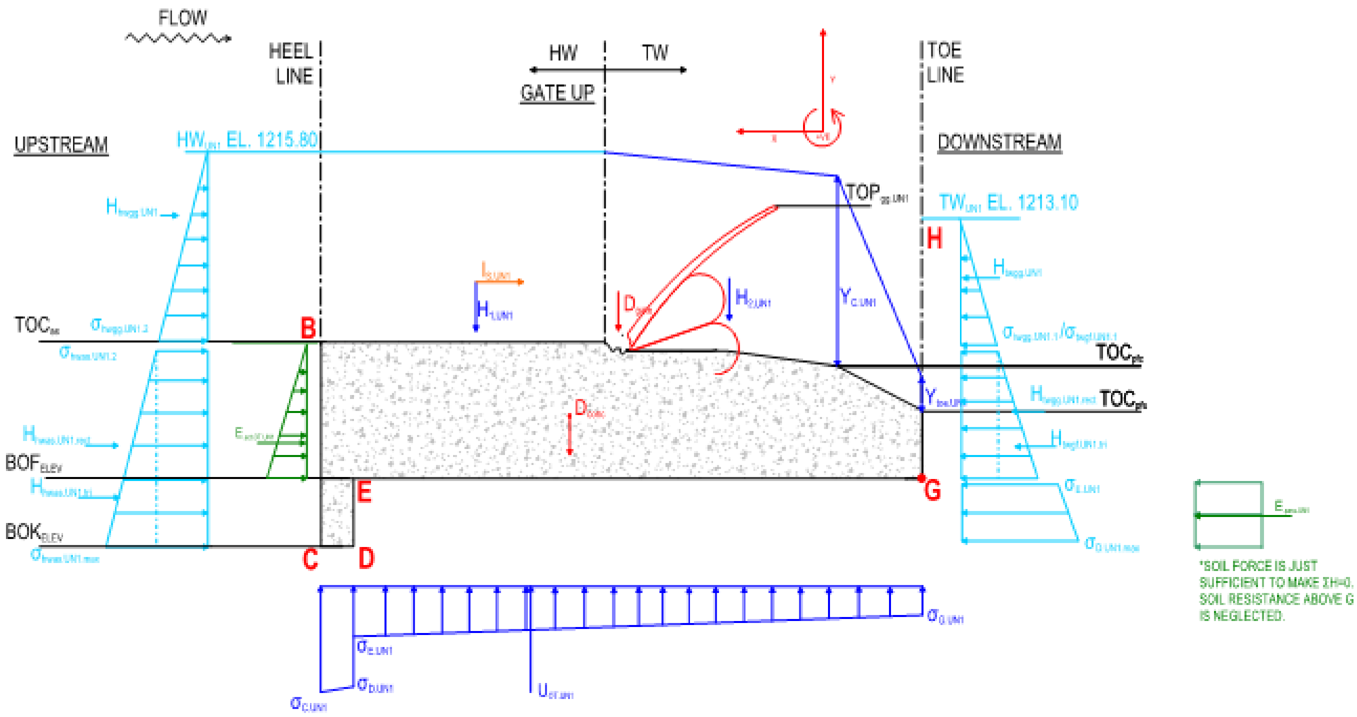
MONOLITH OVERTURNING STABILITY ANALYSIS

UN1 CASE

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stability of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1 $Ratio_{OT.UN1.min} := 0.33$ Resultant at Middle Third



Uplift Loads for Overturning Stability Analysis

Line of Creep:

Change in Water Head: $\Delta_{h.UN1} := HW_{UN1} - TW_{UN1} = 2.7\,m$

Length from Point C to Point G: $L_{CG} = 18.61\,m$

Length from Various Points to Points: $L_{CD} = 1\,m$ $L_{DE} = 2\,m$ $L_{EG} = 17.5\,m$

$L_{GH.UN1} := TW_{UN1} - BOF_{elev} = 7.1\,m$

Length from Point C, D, E to G: $L_{CDEG} = 20.5\,m$ $L_{CDE} = 3\,m$

Water Pressure at Point C: $\sigma_{C.UN1} := \sigma_{hwas.UN1.2} = -115.76 \cdot kPa$

Water Pressure at Point G: $\sigma_{G.UN1} := \sigma_{twtoe.UN1} \cdot -1 = -69.65 \cdot kPa$

Water Pressure at Point D: $\sigma_{D.UN1} := -\gamma_w \cdot \left[\left(HW_{UN1} - BOK_{elev} \right) - \frac{\Delta_{h.UN1} \cdot L_{CD}}{L_{CDEG}} \right] = -114.47 \cdot kPa$

Water Pressure at Point E: $\sigma_{E.UN1} := -\gamma_w \cdot \left[\left(HW_{UN1} - BOF_{elev} \right) - \frac{\Delta_{h.UN1} \cdot L_{CDE}}{L_{CDEG}} \right] = -92.26 \cdot kPa$

Uplift for Overturning Analysis on Bottom of Key: $U_{OT.UN1.key} := \frac{\sigma_{C.UN1} + \sigma_{D.UN1}}{2} \cdot L_{CD} \cdot W_b = -1726.68 \cdot kN$

Acting at: $U_{OT.UN1.key.loc} := \frac{L_{CD} \cdot \left(2 \cdot \sigma_{C.UN1} + \sigma_{D.UN1} \right)}{3 \left(\sigma_{C.UN1} + \sigma_{D.UN1} \right)} + L_{EG} = 18\,m$

UN1 CASE

Uplift for Overturning Analysis on Bottom of Footing:

$$U_{OT.UN1.ftg} := \frac{\sigma_{E.UN1} + \sigma_{G.UN1}}{2} \cdot L_{EG} \cdot W_b = -21251.06 \cdot kN$$

Acting at:

$$U_{OT.UN1.ftg.loc} := \frac{L_{EG} \cdot \left(\sigma_{G.UN1} + 2 \cdot \sigma_{E.UN1}\right)}{3\left(\sigma_{G.UN1} + \sigma_{E.UN1}\right)} = 9.16 m$$

Uplift Load for Overturning Analysis:

$$U_{OT.UN1} := U_{OT.UN1.key} + U_{OT.UN1.ftg} = -22977.74 \cdot kN$$

Uplift Load Acting from Toe:

$$U_{OT.UN1.loc} := \frac{U_{OT.UN1.key} \cdot U_{OT.UN1.key.loc} + U_{OT.UN1.ftg} \cdot U_{OT.UN1.ftg.loc}}{U_{OT.UN1}} = 9.82 m$$

<u>All Vertical Loads Applicable to Overturning Stability Analysis</u>

Total Concrete Dead Loads:	$D_{conc} = 24618.6 \cdot kN$	at:	$X_{conc.loc} = 10.06 m$
Dead Load of Gate:	$D_{Gate} = 210.0 \cdot kN$		$X_{gate} = 6.60 m$
Water Weight (HW) on Apron Slab:	$H_{1.UN1} = 7467.9 \cdot kN$		$H_{1.UN1.loc} = 14.13 m$
Water Weight (TW) on Gate Footing:	$H_{2.UN1} = 7253.4 \cdot kN$		$H_{2.UN1.loc} = 5.44 m$
Uplift Load for Overturning Analysis:	$U_{OT.UN1} = -22977.74 \cdot kN$		$U_{OT.UN1.loc} = 9.82 \cdot m$

Sum of All Overtuming Analysis Vertical Load:

$$\Sigma V_{UN1.OT} := D_{conc} + D_{Gate} + H_{1.UN1} + H_{2.UN1} + U_{OT.UN1} = 16572.15 \cdot kN$$

Sum of All Overtuming Analysis Vertical Load Moments:

$$\Sigma M_{V.UN1.OT} := D_{conc} \cdot X_{conc.loc} + D_{Gate} \cdot X_{gate} + H_{1.UN1} \cdot H_{1.UN1.loc} + H_{2.UN1} \cdot H_{2.UN1.loc} + U_{OT.UN1} \cdot U_{OT.UN1.loc} = 168220.77 \cdot kN \cdot m$$

<u>Lateral Tailwater Loads for Overturning Stability Analysis</u>

TW Lateral Load on Gate Footing (No Key - Overturning Values Adjusted):

$$H_{twgf.UN1} := H_{twgf.UN1.tri} + H_{twgf.UN1.rect} = 3001.86 \cdot kN$$

Acting at:

$$H_{twgf.UN1.loc} := \frac{\frac{h_{toe}}{3} \cdot H_{twgf.UN1.tri} + \frac{h_{toe}}{2} \cdot H_{twgf.UN1.rect}}{H_{twgf.UN1}} = 1.74 m$$

Horizontal Tailwater Pressure Top of Key (Overturning Analysis):

$$\sigma_{twtk.OT.UN1} := \sigma_{E.UN1} \cdot -1 = 92.26 \cdot kPa$$

Horizontal Tailwater Pressure Bottom of Key (Overturning Analysis):

$$\sigma_{twbk.OT.UN1} := \sigma_{D.UN1} \cdot -1 = 114.47 \cdot kPa$$

Triangular Distribution Unit Load Acting at Key:

$$H_{twbk.OT.UN1.tri} := \frac{\left(\sigma_{twbk.OT.UN1} - \sigma_{twtk.OT.UN1}\right)}{2} \cdot d_{key} \cdot W_{tw.UN1} = 333.06 \cdot kN$$

Triangular Distribution Unit Load Acting at Key:

$$H_{twbk.OT.UN1.rect} := \sigma_{twtk.OT.UN1} \cdot d_{key} \cdot W_{tw.UN1} = 2767.86 \cdot kN$$

Total Horizontal Tailwater Load on Key (Overturning Values Adjusted):

$$H_{twkey.OT.UN1} := H_{twbk.OT.UN1.tri} + H_{twbk.OT.UN1.rect} = 3100.92 \cdot kN$$

Acting at:

$$H_{twkey.OT.UN1.loc} := \frac{H_{twbk.OT.UN1.tri} \cdot \frac{-2 \cdot d_{key}}{3} + H_{twbk.OT.UN1.rect} \cdot \frac{-d_{key}}{2}}{H_{twkey.OT.UN1}} = -1.04 \cdot m$$

UN1 CASE

Lateral Driving Earth Loads for Overturning Stability Analysis (at rest condition)

Depth of Driving Soil Loads (to top of key): $h_{E.OT.UN1} := TOC_{as} - BOF_{elev} = 4\ m$

At-Rest Soil Load: $E_{act.OT.UN1} := \dfrac{\left(K_{o.UN1} \cdot h_{E.OT.UN1}{}^{2}\right)}{2} \cdot \left(\gamma_r - \gamma_w\right) \cdot W_{hwas.UN1} \cdot -1 = -962.49 \cdot kN$

At Rest- Soil Load Acting from Toe: $E_{act.OT.UN1.loc} := \dfrac{h_{E.OT.UN1}}{3} = 1.33\ m$

All Lateral Loads Applicable to Overturning Stability Analysis

HW Lateral Load on Approach Slab:	$H_{hwas.UN1} = -7769.5 \cdot kN$	$H_{hwas.UN1.loc} = 0.66\ m$
HW Lateral Load on Guard Gate:	$H_{hwgg.UN1} = -2085.9 \cdot kN$	$H_{hwgg.UN1.loc} = 5.50\ m$
TW Lateral Load on Guard Gate:	$H_{twgg.UN1} = 707.1 \cdot kN$	$H_{twgg.UN1.loc} = 5.03\ m$
TW Lateral Load on Gate Footing (No Key - Overturning Values Adjusted):	$H_{twgf.UN1} = 3001.86 \cdot kN$	$H_{twgf.UN1.loc} = 1.74\ m$
TW Lateral Load on Key:	$H_{twkey.OT.UN1} = 3100.92 \cdot kN$	$H_{twkey.OT.UN1.loc} = -1.04\ m$
Ice / Impact Load:	$I_{UN1} = 0.0 \cdot kN$	$I_{UN1.loc} = 7.20\ m$
Lateral Soil Load (driving):	$E_{act.OT.UN1} = -962.5 \cdot kN$	$E_{act.OT.UN1.loc} = 1.33\ m$

Resisting Lateral Soil Load as required to produce horizontal equilibrium:

$$E_{pas.OT.UN1} := -\left(H_{hwas.UN1} + H_{hwgg.UN1} + H_{twgg.UN1} + H_{twgf.UN1} + H_{twkey.OT.UN1} + I_{UN1} + E_{act.OT.UN1}\right) = 4008.03 \cdot kN$$

Acting at:

$$E_{pas.OT.UN1.loc} := -1 \cdot \frac{d_{key}}{2} = -1\ m$$

Sum of All Overturning Analysis Horizontal Load (ΣH=0):

$$\Sigma H_{UN1.OT} := H_{hwas.UN1} + H_{hwgg.UN1} + H_{twgg.UN1} + H_{twgf.UN1} + H_{twkey.OT.UN1} + I_{UN1} + E_{act.OT.UN1} + E_{pas.OT.UN1} = 0 \cdot kN$$

Sum of All Overturning Analysis Horizontal Load Moments:

$$\begin{aligned}\Sigma M_{H.UN1.OT} := {} & H_{hwas.UN1} \cdot H_{hwas.UN1.loc} + H_{hwgg.UN1} \cdot H_{hwgg.UN1.loc} + H_{twgg.UN1} \cdot H_{twgg.UN1.loc} \cdots = -16314.24 \cdot kN \cdot m \\ & + H_{twgf.UN1} \cdot H_{twgf.UN1.loc} + H_{twkey.OT.UN1} \cdot H_{twkey.OT.UN1.loc} + I_{UN1} \cdot I_{UN1.loc} \cdots \\ & + E_{act.OT.UN1} \cdot E_{act.OT.UN1.loc} + E_{pas.OT.UN1} \cdot E_{pas.OT.UN1.loc}\end{aligned}$$

Overturning Stability Analysis

LATERAL WATER LOADS (continued)

UN2 CASE

TAILWATER (RESISTING) Applied to Concrete Structure:

Tailwater Depth At top of Gate Base Footing Elevation: $D_{twgf.UN2} := TW_{UN2} - TOC_{as} = 3.00\,m$

Water Depth at bottom of Gate Base Footing: $D_{twtoe.UN2} := TW_{UN2} - BOF_{elev} = 7.00\,m$

Footing Thickness at Toe $h_{toe} = 4\,m$

Unit Width of D/S face of crest for application of Tailwater Load: $W_{tw.UN2} := W_b = 15.00\,m$

Tailwater Pressure At Top of Gate Footing: $\sigma_{twgf.UN2} := \left(\gamma_w \cdot D_{twgf.UN2}\right) = 29.43 \cdot kPa$

Tailwater Line Load At Bottom of Gate Footing: $\sigma_{twtoe.UN2} := \left(\gamma_w \cdot D_{twtoe.UN2}\right) = 68.67 \cdot kPa$

Triangular Distribution Unit Load on Gate Footing Base:

$$H_{twgf.UN2.tri} := \left(\frac{\sigma_{twtoe.UN2} - \sigma_{twgf.UN2}}{2}\right) \cdot \left(h_{toe} \cdot W_{tw.UN2}\right) = 1177.2 \cdot kN$$

Rectangular Distribution Unit Load on Gate Footing Base:

$$H_{twgf.UN2.rect} := \sigma_{twgf.UN2} \cdot \left(h_{toe} \cdot W_{tw.UN2}\right) = 1765.8 \cdot kN$$

Tailwater Pressure At Bottom of Sliding Failure Plane: $\sigma_{twbk.UN2} := \left(HW_{UN2} - BOK_{elev}\right) \cdot \gamma_w = 118.7 \cdot kPa$

Triangular Distribution Unit Load Below Footing:

$$H_{twbk.UN2.tri} := \frac{\left(\sigma_{twbk.UN2} - \sigma_{twtoe.UN2}\right)}{2} \cdot d_{key} \cdot W_{tw.UN2} = 750.46 \cdot kN$$

Rectangular Distribution Load Below Footing Base:

$$H_{twbk.UN2.rect} := \sigma_{twtoe.UN2} \cdot d_{key} \cdot W_{tw.UN2} = 2060.1 \cdot kN$$

Total Horizontal Tailwater Load on Gate Footing (including key):

$$H_{twgk.UN2} := H_{twgf.UN2.tri} + H_{twgf.UN2.rect} + H_{twbk.UN2.tri} + H_{twbk.UN2.rect} = 5753.56 \cdot kN$$

Apply Total Gate Footing Tailwater Load at:

$$H_{twgk.UN2.loc} := \frac{\left[H_{twgf.UN2.rect} \cdot \frac{\left(h_{toe}\right)}{2} + H_{twgf.UN2.tri} \cdot \frac{\left(h_{toe}\right)}{3} + H_{twbk.UN2.tri} \cdot \left(-d_{key} \cdot \frac{2}{3}\right) + H_{twbk.UN2.rect} \cdot \left(\frac{-d_{key}}{2}\right)\right]}{H_{twgf.UN2.tri} + H_{twgf.UN2.rect} + H_{twbk.UN2.tri} + H_{twbk.UN2.rect}} = 0.35\,m$$

SUMMATION OF LATERAL WATER LOADS:

$$\Sigma H_{Water.UN2} := H_{hwas.UN2} + H_{hwgg.UN2} + H_{twgk.UN2} + H_{twgg.UN2} = -4267.35 \cdot kN$$

$$\Sigma M_{Hwater.UN2} := H_{hwas.UN2} \cdot H_{hwas.UN2.loc} + H_{hwgg.UN2} \cdot H_{hwgg.UN2.loc} \ldots + H_{twgk.UN2} \cdot H_{twgk.UN2.loc} + H_{twgg.UN2} \cdot H_{twgg.UN2.loc} = -15718.07 \cdot kN \cdot m$$

VERTICAL WATER LOADS

UN2 CASE

HEADWATER:

Water Depth on top of Approach Slab: $d_{hw.UN2} := HW_{UN2} - TOC_{as} = 6.10\,m$

Length of Approach Slab: $L_{as} = 8.75\,m$

Width of Approach Slab: $w_{as} = 15.00\,m$

Vertical Water Weight (H1) on Approach Slab: $H_{1.UN2} := \left(w_{as} \cdot d_{hw.UN2} \cdot L_{as}\right) \cdot \gamma_w = 7854.1 \cdot kN$

Moment Arm for Application of Water Weight (H1) from toe: $H_{1.UN2.loc} := L_b - \dfrac{L_{as}}{2} = 14.13\,m$

TAILWATER:

Trapezoid Volume Above Gate Footing from Approach Slab to Crest: $V_{asc.UN2} := \left(L_{gf} - L_{gfc}\right) W_b \dfrac{d_{hw.UN2} + Y_{C.UN2}}{2} = 671.92 \cdot m^3$

Trapezoid Volume Above Gate Footing Crest to End of Gate Footing: $V_{gfc.UN2} := \left(L_{gfc} \cdot W_b\right) \dfrac{Y_{C.UN2} + Y_{TOE.UN2}}{2} = 222.89 \cdot m^3$

Load Above Gate Footing from Approach Slab to Crest: $H_{2.UN2.asc} := V_{asc.UN2} \cdot \gamma_w = 6591.55 \cdot kN$

Load Acting Above Footing Crest from Toe: $H_{2.UN2.asc.loc} := \dfrac{\left(L_{gf} - L_{gfc}\right) \cdot \left(2 \cdot d_{hw.UN2} + Y_{C.UN2}\right)}{3 \cdot \left(d_{hw.UN2} + Y_{C.UN2}\right)} + L_{gfc} = 6.14\,m$

Load Above Gate Footing from Crest to End: $H_{2.UN2.gfc} := V_{gfc.UN2} \cdot \gamma_w = 2186.5 \cdot kN$

Load Acting Above Gate Footing from Crest to End: $H_{2.UN2.gfc.loc} := \dfrac{\left(L_{gfc}\right) \cdot \left(2 \cdot Y_{C.UN2} + Y_{TOE.UN2}\right)}{3 \cdot \left(Y_{C.UN2} + Y_{TOE.UN2}\right)} = 1.35\,m$

Vertical Water Weight (H2) on Gate Footing: $H_{2.UN2} := H_{2.UN2.asc} + H_{2.UN2.gfc} = 8778.05 \cdot kN$

Moment Arm for Application of Water Weight (H2) from toe: $H_{2.UN2.loc} := \dfrac{H_{2.UN2.asc} \cdot H_{2.UN2.asc.loc} + H_{2.UN2.gfc} \cdot H_{2.UN2.gfc.loc}}{H_{2.UN2}} = 4.95\,m$

UPLIFT AT INCLINE SLIDING PLANE

UN2 CASE

Uplift pressure at U/S Face (heel): $U_{HW.UN2} := D_{hwas.UN2} \cdot \gamma_w = 118.7 \cdot \frac{kN}{m^2}$

Uplift pressure at D/S Face Stilling Basin: $U_{TW.UN2} := \left(D_{twtoe.UN2}\right) \cdot \gamma_w = 68.67 \cdot \frac{kN}{m^2}$

Length from U/S of Gate Structure to D/S of Stilling Basin: $L_{overall} = 18.50\,m$

Difference between Uplift pressure at HW and TW: $U_{diff.UN2} := U_{HW.UN2} - U_{TW.UN2} = 50.03 \cdot \frac{kN}{m^2}$

Slope of difference between between Uplift pressure at HW and TW: $U_{slope.UN2} := \frac{U_{diff.UN2}}{L_{overall}} = 2.70 \cdot \frac{kN}{m^2 \cdot m}$

Tailwater Pressure at toe of Gate Structure: $U_{press.toe.gs.UN2} := U_{TW.UN2} + \left(L_{overall} - L_b\right) \cdot U_{slope.UN2} = 68.67 \cdot \frac{kN}{m^2}$

Uniform uplift force UA Under Gate Structure due to TW (rectangle): $U_{A.UN2} := U_{press.toe.gs.UN2} \cdot L_b \cdot W_b \cdot -1 = -19055.92 \cdot kN$

Moment Arm from Toe of Gate Structure for Uplift UA: $L_{A.UN2} := \left(\frac{L_b}{2}\right) = 9.25\,m$

Linearly Decreasing Uplift Force UN2B Under Gate Structure due to HW-TW Differential (triangle): $U_{B.UN2} := \frac{1}{2} \cdot \left(U_{HW.UN2} - U_{press.toe.gs.UN2}\right) \cdot L_b \cdot W_b \cdot -1 = -6941.8 \cdot kN$

Moment Arm from Toe of Gate Structure for Uplift UB: $L_{B.UN2} := \frac{2}{3} \cdot L_b = 12.33\,m$

Total Resultant Uplift force: $U_{UN2} := U_{A.UN2} + U_{B.UN2} = -25997.73 \cdot kN$

Resultant Location from Toe: $U_{UN2.loc} := \frac{\left(U_{A.UN2} \cdot L_{A.UN2} + U_{B.UN2} \cdot L_{B.UN2}\right)}{\left(U_{A.UN2} + U_{B.UN2}\right)} = 10.07\,m$

$\Sigma V_{water.UN2} := H_{1.UN2} + H_{2.UN2} + U_{UN2} = -9365.55 \cdot kN$

$\Sigma M_{Vwater.UN2} := H_{1.UN2} \cdot H_{1.UN2.loc} + H_{2.UN2} \cdot H_{2.UN2.loc} + U_{UN2} \cdot U_{UN2.loc} = -107486.33 \cdot kN \cdot m$

SOIL LOADS

UN2 CASE

Equivalent Fluid Pressure (EFP):

At rest lateral pressure coefficient: $K_{o.UN2} := 1 - \sin\left(\phi_{backfill}\right) = 0.658$ (Section 5.3, Design Criteria)

Headwater Pier Footing Unit Width: $W_{hwas.UN2} = 15.00\,m$

Tailwater Pier Footing Unit Width: $W_{tw.UN2} = 15.00\,m$

Pier Footing Thickness at Heel: $t_{hf.UN2} := TOC_{as} - BOK_{elev} = 6.00\,m$

Fixed Crest Footing Thickness at Toe: $t_{tf.UN2} := TOC_{pfe} - BOF_{elev} = 2.00\,m$

Lateral Driving Force (Headwater Side - at rest condition)

At-Rest Soil Load: $$E_{act.UN2} := \frac{\left(K_{o.UN2} \cdot t_{hf.UN2}^{\,2}\right)}{2} \cdot \left(\gamma_r - \gamma_w\right) \cdot W_{hwas.UN2} \cdot -1 = -2165.61 \cdot kN$$

Acting at: $$E_{act.UN2.loc} := \frac{t_{hf.UN2}}{3} = 2.00\,m$$

Lateral Resisting Force (Tailwater Side - at rest condition)

At-rest Soil Load: $$E_{pass.UN2} := \frac{\left(K_{o.UN2} \cdot t_{tf.UN2}^{\,2}\right)}{2} \cdot \left(\gamma_r - \gamma_w\right) \cdot W_{tw.UN2} = 240.62 \cdot kN$$

Acting at: $$E_{pass.UN2.loc} := \frac{t_{tf.UN2}}{3} = 0.67\,m$$

$$\Sigma H_{soil.UN2} := E_{act.UN2} + E_{pass.UN2} = -1924.99 \cdot kN$$

$$\Sigma M_{soil.UN2} := E_{act.UN2} \cdot E_{act.UN2.loc} + E_{pass.UN2} \cdot E_{pass.UN2.loc} = -4170.8 \cdot kN \cdot m$$

ICE / IMPACT LOADS (ASSUME NO ICE LOADING ON TAILWATER SIDE)

Static Ice load on Gates: $$I_{G.UN2} := \begin{cases} 00 \dfrac{kN}{m} & \text{if } TOP_{gg.UN2} \le TOC_{as} \\ 0 \dfrac{kN}{m} & \text{if } TOP_{gg.UN2} > TOC_{as} \end{cases} = 0 \cdot \frac{kN}{m}$$ (Section 7.7, Design Criteria)

Ice Loading Unit Width on Guard Gate: $W_{gg.UN2} := 15.00m$ (Input value for load case)

Total Ice Load on Structure: $I_{UN2} := -\left(I_{G.UN2} \cdot W_{gg.UN2}\right) = 0 \cdot kN$

Apply Ice load at: $I_{UN2.loc} := \left(TOP_{gg.UN2} - BOF_{elev} - 0.30m\right) = 8.70\,m$

$$\Sigma H_{I.UN2} := I_{UN2} = 0 \cdot kN$$

$$\Sigma M_{I.UN2} := I_{UN1} \cdot I_{UN1.loc} = 0 \cdot kN \cdot m$$

SEISMIC LOAD (NOT APPLICABLE FOR THIS LOAD CASE)

UN2 CASE

SUMMARY OF LOADS

	Loads	Moment Arm
Dead load of Concrete Structure:	$D_{conc} = 24618.6 \cdot kN$	$X_{conc.loc} = 10.06\, m$
Obermyer Gate Weight:	$D_{Gate} = 210.0 \cdot kN$	$X_{gate} = 6.60\, m$
HW Lateral Load on Approach Slab:	$H_{hwas.UN2} = -8034.4 \cdot kN$	$H_{hwas.UN2.loc} = 0.67\, m$
HW Lateral Load on Guard Gate:	$H_{hwgg.UN2} = -2648.7 \cdot kN$	$H_{hwgg.UN2.loc} = 5.92\, m$
TW Lateral Load on Gate Footing (Including Key - Sliding Check Loads):	$H_{twgk.UN2} = 5753.56 \cdot kN$	$H_{twgk.UN2.loc} = 0.35\, m$
TW Lateral Load on Guard Gate:	$H_{twgg.UN2} = 662.2 \cdot kN$	$H_{twgg.UN2.loc} = 5.00\, m$
Vertical HW Load on Approach Slab:	$H_{1.UN2} = 7854.1 \cdot kN$	$H_{1.UN2.loc} = 14.13\, m$
Vertical TW Load on Pier Footing (crest):	$H_{2.UN2} = 8778.0 \cdot kN$	$H_{2.UN2.loc} = 4.95\, m$
Uplift:	$U_{UN2} = -25997.7 \cdot kN$	$U_{UN2.loc} = 10.07\, m$

ACCEPTANCE PARAMETERS

Required Factor of Safety: $FS_{req.FUN2} := 1.3$

VERTICAL LOADS RESISTING:

Dead Load: $\Sigma V_{DL} = 24828.6 \cdot kN$

Water Weight H1+H2: $\Sigma V_{H.FUN2} := H_{1.UN2} + H_{2.UN2} = 16632.18 \cdot kN$

Summation Vertical Resisting: $\Sigma V_{FUN2} := \Sigma V_{DL} + \Sigma V_{H.FUN2} = 41460.8 \cdot kN$

VERTICAL LOADS UPLIFT:

Uplift: $U_{UN2} = -25997.73 \cdot kN$

Factor of Safety Floatation:

$$FS_{act.FUN2} := \frac{\Sigma V_{FUN2}}{\left|U_{UN2}\right|} = 1.59$$

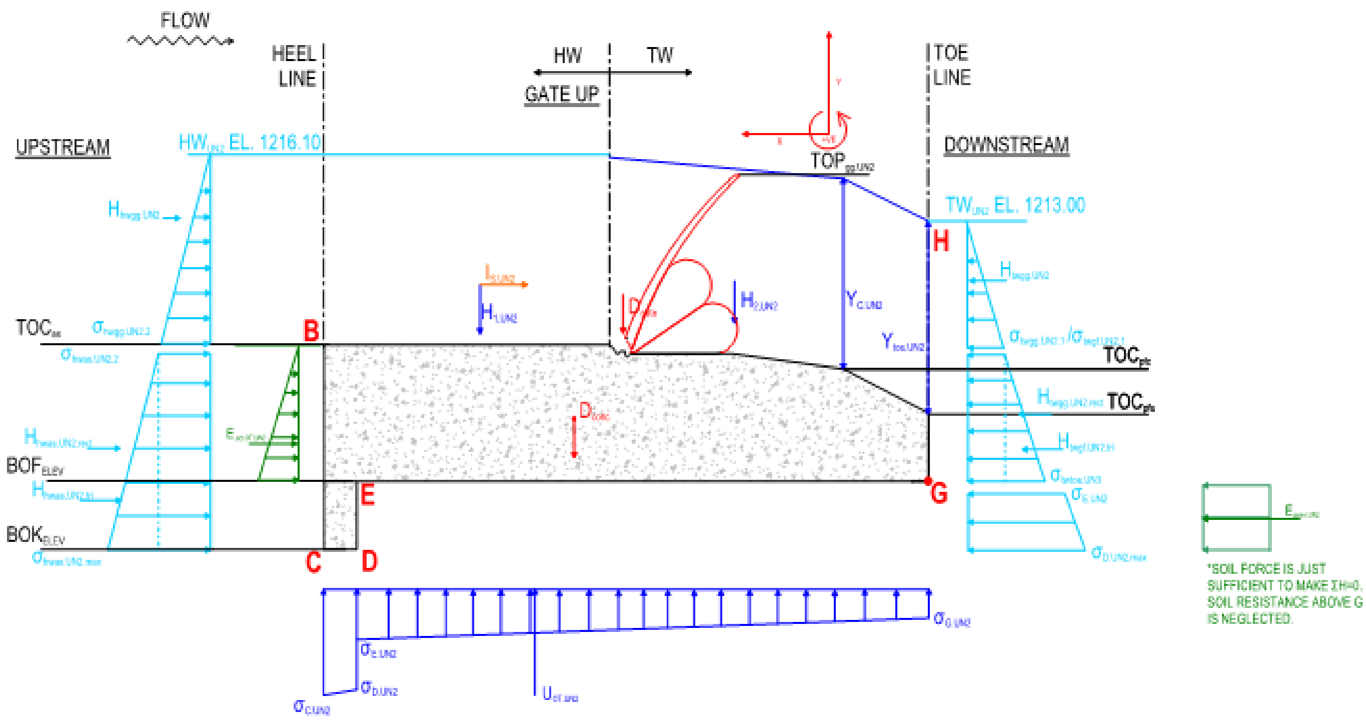
$$FS_{check.FUN2} := \begin{cases} \text{"OKAY"} & \text{if } FS_{act.FUN2} \ge FS_{req.FUN2} \\ \text{"ANCHORS REQUIRED"} & \text{if } FS_{act.FUN2} < FS_{req.FUN2} \end{cases} = \text{"OKAY"}$$

MONOLITH OVERTURNING STABILITY ANALYSIS

UN2 CASE

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stability of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1 $Ratio_{OT.UN2.min} := 0.33$



Uplift Loads for Overturning Stability Analysis

Line of Creep:

Change in Water Head: $\Delta_{h.UN2} := HW_{UN2} - TW_{UN2} = 3.1\ m$

Length from Point C to Point G: $L_{CG} = 18.61\ m$

Length from Various Points to Points: $L_{CD} = 1\ m$ $L_{DE} = 2\ m$ $L_{EG} = 17.5\ m$

$L_{GH.UN2} := TW_{UN2} - BOF_{elev} = 7\ m$

Length from Point C, D, E to G: $L_{CDEG} = 20.5\ m$ $L_{CDE} = 3\ m$

Water Pressure at Point C: $\sigma_{C.UN2} := \sigma_{hwas.UN2.2} = -118.7 \cdot kPa$

Water Pressure at Point G: $\sigma_{G.UN2} := \sigma_{twtoe.UN2} \cdot -1 = -68.67 \cdot kPa$

Water Pressure at Point D: $$\sigma_{D.UN2} := -\gamma_w \cdot \left[\left(HW_{UN2} - BOK_{elev} \right) - \frac{\Delta_{h.UN2} \cdot L_{CD}}{L_{CDEG}} \right] = -117.22 \cdot kPa$$

Water Pressure at Point E: $$\sigma_{E.UN2} := -\gamma_w \cdot \left[\left(HW_{UN2} - BOF_{elev} \right) - \frac{\Delta_{h.UN2} \cdot L_{CDE}}{L_{CDEG}} \right] = -94.63 \cdot kPa$$

Uplift for Overturning Analysis on Bottom of Key: $$U_{OT.UN2.key} := \frac{\sigma_{C.UN2} + \sigma_{D.UN2}}{2} \cdot L_{CD} \cdot W_b = -1769.39 \cdot kN$$

Acting at: $$U_{OT.UN2.key.loc} := \frac{L_{CD} \cdot \left(2 \cdot \sigma_{C.UN2} + \sigma_{D.UN2} \right)}{3 \left(\sigma_{C.UN2} + \sigma_{D.UN2} \right)} + L_{EG} = 18\ m$$

UN2 CASE

Uplift for Overturning Analysis on Bottom of Footing:

$$U_{OT.UN2.ftg} := \frac{\sigma_{E.UN2} + \sigma_{G.UN2}}{2} \cdot L_{EG} \cdot W_b = -21433.21 \cdot kN$$

Acting at:

$$U_{OT.UN2.ftg.loc} := \frac{L_{EG} \cdot \left(\sigma_{G.UN2} + 2 \cdot \sigma_{E.UN2}\right)}{3\left(\sigma_{G.UN2} + \sigma_{E.UN2}\right)} = 9.21\,m$$

Uplift Load for Overturning Analysis:

$$U_{OT.UN2} := U_{OT.UN2.key} + U_{OT.UN2.ftg} = -23202.59 \cdot kN$$

Uplift Load Acting from Toe:

$$U_{OT.UN2.loc} := \frac{U_{OT.UN2.key} \cdot U_{OT.UN2.key.loc} + U_{OT.UN2.ftg} \cdot U_{OT.UN2.ftg.loc}}{U_{OT.UN2}} = 9.88\,m$$

<u>All Vertical Loads Applicable to Overturning Stability Analysis</u>

Total Concrete Dead Loads:	$D_{conc} = 24618.6 \cdot kN$	at:	$X_{conc.loc} = 10.06\,m$
Dead Load of Gate:	$D_{Gate} = 210.0 \cdot kN$		$X_{gate} = 6.60\,m$
Water Weight (HW) on Apron Slab:	$H_{1.UN2} = 7854.1 \cdot kN$		$H_{1.UN2.loc} = 14.13\,m$
Water Weight (TW) on Gate Footing:	$H_{2.UN2} = 8778.0 \cdot kN$		$H_{2.UN2.loc} = 4.95\,m$
Uplift Load for Overturning Analysis:	$U_{OT.UN2} = -23202.59 \cdot kN$		$U_{OT.UN2.loc} = 9.88 \cdot m$

Sum of All Overtuming Analysis Vertical Load:

$$\Sigma V_{UN2.OT} := D_{conc} + D_{Gate} + H_{1.UN2} + H_{2.UN2} + U_{OT.UN2} = 18258.19 \cdot kN$$

Sum of All Overtuming Analysis Vertical Load Moments:

$$\Sigma M_{V.UN2.OT} := D_{conc} \cdot X_{conc.loc} + D_{Gate} \cdot X_{gate} + H_{1.UN2} \cdot H_{1.UN2.loc} + H_{2.UN2} \cdot H_{2.UN2.loc} + U_{OT.UN2} \cdot U_{OT.UN2.loc} = 174010.87 \cdot kN \cdot m$$

<u>Lateral Tailwater Loads for Overturning Stability Analysis</u>

TW Lateral Load on Gate Footing (No Key - Overturning Values Adjusted):

$$H_{twgf.UN2} := H_{twgf.UN2.tri} + H_{twgf.UN2.rect} = 2943 \cdot kN$$

Acting at:

$$H_{twgf.UN2.loc} := \frac{\frac{h_{toe}}{3} \cdot H_{twgf.UN2.tri} + \frac{h_{toe}}{2} \cdot H_{twgf.UN2.rect}}{H_{twgf.UN2}} = 1.73\,m$$

Horizontal Tailwater Pressure Top of Key (Overturning Analysis):

$$\sigma_{twtk.OT.UN2} := \sigma_{E.UN2} \cdot -1 = 94.63 \cdot kPa$$

Horizontal Tailwater Pressure Bottom of Key (Overturning Analysis):

$$\sigma_{twbk.OT.UN2} := \sigma_{D.UN2} \cdot -1 = 117.22 \cdot kPa$$

Triangular Distribution Unit Load Acting at Key:

$$H_{twbk.OT.UN2.tri} := \frac{\left(\sigma_{twbk.OT.UN2} - \sigma_{twtk.OT.UN2}\right)}{2} \cdot d_{key} \cdot W_{tw.UN2} = 338.8 \cdot kN$$

Triangular Distribution Unit Load Acting at Key:

$$H_{twbk.OT.UN2.rect} := \sigma_{twtk.OT.UN2} \cdot d_{key} \cdot W_{tw.UN2} = 2838.92 \cdot kN$$

Total Horizontal Tailwater Load on Key (Overturning Values Adjusted):

$$H_{twkey.OT.UN2} := H_{twbk.OT.UN2.tri} + H_{twbk.OT.UN2.rect} = 3177.72 \cdot kN$$

Acting at:

$$H_{twkey.OT.UN2.loc} := \frac{H_{twbk.OT.UN2.tri} \cdot \frac{-2 \cdot d_{key}}{3} + H_{twbk.OT.UN2.rect} \cdot \frac{-d_{key}}{2}}{H_{twkey.OT.UN2}} = -1.04 \cdot m$$

UN2 CASE

Lateral Driving Earth Loads for Overturning Stability Analysis (at rest condition)

Depth of Driving Soil Loads (to top of key): $h_{E.OT.UN2} := TOC_{as} - BOF_{elev} = 4\,m$

At-Rest Soil Load: $E_{act.OT.UN2} := \frac{\left(K_{o.UN2} \cdot h_{E.OT.UN2}^{2}\right)}{2} \cdot \left(\gamma_r - \gamma_w\right) \cdot W_{hwas.UN2} \cdot -1 = -962.49 \cdot kN$

At Rest- Soil Load Acting from Toe: $E_{act.OT.UN2.loc} := \frac{h_{E.OT.UN2}}{3} = 1.33\,m$

All Lateral Loads Applicable to Overturning Stability Analysis

HW Lateral Load on Approach Slab:	$H_{hwas.UN2} = -8034.4 \cdot kN$	$H_{hwas.UN2.loc} = 0.67\,m$
HW Lateral Load on Guard Gate:	$H_{hwgg.UN2} = -2648.7 \cdot kN$	$H_{hwgg.UN2.loc} = 5.92\,m$
TW Lateral Load on Guard Gate:	$H_{twgg.UN2} = 662.2 \cdot kN$	$H_{twgg.UN2.loc} = 5.00\,m$
TW Lateral Load on Gate Footing (No Key - Overturning Values Adjusted):	$H_{twgf.UN2} = 2943 \cdot kN$	$H_{twgf.UN2.loc} = 1.73\,m$
TW Lateral Load on Key:	$H_{twkey.OT.UN2} = 3177.72 \cdot kN$	$H_{twkey.OT.UN2.loc} = -1.04\,m$
Ice / Impact Load:	$I_{UN2} = 0.0 \cdot kN$	$I_{UN2.loc} = 8.70\,m$
Lateral Soil Load (driving):	$E_{act.OT.UN2} = -962.5 \cdot kN$	$E_{act.OT.UN2.loc} = 1.33\,m$

Resisting Lateral Soil Load as required to produce horizontal equilibrium:

$$E_{pas.OT.UN2} := -\left(H_{hwas.UN2} + H_{hwgg.UN2} + H_{twgg.UN2} + H_{twgf.UN2} + H_{twkey.OT.UN2} + I_{UN2} + E_{act.OT.UN2}\right) = 4862.69 \cdot kN$$

Acting at:

$$E_{pas.OT.UN2.loc} := -1 \cdot \frac{d_{key}}{2} = -1\,m$$

Sum of All Overturning Analysis Horizontal Load (ΣH=0):

$$\Sigma H_{UN2.OT} := H_{hwas.UN2} + H_{hwgg.UN2} + H_{twgg.UN2} + H_{twgf.UN2} + H_{twkey.OT.UN2} + I_{UN2} + E_{act.OT.UN2} + E_{pas.OT.UN2} = 0 \cdot kN$$

Sum of All Overturning Analysis Horizontal Load Moments:

$$\Sigma M_{H.UN2.OT} := H_{hwas.UN2} \cdot H_{hwas.UN2.loc} + H_{hwgg.UN2} \cdot H_{hwgg.UN2.loc} + H_{twgg.UN2} \cdot H_{twgg.UN2.loc} \cdots + H_{twgf.UN2} \cdot H_{twgf.UN2.loc} + H_{twkey.OT.UN2} \cdot H_{twkey.OT.UN2.loc} + I_{UN2} \cdot I_{UN2.loc} \cdots + E_{act.OT.UN2} \cdot E_{act.OT.UN2.loc} + E_{pas.OT.UN2} \cdot E_{pas.OT.UN2.loc} = -22094.02 \cdot kN \cdot m$$

Overturning Stability Analysis

$\Sigma M_{UN2.OT} := \Sigma M_{V.UN2.OT} + \Sigma M_{H.UN2.OT} = 151916.85 \cdot kN \cdot m$ $\quad X_{R.UN2} := \frac{\Sigma M_{UN2.OT}}{\Sigma V_{UN2.OT}} = 8.32\,m$ $\quad x_{OT.UN2} := X_{R.UN2} - \frac{L_b}{2} = -0.93\,m$

Overturning Resultant Ratio $\quad Ratio_{OT.UN2} := \frac{X_{R.UN2}}{L_b} = 0.45$

$$Ratio_{OT.UN2.check} := \begin{cases} \text{"OKAY"} & \text{if } Ratio_{OT.UN2} \geq Ratio_{OT.UN2.min} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

$$x_{OT.check.UN2} := \begin{cases} \text{"OKAY"} & \text{if } \left|x_{OT.UN2}\right| \leq Kern \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

UN2 CASE

CHECK FOUNDATION BEARING CAPACITY (HORIZONTAL PLANE):

Bearing Pressure Under Toe:

$$\sigma_{ToeUN2.OT} := \frac{\Sigma V_{UN2.OT}}{L_b \cdot W_b} + \frac{\left(\Sigma V_{UN2.OT} \cdot x_{OT.UN2}\right)}{S_b} = 46.0 \cdot kPa$$

$$Bearing_{ChecktoeUN2.OT} := \begin{vmatrix} \text{"OKAY "} & \text{if } \sigma_{ToeUN2.OT} < \sigma_{allow.UN2} \\ \text{"NG""} & \text{otherwise} \end{vmatrix} = \text{"OKAY "}$$

Bearing Pressure Under Heel:

$$\sigma_{HeelUN2.OT} := \frac{\Sigma V_{UN2.OT}}{L_b \cdot W_b} - \frac{\left(\Sigma V_{UN2.OT} \cdot x_{OT.UN2}\right)}{S_b} = 85.6 \cdot kPa$$

$$Bearing_{CheckheelUN2.OT} := \left(\begin{vmatrix} \text{"OKAY "} & \text{if } \sigma_{HeelUN2.OT} < \sigma_{allow.UN2} \wedge \sigma_{HeelUN2.OT} > 0 \\ \text{"NG""} & \text{otherwise} \end{vmatrix} \right) = \text{"OKAY "}$$

SUMMARY OF STABILITY ASSESSMENT:

Sliding Factor of Safety:
(Horizontal Plane)

$FS_{HorizSliding.UN2} = 1.22$

$FS_{HorizSliding.UN2.Check}$ = "Horizontal Sliding (No Key or Void Behind Key) Fail ! Revise Structure !"

Sliding Factor of Safety:
(Inclined Plane)

$FS_{InclinedlSlidingUN2} = 2.84$ $\quad$ $FS_{InclinedSliding.check.UN2}$ = "OKAY "

Eccentricity:
(Inclined Plane)

$e_{UN2} = 0.64\,m$ $\quad$ $e_{check.UN2}$ = "Okay"

Bearing Pressure At Heel:
(Inclined Plane)

$\sigma_{heel.UN2} = 62 \cdot kPa$ $\quad$ $\sigma_{heel.UN2.check}$ = "Okay"

Bearing Pressure At Toe:
(Inclined Plane)

$\sigma_{toe.UN2} = 94 \cdot kPa$ $\quad$ $\sigma_{toe.UN2.1.check}$ = "Okay"

Flotation Factor of Safety
(horizontal plane)

$FS_{act.FUN2} = 1.59$ $\quad$ $FS_{check.FUN2}$ = "OKAY"

Overturning Resultant Ratio:
(horizontal plane)

$Ratio_{OT.UN2} = 0.45$ $\quad$ $Ratio_{OT.UN2.check}$ = "OKAY"

Eccentricity:
(horizontal plane)

$x_{OT.UN2} = -0.93\,m$ $\quad$ $x_{OT.check.UN2}$ = "OKAY"

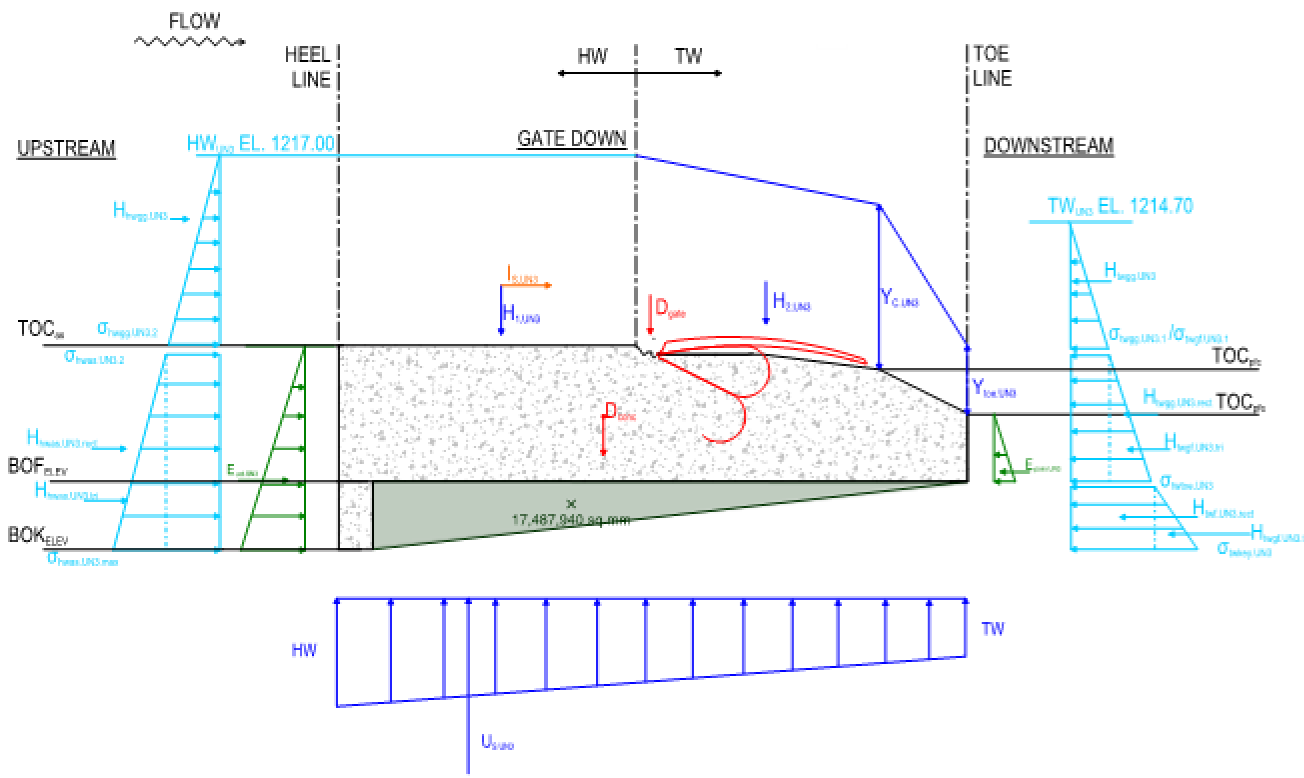
Bearing Pressure At Heel:
(horizontal plane)

$\sigma_{HeelUN2.OT} = 86 \cdot kPa$ $\quad$ $Bearing_{CheckheelUN2.OT}$ = "OKAY "

Bearing Pressure At Toe:
(horizontal plane)

$\sigma_{ToeUN2.OT} = 46 \cdot kPa$ $\quad$ $Bearing_{ChecktoeUN2.OT}$ = "OKAY "

UN3 DESIGN CASE



ACCEPTANCE PARAMETERS

Required Factor of Safety for Sliding: $FS_{req.UN3.sl} := 1.3$ (Without Cohesion) (Section 8.1, Design Criteria)

Resultant Within Middle Third of Base: $e \le \frac{L_b}{6} \wedge e \ge \frac{-L_b}{6}$

Allowable Rock Bearing Pressure: $\sigma_{allow.UN3} := 1470 \cdot \frac{kN}{m^2}$ (Section 5.2, Design Criteria)

INPUT PARAMETERS

Headwater Elevation: $HW_{UN3} := 1217.0m$ (Section 8.3, Design Criteria)

Tailwater Elevation: $TW_{UN3} := 1214.70m$ (Section 8.3, Design Criteria)

Bottom of Footing Elevation: $BOF_{elev} = 1206\,m$

Approach Slab Top of Concrete Elevation at Upstream Face: $TOC_{as} = 1210\,m$

Footing Top of Concrete Elevation at Stilling Basin: $TOC_{pfe} = 1208\,m$

Footing Top of Concrete Elevation at Center of Footing: $TOC_{pfc} = 1209.3\,m$

Gates are open when top of gate elevation is at 1210.00m

Top of Guard/Regulating Gate Elevation: $TOP_{rg.UN3} := 1210.00m$ $TOP_{gg.UN3} := 1210.00m$

Gates are closed/up when top of gate elevation is at 1215.0m

Bottom of Key Elevation: $BOK_{elev} = 1204\,m$

Crestwater Elevation: Dynamic Flow $EL_{C.UN3} := 1214.67m$

$$Y_{C.UN3} := \begin{cases} (EL_{C.UN3} - TOC_{pfc}) & \text{if } TOP_{gg.UN3} \le HW_{UN3} \\ (TW_{UN3} - TOC_{pfc}) & \text{if } TOP_{gg.UN3} > HW_{UN3} \end{cases} = 5.37 \cdot m$$

Toewater Elevation: $EL_{TOE.UN3} := 1210.89m$

$$Y_{TOE.UN3} := \begin{cases} (EL_{TOE.UN3} - TOC_{pfe}) & \text{if } TOP_{gg.UN3} \le HW_{UN3} \\ (TW_{UN3} - TOC_{pfe}) & \text{if } TOP_{gg.UN3} > HW_{UN3} \end{cases} = 2.89 \cdot m$$

LATERAL WATER LOADS

UN3 CASE

HEADWATER (DRIVING):

Headwater Depth on Gate: $D_{hwg.UN3} := HW_{UN3} - TOC_{as} = 7.00\,m$

Thickness of Approach Slab (Including Key): $T_{as} = 6\,m$

Headwater Depth at Heel (U/S face): $D_{hwas.UN3} := HW_{UN3} - BOK_{elev} = 13.00\,m$

Headwater Load Unit Width on Approach Slab: $W_{hwas.UN3} := W_b = 15.00\,m$

Headwater Unit Load At Top of Approach Slab:

$$H_{hwas.UN3.1} := \frac{-\left(\gamma_w \cdot D_{hwg.UN3}^{\;2}\right)}{2} \cdot W_{hwas.UN3} = -3605.18 \cdot kN$$

Headwater Unit Load At Bottom of Approach Key:

$$H_{hwas.UN3.2} := \frac{-\left(\gamma_w \cdot D_{hwas.UN3}^{\;2}\right)}{2} \cdot W_{hwas.UN3} = -12434.2 \cdot kN$$

Headwater Line Load At Top of Approach Slab:

$$\sigma_{hwas.UN3.1} := -\left(\gamma_w \cdot D_{hwg.UN3}\right) = -68.67 \cdot kPa$$

Headwater Line Load At Bottom of Approach Key:

$$\sigma_{hwas.UN3.2} := -\left(\gamma_w \cdot D_{hwas.UN3}\right) = -127.53 \cdot kPa$$

Triangular Distribution Unit Load on Approach Slab and Key:

$$H_{hwas.UN3.2.tri} := \left(\frac{\sigma_{hwas.UN3.2} - \sigma_{hwas.UN3.1}}{2}\right) \cdot \left(T_{as} \cdot W_{hwas.UN3}\right) = -2648.7 \cdot kN$$

Rectangular Distribution Unit Load on Approach Slab and Key:

$$H_{hwas.UN3.2.rect} := \sigma_{hwas.UN3.1} \cdot \left(T_{as} \cdot W_{hwas.UN3}\right) = -6180.3 \cdot kN$$

Total Horizontal Headwater Load on Approach Slab:

$$H_{hwas.UN3} := H_{hwas.UN3.2.tri} + H_{hwas.UN3.2.rect} = -8829 \cdot kN$$

Apply Total Footing Headwater Load at:

$$H_{hwas.UN3.loc} := \frac{\left[H_{hwas.UN3.2.rect} \cdot \frac{\left(T_{as}\right)}{2} + H_{hwas.UN3.2.tri} \cdot \frac{\left(T_{as}\right)}{3}\right]}{H_{hwas.UN3.2.tri} + H_{hwas.UN3.2.rect}} - d_{key} = 0.70\,m$$

Guard Gate Operating Condition:

Guard Gate Down/Open Condition: $A1_{UN3} := TOP_{gg.UN3} \le TOC_{as}$

Guard Crest Gate Up/Closed, with Top of Gate Higher than HW Elevation: $B1_{UN3} := TOP_{gg.UN3} \ge HW_{UN3} \wedge TOP_{gg.UN3} > TOC_{as}$

Guard Crest Gate Up/Closed, with Top of Gate Lower than HW Elevation: $C1_{UN3} := TOP_{gg.UN3} > TOC_{as} \wedge HW_{UN3} > TOP_{gg.UN3}$

Guard Crest Gate Height: $H_{gg.UN3} := TOP_{gg.UN3} - TOC_{as} = 0\,m$

Headwater Depth at Guard Crest Gate: $D_{hwgg.UN3} := HW_{UN3} - TOC_{as} = 7.00\,m$

Guard Crest Gate Width: $W_{hwgg.UN3} := 15.00m$

Lateral Headwater Pressure at Bottom of Guard Crest Gate:

$$\sigma_{hwgg.UN3.1} := \begin{cases} (0.0kPa) & \text{if } A1_{UN3} \\ -(\gamma_w \cdot D_{hwgg.UN3}) & \text{if } B1_{UN3} \\ -(\gamma_w \cdot D_{hwgg.UN3}) & \text{if } C1_{UN3} \end{cases} = 0.0\cdot kPa$$

Lateral Headwater Pressure at Top of Guard Crest Gate:
(Load at HW Elevation On Guard Crest Gate if HW is below TOG_{rg})

$$\sigma_{hwgg.UN3.2} := \begin{cases} (0.0kPa) & \text{if } A1_{UN3} \\ 0.0kPa & \text{if } B1_{UN3} \\ -\left[\gamma_w \cdot (HW_{UN3} - TOP_{gg.UN3})\right] & \text{if } C1_{UN3} \end{cases} = 0.0\cdot kPa$$

Average Pressure acting on Guard Crest Gate:

$$\sigma_{hwgg.UN3.avg} := \frac{(\sigma_{hwgg.UN3.1} + \sigma_{hwgg.UN3.2})}{2} = 0\cdot kPa$$

Total Area of Crest Gate:

$$A_{hwgg.UN3} := \begin{cases} D_{hwgg.UN3} \cdot W_{hwgg.UN3} & \text{if } A1_{UN3} \\ D_{hwgg.UN3} \cdot W_{hwgg.UN3} & \text{if } B1_{UN3} \\ H_{gg.UN3} \cdot W_{hwgg.UN3} & \text{if } C1_{UN3} \end{cases} = 105\cdot m^2$$

Total Horizontal Headwater Load on Guard Crest Gate: $H_{hwgg.UN3} := \sigma_{hwgg.UN3.avg} \cdot A_{hwgg.UN3} = 0.0\cdot kN$

Apply Total Guard Crest Gate Headwater Load at:

$$H_{hwgg.UN3.loc} := \begin{cases} (TOC_{as} - BOF_{elev}) & \text{if } A1_{UN3} \\ \left[\frac{(HW_{UN3} - TOC_{as})}{3} + (TOC_{as} - BOF_{elev})\right] & \text{if } B1_{UN3} \\ \left[\frac{\sigma_{hwgg.UN3.2} \cdot A_{hwgg.UN3} \cdot \frac{(H_{gg.UN3})}{2} + \frac{(\sigma_{hwgg.UN3.1} - \sigma_{hwgg.UN3.2})}{2} A_{hwgg.UN3} \cdot \frac{(H_{gg.UN3})}{3}}{\sigma_{hwgg.UN3.2} \cdot A_{hwgg.UN3} + \frac{(\sigma_{hwgg.UN3.1} - \sigma_{hwgg.UN3.2})}{2} \cdot A_{hwgg.UN3}} \ldots \right. \\ \left. + (TOC_{as} - BOF_{elev}) \right] & \text{if } C1_{UN3} \end{cases} = 4.0\cdot m$$

LATERAL TAILWATER (RESISTING) Applied to Downstream Side of Guard Crest Gate: UN3 CASE

Guard Gate Down/Open Condition:

$$A2_{UN3} := TOP_{gg.UN3} \le TOC_{as}$$

Guard Crest Gate Up/Closed, with Top of Gate Higher than TW Elevation:

$$B2_{UN3} := TOP_{gg.UN3} \ge TW_{UN3} \wedge TOP_{gg.UN3} > TOC_{as}$$

Guard Crest Gate Up/Closed, with Top of Gate Lower than TW Elevation:

$$C2_{UN3} := TOP_{gg.UN3} > TOC_{as} \wedge TW_{UN3} > TOP_{gg.UN3}$$

Tailwater Depth at Guard Crest Gate:

$$D_{twgg.UN3} := TW_{UN3} - TOC_{as} = 4.70\,m$$

Guard Crest Gate Width:

$$W_{twgg.UN3} := 15.00m$$

Lateral Water Load at Bottom of Guard Crest Gate:

$$\sigma_{twgg.UN3.1} := \begin{cases} (0.0kPa) & \text{if } A2_{UN3} \\ (\gamma_w \cdot D_{twgg.UN3}) & \text{if } B2_{UN3} \\ (\gamma_w \cdot D_{twgg.UN3}) & \text{if } C2_{UN3} \end{cases} = 0.0 \cdot kPa$$

Lateral Water Load at Top of Guard Crest Gate:
(Load at TW Elevation On Guard Crest Gate if TW is below TOG_{gg})

$$\sigma_{twgg.UN3.2} := \begin{cases} (0.0kPa) & \text{if } A2_{UN3} \\ 0.0kPa & \text{if } B2_{UN3} \\ \left[\gamma_w \cdot (TW_{UN3} - TOP_{gg.UN3})\right] & \text{if } C2_{UN3} \end{cases} = 0.0 \cdot kPa$$

Average Pressure acting on Guard Crest Gate:

$$\sigma_{twgg.UN3.avg} := \frac{(\sigma_{twgg.UN3.1} + \sigma_{twgg.UN3.2})}{2} = 0 \cdot kPa$$

Total Area water acting on Crest Gate:

$$A_{twgg.UN3} := \begin{cases} D_{twgg.UN3} \cdot W_{twgg.UN3} & \text{if } A2_{UN3} \\ D_{twgg.UN3} \cdot W_{twgg.UN3} & \text{if } B2_{UN3} \\ H_{gg.UN3} \cdot W_{twgg.UN3} & \text{if } C2_{UN3} \end{cases} = 70.5 \cdot m^2$$

Total Horizontal Tailwater Load on Guard Crest Gate:

$$H_{twgg.UN3} := \sigma_{twgg.UN3.avg} \cdot A_{twgg.UN3} = 0.0 \cdot kN$$

Apply Total Horiz. TW Load on Guard Gate at:

$$H_{twgg.UN3.loc} := \begin{cases} (TOC_{as} - BOF_{elev}) & \text{if } A2_{UN3} \\ \left[\frac{(TW_{UN3} - TOC_{as})}{3} + (TOC_{as} - BOF_{elev})\right] & \text{if } B2_{UN3} \\ \left[\frac{\sigma_{twgg.UN3.2} \cdot A_{twgg.UN3} \cdot \frac{(H_{gg.UN3})}{2} + \frac{(\sigma_{twgg.UN3.1} - \sigma_{twgg.UN3.2})}{2} \cdot A_{twgg.UN3} \cdot \frac{(H_{gg.UN3})}{3}}{\sigma_{twgg.UN3.2} \cdot A_{twgg.UN3} + \frac{(\sigma_{twgg.UN3.1} - \sigma_{twgg.UN3.2})}{2} \cdot A_{twgg.UN3}} \ldots \\ + (TOC_{as} - BOF_{elev}) \right] & \text{if } C2_{UN3} \end{cases} = 4.0 \cdot m$$

LATERAL WATER LOADS (continued)

UN3 CASE

TAILWATER (RESISTING) Applied to Concrete Structure:

Tailwater Depth At top of Gate Base Footing Elevation: $D_{twgf.UN3} := TW_{UN3} - TOC_{as} = 4.70\,m$

Water Depth at bottom of Gate Base Footing: $D_{twtoe.UN3} := TW_{UN3} - BOF_{elev} = 8.70\,m$

Footing Thickness at Toe $h_{toe} = 4\,m$

Unit Width of D/S face of crest for application of Tailwater Load: $W_{tw.UN3} := W_b = 15.00\,m$

Tailwater Pressure At Top of Gate Footing: $\sigma_{twgf.UN3} := \left(\gamma_w \cdot D_{twgf.UN3}\right) = 46.11 \cdot kPa$

Tailwater Line Load At Bottom of Gate Footing: $\sigma_{twtoe.UN3} := \left(\gamma_w \cdot D_{twtoe.UN3}\right) = 85.35 \cdot kPa$

Triangular Distribution Unit Load on Gate Footing Base:

$$H_{twgf.UN3.tri} := \left(\frac{\sigma_{twtoe.UN3} - \sigma_{twgf.UN3}}{2}\right) \cdot \left(h_{toe} \cdot W_{tw.UN3}\right) = 1177.2 \cdot kN$$

Rectangular Distribution Unit Load on Gate Footing Base:

$$H_{twgf.UN3.rect} := \sigma_{twgf.UN3} \cdot \left(h_{toe} \cdot W_{tw.UN3}\right) = 2766.42 \cdot kN$$

Tailwater Pressure At Bottom of Sliding Failure Plane:

$$\sigma_{twbk.UN3} := \left(HW_{UN3} - BOK_{elev}\right) \cdot \gamma_w = 127.53 \cdot kPa$$

Triangular Distribution Unit Load Below Footing:

$$H_{twbk.UN3.tri} := \frac{\left(\sigma_{twbk.UN3} - \sigma_{twtoe.UN3}\right)}{2} \cdot d_{key} \cdot W_{tw.UN3} = 632.74 \cdot kN$$

Rectangular Distribution Load Below Footing Base:

$$H_{twbk.UN3.rect} := \sigma_{twtoe.UN3} \cdot d_{key} \cdot W_{tw.UN3} = 2560.41 \cdot kN$$

Total Horizontal Tailwater Load on Gate Footing (including key):

$$H_{twgk.UN3} := H_{twgf.UN3.tri} + H_{twgf.UN3.rect} + H_{twbk.UN3.tri} + H_{twbk.UN3.rect} = 7136.78 \cdot kN$$

Apply Total Gate Footing Tailwater Load at:

$$H_{twgk.UN3.loc} := \frac{\left[H_{twgf.UN3.rect} \cdot \frac{\left(h_{toe}\right)}{2} + H_{twgf.UN3.tri} \cdot \frac{\left(h_{toe}\right)}{3} + H_{twbk.UN3.tri} \cdot \left(-d_{key} \cdot \frac{2}{3}\right) + H_{twbk.UN3.rect} \cdot \left(\frac{-d_{key}}{2}\right)\right]}{H_{twgf.UN3.tri} + H_{twgf.UN3.rect} + H_{twbk.UN3.tri} + H_{twbk.UN3.rect}} = 0.52\,m$$

SUMMATION OF LATERAL WATER LOADS:

$$\Sigma H_{Water.UN3} := H_{hwas.UN3} + H_{hwgg.UN3} + H_{twgk.UN3} + H_{twgg.UN3} = -1692.22 \cdot kN$$

$$\Sigma M_{Hwater.UN3} := H_{hwas.UN3} \cdot H_{hwas.UN3.loc} + H_{hwgg.UN3} \cdot H_{hwgg.UN3.loc} \cdots + H_{twgk.UN3} \cdot H_{twgk.UN3.loc} + H_{twgg.UN3} \cdot H_{twgg.UN3.loc} = -2481.93 \cdot kN \cdot m$$

VERTICAL WATER LOADS

UN3 CASE

HEADWATER:

Water Depth on top of Approach Slab: $d_{hw.UN3} := HW_{UN3} - TOC_{as} = 7.00\,m$

Length of Approach Slab: $L_{as} = 8.75\,m$

Width of Approach Slab: $w_{as} = 15.00\,m$

Vertical Water Weight (H1) on Approach Slab: $H_{1.UN3} := \left(w_{as} \cdot d_{hw.UN3} \cdot L_{as}\right) \cdot \gamma_w = 9012.9 \cdot kN$

Moment Arm for Application of Water Weight (H1) from toe: $H_{1.UN3.loc} := L_b - \dfrac{L_{as}}{2} = 14.13\,m$

TAILWATER:

Trapezoid Volume Above Gate Footing from Approach Slab to Crest: $V_{asc.UN3} := \left(L_{gf} - L_{gfc}\right) W_b \dfrac{d_{hw.UN3} + Y_{C.UN3}}{2} = 663.34 \cdot m^3$

Trapezoid Volume Above Gate Footing Crest to End of Gate Footing: $V_{gfc.UN3} := \left(L_{gfc} \cdot W_b\right) \dfrac{Y_{C.UN3} + Y_{TOE.UN3}}{2} = 161.07 \cdot m^3$

Load Above Gate Footing from Approach Slab to Crest: $H_{2.UN3.asc} := V_{asc.UN3} \cdot \gamma_w = 6507.38 \cdot kN$

Load Acting Above Footing Crest from Toe: $H_{2.UN3.asc.loc} := \dfrac{\left(L_{gf} - L_{gfc}\right) \cdot \left(2 \cdot d_{hw.UN3} + Y_{C.UN3}\right)}{3 \cdot \left(d_{hw.UN3} + Y_{C.UN3}\right)} + L_{gfc} = 6.33\,m$

Load Above Gate Footing from Crest to End: $H_{2.UN3.gfc} := V_{gfc.UN3} \cdot \gamma_w = 1580.1 \cdot kN$

Load Acting Above Gate Footing from Crest to End: $H_{2.UN3.gfc.loc} := \dfrac{\left(L_{gfc}\right) \cdot \left(2 \cdot Y_{C.UN3} + Y_{TOE.UN3}\right)}{3 \cdot \left(Y_{C.UN3} + Y_{TOE.UN3}\right)} = 1.43\,m$

Vertical Water Weight (H2) on Gate Footing: $H_{2.UN3} := H_{2.UN3.asc} + H_{2.UN3.gfc} = 8087.47 \cdot kN$

Moment Arm for Application of Water Weight (H2) from toe: $H_{2.UN3.loc} := \dfrac{H_{2.UN3.asc} \cdot H_{2.UN3.asc.loc} + H_{2.UN3.gfc} \cdot H_{2.UN3.gfc.loc}}{H_{2.UN3}} = 5.37\,m$

UPLIFT AT INCLINE SLIDING PLANE

UN3 CASE

Uplift pressure at U/S Face (heel): $U_{HW.UN3} := D_{hwas.UN3} \cdot \gamma_w = 127.5 \cdot \frac{kN}{m^2}$

Uplift pressure at D/S Face Stilling Basin: $U_{TW.UN3} := \left(D_{twtoe.UN3}\right) \cdot \gamma_w = 85.35 \cdot \frac{kN}{m^2}$

Length from U/S of Gate Structure to D/S of Stilling Basin: $L_{overall} = 18.50\,m$

Difference between Uplift pressure at HW and TW: $U_{diff.UN3} := U_{HW.UN3} - U_{TW.UN3} = 42.18 \cdot \frac{kN}{m^2}$

Slope of difference between between Uplift pressure at HW and TW: $U_{slope.UN3} := \frac{U_{diff.UN3}}{L_{overall}} = 2.28 \cdot \frac{kN}{m^2 \cdot m}$

Tailwater Pressure at toe of Gate Structure: $U_{press.toe.gs.UN3} := U_{TW.UN3} + \left(L_{overall} - L_b\right) \cdot U_{slope.UN3} = 85.35 \cdot \frac{kN}{m^2}$

Uniform uplift force UA Under Gate Structure due to TW (rectangle): $U_{A.UN3} := U_{press.toe.gs.UN3} \cdot L_b \cdot W_b \cdot -1 = -23683.79 \cdot kN$

Moment Arm from Toe of Gate Structure for Uplift UA: $L_{A.UN3} := \left(\frac{L_b}{2}\right) = 9.25\,m$

Linearly Decreasing Uplift Force UN3B Under Gate Structure due to HW-TW Differential (triangle): $U_{B.UN3} := \frac{1}{2} \cdot \left(U_{HW.UN3} - U_{press.toe.gs.UN3}\right) \cdot L_b \cdot W_b \cdot -1 = -5852.89 \cdot kN$

Moment Arm from Toe of Gate Structure for Uplift UB: $L_{B.UN3} := \frac{2}{3} \cdot L_b = 12.33\,m$

Total Resultant Uplift force: $U_{UN3} := U_{A.UN3} + U_{B.UN3} = -29536.68 \cdot kN$

Resultant Location from Toe: $U_{UN3.loc} := \frac{\left(U_{A.UN3} \cdot L_{A.UN3} + U_{B.UN3} \cdot L_{B.UN3}\right)}{\left(U_{A.UN3} + U_{B.UN3}\right)} = 9.86\,m$

$\Sigma V_{water.UN3} := H_{1.UN3} + H_{2.UN3} + U_{UN3} = -12436.27 \cdot kN$

$\Sigma M_{Vwater.UN3} := H_{1.UN3} \cdot H_{1.UN3.loc} + H_{2.UN3} \cdot H_{2.UN3.loc} + U_{UN3} \cdot U_{UN3.loc} = -120488.41 \cdot kN \cdot m$

SOIL LOADS

UN3 CASE

Equivalent Fluid Pressure (EFP):

At rest lateral pressure coefficient: $K_{o.UN3} := 1 - \sin(\phi_{backfill}) = 0.658$ (Section 5.3, Design Criteria)

Headwater Pier Footing Unit Width: $W_{hwas.UN3} = 15.00\,m$

Tailwater Pier Footing Unit Width: $W_{tw.UN3} = 15.00\,m$

Pier Footing Thickness at Heel: $t_{hf.UN3} := TOC_{as} - BOK_{elev} = 6.00\,m$

Fixed Crest Footing Thickness at Toe: $t_{tf.UN3} := TOC_{pfe} - BOF_{elev} = 2.00\,m$

Lateral Driving Force (Headwater Side - at rest condition)

At-Rest Soil Load:

$$E_{act.UN3} := \frac{\left(K_{o.UN3} \cdot t_{hf.UN3}^{\ 2}\right)}{2} \cdot (\gamma_r - \gamma_w) \cdot W_{hwas.UN3} \cdot -1 = -2165.61 \cdot kN$$

Acting at:

$$E_{act.UN3.loc} := \frac{t_{hf.UN3}}{3} = 2.00\,m$$

Lateral Resisting Force (Tailwater Side - at rest condition)

At-rest Soil Load:

$$E_{pass.UN3} := \frac{\left(K_{o.UN3} \cdot t_{tf.UN3}^{\ 2}\right)}{2} \cdot (\gamma_r - \gamma_w) \cdot W_{tw.UN3} = 240.62 \cdot kN$$

Acting at:

$$E_{pass.UN3.loc} := \frac{t_{tf.UN3}}{3} = 0.67\,m$$

$$\Sigma H_{soil.UN3} := E_{act.UN3} + E_{pass.UN3} = -1924.99 \cdot kN$$

$$\Sigma M_{soil.UN3} := E_{act.UN3} \cdot E_{act.UN3.loc} + E_{pass.UN3} \cdot E_{pass.UN3.loc} = -4170.8 \cdot kN \cdot m$$

ICE / IMPACT LOADS (ASSUME NO ICE LOADING ON TAILWATER SIDE)

ICE & IMPACT LOADS DO NOT APPLY FOR THIS LOAD CASE

Static Ice load on Gates:

$$I_{G.UN3} := \begin{cases} 00 \dfrac{kN}{m} & \text{if } TOP_{gg.UN3} \le TOC_{as} \\ 0 \dfrac{kN}{m} & \text{if } TOP_{gg.UN3} > TOC_{as} \end{cases} = 0 \cdot \frac{kN}{m}$$

(Section 7.7, Design Criteria)

Ice Loading Unit Width on Guard Gate: $W_{gg.UN3} := 15.00m$ (Input value for load case)

Total Ice Load on Structure: $I_{UN3} := -\left(I_{G.UN3} \cdot W_{gg.UN3}\right) = 0 \cdot kN$

Apply Ice load at: $I_{UN3.loc} := \left(TOP_{gg.UN3} - BOF_{elev} - 0.30m\right) = 3.70\,m$

$$\Sigma H_{I.UN3} := I_{UN3} = 0 \cdot kN$$

$$\Sigma M_{I.UN3} := I_{UN3} \cdot I_{UN3.loc} = 0 \cdot kN \cdot m$$

SEISMIC LOAD (NOT APPLICABLE FOR THIS LOAD CASE)

UN3 CASE

SUMMARY OF LOADS

	Loads	Moment Arm
Dead load of Concrete Structure:	$D_{conc} = 24618.6 \cdot kN$	$X_{conc.loc} = 10.06\,m$
Obermyer Gate Weight:	$D_{Gate} = 210.0 \cdot kN$	$X_{gate} = 6.60\,m$
HW Lateral Load on Approach Slab:	$H_{hwas.UN3} = -8829.0 \cdot kN$	$H_{hwas.UN3.loc} = 0.70\,m$

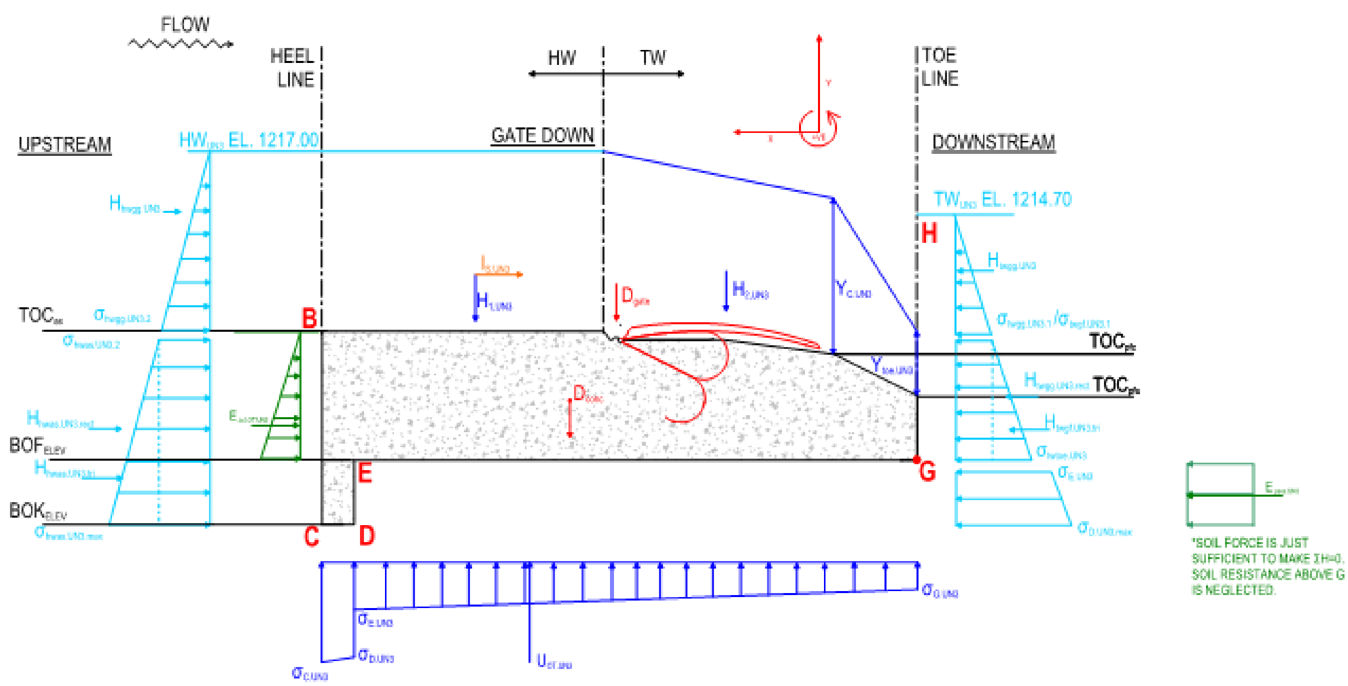
MONOLITH OVERTURNING STABILITY ANALYSIS

UN3 CASE

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stability of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1 $Ratio_{OT.UN3.min} := 0.33$



Uplift Loads for Overturning Stability Analysis

Line of Creep:

Change in Water Head: $\Delta_{h.UN3} := HW_{UN3} - TW_{UN3} = 2.3\,m$

Length from Point C to Point G: $L_{CG} = 18.61\,m$

Length from Various Points to Points: $L_{CD} = 1\,m$ $L_{DE} = 2\,m$ $L_{EG} = 17.5\,m$

$L_{GH.UN3} := TW_{UN3} - BOF_{elev} = 8.7\,m$

Length from Point C, D, E to G: $L_{CDEG} = 20.5\,m$ $L_{CDE} = 3\,m$

Water Pressure at Point C: $\sigma_{C.UN3} := \sigma_{hwas.UN3.2} = -127.53 \cdot kPa$

Water Pressure at Point G: $\sigma_{G.UN3} := \sigma_{twtoe.UN3} \cdot -1 = -85.35 \cdot kPa$

Water Pressure at Point D:
$$\sigma_{D.UN3} := -\gamma_w \cdot \left[\left(HW_{UN3} - BOK_{elev} \right) - \frac{\Delta_{h.UN3} \cdot L_{CD}}{L_{CDEG}} \right] = -126.43 \cdot kPa$$

Water Pressure at Point E:
$$\sigma_{E.UN3} := -\gamma_w \cdot \left[\left(HW_{UN3} - BOF_{elev} \right) - \frac{\Delta_{h.UN3} \cdot L_{CDE}}{L_{CDEG}} \right] = -104.61 \cdot kPa$$

Uplift for Overturning Analysis on Bottom of Key:
$$U_{OT.UN3.key} := \frac{\sigma_{C.UN3} + \sigma_{D.UN3}}{2} \cdot L_{CD} \cdot W_b = -1904.7 \cdot kN$$

Acting at:
$$U_{OT.UN3.key.loc} := \frac{L_{CD} \cdot \left(2 \cdot \sigma_{C.UN3} + \sigma_{D.UN3} \right)}{3 \left(\sigma_{C.UN3} + \sigma_{D.UN3} \right)} + L_{EG} = 18\,m$$

UN3 CASE

Uplift for Overturning Analysis on Bottom of Footing: $U_{OT.UN3.ftg} := \frac{\sigma_{E.UN3} + \sigma_{G.UN3}}{2} \cdot L_{EG} \cdot W_b = -24931.61 \cdot kN$

Acting at: $U_{OT.UN3.ftg.loc} := \frac{L_{EG} \cdot \left(\sigma_{G.UN3} + 2 \cdot \sigma_{E.UN3}\right)}{3\left(\sigma_{G.UN3} + \sigma_{E.UN3}\right)} = 9.05\,m$

Uplift Load for Overturning Analysis: $U_{OT.UN3} := U_{OT.UN3.key} + U_{OT.UN3.ftg} = -26836.3 \cdot kN$

Uplift Load Acting from Toe: $U_{OT.UN3.loc} := \frac{U_{OT.UN3.key} \cdot U_{OT.UN3.key.loc} + U_{OT.UN3.ftg} \cdot U_{OT.UN3.ftg.loc}}{U_{OT.UN3}} = 9.68\,m$

<u>All Vertical Loads Applicable to Overturning Stability Analysis</u>

Total Concrete Dead Loads:	$D_{conc} = 24618.6 \cdot kN$	at:	$X_{conc.loc} = 10.06\,m$
Dead Load of Gate:	$D_{Gate} = 210.0 \cdot kN$		$X_{gate} = 6.60\,m$
Water Weight (HW) on Apron Slab:	$H_{1.UN3} = 9012.9 \cdot kN$		$H_{1.UN3.loc} = 14.13\,m$
Water Weight (TW) on Gate Footing:	$H_{2.UN3} = 8087.5 \cdot kN$		$H_{2.UN3.loc} = 5.37\,m$
Uplift Load for Overturning Analysis:	$U_{OT.UN3} = -26836.3 \cdot kN$		$U_{OT.UN3.loc} = 9.68 \cdot m$

Sum of All Overturning Analysis Vertical Load:

$$\Sigma V_{UN3.OT} := D_{conc} + D_{Gate} + H_{1.UN3} + H_{2.UN3} + U_{OT.UN3} = 15092.71 \cdot kN$$

Sum of All Overturning Analysis Vertical Load Moments:

$$\Sigma M_{V.UN3.OT} := D_{conc} \cdot X_{conc.loc} + D_{Gate} \cdot X_{gate} + H_{1.UN3} \cdot H_{1.UN3.loc} + H_{2.UN3} \cdot H_{2.UN3.loc} + U_{OT.UN3} \cdot U_{OT.UN3.loc} = 159905.29 \cdot kN \cdot m$$

<u>Lateral Tailwater Loads for Overturning Stability Analysis</u>

TW Lateral Load on Gate Footing (No Key - Overturning Values Adjusted): $H_{twgf.UN3} := H_{twgf.UN3.tri} + H_{twgf.UN3.rect} = 3943.62 \cdot kN$

Acting at: $H_{twgf.UN3.loc} := \frac{\frac{h_{toe}}{3} \cdot H_{twgf.UN3.tri} + \frac{h_{toe}}{2} \cdot H_{twgf.UN3.rect}}{H_{twgf.UN3}} = 1.8\,m$

Horizontal Tailwater Pressure Top of Key (Overturning Analysis): $\sigma_{twtk.OT.UN3} := \sigma_{E.UN3} \cdot -1 = 104.61 \cdot kPa$

Horizontal Tailwater Pressure Bottom of Key (Overturning Analysis): $\sigma_{twbk.OT.UN3} := \sigma_{D.UN3} \cdot -1 = 126.43 \cdot kPa$

Triangular Distribution Unit Load Acting at Key: $H_{twbk.OT.UN3.tri} := \frac{\left(\sigma_{twbk.OT.UN3} - \sigma_{twtk.OT.UN3}\right)}{2} \cdot d_{key} \cdot W_{tw.UN3} = 327.32 \cdot kN$

Triangular Distribution Unit Load Acting at Key: $H_{twbk.OT.UN3.rect} := \sigma_{twtk.OT.UN3} \cdot d_{key} \cdot W_{tw.UN3} = 3138.24 \cdot kN$

Total Horizontal Tailwater Load on Key (Overturning Values Adjusted): $H_{twkey.OT.UN3} := H_{twbk.OT.UN3.tri} + H_{twbk.OT.UN3.rect} = 3465.56 \cdot kN$

Acting at: $H_{twkey.OT.UN3.loc} := \frac{H_{twbk.OT.UN3.tri} \cdot \frac{-2 \cdot d_{key}}{3} + H_{twbk.OT.UN3.rect} \cdot \frac{-d_{key}}{2}}{H_{twkey.OT.UN3}} = -1.03 \cdot m$

UN3 CASE

Lateral Driving Earth Loads for Overturning Stability Analysis (at rest condition)

Depth of Driving Soil Loads (to top of key): $h_{E.OT.UN3} := TOC_{as} - BOF_{elev} = 4\,m$

At-Rest Soil Load: $E_{act.OT.UN3} := \frac{\left(K_{o.UN3} \cdot h_{E.OT.UN3}{}^{2}\right)}{2} \cdot \left(\gamma_r - \gamma_w\right) \cdot W_{hwas.UN3} \cdot -1 = -962.49 \cdot kN$

At Rest- Soil Load Acting from Toe: $E_{act.OT.UN3.loc} := \frac{h_{E.OT.UN3}}{3} = 1.33\,m$

All Lateral Loads Applicable to Overturning Stability Analysis

HW Lateral Load on Approach Slab:	$H_{hwas.UN3} = -8829.0 \cdot kN$	$H_{hwas.UN3.loc} = 0.70\,m$
HW Lateral Load on Guard Gate:	$H_{hwgg.UN3} = 0.0 \cdot kN$	$H_{hwgg.UN3.loc} = 4.00\,m$
TW Lateral Load on Guard Gate:	$H_{twgg.UN3} = 0.0 \cdot kN$	$H_{twgg.UN3.loc} = 4.00\,m$
TW Lateral Load on Gate Footing (No Key - Overturning Values Adjusted):	$H_{twgf.UN3} = 3943.62 \cdot kN$	$H_{twgf.UN3.loc} = 1.8\,m$
TW Lateral Load on Key:	$H_{twkey.OT.UN3} = 3465.56 \cdot kN$	$H_{twkey.OT.UN3.loc} = -1.03\,m$
Ice / Impact Load:	$I_{UN3} = 0.0 \cdot kN$	$I_{UN3.loc} = 3.70\,m$
Lateral Soil Load (driving):	$E_{act.OT.UN3} = -962.5 \cdot kN$	$E_{act.OT.UN3.loc} = 1.33\,m$

Resisting Lateral Soil Load as required to produce horizontal equilibrium:

$$E_{pas.OT.UN3} := -\left(H_{hwas.UN3} + H_{hwgg.UN3} + H_{twgg.UN3} + H_{twgf.UN3} + H_{twkey.OT.UN3} + I_{UN3} + E_{act.OT.UN3}\right) = 2382.31 \cdot kN$$

Acting at:

$$E_{pas.OT.UN3.loc} := -1 \cdot \frac{d_{key}}{2} = -1\,m$$

Sum of All Overturning Analysis Horizontal Load (ΣH=0):

$$\Sigma H_{UN3.OT} := H_{hwas.UN3} + H_{hwgg.UN3} + H_{twgg.UN3} + H_{twgf.UN3} + H_{twkey.OT.UN3} + I_{UN3} + E_{act.OT.UN3} + E_{pas.OT.UN3} = 0 \cdot kN$$

Sum of All Overturning Analysis Horizontal Load Moments:

$$\Sigma M_{H.UN3.OT} := H_{hwas.UN3} \cdot H_{hwas.UN3.loc} + H_{hwgg.UN3} \cdot H_{hwgg.UN3.loc} + H_{twgg.UN3} \cdot H_{twgg.UN3.loc} \cdots + H_{twgf.UN3} \cdot H_{twgf.UN3.loc} + H_{twkey.OT.UN3} \cdot H_{twkey.OT.UN3.loc} + I_{UN3} \cdot I_{UN3.loc} \cdots + E_{act.OT.UN3} \cdot E_{act.OT.UN3.loc} + E_{pas.OT.UN3} \cdot E_{pas.OT.UN3.loc} = -6318.16 \cdot kN \cdot m$$

Overturning Stability Analysis

$\Sigma M_{UN3.OT} := \Sigma M_{V.UN3.OT} + \Sigma M_{H.UN3.OT} = 153587.12 \cdot kN \cdot m$

$X_{R.UN3} := \frac{\Sigma M_{UN3.OT}}{\Sigma V_{UN3.OT}} = 10.18\,m$

$x_{OT.UN3} := X_{R.UN3} - \frac{L_b}{2} = 0.93\,m$

Overturning Resultant Ratio

$$Ratio_{OT.UN3} := \frac{X_{R.UN3}}{L_b} = 0.55$$

$$Ratio_{OT.UN3.check} := \begin{cases} \text{"OKAY"} & \text{if } Ratio_{OT.UN3} \geq Ratio_{OT.UN3.min} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

$$x_{OT.check.UN3} := \begin{cases} \text{"OKAY"} & \text{if } \left|x_{OT.UN3}\right| \leq Kern \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

UN3 CASE

CHECK FOUNDATION BEARING CAPACITY (HORIZONTAL PLANE):

Bearing Pressure Under Toe:

$$\sigma_{ToeUN3.OT} := \frac{\Sigma V_{UN3.OT}}{L_b \cdot W_b} + \frac{\left(\Sigma V_{UN3.OT} \cdot x_{OT.UN3}\right)}{S_b} = 70.7 \cdot kPa$$

$$Bearing_{ChecktoeUN3.OT} := \begin{vmatrix} \text{"OKAY "} & \text{if } \sigma_{ToeUN3.OT} < \sigma_{allow.UN3} \\ \text{"NG""} & \text{otherwise} \end{vmatrix} = \text{"OKAY "}$$

Bearing Pressure Under Heel:

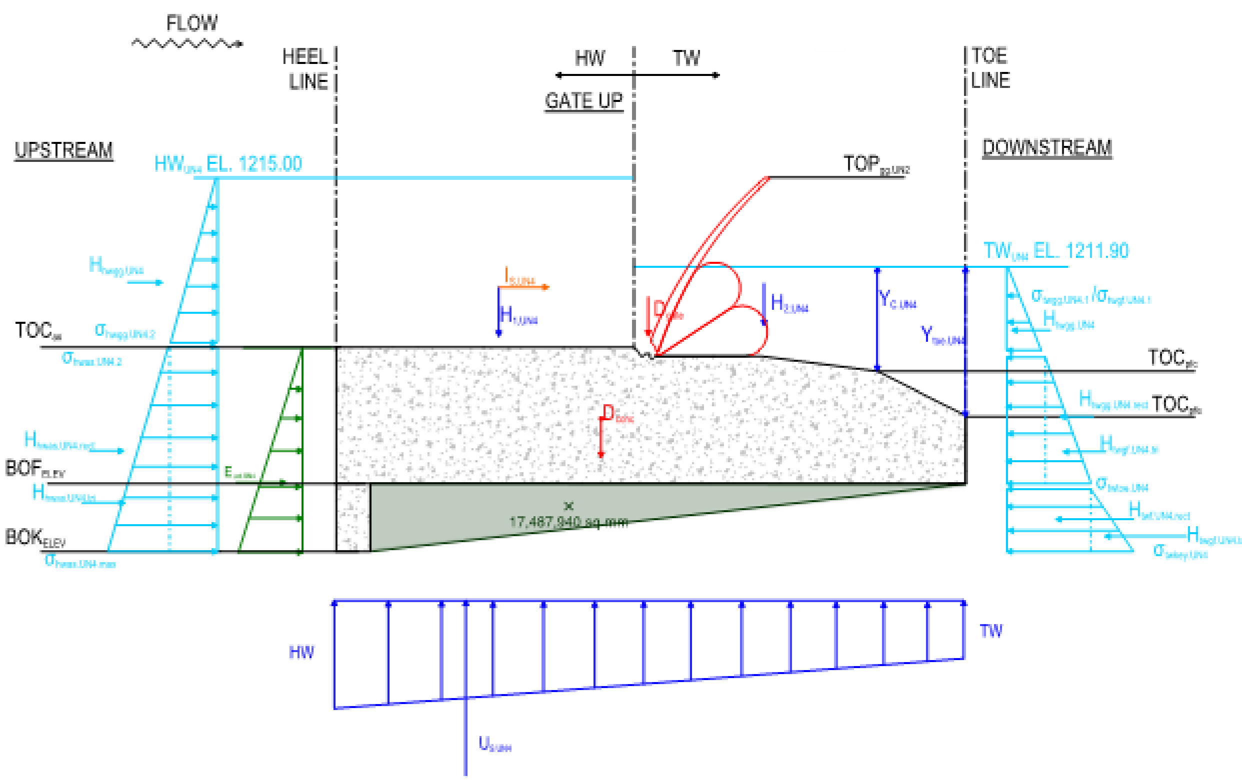
$$\sigma_{HeelUN3.OT} := \frac{\Sigma V_{UN3.OT}}{L_b \cdot W_b} - \frac{\left(\Sigma V_{UN3.OT} \cdot x_{OT.UN3}\right)}{S_b} = 38.0 \cdot kPa$$

$$Bearing_{CheckheelUN3.OT} := \left(\begin{vmatrix} \text{"OKAY "} & \text{if } \sigma_{HeelUN3.OT} < \sigma_{allow.UN3} \wedge \sigma_{HeelUN3.OT} > 0 \\ \text{"NG""} & \text{otherwise} \end{vmatrix} \right) = \text{"OKAY "}$$

SUMMARY OF STABILITY ASSESSMENT:

Sliding Factor of Safety: (Horizontal Plane)	$FS_{HorizSliding.UN3} = 1.67$	$FS_{HorizSliding.UN3.Check} = \text{"OKAY"}$
Sliding Factor of Safety: (Inclined Plane)	$FS_{InclinedlSlidingUN3} = 5.88$	$FS_{InclinedSliding.check.UN3} = \text{"OKAY "}$
Eccentricity: (Inclined Plane)	$e_{UN3} = -0.94\,m$	$e_{check.UN3} = \text{"Okay"}$
Bearing Pressure At Heel: (Inclined Plane)	$\sigma_{heel.UN3} = 86 \cdot kPa$	$\sigma_{heel.UN3.check} = \text{"Okay"}$
Bearing Pressure At Toe: (Inclined Plane)	$\sigma_{toe.UN3} = 46 \cdot kPa$	$\sigma_{toe.UN3.1.check} = \text{"Okay"}$
Flotation Factor of Safety (horizontal plane)	$FS_{act.FUN3} = 1.42$	$FS_{check.FUN3} = \text{"OKAY"}$
Overturning Resultant Ratio: (horizontal plane)	$Ratio_{OT.UN3} = 0.55$	$Ratio_{OT.UN3.check} = \text{"OKAY"}$
Eccentricity: (horizontal plane)	$x_{OT.UN3} = 0.93\,m$	$x_{OT.check.UN3} = \text{"OKAY"}$
Bearing Pressure At Heel: (horizontal plane)	$\sigma_{HeelUN3.OT} = 38 \cdot kPa$	$Bearing_{CheckheelUN3.OT} = \text{"OKAY "}$
Bearing Pressure At Toe: (horizontal plane)	$\sigma_{ToeUN3.OT} = 71 \cdot kPa$	$Bearing_{ChecktoeUN3.OT} = \text{"OKAY "}$

UN4 DESIGN CASE



ACCEPTANCE PARAMETERS

Required Factor of Safety for Sliding: $FS_{req.UN4.sl} := 1.3$ (Without Cohesion)

(Section 8.1, Design Criteria)

Resultant Within Middle Third of Base: $e \le \frac{L_b}{6} \wedge e \ge \frac{-L_b}{6}$

Allowable Rock Bearing Pressure: $\sigma_{allow.UN4} := 1470 \cdot \frac{kN}{m^2}$ (Section 5.2, Design Criteria)

INPUT PARAMETERS

Headwater Elevation: $HW_{UN4} := 1215.00m$ (Section 8.3, Design Criteria)

Tailwater Elevation: $TW_{UN4} := 1211.90m$ (Section 8.3, Design Criteria)

Bottom of Footing Elevation: $BOF_{elev} = 1206\,m$

Approach Slab Top of Concrete Elevation at Upstream Face: $TOC_{as} = 1210\,m$

Footing Top of Concrete Elevation at Stilling Basin: $TOC_{pfe} = 1208\,m$

Footing Top of Concrete Elevation at Center of Footing: $TOC_{pfc} = 1209.3\,m$

Gates are open when top of gate elevation is at 1210.00m

Top of Guard/Regulating Gate Elevation: $TOP_{rg.UN4} := 1210.90m$ $TOP_{gg.UN4} := 1215.00m$

Gates are closed/up when top of gate elevation is at 1215.0m

Bottom of Key Elevation: $BOK_{elev} = 1204\,m$

Crestwater Elevation: Dynamic Flow $EL_{C.UN4} := 1211.9m$

$$Y_{C.UN4} := \begin{cases} (EL_{C.UN4} - TOC_{pfc}) & \text{if } TOP_{gg.UN4} < HW_{UN4} \\ (TW_{UN4} - TOC_{pfc}) & \text{if } TOP_{gg.UN4} \ge HW_{UN4} \end{cases} = 2.6 \cdot m$$

Toewater Elevation: $EL_{TOE.UN4} := 1211.9m$

$$Y_{TOE.UN4} := \begin{cases} (EL_{TOE.UN4} - TOC_{pfe}) & \text{if } TOP_{gg.UN4} \le HW_{UN4} \\ (TW_{UN4} - TOC_{pfe}) & \text{if } TOP_{gg.UN4} > HW_{UN4} \end{cases} = 3.9 \cdot m$$

UN4 CASE

This load case is the Construction / Maintenance / Single Gate Bay Dewatered Load Case. One bay is open, while the other has been blocked off for gate maintenance. Calculation highlighted in Orange where calculation is affected.

CREST GATE (OBERMEYER)

Dead Load of Gates: $D_{Gate.UN4} := \frac{D_{Gate}}{2} = 105 \cdot kN$ (Vendor supplied, Dwg. Q-200 Series)

DEAD LOAD SUMMATION:

$\Sigma V_{DL.UN4} := D_{conc} + D_{Gate} = 24828.6 \cdot kN$

$\Sigma M_{DL.UN4} := D_{conc} \cdot X_{conc.loc} + D_{Gate.UN4} \cdot X_{gate} = 248250.79 \cdot kN \cdot m$

LATERAL WATER LOADS

HEADWATER (DRIVING):

Headwater Depth on Pier: $D_{hwg.UN4} := HW_{UN4} - TOC_{as} = 5.00\,m$

Thickness of Approach Slab (Including Key): $T_{as} = 6\,m$

Headwater Depth at Heel (U/S face): $D_{hwas.UN4} := HW_{UN4} - BOK_{elev} = 11.00\,m$

Headwater Load Unit Width on Approach Slab: $W_{hwas.UN4} := W_b = 15.00\,m$

Headwater Unit Load At Top of Approach Slab: $H_{hwas.UN4.1} := \frac{-\left(\gamma_w \cdot D_{hwg.UN4}^{\;2}\right)}{2} \cdot W_{hwas.UN4} = -1839.38 \cdot kN$

Headwater Unit Load At Bottom of Approach Key: $H_{hwas.UN4.2} := \frac{-\left(\gamma_w \cdot D_{hwas.UN4}^{\;2}\right)}{2} \cdot W_{hwas.UN4} = -8902.6 \cdot kN$

Headwater Line Load At Top of Approach Slab: $\sigma_{hwas.UN4.1} := -\left(\gamma_w \cdot D_{hwg.UN4}\right) = -49.05 \cdot kPa$

Headwater Line Load At Bottom of Approach Key: $\sigma_{hwas.UN4.2} := -\left(\gamma_w \cdot D_{hwas.UN4}\right) = -107.91 \cdot kPa$

Triangular Distribution Unit Load on Approach Slab and Key: $H_{hwas.UN4.2.tri} := \left(\frac{\sigma_{hwas.UN4.2} - \sigma_{hwas.UN4.1}}{2}\right) \cdot \left(T_{as} \cdot W_{hwas.UN4}\right) = -2648.7 \cdot kN$

Rectangular Distribution Unit Load on Approach Slab and Key: $H_{hwas.UN4.2.rect} := \sigma_{hwas.UN4.1} \cdot \left(T_{as} \cdot W_{hwas.UN4}\right) = -4414.5 \cdot kN$

Total Horizontal Headwater Load on Approach Slab: $H_{hwas.UN4} := H_{hwas.UN4.2.tri} + H_{hwas.UN4.2.rect} = -7063.2 \cdot kN$

Apply Total Footing Headwater Load at:

$$H_{hwas.UN4.loc} := \frac{\left[H_{hwas.UN4.2.rect} \cdot \frac{\left(T_{as}\right)}{2} + H_{hwas.UN4.2.tri} \cdot \frac{\left(T_{as}\right)}{3}\right]}{H_{hwas.UN4.2.tri} + H_{hwas.UN4.2.rect}} - d_{key} = 0.63\,m$$

Guard Gate Operating Condition:

Guard Gate Down/Open Condition: $A1_{UN4} := TOP_{gg.UN4} \le TOC_{as}$

Guard Crest Gate Up/Closed, with Top of Gate Higher than HW Elevation: $B1_{UN4} := TOP_{gg.UN4} \ge HW_{UN4} \wedge TOP_{gg.UN4} > TOC_{as}$

Guard Crest Gate Up/Closed, with Top of Gate Lower than HW Elevation: $C1_{UN4} := TOP_{gg.UN4} > TOC_{as} \wedge HW_{UN4} > TOP_{gg.UN4} = 0$

Guard Crest Gate Height: $H_{gg.UN4} := TOP_{gg.UN4} - TOC_{as} = 5\ m$

Headwater Depth at Guard Crest Gate: $D_{hwgg.UN4} := HW_{UN4} - TOC_{as} = 5.00\ m$

Guard Crest Gate Width: $W_{hwgg.UN4} := 15.00m$

Lateral Headwater Pressure at Bottom of Guard Crest Gate:

$$\sigma_{hwgg.UN4.1} := \begin{vmatrix} (0.0kPa) & \text{if } A1_{UN4} \\ -(\gamma_w \cdot D_{hwgg.UN4}) & \text{if } B1_{UN4} \\ -(\gamma_w \cdot D_{hwgg.UN4}) & \text{if } C1_{UN4} \end{vmatrix} = -49.0 \cdot kPa$$

Lateral Headwater Pressure at Top of Guard Crest Gate: (Load at HW Elevation On Guard Crest Gate if HW is below TOG_{rg})

$$\sigma_{hwgg.UN4.2} := \begin{vmatrix} (0.0kPa) & \text{if } A1_{UN4} \\ 0.0kPa & \text{if } B1_{UN4} \\ -\left[\gamma_w \cdot (HW_{UN4} - TOP_{gg.UN4})\right] & \text{if } C1_{UN4} \end{vmatrix} = 0.0 \cdot kPa$$

Average Pressure acting on Guard Crest Gate:

$$\sigma_{hwgg.UN4.avg} := \frac{(\sigma_{hwgg.UN4.1} + \sigma_{hwgg.UN4.2})}{2} = -24.52 \cdot kPa$$

Total Area of Crest Gate:

$$A_{hwgg.UN4} := \begin{vmatrix} D_{hwgg.UN4} \cdot W_{hwgg.UN4} & \text{if } A1_{UN4} \\ D_{hwgg.UN4} \cdot W_{hwgg.UN4} & \text{if } B1_{UN4} \\ H_{gg.UN4} \cdot W_{hwgg.UN4} & \text{if } C1_{UN4} \end{vmatrix} = 75 \cdot m^2$$

Total Horizontal Headwater Load on Guard Crest Gate: $H_{hwgg.UN4} := \sigma_{hwgg.UN4.avg} \cdot A_{hwgg.UN4} = -1839.4 \cdot kN$

Apply Total Guard Crest Gate Headwater Load at:

$$H_{hwgg.UN4.loc} := \begin{vmatrix} (TOC_{as} - BOF_{elev}) & \text{if } A1_{UN4} \\ \left[\frac{(HW_{UN4} - TOC_{as})}{3} + (TOC_{as} - BOF_{elev})\right] & \text{if } B1_{UN4} \\ \left[\frac{\sigma_{hwgg.UN4.2} \cdot A_{hwgg.UN4} \cdot \frac{(H_{gg.UN4})}{2} + \frac{(\sigma_{hwgg.UN4.1} - \sigma_{hwgg.UN4.2})}{2} A_{hwgg.UN4} \cdot \frac{(H_{gg.UN4})}{3}}{\sigma_{hwgg.UN4.2} \cdot A_{hwgg.UN4} + \frac{(\sigma_{hwgg.UN4.1} - \sigma_{hwgg.UN4.2})}{2} \cdot A_{hwgg.UN4}} \ldots \\ + (TOC_{as} - BOF_{elev})\right] & \text{if } C1_{UN4} \end{vmatrix} = 5.7 \cdot m$$

LATERAL TAILWATER (RESISTING) Applied to Downstream Side of Guard Crest Gate: UN4 CASE

Guard Gate Down/Open Condition:

$A2_{UN4} := TOP_{gg.UN4} \le TOC_{as}$

Guard Crest Gate Up/Closed, with Top of Gate Higher than TW Elevation:

$B2_{UN4} := TOP_{gg.UN4} \ge TW_{UN4} \wedge TOP_{gg.UN4} > TOC_{as} = 1$

Guard Crest Gate Up/Closed, with Top of Gate Lower than TW Elevation:

$C2_{UN4} := TOP_{gg.UN4} > TOC_{as} \wedge TW_{UN4} > TOP_{gg.UN4} = 0$

Tailwater Depth at Guard Crest Gate:

$D_{twgg.UN4} := TW_{UN4} - TOC_{as} = 1.90\,m$

Guard Crest Gate Width:

$W_{twgg.UN4} := 15.00m$

Lateral Water Load at Bottom of Guard Crest Gate:

$$\sigma_{twgg.UN4.1} := \begin{cases} (0.0kPa) & \text{if } A2_{UN4} \\ (\gamma_w \cdot D_{twgg.UN4}) & \text{if } B2_{UN4} \\ (\gamma_w \cdot D_{twgg.UN4}) & \text{if } C2_{UN4} \end{cases} = 18.6 \cdot kPa$$

Lateral Water Load at Top of Guard Crest Gate:
(Load at TW Elevation On Guard Crest Gate if TW is below TOG_{gg})

$$\sigma_{twgg.UN4.2} := \begin{cases} (0.0kPa) & \text{if } A2_{UN4} \\ 0.0kPa & \text{if } B2_{UN4} \\ \left[\gamma_w \cdot \left(TW_{UN4} - TOP_{gg.UN4}\right)\right] & \text{if } C2_{UN4} \end{cases} = 0.0 \cdot kPa$$

Average Pressure acting on Guard Crest Gate:

$$\sigma_{twgg.UN4.avg} := \frac{\left(\sigma_{twgg.UN4.1} + \sigma_{twgg.UN4.2}\right)}{2} = 9.32 \cdot kPa$$

Total Area water acting on Crest Gate:

$$A_{twgg.UN4} := \begin{cases} D_{twgg.UN4} \cdot W_{twgg.UN4} & \text{if } A2_{UN4} \\ D_{twgg.UN4} \cdot W_{twgg.UN4} & \text{if } B2_{UN4} \\ H_{gg.UN4} \cdot W_{twgg.UN4} & \text{if } C2_{UN4} \end{cases} = 28.5 \cdot m^2$$

Total Horizontal Tailwater Load on Guard Crest Gate:

$H_{twgg.UN4} := \sigma_{twgg.UN4.avg} \cdot A_{twgg.UN4} = 265.6 \cdot kN$

Apply Total Horiz. TW Load on Guard Gate at:

$$H_{twgg.UN4.loc} := \begin{cases} \left(TOC_{as} - BOF_{elev}\right) & \text{if } A2_{UN4} \\ \left[\frac{\left(TW_{UN4} - TOC_{as}\right)}{3} + \left(TOC_{as} - BOF_{elev}\right)\right] & \text{if } B2_{UN4} \\ \left[\frac{\sigma_{twgg.UN4.2} \cdot A_{twgg.UN4} \cdot \frac{\left(H_{gg.UN4}\right)}{2} + \frac{\left(\sigma_{twgg.UN4.1} - \sigma_{twgg.UN4.2}\right)}{2} \cdot A_{twgg.UN4} \cdot \frac{\left(H_{gg.UN4}\right)}{3}}{\sigma_{twgg.UN4.2} \cdot A_{twgg.UN4} + \frac{\left(\sigma_{twgg.UN4.1} - \sigma_{twgg.UN4.2}\right)}{2} \cdot A_{twgg.UN4}} \ldots \\ + \left(TOC_{as} - BOF_{elev}\right)\right] & \text{if } C2_{UN4} \end{cases} = 4.6 \cdot m$$

TAILWATER (RESISTING) Applied to Concrete Structure:

Tailwater Depth At top of Gate Base Footing Elevation: $D_{twgf.UN4} := TW_{UN4} - TOC_{as} = 1.90\,m$

Water Depth at bottom of Gate Base Footing: $D_{twtoe.UN4} := TW_{UN4} - BOF_{elev} = 5.90\,m$

Footing Thickness at Toe $h_{toe} = 4\,m$

Unit Width of D/S face of crest for application of Tailwater Load: $W_{tw.UN4} := W_b = 15.00\,m$

Tailwater Pressure At Top of Gate Footing: $\sigma_{twgf.UN4} := \left(\gamma_w \cdot D_{twgf.UN4}\right) = 18.64 \cdot kPa$

Tailwater Line Load At Bottom of Gate Footing: $\sigma_{twtoe.UN4} := \left(\gamma_w \cdot D_{twtoe.UN4}\right) = 57.88 \cdot kPa$

Triangular Distribution Unit Load on Gate Footing Base: $H_{twgf.UN4.tri} := \left(\dfrac{\sigma_{twtoe.UN4} - \sigma_{twgf.UN4}}{2}\right) \cdot \left(h_{toe} \cdot W_{tw.UN4}\right) = 1177.2 \cdot kN$

Rectangular Distribution Unit Load on Gate Footing Base: $H_{twgf.UN4.rect} := \sigma_{twgf.UN4} \cdot \left(h_{toe} \cdot W_{tw.UN4}\right) = 1118.34 \cdot kN$

Tailwater Pressure At Bottom of Sliding Failure Plane: $\sigma_{twbk.UN4} := \left(HW_{UN4} - BOK_{elev}\right) \cdot \gamma_w = 107.91 \cdot kPa$

Triangular Distribution Unit Load Below Footing: $H_{twbk.UN4.tri} := \dfrac{\left(\sigma_{twbk.UN4} - \sigma_{twtoe.UN4}\right)}{2} \cdot d_{key} \cdot W_{tw.UN4} = 750.46 \cdot kN$

Rectangular Distribution Load Below Footing Base: $H_{twbk.UN4.rect} := \sigma_{twtoe.UN4} \cdot d_{key} \cdot W_{tw.UN4} = 1736.37 \cdot kN$

Total Horizontal Tailwater Load on Gate Footing (including key):

$$H_{twgk.UN4} := H_{twgf.UN4.tri} + H_{twgf.UN4.rect} + H_{twbk.UN4.tri} + H_{twbk.UN4.rect} = 4782.38 \cdot kN$$

Apply Total Gate Footing Tailwater Load at:

$$H_{twgk.UN4.loc} := \frac{\left[H_{twgf.UN4.rect} \cdot \dfrac{\left(h_{toe}\right)}{2} + H_{twgf.UN4.tri} \cdot \dfrac{\left(h_{toe}\right)}{3} + H_{twbk.UN4.tri} \cdot \left(-d_{key} \cdot \dfrac{2}{3}\right) + H_{twbk.UN4.rect} \cdot \left(\dfrac{-d_{key}}{2}\right)\right]}{H_{twgf.UN4.tri} + H_{twgf.UN4.rect} + H_{twbk.UN4.tri} + H_{twbk.UN4.rect}} = 0.22\,m$$

SUMMATION OF LATERAL WATER LOADS:

$$\Sigma H_{Water.UN4} := H_{hwas.UN4} + H_{hwgg.UN4} + H_{twgk.UN4} + H_{twgg.UN4} = -3854.59 \cdot kN$$

$$\Sigma M_{Hwater.UN4} := H_{hwas.UN4} \cdot H_{hwas.UN4.loc} + H_{hwgg.UN4} \cdot H_{hwgg.UN4.loc} \cdots + H_{twgk.UN4} \cdot H_{twgk.UN4.loc} + H_{twgg.UN4} \cdot H_{twgg.UN4.loc} = -12537.7 \cdot kN \cdot m$$

VERTICAL WATER LOADS

UN4 CASE

HEADWATER:

Water Depth on top of Approach Slab: $d_{hw.UN4} := HW_{UN4} - TOC_{as} = 5.00\,m$

Length of Approach Slab: $L_{as} = 8.75\,m$

Width of Approach Slab: $w_{as} = 15.00\,m$

(Weight on Apron is required for stability. Coffer U/S of pier nose must include fill to offset reduced water load.)

Vertical Water Weight (H1) on Approach Slab: $H_{1.UN4} := \left(w_{as} \cdot d_{hw.UN4} \cdot L_{as}\right) \cdot \gamma_w \cdot \frac{3}{4} = 4828.4 \cdot kN$

Moment Arm for Application of Water Weight (H1) from toe: $H_{1.UN4.loc} := L_b - \frac{L_{as}}{2} = 14.13\,m$

TAILWATER:

Trapezoid Volume Above Gate Footing from Approach Slab to Crest: $V_{asc.UN4} := \left(L_{gf} - L_{gfc}\right) W_b \frac{d_{hw.UN4} + Y_{C.UN4}}{2} = 407.55 \cdot m^3$

Trapezoid Volume Above Gate Footing Crest to End of Gate Footing: $V_{gfc.UN4} := \left(L_{gfc} \cdot W_b\right) \frac{Y_{C.UN4} + Y_{TOE.UN4}}{2} = 126.75 \cdot m^3$

Load Above Gate Footing from Approach Slab to Crest: $H_{2.UN4.asc} := V_{asc.UN4} \cdot \gamma_w = 3998.07 \cdot kN$

Load Acting Above Footing Crest from Toe: $H_{2.UN4.asc.loc} := \frac{\left(L_{gf} - L_{gfc}\right) \cdot \left(2 \cdot d_{hw.UN4} + Y_{C.UN4}\right)}{3 \cdot \left(d_{hw.UN4} + Y_{C.UN4}\right)} + L_{gfc} = 6.55\,m$

Load Above Gate Footing from Crest to End: $H_{2.UN4.gfc} := V_{gfc.UN4} \cdot \gamma_w = 1243.42 \cdot kN$

Load Acting Above Gate Footing from Crest to End: $H_{2.UN4.gfc.loc} := \frac{\left(L_{gfc}\right) \cdot \left(2 \cdot Y_{C.UN4} + Y_{TOE.UN4}\right)}{3 \cdot \left(Y_{C.UN4} + Y_{TOE.UN4}\right)} = 1.21\,m$

Vertical Water Weight (H2) on Gate Footing: $H_{2.UN4} := H_{2.UN4.asc} + H_{2.UN4.gfc} = 5241.48 \cdot kN$

Moment Arm for Application of Water Weight (H2) from toe: $H_{2.UN4.loc} := \frac{H_{2.UN4.asc} \cdot H_{2.UN4.asc.loc} + H_{2.UN4.gfc} \cdot H_{2.UN4.gfc.loc}}{H_{2.UN4}} = 5.29\,m$

UPLIFT AT INCLINE SLIDING PLANE

UN4 CASE

Uplift pressure at U/S Face (heel): $U_{HW.UN4} := D_{hwas.UN4} \cdot \gamma_w = 107.9 \cdot \frac{kN}{m^2}$

Uplift pressure at D/S Face Stilling Basin: $U_{TW.UN4} := \left(D_{twtoe.UN4}\right) \cdot \gamma_w = 57.88 \cdot \frac{kN}{m^2}$

Length from U/S of Gate Structure to D/S of Stilling Basin: $L_{overall} = 18.50\,m$

Difference between Uplift pressure at HW and TW: $U_{diff.UN4} := U_{HW.UN4} - U_{TW.UN4} = 50.03 \cdot \frac{kN}{m^2}$

Slope of difference between between Uplift pressure at HW and TW: $U_{slope.UN4} := \frac{U_{diff.UN4}}{L_{overall}} = 2.70 \cdot \frac{kN}{m^2 \cdot m}$

UN4 CASE

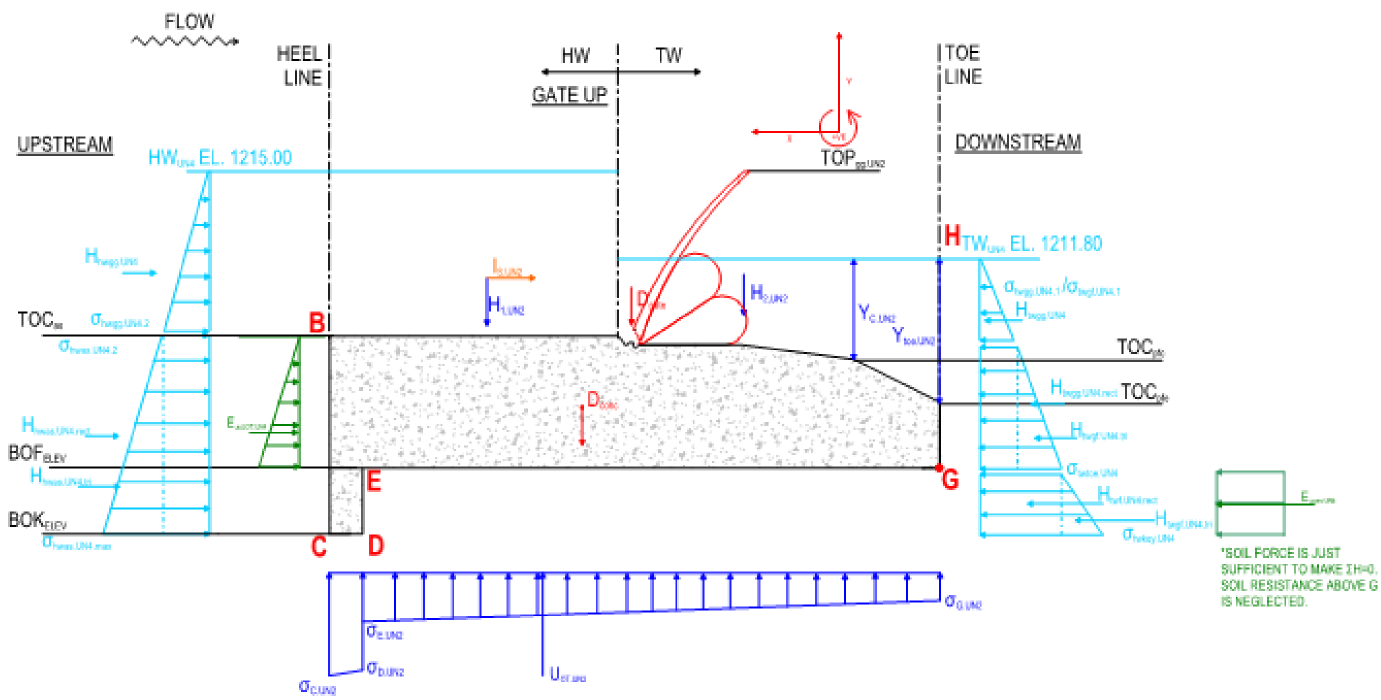
MONOLITH OVERTURNING STABILITY ANALYSIS

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stability of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1 $Ratio_{OT.UN4.min} := 0.33$ Resultant at Middle Third



Uplift Loads for Overturning Stability Analysis

Line of Creep:

Change in Water Head: $\Delta_{h.UN4} := HW_{UN4} - TW_{UN4} = 3.1\ m$

Length from Point C to Point G: $L_{CG} = 18.61\ m$

Length from Various Points to Points: $L_{CD} = 1\ m$ $L_{DE} = 2\ m$ $L_{EG} = 17.5\ m$

$L_{GH.UN4} := TW_{UN4} - BOF_{elev} = 5.9\ m$

Length from Point C, D, E to G: $L_{CDEG} = 20.5\ m$ $L_{CDE} = 3\ m$

Water Pressure at Point C: $\sigma_{C.UN4} := \sigma_{hwas.UN4.2} = -107.91 \cdot kPa$

Water Pressure at Point G: $\sigma_{G.UN4} := \sigma_{twtoe.UN4} \cdot -1 = -57.88 \cdot kPa$

Water Pressure at Point D: $$\sigma_{D.UN4} := -\gamma_w \cdot \left[\left(HW_{UN4} - BOK_{elev}\right) - \frac{\Delta_{h.UN4} \cdot L_{CD}}{L_{CDEG}}\right] = -106.43 \cdot kPa$$

Water Pressure at Point E: $$\sigma_{E.UN4} := -\gamma_w \cdot \left[\left(HW_{UN4} - BOF_{elev}\right) - \frac{\Delta_{h.UN4} \cdot L_{CDE}}{L_{CDEG}}\right] = -83.84 \cdot kPa$$

Uplift for Overturning Analysis on Bottom of Key: $$U_{OT.UN4.key} := \frac{\sigma_{C.UN4} + \sigma_{D.UN4}}{2} \cdot L_{CD} \cdot W_b = -1607.52 \cdot kN$$

Acting at: $$U_{OT.UN4.key.loc} := \frac{L_{CD} \cdot \left(2 \cdot \sigma_{C.UN4} + \sigma_{D.UN4}\right)}{3\left(\sigma_{C.UN4} + \sigma_{D.UN4}\right)} + L_{EG} = 18\ m$$

Uplift for Overturning Analysis on Bottom of Footing: $U_{OT.UN4.ftg} := \frac{\sigma_{E.UN4} + \sigma_{G.UN4}}{2} \cdot L_{EG} \cdot W_b = -18600.57 \cdot kN$

UN4 CASE

Acting at: $U_{OT.UN4.ftg.loc} := \frac{L_{EG} \cdot \left(\sigma_{G.UN4} + 2 \cdot \sigma_{E.UN4}\right)}{3\left(\sigma_{G.UN4} + \sigma_{E.UN4}\right)} = 9.28\,m$

Uplift Load for Overturning Analysis: $U_{OT.UN4} := U_{OT.UN4.key} + U_{OT.UN4.ftg} = -20208.09 \cdot kN$

Uplift Load Acting from Toe: $U_{OT.UN4.loc} := \frac{U_{OT.UN4.key} \cdot U_{OT.UN4.key.loc} + U_{OT.UN4.ftg} \cdot U_{OT.UN4.ftg.loc}}{U_{OT.UN4}} = 9.98\,m$

All Vertical Loads Applicable to Overturning Stability Analysis

		at:
Total Concrete Dead Loads:	$D_{conc} = 24618.6 \cdot kN$	$X_{conc.loc} = 10.06\,m$
Dead Load of Gate:	$D_{Gate} = 210.0 \cdot kN$	$X_{gate} = 6.60\,m$
Water Weight (HW) on Apron Slab:	$H_{1.UN4} = 4828.4 \cdot kN$	$H_{1.UN4.loc} = 14.13\,m$
Water Weight (TW) on Gate Footing:	$H_{2.UN4} = 5241.5 \cdot kN$	$H_{2.UN4.loc} = 5.29\,m$
Uplift Load for Overturning Analysis:	$U_{OT.UN4} = -20208.09 \cdot kN$	$U_{OT.UN4.loc} = 9.98 \cdot m$

Sum of All Overturning Analysis Vertical Load:

$$\Sigma V_{UN4.OT} := D_{conc} + D_{Gate} + H_{1.UN4} + H_{2.UN4} + U_{OT.UN4} = 14690.35 \cdot kN$$

Sum of All Overturning Analysis Vertical Load Moments:

$$\Sigma M_{V.UN4.OT} := D_{conc} \cdot X_{conc.loc} + D_{Gate} \cdot X_{gate} + H_{1.UN4} \cdot H_{1.UN4.loc} + H_{2.UN4} \cdot H_{2.UN4.loc} + U_{OT.UN4} \cdot U_{OT.UN4.loc} = 143215.34 \cdot kN \cdot m$$

Lateral Tailwater Loads for Overturning Stability Analysis

TW Lateral Load on Gate Footing (No Key - Overturning Values Adjusted): $H_{twgf.UN4} := H_{twgf.UN4.tri} + H_{twgf.UN4.rect} = 2295.54 \cdot kN$

Acting at: $H_{twgf.UN4.loc} := \frac{\frac{h_{toe}}{3} \cdot H_{twgf.UN4.tri} + \frac{h_{toe}}{2} \cdot H_{twgf.UN4.rect}}{H_{twgf.UN4}} = 1.66\,m$

Horizontal Tailwater Pressure Top of Key (Overturning Analysis): $\sigma_{twtk.OT.UN4} := \sigma_{E.UN4} \cdot -1 = 83.84 \cdot kPa$

Horizontal Tailwater Pressure Bottom of Key (Overturning Analysis): $\sigma_{twbk.OT.UN4} := \sigma_{D.UN4} \cdot -1 = 106.43 \cdot kPa$

Triangular Distribution Unit Load Acting at Key: $H_{twbk.OT.UN4.tri} := \frac{\left(\sigma_{twbk.OT.UN4} - \sigma_{twtk.OT.UN4}\right)}{2} \cdot d_{key} \cdot W_{tw.UN4} = 338.8 \cdot kN$

Triangular Distribution Unit Load Acting at Key: $H_{twbk.OT.UN4.rect} := \sigma_{twtk.OT.UN4} \cdot d_{key} \cdot W_{tw.UN4} = 2515.19 \cdot kN$

Total Horizontal Tailwater Load on Key (Overturning Values Adjusted): $H_{twkey.OT.UN4} := H_{twbk.OT.UN4.tri} + H_{twbk.OT.UN4.rect} = 2853.99 \cdot kN$

Acting at: $H_{twkey.OT.UN4.loc} := \frac{H_{twbk.OT.UN4.tri} \cdot \frac{-2 \cdot d_{key}}{3} + H_{twbk.OT.UN4.rect} \cdot \frac{-d_{key}}{2}}{H_{twkey.OT.UN4}} = -1.04 \cdot m$

UN4 CASE

Lateral Driving Earth Loads for Overturning Stability Analysis (at rest condition)

Depth of Driving Soil Loads (to top of key): $h_{E.OT.UN4} := TOC_{as} - BOF_{elev} = 4\,m$

At-Rest Soil Load:

$$E_{act.OT.UN4} := \frac{\left(K_{o.UN4} \cdot h_{E.OT.UN4}^{\;2}\right)}{2} \cdot \left(\gamma_r - \gamma_w\right) \cdot W_{hwas.UN4} \cdot -1 = -962.49 \cdot kN$$

At Rest- Soil Load Acting from Toe:

$$E_{act.OT.UN4.loc} := \frac{h_{E.OT.UN4}}{3} = 1.33\,m$$

All Lateral Loads Applicable to Overturning Stability Analysis

HW Lateral Load on Approach Slab:	$H_{hwas.UN4} = -7063.2 \cdot kN$	$H_{hwas.UN4.loc} = 0.63\,m$
HW Lateral Load on Guard Gate:	$H_{hwgg.UN4} = -1839.4 \cdot kN$	$H_{hwgg.UN4.loc} = 5.67\,m$
TW Lateral Load on Guard Gate:	$H_{twgg.UN4} = 265.6 \cdot kN$	$H_{twgg.UN4.loc} = 4.63\,m$
TW Lateral Load on Gate Footing (No Key - Overturning Values Adjusted):	$H_{twgf.UN4} = 2295.54 \cdot kN$	$H_{twgf.UN4.loc} = 1.66\,m$

CHECK FOUNDATION BEARING CAPACITY (HORIZONTAL PLANE): UN4 CASE

Bearing Pressure Under Toe:

$$\sigma_{ToeUN4.OT} := \frac{\Sigma V_{UN4.OT}}{L_b \cdot W_b} + \frac{\left(\Sigma V_{UN4.OT} \cdot x_{OT.UN4}\right)}{S_b} = 39.9 \cdot kPa$$

$$Bearing_{ChecktoeUN4.OT} := \begin{vmatrix} \text{"OKAY "} & \text{if } \sigma_{ToeUN4.OT} < \sigma_{allow.UN4} \\ \text{"NG""} & \text{otherwise} \end{vmatrix} = \text{"OKAY "}$$

Bearing Pressure Under Heel:

$$\sigma_{HeelUN4.OT} := \frac{\Sigma V_{UN4.OT}}{L_b \cdot W_b} - \frac{\left(\Sigma V_{UN4.OT} \cdot x_{OT.UN4}\right)}{S_b} = 66.0 \cdot kPa$$

$$Bearing_{CheckheelUN4.OT} := \left(\begin{vmatrix} \text{"OKAY "} & \text{if } \sigma_{HeelUN4.OT} < \sigma_{allow.UN4} \wedge \sigma_{HeelUN4.OT} > 0 \\ \text{"NG""} & \text{otherwise} \end{vmatrix} \right) = \text{"OKAY "}$$

SUMMARY OF STABILITY ASSESSMENT:

Sliding Factor of Safety: (Horizontal Plane)

$FS_{HorizSliding.UN4} = 1.00$

$FS_{HorizSliding.UN4.Check} =$ "Horizontal Sliding (No Key or Void Behind Key) Fail ! Revise Structure !"

Sliding Factor of Safety: (Inclined Plane)

$FS_{InclinedlSlidingUN4} = 2.38$ $FS_{InclinedSliding.check.UN4} =$ "OKAY "

Eccentricity: (Inclined Plane)

$e_{UN4} = 0.48 m$ $e_{check.UN4} =$ "Okay"

Bearing Pressure At Heel: (Inclined Plane)

$\sigma_{heel.UN4} = 55 \cdot kPa$ $\sigma_{heel.UN4.check} =$ "Okay"

Bearing Pressure At Toe: (Inclined Plane)

$\sigma_{toe.UN4} = 75 \cdot kPa$ $\sigma_{toe.UN4.1.check} =$ "Okay"

Flotation Factor of Safety (horizontal plane)

$FS_{act.FUN4} = 1.52$ $FS_{check.FUN4} =$ "OKAY"

Overturning Resultant Ratio: (horizontal plane)

$Ratio_{OT.UN4} = 0.46$ $Ratio_{OT.UN4.check} =$ "OKAY"

Eccentricity: (horizontal plane)

$x_{OT.UN4} = -0.76 m$ $x_{OT.check.UN4} =$ "OKAY"

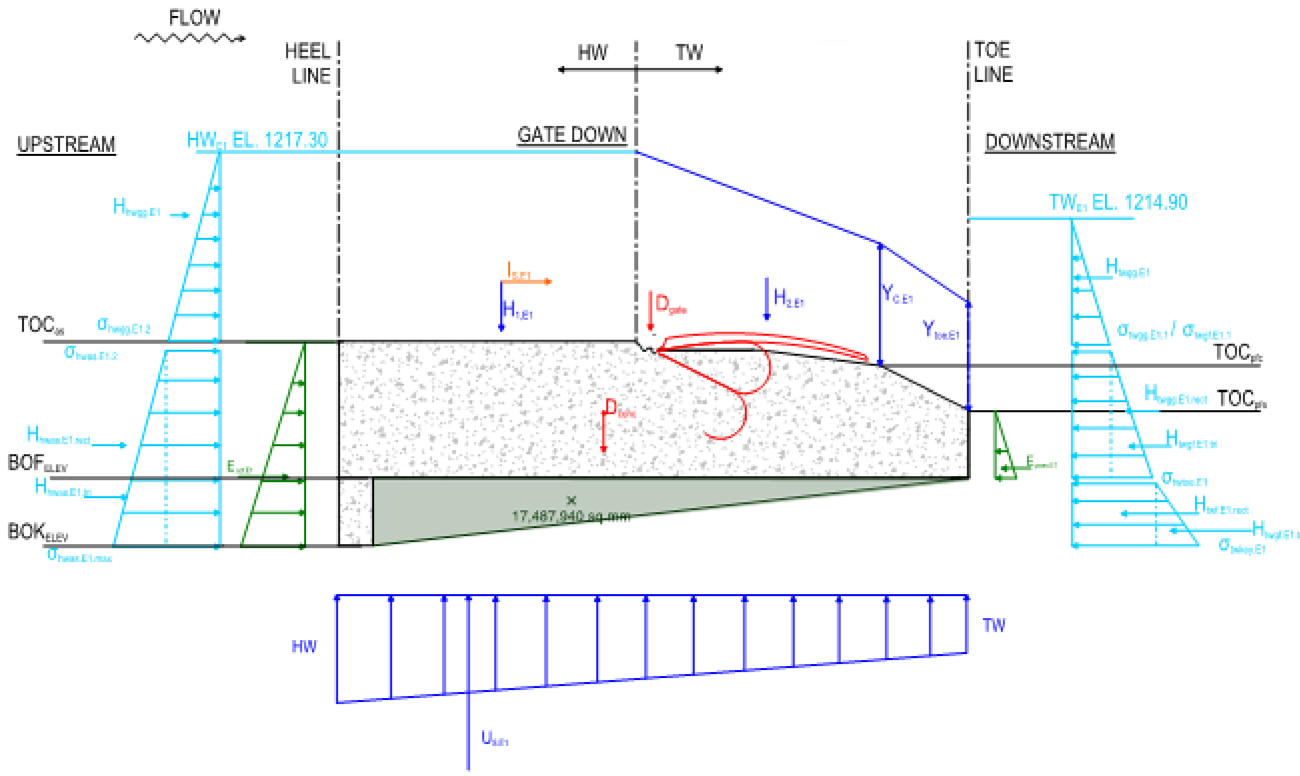
Bearing Pressure At Heel: (horizontal plane)

$\sigma_{HeelUN4.OT} = 66 \cdot kPa$ $Bearing_{CheckheelUN4.OT} =$ "OKAY "

Bearing Pressure At Toe: (horizontal plane)

$\sigma_{ToeUN4.OT} = 40 \cdot kPa$ $Bearing_{ChecktoeUN4.OT} =$ "OKAY "

E1 DESIGN CASE



ACCEPTANCE PARAMETERS

Required Factor of Safety for Sliding: $FS_{req.E1.sl} := 1.1$ (Without Cohesion) (Section 8.1, Design Criteria)

Resultant Within Middle Half of Base: $e \le \frac{L_b}{4} \wedge e \ge \frac{-L_b}{4}$

Allowable Rock Bearing Pressure: $\sigma_{allow.E1} := 1740 \cdot \frac{kN}{m^2}$ (Section 5.2, Design Criteria)

INPUT PARAMETERS

Headwater Elevation: $HW_{E1} := 1217.30m$ (Section 8.3, Design Criteria)

Tailwater Elevation: $TW_{E1} := 1214.90m$ (Section 8.3, Design Criteria)

Bottom of Footing Elevation: $BOF_{elev} = 1206\,m$

Approach Slab Top of Concrete Elevation at Upstream Face: $TOC_{as} = 1210\,m$

Footing Top of Concrete Elevation at Stilling Basin: $TOC_{pfe} = 1208\,m$

Footing Top of Concrete Elevation at Center of Footing: $TOC_{pfc} = 1209.3\,m$

Top of Guard/Regulating Gate Elevation: $TOP_{rg.E1} := 1210.00m$ $TOP_{gg.E1} := 1210.00m$

Bottom of Key Elevation: $BOK_{elev} = 1204\,m$

Gates are open when top of gate elevation is at 1210.00m

Gates are closed/up when top of gate elevation is at 1215.0m

Crestwater Elevation: Dynamic Flow $EL_{C.E1} := 1214.87m$

$$Y_{C.E1} := \begin{cases} (EL_{C.E1} - TOC_{pfc}) & \text{if } TOP_{gg.E1} \le HW_{E1} \\ (TW_{E1} - TOC_{pfc}) & \text{if } TOP_{gg.E1} > HW_{E1} \end{cases} = 5.57 \cdot m$$

Toewater Elevation: $EL_{TOE.E1} := 1211.06m$

$$Y_{TOE.E1} := \begin{cases} (EL_{TOE.E1} - TOC_{pfe}) & \text{if } TOP_{gg.E1} \le HW_{E1} \\ (TW_{E1} - TOC_{pfe}) & \text{if } TOP_{gg.E1} > HW_{E1} \end{cases} = 3.06 \cdot m$$

LATERAL WATER LOADS

E1 CASE

HEADWATER (DRIVING):

Headwater Depth on Gate: $D_{hwg.E1} := HW_{E1} - TOC_{as} = 7.30\,m$

Thickness of Approach Slab (Including Key): $T_{as} = 6\,m$

Headwater Depth at Heel (U/S face): $D_{hwas.E1} := HW_{E1} - BOK_{elev} = 13.30\,m$

Headwater Load Unit Width on Approach Slab: $W_{hwas.E1} := W_b = 15.00\,m$

Headwater Unit Load At Top of Approach Slab:

$$H_{hwas.E1.1} := \frac{-\left(\gamma_w \cdot D_{hwg.E1}{}^2\right)}{2} \cdot W_{hwas.E1} = -3920.81 \cdot kN$$

Headwater Unit Load At Bottom of Approach Key:

$$H_{hwas.E1.2} := \frac{-\left(\gamma_w \cdot D_{hwas.E1}{}^2\right)}{2} \cdot W_{hwas.E1} = -13014.7 \cdot kN$$

Headwater Line Load At Top of Approach Slab: $\sigma_{hwas.E1.1} := -\left(\gamma_w \cdot D_{hwg.E1}\right) = -71.61 \cdot kPa$

Headwater Line Load At Bottom of Approach Key: $\sigma_{hwas.E1.2} := -\left(\gamma_w \cdot D_{hwas.E1}\right) = -130.47 \cdot kPa$

Triangular Distribution Unit Load on Approach Slab and Key:

$$H_{hwas.E1.2.tri} := \left(\frac{\sigma_{hwas.E1.2} - \sigma_{hwas.E1.1}}{2}\right) \cdot \left(T_{as} \cdot W_{hwas.E1}\right) = -2648.7 \cdot kN$$

Rectangular Distribution Unit Load on Approach Slab and Key:

$$H_{hwas.E1.2.rect} := \sigma_{hwas.E1.1} \cdot \left(T_{as} \cdot W_{hwas.E1}\right) = -6445.17 \cdot kN$$

Total Horizontal Headwater Load on Approach Slab:

$$H_{hwas.E1} := H_{hwas.E1.2.tri} + H_{hwas.E1.2.rect} = -9093.87 \cdot kN$$

Apply Total Footing Headwater Load at:

$$H_{hwas.E1.loc} := \frac{\left(H_{hwas.E1.2.rect} \cdot \frac{T_{as}}{2} + H_{hwas.E1.2.tri} \cdot \frac{T_{as}}{3}\right)}{H_{hwas.E1.2.tri} + H_{hwas.E1.2.rect}} - d_{key} = 0.71\,m$$

Guard Gate Operating Condition:

Guard Gate Down/Open Condition: $A1_{E1} := TOP_{gg.E1} \le TOC_{as}$

Guard Crest Gate Up/Closed, with Top of Gate Higher than HW Elevation: $B1_{E1} := TOP_{gg.E1} \ge HW_{E1} \wedge TOP_{gg.E1} > TOC_{as}$

Guard Crest Gate Up/Closed, with Top of Gate Lower than HW Elevation: $C1_{E1} := TOP_{gg.E1} > TOC_{as} \wedge HW_{E1} > TOP_{gg.E1} = 0$

Guard Crest Gate Height: $H_{gg.E1} := TOP_{gg.E1} - TOC_{as} = 0\,m$

Headwater Depth at Guard Crest Gate: $D_{hwgg.E1} := HW_{E1} - TOC_{as} = 7.30\,m$

Guard Crest Gate Width: $W_{hwgg.E1} := 15.00m$

Lateral Headwater Pressure at Bottom of Guard Crest Gate:

$$\sigma_{hwgg.E1.1} := \begin{cases} (0.0kPa) & \text{if } A1_{E1} \\ -(\gamma_w \cdot D_{hwgg.E1}) & \text{if } B1_{E1} \\ -(\gamma_w \cdot D_{hwgg.E1}) & \text{if } C1_{E1} \end{cases} = 0.0 \cdot kPa$$

Lateral Headwater Pressure at Top of Guard Crest Gate:
(Load at HW Elevation On Guard Crest Gate if HW is below TOG_{rg})

$$\sigma_{hwgg.E1.2} := \begin{cases} (0.0kPa) & \text{if } A1_{E1} \\ 0.0kPa & \text{if } B1_{E1} \\ -\left[\gamma_w \cdot \left(HW_{E1} - TOP_{gg.E1}\right)\right] & \text{if } C1_{E1} \end{cases} = 0.0 \cdot kPa$$

Average Pressure acting on Guard Crest Gate:

$$\sigma_{hwgg.E1.avg} := \frac{\left(\sigma_{hwgg.E1.1} + \sigma_{hwgg.E1.2}\right)}{2} = 0 \cdot kPa$$

Total Area of Crest Gate:

$$A_{hwgg.E1} := \begin{cases} D_{hwgg.E1} \cdot W_{hwgg.E1} & \text{if } A1_{E1} \\ D_{hwgg.E1} \cdot W_{hwgg.E1} & \text{if } B1_{E1} \\ H_{gg.E1} \cdot W_{hwgg.E1} & \text{if } C1_{E1} \end{cases} = 109.5 \cdot m^2$$

Total Horizontal Headwater Load on Guard Crest Gate: $H_{hwgg.E1} := \sigma_{hwgg.E1.avg} \cdot A_{hwgg.E1} = 0.0 \cdot kN$

Apply Total Guard Crest Gate Headwater Load at:

$$H_{hwgg.E1.loc} := \begin{cases} \left(TOC_{as} - BOF_{elev}\right) & \text{if } A1_{E1} \\ \left[\dfrac{\left(HW_{E1} - TOC_{as}\right)}{3} + \left(TOC_{as} - BOF_{elev}\right)\right] & \text{if } B1_{E1} \\ \left[\dfrac{\sigma_{hwgg.E1.2} \cdot A_{hwgg.E1} \cdot \dfrac{\left(H_{gg.E1}\right)}{2} + \dfrac{\left(\sigma_{hwgg.E1.1} - \sigma_{hwgg.E1.2}\right)}{2} A_{hwgg.E1} \cdot \dfrac{\left(H_{gg.E1}\right)}{3}}{\sigma_{hwgg.E1.2} \cdot A_{hwgg.E1} + \dfrac{\left(\sigma_{hwgg.E1.1} - \sigma_{hwgg.E1.2}\right)}{2} \cdot A_{hwgg.E1}} \dots \\ + \left(TOC_{as} - BOF_{elev}\right)\right] & \text{if } C1_{E1} \end{cases} = 4.0 \cdot m$$

LATERAL TAILWATER (RESISTING) Applied to Downstream Side of Guard Crest Gate: E1 CASE

Guard Gate Down/Open Condition: $A2_{E1} := TOP_{gg.E1} \le TOC_{as}$

Guard Crest Gate Up/Closed, with Top of Gate Higher than TW Elevation: $B2_{E1} := TOP_{gg.E1} \ge TW_{E1} \wedge TOP_{gg.E1} > TOC_{as} = 0$

Guard Crest Gate Up/Closed, with Top of Gate Lower than TW Elevation: $C2_{E1} := TOP_{gg.E1} > TOC_{as} \wedge TW_{E1} > TOP_{gg.E1} = 0$

Tailwater Depth at Guard Crest Gate: $D_{twgg.E1} := TW_{E1} - TOC_{as} = 4.90\,m$

Guard Crest Gate Width: $W_{twgg.E1} := 15.00m$

Lateral Water Load at Bottom of Guard Crest Gate:

$$\sigma_{twgg.E1.1} := \begin{cases} (0.0kPa) & \text{if } A2_{E1} \\ (\gamma_w \cdot D_{twgg.E1}) & \text{if } B2_{E1} \\ (\gamma_w \cdot D_{twgg.E1}) & \text{if } C2_{E1} \end{cases} = 0.0 \cdot kPa$$

Lateral Water Load at Top of Guard Crest Gate:
(Load at TW Elevation On Guard Crest Gate if TW is below TOG_{gg})

$$\sigma_{twgg.E1.2} := \begin{cases} (0.0kPa) & \text{if } A2_{E1} \\ 0.0kPa & \text{if } B2_{E1} \\ \left[\gamma_w \cdot (TW_{E1} - TOP_{gg.E1})\right] & \text{if } C2_{E1} \end{cases} = 0.0 \cdot kPa$$

Average Pressure acting on Guard Crest Gate:

$$\sigma_{twgg.E1.avg} := \frac{(\sigma_{twgg.E1.1} + \sigma_{twgg.E1.2})}{2} = 0 \cdot kPa$$

Total Area water acting on Crest Gate:

$$A_{twgg.E1} := \begin{cases} D_{twgg.E1} \cdot W_{twgg.E1} & \text{if } A2_{E1} \\ D_{twgg.E1} \cdot W_{twgg.E1} & \text{if } B2_{E1} \\ H_{gg.E1} \cdot W_{twgg.E1} & \text{if } C2_{E1} \end{cases} = 73.5 \cdot m^2$$

Total Horizontal Tailwater Load on Guard Crest Gate: $H_{twgg.E1} := \sigma_{twgg.E1.avg} \cdot A_{twgg.E1} = 0.0 \cdot kN$

Apply Total Horiz. TW Load on Guard Gate at:

$$H_{twgg.E1.loc} := \begin{cases} (TOC_{as} - BOF_{elev}) & \text{if } A2_{E1} \\ \left[\frac{(TW_{E1} - TOC_{as})}{3} + (TOC_{as} - BOF_{elev})\right] & \text{if } B2_{E1} \\ \left[\dfrac{\sigma_{twgg.E1.2} \cdot A_{twgg.E1} \cdot \frac{(H_{gg.E1})}{2} + \frac{(\sigma_{twgg.E1.1} - \sigma_{twgg.E1.2})}{2} A_{twgg.E1} \cdot \frac{(H_{gg.E1})}{3}}{\sigma_{twgg.E1.2} \cdot A_{twgg.E1} + \frac{(\sigma_{twgg.E1.1} - \sigma_{twgg.E1.2})}{2} \cdot A_{twgg.E1}} \ldots \\ + (TOC_{as} - BOF_{elev})\right] & \text{if } C2_{E1} \end{cases} = 4.0 \cdot m$$

LATERAL WATER LOADS (continued)

E1 CASE

TAILWATER (RESISTING) Applied to Concrete Structure:

Tailwater Depth At top of Gate Base Footing Elevation: $D_{twgf.E1} := TW_{E1} - TOC_{as} = 4.90\,m$

Water Depth at bottom of Gate Base Footing: $D_{twtoe.E1} := TW_{E1} - BOF_{elev} = 8.90\,m$

Footing Thickness at Toe $h_{toe} = 4\,m$

Unit Width of D/S face of crest for application of Tailwater Load: $W_{tw.E1} := W_b = 15.00\,m$

Tailwater Pressure At Top of Gate Footing: $\sigma_{twgf.E1} := \left(\gamma_w \cdot D_{twgf.E1}\right) = 48.07 \cdot kPa$

Tailwater Line Load At Bottom of Gate Footing: $\sigma_{twtoe.E1} := \left(\gamma_w \cdot D_{twtoe.E1}\right) = 87.31 \cdot kPa$

Triangular Distribution Unit Load on Gate Footing Base:

$$H_{twgf.E1.tri} := \left(\frac{\sigma_{twtoe.E1} - \sigma_{twgf.E1}}{2}\right) \cdot \left(h_{toe} \cdot W_{tw.E1}\right) = 1177.2 \cdot kN$$

Rectangular Distribution Unit Load on Gate Footing Base:

$$H_{twgf.E1.rect} := \sigma_{twgf.E1} \cdot \left(h_{toe} \cdot W_{tw.E1}\right) = 2884.14 \cdot kN$$

Tailwater Pressure At Bottom of Sliding Failure Plane: $\sigma_{twbk.E1} := \left(HW_{E1} - BOK_{elev}\right) \cdot \gamma_w = 130.47 \cdot kPa$

Triangular Distribution Unit Load Below Footing:

$$H_{twbk.E1.tri} := \frac{\left(\sigma_{twbk.E1} - \sigma_{twtoe.E1}\right)}{2} \cdot d_{key} \cdot W_{tw.E1} = 647.46 \cdot kN$$

Rectangular Distribution Load Below Footing Base: $H_{twbk.E1.rect} := \sigma_{twtoe.E1} \cdot d_{key} \cdot W_{tw.E1} = 2619.27 \cdot kN$

Total Horizontal Tailwater Load on Gate Footing (including key):

$$H_{twgk.E1} := H_{twgf.E1.tri} + H_{twgf.E1.rect} + H_{twbk.E1.tri} + H_{twbk.E1.rect} = 7328.07 \cdot kN$$

Apply Total Gate Footing Tailwater Load at:

$$H_{twgk.E1.loc} := \frac{\left[H_{twgf.E1.rect} \cdot \frac{\left(h_{toe}\right)}{2} + H_{twgf.E1.tri} \cdot \frac{\left(h_{toe}\right)}{3} + H_{twbk.E1.tri} \cdot \left(-d_{key} \cdot \frac{2}{3}\right) + H_{twbk.E1.rect} \cdot \left(\frac{-d_{key}}{2}\right)\right]}{H_{twgf.E1.tri} + H_{twgf.E1.rect} + H_{twbk.E1.tri} + H_{twbk.E1.rect}} = 0.53\,m$$

SUMMATION OF LATERAL WATER LOADS:

$$\Sigma H_{Water.E1} := H_{hwas.E1} + H_{hwgg.E1} + H_{twgk.E1} + H_{twgg.E1} = -1765.8 \cdot kN$$

$$\Sigma M_{Hwater.E1} := H_{hwas.E1} \cdot H_{hwas.E1.loc} + H_{hwgg.E1} \cdot H_{hwgg.E1.loc} \cdots + H_{twgk.E1} \cdot H_{twgk.E1.loc} + H_{twgg.E1} \cdot H_{twgg.E1.loc} = -2589.84 \cdot kN \cdot m$$

VERTICAL WATER LOADS

E1 CASE

HEADWATER:

Water Depth on top of Approach Slab: $d_{hw.E1} := HW_{E1} - TOC_{as} = 7.30\,m$

Length of Approach Slab: $L_{as} = 8.75\,m$

Width of Approach Slab: $w_{as} = 15.00\,m$

Vertical Water Weight (H1) on Approach Slab: $H_{1.E1} := \left(w_{as} \cdot d_{hw.E1} \cdot L_{as}\right) \cdot \gamma_w = 9399.2 \cdot kN$

Moment Arm for Application of Water Weight (H1) from toe: $H_{1.E1.loc} := L_b - \frac{L_{as}}{2} = 14.13\,m$

TAILWATER:

Trapezoid Volume Above Gate Footing from Approach Slab to Crest: $V_{asc.E1} := \left(L_{gf} - L_{gfc}\right) W_b \frac{d_{hw.E1} + Y_{C.E1}}{2} = 690.15 \cdot m^3$

Trapezoid Volume Above Gate Footing Crest to End of Gate Footing: $V_{gfc.E1} := \left(L_{gfc} \cdot W_b\right) \frac{Y_{C.E1} + Y_{TOE.E1}}{2} = 168.28 \cdot m^3$

Load Above Gate Footing from Approach Slab to Crest: $H_{2.E1.asc} := V_{asc.E1} \cdot \gamma_w = 6770.41 \cdot kN$

Load Acting Above Footing Crest from Toe: $H_{2.E1.asc.loc} := \frac{\left(L_{gf} - L_{gfc}\right) \cdot \left(2 \cdot d_{hw.E1} + Y_{C.E1}\right)}{3 \cdot \left(d_{hw.E1} + Y_{C.E1}\right)} + L_{gfc} = 6.34\,m$

Load Above Gate Footing from Crest to End: $H_{2.E1.gfc} := V_{gfc.E1} \cdot \gamma_w = 1650.88 \cdot kN$

Load Acting Above Gate Footing from Crest to End: $H_{2.E1.gfc.loc} := \frac{\left(L_{gfc}\right) \cdot \left(2 \cdot Y_{C.E1} + Y_{TOE.E1}\right)}{3 \cdot \left(Y_{C.E1} + Y_{TOE.E1}\right)} = 1.43\,m$

Vertical Water Weight (H2) on Gate Footing: $H_{2.E1} := H_{2.E1.asc} + H_{2.E1.gfc} = 8421.28 \cdot kN$

Moment Arm for Application of Water Weight (H2) from toe: $H_{2.E1.loc} := \frac{H_{2.E1.asc} \cdot H_{2.E1.asc.loc} + H_{2.E1.gfc} \cdot H_{2.E1.gfc.loc}}{H_{2.E1}} = 5.37\,m$

UPLIFT AT INCLINE SLIDING PLANE

E1 CASE

Uplift pressure at U/S Face (heel): $U_{HW.E1} := D_{hwas.E1} \cdot \gamma_w = 130.5 \cdot \frac{kN}{m^2}$

Uplift pressure at D/S Face Stilling Basin: $U_{TW.E1} := \left(D_{twtoe.E1}\right) \cdot \gamma_w = 87.31 \cdot \frac{kN}{m^2}$

Length from U/S of Gate Structure to D/S of Stilling Basin: $L_{overall} = 18.50\,m$

Difference between Uplift pressure at HW and TW: $U_{diff.E1} := U_{HW.E1} - U_{TW.E1} = 43.16 \cdot \frac{kN}{m^2}$

Slope of difference between between Uplift pressure at HW and TW: $U_{slope.E1} := \frac{U_{diff.E1}}{L_{overall}} = 2.33 \cdot \frac{kN}{m^2 \cdot m}$

Tailwater Pressure at toe of Gate Structure: $U_{press.toe.gs.E1} := U_{TW.E1} + \left(L_{overall} - L_b\right) \cdot U_{slope.E1} = 87.31 \cdot \frac{kN}{m^2}$

Uniform uplift force UA Under Gate Structure due to TW (rectangle): $U_{A.E1} := U_{press.toe.gs.E1} \cdot L_b \cdot W_b \cdot -1 = -24228.25 \cdot kN$

Moment Arm from Toe of Gate Structure for Uplift UA: $L_{A.E1} := \left(\frac{L_b}{2}\right) = 9.25\,m$

Linearly Decreasing Uplift Force E1B Under Gate Structure due to HW-TW Differential (triangle): $U_{B.E1} := \frac{1}{2} \cdot \left(U_{HW.E1} - U_{press.toe.gs.E1}\right) \cdot L_b \cdot W_b \cdot -1 = -5989 \cdot kN$

Moment Arm from Toe of Gate Structure for Uplift UB: $L_{B.E1} := \frac{2}{3} \cdot L_b = 12.33\,m$

Total Resultant Uplift force: $U_{E1} := U_{A.E1} + U_{B.E1} = -30217.25 \cdot kN$

Resultant Location from Toe: $U_{E1.loc} := \frac{\left(U_{A.E1} \cdot L_{A.E1} + U_{B.E1} \cdot L_{B.E1}\right)}{\left(U_{A.E1} + U_{B.E1}\right)} = 9.86\,m$

$\Sigma V_{water.E1} := H_{1.E1} + H_{2.E1} + U_{E1} = -12396.76 \cdot kN$

$\Sigma M_{Vwater.E1} := H_{1.E1} \cdot H_{1.E1.loc} + H_{2.E1} \cdot H_{2.E1.loc} + U_{E1} \cdot U_{E1.loc} = -119965.9 \cdot kN \cdot m$

SOIL LOADS

E1 CASE

Equivalent Fluid Pressure (EFP):

At rest lateral pressure coefficient: $K_{o.E1} := 1 - \sin(\phi_{backfill}) = 0.658$ (Section 5.3, Design Criteria)

Headwater Pier Footing Unit Width: $W_{hwas.E1} = 15.00\,m$

Tailwater Pier Footing Unit Width: $W_{tw.E1} = 15.00\,m$

Pier Footing Thickness at Heel: $t_{hf.E1} := TOC_{as} - BOK_{elev} = 6.00\,m$

Fixed Crest Footing Thickness at Toe: $t_{tf.E1} := TOC_{pfe} - BOF_{elev} = 2.00\,m$

Lateral Driving Force (Headwater Side - at rest condition)

At-Rest Soil Load:

$$E_{act.E1} := \frac{\left(K_{o.E1} \cdot t_{hf.E1}^{\,2}\right)}{2} \cdot (\gamma_r - \gamma_w) \cdot W_{hwas.E1} \cdot -1 = -2165.61 \cdot kN$$

Acting at:

$$E_{act.E1.loc} := \frac{t_{hf.E1}}{3} = 2.00\,m$$

Lateral Resisting Force (Tailwater Side - at rest condition)

At-rest Soil Load:

$$E_{pass.E1} := \frac{\left(K_{o.E1} \cdot t_{tf.E1}^{\,2}\right)}{2} \cdot (\gamma_r - \gamma_w) \cdot W_{tw.E1} = 240.62 \cdot kN$$

Acting at:

$$E_{pass.E1.loc} := \frac{t_{tf.E1}}{3} = 0.67\,m$$

$$\Sigma H_{soil.E1} := E_{act.E1} + E_{pass.E1} = -1924.99 \cdot kN$$

$$\Sigma M_{soil.E1} := E_{act.E1} \cdot E_{act.E1.loc} + E_{pass.E1} \cdot E_{pass.E1.loc} = -4170.8 \cdot kN \cdot m$$

ICE / IMPACT LOADS (ASSUME NO ICE LOADING ON TAILWATER SIDE)

Static Ice load on Gates:

$$I_{G.E1} := \begin{cases} 00 \dfrac{kN}{m} & \text{if } TOP_{gg.E1} \le TOC_{as} \\ 0.0 \dfrac{kN}{m} & \text{if } TOP_{gg.E1} > TOC_{as} \end{cases} = 0 \cdot \frac{kN}{m}$$

(Section 7.7, Design Criteria)

Ice Loading Unit Width on Guard Gate: $W_{gg.E1} := 15.00m$ (Input value for load case)

Total Ice Load on Structure: $I_{E1} := -\left(I_{G.E1} \cdot W_{gg.E1}\right) = 0 \cdot kN$

Apply Ice load at: $I_{E1.loc} := \left(TOP_{gg.E1} - BOF_{elev} - 0.30m\right) = 3.70\,m$

$$\Sigma H_{I.E1} := I_{E1} = 0 \cdot kN$$

$$\Sigma M_{I.E1} := I_{E1} \cdot I_{E1.loc} = 0 \cdot kN \cdot m$$

SEISMIC LOAD (NOT APPLICABLE FOR THIS LOAD CASE)

E1 CASE

SUMMARY OF LOADS

	Loads	Moment Arm
Dead load of Concrete Structure:	$D_{conc} = 24618.6 \cdot kN$	$X_{conc.loc} = 10.06\,m$
Obermyer Gate Weight:	$D_{Gate} = 210.0 \cdot kN$	$X_{gate} = 6.60\,m$
HW Lateral Load on Approach Slab:	$H_{hwas.E1} = -9093.9 \cdot kN$	$H_{hwas.E1.loc} = 0.71\,m$
HW Lateral Load on Guard Gate:	$H_{hwgg.E1} = 0.0 \cdot kN$	$H_{hwgg.E1.loc} = 4.00\,m$
TW Lateral Load on Gate Footing (Including Key - Sliding Check Loads):	$H_{twgk.E1} = 7328.07 \cdot kN$	$H_{twgk.E1.loc} = 0.53\,m$
TW Lateral Load on Guard Gate:	$H_{twgg.E1} = 0.0 \cdot kN$	$H_{twgg.E1.loc} = 4.00\,m$
Vertical HW Load on Approach Slab:	$H_{1.E1} = 9399.2 \cdot kN$	$H_{1.E1.loc} = 14.13\,m$
Vertical TW Load on Pier Footing (crest):	$H_{2.E1} = 8421.3 \cdot kN$	$H_{2.E1.loc} = 5.37\,m$
Uplift:	$U_{E1} = -30217.3 \cdot kN$	$U_{E1.loc} = 9.86\,m$
Lateral Soil Load (driving):	$E_{act.E1} = -2165.6 \cdot kN$	$E_{act.E1.loc} = 2.00\,m$
Lateral Soil Load (resisting):	$E_{pass.E1} = 240.62 \cdot kN$	$E_{pass.E1.loc} = 0.67\,m$
Ice / Impact Load:	$I_{E1} = 0.0 \cdot kN$	$I_{E1.loc} = 3.70\,m$

STABILITY ASSESSMENT (SLIDNG, BEARING, FLOTATION AND OVERTURNING):

E1 CASE

CHECK SLIDING ALONG HORIZONTAL PLANE THRU TOE, IGNORING BEDROCK MOBILIZED BY STRUCTURAL HEEL KEY, OR VOID BEHIND KEY

Sum of Vertical Forces:

$\Sigma V_{E1} := \Sigma V_{DL} + \Sigma V_{water.E1} = 12431.8 \cdot kN$

Sum of Horizontal Forces:

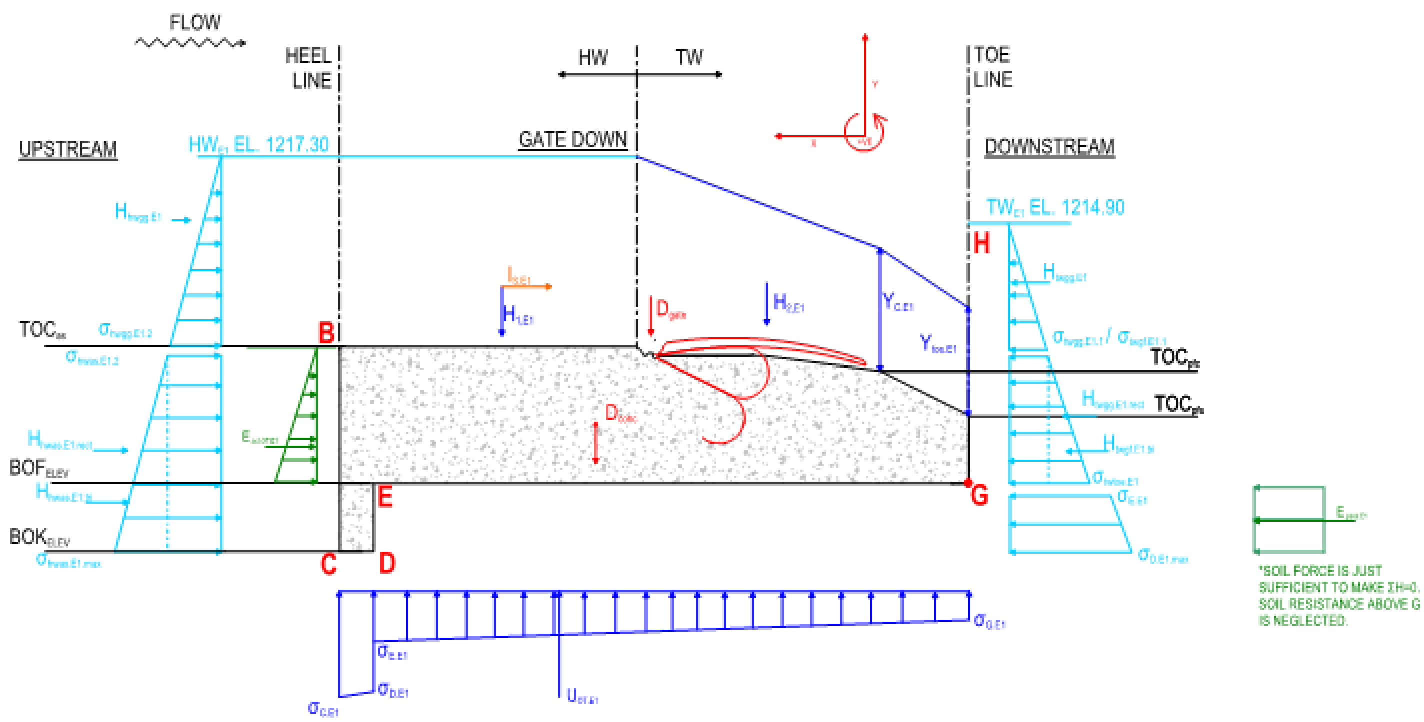
MONOLITH OVERTURNING STABILITY ANALYSIS

E1 CASE

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stability of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1 $\text{Ratio}_{OT.E1.min} := 0.25$ Resultant at Middle Half



Uplift Loads for Overturning Stability Analysis

Line of Creep:

Change in Water Head: $\Delta_{h.E1} := HW_{E1} - TW_{E1} = 2.4\,m$

Length from Point C to Point G: $L_{CG} = 18.61\,m$

Length from Various Points to Points: $L_{CD} = 1\,m$ $L_{DE} = 2\,m$ $L_{EG} = 17.5\,m$

$L_{GH.E1} := TW_{E1} - BOF_{elev} = 8.9\,m$

Length from Point C, D, E to G: $L_{CDEG} = 20.5\,m$ $L_{CDE} = 3\,m$

Water Pressure at Point C: $\sigma_{C.E1} := \sigma_{hwas.E1.2} = -130.47\cdot kPa$

Water Pressure at Point G: $\sigma_{G.E1} := \sigma_{twtoe.E1}\cdot -1 = -87.31\cdot kPa$

Water Pressure at Point D: $$\sigma_{D.E1} := -\gamma_w\cdot\left[\left(HW_{E1} - BOK_{elev}\right) - \frac{\Delta_{h.E1}\cdot L_{CD}}{L_{CDEG}}\right] = -129.32\cdot kPa$$

Water Pressure at Point E: $$\sigma_{E.E1} := -\gamma_w\cdot\left[\left(HW_{E1} - BOF_{elev}\right) - \frac{\Delta_{h.E1}\cdot L_{CDE}}{L_{CDEG}}\right] = -107.41\cdot kPa$$

Uplift for Overturning Analysis on Bottom of Key: $$U_{OT.E1.key} := \frac{\sigma_{C.E1} + \sigma_{D.E1}}{2}\cdot L_{CD}\cdot W_b = -1948.48\cdot kN$$

Acting at: $$U_{OT.E1.key.loc} := \frac{L_{CD}\cdot\left(2\cdot\sigma_{C.E1} + \sigma_{D.E1}\right)}{3\left(\sigma_{C.E1} + \sigma_{D.E1}\right)} + L_{EG} = 18\,m$$

E1 CASE

Uplift for Overturning Analysis on Bottom of Footing:

$$U_{OT.E1.ftg} := \frac{\sigma_{E.E1} + \sigma_{G.E1}}{2} \cdot L_{EG} \cdot W_b = -25556.55 \cdot kN$$

Acting at:

$$U_{OT.E1.ftg.loc} := \frac{L_{EG} \cdot \left(\sigma_{G.E1} + 2 \cdot \sigma_{E.E1}\right)}{3\left(\sigma_{G.E1} + \sigma_{E.E1}\right)} = 9.05\,m$$

Uplift Load for Overturning Analysis:

$$U_{OT.E1} := U_{OT.E1.key} + U_{OT.E1.ftg} = -27505.03 \cdot kN$$

Uplift Load Acting from Toe:

$$U_{OT.E1.loc} := \frac{U_{OT.E1.key} \cdot U_{OT.E1.key.loc} + U_{OT.E1.ftg} \cdot U_{OT.E1.ftg.loc}}{U_{OT.E1}} = 9.69\,m$$

All Vertical Loads Applicable to Overturning Stability Analysis

Total Concrete Dead Loads:	$D_{conc} = 24618.6 \cdot kN$	at:	$X_{conc.loc} = 10.06\,m$
Dead Load of Gate:	$D_{Gate} = 210.0 \cdot kN$		$X_{gate} = 6.60\,m$
Water Weight (HW) on Apron Slab:	$H_{1.E1} = 9399.2 \cdot kN$		$H_{1.E1.loc} = 14.13\,m$
Water Weight (TW) on Gate Footing:	$H_{2.E1} = 8421.3 \cdot kN$		$H_{2.E1.loc} = 5.37\,m$
Uplift Load for Overturning Analysis:	$U_{OT.E1} = -27505.03 \cdot kN$		$U_{OT.E1.loc} = 9.69 \cdot m$

Sum of All Overturning Analysis Vertical Load:

$$\Sigma V_{E1.OT} := D_{conc} + D_{Gate} + H_{1.E1} + H_{2.E1} + U_{OT.E1} = 15144.06 \cdot kN$$

Sum of All Overturning Analysis Vertical Load Moments:

$$\Sigma M_{V.E1.OT} := D_{conc} \cdot X_{conc.loc} + D_{Gate} \cdot X_{gate} + H_{1.E1} \cdot H_{1.E1.loc} + H_{2.E1} \cdot H_{2.E1.loc} + U_{OT.E1} \cdot U_{OT.E1.loc} = 160565.73 \cdot kN \cdot m$$

Lateral Tailwater Loads for Overturning Stability Analysis

TW Lateral Load on Gate Footing (No Key - Overturning Values Adjusted):

$$H_{twgf.E1} := H_{twgf.E1.tri} + H_{twgf.E1.rect} = 4061.34 \cdot kN$$

Acting at:

$$H_{twgf.E1.loc} := \frac{\frac{h_{toe}}{3} \cdot H_{twgf.E1.tri} + \frac{h_{toe}}{2} \cdot H_{twgf.E1.rect}}{H_{twgf.E1}} = 1.81\,m$$

Horizontal Tailwater Pressure Top of Key (Overturning Analysis):

$$\sigma_{twtk.OT.E1} := \sigma_{E.E1} \cdot -1 = 107.41 \cdot kPa$$

Horizontal Tailwater Pressure Bottom of Key (Overturning Analysis):

$$\sigma_{twbk.OT.E1} := \sigma_{D.E1} \cdot -1 = 129.32 \cdot kPa$$

Triangular Distribution Unit Load Acting at Key:

$$H_{twbk.OT.E1.tri} := \frac{\left(\sigma_{twbk.OT.E1} - \sigma_{twtk.OT.E1}\right)}{2} \cdot d_{key} \cdot W_{tw.E1} = 328.75 \cdot kN$$

Triangular Distribution Unit Load Acting at Key:

$$H_{twbk.OT.E1.rect} := \sigma_{twtk.OT.E1} \cdot d_{key} \cdot W_{tw.E1} = 3222.23 \cdot kN$$

Total Horizontal Tailwater Load on Key (Overturning Values Adjusted):

$$H_{twkey.OT.E1} := H_{twbk.OT.E1.tri} + H_{twbk.OT.E1.rect} = 3550.98 \cdot kN$$

Acting at:

$$H_{twkey.OT.E1.loc} := \frac{H_{twbk.OT.E1.tri} \cdot \frac{-2 \cdot d_{key}}{3} + H_{twbk.OT.E1.rect} \cdot \frac{-d_{key}}{2}}{H_{twkey.OT.E1}} = -1.03 \cdot m$$

E1 CASE

Lateral Driving Earth Loads for Overturning Stability Analysis (at rest condition)

Depth of Driving Soil Loads (to top of key): $h_{E.OT.E1} := TOC_{as} - BOF_{elev} = 4\ m$

At-Rest Soil Load: $E_{act.OT.E1} := \dfrac{\left(K_{o.E1} \cdot h_{E.OT.E1}^{\ 2}\right)}{2} \cdot \left(\gamma_r - \gamma_w\right) \cdot W_{hwas.E1} \cdot -1 = -962.49 \cdot kN$

At Rest- Soil Load Acting from Toe: $E_{act.OT.E1.loc} := \dfrac{h_{E.OT.E1}}{3} = 1.33\ m$

All Lateral Loads Applicable to Overturning Stability Analysis

HW Lateral Load on Approach Slab:	$H_{hwas.E1} = -9093.9 \cdot kN$	$H_{hwas.E1.loc} = 0.71\ m$
HW Lateral Load on Guard Gate:	$H_{hwgg.E1} = 0.0 \cdot kN$	$H_{hwgg.E1.loc} = 4.00\ m$
TW Lateral Load on Guard Gate:	$H_{twgg.E1} = 0.0 \cdot kN$	$H_{twgg.E1.loc} = 4.00\ m$
TW Lateral Load on Gate Footing (No Key - Overturning Values Adjusted):	$H_{twgf.E1} = 4061.34 \cdot kN$	$H_{twgf.E1.loc} = 1.81\ m$
TW Lateral Load on Key:	$H_{twkey.OT.E1} = 3550.98 \cdot kN$	$H_{twkey.OT.E1.loc} = -1.03\ m$
Ice / Impact Load:	$I_{E1} = 0.0 \cdot kN$	$I_{E1.loc} = 3.70\ m$
Lateral Soil Load (driving):	$E_{act.OT.E1} = -962.5 \cdot kN$	$E_{act.OT.E1.loc} = 1.33\ m$

Resisting Lateral Soil Load as required to produce horizontal equilibrium:

$$E_{pas.OT.E1} := -\left(H_{hwas.E1} + H_{hwgg.E1} + H_{twgg.E1} + H_{twgf.E1} + H_{twkey.OT.E1} + I_{E1} + E_{act.OT.E1}\right) = 2444.04 \cdot kN$$

Acting at:

$$E_{pas.OT.E1.loc} := -1 \cdot \frac{d_{key}}{2} = -1\ m$$

Sum of All Overturning Analysis Horizontal Load (ΣH=0):

$$\Sigma H_{E1.OT} := H_{hwas.E1} + H_{hwgg.E1} + H_{twgg.E1} + H_{twgf.E1} + H_{twkey.OT.E1} + I_{E1} + E_{act.OT.E1} + E_{pas.OT.E1} = 0 \cdot kN$$

Sum of All Overturning Analysis Horizontal Load Moments:

$$\Sigma M_{H.E1.OT} := H_{hwas.E1} \cdot H_{hwas.E1.loc} + H_{hwgg.E1} \cdot H_{hwgg.E1.loc} + H_{twgg.E1} \cdot H_{twgg.E1.loc} \cdots + H_{twgf.E1} \cdot H_{twgf.E1.loc} + H_{twkey.OT.E1} \cdot H_{twkey.OT.E1.loc} + I_{E1} \cdot I_{E1.loc} \cdots + E_{act.OT.E1} \cdot E_{act.OT.E1.loc} + E_{pas.OT.E1} \cdot E_{pas.OT.E1.loc} = -6495.22 \cdot kN \cdot m$$

Overturning Stability Analysis

$\Sigma M_{E1.OT} := \Sigma M_{V.E1.OT} + \Sigma M_{H.E1.OT} = 154070.51 \cdot kN \cdot m$

$X_{R.E1} := \dfrac{\Sigma M_{E1.OT}}{\Sigma V_{E1.OT}} = 10.17\ m$

$x_{OT.E1} := X_{R.E1} - \dfrac{L_b}{2} = 0.92\ m$

Overturning Resultant Ratio $Ratio_{OT.E1} := \dfrac{X_{R.E1}}{L_b} = 0.55$

$$Ratio_{OT.E1.check} := \begin{cases} \text{"OKAY"} & \text{if } Ratio_{OT.E1} \geq Ratio_{OT.E1.min} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

E2.1 CASE

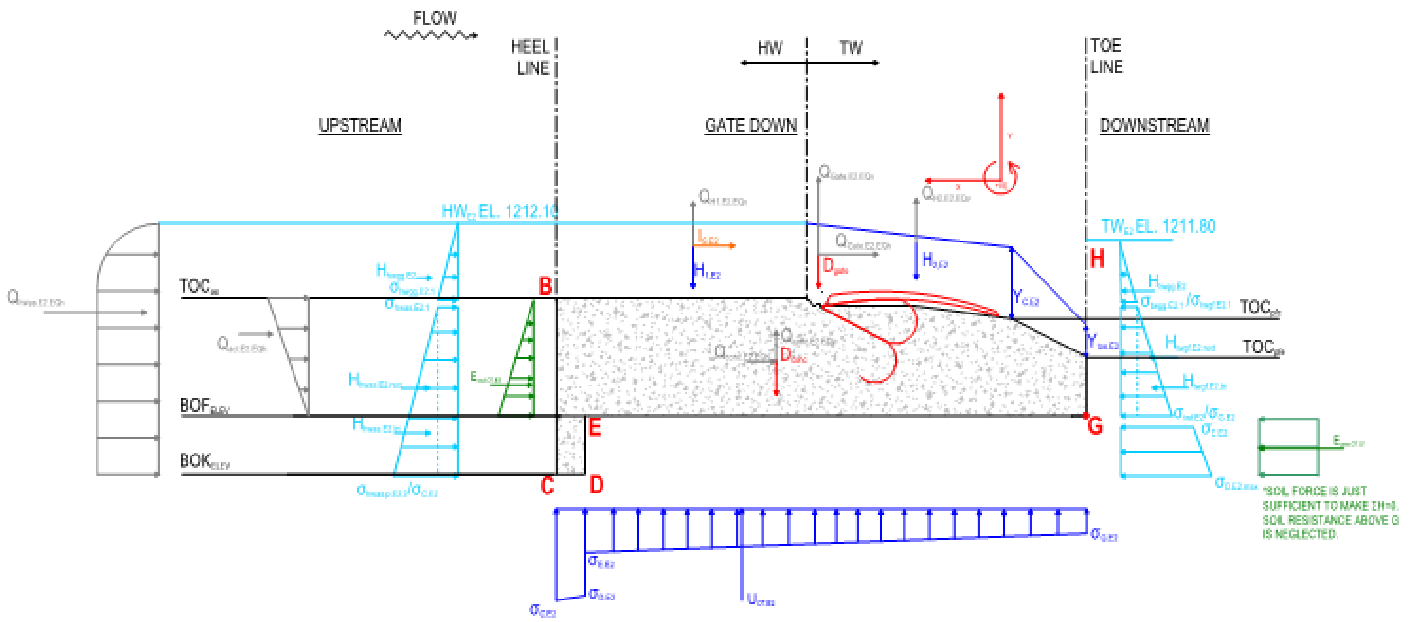
MONOLITH OVERTURNING STABILITY ANALYSIS

Seismic Case $Q_{E2.1}$: 100% Horizontal Seismic Force, No Vertical

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stability of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1 $Ratio_{overturning.allow.Extreme} := 0.25$ Resultant within Middle Half



All Vertical Loads Applicable to Overturning Stability Analysis

Total Concrete Dead Loads:	$D_{conc} = 24618.6 \cdot kN$	at:	$X_{conc.loc} = 10.06\,m$
Dead Load of Gate:	$D_{Gate} = 210.0 \cdot kN$		$X_{gate} = 6.60\,m$
Water Weight (HW) on Apron Slab:	$H_{1.U1} = 2703.9 \cdot kN$		$H_{1.U1.loc} = 14.13\,m$
Water Weight (TW) on Gate Footing:	$H_{2.U1} = 2699.2 \cdot kN$		$H_{2.U1.loc} = 5.34\,m$
Uplift Load for Overturning Analysis:	$U_{OT.U1} = -16456.3 \cdot kN$		$U_{OT.U1.loc} = 9.48 \cdot m$
Vertical Seismic Component of Concrete Structure:	$Q_{conc.E2.EQv.1} = 0$		$X_{conc.loc} = 10.06\,m$
Vertical Seismic Component of Crest Gate:	$Q_{Gate.E2.EQv.1} = 0$		$X_{gate} = 6.60\,m$
Vertical Seismic Component of Headwater over Apron Slab:	$Q_{H1.E2.EQv.1} = 0$		$H_{1.U2.loc} = 14.13\,m$
Vertical Seismic Component of Headwater over Fixed Crest Slab:	$Q_{H2.E2.EQv.1} = 0$		$H_{2.U2.loc} = 5.23\,m$

Sum of All Overtuming Analysis Vertical Load:

$$\Sigma V_{E2.OT.1} := D_{conc} + D_{Gate} + H_{1.U1} + H_{2.U1} + U_{OT.U1} + \Sigma V_{Q.E2.EQv.1} = 13775.35 \cdot kN$$

Sum of All Overtuming Analysis Vertical Load Moments:

$$\Sigma M_{V.E2.OT.1} := D_{conc} \cdot X_{conc.loc} + D_{Gate} \cdot X_{gate} + H_{1.U1} \cdot H_{1.U1.loc} + H_{2.U1} \cdot H_{2.U1.loc} + U_{OT.U1} \cdot U_{OT.U1.loc} = 145582.24 \cdot kN \cdot m$$

Lateral Driving Earth Loads for Overturning Stability Analysis (at rest condition)

E2.1 CASE

Depth of Driving Soil Loads (to top of key): $h_{E.OT.E2.1} := TOC_{as} - BOF_{elev} = 4\,m$

At-Rest Soil Load: $E_{act.OT.E2.1} := \frac{K_{o.U1} \cdot h_{E.OT.U1}^{\,2}}{2} \cdot (\gamma_r - \gamma_w) \cdot W_{hwas.U1} \cdot -1 = -962.49 \cdot kN$

At Rest- Soil Load Acting from Toe: $E_{act.OT.E2.1.loc} := \frac{h_{E.OT.U1}}{3} = 1.33\,m$

All Lateral Loads Applicable to Overturning Stability Analysis

HW Lateral Load on Approach Slab:	$H_{hwas.U1} = -4502.8 \cdot kN$	$H_{hwas.U1.loc} = 0.41\,m$
HW Lateral Load on Guard Gate:	$H_{hwgg.U1} = 0.0 \cdot kN$	$H_{hwgg.U1.loc} = 4.00\,m$
TW Lateral Load on Guard Gate:	$H_{twgg.U1} = 0.0 \cdot kN$	$H_{twgg.U1.loc} = 4.00\,m$
TW Lateral Load on Gate Footing (No Key - Overturning Values Adjusted):	$H_{twgf.U1} = 2236.68 \cdot kN$	$H_{twgf.U1.loc} = 1.65\,m$
TW Lateral Load on Key:	$H_{twkey.OT.U1} = 2080.92 \cdot kN$	$H_{twkey.OT.U1.loc} = -1.05\,m$
Ice / Impact Load:	$I_{U1} = 0.0 \cdot kN$	$I_{U1.loc} = 3.70\,m$
Lateral Soil Load (driving):	$E_{act.OT.U1} = -962.5 \cdot kN$	$E_{act.OT.U1.loc} = 1.33\,m$
Horizontal Seismic Component of Concrete Structure:	$Q_{conc.E2.EQh.1} = -4185.16 \cdot kN$	$Y_{conc.loc} = 1.87\,m$
Horizontal Seismic Component of Vertical Lift Gate:	$Q_{Gate.E2.EQh.1} = -35.7 \cdot kN$	$Y_{gate} = 3.90\,m$
Horizontal Seismic Component of Headwater on Gate:	$Q_{hwas.E2.EQh.1} = -957.41 \cdot kN$	$Y_{HWg.E2} = 3.24\,m$
Horizontal Seismic Component of Active Soil: (Section 5-5, USACE EM_1110-2-2100)	$Q_{act.E2.EQh.1.OT} = -1119042\,N$	$Y_{E.act.E2.OT} = 3.78\,m$

Resisting Lateral Soil Load as required to produce horizontal equilibrium:

$$E_{pas.OT.E2.1} := -\left(H_{hwas.U1} + H_{hwgg.U1} + H_{twgg.U1} + H_{twgf.U1} + H_{twkey.OT.U1} + I_{U1} + E_{act.OT.U1} + \Sigma H_{Q.E2.EQh.1.OT}\right) = 7445 \cdot kN$$

Acting at: $E_{pas.OT.E2.1.loc} := -1 \cdot \frac{d_{key}}{2} = -1\,m$

Sum of All Overturning Analysis Horizontal Load (ΣH=0):

$$\Sigma H_{E2.OT.1} := H_{hwas.U1} + H_{hwgg.U1} + H_{twgg.U1} + H_{twgf.U1} + H_{twkey.OT.U1} + I_{U1} + E_{act.OT.U1} + E_{pas.OT.E2.1} + \Sigma H_{Q.E2.EQh.1.OT} = 0 \cdot kN$$

Sum of All Overturning Analysis Horizontal Load Moments:

$$\Sigma M_{H.E2.OT.1} := H_{hwas.U1} \cdot H_{hwas.U1.loc} + H_{hwgg.U1} \cdot H_{hwgg.U1.loc} + H_{twgg.U1} \cdot H_{twgg.U1.loc} \cdots + H_{twgf.U1} \cdot H_{twgf.U1.loc} + H_{twkey.OT.U1} \cdot H_{twkey.OT.U1.loc} + I_{U1} \cdot I_{U1.loc} \cdots + E_{act.OT.U1} \cdot E_{act.OT.U1.loc} + E_{pas.OT.U1} \cdot E_{pas.OT.U1.loc} + \Sigma M_{Q.E2.1} = -18067.5 \cdot kN \cdot m$$

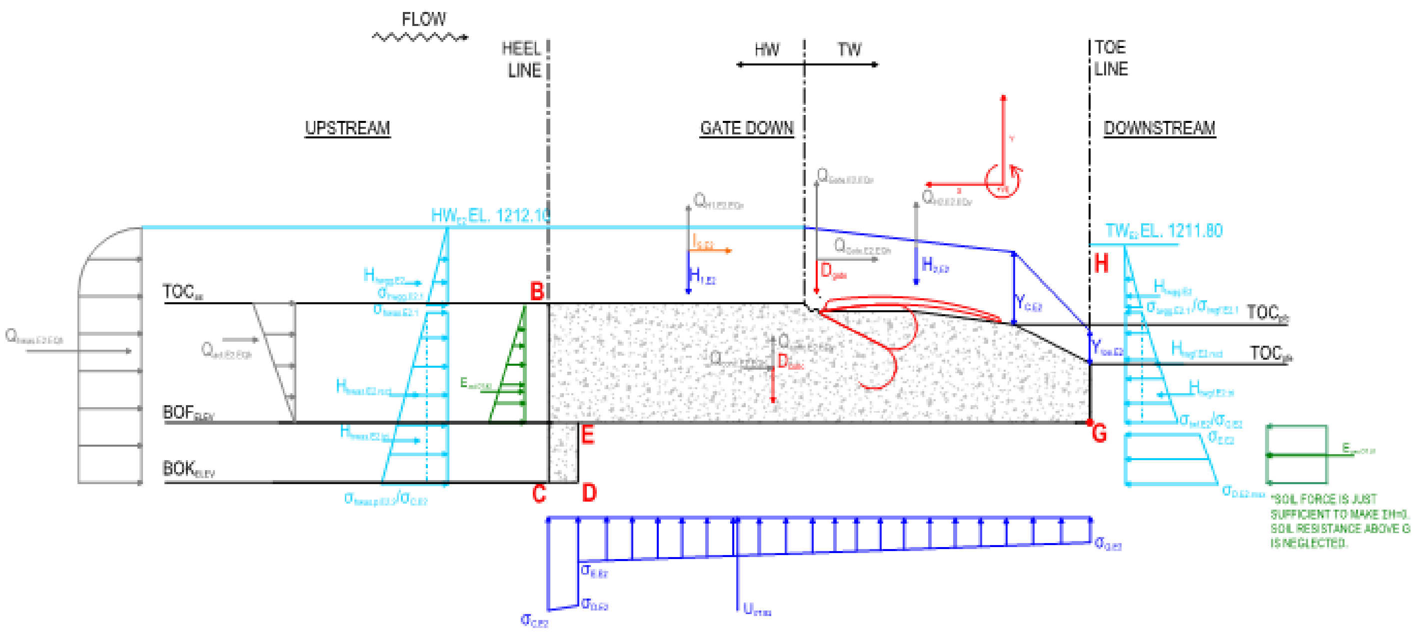
MONOLITH OVERTURNING STABILITY ANALYSIS

E2.2 CASE

Seismic Case $Q_{E2.2}$: 100% Horizontal Seismic Force, 30% Vertical

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stability of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1 $Ratio_{overturning.allow.Extreme} = 0.25$ Resultant within Middle Half



All Vertical Loads Applicable to Overturning Stability Analysis

Total Concrete Dead Loads:	$D_{conc} = 24618.6 \cdot kN$	at:	$X_{conc.loc} = 10.06\,m$
Dead Load of Gate:	$D_{Gate} = 210.0 \cdot kN$		$X_{gate} = 6.60\,m$
Water Weight (HW) on Apron Slab:	$H_{1.U1} = 2703.9 \cdot kN$		$H_{1.U1.loc} = 14.13\,m$
Water Weight (TW) on Gate Footing:	$H_{2.U1} = 2699.2 \cdot kN$		$H_{2.U1.loc} = 5.34\,m$
Uplift Load for Overturning Analysis:	$U_{OT.U1} = -16456.3 \cdot kN$		$U_{OT.U1.loc} = 9.48 \cdot m$
Vertical Seismic Component of Concrete Structure:	$Q_{conc.E2.EQv.2} = -738.56 \cdot kN$		$X_{conc.loc} = 10.06\,m$
Vertical Seismic Component of Crest Gate:	$Q_{Gate.E2.EQv.2} = -6.3 \cdot kN$		$X_{gate} = 6.60\,m$
Vertical Seismic Component of Headwater over Apron Slab:	$Q_{H1.E2.EQv.2} = -81.12 \cdot kN$		$H_{1.U1.loc} = 14.13\,m$
Vertical Seismic Component of Headwater over Fixed Crest Slab:	$Q_{H2.E2.EQv.2} = -80.98 \cdot kN$		$H_{2.U1.loc} = 5.34\,m$

Sum of All Overturning Analysis Vertical Load:

$$\Sigma V_{E2.OT.2} := D_{conc} + D_{Gate} + H_{1.U1} + H_{2.U1} + U_{OT.U1} + \Sigma V_{Q.E2.EQv.2} = 12868.4 \cdot kN$$

Sum of All Overturning Analysis Vertical Load Moments:

$$\Sigma M_{V.E2.OT.2} := D_{conc} \cdot X_{conc.loc} + D_{Gate} \cdot X_{gate} + H_{1.U1} \cdot H_{1.U1.loc} + H_{2.U1} \cdot H_{2.U1.loc} + U_{OT.U1} \cdot U_{OT.U1.loc} = 145582.24 \cdot kN \cdot m$$

Lateral Driving Earth Loads for Overturning Stability Analysis (at rest condition)

E2.2 CASE

Depth of Driving Soil Loads (to top of key): $h_{E.OT.E2.2} := TOC_{as} - BOF_{elev} = 4\,m$

At-Rest Soil Load: $E_{act.OT.E2.2} := \dfrac{\left(K_{o.U1} \cdot h_{E.OT.U1}\right)^2}{2} \cdot \left(\gamma_r - \gamma_w\right) \cdot W_{hwas.U1} \cdot -1 = -962.49 \cdot kN$

At Rest- Soil Load Acting from Toe: $E_{act.OT.E2.2.loc} := \dfrac{h_{E.OT.U1}}{3} = 1.33\,m$

All Lateral Loads Applicable to Overturning Stability Analysis

HW Lateral Load on Approach Slab:	$H_{hwas.U1} = -4502.8 \cdot kN$	$H_{hwas.U1.loc} = 0.41\,m$
HW Lateral Load on Guard Gate:	$H_{hwgg.U1} = 0.0 \cdot kN$	$H_{hwgg.U1.loc} = 4.00\,m$
TW Lateral Load on Guard Gate:	$H_{twgg.U1} = 0.0 \cdot kN$	$H_{twgg.U1.loc} = 4.00\,m$
TW Lateral Load on Gate Footing (No Key - Overturning Values Adjusted):	$H_{twgf.U1} = 2236.68 \cdot kN$	$H_{twgf.U1.loc} = 1.65\,m$
TW Lateral Load on Key:	$H_{twkey.OT.U1} = 2080.92 \cdot kN$	$H_{twkey.OT.U1.loc} = -1.05\,m$
Ice / Impact Load:	$I_{U1} = 0.0 \cdot kN$	$I_{U1.loc} = 3.70\,m$
Lateral Soil Load (driving):	$E_{act.OT.U1} = -962.5 \cdot kN$	$E_{act.OT.U1.loc} = 1.33\,m$
Horizontal Seismic Component of Concrete Structure:	$Q_{conc.E2.EQh.2} = -4185.16 \cdot kN$	$Y_{conc.loc} = 1.87\,m$
Horizontal Seismic Component of Vertical Lift Gate:	$Q_{Gate.E2.EQh.2} = -35.7 \cdot kN$	$Y_{gate} = 3.90\,m$
Horizontal Seismic Component of Headwater on Gate:	$Q_{hwas.E2.EQh.2} = -957.41 \cdot kN$	$Y_{HWg.E2} = 3.24\,m$
Horizontal Seismic Component of Active Soil: (Section 5-5, USACE EM_1110-2-2100)	$Q_{act.E2.EQh.2} = -497.35 \cdot kN$	$Y_{E.act.E2} = 2.52\,m$

Resisting Lateral Soil Load as required to produce horizontal equilibrium:

$$E_{pas.OT.E2.2} := -\left(H_{hwas.U1} + H_{hwgg.U1} + H_{twgg.U1} + H_{twgf.U1} + H_{twkey.OT.U1} + I_{U1} + E_{act.OT.U1} + \Sigma H_{Q.E2.EQh.2.OT}\right) = 7445 \cdot kN$$

Acting at: $E_{pas.OT.E2.2.loc} := -1 \cdot \dfrac{d_{key}}{2} = -1\,m$

Sum of All Overturning Analysis Horizontal Load (ΣH=0):

$$\Sigma H_{E2.OT.2} := H_{hwas.U1} + H_{hwgg.U1} + H_{twgg.U1} + H_{twgf.U1} + H_{twkey.OT.U1} + I_{U1} + E_{act.OT.U1} + E_{pas.OT.E2.2} + \Sigma H_{Q.E2.EQh.2.OT} = 0 \cdot kN$$

Sum of All Overturning Analysis Horizontal Load Moments:

$$\begin{aligned}\Sigma M_{H.E2.OT.2} := {} & H_{hwas.U1} \cdot H_{hwas.U1.loc} + H_{hwgg.U1} \cdot H_{hwgg.U1.loc} + H_{twgg.U1} \cdot H_{twgg.U1.loc} \cdots = -27114.06 \cdot kN \cdot m \\ & + H_{twgf.U1} \cdot H_{twgf.U1.loc} + H_{twkey.OT.U1} \cdot H_{twkey.OT.U1.loc} + I_{U1} \cdot I_{U1.loc} \cdots \\ & + E_{act.OT.U1} \cdot E_{act.OT.U1.loc} + E_{pas.OT.U1} \cdot E_{pas.OT.U1.loc} + \Sigma M_{Q.E2.2}\end{aligned}$$

E3.1 CASE

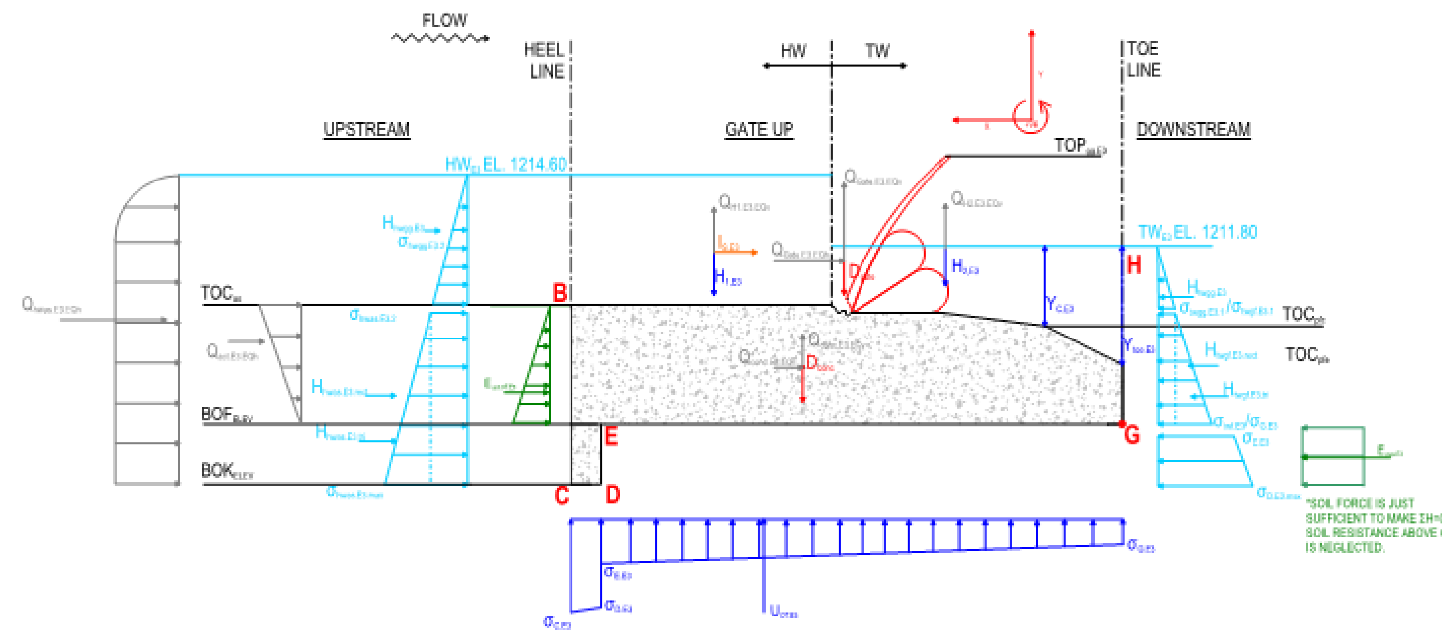
MONOLITH OVERTURNING STABILITY ANALYSIS

Seismic Case $Q_{E3.1}$: 100% Horizontal Seismic Force, No Vertical

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stability of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1 $Ratio_{overturning.allow.Extreme} = 0.25$ Resultant within Middle Half



All Vertical Loads Applicable to Overturning Stability Analysis

Total Concrete Dead Loads:	$D_{conc} = 24618.6 \cdot kN$	at:	$X_{conc.loc} = 10.06\,m$
Dead Load of Gate:	$D_{Gate} = 210.0 \cdot kN$		$X_{gate} = 6.60\,m$
Water Weight (HW) on Apron Slab:	$H_{1.U2} = 5922.8 \cdot kN$		$H_{1.U2.loc} = 14.13\,m$
Water Weight (TW) on Gate Footing:	$H_{2.U2} = 4940.2 \cdot kN$		$H_{2.U2.loc} = 5.23\,m$
Uplift Load for Overturning Analysis:	$U_{OT.U2} = -19563.05 \cdot kN$		$U_{OT.U2.loc} = 9.94 \cdot m$
Vertical Seismic Component of Concrete Structure:	$Q_{conc.E3.EQv.1} = 0$		$X_{conc.loc} = 10.06\,m$
Vertical Seismic Component of Crest Gate:	$Q_{Gate.E3.EQv.1} = 0$		$X_{gate} = 6.60\,m$
Vertical Seismic Component of Headwater over Apron Slab:	$Q_{H1.E3.EQv.1} = 0$		$H_{1.U2.loc} = 14.13\,m$
Vertical Seismic Component of Headwater over Fixed Crest Slab:	$Q_{H2.E3.EQv.1} = 0$		$H_{2.U2.loc} = 5.23\,m$

Sum of All Overturning Analysis Vertical Load:

$$\Sigma V_{E3.OT.1} := D_{conc} + D_{Gate} + H_{1.U2} + H_{2.U2} + U_{OT.U2} + \Sigma V_{Q.E3.EQv.1} = 16128.53 \cdot kN$$

Sum of All Overturning Analysis Vertical Load Moments:

$$\Sigma M_{V.E3.OT.1} := D_{conc} \cdot X_{conc.loc} + D_{Gate} \cdot X_{gate} + H_{1.U2} \cdot H_{1.U2.loc} + H_{2.U2} \cdot H_{2.U2.loc} + U_{OT.U2} \cdot U_{OT.U2.loc} = 163952.61 \cdot kN \cdot m$$

Lateral Driving Earth Loads for Overturning Stability Analysis (at rest condition)

E3.1 CASE

Depth of Driving Soil Loads (to top of key): $h_{E.OT.E3.1} := TOC_{as} - BOF_{elev} = 4\,m$

At-Rest Soil Load: $E_{act.OT.E3.1} := \frac{K_{o.U2} \cdot h_{E.OT.U2}^{\;2}}{2} \cdot (\gamma_r - \gamma_w) \cdot W_{hwas.U2} \cdot -1 = -962.49 \cdot kN$

At Rest- Soil Load Acting from Toe: $E_{act.OT.E3.1.loc} := \frac{h_{E.OT.U2}}{3} = 1.33\,m$

All Lateral Loads Applicable to Overturning Stability Analysis

HW Lateral Load on Approach Slab:	$H_{hwas.U1} = -4502.8 \cdot kN$	$H_{hwas.U1.loc} = 0.41\,m$
HW Lateral Load on Guard Gate:	$H_{hwgg.U1} = 0.0 \cdot kN$	$H_{hwgg.U1.loc} = 4.00\,m$
TW Lateral Load on Guard Gate:	$H_{twgg.E1} = 0.0 \cdot kN$	$H_{twgg.E1.loc} = 4.00\,m$
TW Lateral Load on Gate Footing (No Key - Overturning Values Adjusted):	$H_{twgf.E1} = 4061.34 \cdot kN$	$H_{twgf.E1.loc} = 1.81\,m$
TW Lateral Load on Key:	$H_{twkey.OT.E1} = 3550.98 \cdot kN$	$H_{twkey.OT.E1.loc} = -1.03\,m$
Ice / Impact Load:	$I_{E1} = 0.0 \cdot kN$	$I_{E1.loc} = 3.70\,m$
Lateral Soil Load (driving):	$E_{act.OT.E1} = -962.5 \cdot kN$	$E_{act.OT.E1.loc} = 1.33\,m$
Horizontal Seismic Component of Concrete Structure:	$Q_{conc.E3.EQh.1} = -4185.16 \cdot kN$	$Y_{conc.loc} = 1.87\,m$
Horizontal Seismic Component of Vertical Lift Gate:	$Q_{Gate.E3.EQh.1} = -35.7 \cdot kN$	$Y_{gate} = 3.90\,m$
Horizontal Seismic Component of Headwater on Footing:	$Q_{hwas.E3.EQh.1} = -1639.6 \cdot kN$	$Y_{HWg.E3} = 4.24\,m$
Horizontal Seismic Component of Active Soil: (Section 5-5, USACE EM_1110-2-2100)	$Q_{act.E3.EQh.1} = -497352\,N$	$Y_{E.act.E3} = 2.52\,m$

Resisting Lateral Soil Load as required to produce horizontal equilibrium:

$$E_{pas.OT.E3.1} := -\left(H_{hwas.U2} + H_{hwgg.U2} + H_{twgg.U2} + H_{twgf.U2} + H_{twkey.OT.U2} + I_{U2} + E_{act.OT.U2} + \Sigma H_{Q.E3.EQh.1}\right) = 11492.24 \cdot kN$$

Acting at: $E_{pas.OT.E3.1.loc} := -1 \cdot \frac{d_{key}}{2} = -1\,m$

Sum of All Overturning Analysis Horizontal Load (ΣH=0):

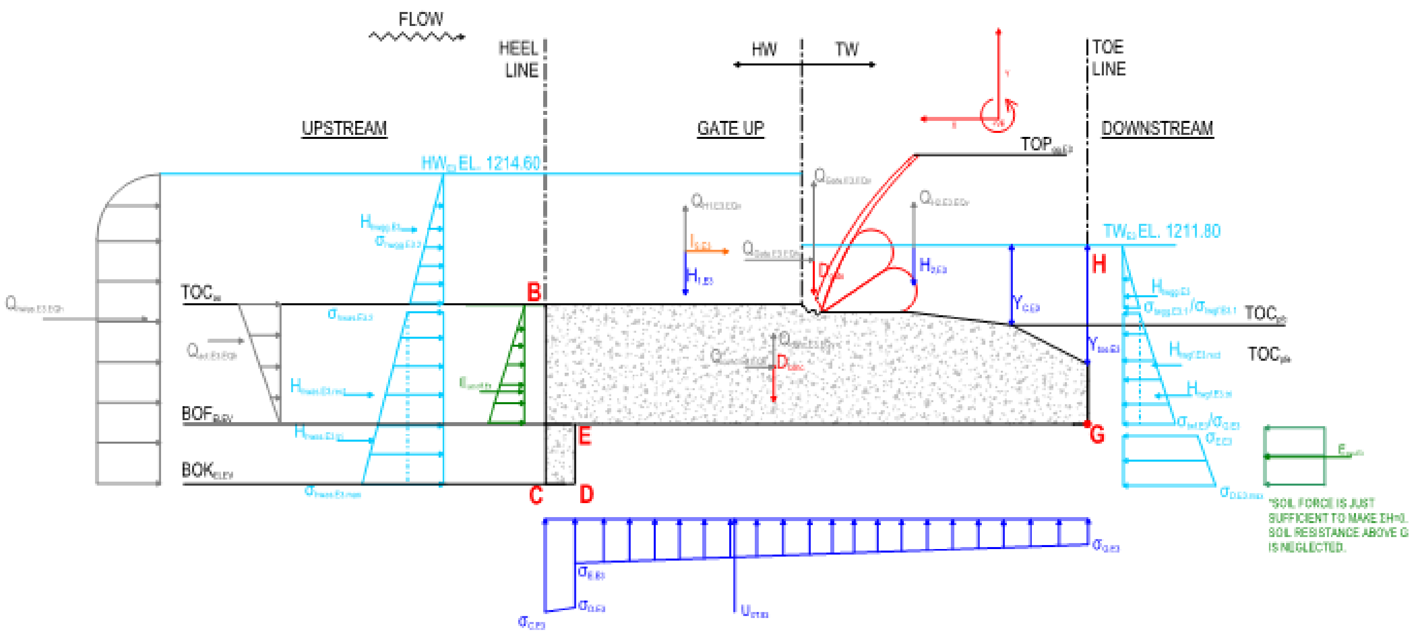
MONOLITH OVERTURNING STABILITY ANALYSIS

E3.2 CASE

Seismic Case $Q_{E3.2}$: 100% Horizontal Seismic Force, 30% Vertical

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stability of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1 $Ratio_{overturning.allow.Extreme} = 0.25$ Resultant within Middle Half



All Vertical Loads Applicable to Overturning Stability Analysis

Total Concrete Dead Loads:	$D_{conc} = 24618.6 \cdot kN$	at:	$X_{conc.loc} = 10.06\,m$
Dead Load of Gate:	$D_{Gate} = 210.0 \cdot kN$		$X_{gate} = 6.60\,m$
Water Weight (HW) on Apron Slab:	$H_{1.U2} = 5922.8 \cdot kN$		$H_{1.U2.loc} = 14.13\,m$
Water Weight (TW) on Gate Footing:	$H_{2.U2} = 4940.2 \cdot kN$		$H_{2.U2.loc} = 5.23\,m$
Uplift Load for Overturning Analysis:	$U_{OT.U2} = -19563.05 \cdot kN$		$U_{OT.U2.loc} = 9.94 \cdot m$
Vertical Seismic Component of Concrete Structure:	$Q_{conc.E3.EQv.2} = -738.56 \cdot kN$		$X_{conc.loc} = 10.06\,m$
Vertical Seismic Component of Crest Gate:	$Q_{Gate.E3.EQv.2} = -6.3 \cdot kN$		$X_{gate} = 6.60\,m$
Vertical Seismic Component of Headwater over Apron Slab:	$Q_{H1.E3.EQv.2} = -81.12 \cdot kN$		$H_{1.U2.loc} = 14.13\,m$
Vertical Seismic Component of Headwater over Fixed Crest Slab:	$Q_{H2.E3.EQv.2} = -80.98 \cdot kN$		$H_{2.U2.loc} = 5.23\,m$

Sum of All Overturning Analysis Vertical Load:

$$\Sigma V_{E3.OT.2} := D_{conc} + D_{Gate} + H_{1.U2} + H_{2.U2} + U_{OT.U2} + \Sigma V_{Q.E3.EQv.2} = 15221.58 \cdot kN$$

Sum of All Overturning Analysis Vertical Load Moments:

$$\Sigma M_{V.E3.OT.2} := D_{conc} \cdot X_{conc.loc} + D_{Gate} \cdot X_{gate} + H_{1.U2} \cdot H_{1.U2.loc} + H_{2.U2} \cdot H_{2.U2.loc} + U_{OT.U2} \cdot U_{OT.U2.loc} = 163952.61 \cdot kN \cdot m$$

Lateral Driving Earth Loads for Overturning Stability Analysis (at rest condition) **E3.2 CASE**

Depth of Driving Soil Loads (to top of key): $h_{E.OT.E3.2} := TOC_{as} - BOF_{elev} = 4\,m$

At-Rest Soil Load: $E_{act.OT.E3.2} := \dfrac{\left(K_{o.U1} \cdot h_{E.OT.U2}^{\;2}\right)}{2} \cdot \left(\gamma_r - \gamma_w\right) \cdot W_{hwas.U2} \cdot -1 = -962.49 \cdot kN$

At Rest- Soil Load Acting from Toe: $E_{act.OT.E3..loc} := \dfrac{h_{E.OT.U2}}{3} = 1.33\,m$

All Lateral Loads Applicable to Overturning Stability Analysis

HW Lateral Load on Approach Slab:	$H_{hwas.U2} = -6710.0 \cdot kN$	$H_{hwas.U2.loc} = 0.61\,m$
HW Lateral Load on Guard Gate:	$H_{hwgg.U2} = -1556.8 \cdot kN$	$H_{hwgg.U2.loc} = 5.53\,m$
TW Lateral Load on Guard Gate:	$H_{twgg.U2} = 238.4 \cdot kN$	$H_{twgg.U2.loc} = 4.60\,m$
TW Lateral Load on Gate Footing (No Key - Overturning Values Adjusted):	$H_{twgf.U2} = 2236.68 \cdot kN$	$H_{twgf.U2.loc} = 1.65\,m$
TW Lateral Load on Key:	$H_{twkey.OT.U2} = 2744.89 \cdot kN$	$H_{twkey.OT.U2.loc} = -1.04\,m$
Ice / Impact Load:	$I_{U2} = -1125.0 \cdot kN$	$I_{U2.loc} = 8.70\,m$
Lateral Soil Load (driving):	$E_{act.OT.U2} = -962.5 \cdot kN$	$E_{act.OT.U1.loc} = 1.33\,m$
Horizontal Seismic Component of Concrete Structure:	$Q_{conc.E3.EQh.2} = -4185.16 \cdot kN$	$Y_{conc.loc} = 1.87\,m$
Horizontal Seismic Component of Vertical Lift Gate:	$Q_{Gate.E3.EQh.2} = -35.7 \cdot kN$	$Y_{gate} = 3.90\,m$
Horizontal Seismic Component of Headwater on Gate:	$Q_{hwas.E3.EQh.2} = -1639.6 \cdot kN$	$Y_{HWg.E3} = 4.24\,m$
Horizontal Seismic Component of Active Soil: (Section 5-5, USACE EM_1110-2-2100)	$Q_{act.E3.EQh.2} = -497.35 \cdot kN$	$Y_{E.act.E3} = 2.52\,m$

Resisting Lateral Soil Load as required to produce horizontal equilibrium:

$$E_{pas.OT.E3.2} := -\left(H_{hwas.U2} + H_{hwgg.U2} + H_{twgg.U2} + H_{twgf.U2} + H_{twkey.OT.U2} + I_{U2} + E_{act.OT.U2} + \Sigma H_{Q.E3.EQh.2.OT}\right) = 12113.93 \cdot kN$$

Acting at: $E_{pas.OT.E3.2.loc} := -1 \cdot \dfrac{d_{key}}{2} = -1\,m$

E3.3 CASE

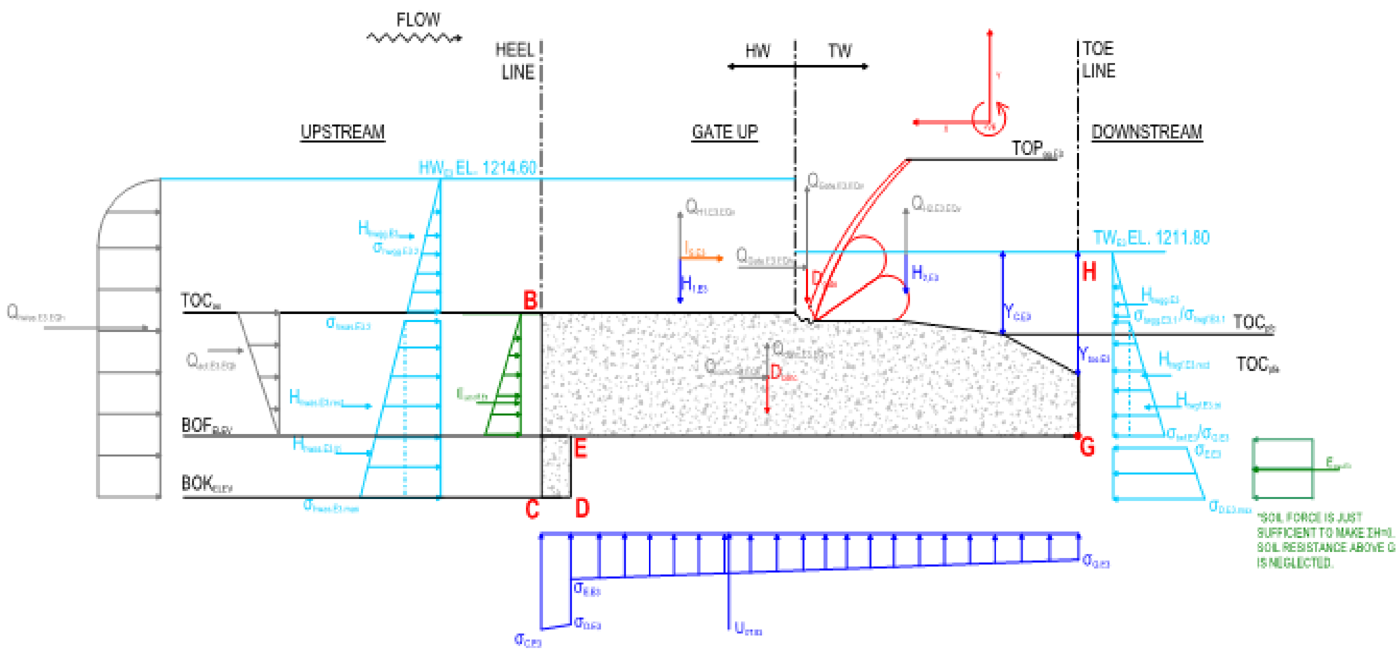
MONOLITH OVERTURNING STABILITY ANALYSIS

Seismic Case $Q_{E3.2}$: 100% Horizontal Seismic Force, 30% Vertical

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stability of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1 $Ratio_{overturning.allow.Extreme} = 0.25$ Resultant within Middle Half



All Vertical Loads Applicable to Overturning Stability Analysis

Total Concrete Dead Loads:	$D_{conc} = 24618.6 \cdot kN$	at:	$X_{conc.loc} = 10.06\,m$
Dead Load of Gate:	$D_{Gate} = 210.0 \cdot kN$		$X_{gate} = 6.60\,m$
Water Weight (HW) on Apron Slab:	$H_{1.U2} = 5922.8 \cdot kN$		$H_{1.U2.loc} = 14.13\,m$
Water Weight (TW) on Gate Footing:	$H_{2.U2} = 4940.2 \cdot kN$		$H_{2.U2.loc} = 5.23\,m$
Uplift Load for Overturning Analysis:	$U_{OT.U2} = -19563.05 \cdot kN$		$U_{OT.U2.loc} = 9.94 \cdot m$
Vertical Seismic Component of Concrete Structure:	$Q_{conc.E3.EQv.3} = -2461.86 \cdot kN$		$X_{conc.loc} = 10.06\,m$
Vertical Seismic Component of Crest Gate:	$Q_{Gate.E3.EQv.3} = -21 \cdot kN$		$X_{gate} = 6.60\,m$
Vertical Seismic Component of Headwater over Apron Slab:	$Q_{H1.E3.EQv.3} = -592.28 \cdot kN$		$H_{1.U2.loc} = 14.13\,m$
Vertical Seismic Component of Headwater over Fixed Crest Slab:	$Q_{H2.E3.EQv.3} = -494.02 \cdot kN$		$H_{2.U2.loc} = 5.23\,m$

Sum of All Overturning Analysis Vertical Load:

$$\Sigma V_{E3.OT.3} := D_{conc} + D_{Gate} + H_{1.U2} + H_{2.U2} + U_{OT.U2} + \Sigma V_{Q.E3.EQv.2} = 15221.58 \cdot kN$$

Sum of All Overturning Analysis Vertical Load Moments:

$$\Sigma M_{V.E3.OT.3} := D_{conc} \cdot X_{conc.loc} + D_{Gate} \cdot X_{gate} + H_{1.U2} \cdot H_{1.U2.loc} + H_{2.U2} \cdot H_{2.U2.loc} + U_{OT.U2} \cdot U_{OT.U2.loc} = 163952.61 \cdot kN \cdot m$$

Lateral Driving Earth Loads for Overturning Stability Analysis (at rest condition)

E3.3 CASE

Depth of Driving Soil Loads (to top of key): $h_{E.OT.E3.3} := TOC_{as} - BOF_{elev} = 4\,m$

At-Rest Soil Load: $E_{act.OT.E3.3} := \frac{\left(K_{o.U1} \cdot h_{E.OT.U2}^{2}\right)}{2} \cdot \left(\gamma_r - \gamma_w\right) \cdot W_{hwas.U2} \cdot -1 = -962.49 \cdot kN$

At Rest- Soil Load Acting from Toe: $E_{act.OT.E3.3.loc} := \frac{h_{E.OT.U2}}{3} = 1.33\,m$

All Lateral Loads Applicable to Overturning Stability Analysis

HW Lateral Load on Approach Slab:	$H_{hwas.U2} = -6710.0 \cdot kN$	$H_{hwas.U2.loc} = 0.61\,m$
HW Lateral Load on Guard Gate:	$H_{hwgg.U2} = -1556.8 \cdot kN$	$H_{hwgg.U2.loc} = 5.53\,m$
TW Lateral Load on Guard Gate:	$H_{twgg.U2} = 238.4 \cdot kN$	$H_{twgg.U2.loc} = 4.60\,m$
TW Lateral Load on Gate Footing (No Key - Overturning Values Adjusted):	$H_{twgf.U2} = 2236.68 \cdot kN$	$H_{twgf.U2.loc} = 1.65\,m$
TW Lateral Load on Key:	$H_{twkey.OT.U2} = 2744.89 \cdot kN$	$H_{twkey.OT.U2.loc} = -1.04\,m$
Ice / Impact Load:	$I_{U2} = -1125.0 \cdot kN$	$I_{U2.loc} = 8.70\,m$
Lateral Soil Load (driving):	$E_{act.OT.U2} = -962.5 \cdot kN$	$E_{act.OT.U2.loc} = 1.33\,m$
Horizontal Seismic Component of Concrete Structure:	$Q_{conc.E3.EQh.3} = -1230.93 \cdot kN$	$Y_{conc.loc} = 1.87\,m$
Horizontal Seismic Component of Vertical Lift Gate:	$Q_{Gate.E3.EQh.3} = -10.5 \cdot kN$	$Y_{gate} = 3.90\,m$
Horizontal Seismic Component of Headwater on Gate:	$Q_{hwas.E3.EQh.3} = -482.24 \cdot kN$	$Y_{HWg.E3} = 4.24\,m$
Horizontal Seismic Component of Active Soil: (Section 5-5, USACE EM_1110-2-2100)	$Q_{act.E3.EQh.3} = -146.28 \cdot kN$	$Y_{E.act.E3} = 2.52\,m$

Resisting Lateral Soil Load as required to produce horizontal equilibrium:

$$E_{pas.OT.E3.3} := -\left(H_{hwas.U2} + H_{hwgg.U2} + H_{twgg.U2} + H_{twgf.U2} + H_{twkey.OT.U2} + I_{U2} + E_{act.OT.U2} + \Sigma H_{Q.E3.EQh.3.OT}\right) = 7187.23 \cdot kN$$

Acting at: $E_{pas.OT.E3.3.loc} := -1 \cdot \frac{d_{key}}{2} = -1\,m$

Sum of All Overturning Analysis Horizontal Load (ΣH=0):

$$\Sigma H_{E3.OT.3} := H_{hwas.U2} + H_{hwgg.U2} + H_{twgg.U2} + H_{twgf.U2} + H_{twkey.OT.U2} + I_{U2} + E_{act.OT.U2} + E_{pas.OT.E3.3} + \Sigma H_{Q.E3.EQh.3.OT} = 0 \cdot kN$$

Sum of All Overturning Analysis Horizontal Load Moments:

$$\Sigma M_{H.E3.OT.3} := H_{hwas.U2} \cdot H_{hwas.U2.loc} + H_{hwgg.U2} \cdot H_{hwgg.U2.loc} + H_{twgg.U2} \cdot H_{twgg.U2.loc} \cdots + H_{twgf.U2} \cdot H_{twgf.U2.loc} + H_{twkey.OT.U2} \cdot H_{twkey.OT.U2.loc} + I_{U2} \cdot I_{U2.loc} \cdots + E_{act.OT.U2} \cdot E_{act.OT.U2.loc} + E_{pas.OT.U2} \cdot E_{pas.OT.U2.loc} + \Sigma M_{Q.E3.3} = -68426.19 \cdot kN \cdot m$$

Overturning Stability Analysis

$$\Sigma M_{E3.OT.3} := \Sigma M_{V.E3.OT.3} + \Sigma M_{H.E3.OT.3} = 95526.43 \cdot kN \cdot m$$

$$X_{R.E3.3} := \frac{\Sigma M_{E3.OT.3}}{\Sigma V_{E3.OT.3}} = 6.28\,m \qquad x_{OT.E3.3} := X_{R.E3.3} - \frac{L_b}{2} = -2.97\,m$$

Overturning Resultant Ratio $Ratio_{OT.E3.3} := \frac{X_{R.E3.2}}{L_b} = 0.39$

SERVICE SPILLWAY DEIMENSIONAL INPUT PARAMETERS

BASE SECTION PROPERTIES

Base Length: $L_b := 18.50m$

Stilling Basin Length: $L_{sb} := 17.0m$

(Refer to Dwg. S-220 PLAN)

Base Width: $W_b := 15.00m$

$Kern := \frac{L_b}{6} = 3.08\,m$

$Midhalf := \frac{L_b}{4} = 4.63\,m$

Area of Base: $A_b := L_b \cdot W_b = 277.5\,m^2$

Section Modulus of Base: $S_b := \frac{\left(W_b \cdot L_b{}^2\right)}{6} = 855.6\,m^3$

FOOTINGS (fixed crest and approach slab)

Footing Cross Sectional Area: $A_{gf} := 32.84m^2$ (From Bluebeam Measurement)

Block Footing Width: $w_{gf} := W_b = 15.00\,m$

Total Fixed Crest Footing Volume: $V_{gf} := A_{gf} \cdot w_{gf} = 492.6 \cdot m^3$

Approach Slab Height: $h_{as} := 4.00m$

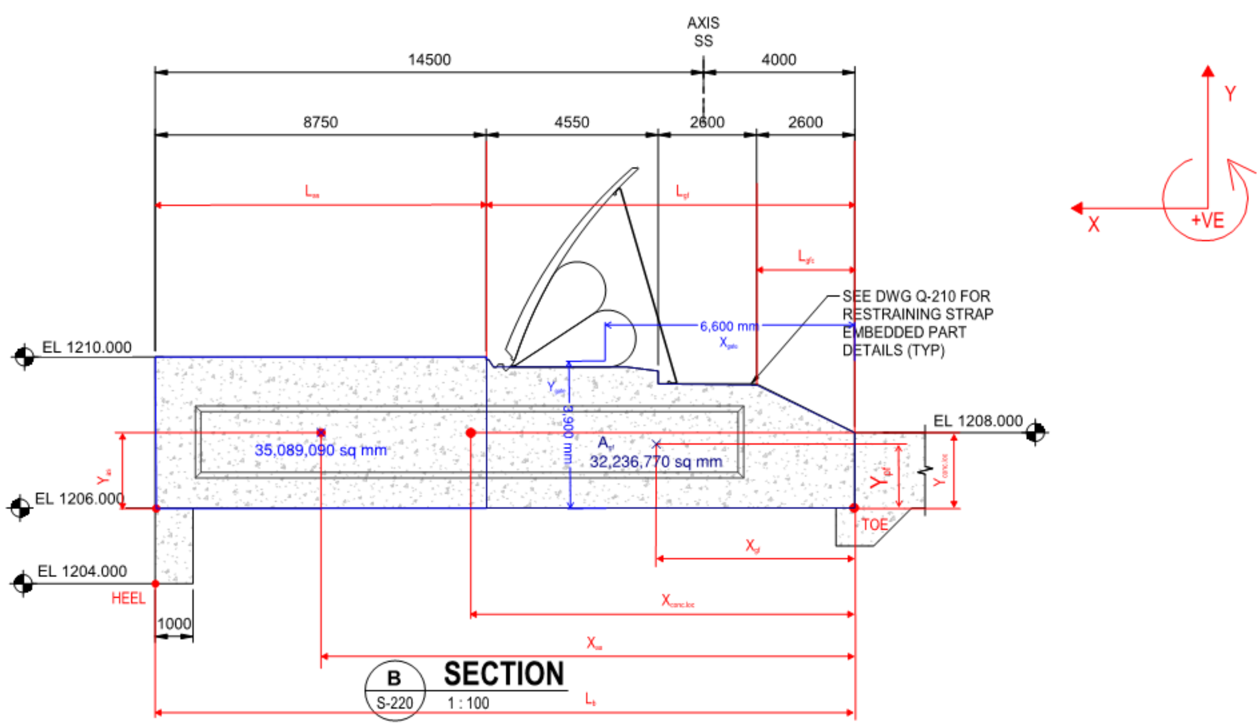
Approach Slab Width: $w_{as} := W_b = 15.00\,m$

Approach Slab Length: $L_{as} := 8.75m$

Gate Footing Length: $L_{gf} := L_b - L_{as} = 9.75\,m$

Gate Footing Crest Length: $L_{gfc} := 2.6m$

Total Approach Slab Volume: $V_{as} := h_{as} \cdot w_{as} \cdot L_{as} = 525.0 \cdot m^3$



SHEAR KEY PARAMETERS

Key depth: $d_{key} := 2.00m$

Key width: $w_{key} := 1.00m$

FOUNDATION PARAMETERS

Granular Fill Internal Angle of Friction: $\phi := 34 \cdot \frac{\pi}{180} = 0.59$ Radians (Section 5.3, Design Criteria)

Friction Angle at Base Concrete / Rock Interface: $\phi_{rock} := 26$ (Section 5.2, Design Criteria)

Base Friction Coefficient: $\tan_{\phi} := \tan\left(\phi_{rock} \frac{\pi}{180}\right) = 0.488$ radians

MATERIAL PROPERTIES

Unit Weight of Concrete: $\gamma_c := 23.5 \frac{kN}{m^3}$ (Section 7.1, Design Criteria)

Unit Weight of Rock Fill: $\gamma_r := 22.0 \frac{kN}{m^3}$ (Section 5.3, Design Criteria)

$\phi_{backfill} := \left(20 \frac{\pi}{180}\right) = 0.35$ radians Assume Rip Rap Backfill

Unit Weight of Water: $\gamma_w := 9.81 \frac{kN}{m^3}$ (Section 7.2, Design Criteria)

CONCRETE DEAD LOADS

Pier Footing (fixed crest): $D_{gf} := V_{gf} \cdot \gamma_c = 11576.1 \cdot kN$

Approach Slab: $D_{as} := V_{as} \cdot \gamma_c + d_{key} \cdot w_{key} \cdot w_{as} \cdot \gamma_c = 13042.5 \cdot kN$

Total Concrete Dead Loads: $D_{conc} := D_{gf} + D_{as} = 24618.6 \cdot kN$

Rock Section Mobilized for Inclined Sliding Failure:

Soil Volume Below Footing (Triangle): $V_{E.tri} := W_b \cdot \frac{1}{2} \cdot d_{key} \cdot \left(L_b - w_{key}\right) = 262.5 \cdot m^3$ $X_{E.tri} := \left(L_b - w_{key}\right) \cdot \frac{2}{3} = 11.67\, m$

Vertical Soil Weight: $E_{v.tri} := V_{E.tri} \cdot \left(\gamma_r\right) = 5775 \cdot kN$ $\Sigma V_{soil} := E_{v.tri} = 5775 \cdot kN$ $\Sigma M_{soil} := E_{v.tri} \cdot X_{E.tri} = 67375 \cdot kN \cdot m$

MOMENT ARM FROM TOE TO COG OF COMPONENT

Dist. from Toe to COG of Gate Footing: $X_{gf} := 5.24m$ (From Bluebeam Measurement)

Dist. from Toe to COG of Approach Slab: $X_{as} := 14.33m$

Distance From Toe to COG of Concrete Dead Load : $X_{conc.loc} := \frac{\left(X_{gf} \cdot D_{gf} + X_{as} \cdot D_{as}\right)}{D_{conc}} = 10.06\, m$

MOMENT ARM FROM BASE OF FOOTING TO COG OF COMPONENT

Dist. from Base to COG of Footing: $Y_{gf} := 1.72m$ (From Bluebeam Measurement)

Dist. from Base to COG of Approach Slab: $Y_{as} := 2.0m$

Distance Above Base to COG of Concrete Dead Load: $Y_{conc.loc} := \frac{\left(Y_{gf} \cdot D_{gf} + Y_{as} \cdot D_{as}\right)}{D_{conc}} = 1.87\, m$

CREST GATE (OBERMEYER)

Dead Load of Gates: $D_{Gate} := 140kN \cdot \frac{15}{10} \frac{m}{m} = 210 \cdot kN$ (Vendor supplied, Dwg. Q-200 Series)

Distance from Toe to COG of Gates: $X_{gate} := 6.60m$

Distance from Base to COG of Gates: $Y_{gate} := 3.90m$ Distance from base to top of Pier Footing

DEAD LOAD SUMMATION:

$$\Sigma V_{DL} := D_{conc} + D_{Gate} = 24828.6 \cdot kN$$

$$\Sigma M_{DL} := D_{conc} \cdot X_{conc.loc} + D_{Gate} \cdot X_{gate} = 248943.79 \cdot kN \cdot m$$

ROCK SECTION MOBILIZED FOR INCLINDED SLIDING FAILURE

Area of Rock Section Mobilized: $A_{rs} := \frac{(L_b - w_{key}) \cdot d_{key}}{2} = 17.5 m^2$

Rock Mass Mobilized: $V_{rs} := A_{rs} \cdot \gamma_r \cdot W_b = 5775 \cdot kN$

(Pore pressure taken along assumed inclined sliding plane)

Distance from Toe to COG of Rock Section: $L_{rs} := \frac{2}{3} \cdot (L_b - w_{key}) = 11.67 m$

(From Bluebeam Measurement)

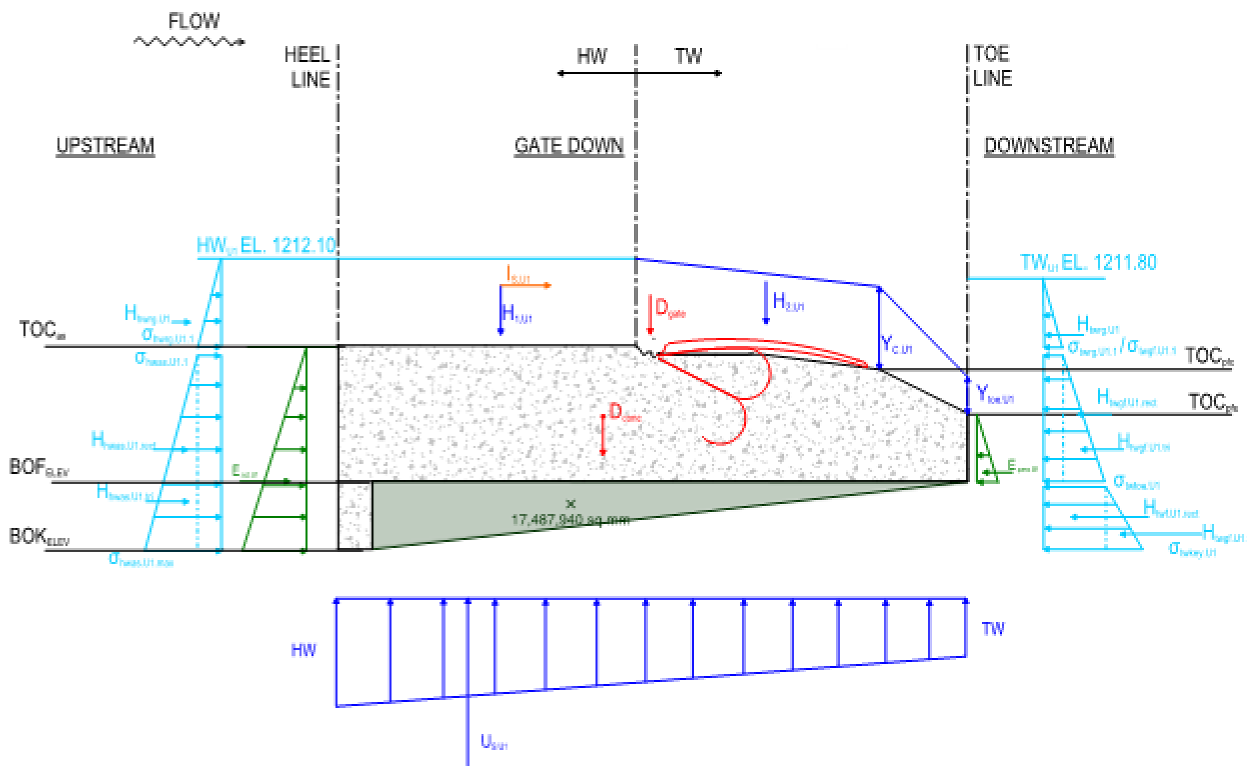
U1 DESIGN CASE



ACCEPTANCE PARAMETERS

Required Factor of Safety for Sliding: $FS_{req.U1.sl} := 1.5$ (Without Cohesion)

(Section 8.1, Design Criteria)

Resultant Within Middle Third of Base: $e \le \frac{L_b}{6} \wedge e \ge \frac{-L_b}{6}$

Allowable Rock Bearing Pressure: $\sigma_{allow.U1} := 1270 \cdot \frac{kN}{m^2}$ (Section 5.2, Design Criteria)

INPUT PARAMETERS

Headwater Elevation: $HW_{U1} := 1212.10m$ (Section 8.3, Design Criteria)

Tailwater Elevation: $TW_{U1} := 1211.80m$ (Section 8.3, Design Criteria)

Bottom of Footing Elevation: $BOF_{elev} := 1206.00m$

Approach Slab Top of Concrete Elevation at Upstream Face: $TOC_{as} := 1210.00m$

Footing Top of Concrete Elevation at Stilling Basin: $TOC_{pfe} := 1208.00m$

Footing Top of Concrete Elevation at Center of Footing: $TOC_{pfc} := 1209.30m$

Top of Guard/Regulating Gate Elevation: $TOP_{rg.U1} := 1210.00m$ $TOP_{gg.U1} := 1210.00m$

Gates are open when top of gate elevation is at 1210.00m

Bottom of Key Elevation: $BOK_{elev} := BOF_{elev} - d_{key} = 1204\,m$

Gates are closed/up when top of gate elevation is at 1215.0m

Water Elevation above Crest of Reg. Gate: $EL_{C.U1} := 1211.4m$

$$Y_{C.U1} := \begin{cases} (EL_{C.U1} - TOC_{pfc}) & \text{if } TOP_{rg.U1} \le HW_{U1} \\ (TW_{U1} - TOC_{pfc}) & \text{if } TOP_{rg.U1} > HW_{U1} \end{cases} = 2.1 \cdot m$$

Water Elevation above Reg. Gate Toe: $EL_{TOE.U1} := 1208.46m$

$$Y_{TOE.U1} := \begin{cases} (EL_{TOE.U1} - TOC_{pfe}) & \text{if } TOP_{rg.U1} \le HW_{U1} \\ (TW_{U1} - TOC_{pfe}) & \text{if } TOP_{rg.U1} > HW_{U1} \end{cases} = 0.46 \cdot m$$

LATERAL WATER LOADS

U1 CASE

HEADWATER (APPROACH SLAB DRIVING):

Headwater Depth on Gate: $D_{hwg.U1} := HW_{U1} - TOC_{as} = 2.10\,m$

Thickness of Approach Slab (Including Key): $T_{as} := \left(TOC_{as} - BOK_{elev}\right) = 6\,m$

Headwater Depth at Heel (U/S face): $D_{hwas.U1} := HW_{U1} - BOK_{elev} = 8.10\,m$

Headwater Load Unit Width on Approach Slab: $W_{hwas.U1} := W_b = 15.00\,m$

Headwater Unit Load At Top of Approach Slab: $H_{hwas.U1.1} := \frac{-\left(\gamma_w \cdot D_{hwg.U1}{}^2\right)}{2} \cdot W_{hwas.U1} = -324.47 \cdot kN$

Headwater Unit Load At Bottom of Approach Key: $H_{hwas.U1.2} := \frac{-\left(\gamma_w \cdot D_{hwas.U1}{}^2\right)}{2} \cdot W_{hwas.U1} = -4827.3 \cdot kN$

Headwater Line Load At Top of Approach Slab: $\sigma_{hwas.U1.1} := -\left(\gamma_w \cdot D_{hwg.U1}\right) = -20.6 \cdot kPa$

Headwater Line Load At Bottom of Approach Key: $\sigma_{hwas.U1.2} := -\left(\gamma_w \cdot D_{hwas.U1}\right) = -79.46 \cdot kPa$

Ice / Impact Load:	$I_{U1} = 0.0 \cdot kN$	$I_{U1.loc} = 3.70\,m$

STABILITY ASSESSMENT (SLIDNG, BEARING, FLOTATION AND OVERTURNING):

U1 CASE

CHECK SLIDING ALONG HORIZONTAL PLANE THRU TOE,
IGNORING BEDROCK MOBILIZED BY STRUCTURAL HEEL KEY, OR VOID BEHIND KEY

Sum of Vertical Forces:

$$\Sigma V_{U1} := \Sigma V_{DL} + \Sigma V_{water.U1} = 11311.8 \cdot kN$$

Sum of Horizontal Forces:

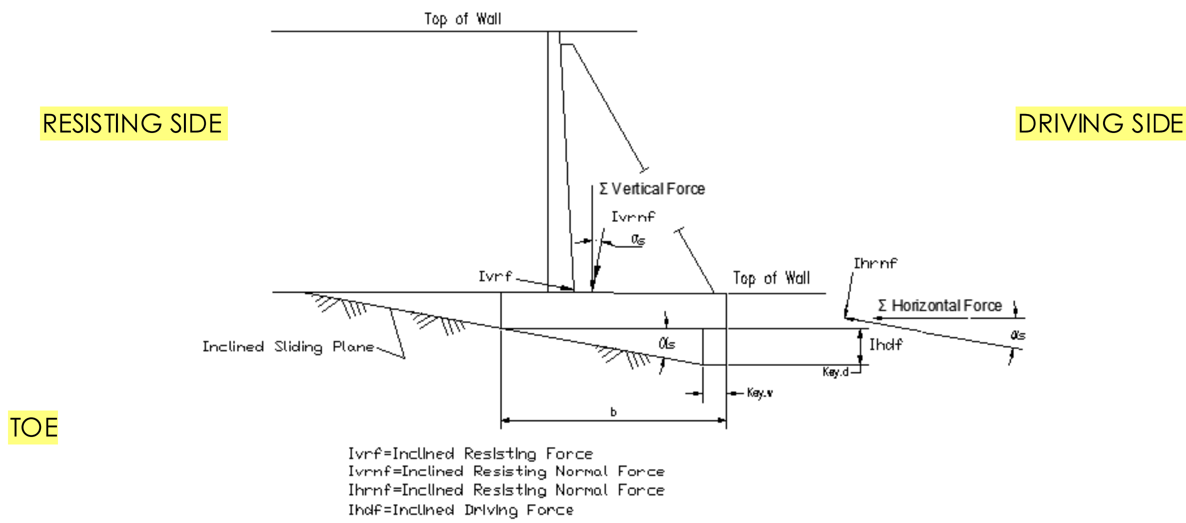
$$\Sigma H_{U1} := \Sigma H_{Water.U1} + \Sigma H_{soil.U1} + \Sigma H_{I.U1} = -2145.71 \cdot kN$$

Sliding Factor of Safety:

$$FS_{HorizSliding.U1} := \frac{\tan_{\phi} \cdot \Sigma V_{U1}}{\left|\Sigma H_{U1}\right|} = 2.57$$

$$FS_{HorizSliding.U1.Check} := \begin{array}{|l} \text{"OKAY"} \quad \text{if} \quad FS_{HorizSliding.U1} \ge FS_{req.U1.sl} \\ \text{"Horizontal Sliding (No Key or Void Behind Key) Fail ! Revise Structure !"} \quad \text{otherwise} \end{array} = \text{"OKAY"}$$

CHECK SLIDING ALONG INCLINED SLIDING PLANE FROM HEEL KEY TO TOE,
WITH BEDROCK MASS MOBILIZED BY REINFOCREDE CONCRETE KEY)



$$\alpha s := \operatorname{atan}\left(\frac{d_{key}}{L_b - w_{key}}\right) = 0.11$$

as degrees= $\alpha s \cdot \left(\frac{180}{\pi}\right) = 6.52$

$\Sigma V_{U1} = 11311.84 \cdot kN$

$V_{rs} = 5775 \cdot kN$

Resolve $\Sigma Vert_{U1}$ & $\Sigma Horiz_{U1}$

$$\Sigma V_{InclinedU1} := \cos(\alpha s) \cdot \left(\Sigma V_{U1} + V_{rs}\right) + \sin(\alpha s) \cdot \left|\Sigma H_{U1}\right| = 17220.0 \cdot kN$$

$$\Sigma H_{InclinedU1} := \cos(\alpha s) \cdot \left|\Sigma H_{U1}\right| - \sin(\alpha s) \cdot \left(\Sigma V_{U1} + V_{rs}\right) = 191.7 \cdot kN$$

(With properly engineered reinforced concrete Key, horizontal sliding plane thru Toe is protected, critical sliding plane is relocated to the INCLINED SLIDING PLANE FROM HEEL KEY To TOE, Bedrock Mass above this examined plane is mobilized by reinforced concrete key and combined into Structural Wedge.)

Inclined Sliding Plane Length

$$L_{incline} := \left[L_b^{\,2} + \left(BOF_{elev} - BOK_{elev}\right)^2\right]^{0.5} = 18.61\,m$$

Safety Factor for Sliding
Inclined Failure Plane

$$FS_{InclinedlSlidingU1} := \frac{\Sigma V_{InclinedU1} \cdot \tan\left(\phi_{rock} \cdot \frac{\pi}{180}\right)}{\left|\Sigma H_{InclinedU1}\right|} = 43.82$$

$$FS_{InclinedSliding.check.U1} := \begin{array}{|l} \text{"OKAY "} \quad \text{if} \quad FS_{InclinedlSlidingU1} > FS_{req.U1.sl} \\ \text{"Revise Structure""} \quad \text{otherwise} \end{array} = \text{"OKAY "}$$

$FS_{InclinedSliding.check.U1} = \text{"OKAY "}$

OVERTURNING STABILITY CHECK:

U1 CASE

CHECK ECCENTRICITY

Sum of the moments:

$$\Sigma M_{U1} := \Sigma M_{DL} + \Sigma M_{Hwater.U1} + \Sigma M_{Vwater.U1} + \Sigma M_{I.U1} + \Sigma M_{soil.U1} + \Sigma M_{soil} = 184103 \cdot kN \cdot m$$

Eccentricity:

$$e_{U1} := \left(\frac{L_{incline}}{2}\right) - \frac{\left(\Sigma M_{U1}\right)}{\Sigma V_{InclinedU1}} = -1.39\,m$$

Eccentricity Check:

$$e_{check.U1} := \begin{cases} \text{"Okay"} & \text{if } \left|e_{U1}\right| \le Kern \\ \text{"Revise Structure"} & \text{otherwise} \end{cases}$$

$$e_{check.U1} = \text{"Okay"}$$

Foundation Bearing Checks:

Incline Plane Area:

$$A_{b.incline} := L_{incline} \cdot W_b = 279.12\,m^2$$

Incline Plane Section Modulus:

$$S_{b.incline} := \frac{W_b \cdot L_{incline}^{\,2}}{6} = 865.63 \cdot m^3$$

Bearing Pressure at Heel:

$$\sigma_{heel.U1} := \frac{\Sigma V_{InclinedU1}}{A_{b.incline}} - \frac{\left(\Sigma V_{InclinedU1} \cdot e_{U1}\right)}{S_{b.incline}} = 89.3 \cdot \frac{kN}{m^2}$$

$$\sigma_{heel.U1.check} := \left(\begin{cases} \text{"Okay"} & \text{if } \sigma_{heel.U1} \le \sigma_{allow.U1} \\ \text{"Revise Structure"} & \text{if } \sigma_{heel.U1} < 0\,\frac{kN}{m^2} \end{cases}\right)$$

$$\sigma_{heel.U1.check} = \text{"Okay"}$$

Bearing Pressure at Toe:

$$\sigma_{toe.U1} := \frac{\Sigma V_{InclinedU1}}{A_{b.incline}} + \frac{\left(\Sigma V_{InclinedU1} \cdot e_{U1}\right)}{S_{b.incline}} = 34.1 \cdot \frac{kN}{m^2}$$

$$\sigma_{toe.U1.1.check} := \begin{cases} \text{"Okay"} & \text{if } \sigma_{toe.U1} \le \sigma_{allow.U1} \\ \text{"Revise Structure"} & \text{if } \sigma_{toe.U1} < 0\,\frac{kN}{m^2} \end{cases}$$

$$\sigma_{toe.U1.1.check} = \text{"Okay"}$$

FLOATATION ANALYSIS:

ACCEPTANCE PARAMETERS

Required Factor of Safety: $FS_{req.FU1} := 1.5$

VERTICAL LOADS RESISTING:

Dead Load: $\Sigma V_{DL} = 24828.6 \cdot kN$

Water Weight H1+H2: $\Sigma V_{H.FU1} := H_{1.U1} + H_{2.U1} = 5403.05 \cdot kN$

Summation Vertical Resisting: $\Sigma V_{FU1} := \Sigma V_{DL} + \Sigma V_{H.FU1} = 30231.7 \cdot kN$

VERTICAL LOADS UPLIFT:

Uplift: $U_{S.U1} = -18919.81 \cdot kN$

$$FS_{act.FU1} := \frac{\Sigma V_{FU1}}{\left|U_{S.U1}\right|} = 1.60$$

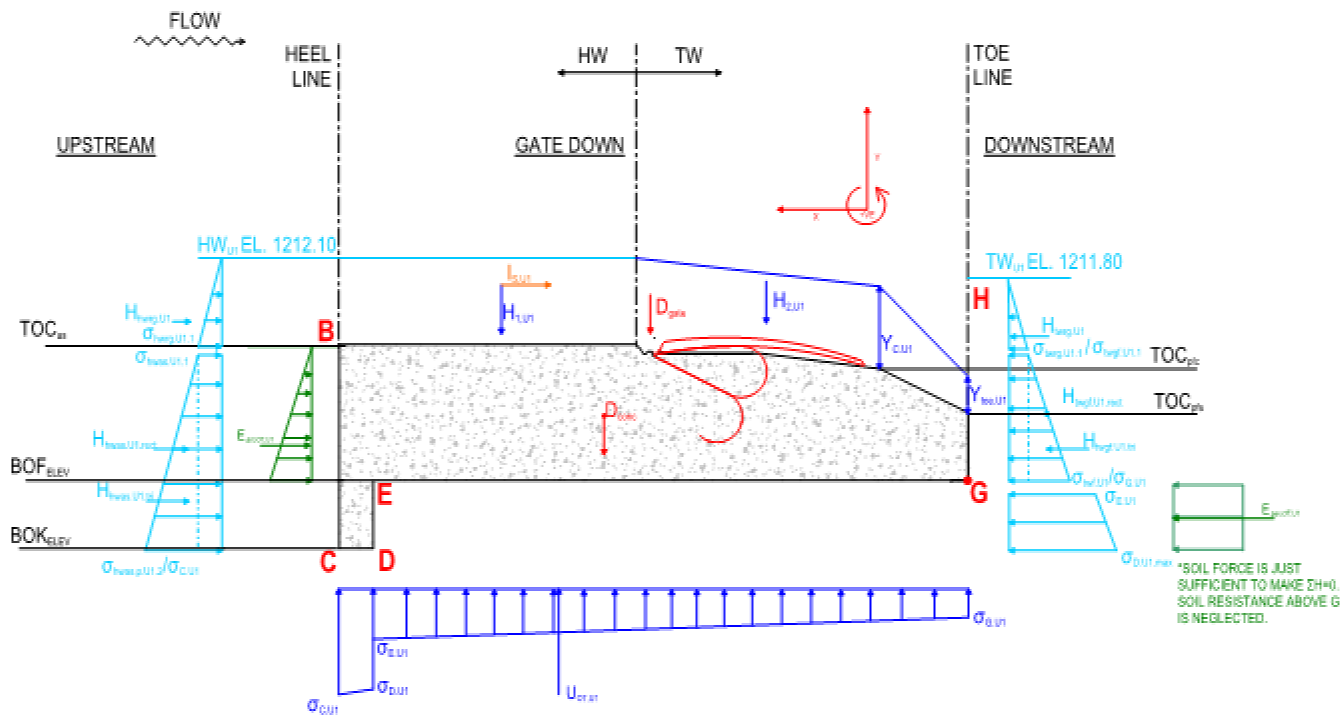
$$FS_{check.FU1} := \begin{cases} \text{"OKAY"} & \text{if } FS_{act.FU1} \ge FS_{req.FU1} \\ \text{"ANCHORS REQUIRED"} & \text{if } FS_{act.FU1} < FS_{req.FU1} \end{cases} = \text{"OKAY"}$$

MONOLITH OVERTURNING STABILITY ANALYSIS

U1 CASE

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stability of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1 $Ratio_{OT.U1.min} := 0.33$



Uplift Loads for Overturning Stability Analysis

Line of Creep:

Change in Water Head: $\Delta_{h.U1} := HW_{U1} - TW_{U1} = 0.3\,m$

Length from Point C to Point G: $L_{CG} := \sqrt{d_{key}^{\,2} + L_b^{\,2}} = 18.61\,m$

Length from Various Points to Points: $L_{CD} := w_{key} = 1\,m$ $\quad L_{DE} := d_{key} = 2\,m$ $\quad L_{EG} := L_b - L_{CD} = 17.5\,m$

$L_{GH.U1} := TW_{U1} - BOF_{elev} = 5.8\,m$

Length from Point C, D, E to G: $L_{CDEG} := L_{CD} + L_{DE} + L_{EG} = 20.5\,m$ $\quad L_{CDE} := L_{CD} + L_{DE} = 3\,m$

Water Pressure at Point C: $\sigma_{C.U1} := \sigma_{hwas.U1.2} = -79.46 \cdot kPa$

Water Pressure at Point G: $\sigma_{G.U1} := \sigma_{twtoe.U1} \cdot -1 = -56.9 \cdot kPa$

Water Pressure at Point D: $$\sigma_{D.U1} := -\gamma_w \cdot \left[\left(HW_{U1} - BOK_{elev}\right) - \frac{\Delta_{h.U1} \cdot L_{CD}}{L_{CDEG}}\right] = -79.32 \cdot kPa$$

Water Pressure at Point E: $$\sigma_{E.U1} := -\gamma_w \cdot \left[\left(HW_{U1} - BOF_{elev}\right) - \frac{\Delta_{h.U1} \cdot L_{CDE}}{L_{CDEG}}\right] = -59.41 \cdot kPa$$

Uplift for Overturning Analysis on Bottom of Key: $$U_{OT.U1.key} := \frac{\sigma_{C.U1} + \sigma_{D.U1}}{2} \cdot L_{CD} \cdot W_b = -1190.84 \cdot kN$$

Acting at: $$U_{OT.U1.key.loc} := \frac{L_{CD} \cdot \left(2 \cdot \sigma_{C.U1} + \sigma_{D.U1}\right)}{3\left(\sigma_{C.U1} + \sigma_{D.U1}\right)} + L_{EG} = 18\,m$$

U1 CASE

Uplift for Overturning Analysis on Bottom of Footing: $U_{OT.U1.ftg} := \frac{\sigma_{E.U1} + \sigma_{G.U1}}{2} \cdot L_{EG} \cdot W_b = -15265.47 \cdot kN$

Acting at: $U_{OT.U1.ftg.loc} := \frac{L_{EG} \cdot \left(\sigma_{G.U1} + 2 \cdot \sigma_{E.U1}\right)}{3\left(\sigma_{G.U1} + \sigma_{E.U1}\right)} = 8.81\,m$

Uplift Load for Overturning Analysis: $U_{OT.U1} := U_{OT.U1.key} + U_{OT.U1.ftg} = -16456.3 \cdot kN$

Uplift Load Acting from Toe: $U_{OT.U1.loc} := \frac{U_{OT.U1.key} \cdot U_{OT.U1.key.loc} + U_{OT.U1.ftg} \cdot U_{OT.U1.ftg.loc}}{U_{OT.U1}} = 9.48\,m$

All Vertical Loads Applicable to Overturning Stability Analysis

Total Concrete Dead Loads:	$D_{conc} = 24618.6 \cdot kN$	at:	$X_{conc.loc} = 10.06\,m$
Dead Load of Gate:	$D_{Gate} = 210.0 \cdot kN$		$X_{gate} = 6.60\,m$
Water Weight (HW) on Apron Slab:	$H_{1.U1} = 2703.9 \cdot kN$		$H_{1.U1.loc} = 14.13\,m$
Water Weight (TW) on Gate Footing:	$H_{2.U1} = 2699.2 \cdot kN$		$H_{2.U1.loc} = 5.34\,m$
Uplift Load for Overturning Analysis:	$U_{OT.U1} = -16456.3 \cdot kN$		$U_{OT.U1.loc} = 9.48 \cdot m$

Sum of All Overtuming Analysis Vertical Load:

$$\Sigma V_{U1.OT} := D_{conc} + D_{Gate} + H_{1.U1} + H_{2.U1} + U_{OT.U1} = 13775.35 \cdot kN$$

Sum of All Overtuming Analysis Vertical Load Moments:

$$\Sigma M_{V.U1.OT} := D_{conc} \cdot X_{conc.loc} + D_{Gate} \cdot X_{gate} + H_{1.U1} \cdot H_{1.U1.loc} + H_{2.U1} \cdot H_{2.U1.loc} + U_{OT.U1} \cdot U_{OT.U1.loc} = 145582.24 \cdot kN \cdot m$$

Lateral Tailwater Loads for Overturning Stability Analysis

TW Lateral Load on Gate Footing (No Key - Overturning Values Adjusted): $H_{twgf.U1} := H_{twgf.U1.tri} + H_{twgf.U1.rect} = 2236.68 \cdot kN$

Acting at: $H_{twgf.U1.loc} := \frac{\frac{h_{toe}}{3} \cdot H_{twgf.U1.tri} + \frac{h_{toe}}{2} \cdot H_{twgf.U1.rect}}{H_{twgf.U1}} = 1.65\,m$

Horizontal Tailwater Pressure Top of Key (Overturning Analysis): $\sigma_{twtk.OT.U1} := \sigma_{E.U1} \cdot -1 = 59.41 \cdot kPa$

Horizontal Tailwater Pressure Bottom of Key (Overturning Analysis): $\sigma_{twbk.OT.U1} := \sigma_{D.U1} \cdot -1 = 79.32 \cdot kPa$

Triangular Distribution Unit Load Acting at Key: $H_{twbk.OT.U1.tri} := \frac{\left(\sigma_{twbk.OT.U1} - \sigma_{twtk.OT.U1}\right)}{2} \cdot d_{key} \cdot W_{tw.U1} = 298.61 \cdot kN$

Triangular Distribution Unit Load Acting at Key: $H_{twbk.OT.U1.rect} := \sigma_{twtk.OT.U1} \cdot d_{key} \cdot W_{tw.U1} = 1782.31 \cdot kN$

Total Horizontal Tailwater Load on Key (Overturning Values Adjusted): $H_{twkey.OT.U1} := H_{twbk.OT.U1.tri} + H_{twbk.OT.U1.rect} = 2080.92 \cdot kN$

Acting at: $H_{twkey.OT.U1.loc} := \frac{H_{twbk.OT.U1.tri} \cdot \frac{-2 \cdot d_{key}}{3} + H_{twbk.OT.U1.rect} \cdot \frac{-d_{key}}{2}}{H_{twkey.OT.U1}} = -1.05 \cdot m$

Lateral Driving Earth Loads for Overturning Stability Analysis (at rest condition)

Depth of Driving Soil Loads (to top of key): $h_{E.OT.U1} := TOC_{as} - BOF_{elev} = 4\,m$

At-Rest Soil Load: $E_{act.OT.U1} := \dfrac{\left(K_{o.U1} \cdot h_{E.OT.U1}^{\,2}\right)}{2} \cdot \left(\gamma_r - \gamma_w\right) \cdot W_{hwas.U1} \cdot -1 = -962.49 \cdot kN$

At Rest- Soil Load Acting from Toe: $E_{act.OT.U1.loc} := \dfrac{h_{E.OT.U1}}{3} = 1.33\,m$

All Lateral Loads Appliable to Overturning Stability Analysis

HW Lateral Load on Approach Slab:	$H_{hwas.U1} = -4502.8 \cdot kN$	$H_{hwas.U1.loc} = 0.41\,m$
HW Lateral Load on Reg. Gate:	$H_{hwrg.U1} = 0.0 \cdot kN$	$H_{hwrg.U1.loc} = 4.00\,m$
TW Lateral Load on Reg. Gate:	$H_{twrg.U1} = 0.0 \cdot kN$	$H_{twrg.U1.loc} = 4.00\,m$
TW Lateral Load on Gate Footing (No Key - Overturning Values Adjusted):	$H_{twgf.U1} = 2236.68 \cdot kN$	$H_{twgf.U1.loc} = 1.65\,m$
TW Lateral Load on Key:	$H_{twkey.OT.U1} = 2080.92 \cdot kN$	$H_{twkey.OT.U1.loc} = -1.05\,m$
Ice / Impact Load:	$I_{U1} = 0.0 \cdot kN$	$I_{U1.loc} = 3.70\,m$
Lateral Soil Load (driving):	$E_{act.OT.U1} = -962.5 \cdot kN$	$E_{act.OT.U1.loc} = 1.33\,m$

Resisting Lateral Soil Load as required to produce horizontal equilibrium:

$$E_{pas.OT.U1} := -\left(H_{hwas.U1} + H_{hwrg.U1} + H_{twrg.U1} + H_{twgf.U1} + H_{twkey.OT.U1} + I_{U1} + E_{act.OT.U1}\right) = 1147.69 \cdot kN$$

Acting at:

$$E_{pas.OT.U1.loc} := -1 \cdot \frac{d_{key}}{2} = -1\,m$$

Sum of All Overturning Analysis Horizontal Load (ΣH=0):

$$\Sigma H_{U1.OT} := H_{hwas.U1} + H_{hwrg.U1} + H_{twrg.U1} + H_{twgf.U1} + H_{twkey.OT.U1} + I_{U1} + E_{act.OT.U1} + E_{pas.OT.U1} = 0 \cdot kN$$

Sum of All Overturning Analysis Horizontal Load Moments:

$$\Sigma M_{H.U1.OT} := H_{hwas.U1} \cdot H_{hwas.U1.loc} + H_{hwrg.U1} \cdot H_{hwrg.U1.loc} + H_{twrg.U1} \cdot H_{twrg.U1.loc} + H_{twgf.U1} \cdot H_{twgf.U1.loc} \cdots + H_{twkey.OT.U1} \cdot H_{twkey.OT.U1.loc} + I_{U1} \cdot I_{U1.loc} + E_{act.OT.U1} \cdot E_{act.OT.U1.loc} + E_{pas.OT.U1} \cdot E_{pas.OT.U1.loc} = -2776.99 \cdot kN \cdot m$$

Overturning Stability Analysis

$\Sigma M_{U1.OT} := \Sigma M_{V.U1.OT} + \Sigma M_{H.U1.OT} = 142805.25 \cdot kN \cdot m$ $\quad X_{R.U1} := \dfrac{\Sigma M_{U1.OT}}{\Sigma V_{U1.OT}} = 10.37\,m$ $\quad x_{OT.U1} := X_{R.U1} - \dfrac{L_b}{2} = 1.12\,m$

Overturning Resultant Ratio $\quad Ratio_{OT.U1} := \dfrac{X_{R.U1}}{L_b} = 0.56$

$$Ratio_{OT.U1.check} := \begin{cases} \text{"OKAY"} & \text{if } Ratio_{OT.U1} \geq Ratio_{OT.U1.min} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

$$x_{OT.check.U1} := \begin{cases} \text{"OKAY"} & \text{if } \left|x_{OT.U1}\right| \leq Kern \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

CHECK FOUNDATION BEARING CAPACITY (HORIZONTAL PLANE):

U1 CASE

Bearing Pressure Under Toe:

$$\sigma_{ToeU1.OT} := \frac{\Sigma V_{U1.OT}}{L_b \cdot W_b} + \frac{\left(\Sigma V_{U1.OT} \cdot x_{OT.U1}\right)}{S_b} = 67.6 \cdot kPa$$

$$Bearing_{ChecktoeU1.OT} := \begin{vmatrix} \text{"OKAY "} & \text{if} & \sigma_{ToeU1.OT} < \sigma_{allow.U1} \\ \text{"NG""} & \text{otherwise} & \end{vmatrix} = \text{"OKAY "}$$

Bearing Pressure Under Heel:

$$\sigma_{HeelU1.OT} := \frac{\Sigma V_{U1.OT}}{L_b \cdot W_b} - \frac{\left(\Sigma V_{U1.OT} \cdot x_{OT.U1}\right)}{S_b} = 31.7 \cdot kPa$$

$$Bearing_{CheckheelU1.OT} := \left(\begin{vmatrix} \text{"OKAY "} & \text{if} & \sigma_{HeelU1.OT} < \sigma_{allow.U1} \wedge \sigma_{HeelU1.OT} > 0 \\ \text{"NG""} & \text{otherwise} & \end{vmatrix} \right) = \text{"OKAY "}$$

SUMMARY OF STABILITY ASSESSMENT:

Sliding Factor of Safety: (Horizontal Plane)	$FS_{HorizSliding.U1} = 2.57$	$FS_{HorizSliding.U1.Check}$ = "OKAY"
Sliding Factor of Safety: (Inclined Plane)	$FS_{InclinedlSlidingU1} = 43.82$	$FS_{InclinedSliding.check.U1}$ = "OKAY "

LATERAL WATER LOADS

U2 CASE

HEADWATER (APPROACH SLAB DRIVING):

Headwater Depth on Gate: $D_{hwg.U2} := HW_{U2} - TOC_{as} = 4.60\,m$

Thickness of Approach Slab (Including Key): $T_{as} = 6\,m$

Headwater Depth at Heel (U/S face): $D_{hwas.U2} := HW_{U2} - BOK_{elev} = 10.60\,m$

Headwater Load Unit Width on Approach Slab: $W_{hwas.U2} := W_b = 15.00\,m$

Headwater Unit Load At Top of Approach Slab:

$$H_{hwas.U2.1} := \frac{-\left(\gamma_w \cdot D_{hwg.U2}^{\,2}\right)}{2} \cdot W_{hwas.U2} = -1556.85 \cdot kN$$

Headwater Unit Load At Bottom of Approach Key:

$$H_{hwas.U2.2} := \frac{-\left(\gamma_w \cdot D_{hwas.U2}^{\,2}\right)}{2} \cdot W_{hwas.U2} = -8266.9 \cdot kN$$

Headwater Line Load At Top of Approach Slab:

$$\sigma_{hwas.U2.1} := -\left(\gamma_w \cdot D_{hwg.U2}\right) = -45.13 \cdot kPa$$

Headwater Line Load At Bottom of Approach Key:

$$\sigma_{hwas.U2.2} := -\left(\gamma_w \cdot D_{hwas.U2}\right) = -103.99 \cdot kPa$$

Triangular Distribution Unit Load on Approach Slab and Key:

$$H_{hwas.U2.2.tri} := \left(\frac{\sigma_{hwas.U2.2} - \sigma_{hwas.U2.1}}{2}\right) \cdot \left(T_{as} \cdot W_{hwas.U2}\right) = -2648.7 \cdot kN$$

Rectangular Distribution Unit Load on Approach Slab and Key:

$$H_{hwas.U2.2.rect} := \sigma_{hwas.U2.1} \cdot \left(T_{as} \cdot W_{hwas.U2}\right) = -4061.34 \cdot kN$$

Total Horizontal Headwater Load on Approach Slab:

$$H_{hwas.U2} := H_{hwas.U2.2.tri} + H_{hwas.U2.2.rect} = -6710.04 \cdot kN$$

Apply Total Footing Headwater Load at:

$$H_{hwas.U2.loc} := \frac{\left[H_{hwas.U2.2.rect} \cdot \frac{\left(T_{as}\right)}{2} + H_{hwas.U2.2.tri} \frac{\left(T_{as}\right)}{3}\right]}{H_{hwas.U2.2.tri} + H_{hwas.U2.2.rect}} - d_{key} = 0.61\,m$$

Regulating Gate (4A) Operating Condition:

Reg. Gate Down/Open Condition: $A1_{U2} := TOP_{rg.U2} \le TOC_{as}$

Reg. Crest Gate Up/Closed, with Top of Gate Higher than HW Elevation: $B1_{U2} := TOP_{rg.U2} \ge HW_{U2} \wedge TOP_{rg.U2} > TOC_{as}$

Reg. Crest Gate Up/Closed, with Top of Gate Lower than HW Elevation: $C1_{U2} := TOP_{rg.U2} > TOC_{as} \wedge HW_{U2} > TOP_{rg.U2}$

Reg. Crest Gate Height: $H_{rg.U2} := TOP_{rg.U2} - TOC_{as} = 2.1\,m$

Headwater Depth at Reg. Crest Gate: $D_{hwrg.U2} := HW_{U2} - TOC_{as} = 4.60\,m$

Reg. Crest Gate Width: $W_{hwrg.U2} := 15.00m$

Lateral Headwater Pressure at Bottom of Reg. Crest Gate:

$$\sigma_{hwrg.U2.1} := \begin{cases} (0.0kPa) & \text{if } A1_{U2} \\ -(\gamma_w \cdot D_{hwrg.U2}) & \text{if } B1_{U2} \\ -(\gamma_w \cdot D_{hwrg.U2}) & \text{if } C1_{U2} \end{cases} = -45.1 \cdot kPa$$

Lateral Headwater Pressure at Top of Reg. Crest Gate:
(Load at HW Elevation On Reg. Crest Gate if HW is below TOG_{rg})

$$\sigma_{hwrg.U2.2} := \begin{cases} (0.0kPa) & \text{if } A1_{U2} \\ 0.0kPa & \text{if } B1_{U2} \\ -\left[\gamma_w \cdot (HW_{U2} - TOP_{rg.U2})\right] & \text{if } C1_{U2} \end{cases} = -24.5 \cdot kPa$$

Average Pressure acting on Reg. Crest Gate:

$$\sigma_{hwrg.U2.avg} := \frac{(\sigma_{hwrg.U2.1} + \sigma_{hwrg.U2.2})}{2} = -34.83 \cdot kPa$$

Total Area of Crest Gate:

$$A_{hwrg.U2} := \begin{cases} D_{hwrg.U2} \cdot W_{hwrg.U2} & \text{if } A1_{U2} \\ D_{hwrg.U2} \cdot W_{hwrg.U2} & \text{if } B1_{U2} \\ H_{rg.U2} \cdot W_{hwrg.U2} & \text{if } C1_{U2} \end{cases} = 31.5 \cdot m^2$$

Total Horizontal Headwater Load on Reg. Crest Gate: $H_{hwrg.U2} := \sigma_{hwrg.U2.avg} \cdot A_{hwrg.U2} = -1097.0 \cdot kN$

Apply Total Reg. Crest Gate Headwater Load at:

$$H_{hwrg.U2.loc} := \begin{cases} (TOC_{as} - BOF_{elev}) & \text{if } A1_{U2} \\ \left[\frac{(HW_{U2} - TOC_{as})}{3} + (TOC_{as} - BOF_{elev})\right] & \text{if } B1_{U2} \\ \left[\frac{\sigma_{hwrg.U2.2} \cdot A_{hwrg.U2} \cdot \frac{(H_{rg.U2})}{2} + \frac{(\sigma_{hwrg.U2.1} - \sigma_{hwrg.U2.2})}{2} A_{hwrg.U1} \cdot \frac{(H_{rg.U2})}{3}}{\sigma_{hwrg.U2.2} \cdot A_{hwrg.U2} + \frac{(\sigma_{hwrg.U2.1} - \sigma_{hwrg.U2.2})}{2} \cdot A_{hwrg.U1}} \ldots \\ + (TOC_{as} - BOF_{elev})\right] & \text{if } C1_{U2} \end{cases} = 4.9 \cdot m$$

LATERAL TAILWATER (RESISTING) Applied to Downstream Side of Reg. Crest Gate: U2 CASE

Reg. Gate Down/Open Condition: $A2_{U2} := TOP_{rg.U2} \le TOC_{as}$

Reg. Crest Gate Up/Closed, with Top of Gate Higher than TW Elevation: $B2_{U2} := TOP_{rg.U2} \ge TW_{U2} \wedge TOP_{rg.U2} > TOC_{as}$

Reg. Crest Gate Up/Closed, with Top of Gate Lower than TW Elevation: $C2_{U2} := TOP_{rg.U2} > TOC_{as} \wedge TW_{U2} > TOP_{rg.U2}$

Tailwater Depth at Reg. Crest Gate: $D_{twrg.U2} := TW_{U2} - TOC_{as} = 1.80\,m$

Reg. Crest Gate Width: $W_{twrg.U2} := 15.00m$

Lateral Water Load at Bottom of Reg. Crest Gate:

$$\sigma_{twrg.U2.1} := \begin{vmatrix} (0.0kPa) & \text{if } A2_{U2} \\ (\gamma_w \cdot D_{twrg.U2}) & \text{if } B2_{U2} \\ (\gamma_w \cdot D_{twrg.U2}) & \text{if } C2_{U2} \end{vmatrix} = 17.7 \cdot kPa$$

Lateral Water Load at Top of Reg. Crest Gate:
(Load at TW Elevation On Reg. Crest Gate if TW is below TOG_{rg})

$$\sigma_{twrg.U2.2} := \begin{vmatrix} (0.0kPa) & \text{if } A2_{U2} \\ 0.0kPa & \text{if } B2_{U2} \\ \left[\gamma_w \cdot (TW_{U2} - TOP_{rg.U2})\right] & \text{if } C2_{U2} \end{vmatrix} = 0.0 \cdot kPa$$

Average Pressure acting on Reg. Crest Gate:

$$\sigma_{twrg.U2.avg} := \frac{(\sigma_{twrg.U2.1} + \sigma_{twrg.U2.2})}{2} = 8.83 \cdot kPa$$

Total Area water acting on Crest Gate:

$$A_{twrg.U2} := \begin{vmatrix} D_{twrg.U2} \cdot W_{twrg.U2} & \text{if } A2_{U2} \\ D_{twrg.U2} \cdot W_{twrg.U2} & \text{if } B2_{U2} \\ H_{rg.U2} \cdot W_{twrg.U2} & \text{if } C2_{U2} \end{vmatrix} = 27 \cdot m^2$$

Total Horizontal Tailwater Load on Reg. Crest Gate: $H_{twrg.U2} := \sigma_{twrg.U2.avg} \cdot A_{twrg.U2} = 238.4 \cdot kN$

Apply Total Horiz. TW Load on Reg. Gate at:

$$H_{twrg.U2.loc} := \begin{vmatrix} (TOC_{as} - BOF_{elev}) & \text{if } A2_{U2} \\ \left[\frac{(TW_{U2} - TOC_{as})}{3} + (TOC_{as} - BOF_{elev})\right] & \text{if } B2_{U2} \\ \left[\frac{\sigma_{twrg.U2.2} \cdot A_{twrg.U2} \cdot \frac{(H_{rg.U2})}{2} + \frac{(\sigma_{twrg.U2.1} - \sigma_{twrg.U2.2})}{2} A_{twrg.U2} \cdot \frac{(H_{rg.U2})}{3}}{\sigma_{twrg.U2.2} \cdot A_{twrg.U2} + \frac{(\sigma_{twrg.U2.1} - \sigma_{twrg.U2.2})}{2} \cdot A_{twrg.U2}} \ldots \\ + (TOC_{as} - BOF_{elev})\right] & \text{if } C2_{U2} \end{vmatrix} = 4.6 \cdot m$$

LATERAL WATER LOADS (continued)

U2 CASE

TAILWATER (RESISTING) Applied to Concrete Structure:

Tailwater Depth At top of Gate Base Footing Elevation: $D_{twgf.U2} := TW_{U2} - TOC_{as} = 1.80\,m$

Water Depth at bottom of Gate Base Footing: $D_{twtoe.U2} := TW_{U2} - BOF_{elev} = 5.80\,m$

Footing Thickness at Toe $h_{toe} = 4\,m$

Unit Width of D/S face of crest for application of Tailwater Load: $W_{tw.U2} := W_b = 15.00\,m$

Tailwater Pressure At Top of Gate Footing: $\sigma_{twgf.U2} := \left(\gamma_w \cdot D_{twgf.U2}\right) = 17.66 \cdot kPa$

Tailwater Line Load At Bottom of Gate Footing: $\sigma_{twtoe.U2} := \left(\gamma_w \cdot D_{twtoe.U2}\right) = 56.9 \cdot kPa$

Triangular Distribution Unit Load on Gate Footing Base $H_{twgf.U2.tri} := \left(\frac{\sigma_{twtoe.U2} - \sigma_{twgf.U2}}{2}\right) \cdot \left(h_{toe} \cdot W_{tw.U2}\right) = 1177.2 \cdot kN$

Rectangular Distribution Unit Load on Gate Footing Base: $H_{twgf.U2.rect} := \sigma_{twgf.U2} \cdot \left(h_{toe} \cdot W_{tw.U2}\right) = 1059.48 \cdot kN$

Tailwater Pressure At Bottom of Sliding Failure Plane: $\sigma_{twbk.U2} := \left(HW_{U2} - BOK_{elev}\right) \cdot \gamma_w = 103.99 \cdot kPa$

Triangular Distribution Unit Load Below Footing: $H_{twbk.U2.tri} := \frac{\left(\sigma_{twbk.U2} - \sigma_{twtoe.U2}\right)}{2} \cdot d_{key} \cdot W_{tw.U2} = 706.32 \cdot kN$

Rectangular Distribution Load Below Footing Base: $H_{twbk.U2.rect} := \sigma_{twtoe.U2} \cdot d_{key} \cdot W_{tw.U2} = 1706.94 \cdot kN$

Total Horizontal Tailwater Load on Gate Footing (including key):

$$H_{twgk.U2} := H_{twgf.U2.tri} + H_{twgf.U2.rect} + H_{twbk.U2.tri} + H_{twbk.U2.rect} = 4649.94 \cdot kN$$

Apply Total Gate Footing Tailwater Load at:

$$H_{twgk.U2.loc} := \frac{\left[H_{twgf.U2.rect} \cdot \frac{\left(h_{toe}\right)}{2} + H_{twgf.U2.tri} \cdot \frac{\left(h_{toe}\right)}{3} + H_{twbk.U2.tri} \cdot \left(-d_{key} \cdot \frac{2}{3}\right) + H_{twbk.U2.rect} \cdot \left(\frac{-d_{key}}{2}\right)\right]}{H_{twgf.U2.tri} + H_{twgf.U2.rect} + H_{twbk.U2.tri} + H_{twbk.U2.rect}} = 0.22\,m$$

SUMMATION OF LATERAL WATER LOADS:

$$\Sigma H_{Water.U2} := H_{hwas.U2} + H_{hwrg.U2} + H_{twgk.U2} + H_{twrg.U2} = -2918.72 \cdot kN$$

$$\Sigma M_{Hwater.U2} := H_{hwas.U2} \cdot H_{hwas.U2.loc} + H_{hwrg.U2} \cdot H_{hwrg.U2.loc} + H_{twgk.U2} \cdot H_{twgk.U2.loc} + H_{twrg.U2} \cdot H_{twrg.U2.loc} = -7351.22 \cdot kN \cdot m$$

VERTICAL WATER LOADS

U2 CASE

HEADWATER:

Water Depth on top of Approach Slab: $d_{hw.U2} := HW_{U2} - TOC_{as} = 4.60\,m$

Length of Approach Slab: $L_{as} = 8.75\,m$

Width of Approach Slab: $w_{as} = 15.00\,m$

Vertical Water Weight (H1) on Approach Slab: $H_{1.U2} := \left(w_{as} \cdot d_{hw.U2} \cdot L_{as}\right) \cdot \gamma_w = 5922.8 \cdot kN$

Moment Arm for Application of Water Weight (H1) from toe: $H_{1.U2.loc} := L_b - \dfrac{L_{as}}{2} = 14.13\,m$

TAILWATER:

Trapezoid Volume Above Gate Footing from Approach Slab to Crest: $V_{asc.U2} := \left(L_{gf} - L_{gfc}\right) W_b \dfrac{d_{hw.U2} + Y_{C.U2}}{2} = 485.84 \cdot m^3$

Trapezoid Volume Above Gate Footing Crest to End of Gate Footing: $V_{gfc.U2} := \left(L_{gfc} \cdot W_b\right) \dfrac{Y_{C.U2} + Y_{TOE.U2}}{2} = 98.28 \cdot m^3$

Load Above Gate Footing from Approach Slab to Crest: $H_{2.U2.asc} := V_{asc.U2} \cdot \gamma_w = 4766.11 \cdot kN$

Load Acting Above Footing Crest from Toe: $H_{2.U2.asc.loc} := \dfrac{\left(L_{gf} - L_{gfc}\right) \cdot \left(2 \cdot d_{hw.U2} + Y_{C.U2}\right)}{3 \cdot \left(d_{hw.U2} + Y_{C.U2}\right)} + L_{gfc} = 6.19\,m$

Load Above Gate Footing from Crest to End: $H_{2.U2.gfc} := V_{gfc.U2} \cdot \gamma_w = 964.13 \cdot kN$

Load Acting Above Gate Footing from Crest to End: $H_{2.U2.gfc.loc} := \dfrac{\left(L_{gfc}\right) \cdot \left(2 \cdot Y_{C.U2} + Y_{TOE.U2}\right)}{3 \cdot \left(Y_{C.U2} + Y_{TOE.U2}\right)} = 1.63\,m$

Vertical Water Weight (H2) on Gate Footing: $H_{2.U2} := H_{2.U2.asc} + H_{2.U2.gfc} = 5730.24 \cdot kN$

Moment Arm for Application of Water Weight (H2) from toe: $H_{2.U2.loc} := \dfrac{H_{2.U2.asc} \cdot H_{2.U2.asc.loc} + H_{2.U2.gfc} \cdot H_{2.U2.gfc.loc}}{H_{2.U2}} = 5.43\,m$

UPLIFT AT INCLINE SLIDING PLANE

U2 CASE

Uplift pressure at U/S Face (heel): $U_{HW.U2} := D_{hwas.U2} \cdot \gamma_w = 104.0 \cdot \frac{kN}{m^2}$

Uplift pressure at D/S Face Stilling Basin: $U_{TW.U2} := \left(D_{twtoe.U2}\right) \cdot \gamma_w = 56.9 \cdot \frac{kN}{m^2}$

Length from U/S of Gate Structure to U/S of Stilling Basin: $L_{overall.Usual} = 18.50\,m$

Difference between Uplift pressure at HW and TW: $U_{diff.U2} := U_{HW.U2} - U_{TW.U2} = 47.09 \cdot \frac{kN}{m^2}$

Slope of difference between between Uplift pressure at HW and TW: $U_{slope.U2} := \frac{U_{diff.U2}}{L_{overall.Usual}} = 2.55 \cdot \frac{kN}{m^2 \cdot m}$

Tailwater Pressure at toe of Gate Structure: $U_{press.toe.gs.U2} := U_{TW.U2} + \left(L_{overall.Usual} - L_b\right) \cdot U_{slope.U2} = 56.9 \cdot \frac{kN}{m^2}$

Uniform uplift force UA Under Gate Structure due to TW (rectangle): $U_{A.U2} := U_{press.toe.gs.U2} \cdot L_b \cdot W_b \cdot -1 = -15789.19 \cdot kN$

Moment Arm from Toe of Gate Structure for Uplift UA: $L_{A.U2} := \left(\frac{L_b}{2}\right) = 9.25\,m$

Linearly Decreasing Uplift Force U2B Under Gate Structure due to HW-TW Differential (triangle): $U_{B.U2} := \frac{1}{2} \cdot \left(U_{HW.U2} - U_{press.toe.gs.U2}\right) \cdot L_b \cdot W_b \cdot -1 = -6533.46 \cdot kN$

Moment Arm from Toe of Gate Structure for Uplift UB: $L_{B.U2} := \frac{2}{3} \cdot L_b = 12.33\,m$

Total Resultant Uplift force: $U_{U2} := U_{A.U2} + U_{B.U2} = -22322.65 \cdot kN$

Resultant Location from Toe: $U_{U2.loc} := \frac{\left(U_{A.U2} \cdot L_{A.U2} + U_{B.U2} \cdot L_{B.U2}\right)}{\left(U_{A.U2} + U_{B.U2}\right)} = 10.15\,m$

$\Sigma V_{water.U2} := H_{1.U2} + H_{2.U2} + U_{U2} = -10669.63 \cdot kN$

$\Sigma M_{Vwater.U2} := H_{1.U2} \cdot H_{1.U2.loc} + H_{2.U2} \cdot H_{2.U2.loc} + U_{U2} \cdot U_{U2.loc} = -111876.5 \cdot kN \cdot m$

SOIL LOADS

U2 CASE

Equivalent Fluid Pressure (EFP):

At rest lateral pressure coefficient: $K_{o.U2} := 1 - \sin(\phi_{backfill}) = 0.658$ (Section 5.3, Design Criteria)

Headwater Footing Unit Width: $W_{hwas.U2} = 15.00\,m$

Tailwater Footing Unit Width: $W_{tw.U2} = 15.00\,m$

Footing Thickness at Heel: $t_{hf.U2} := TOC_{as} - BOK_{elev} = 6.00\,m$

Fixed Crest Footing Thickness at Toe: $t_{tf.U2} := TOC_{pfe} - BOF_{elev} = 2.00\,m$

Lateral Driving Force (Headwater Side - at rest condition)

At-Rest Soil Load: $E_{act.U2} := \frac{\left(K_{o.U2} \cdot t_{hf.U2}^{2}\right)}{2} \cdot (\gamma_r - \gamma_w) \cdot W_{hwas.U2} \cdot -1 = -2165.61 \cdot kN$

Acting at: $E_{act.U2.loc} := \frac{t_{hf.U2}}{3} = 2.00\,m$

Lateral Resisting Force (Tailwater Side - at rest condition)

At-rest Soil Load: $E_{pass.U2} := \frac{\left(K_{o.U2} \cdot t_{tf.U2}^{2}\right)}{2} \cdot (\gamma_r - \gamma_w) \cdot W_{tw.U2} = 240.62 \cdot kN$

Acting at: $E_{pass.U2.loc} := \frac{t_{tf.U2}}{3} = 0.67\,m$

$\Sigma H_{soil.U2} := E_{act.U2} + E_{pass.U2} = -1924.99 \cdot kN$

$\Sigma M_{soil.U2} := E_{act.U2} \cdot E_{act.U2.loc} + E_{pass.U2} \cdot E_{pass.U2.loc} = -4170.8 \cdot kN \cdot m$

ICE / IMPACT LOADS (ASSUME NO ICE LOADING ON TAILWATER SIDE)

Static Ice load on Gates:

$$I_{G.U2} := \begin{cases} 00 \frac{kN}{m} & \text{if } TOP_{rg.U2} \le TOC_{as} \\ 75 \frac{kN}{m} & \text{if } TOP_{rg.U2} > TOC_{as} \end{cases} = 75 \cdot \frac{kN}{m}$$

(Section 7.7, Design Criteria)

Ice Loading Unit Width on Reg. Gate: $W_{rg.U2} := 15.00m$ (Input value for load case)

Total Ice Load on Structure: $I_{U2} := -\left(I_{G.U2} \cdot W_{rg.U2}\right) = -1125 \cdot kN$

Apply Ice load at: $I_{U2.loc} := \left(TOP_{rg.U2} - BOF_{elev} - 0.30m\right) = 5.80\,m$

$\Sigma H_{I.U2} := I_{U2} = -1125 \cdot kN$

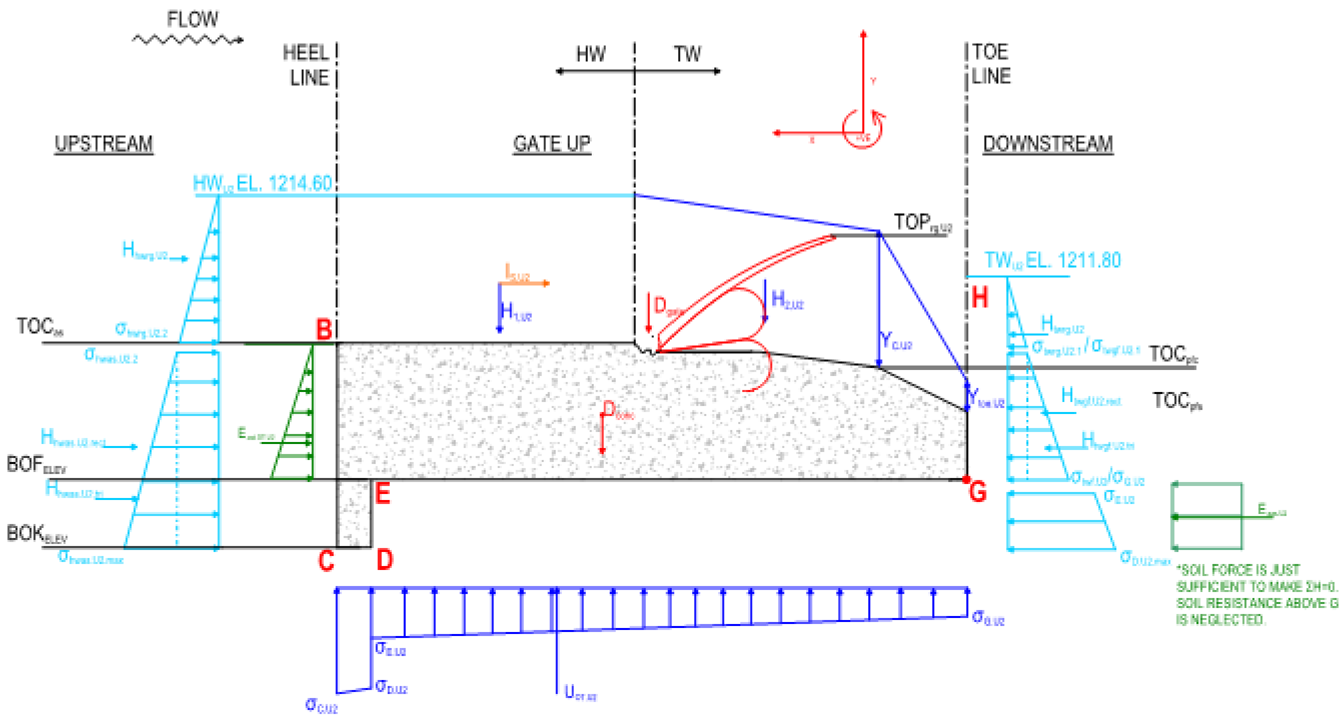
MONOLITH OVERTURNING STABILITY ANALYSIS

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stability of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1 $Ratio_{OT.U2.min} := 0.33$



Uplift Loads for Overturning Stability Analysis

Line of Creep:

Change in Water Head: $\Delta_{h.U2} := HW_{U2} - TW_{U2} = 2.8\,m$

Length from Point C to Point G: $L_{CG} = 18.61\,m$

Length from Various Points to Points: $L_{CD} = 1\,m$ $L_{DE} = 2\,m$ $L_{EG} = 17.5\,m$

$L_{GH.U2} := TW_{U2} - BOF_{elev} = 5.8\,m$

Length from Point C, D, E to G: $L_{CDEG} = 20.5\,m$ $L_{CDE} = 3\,m$

Water Pressure at Point C: $\sigma_{C.U2} := \sigma_{hwas.U2.2} = -103.99\cdot kPa$

Water Pressure at Point G: $\sigma_{G.U2} := \sigma_{twtoe.U2}\cdot -1 = -56.9\cdot kPa$

Water Pressure at Point D:

$$\sigma_{D.U2} := -\gamma_w \cdot \left[\left(HW_{U2} - BOK_{elev}\right) - \frac{\Delta_{h.U2}\cdot L_{CD}}{L_{CDEG}}\right] = -102.65\cdot kPa$$

Water Pressure at Point E:

$$\sigma_{E.U2} := -\gamma_w \cdot \left[\left(HW_{U2} - BOF_{elev}\right) - \frac{\Delta_{h.U2}\cdot L_{CDE}}{L_{CDEG}}\right] = -80.35\cdot kPa$$

Uplift for Overturning Analysis on Bottom of Key:

$$U_{OT.U2.key} := \frac{\sigma_{C.U2} + \sigma_{D.U2}}{2}\cdot L_{CD}\cdot W_b = -1549.74\cdot kN$$

Acting at:

$$U_{OT.U2.key.loc} := \frac{L_{CD}\cdot\left(2\cdot\sigma_{C.U2} + \sigma_{D.U2}\right)}{3\left(\sigma_{C.U2} + \sigma_{D.U2}\right)} + L_{EG} = 18\,m$$

U2 CASE

Uplift for Overturning Analysis on Bottom of Footing: $U_{OT.U2.ftg} := \frac{\sigma_{E.U2} + \sigma_{G.U2}}{2} \cdot L_{EG} \cdot W_b = -18013.31 \cdot kN$

Acting at: $U_{OT.U2.ftg.loc} := \frac{L_{EG} \cdot \left(\sigma_{G.U2} + 2 \cdot \sigma_{E.U2}\right)}{3\left(\sigma_{G.U2} + \sigma_{E.U2}\right)} = 9.25\,m$

Uplift Load for Overturning Analysis: $U_{OT.U2} := U_{OT.U2.key} + U_{OT.U2.ftg} = -19563.05 \cdot kN$

Uplift Load Acting from Toe: $U_{OT.U2.loc} := \frac{U_{OT.U2.key} \cdot U_{OT.U2.key.loc} + U_{OT.U2.ftg} \cdot U_{OT.U2.ftg.loc}}{U_{OT.U2}} = 9.94\,m$

<u>All Vertical Loads Applicable to Overturning Stability Analysis</u>

Total Concrete Dead Loads:	$D_{conc} = 24618.6 \cdot kN$	at:	$X_{conc.loc} = 10.06\,m$
Dead Load of Gate:	$D_{Gate} = 210.0 \cdot kN$		$X_{gate} = 6.60\,m$
Water Weight (HW) on Apron Slab:	$H_{1.U2} = 5922.8 \cdot kN$		$H_{1.U2.loc} = 14.13\,m$
Water Weight (TW) on Gate Footing:	$H_{2.U2} = 5730.2 \cdot kN$		$H_{2.U2.loc} = 5.43\,m$
Uplift Load for Overturning Analysis:	$U_{OT.U2} = -19563.05 \cdot kN$		$U_{OT.U2.loc} = 9.94 \cdot m$

Sum of All Overtuming Analysis Vertical Load:

$$\Sigma V_{U2.OT} := D_{conc} + D_{Gate} + H_{1.U2} + H_{2.U2} + U_{OT.U2} = 16918.58 \cdot kN$$

Sum of All Overtuming Analysis Vertical Load Moments:

$$\Sigma M_{V.U2.OT} := D_{conc} \cdot X_{conc.loc} + D_{Gate} \cdot X_{gate} + H_{1.U2} \cdot H_{1.U2.loc} + H_{2.U2} \cdot H_{2.U2.loc} + U_{OT.U2} \cdot U_{OT.U2.loc} = 169206.88 \cdot kN \cdot m$$

<u>Lateral Tailwater Loads for Overturning Stability Analysis</u>

TW Lateral Load on Gate Footing (No Key - Overturning Values Adjusted): $H_{twgf.U2} := H_{twgf.U2.tri} + H_{twgf.U2.rect} = 2236.68 \cdot kN$

Acting at: $H_{twgf.U2.loc} := \frac{\frac{h_{toe}}{3} \cdot H_{twgf.U2.tri} + \frac{h_{toe}}{2} \cdot H_{twgf.U2.rect}}{H_{twgf.U2}} = 1.65\,m$

Horizontal Tailwater Pressure Top of Key (Overturning Analysis): $\sigma_{twtk.OT.U2} := \sigma_{E.U2} \cdot -1 = 80.35 \cdot kPa$

Horizontal Tailwater Pressure Bottom of Key (Overturning Analysis): $\sigma_{twbk.OT.U2} := \sigma_{D.U2} \cdot -1 = 102.65 \cdot kPa$

Triangular Distribution Unit Load Acting at Key: $H_{twbk.OT.U2.tri} := \frac{\left(\sigma_{twbk.OT.U2} - \sigma_{twtk.OT.U2}\right)}{2} \cdot d_{key} \cdot W_{tw.U2} = 334.5 \cdot kN$

Triangular Distribution Unit Load Acting at Key: $H_{twbk.OT.U2.rect} := \sigma_{twtk.OT.U2} \cdot d_{key} \cdot W_{tw.U2} = 2410.39 \cdot kN$

Total Horizontal Tailwater Load on Key (Overturning Values Adjusted): $H_{twkey.OT.U2} := H_{twbk.OT.U2.tri} + H_{twbk.OT.U2.rect} = 2744.89 \cdot kN$

Acting at: $H_{twkey.OT.U2.loc} := \frac{H_{twbk.OT.U2.tri} \cdot \frac{-2 \cdot d_{key}}{3} + H_{twbk.OT.U2.rect} \cdot \frac{-d_{key}}{2}}{H_{twkey.OT.U2}} = -1.04 \cdot m$

U2 CASE

__Lateral Driving Earth Loads for Overturning Stability Analysis (at rest condition)__

Depth of Driving Soil Loads (to top of key): $h_{E.OT.U2} := TOC_{as} - BOF_{elev} = 4\ m$

At-Rest Soil Load: $E_{act.OT.U2} := \frac{\left(K_{o.U2} \cdot h_{E.OT.U2}^{\ 2}\right)}{2} \cdot \left(\gamma_r - \gamma_w\right) \cdot W_{hwas.U2} \cdot -1 = -962.49 \cdot kN$

At Rest- Soil Load Acting from Toe: $E_{act.OT.U2.loc} := \frac{h_{E.OT.U2}}{3} = 1.33\ m$

__All Lateral Loads Appliable to Overturning Stability Analysis__

HW Lateral Load on Approach Slab:	$H_{hwas.U2} = -6710.0 \cdot kN$	$H_{hwas.U2.loc} = 0.61\ m$
HW Lateral Load on Reg. Gate:	$H_{hwrg.U2} = -1097.0 \cdot kN$	$H_{hwrg.U2.loc} = 4.95\ m$
TW Lateral Load on Reg. Gate:	$H_{twrg.U2} = 238.4 \cdot kN$	$H_{twrg.U2.loc} = 4.60\ m$
TW Lateral Load on Gate Footing (No Key - Overturning Values Adjusted):	$H_{twgf.U2} = 2236.68 \cdot kN$	$H_{twgf.U2.loc} = 1.65\ m$
TW Lateral Load on Key:	$H_{twkey.OT.U2} = 2744.89 \cdot kN$	$H_{twkey.OT.U2.loc} = -1.04\ m$
Ice / Impact Load:	$I_{U2} = -1125.0 \cdot kN$	$I_{U2.loc} = 5.80\ m$
Lateral Soil Load (driving):	$E_{act.OT.U2} = -962.5 \cdot kN$	$E_{act.OT.U2.loc} = 1.33\ m$

Resisting Lateral Soil Load as required to produce horizontal equilibrium:

$$E_{pas.OT.U2} := -\left(H_{hwas.U2} + H_{hwrg.U2} + H_{twrg.U2} + H_{twgf.U2} + H_{twkey.OT.U2} + I_{U2} + E_{act.OT.U2}\right) = 4674.59 \cdot kN$$

Acting at:

$$E_{pas.OT.U2.loc} := -1 \cdot \frac{d_{key}}{2} = -1\ m$$

Sum of All Overturning Analysis Horizontal Load (ΣH=0):

$$\Sigma H_{U2.OT} := H_{hwas.U2} + H_{hwrg.U2} + H_{twrg.U2} + H_{twgf.U2} + H_{twkey.OT.U2} + I_{U2} + E_{act.OT.U2} + E_{pas.OT.U2} = 0 \cdot kN$$

Sum of All Overturning Analysis Horizontal Load Moments:

$$\Sigma M_{H.U2.OT} := H_{hwas.U2} \cdot H_{hwas.U2.loc} + H_{hwrg.U2} \cdot H_{hwrg.U2.loc} + H_{twrg.U2} \cdot H_{twrg.U2.loc} + H_{twgf.U2} \cdot H_{twgf.U2.loc} \cdots + H_{twkey.OT.U2} \cdot H_{twkey.OT.U2.loc} + I_{U2} \cdot I_{U2.loc} + E_{act.OT.U2} \cdot E_{act.OT.U2.loc} + E_{pas.OT.U2} \cdot E_{pas.OT.U2.loc} = -20041.82 \cdot kN \cdot m$$

__Overturning Stability Analysis__

$\Sigma M_{U2.OT} := \Sigma M_{V.U2.OT} + \Sigma M_{H.U2.OT} = 149165.06 \cdot kN \cdot m$

$X_{R.U2} := \frac{\Sigma M_{U2.OT}}{\Sigma V_{U2.OT}} = 8.82\ m$

$x_{OT.U2} := X_{R.U2} - \frac{L_b}{2} = -0.43\ m$

Overturning Resultant Ratio $Ratio_{OT.U2} := \frac{X_{R.U2}}{L_b} = 0.48$

$$Ratio_{OT.U2.check} := \begin{cases} \text{"OKAY"} & \text{if } Ratio_{OT.U2} \geq Ratio_{OT.U2.min} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

$$x_{OT.check.U2} := \begin{cases} \text{"OKAY"} & \text{if } \left|x_{OT.U2}\right| \leq Kern \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

CHECK FOUNDATION BEARING CAPACITY (HORIZONTAL PLANE):

U2 CASE

Bearing Pressure Under Toe:

$$\sigma_{ToeU2.OT} := \frac{\Sigma V_{U2.OT}}{L_b \cdot W_b} + \frac{\left(\Sigma V_{U2.OT} \cdot x_{OT.U2}\right)}{S_b} = 52.4 \cdot kPa$$

$$Bearing_{ChecktoeU2.OT} := \begin{vmatrix} \text{"OKAY "} & \text{if } \sigma_{ToeU2.OT} < \sigma_{allow.U2} \\ \text{"NG""} & \text{otherwise} \end{vmatrix} = \text{"OKAY "}$$

Bearing Pressure Under Heel:

$$\sigma_{HeelU2.OT} := \frac{\Sigma V_{U2.OT}}{L_b \cdot W_b} - \frac{\left(\Sigma V_{U2.OT} \cdot x_{OT.U2}\right)}{S_b} = 69.5 \cdot kPa$$

$$Bearing_{CheckheelU2.OT} := \left(\begin{vmatrix} \text{"OKAY "} & \text{if } \sigma_{HeelU2.OT} < \sigma_{allow.U2} \wedge \sigma_{HeelU2.OT} > 0 \\ \text{"NG""} & \text{otherwise} \end{vmatrix}\right) = \text{"OKAY "}$$

SUMMARY OF STABILITY ASSESSMENT:

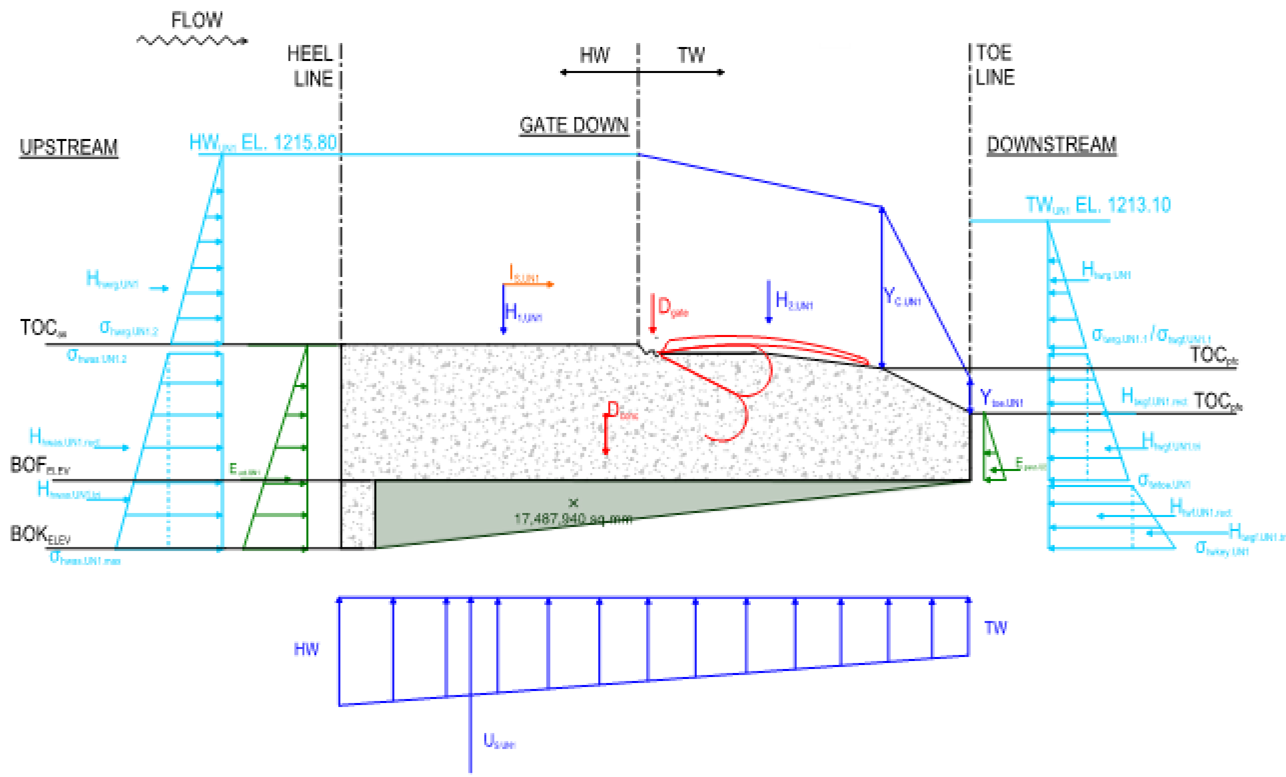
UN1 DESIGN CASE



ACCEPTANCE PARAMETERS

Required Factor of Safety for Sliding: $FS_{req.UN1.sl} := 1.3$ (Without Cohesion) (Section 8.1, Design Criteria)

Resultant Within Middle Third of Base: $e \le \frac{L_b}{6} \wedge e \ge \frac{-L_b}{6}$

Allowable Rock Bearing Pressure: $\sigma_{allow.UN1} := 1470 \cdot \frac{kN}{m^2}$ (Section 5.2, Design Criteria)

INPUT PARAMETERS

Headwater Elevation: $HW_{UN1} := 1215.8m$ (Section 8.3, Design Criteria)

Tailwater Elevation: $TW_{UN1} := 1213.1m$ (Section 8.3, Design Criteria)

Bottom of Footing Elevation: $BOF_{elev} = 1206\,m$

Approach Slab Top of Concrete Elevation at Upstream Face: $TOC_{as} = 1210\,m$

Footing Top of Concrete Elevation at Stilling Basin: $TOC_{pfe} = 1208\,m$

Footing Top of Concrete Elevation at Center of Footing: $TOC_{pfc} = 1209.3\,m$

Gates are open when top of gate elevation is at 1210.00m

Top of Guard/Regulating Gate Elevation: $TOP_{rg.UN1} := 1210.00m$ $TOP_{gg.UN1} := 1213.50m$

Gates are closed/up when top of gate elevation is at 1215.0m

Bottom of Key Elevation: $BOK_{elev} = 1204\,m$

Crestwater Elevation: Dynamic Flow $EL_{C.UN1} := 1213.87m$

$$Y_{C.UN1} := \begin{cases} (EL_{C.UN1} - TOC_{pfc}) & \text{if } TOP_{rg.UN1} \le HW_{UN1} \\ (TW_{UN1} - TOC_{pfc}) & \text{if } TOP_{rg.UN1} > HW_{UN1} \end{cases} = 4.57 \cdot m$$

Toewater Elevation: $EL_{TOE.UN1} := 1209.95m$

$$Y_{TOE.UN1} := \begin{cases} (EL_{TOE.UN1} - TOC_{pfe}) & \text{if } TOP_{rg.UN1} \le HW_{UN1} \\ (TW_{UN1} - TOC_{pfe}) & \text{if } TOP_{rg.UN1} > HW_{UN1} \end{cases} = 1.95 \cdot m$$

LATERAL WATER LOADS

UN1 CASE

HEADWATER (DRIVING):

Headwater Depth on Gate: $D_{hwg.UN1} := HW_{UN1} - TOC_{as} = 5.80\,m$

Thickness of Approach Slab (Including Key): $T_{as} = 6\,m$

Headwater Depth at Heel (U/S face): $D_{hwas.UN1} := HW_{UN1} - BOK_{elev} = 11.80\,m$

Headwater Load Unit Width on Approach Slab: $W_{hwas.UN1} := W_b = 15.00\,m$

Headwater Unit Load At Top of Approach Slab:

$$H_{hwas.UN1.1} := \frac{-\left(\gamma_w \cdot D_{hwg.UN1}{}^2\right)}{2} \cdot W_{hwas.UN1} = -2475.06 \cdot kN$$

Headwater Unit Load At Bottom of Approach Key:

$$H_{hwas.UN1.2} := \frac{-\left(\gamma_w \cdot D_{hwas.UN1}{}^2\right)}{2} \cdot W_{hwas.UN1} = -10244.6 \cdot kN$$

Headwater Line Load At Top of Approach Slab: $\sigma_{hwas.UN1.1} := -\left(\gamma_w \cdot D_{hwg.UN1}\right) = -56.9 \cdot kPa$

Headwater Line Load At Bottom of Approach Key: $\sigma_{hwas.UN1.2} := -\left(\gamma_w \cdot D_{hwas.UN1}\right) = -115.76 \cdot kPa$

Triangular Distribution Unit Load on Approach Slab and Key:

$$H_{hwas.UN1.2.tri} := \left(\frac{\sigma_{hwas.UN1.2} - \sigma_{hwas.UN1.1}}{2}\right) \cdot \left(T_{as} \cdot W_{hwas.UN1}\right) = -2648.7 \cdot kN$$

Rectangular Distribution Unit Load on Approach Slab and Key:

$$H_{hwas.UN1.2.rect} := \sigma_{hwas.UN1.1} \cdot \left(T_{as} \cdot W_{hwas.UN1}\right) = -5120.82 \cdot kN$$

Total Horizontal Headwater Load on Approach Slab:

$$H_{hwas.UN1} := H_{hwas.UN1.2.tri} + H_{hwas.UN1.2.rect} = -7769.52 \cdot kN$$

Apply Total Footing Headwater Load at:

$$H_{hwas.UN1.loc} := \frac{\left[H_{hwas.UN1.2.rect} \cdot \frac{\left(T_{as}\right)}{2} + H_{hwas.UN1.2.tri} \cdot \frac{\left(T_{as}\right)}{3}\right]}{H_{hwas.UN1.2.tri} + H_{hwas.UN1.2.rect}} - d_{key} = 0.66\,m$$

Regulating Gate (4A) Operating Condition:

Reg. Gate Down/Open Condition: $A1_{UN1} := TOP_{rg.UN1} \le TOC_{as}$

Reg. Crest Gate Up/Closed, with Top of Gate Higher than HW Elevation: $B1_{UN1} := TOP_{rg.UN1} \ge HW_{UN1} \wedge TOP_{rg.UN1} > TOC_{as}$

Reg. Crest Gate Up/Closed, with Top of Gate Lower than HW Elevation: $C1_{UN1} := TOP_{rg.UN1} > TOC_{as} \wedge HW_{UN1} > TOP_{rg.UN1} = 0$

Reg. Crest Gate Height: $H_{rg.UN1} := TOP_{rg.UN1} - TOC_{as} = 0\,m$

Headwater Depth at Reg. Crest Gate: $D_{hwrg.UN1} := HW_{UN1} - TOC_{as} = 5.80\,m$

Reg. Crest Gate Width: $W_{hwrg.UN1} := 15.00m$

Lateral Headwater Pressure at Bottom of Reg. Crest Gate:

$$\sigma_{hwrg.UN1.1} := \begin{cases} (0.0kPa) & \text{if } A1_{UN1} \\ -(\gamma_w \cdot D_{hwrg.UN1}) & \text{if } B1_{UN1} \\ -(\gamma_w \cdot D_{hwrg.UN1}) & \text{if } C1_{UN1} \end{cases} = 0.0 \cdot kPa$$

Lateral Headwater Pressure at Top of Reg. Crest Gate:
(Load at HW Elevation On Reg. Crest Gate if HW is below TOG_{rg})

$$\sigma_{hwrg.UN1.2} := \begin{cases} (0.0kPa) & \text{if } A1_{UN1} \\ 0.0kPa & \text{if } B1_{UN1} \\ -\left[\gamma_w \cdot (HW_{UN1} - TOP_{rg.UN1})\right] & \text{if } C1_{UN1} \end{cases} = 0.0 \cdot kPa$$

Average Pressure acting on Reg. Crest Gate:

$$\sigma_{hwrg.UN1.avg} := \frac{(\sigma_{hwrg.UN1.1} + \sigma_{hwrg.UN1.2})}{2} = 0 \cdot kPa$$

Total Area of Crest Gate:

$$A_{hwrg.UN1} := \begin{cases} D_{hwrg.UN1} \cdot W_{hwrg.UN1} & \text{if } A1_{UN1} \\ D_{hwrg.UN1} \cdot W_{hwrg.UN1} & \text{if } B1_{UN1} \\ H_{rg.UN1} \cdot W_{hwrg.UN1} & \text{if } C1_{UN1} \end{cases} = 87 \cdot m^2$$

Total Horizontal Headwater Load on Reg. Crest Gate: $H_{hwrg.UN1} := \sigma_{hwrg.UN1.avg} \cdot A_{hwrg.UN1} = 0.0 \cdot kN$

Apply Total Reg. Crest Gate Headwater Load at:

$$H_{hwrg.UN1.loc} := \begin{cases} (TOC_{as} - BOF_{elev}) & \text{if } A1_{UN1} \\ \left[\frac{(HW_{UN1} - TOC_{as})}{3} + (TOC_{as} - BOF_{elev})\right] & \text{if } B1_{UN1} \\ \left[\frac{\sigma_{hwrg.UN1.2} \cdot A_{hwrg.UN1} \cdot \frac{(H_{rg.UN1})}{2} + \frac{(\sigma_{hwrg.UN1.1} - \sigma_{hwrg.UN1.2})}{2} \cdot A_{hwrg.UN1} \cdot \frac{(H_{rg.UN1})}{3}}{\sigma_{hwrg.UN1.2} \cdot A_{hwrg.UN1} + \frac{(\sigma_{hwrg.UN1.1} - \sigma_{hwrg.UN1.2})}{2} \cdot A_{hwrg.UN1}} \ldots \right. \\ \left. + (TOC_{as} - BOF_{elev}) \right] & \text{if } C1_{UN1} \end{cases} = 4.0 \cdot m$$

LATERAL TAILWATER (RESISTING) Applied to Downstream Side of Reg. Crest Gate: UN1 CASE

Reg. Gate Down/Open Condition: $A2_{UN1} := TOP_{rg.UN1} \le TOC_{as}$

Reg. Crest Gate Up/Closed, with Top of Gate Higher than TW Elevation: $B2_{UN1} := TOP_{rg.UN1} \ge TW_{UN1} \wedge TOP_{rg.UN1} > TOC_{as}$

Reg. Crest Gate Up/Closed, with Top of Gate Lower than TW Elevation: $C2_{UN1} := TOP_{rg.UN1} > TOC_{as} \wedge TW_{UN1} > TOP_{rg.UN1}$

Tailwater Depth at Reg. Crest Gate: $D_{twrg.UN1} := TW_{UN1} - TOC_{as} = 3.10\,m$

Reg. Crest Gate Width: $W_{twrg.UN1} := 15.00m$

Lateral Water Load at Bottom of Reg. Crest Gate:

$$\sigma_{twrg.UN1.1} := \left| \begin{array}{ll} (0.0kPa) & \text{if } A2_{UN1} \\ (\gamma_w \cdot D_{twrg.UN1}) & \text{if } B2_{UN1} \\ (\gamma_w \cdot D_{twrg.UN1}) & \text{if } C2_{UN1} \end{array} \right. = 0.0 \cdot kPa$$

Lateral Water Load at Top of Reg. Crest Gate:
(Load at TW Elevation On Reg. Crest Gate if TW is below TOG_{rg})

$$\sigma_{twrg.UN1.2} := \left| \begin{array}{ll} (0.0kPa) & \text{if } A2_{UN1} \\ 0.0kPa & \text{if } B2_{UN1} \\ \left[\gamma_w \cdot (TW_{UN1} - TOP_{rg.UN1})\right] & \text{if } C2_{UN1} \end{array} \right. = 0.0 \cdot kPa$$

Average Pressure acting on Reg. Crest Gate:

$$\sigma_{twrg.UN1.avg} := \frac{(\sigma_{twrg.UN1.1} + \sigma_{twrg.UN1.2})}{2} = 0 \cdot kPa$$

Total Area water acting on Crest Gate:

$$A_{twrg.UN1} := \left| \begin{array}{ll} D_{twrg.UN1} \cdot W_{twrg.UN1} & \text{if } A2_{UN1} \\ D_{twrg.UN1} \cdot W_{twrg.UN1} & \text{if } B2_{UN1} \\ H_{rg.UN1} \cdot W_{twrg.UN1} & \text{if } C2_{UN1} \end{array} \right. = 46.5 \cdot m^2$$

Total Horizontal Tailwater Load on Reg. Crest Gate: $H_{twrg.UN1} := \sigma_{twrg.UN1.avg} \cdot A_{twrg.UN1} = 0.0 \cdot kN$

Apply Total Horiz. TW Load on Reg. Gate at:

$$H_{twrg.UN1.loc} := \left| \begin{array}{ll} (TOC_{as} - BOF_{elev}) & \text{if } A2_{UN1} \\ \left[\frac{(TW_{UN1} - TOC_{as})}{3} + (TOC_{as} - BOF_{elev})\right] & \text{if } B2_{UN1} \\ \left[\frac{\sigma_{twrg.UN1.2} \cdot A_{twrg.UN1} \cdot \frac{(H_{rg.UN1})}{2} + \frac{(\sigma_{twrg.UN1.1} - \sigma_{twrg.UN1.2})}{2} A_{twrg.UN1} \cdot \frac{(H_{rg.UN1})}{3}}{\sigma_{twrg.UN1.2} \cdot A_{twrg.UN1} + \frac{(\sigma_{twrg.UN1.1} - \sigma_{twrg.UN1.2})}{2} \cdot A_{twrg.UN1}} \ldots \\ + (TOC_{as} - BOF_{elev})\right] & \text{if } C2_{UN1} \end{array} \right. = 4.0 \cdot m$$

LATERAL WATER LOADS (continued)

UN1 CASE

TAILWATER (RESISTING) Applied to Concrete Structure:

Tailwater Depth At top of Gate Base Footing Elevation: $D_{twgf.UN1} := TW_{UN1} - TOC_{as} = 3.10\,m$

Water Depth at bottom of Gate Base Footing: $D_{twtoe.UN1} := TW_{UN1} - BOF_{elev} = 7.10\,m$

Footing Thickness at Toe $h_{toe} = 4\,m$

Unit Width of D/S face of crest for application of Tailwater Load: $W_{tw.UN1} := W_b = 15.00\,m$

Tailwater Pressure At Top of Gate Footing: $\sigma_{twgf.UN1} := \left(\gamma_w \cdot D_{twgf.UN1}\right) = 30.41 \cdot kPa$

Tailwater Line Load At Bottom of Gate Footing: $\sigma_{twtoe.UN1} := \left(\gamma_w \cdot D_{twtoe.UN1}\right) = 69.65 \cdot kPa$

Triangular Distribution Unit Load on Gate Footing Base $H_{twgf.UN1.tri} := \left(\frac{\sigma_{twtoe.UN1} - \sigma_{twgf.UN1}}{2}\right) \cdot \left(h_{toe} \cdot W_{tw.UN1}\right) = 1177.2 \cdot kN$

Rectangular Distribution Unit Load on Gate Footing Base: $H_{twgf.UN1.rect} := \sigma_{twgf.UN1} \cdot \left(h_{toe} \cdot W_{tw.UN1}\right) = 1824.66 \cdot kN$

Tailwater Pressure At Bottom of Sliding Failure Plane: $\sigma_{twbk.UN1} := \left(HW_{UN1} - BOK_{elev}\right) \cdot \gamma_w = 115.76 \cdot kPa$

Triangular Distribution Unit Load Below Footing: $H_{twbk.UN1.tri} := \frac{\left(\sigma_{twbk.UN1} - \sigma_{twtoe.UN1}\right)}{2} \cdot d_{key} \cdot W_{tw.UN1} = 691.61 \cdot kN$

Rectangular Distribution Load Below Footing Base: $H_{twbk.UN1.rect} := \sigma_{twtoe.UN1} \cdot d_{key} \cdot W_{tw.UN1} = 2089.53 \cdot kN$

Total Horizontal Tailwater Load on Gate Footing (including key):

$$H_{twgk.UN1} := H_{twgf.UN1.tri} + H_{twgf.UN1.rect} + H_{twbk.UN1.tri} + H_{twbk.UN1.rect} = 5782.99 \cdot kN$$

Apply Total Gate Footing Tailwater Load at:

$$H_{twgk.UN1.loc} := \frac{\left[H_{twgf.UN1.rect} \cdot \frac{\left(h_{toe}\right)}{2} + H_{twgf.UN1.tri} \cdot \frac{\left(h_{toe}\right)}{3} + H_{twbk.UN1.tri} \cdot \left(-d_{key} \cdot \frac{2}{3}\right) + H_{twbk.UN1.rect} \cdot \left(\frac{-d_{key}}{2}\right)\right]}{H_{twgf.UN1.tri} + H_{twgf.UN1.rect} + H_{twbk.UN1.tri} + H_{twbk.UN1.rect}} = 0.38\,m$$

SUMMATION OF LATERAL WATER LOADS:

$$\Sigma H_{Water.UN1} := H_{hwas.UN1} + H_{hwrg.UN1} + H_{twgk.UN1} + H_{twrg.UN1} = -1986.53 \cdot kN$$

$$\Sigma M_{Hwater.UN1} := H_{hwas.UN1} \cdot H_{hwas.UN1.loc} + H_{hwrg.UN1} \cdot H_{hwrg.UN1.loc} \cdots + H_{twgk.UN1} \cdot H_{twgk.UN1.loc} + H_{twrg.UN1} \cdot H_{twrg.UN1.loc} = -2913.57 \cdot kN \cdot m$$

VERTICAL WATER LOADS

UN1 CASE

HEADWATER:

Water Depth on top of Approach Slab: $d_{hw.UN1} := HW_{UN1} - TOC_{as} = 5.80\,m$

Length of Approach Slab: $L_{as} = 8.75\,m$

Width of Approach Slab: $w_{as} = 15.00\,m$

Vertical Water Weight (H1) on Approach Slab: $H_{1.UN1} := \left(w_{as} \cdot d_{hw.UN1} \cdot L_{as}\right) \cdot \gamma_w = 7467.9 \cdot kN$

Moment Arm for Application of Water Weight (H1) from toe: $H_{1.UN1.loc} := L_b - \dfrac{L_{as}}{2} = 14.13\,m$

TAILWATER:

Trapezoid Volume Above Gate Footing from Approach Slab to Crest: $V_{asc.UN1} := \left(L_{gf} - L_{gfc}\right) W_b \dfrac{d_{hw.UN1} + Y_{C.UN1}}{2} = 556.09 \cdot m^3$

Trapezoid Volume Above Gate Footing Crest to End of Gate Footing: $V_{gfc.UN1} := \left(L_{gfc} \cdot W_b\right) \dfrac{Y_{C.UN1} + Y_{TOE.UN1}}{2} = 127.14 \cdot m^3$

Load Above Gate Footing from Approach Slab to Crest: $H_{2.UN1.asc} := V_{asc.UN1} \cdot \gamma_w = 5455.26 \cdot kN$

Load Acting Above Footing Crest from Toe: $H_{2.UN1.asc.loc} := \dfrac{\left(L_{gf} - L_{gfc}\right) \cdot \left(2 \cdot d_{hw.UN1} + Y_{C.UN1}\right)}{3 \cdot \left(d_{hw.UN1} + Y_{C.UN1}\right)} + L_{gfc} = 6.32\,m$

Load Above Gate Footing from Crest to End: $H_{2.UN1.gfc} := V_{gfc.UN1} \cdot \gamma_w = 1247.24 \cdot kN$

Load Acting Above Gate Footing from Crest to End: $H_{2.UN1.gfc.loc} := \dfrac{\left(L_{gfc}\right) \cdot \left(2 \cdot Y_{C.UN1} + Y_{TOE.UN1}\right)}{3 \cdot \left(Y_{C.UN1} + Y_{TOE.UN1}\right)} = 1.47\,m$

Vertical Water Weight (H2) on Gate Footing: $H_{2.UN1} := H_{2.UN1.asc} + H_{2.UN1.gfc} = 6702.5 \cdot kN$

Moment Arm for Application of Water Weight (H2) from toe: $H_{2.UN1.loc} := \dfrac{H_{2.UN1.asc} \cdot H_{2.UN1.asc.loc} + H_{2.UN1.gfc} \cdot H_{2.UN1.gfc.loc}}{H_{2.UN1}} = 5.42\,m$

UPLIFT AT INCLINE SLIDING PLANE

UN1 CASE

Uplift pressure at U/S Face (heel): $U_{HW.UN1} := D_{hwas.UN1} \cdot \gamma_w = 115.8 \cdot \frac{kN}{m^2}$

Uplift pressure at D/S Face Stilling Basin: $U_{TW.UN1} := \left(D_{twtoe.UN1}\right) \cdot \gamma_w = 69.65 \cdot \frac{kN}{m^2}$

Length from U/S of Gate Structure to D/S of Stilling Basin: $L_{overall} := L_b = 18.50\,m$

Difference between Uplift pressure at HW and TW: $U_{diff.UN1} := U_{HW.UN1} - U_{TW.UN1} = 46.11 \cdot \frac{kN}{m^2}$

Slope of difference between between Uplift pressure at HW and TW: $U_{slope.UN1} := \frac{U_{diff.UN1}}{L_{overall}} = 2.49 \cdot \frac{kN}{m^2 \cdot m}$

Tailwater Pressure at toe of Gate Structure: $U_{press.toe.gs.UN1} := U_{TW.UN1} + \left(L_{overall} - L_b\right) \cdot U_{slope.UN1} = 69.65 \cdot \frac{kN}{m^2}$

Uniform uplift force UA Under Gate Structure due to TW (rectangle): $U_{A.UN1} := U_{press.toe.gs.UN1} \cdot L_b \cdot W_b \cdot -1 = -19328.15 \cdot kN$

Moment Arm from Toe of Gate Structure for Uplift UA: $L_{A.UN1} := \left(\frac{L_b}{2}\right) = 9.25\,m$

Linearly Decreasing Uplift Force UN1B Under Gate Structure due to HW-TW Differential (triangle): $U_{B.UN1} := \frac{1}{2} \cdot \left(U_{HW.UN1} - U_{press.toe.gs.UN1}\right) \cdot L_b \cdot W_b \cdot -1 = -6397.35 \cdot kN$

Moment Arm from Toe of Gate Structure for Uplift UB: $L_{B.UN1} := \frac{2}{3} \cdot L_b = 12.33\,m$

Total Resultant Uplift force: $U_{UN1} := U_{A.UN1} + U_{B.UN1} = -25725.5 \cdot kN$

Resultant Location from Toe: $U_{UN1.loc} := \frac{\left(U_{A.UN1} \cdot L_{A.UN1} + U_{B.UN1} \cdot L_{B.UN1}\right)}{\left(U_{A.UN1} + U_{B.UN1}\right)} = 10.02\,m$

$$\Sigma V_{water.UN1} := H_{1.UN1} + H_{2.UN1} + U_{UN1} = -11555.14 \cdot kN$$

$$\Sigma M_{Vwater.UN1} := H_{1.UN1} \cdot H_{1.UN1.loc} + H_{2.UN1} \cdot H_{2.UN1.loc} + U_{UN1} \cdot U_{UN1.loc} = -115906.58 \cdot kN \cdot m$$

SOIL LOADS

UN1 CASE

Equivalent Fluid Pressure (EFP):

At rest lateral pressure coefficient: $K_{o.UN1} := 1 - \sin(\phi_{backfill}) = 0.658$ (Section 5.3, Design Criteria)

Headwater Pier Footing Unit Width: $W_{hwas.UN1} = 15.00\,m$

Tailwater Pier Footing Unit Width: $W_{tw.UN1} = 15.00\,m$

Pier Footing Thickness at Heel: $t_{hf.UN1} := TOC_{as} - BOK_{elev} = 6.00\,m$

Fixed Crest Footing Thickness at Toe: $t_{tf.UN1} := TOC_{pfe} - BOF_{elev} = 2.00\,m$

Lateral Driving Force (Headwater Side - at rest condition)

At-Rest Soil Load:

$$E_{act.UN1} := \frac{\left(K_{o.UN1} \cdot t_{hf.UN1}^{\;2}\right)}{2} \cdot \left(\gamma_r - \gamma_w\right) \cdot W_{hwas.UN1} \cdot -1 = -2165.61 \cdot kN$$

Acting at:

$$E_{act.UN1.loc} := \frac{t_{hf.UN1}}{3} = 2.00\,m$$

Lateral Resisting Force (Tailwater Side - at rest condition)

At-rest Soil Load:

$$E_{pass.UN1} := \frac{\left(K_{o.UN1} \cdot t_{tf.UN1}^{\;2}\right)}{2} \cdot \left(\gamma_r - \gamma_w\right) \cdot W_{tw.UN1} = 240.62 \cdot kN$$

Acting at:

$$E_{pass.UN1.loc} := \frac{t_{tf.UN1}}{3} = 0.67\,m$$

$$\Sigma H_{soil.UN1} := E_{act.UN1} + E_{pass.UN1} = -1924.99 \cdot kN$$

$$\Sigma M_{soil.UN1} := E_{act.UN1} \cdot E_{act.UN1.loc} + E_{pass.UN1} \cdot E_{pass.UN1.loc} = -4170.8 \cdot kN \cdot m$$

ICE / IMPACT LOADS (ASSUME NO ICE LOADING ON TAILWATER SIDE)

Static Ice load on Gates:

$$I_{G.UN1} := \begin{cases} 00\,\dfrac{kN}{m} & \text{if } TOP_{rg.UN1} \le TOC_{as} \\ 0\,\dfrac{kN}{m} & \text{if } TOP_{rg.UN1} > TOC_{as} \end{cases} = 0 \cdot \frac{kN}{m}$$

(Section 7.7, Design Criteria)

Ice Loading Unit Width on Reg. Gate: $W_{rg.UN1} := 15.00m$ (Input value for load case)

Total Ice Load on Structure: $I_{UN1} := -\left(I_{G.UN1} \cdot W_{rg.UN1}\right) = 0 \cdot kN$

Apply Ice load at: $I_{UN1.loc} := \left(TOP_{rg.UN1} - BOF_{elev} - 0.30m\right) = 3.70\,m$

$$\Sigma H_{I.UN1} := I_{UN1} = 0 \cdot kN$$

$$\Sigma M_{I.UN1} := I_{UN1} \cdot I_{UN1.loc} = 0 \cdot kN \cdot m$$

(SEISMIC LOAD (NOT APPLICABLE FOR THIS LOAD CASE)

UN1 CASE

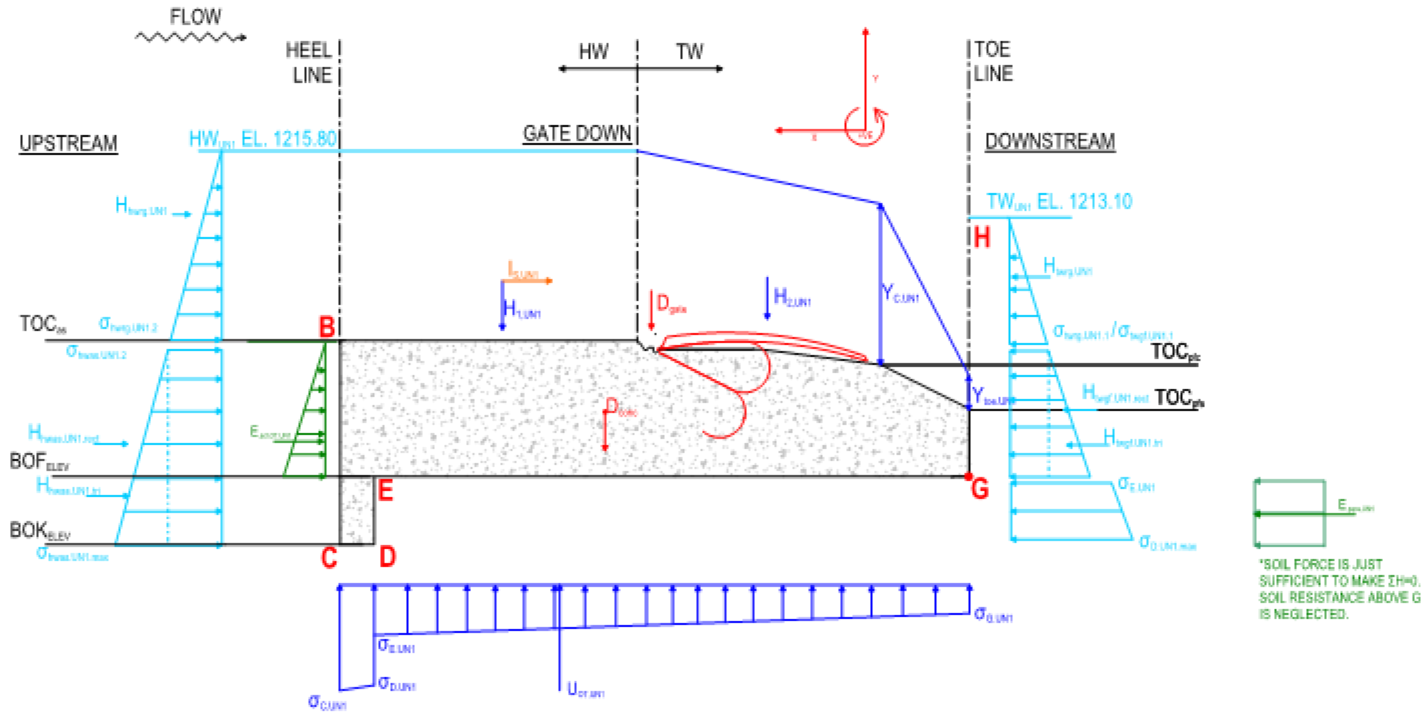
MONOLITH OVERTURNING STABILITY ANALYSIS

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stability of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1 $Ratio_{OT.UN1.min} := 0.33$



Uplift Loads for Overturning Stability Analysis

Line of Creep:

Change in Water Head: $\Delta_{h.UN1} := HW_{UN1} - TW_{UN1} = 2.7\ m$

Length from Point C to Point G: $L_{CG} = 18.61\ m$

Length from Various Points to Points: $L_{CD} = 1\ m$ $L_{DE} = 2\ m$ $L_{EG} = 17.5\ m$

$L_{GH.UN1} := TW_{UN1} - BOF_{elev} = 7.1\ m$

Length from Point C, D, E to G: $L_{CDEG} = 20.5\ m$ $L_{CDE} = 3\ m$

Water Pressure at Point C: $\sigma_{C.UN1} := \sigma_{hwas.UN1.2} = -115.76 \cdot kPa$

Water Pressure at Point G: $\sigma_{G.UN1} := \sigma_{twtoe.UN1} \cdot -1 = -69.65 \cdot kPa$

Water Pressure at Point D: $\sigma_{D.UN1} := -\gamma_w \cdot \left[\left(HW_{UN1} - BOK_{elev} \right) - \frac{\Delta_{h.UN1} \cdot L_{CD}}{L_{CDEG}} \right] = -114.47 \cdot kPa$

Water Pressure at Point E: $\sigma_{E.UN1} := -\gamma_w \cdot \left[\left(HW_{UN1} - BOF_{elev} \right) - \frac{\Delta_{h.UN1} \cdot L_{CDE}}{L_{CDEG}} \right] = -92.26 \cdot kPa$

Uplift for Overturning Analysis on Bottom of Key: $U_{OT.UN1.key} := \frac{\sigma_{C.UN1} + \sigma_{D.UN1}}{2} \cdot L_{CD} \cdot W_b = -1726.68 \cdot kN$

Acting at: $U_{OT.UN1.key.loc} := \frac{L_{CD} \cdot \left(2 \cdot \sigma_{C.UN1} + \sigma_{D.UN1} \right)}{3 \left(\sigma_{C.UN1} + \sigma_{D.UN1} \right)} + L_{EG} = 18\ m$

UN1 CASE

Uplift for Overturning Analysis on Bottom of Footing:

$$U_{OT.UN1.ftg} := \frac{\sigma_{E.UN1} + \sigma_{G.UN1}}{2} \cdot L_{EG} \cdot W_b = -21251.06 \cdot kN$$

Acting at:

$$U_{OT.UN1.ftg.loc} := \frac{L_{EG} \cdot \left(\sigma_{G.UN1} + 2 \cdot \sigma_{E.UN1}\right)}{3\left(\sigma_{G.UN1} + \sigma_{E.UN1}\right)} = 9.16\,m$$

Uplift Load for Overturning Analysis:

$$U_{OT.UN1} := U_{OT.UN1.key} + U_{OT.UN1.ftg} = -22977.74 \cdot kN$$

Uplift Load Acting from Toe:

$$U_{OT.UN1.loc} := \frac{U_{OT.UN1.key} \cdot U_{OT.UN1.key.loc} + U_{OT.UN1.ftg} \cdot U_{OT.UN1.ftg.loc}}{U_{OT.UN1}} = 9.82\,m$$

<u>All Vertical Loads Applicable to Overturning Stability Analysis</u>

Total Concrete Dead Loads:	$D_{conc} = 24618.6 \cdot kN$	at:	$X_{conc.loc} = 10.06\,m$
Dead Load of Gate:	$D_{Gate} = 210.0 \cdot kN$		$X_{gate} = 6.60\,m$
Water Weight (HW) on Apron Slab:	$H_{1.UN1} = 7467.9 \cdot kN$		$H_{1.UN1.loc} = 14.13\,m$
Water Weight (TW) on Gate Footing:	$H_{2.UN1} = 6702.5 \cdot kN$		$H_{2.UN1.loc} = 5.42\,m$
Uplift Load for Overturning Analysis:	$U_{OT.UN1} = -22977.74 \cdot kN$		$U_{OT.UN1.loc} = 9.82 \cdot m$

Sum of All Overturning Analysis Vertical Load:

$$\Sigma V_{UN1.OT} := D_{conc} + D_{Gate} + H_{1.UN1} + H_{2.UN1} + U_{OT.UN1} = 16021.22 \cdot kN$$

Sum of All Overturning Analysis Vertical Load Moments:

$$\Sigma M_{V.UN1.OT} := D_{conc} \cdot X_{conc.loc} + D_{Gate} \cdot X_{gate} + H_{1.UN1} \cdot H_{1.UN1.loc} + H_{2.UN1} \cdot H_{2.UN1.loc} + U_{OT.UN1} \cdot U_{OT.UN1.loc} = 165038.86 \cdot kN \cdot m$$

<u>Lateral Tailwater Loads for Overturning Stability Analysis</u>

TW Lateral Load on Gate Footing (No Key - Overturning Values Adjusted):

$$H_{twgf.UN1} := H_{twgf.UN1.tri} + H_{twgf.UN1.rect} = 3001.86 \cdot kN$$

Acting at:

$$H_{twgf.UN1.loc} := \frac{\frac{h_{toe}}{3} \cdot H_{twgf.UN1.tri} + \frac{h_{toe}}{2} \cdot H_{twgf.UN1.rect}}{H_{twgf.UN1}} = 1.74\,m$$

Horizontal Tailwater Pressure Top of Key (Overturning Analysis):

$$\sigma_{twtk.OT.UN1} := \sigma_{E.UN1} \cdot -1 = 92.26 \cdot kPa$$

Horizontal Tailwater Pressure Bottom of Key (Overturning Analysis):

$$\sigma_{twbk.OT.UN1} := \sigma_{D.UN1} \cdot -1 = 114.47 \cdot kPa$$

Triangular Distribution Unit Load Acting at Key:

$$H_{twbk.OT.UN1.tri} := \frac{\left(\sigma_{twbk.OT.UN1} - \sigma_{twtk.OT.UN1}\right)}{2} \cdot d_{key} \cdot W_{tw.UN1} = 333.06 \cdot kN$$

Triangular Distribution Unit Load Acting at Key:

$$H_{twbk.OT.UN1.rect} := \sigma_{twtk.OT.UN1} \cdot d_{key} \cdot W_{tw.UN1} = 2767.86 \cdot kN$$

Total Horizontal Tailwater Load on Key (Overturning Values Adjusted):

$$H_{twkey.OT.UN1} := H_{twbk.OT.UN1.tri} + H_{twbk.OT.UN1.rect} = 3100.92 \cdot kN$$

Acting at:

$$H_{twkey.OT.UN1.loc} := \frac{H_{twbk.OT.UN1.tri} \cdot \frac{-2 \cdot d_{key}}{3} + H_{twbk.OT.UN1.rect} \cdot \frac{-d_{key}}{2}}{H_{twkey.OT.UN1}} = -1.04 \cdot m$$

UN1 CASE

Lateral Driving Earth Loads for Overturning Stability Analysis (at rest condition)

Depth of Driving Soil Loads (to top of key): $h_{E.OT.UN1} := TOC_{as} - BOF_{elev} = 4\,m$

At-Rest Soil Load: $E_{act.OT.UN1} := \frac{\left(K_{o.UN1} \cdot h_{E.OT.UN1}^{2}\right)}{2} \cdot \left(\gamma_r - \gamma_w\right) \cdot W_{hwas.UN1} \cdot -1 = -962.49 \cdot kN$

At Rest- Soil Load Acting from Toe: $E_{act.OT.UN1.loc} := \frac{h_{E.OT.UN1}}{3} = 1.33\,m$

All Lateral Loads Appliable to Overturning Stability Analysis

HW Lateral Load on Approach Slab:	$H_{hwas.UN1} = -7769.5 \cdot kN$	$H_{hwas.UN1.loc} = 0.66\,m$
HW Lateral Load on Reg. Gate:	$H_{hwrg.UN1} = 0.0 \cdot kN$	$H_{hwrg.UN1.loc} = 4.00\,m$
TW Lateral Load on Reg. Gate:	$H_{twrg.UN1} = 0.0 \cdot kN$	$H_{twrg.UN1.loc} = 4.00\,m$
TW Lateral Load on Gate Footing (No Key - Overturning Values Adjusted):	$H_{twgf.UN1} = 3001.86 \cdot kN$	$H_{twgf.UN1.loc} = 1.74\,m$
TW Lateral Load on Key:	$H_{twkey.OT.UN1} = 3100.92 \cdot kN$	$H_{twkey.OT.UN1.loc} = -1.04\,m$
Ice / Impact Load:	$I_{UN1} = 0.0 \cdot kN$	$I_{UN1.loc} = 3.70\,m$
Lateral Soil Load (driving):	$E_{act.OT.UN1} = -962.5 \cdot kN$	$E_{act.OT.UN1.loc} = 1.33\,m$

Resisting Lateral Soil Load as required to produce horizontal equilibrium:

$$E_{pas.OT.UN1} := -\left(H_{hwas.UN1} + H_{hwrg.UN1} + H_{twrg.UN1} + H_{twgf.UN1} + H_{twkey.OT.UN1} + I_{UN1} + E_{act.OT.UN1}\right) = 2629.24 \cdot kN$$

Acting at:

$$E_{pas.OT.UN1.loc} := -1 \cdot \frac{d_{key}}{2} = -1\,m$$

Sum of All Overturning Analysis Horizontal Load (ΣH=0):

$$\Sigma H_{UN1.OT} := H_{hwas.UN1} + H_{hwrg.UN1} + H_{twrg.UN1} + H_{twgf.UN1} + H_{twkey.OT.UN1} + I_{UN1} + E_{act.OT.UN1} + E_{pas.OT.UN1} = 0 \cdot kN$$

Sum of All Overturning Analysis Horizontal Load Moments:

$$\begin{aligned}\Sigma M_{H.UN1.OT} := {} & H_{hwas.UN1} \cdot H_{hwas.UN1.loc} + H_{hwrg.UN1} \cdot H_{hwrg.UN1.loc} + H_{twrg.UN1} \cdot H_{twrg.UN1.loc} \cdots = -7026.4 \cdot kN \cdot m \\ & + H_{twgf.UN1} \cdot H_{twgf.UN1.loc} + H_{twkey.OT.UN1} \cdot H_{twkey.OT.UN1.loc} + I_{UN1} \cdot I_{UN1.loc} \cdots \\ & + E_{act.OT.UN1} \cdot E_{act.OT.UN1.loc} + E_{pas.OT.UN1} \cdot E_{pas.OT.UN1.loc}\end{aligned}$$

Overturning Stability Analysis

Lateral Headwater Pressure at Top of Reg. Crest Gate: (Load at HW Elevation On Reg. Crest Gate if HW is below TOG_{rg})

$$\sigma_{hwrg.UN2.2} := \begin{cases} (0.0kPa) & \text{if } A1_{UN2} \\ 0.0kPa & \text{if } B1_{UN2} \\ -\left[\gamma_w \cdot (HW_{UN2} - TOP_{rg.UN2})\right] & \text{if } C1_{UN2} \end{cases} = 0.0 \cdot kPa$$

Average Pressure acting on Reg. Crest Gate:

$$\sigma_{hwrg.UN2.avg} := \frac{(\sigma_{hwrg.UN2.1} + \sigma_{hwrg.UN2.2})}{2} = 0 \cdot kPa$$

Total Area of Crest Gate:

$$A_{hwrg.UN2} := \begin{cases} D_{hwrg.UN2} \cdot W_{hwrg.UN2} & \text{if } A1_{UN2} \\ D_{hwrg.UN2} \cdot W_{hwrg.UN2} & \text{if } B1_{UN2} \\ H_{rg.UN2} \cdot W_{hwrg.UN2} & \text{if } C1_{UN2} \end{cases} = 91.5 \cdot m^2$$

Total Horizontal Headwater Load on Reg. Crest Gate: $H_{hwrg.UN2} := \sigma_{hwrg.UN2.avg} \cdot A_{hwrg.UN2} = 0.0 \cdot kN$

Apply Total Reg. Crest Gate Headwater Load at:

$$H_{hwrg.UN2.loc} := \begin{cases} (TOC_{as} - BOF_{elev}) & \text{if } A1_{UN2} \\ \left[\frac{(HW_{UN2} - TOC_{as})}{3} + (TOC_{as} - BOF_{elev})\right] & \text{if } B1_{UN2} \\ \left[\frac{\sigma_{hwrg.UN2.2} \cdot A_{hwrg.UN2} \cdot \frac{(H_{rg.UN2})}{2} + \frac{(\sigma_{hwrg.UN2.1} - \sigma_{hwrg.UN2.2})}{2} \cdot A_{hwrg.UN2} \cdot \frac{(H_{rg.UN2})}{3}}{\sigma_{hwrg.UN2.2} \cdot A_{hwrg.UN2} + \frac{(\sigma_{hwrg.UN2.1} - \sigma_{hwrg.UN2.2})}{2} \cdot A_{hwrg.UN2}} \ldots \\ + (TOC_{as} - BOF_{elev})\right] & \text{if } C1_{UN2} \end{cases} = 4.0 \cdot m$$

LATERAL TAILWATER (RESISTING) Applied to Downstream Side of Reg. Crest Gate: UN2 CASE

Reg. Gate Down/Open Condition: $A2_{UN2} := TOP_{rg.UN2} \le TOC_{as}$

Reg. Crest Gate Up/Closed, with Top of Gate Higher than TW Elevation: $B2_{UN2} := TOP_{rg.UN2} \ge TW_{UN2} \wedge TOP_{rg.UN2} > TOC_{as}$

Reg. Crest Gate Up/Closed, with Top of Gate Lower than TW Elevation: $C2_{UN2} := TOP_{rg.UN2} > TOC_{as} \wedge TW_{UN2} > TOP_{rg.UN2}$

Tailwater Depth at Reg. Crest Gate: $D_{twrg.UN2} := TW_{UN2} - TOC_{as} = 3.00\,m$

Reg. Crest Gate Width: $W_{twrg.UN2} := 15.00m$

Lateral Water Load at Bottom of Reg. Crest Gate:

$$\sigma_{twrg.UN2.1} := \left| \begin{array}{ll} (0.0kPa) & \text{if } A2_{UN2} \\ (\gamma_w \cdot D_{twrg.UN2}) & \text{if } B2_{UN2} \\ (\gamma_w \cdot D_{twrg.UN2}) & \text{if } C2_{UN2} \end{array} \right. = 0.0 \cdot kPa$$

Lateral Water Load at Top of Reg. Crest Gate:
(Load at TW Elevation On Reg. Crest Gate if TW is below TOG_{rg})

$$\sigma_{twrg.UN2.2} := \left| \begin{array}{ll} (0.0kPa) & \text{if } A2_{UN2} \\ 0.0kPa & \text{if } B2_{UN2} \\ \left[\gamma_w \cdot (TW_{UN2} - TOP_{rg.UN2})\right] & \text{if } C2_{UN2} \end{array} \right. = 0.0 \cdot kPa$$

Average Pressure acting on Reg. Crest Gate:

$$\sigma_{twrg.UN2.avg} := \frac{(\sigma_{twrg.UN2.1} + \sigma_{twrg.UN2.2})}{2} = 0 \cdot kPa$$

Total Area water acting on Crest Gate:

$$A_{twrg.UN2} := \left| \begin{array}{ll} D_{twrg.UN2} \cdot W_{twrg.UN2} & \text{if } A2_{UN2} \\ D_{twrg.UN2} \cdot W_{twrg.UN2} & \text{if } B2_{UN2} \\ H_{rg.UN2} \cdot W_{twrg.UN2} & \text{if } C2_{UN2} \end{array} \right. = 45 \cdot m^2$$

Total Horizontal Tailwater Load on Reg. Crest Gate: $H_{twrg.UN2} := \sigma_{twrg.UN2.avg} \cdot A_{twrg.UN2} = 0.0 \cdot kN$

Apply Total Horiz. TW Load on Reg. Gate at:

$$H_{twrg.UN2.loc} := \left| \begin{array}{ll} (TOC_{as} - BOF_{elev}) & \text{if } A2_{UN2} \\ \left[\frac{(TW_{UN2} - TOC_{as})}{3} + (TOC_{as} - BOF_{elev})\right] & \text{if } B2_{UN2} \\ \left[\frac{\sigma_{twrg.UN2.2} \cdot A_{twrg.UN2} \cdot \frac{(H_{rg.UN2})}{2} + \frac{(\sigma_{twrg.UN2.1} - \sigma_{twrg.UN2.2})}{2} \cdot A_{twrg.UN2} \cdot \frac{(H_{rg.UN2})}{3}}{\sigma_{twrg.UN2.2} \cdot A_{twrg.UN2} + \frac{(\sigma_{twrg.UN2.1} - \sigma_{twrg.UN2.2})}{2} \cdot A_{twrg.UN2}} \ldots \\ + (TOC_{as} - BOF_{elev})\right] & \text{if } C2_{UN2} \end{array} \right. = 4.0 \cdot m$$

TAILWATER (RESISTING) Applied to Concrete Structure:

Tailwater Depth At top of Gate Base Footing Elevation: $D_{twgf.UN2} := TW_{UN2} - TOC_{as} = 3.00\,m$

Water Depth at bottom of Gate Base Footing: $D_{twtoe.UN2} := TW_{UN2} - BOF_{elev} = 7.00\,m$

Footing Thickness at Toe $h_{toe} = 4\,m$

Unit Width of D/S face of crest for application of Tailwater Load: $W_{tw.UN2} := W_b = 15.00\,m$

Tailwater Pressure At Top of Gate Footing: $\sigma_{twgf.UN2} := \left(\gamma_w \cdot D_{twgf.UN2}\right) = 29.43 \cdot kPa$

Tailwater Line Load At Bottom of Gate Footing: $\sigma_{twtoe.UN2} := \left(\gamma_w \cdot D_{twtoe.UN2}\right) = 68.67 \cdot kPa$

Triangular Distribution Unit Load on Gate Footing Base $H_{twgf.UN2.tri} := \left(\frac{\sigma_{twtoe.UN2} - \sigma_{twgf.UN2}}{2}\right) \cdot \left(h_{toe} \cdot W_{tw.UN2}\right) = 1177.2 \cdot kN$

Rectangular Distribution Unit Load on Gate Footing Base: $H_{twgf.UN2.rect} := \sigma_{twgf.UN2} \cdot \left(h_{toe} \cdot W_{tw.UN2}\right) = 1765.8 \cdot kN$

Tailwater Pressure At Bottom of Sliding Failure Plane: $\sigma_{twbk.UN2} := \left(HW_{UN2} - BOK_{elev}\right) \cdot \gamma_w = 118.7 \cdot kPa$

Triangular Distribution Unit Load Below Footing: $H_{twbk.UN2.tri} := \frac{\left(\sigma_{twbk.UN2} - \sigma_{twtoe.UN2}\right)}{2} \cdot d_{key} \cdot W_{tw.UN2} = 750.46 \cdot kN$

Rectangular Distribution Load Below Footing Base: $H_{twbk.UN2.rect} := \sigma_{twtoe.UN2} \cdot d_{key} \cdot W_{tw.UN2} = 2060.1 \cdot kN$

Total Horizontal Tailwater Load on Gate Footing (including key):

$$H_{twgk.UN2} := H_{twgf.UN2.tri} + H_{twgf.UN2.rect} + H_{twbk.UN2.tri} + H_{twbk.UN2.rect} = 5753.56 \cdot kN$$

Apply Total Gate Footing Tailwater Load at:

$$H_{twgk.UN2.loc} := \frac{\left[H_{twgf.UN2.rect} \cdot \frac{\left(h_{toe}\right)}{2} + H_{twgf.UN2.tri} \cdot \frac{\left(h_{toe}\right)}{3} + H_{twbk.UN2.tri} \cdot \left(-d_{key} \cdot \frac{2}{3}\right) + H_{twbk.UN2.rect} \cdot \left(\frac{-d_{key}}{2}\right)\right]}{H_{twgf.UN2.tri} + H_{twgf.UN2.rect} + H_{twbk.UN2.tri} + H_{twbk.UN2.rect}} = 0.35\,m$$

SUMMATION OF LATERAL WATER LOADS:

$$\Sigma H_{Water.UN2} := H_{hwas.UN2} + H_{hwrg.UN2} + H_{twgk.UN2} + H_{twrg.UN2} = -2280.82 \cdot kN$$

$$\Sigma M_{Hwater.UN2} := H_{hwas.UN2} \cdot H_{hwas.UN2.loc} + H_{hwrg.UN2} \cdot H_{hwrg.UN2.loc} \cdots + H_{twgk.UN2} \cdot H_{twgk.UN2.loc} + H_{twrg.UN2} \cdot H_{twrg.UN2.loc} = -3345.21 \cdot kN \cdot m$$

VERTICAL WATER LOADS

UN2 CASE

HEADWATER:

Water Depth on top of Approach Slab: $d_{hw.UN2} := HW_{UN2} - TOC_{as} = 6.10\,m$

Length of Approach Slab: $L_{as} = 8.75\,m$

Width of Approach Slab: $w_{as} = 15.00\,m$

Vertical Water Weight (H1) on Approach Slab: $H_{1.UN2} := \left(w_{as} \cdot d_{hw.UN2} \cdot L_{as}\right) \cdot \gamma_w = 7854.1 \cdot kN$

Moment Arm for Application of Water Weight (H1) from toe: $H_{1.UN2.loc} := L_b - \frac{L_{as}}{2} = 14.13\,m$

TAILWATER:

Trapezoid Volume Above Gate Footing from Approach Slab to Crest: $V_{asc.UN2} := \left(L_{gf} - L_{gfc}\right) W_b \frac{d_{hw.UN2} + Y_{C.UN2}}{2} = 582.9 \cdot m^3$

Trapezoid Volume Above Gate Footing Crest to End of Gate Footing: $V_{gfc.UN2} := \left(L_{gfc} \cdot W_b\right) \frac{Y_{C.UN2} + Y_{TOE.UN2}}{2} = 131.43 \cdot m^3$

Load Above Gate Footing from Approach Slab to Crest: $H_{2.UN2.asc} := V_{asc.UN2} \cdot \gamma_w = 5718.29 \cdot kN$

Load Above Gate Footing from Crest to End: $H_{2.UN2.gfc} := V_{gfc.UN2} \cdot \gamma_w = 1289.33 \cdot kN$

Load Acting Above Gate Footing from Crest to End: $H_{2.UN2.gfc.loc} := \frac{\left(L_{gfc}\right) \cdot \left(2 \cdot Y_{C.UN2} + Y_{TOE.UN2}\right)}{3 \cdot \left(Y_{C.UN2} + Y_{TOE.UN2}\right)} = 1.48\,m$

Vertical Water Weight (H2) on Gate Footing: $H_{2.UN2} := H_{2.UN2.asc} + H_{2.UN2.gfc} = 7007.61 \cdot kN$

Moment Arm for Application of Water Weight (H2) from toe: $H_{2.UN2.loc} := \frac{H_{2.UN2.asc} \cdot H_{2.UN2.asc.loc} + H_{2.UN2.gfc} \cdot H_{2.UN2.gfc.loc}}{H_{2.UN2}} = 5.43\,m$

UPLIFT AT INCLINE SLIDING PLANE

UN2 CASE

Uplift pressure at U/S Face (heel): $U_{HW.UN2} := D_{hwas.UN2} \cdot \gamma_w = 118.7 \cdot \frac{kN}{m^2}$

Uplift pressure at D/S Face Stilling Basin: $U_{TW.UN2} := \left(D_{twtoe.UN2}\right) \cdot \gamma_w = 68.67 \cdot \frac{kN}{m^2}$

Length from U/S of Gate Structure to D/S of Stilling Basin: $L_{overall} = 18.50\,m$

Difference between Uplift pressure at HW and TW: $U_{diff.UN2} := U_{HW.UN2} - U_{TW.UN2} = 50.03 \cdot \frac{kN}{m^2}$

Slope of difference between between Uplift pressure at HW and TW: $U_{slope.UN2} := \frac{U_{diff.UN2}}{L_{overall}} = 2.70 \cdot \frac{kN}{m^2 \cdot m}$

Tailwater Pressure at toe of Gate Structure: $U_{press.toe.gs.UN2} := U_{TW.UN2} + \left(L_{overall} - L_b\right) \cdot U_{slope.UN2} = 68.67 \cdot \frac{kN}{m^2}$

Uniform uplift force UA Under Gate Structure due to TW (rectangle): $U_{A.UN2} := U_{press.toe.gs.UN2} \cdot L_b \cdot W_b \cdot -1 = -19055.92 \cdot kN$

Moment Arm from Toe of Gate Structure for Uplift UA: $L_{A.UN2} := \left(\frac{L_b}{2}\right) = 9.25\,m$

Linearly Decreasing Uplift Force UN2B Under Gate Structure due to HW-TW Differential (triangle): $U_{B.UN2} := \frac{1}{2} \cdot \left(U_{HW.UN2} - U_{press.toe.gs.UN2}\right) \cdot L_b \cdot W_b \cdot -1 = -6941.8 \cdot kN$

Moment Arm from Toe of Gate Structure for Uplift UB: $L_{B.UN2} := \frac{2}{3} \cdot L_b = 12.33\,m$

Total Resultant Uplift force: $U_{UN2} := U_{A.UN2} + U_{B.UN2} = -25997.73 \cdot kN$

Resultant Location from Toe: $U_{UN2.loc} := \frac{\left(U_{A.UN2} \cdot L_{A.UN2} + U_{B.UN2} \cdot L_{B.UN2}\right)}{\left(U_{A.UN2} + U_{B.UN2}\right)} = 10.07\,m$

$\Sigma V_{water.UN2} := H_{1.UN2} + H_{2.UN2} + U_{UN2} = -11135.98 \cdot kN$

$\Sigma M_{Vwater.UN2} := H_{1.UN2} \cdot H_{1.UN2.loc} + H_{2.UN2} \cdot H_{2.UN2.loc} + U_{UN2} \cdot U_{UN2.loc} = -112890.84 \cdot kN \cdot m$

SOIL LOADS

UN2 CASE

Equivalent Fluid Pressure (EFP):

At rest lateral pressure coefficient: $K_{o.UN2} := 1 - \sin(\phi_{backfill}) = 0.658$ (Section 5.3, Design Criteria)

Headwater Pier Footing Unit Width: $W_{hwas.UN2} = 15.00\,m$

Tailwater Pier Footing Unit Width: $W_{tw.UN2} = 15.00\,m$

Pier Footing Thickness at Heel: $t_{hf.UN2} := TOC_{as} - BOK_{elev} = 6.00\,m$

Fixed Crest Footing Thickness at Toe: $t_{tf.UN2} := TOC_{pfe} - BOF_{elev} = 2.00\,m$

Lateral Driving Force (Headwater Side - at rest condition)

At-Rest Soil Load:

$$E_{act.UN2} := \frac{\left(K_{o.UN2} \cdot t_{hf.UN2}^{\;2}\right)}{2} \cdot (\gamma_r - \gamma_w) \cdot W_{hwas.UN2} \cdot -1 = -2165.61 \cdot kN$$

Acting at:

$$E_{act.UN2.loc} := \frac{t_{hf.UN2}}{3} = 2.00\,m$$

Lateral Resisting Force (Tailwater Side - at rest condition)

At-rest Soil Load:

$$E_{pass.UN2} := \frac{\left(K_{o.UN2} \cdot t_{tf.UN2}^{\;2}\right)}{2} \cdot (\gamma_r - \gamma_w) \cdot W_{tw.UN2} = 240.62 \cdot kN$$

Acting at:

$$E_{pass.UN2.loc} := \frac{t_{tf.UN2}}{3} = 0.67\,m$$

$$\Sigma H_{soil.UN2} := E_{act.UN2} + E_{pass.UN2} = -1924.99 \cdot kN$$

$$\Sigma M_{soil.UN2} := E_{act.UN2} \cdot E_{act.UN2.loc} + E_{pass.UN2} \cdot E_{pass.UN2.loc} = -4170.8 \cdot kN \cdot m$$

ICE / IMPACT LOADS (ASSUME NO ICE LOADING ON TAILWATER SIDE)

Static Ice load on Gates:

$$I_{G.UN2} := \begin{cases} 00\,\frac{kN}{m} & \text{if } TOP_{rg.UN2} \le TOC_{as} \\ 0\,\frac{kN}{m} & \text{if } TOP_{rg.UN2} > TOC_{as} \end{cases} = 0 \cdot \frac{kN}{m}$$

(Section 7.7, Design Criteria)

Ice Loading Unit Width on Reg. Gate: $W_{rg.UN2} := 15.00\,m$ (Input value for load case)

Total Ice Load on Structure: $I_{UN2} := -\left(I_{G.UN2} \cdot W_{rg.UN2}\right) = 0 \cdot kN$

Apply Ice load at: $I_{UN2.loc} := \left(TOP_{rg.UN2} - BOF_{elev} - 0.30m\right) = 3.70\,m$

$$\Sigma H_{I.UN2} := I_{UN2} = 0 \cdot kN$$

$$\Sigma M_{I.UN2} := I_{UN1} \cdot I_{UN1.loc} = 0 \cdot kN \cdot m$$

(SEISMIC LOAD (NOT APPLICABLE FOR THIS LOAD CASE)

UN2 CASE

SUMMARY OF LOADS

	Loads	Moment Arm
Dead load of Concrete Structure:	$D_{conc} = 24618.6 \cdot kN$	$X_{conc.loc} = 10.06\,m$
Obermyer Gate Weight:	$D_{Gate} = 210.0 \cdot kN$	$X_{gate} = 6.60\,m$
HW Lateral Load on Approach Slab:	$H_{hwas.UN2} = -8034.4 \cdot kN$	$H_{hwas.UN2.loc} = 0.67\,m$
HW Lateral Load on Reg. Gate:	$H_{hwrg.UN2} = 0.0 \cdot kN$	$H_{hwrg.UN2.loc} = 4.00\,m$
TW Lateral Load on Gate Footing (Including Key - Sliding Check Loads):	$H_{twgk.UN2} = 5753.56 \cdot kN$	$H_{twgk.UN2.loc} = 0.35\,m$

UN2 CASE

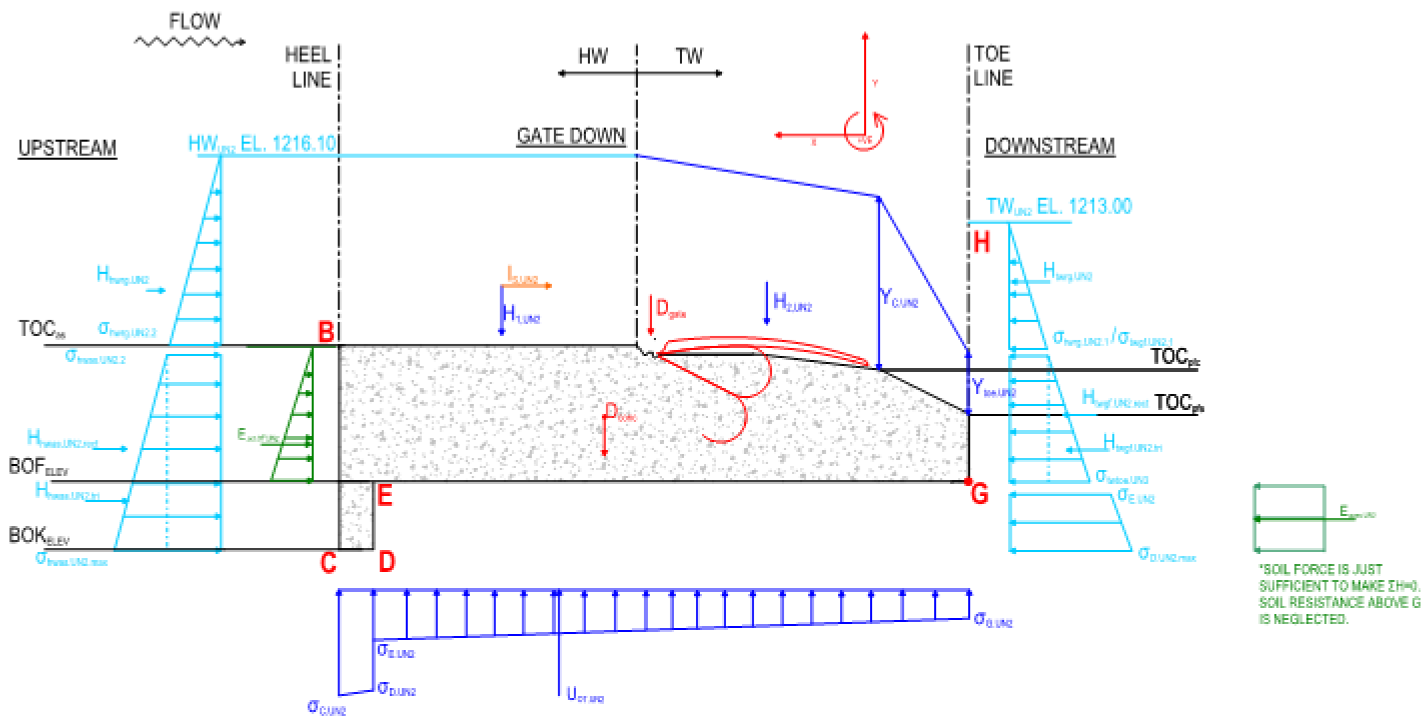
MONOLITH OVERTURNING STABILITY ANALYSIS

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stability of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1 $Ratio_{OT.UN2.min} := 0.33$



Uplift Loads for Overturning Stability Analysis

Line of Creep:

Change in Water Head: $\Delta_{h.UN2} := HW_{UN2} - TW_{UN2} = 3.1\ m$

Length from Point C to Point G: $L_{CG} = 18.61\ m$

Length from Various Points to Points: $L_{CD} = 1\ m$ $L_{DE} = 2\ m$ $L_{EG} = 17.5\ m$

$L_{GH.UN2} := TW_{UN2} - BOF_{elev} = 7\ m$

Length from Point C, D, E to G: $L_{CDEG} = 20.5\ m$ $L_{CDE} = 3\ m$

Water Pressure at Point C: $\sigma_{C.UN2} := \sigma_{hwas.UN2.2} = -118.7 \cdot kPa$

Water Pressure at Point G: $\sigma_{G.UN2} := \sigma_{twtoe.UN2} \cdot -1 = -68.67 \cdot kPa$

Water Pressure at Point D:
$$\sigma_{D.UN2} := -\gamma_w \cdot \left[\left(HW_{UN2} - BOK_{elev} \right) - \frac{\Delta_{h.UN2} \cdot L_{CD}}{L_{CDEG}} \right] = -117.22 \cdot kPa$$

Water Pressure at Point E:
$$\sigma_{E.UN2} := -\gamma_w \cdot \left[\left(HW_{UN2} - BOF_{elev} \right) - \frac{\Delta_{h.UN2} \cdot L_{CDE}}{L_{CDEG}} \right] = -94.63 \cdot kPa$$

Uplift for Overturning Analysis on Bottom of Key:
$$U_{OT.UN2.key} := \frac{\sigma_{C.UN2} + \sigma_{D.UN2}}{2} \cdot L_{CD} \cdot W_b = -1769.39 \cdot kN$$

Acting at:
$$U_{OT.UN2.key.loc} := \frac{L_{CD} \cdot \left(2 \cdot \sigma_{C.UN2} + \sigma_{D.UN2} \right)}{3 \left(\sigma_{C.UN2} + \sigma_{D.UN2} \right)} + L_{EG} = 18\ m$$

UN2 CASE

Uplift for Overturning Analysis on Bottom of Footing:

$$U_{OT.UN2.ftg} := \frac{\sigma_{E.UN2} + \sigma_{G.UN2}}{2} \cdot L_{EG} \cdot W_b = -21433.21 \cdot kN$$

Acting at:

$$U_{OT.UN2.ftg.loc} := \frac{L_{EG} \cdot \left(\sigma_{G.UN2} + 2 \cdot \sigma_{E.UN2}\right)}{3\left(\sigma_{G.UN2} + \sigma_{E.UN2}\right)} = 9.21\,m$$

Uplift Load for Overturning Analysis:

$$U_{OT.UN2} := U_{OT.UN2.key} + U_{OT.UN2.ftg} = -23202.59 \cdot kN$$

Uplift Load Acting from Toe:

$$U_{OT.UN2.loc} := \frac{U_{OT.UN2.key} \cdot U_{OT.UN2.key.loc} + U_{OT.UN2.ftg} \cdot U_{OT.UN2.ftg.loc}}{U_{OT.UN2}} = 9.88\,m$$

All Vertical Loads Applicable to Overturning Stability Analysis

Total Concrete Dead Loads:	$D_{conc} = 24618.6 \cdot kN$	at:	$X_{conc.loc} = 10.06\,m$
Dead Load of Gate:	$D_{Gate} = 210.0 \cdot kN$		$X_{gate} = 6.60\,m$
Water Weight (HW) on Apron Slab:	$H_{1.UN2} = 7854.1 \cdot kN$		$H_{1.UN2.loc} = 14.13\,m$
Water Weight (TW) on Gate Footing:	$H_{2.UN2} = 7007.6 \cdot kN$		$H_{2.UN2.loc} = 5.43\,m$
Uplift Load for Overturning Analysis:	$U_{OT.UN2} = -23202.59 \cdot kN$		$U_{OT.UN2.loc} = 9.88 \cdot m$

Sum of All Overturning Analysis Vertical Load:

$$\Sigma V_{UN2.OT} := D_{conc} + D_{Gate} + H_{1.UN2} + H_{2.UN2} + U_{OT.UN2} = 16487.75 \cdot kN$$

Sum of All Overturning Analysis Vertical Load Moments:

$$\Sigma M_{V.UN2.OT} := D_{conc} \cdot X_{conc.loc} + D_{Gate} \cdot X_{gate} + H_{1.UN2} \cdot H_{1.UN2.loc} + H_{2.UN2} \cdot H_{2.UN2.loc} + U_{OT.UN2} \cdot U_{OT.UN2.loc} = 168606.36 \cdot kN \cdot m$$

Lateral Tailwater Loads for Overturning Stability Analysis

TW Lateral Load on Gate Footing (No Key - Overturning Values Adjusted):

$$H_{twgf.UN2} := H_{twgf.UN2.tri} + H_{twgf.UN2.rect} = 2943 \cdot kN$$

Acting at:

$$H_{twgf.UN2.loc} := \frac{\frac{h_{toe}}{3} \cdot H_{twgf.UN2.tri} + \frac{h_{toe}}{2} \cdot H_{twgf.UN2.rect}}{H_{twgf.UN2}} = 1.73\,m$$

Horizontal Tailwater Pressure Top of Key (Overturning Analysis):

$$\sigma_{twtk.OT.UN2} := \sigma_{E.UN2} \cdot -1 = 94.63 \cdot kPa$$

Horizontal Tailwater Pressure Bottom of Key (Overturning Analysis):

$$\sigma_{twbk.OT.UN2} := \sigma_{D.UN2} \cdot -1 = 117.22 \cdot kPa$$

Triangular Distribution Unit Load Acting at Key:

$$H_{twbk.OT.UN2.tri} := \frac{\left(\sigma_{twbk.OT.UN2} - \sigma_{twtk.OT.UN2}\right)}{2} \cdot d_{key} \cdot W_{tw.UN2} = 338.8 \cdot kN$$

Triangular Distribution Unit Load Acting at Key:

$$H_{twbk.OT.UN2.rect} := \sigma_{twtk.OT.UN2} \cdot d_{key} \cdot W_{tw.UN2} = 2838.92 \cdot kN$$

Total Horizontal Tailwater Load on Key (Overturning Values Adjusted):

$$H_{twkey.OT.UN2} := H_{twbk.OT.UN2.tri} + H_{twbk.OT.UN2.rect} = 3177.72 \cdot kN$$

Acting at:

$$H_{twkey.OT.UN2.loc} := \frac{H_{twbk.OT.UN2.tri} \cdot \frac{-2 \cdot d_{key}}{3} + H_{twbk.OT.UN2.rect} \cdot \frac{-d_{key}}{2}}{H_{twkey.OT.UN2}} = -1.04 \cdot m$$

UN2 CASE

Lateral Driving Earth Loads for Overturning Stability Analysis (at rest condition)

Depth of Driving Soil Loads (to top of key): $h_{E.OT.UN2} := TOC_{as} - BOF_{elev} = 4\,m$

At-Rest Soil Load: $E_{act.OT.UN2} := \dfrac{\left(K_{o.UN2} \cdot h_{E.OT.UN2}{}^{2}\right)}{2} \cdot \left(\gamma_r - \gamma_w\right) \cdot W_{hwas.UN2} \cdot -1 = -962.49 \cdot kN$

At Rest- Soil Load Acting from Toe: $E_{act.OT.UN2.loc} := \dfrac{h_{E.OT.UN2}}{3} = 1.33\,m$

All Lateral Loads Appliable to Overturning Stability Analysis

HW Lateral Load on Approach Slab:	$H_{hwas.UN2} = -8034.4 \cdot kN$	$H_{hwas.UN2.loc} = 0.67\,m$
HW Lateral Load on Reg. Gate:	$H_{hwrg.UN2} = 0.0 \cdot kN$	$H_{hwrg.UN2.loc} = 4.00\,m$
TW Lateral Load on Reg. Gate:	$H_{twrg.UN2} = 0.0 \cdot kN$	$H_{twrg.UN2.loc} = 4.00\,m$
TW Lateral Load on Gate Footing (No Key - Overturning Values Adjusted):	$H_{twgf.UN2} = 2943 \cdot kN$	$H_{twgf.UN2.loc} = 1.73\,m$
TW Lateral Load on Key:	$H_{twkey.OT.UN2} = 3177.72 \cdot kN$	$H_{twkey.OT.UN2.loc} = -1.04\,m$
Ice / Impact Load:	$I_{UN2} = 0.0 \cdot kN$	$I_{UN2.loc} = 3.70\,m$
Lateral Soil Load (driving):	$E_{act.OT.UN2} = -962.5 \cdot kN$	$E_{act.OT.UN2.loc} = 1.33\,m$

Resisting Lateral Soil Load as required to produce horizontal equilibrium:

$$E_{pas.OT.UN2} := -\left(H_{hwas.UN2} + H_{hwrg.UN2} + H_{twrg.UN2} + H_{twgf.UN2} + H_{twkey.OT.UN2} + I_{UN2} + E_{act.OT.UN2}\right) = 2876.16 \cdot kN$$

Acting at:

$$E_{pas.OT.UN2.loc} := -1 \cdot \frac{d_{key}}{2} = -1\,m$$

Sum of All Overturning Analysis Horizontal Load (ΣH=0):

$$\Sigma H_{UN2.OT} := H_{hwas.UN2} + H_{hwrg.UN2} + H_{twrg.UN2} + H_{twgf.UN2} + H_{twkey.OT.UN2} + I_{UN2} + E_{act.OT.UN2} + E_{pas.OT.UN2} = 0 \cdot kN$$

Sum of All Overturning Analysis Horizontal Load Moments:

$$\begin{aligned}\Sigma M_{H.UN2.OT} := {} & H_{hwas.UN2} \cdot H_{hwas.UN2.loc} + H_{hwrg.UN2} \cdot H_{hwrg.UN2.loc} + H_{twrg.UN2} \cdot H_{twrg.UN2.loc} \cdots = -7734.63 \cdot kN \cdot m \\ & + H_{twgf.UN2} \cdot H_{twgf.UN2.loc} + H_{twkey.OT.UN2} \cdot H_{twkey.OT.UN2.loc} + I_{UN2} \cdot I_{UN2.loc} \cdots \\ & + E_{act.OT.UN2} \cdot E_{act.OT.UN2.loc} + E_{pas.OT.UN2} \cdot E_{pas.OT.UN2.loc}\end{aligned}$$

Overturning Stability Analysis

$\Sigma M_{UN2.OT} := \Sigma M_{V.UN2.OT} + \Sigma M_{H.UN2.OT} = 160871.72 \cdot kN \cdot m$ $\quad X_{R.UN2} := \dfrac{\Sigma M_{UN2.OT}}{\Sigma V_{UN2.OT}} = 9.76\,m$ $\quad x_{OT.UN2} := X_{R.UN2} - \dfrac{L_b}{2} = 0.51\,m$

Overturning Resultant Ratio $\quad Ratio_{OT.UN2} := \dfrac{X_{R.UN2}}{L_b} = 0.53$

$$Ratio_{OT.UN2.check} := \begin{cases} \text{"OKAY"} & \text{if } Ratio_{OT.UN2} \geq Ratio_{OT.UN2.min} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

$$x_{OT.check.UN2} := \begin{cases} \text{"OKAY"} & \text{if } \left|x_{OT.UN2}\right| \leq Kern \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

CHECK FOUNDATION BEARING CAPACITY (HORIZONTAL PLANE):

UN2 CASE

Bearing Pressure Under Toe:

$$\sigma_{ToeUN2.OT} := \frac{\Sigma V_{UN2.OT}}{L_b \cdot W_b} + \frac{\left(\Sigma V_{UN2.OT} \cdot x_{OT.UN2}\right)}{S_b} = 69.2 \cdot kPa$$

$$Bearing_{ChecktoeUN2.OT} := \begin{cases} \text{"OKAY "} & \text{if } \sigma_{ToeUN2.OT} < \sigma_{allow.UN2} \\ \text{"NG""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

Bearing Pressure Under Heel:

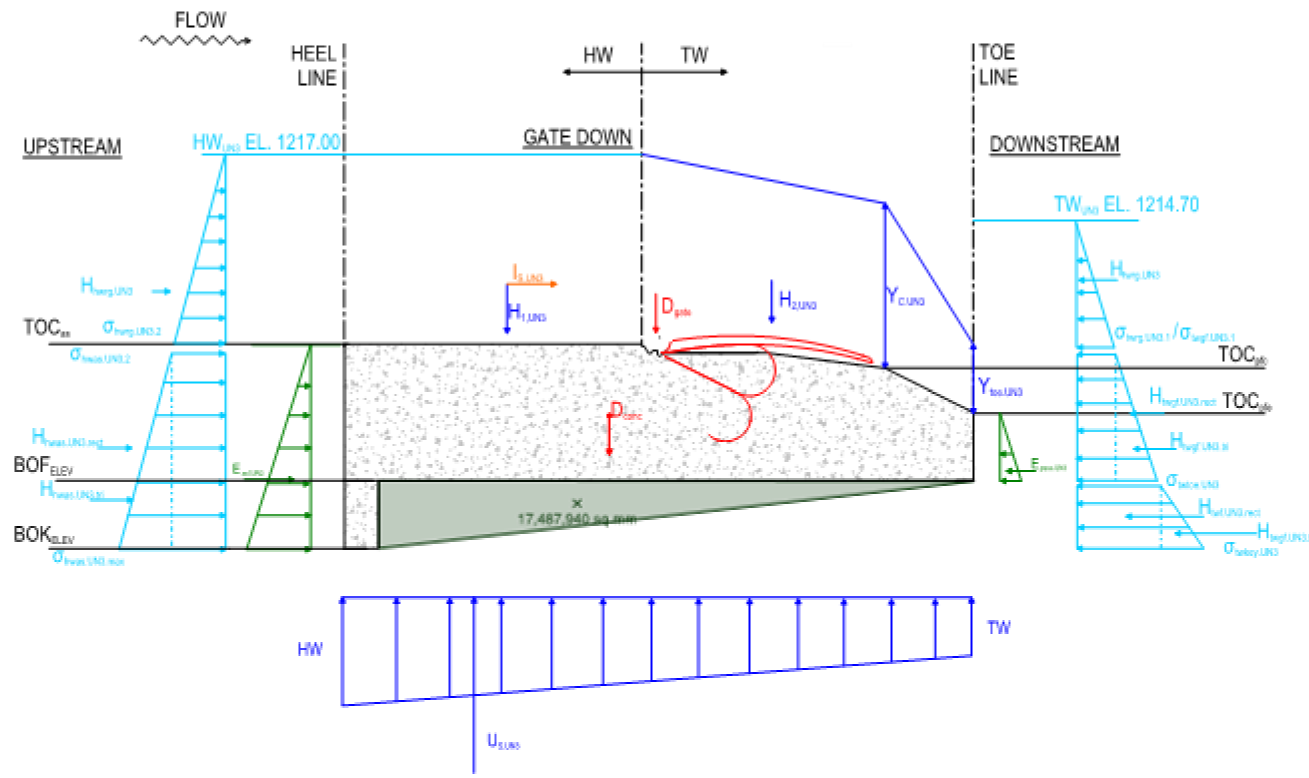
$$\sigma_{HeelUN2.OT} := \frac{\Sigma V_{UN2.OT}}{L_b \cdot W_b} - \frac{\left(\Sigma V_{UN2.OT} \cdot x_{OT.UN2}\right)}{S_b} = 49.6 \cdot kPa$$

$$Bearing_{CheckheelUN2.OT} := \left(\begin{cases} \text{"OKAY "} & \text{if } \sigma_{HeelUN2.OT} < \sigma_{allow.UN2} \wedge \sigma_{HeelUN2.OT} > 0 \\ \text{"NG""} & \text{otherwise} \end{cases} \right) = \text{"OKAY "}$$

SUMMARY OF STABILITY ASSESSMENT:

Sliding Factor of Safety: (Horizontal Plane)	$FS_{HorizSliding.UN2} = 1.59$	$FS_{HorizSliding.UN2.Check} = \text{"OKAY"}$
Sliding Factor of Safety: (Inclined Plane)	$FS_{InclinedlSlidingUN2} = 4.91$	$FS_{InclinedSliding.check.UN2} = \text{"OKAY "}$
Eccentricity: (Inclined Plane)	$e_{UN2} = -0.58\,m$	$e_{check.UN2} = \text{"Okay"}$
Bearing Pressure At Heel: (Inclined Plane)	$\sigma_{heel.UN2} = 84 \cdot kPa$	$\sigma_{heel.UN2.check} = \text{"Okay"}$
Bearing Pressure At Toe: (Inclined Plane)	$\sigma_{toe.UN2} = 58 \cdot kPa$	$\sigma_{toe.UN2.1.check} = \text{"Okay"}$
Flotation Factor of Safety (horizontal plane)	$FS_{act.FUN2} = 1.53$	$FS_{check.FUN2} = \text{"OKAY"}$
Overturning Resultant Ratio: (horizontal plane)	$Ratio_{OT.UN2} = 0.53$	$Ratio_{OT.UN2.check} = \text{"OKAY"}$
Eccentricity: (horizontal plane)	$x_{OT.UN2} = 0.51\,m$	$x_{OT.check.UN2} = \text{"OKAY"}$
Bearing Pressure At Heel: (horizontal plane)	$\sigma_{HeelUN2.OT} = 50 \cdot kPa$	$Bearing_{CheckheelUN2.OT} = \text{"OKAY "}$
Bearing Pressure At Toe: (horizontal plane)	$\sigma_{ToeUN2.OT} = 69 \cdot kPa$	$Bearing_{ChecktoeUN2.OT} = \text{"OKAY "}$

UN3 DESIGN CASE



ACCEPTANCE PARAMETERS

Required Factor of Safety for Sliding: $FS_{req.UN3.sl} := 1.3$ (Without Cohesion) (Section 8.1, Design Criteria)

Resultant Within Middle Third of Base: $e \le \frac{L_b}{6} \wedge e \ge \frac{-L_b}{6}$

Allowable Rock Bearing Pressure: $\sigma_{allow.UN3} := 1470 \cdot \frac{kN}{m^2}$ (Section 5.2, Design Criteria)

INPUT PARAMETERS

Headwater Elevation: $HW_{UN3} := 1217.0m$ (Section 8.3, Design Criteria)

Tailwater Elevation: $TW_{UN3} := 1214.70m$ (Section 8.3, Design Criteria)

Bottom of Footing Elevation: $BOF_{elev} = 1206\,m$

Approach Slab Top of Concrete Elevation at Upstream Face: $TOC_{as} = 1210\,m$

Footing Top of Concrete Elevation at Stilling Basin: $TOC_{pfe} = 1208\,m$

Footing Top of Concrete Elevation at Center of Footing: $TOC_{pfc} = 1209.3\,m$

Top of Guard/Regulating Gate Elevation: $TOP_{rg.UN3} := 1210.00m$ $TOP_{gg.UN3} := 1210.00m$

Gates are open when top of gate elevation is at 1210.00m

Gates are closed/up when top of gate elevation is at 1215.0m

Bottom of Key Elevation: $BOK_{elev} = 1204\,m$

Crestwater Elevation: Dynamic Flow $EL_{C.UN3} := 1214.67m$

$$Y_{C.UN3} := \begin{cases} \left(EL_{C.UN3} - TOC_{pfc}\right) & \text{if } TOP_{rg.UN3} \le HW_{UN3} \\ \left(TW_{UN3} - TOC_{pfc}\right) & \text{if } TOP_{rg.UN3} > HW_{UN3} \end{cases} = 5.37 \cdot m$$

Toewater Elevation: $EL_{TOE.UN3} := 1210.89m$

$$Y_{TOE.UN3} := \begin{cases} \left(EL_{TOE.UN3} - TOC_{pfe}\right) & \text{if } TOP_{rg.UN3} \le HW_{UN3} \\ \left(TW_{UN3} - TOC_{pfe}\right) & \text{if } TOP_{rg.UN3} > HW_{UN3} \end{cases} = 2.89 \cdot m$$

LATERAL WATER LOADS

UN3 CASE

HEADWATER (DRIVING):

Headwater Depth on Gate: $D_{hwg.UN3} := HW_{UN3} - TOC_{as} = 7.00\,m$

Thickness of Approach Slab (Including Key): $T_{as} = 6\,m$

Headwater Depth at Heel (U/S face): $D_{hwas.UN3} := HW_{UN3} - BOK_{elev} = 13.00\,m$

Headwater Load Unit Width on Approach Slab: $W_{hwas.UN3} := W_b = 15.00\,m$

Headwater Unit Load At Top of Approach Slab:

$$H_{hwas.UN3.1} := \frac{-\left(\gamma_w \cdot D_{hwg.UN3}{}^2\right)}{2} \cdot W_{hwas.UN3} = -3605.18 \cdot kN$$

Headwater Unit Load At Bottom of Approach Key:

$$H_{hwas.UN3.2} := \frac{-\left(\gamma_w \cdot D_{hwas.UN3}{}^2\right)}{2} \cdot W_{hwas.UN3} = -12434.2 \cdot kN$$

Headwater Line Load At Top of Approach Slab:

$$\sigma_{hwas.UN3.1} := -\left(\gamma_w \cdot D_{hwg.UN3}\right) = -68.67 \cdot kPa$$

Headwater Line Load At Bottom of Approach Key:

$$\sigma_{hwas.UN3.2} := -\left(\gamma_w \cdot D_{hwas.UN3}\right) = -127.53 \cdot kPa$$

Triangular Distribution Unit Load on Approach Slab and Key:

$$H_{hwas.UN3.2.tri} := \left(\frac{\sigma_{hwas.UN3.2} - \sigma_{hwas.UN3.1}}{2}\right) \cdot \left(T_{as} \cdot W_{hwas.UN3}\right) = -2648.7 \cdot kN$$

Rectangular Distribution Unit Load on Approach Slab and Key:

$$H_{hwas.UN3.2.rect} := \sigma_{hwas.UN3.1} \cdot \left(T_{as} \cdot W_{hwas.UN3}\right) = -6180.3 \cdot kN$$

Total Horizontal Headwater Load on Approach Slab:

$$H_{hwas.UN3} := H_{hwas.UN3.2.tri} + H_{hwas.UN3.2.rect} = -8829 \cdot kN$$

Apply Total Footing Headwater Load at:

$$H_{hwas.UN3.loc} := \frac{\left[H_{hwas.UN3.2.rect} \cdot \frac{\left(T_{as}\right)}{2} + H_{hwas.UN3.2.tri} \cdot \frac{\left(T_{as}\right)}{3}\right]}{H_{hwas.UN3.2.tri} + H_{hwas.UN3.2.rect}} - d_{key} = 0.70\,m$$

Regulating Gate (4A) Operating Condition:

Reg. Gate Down/Open Condition: $A1_{UN3} := TOP_{rg.UN3} \le TOC_{as}$

Reg. Crest Gate Up/Closed, with Top of Gate Higher than HW Elevation: $B1_{UN3} := TOP_{rg.UN3} \ge HW_{UN3} \wedge TOP_{rg.UN3} > TOC_{as}$

Reg. Crest Gate Up/Closed, with Top of Gate Lower than HW Elevation: $C1_{UN3} := TOP_{rg.UN3} > TOC_{as} \wedge HW_{UN3} > TOP_{rg.UN3}$

Reg. Crest Gate Height: $H_{rg.UN3} := TOP_{rg.UN3} - TOC_{as} = 0\,m$

Headwater Depth at Reg. Crest Gate: $D_{hwrg.UN3} := HW_{UN3} - TOC_{as} = 7.00\,m$

Reg. Crest Gate Width: $W_{hwrg.UN3} := 15.00m$

Lateral Headwater Pressure at Bottom of Reg. Crest Gate:

$$\sigma_{hwrg.UN3.1} := \begin{cases} (0.0kPa) & \text{if } A1_{UN3} \\ -(\gamma_w \cdot D_{hwrg.UN3}) & \text{if } B1_{UN3} \\ -(\gamma_w \cdot D_{hwrg.UN3}) & \text{if } C1_{UN3} \end{cases} = 0.0 \cdot kPa$$

Lateral Headwater Pressure at Top of Reg. Crest Gate: (Load at HW Elevation On Reg. Crest Gate if HW is below TOG_{rg})

$$\sigma_{hwrg.UN3.2} := \begin{cases} (0.0kPa) & \text{if } A1_{UN3} \\ 0.0kPa & \text{if } B1_{UN3} \\ -\left[\gamma_w \cdot (HW_{UN3} - TOP_{rg.UN3})\right] & \text{if } C1_{UN3} \end{cases} = 0.0 \cdot kPa$$

Average Pressure acting on Reg. Crest Gate:

$$\sigma_{hwrg.UN3.avg} := \frac{(\sigma_{hwrg.UN3.1} + \sigma_{hwrg.UN3.2})}{2} = 0 \cdot kPa$$

Total Area of Crest Gate:

$$A_{hwrg.UN3} := \begin{cases} D_{hwrg.UN3} \cdot W_{hwrg.UN3} & \text{if } A1_{UN3} \\ D_{hwrg.UN3} \cdot W_{hwrg.UN3} & \text{if } B1_{UN3} \\ H_{rg.UN3} \cdot W_{hwrg.UN3} & \text{if } C1_{UN3} \end{cases} = 105 \cdot m^2$$

Total Horizontal Headwater Load on Reg. Crest Gate: $H_{hwrg.UN3} := \sigma_{hwrg.UN3.avg} \cdot A_{hwrg.UN3} = 0.0 \cdot kN$

Apply Total Reg. Crest Gate Headwater Load at:

$$H_{hwrg.UN3.loc} := \begin{cases} (TOC_{as} - BOF_{elev}) & \text{if } A1_{UN3} \\ \left[\frac{(HW_{UN3} - TOC_{as})}{3} + (TOC_{as} - BOF_{elev})\right] & \text{if } B1_{UN3} \\ \left[\frac{\sigma_{hwrg.UN3.2} \cdot A_{hwrg.UN3} \cdot \frac{(H_{rg.UN3})}{2} + \frac{(\sigma_{hwrg.UN3.1} - \sigma_{hwrg.UN3.2})}{2} A_{hwrg.UN3} \cdot \frac{(H_{rg.UN3})}{3}}{\sigma_{hwrg.UN3.2} \cdot A_{hwrg.UN3} + \frac{(\sigma_{hwrg.UN3.1} - \sigma_{hwrg.UN3.2})}{2} \cdot A_{hwrg.UN3}} \ldots \\ + (TOC_{as} - BOF_{elev}) \right] & \text{if } C1_{UN3} \end{cases} = 4.0 \cdot m$$

LATERAL TAILWATER (RESISTING) Applied to Downstream Side of Reg. Crest Gate: UN3 CASE

Reg. Gate Down/Open Condition: $A2_{UN3} := TOP_{rg.UN3} \le TOC_{as}$

Reg. Crest Gate Up/Closed, with Top of Gate Higher than TW Elevation: $B2_{UN3} := TOP_{rg.UN3} \ge TW_{UN3} \wedge TOP_{rg.UN3} > TOC_{as}$

Reg. Crest Gate Up/Closed, with Top of Gate Lower than TW Elevation: $C2_{UN3} := TOP_{rg.UN3} > TOC_{as} \wedge TW_{UN3} > TOP_{rg.UN3}$

Tailwater Depth at Reg. Crest Gate: $D_{twrg.UN3} := TW_{UN3} - TOC_{as} = 4.70\,m$

Reg. Crest Gate Width: $W_{twrg.UN3} := 15.00m$

Lateral Water Load at Bottom of Reg. Crest Gate:

$$\sigma_{twrg.UN3.1} := \begin{cases} (0.0kPa) & \text{if } A2_{UN3} \\ (\gamma_w \cdot D_{twrg.UN3}) & \text{if } B2_{UN3} \\ (\gamma_w \cdot D_{twrg.UN3}) & \text{if } C2_{UN3} \end{cases} = 0.0 \cdot kPa$$

Lateral Water Load at Top of Reg. Crest Gate:
(Load at TW Elevation On Reg. Crest Gate if TW is below TOG_{rg})

$$\sigma_{twrg.UN3.2} := \begin{cases} (0.0kPa) & \text{if } A2_{UN3} \\ 0.0kPa & \text{if } B2_{UN3} \\ \left[\gamma_w \cdot (TW_{UN3} - TOP_{rg.UN3})\right] & \text{if } C2_{UN3} \end{cases} = 0.0 \cdot kPa$$

Average Pressure acting on Reg. Crest Gate:

$$\sigma_{twrg.UN3.avg} := \frac{(\sigma_{twrg.UN3.1} + \sigma_{twrg.UN3.2})}{2} = 0 \cdot kPa$$

Total Area water acting on Crest Gate:

$$A_{twrg.UN3} := \begin{cases} D_{twrg.UN3} \cdot W_{twrg.UN3} & \text{if } A2_{UN3} \\ D_{twrg.UN3} \cdot W_{twrg.UN3} & \text{if } B2_{UN3} \\ H_{rg.UN3} \cdot W_{twrg.UN3} & \text{if } C2_{UN3} \end{cases} = 70.5 \cdot m^2$$

Total Horizontal Tailwater Load on Reg. Crest Gate: $H_{twrg.UN3} := \sigma_{twrg.UN3.avg} \cdot A_{twrg.UN3} = 0.0 \cdot kN$

Apply Total Horiz. TW Load on Reg. Gate at:

$$H_{twrg.UN3.loc} := \begin{cases} (TOC_{as} - BOF_{elev}) & \text{if } A2_{UN3} \\ \left[\frac{(TW_{UN3} - TOC_{as})}{3} + (TOC_{as} - BOF_{elev})\right] & \text{if } B2_{UN3} \\ \left[\frac{\sigma_{twrg.UN3.2} \cdot A_{twrg.UN3} \cdot \frac{(H_{rg.UN3})}{2} + \frac{(\sigma_{twrg.UN3.1} - \sigma_{twrg.UN3.2})}{2} A_{twrg.UN3} \cdot \frac{(H_{rg.UN3})}{3}}{\sigma_{twrg.UN3.2} \cdot A_{twrg.UN3} + \frac{(\sigma_{twrg.UN3.1} - \sigma_{twrg.UN3.2})}{2} \cdot A_{twrg.UN3}} \ldots \\ + (TOC_{as} - BOF_{elev})\right] & \text{if } C2_{UN3} \end{cases} = 4.0 \cdot m$$

LATERAL WATER LOADS (continued) UN3 CASE

TAILWATER (RESISTING) Applied to Concrete Structure:

Tailwater Depth At top of Gate Base Footing Elevation: $D_{twgf.UN3} := TW_{UN3} - TOC_{as} = 4.70\,m$

Water Depth at bottom of Gate Base Footing: $D_{twtoe.UN3} := TW_{UN3} - BOF_{elev} = 8.70\,m$

Footing Thickness at Toe $h_{toe} = 4\,m$

Unit Width of D/S face of crest for application of Tailwater Load: $W_{tw.UN3} := W_b = 15.00\,m$

Tailwater Pressure At Top of Gate Footing: $\sigma_{twgf.UN3} := \left(\gamma_w \cdot D_{twgf.UN3}\right) = 46.11 \cdot kPa$

Tailwater Line Load At Bottom of Gate Footing: $\sigma_{twtoe.UN3} := \left(\gamma_w \cdot D_{twtoe.UN3}\right) = 85.35 \cdot kPa$

Triangular Distribution Unit Load on Gate Footing Base $H_{twgf.UN3.tri} := \left(\frac{\sigma_{twtoe.UN3} - \sigma_{twgf.UN3}}{2}\right) \cdot \left(h_{toe} \cdot W_{tw.UN3}\right) = 1177.2 \cdot kN$

Rectangular Distribution Unit Load on Gate Footing Base: $H_{twgf.UN3.rect} := \sigma_{twgf.UN3} \cdot \left(h_{toe} \cdot W_{tw.UN3}\right) = 2766.42 \cdot kN$

Tailwater Pressure At Bottom of Sliding Failure Plane: $\sigma_{twbk.UN3} := \left(HW_{UN3} - BOK_{elev}\right) \cdot \gamma_w = 127.53 \cdot kPa$

Triangular Distribution Unit Load Below Footing: $H_{twbk.UN3.tri} := \frac{\left(\sigma_{twbk.UN3} - \sigma_{twtoe.UN3}\right)}{2} \cdot d_{key} \cdot W_{tw.UN3} = 632.74 \cdot kN$

Rectangular Distribution Load Below Footing Base: $H_{twbk.UN3.rect} := \sigma_{twtoe.UN3} \cdot d_{key} \cdot W_{tw.UN3} = 2560.41 \cdot kN$

Total Horizontal Tailwater Load on Gate Footing (including key):

$$H_{twgk.UN3} := H_{twgf.UN3.tri} + H_{twgf.UN3.rect} + H_{twbk.UN3.tri} + H_{twbk.UN3.rect} = 7136.78 \cdot kN$$

Apply Total Gate Footing Tailwater Load at:

$$H_{twgk.UN3.loc} := \frac{\left[H_{twgf.UN3.rect} \cdot \frac{\left(h_{toe}\right)}{2} + H_{twgf.UN3.tri} \cdot \frac{\left(h_{toe}\right)}{3} + H_{twbk.UN3.tri} \cdot \left(-d_{key} \cdot \frac{2}{3}\right) + H_{twbk.UN3.rect} \cdot \left(\frac{-d_{key}}{2}\right)\right]}{H_{twgf.UN3.tri} + H_{twgf.UN3.rect} + H_{twbk.UN3.tri} + H_{twbk.UN3.rect}} = 0.52\,m$$

SUMMATION OF LATERAL WATER LOADS:

$$\Sigma H_{Water.UN3} := H_{hwas.UN3} + H_{hwrg.UN3} + H_{twgk.UN3} + H_{twrg.UN3} = -1692.22 \cdot kN$$

$$\Sigma M_{Hwater.UN3} := H_{hwas.UN3} \cdot H_{hwas.UN3.loc} + H_{hwrg.UN3} \cdot H_{hwrg.UN3.loc} \cdots + H_{twgk.UN3} \cdot H_{twgk.UN3.loc} + H_{twrg.UN3} \cdot H_{twrg.UN3.loc} = -2481.93 \cdot kN \cdot m$$

VERTICAL WATER LOADS

UN3 CASE

HEADWATER:

Water Depth on top of Approach Slab: $d_{hw.UN3} := HW_{UN3} - TOC_{as} = 7.00\,m$

Length of Approach Slab: $L_{as} = 8.75\,m$

Width of Approach Slab: $w_{as} = 15.00\,m$

Vertical Water Weight (H1) on Approach Slab: $H_{1.UN3} := \left(w_{as} \cdot d_{hw.UN3} \cdot L_{as}\right) \cdot \gamma_w = 9012.9 \cdot kN$

Moment Arm for Application of Water Weight (H1) from toe: $H_{1.UN3.loc} := L_b - \dfrac{L_{as}}{2} = 14.13\,m$

TAILWATER:

Trapezoid Volume Above Gate Footing from Approach Slab to Crest: $V_{asc.UN3} := \left(L_{gf} - L_{gfc}\right) W_b \dfrac{d_{hw.UN3} + Y_{C.UN3}}{2} = 663.34 \cdot m^3$

Trapezoid Volume Above Gate Footing Crest to End of Gate Footing: $V_{gfc.UN3} := \left(L_{gfc} \cdot W_b\right) \dfrac{Y_{C.UN3} + Y_{TOE.UN3}}{2} = 161.07 \cdot m^3$

Load Above Gate Footing from Approach Slab to Crest: $H_{2.UN3.asc} := V_{asc.UN3} \cdot \gamma_w = 6507.38 \cdot kN$

Load Acting Above Footing Crest from Toe: $H_{2.UN3.asc.loc} := \dfrac{\left(L_{gf} - L_{gfc}\right) \cdot \left(2 \cdot d_{hw.UN3} + Y_{C.UN3}\right)}{3 \cdot \left(d_{hw.UN3} + Y_{C.UN3}\right)} + L_{gfc} = 6.33\,m$

Load Above Gate Footing from Crest to End: $H_{2.UN3.gfc} := V_{gfc.UN3} \cdot \gamma_w = 1580.1 \cdot kN$

Load Acting Above Gate Footing from Crest to End: $H_{2.UN3.gfc.loc} := \dfrac{\left(L_{gfc}\right) \cdot \left(2 \cdot Y_{C.UN3} + Y_{TOE.UN3}\right)}{3 \cdot \left(Y_{C.UN3} + Y_{TOE.UN3}\right)} = 1.43\,m$

Vertical Water Weight (H2) on Gate Footing: $H_{2.UN3} := H_{2.UN3.asc} + H_{2.UN3.gfc} = 8087.47 \cdot kN$

Moment Arm for Application of Water Weight (H2) from toe: $H_{2.UN3.loc} := \dfrac{H_{2.UN3.asc} \cdot H_{2.UN3.asc.loc} + H_{2.UN3.gfc} \cdot H_{2.UN3.gfc.loc}}{H_{2.UN3}} = 5.37\,m$

UPLIFT AT INCLINE SLIDING PLANE

UN3 CASE

Uplift pressure at U/S Face (heel): $U_{HW.UN3} := D_{hwas.UN3} \cdot \gamma_w = 127.5 \cdot \frac{kN}{m^2}$

Uplift pressure at D/S Face Stilling Basin: $U_{TW.UN3} := \left(D_{twtoe.UN3}\right) \cdot \gamma_w = 85.35 \cdot \frac{kN}{m^2}$

Length from U/S of Gate Structure to D/S of Stilling Basin: $L_{overall} = 18.50\,m$

Difference between Uplift pressure at HW and TW: $U_{diff.UN3} := U_{HW.UN3} - U_{TW.UN3} = 42.18 \cdot \frac{kN}{m^2}$

Slope of difference between between Uplift pressure at HW and TW: $U_{slope.UN3} := \frac{U_{diff.UN3}}{L_{overall}} = 2.28 \cdot \frac{kN}{m^2 \cdot m}$

Tailwater Pressure at toe of Gate Structure: $U_{press.toe.gs.UN3} := U_{TW.UN3} + \left(L_{overall} - L_b\right) \cdot U_{slope.UN3} = 85.35 \cdot \frac{kN}{m^2}$

Uniform uplift force UA Under Gate Structure due to TW (rectangle): $U_{A.UN3} := U_{press.toe.gs.UN3} \cdot L_b \cdot W_b \cdot -1 = -23683.79 \cdot kN$

Moment Arm from Toe of Gate Structure for Uplift UA: $L_{A.UN3} := \left(\frac{L_b}{2}\right) = 9.25\,m$

Linearly Decreasing Uplift Force UN3B Under Gate Structure due to HW-TW Differential (triangle): $U_{B.UN3} := \frac{1}{2} \cdot \left(U_{HW.UN3} - U_{press.toe.gs.UN3}\right) \cdot L_b \cdot W_b \cdot -1 = -5852.89 \cdot kN$

Moment Arm from Toe of Gate Structure for Uplift UB: $L_{B.UN3} := \frac{2}{3} \cdot L_b = 12.33\,m$

Total Resultant Uplift force: $U_{UN3} := U_{A.UN3} + U_{B.UN3} = -29536.68 \cdot kN$

Resultant Location from Toe: $U_{UN3.loc} := \frac{\left(U_{A.UN3} \cdot L_{A.UN3} + U_{B.UN3} \cdot L_{B.UN3}\right)}{\left(U_{A.UN3} + U_{B.UN3}\right)} = 9.86\,m$

$\Sigma V_{water.UN3} := H_{1.UN3} + H_{2.UN3} + U_{UN3} = -12436.27 \cdot kN$

$\Sigma M_{Vwater.UN3} := H_{1.UN3} \cdot H_{1.UN3.loc} + H_{2.UN3} \cdot H_{2.UN3.loc} + U_{UN3} \cdot U_{UN3.loc} = -120488.41 \cdot kN \cdot m$

SOIL LOADS

UN3 CASE

Equivalent Fluid Pressure (EFP):

At rest lateral pressure coefficient: $K_{o.UN3} := 1 - \sin(\phi_{backfill}) = 0.658$ (Section 5.3, Design Criteria)

Headwater Pier Footing Unit Width: $W_{hwas.UN3} = 15.00\,m$

Tailwater Pier Footing Unit Width: $W_{tw.UN3} = 15.00\,m$

Pier Footing Thickness at Heel: $t_{hf.UN3} := TOC_{as} - BOK_{elev} = 6.00\,m$

Fixed Crest Footing Thickness at Toe: $t_{ff.UN3} := TOC_{pfe} - BOF_{elev} = 2.00\,m$

Lateral Driving Force (Headwater Side - at rest condition)

At-Rest Soil Load:

$$E_{act.UN3} := \frac{\left(K_{o.UN3} \cdot t_{hf.UN3}^{\ 2}\right)}{2} \cdot \left(\gamma_r - \gamma_w\right) \cdot W_{hwas.UN3} \cdot -1 = -2165.61 \cdot kN$$

Acting at:

$$E_{act.UN3.loc} := \frac{t_{hf.UN3}}{3} = 2.00\,m$$

Lateral Resisting Force (Tailwater Side - at rest condition)

At-rest Soil Load:

$$E_{pass.UN3} := \frac{\left(K_{o.UN3} \cdot t_{ff.UN3}^{\ 2}\right)}{2} \cdot \left(\gamma_r - \gamma_w\right) \cdot W_{tw.UN3} = 240.62 \cdot kN$$

Acting at:

$$E_{pass.UN3.loc} := \frac{t_{ff.UN3}}{3} = 0.67\,m$$

$$\Sigma H_{soil.UN3} := E_{act.UN3} + E_{pass.UN3} = -1924.99 \cdot kN$$

$$\Sigma M_{soil.UN3} := E_{act.UN3} \cdot E_{act.UN3.loc} + E_{pass.UN3} \cdot E_{pass.UN3.loc} = -4170.8 \cdot kN \cdot m$$

ICE / IMPACT LOADS (ASSUME NO ICE LOADING ON TAILWATER SIDE)

ICE & IMPACT LOADS DO NOT APPLY FOR THIS LOAD CASE

Static Ice load on Gates:

$$I_{G.UN3} := \begin{cases} 00\,\frac{kN}{m} & \text{if } TOP_{rg.UN3} \le TOC_{as} \\ 0\,\frac{kN}{m} & \text{if } TOP_{rg.UN3} > TOC_{as} \end{cases} = 0 \cdot \frac{kN}{m}$$

(Section 7.7, Design Criteria)

Ice Loading Unit Width on Reg. Gate: $W_{rg.UN3} := 15.00m$ (Input value for load case)

Total Ice Load on Structure: $I_{UN3} := -\left(I_{G.UN3} \cdot W_{rg.UN3}\right) = 0 \cdot kN$

Apply Ice load at: $I_{UN3.loc} := \left(TOP_{rg.UN3} - BOF_{elev} - 0.30m\right) = 3.70\,m$

$$\Sigma H_{I.UN3} := I_{UN3} = 0 \cdot kN$$

$$\Sigma M_{I.UN3} := I_{UN3} \cdot I_{UN3.loc} = 0 \cdot kN \cdot m$$

(SEISMIC LOAD (NOT APPLICABLE FOR THIS LOAD CASE)

UN3 CASE

SUMMARY OF LOADS

	Loads	Moment Arm
Dead load of Concrete Structure:	$D_{conc} = 24618.6 \cdot kN$	$X_{conc.loc} = 10.06\,m$
Obermyer Gate Weight:	$D_{Gate} = 210.0 \cdot kN$	$X_{gate} = 6.60\,m$
HW Lateral Load on Approach Slab:	$H_{hwas.UN3} = -8829.0 \cdot kN$	$H_{hwas.UN3.loc} = 0.70\,m$
HW Lateral Load on Reg. Gate:	$H_{hwrg.UN3} = 0.0 \cdot kN$	$H_{hwrg.UN3.loc} = 4.00\,m$
TW Lateral Load on Gate Footing (Including Key - Sliding Check Loads):	$H_{twgk.UN3} = 7136.78 \cdot kN$	$H_{twgk.UN3.loc} = 0.52\,m$
TW Lateral Load on Reg. Gate:	$H_{twrg.UN3} = 0.0 \cdot kN$	$H_{twrg.UN3.loc} = 4.00\,m$
Vertical HW Load on Approach Slab:	$H_{1.UN3} = 9012.9 \cdot kN$	$H_{1.UN3.loc} = 14.13\,m$
Vertical TW Load on Pier Footing (crest):	$H_{2.UN3} = 8087.5 \cdot kN$	$H_{2.UN3.loc} = 5.37\,m$
Uplift:	$U_{UN3} = -29536.7 \cdot kN$	$U_{UN3.loc} = 9.86\,m$
Lateral Soil Load (driving):	$E_{act.UN3} = -2165.6 \cdot kN$	$E_{act.UN3.loc} = 2.00\,m$
Lateral Soil Load (resisting):	$E_{pass.UN3} = 240.62 \cdot kN$	$E_{pass.UN3.loc} = 0.67\,m$
Ice / Impact Load:	$I_{UN3} = 0.0 \cdot kN$	$I_{UN3.loc} = 3.70\,m$

STABILITY ASSESSMENT (SLIDNG, BEARING, FLOTATION AND OVERTURNING):

CHECK SLIDING ALONG HORIZONTAL PLANE THRU TOE, IGNORING BEDROCK MOBILIZED BY STRUCTURAL HEEL KEY, OR VOID BEHIND KEY

UN3 CASE

Sum of Vertical Forces:

$\Sigma V_{UN3} := \Sigma V_{DL} + \Sigma V_{water.UN3} = 12392.3 \cdot kN$

Sum of Horizontal Forces:

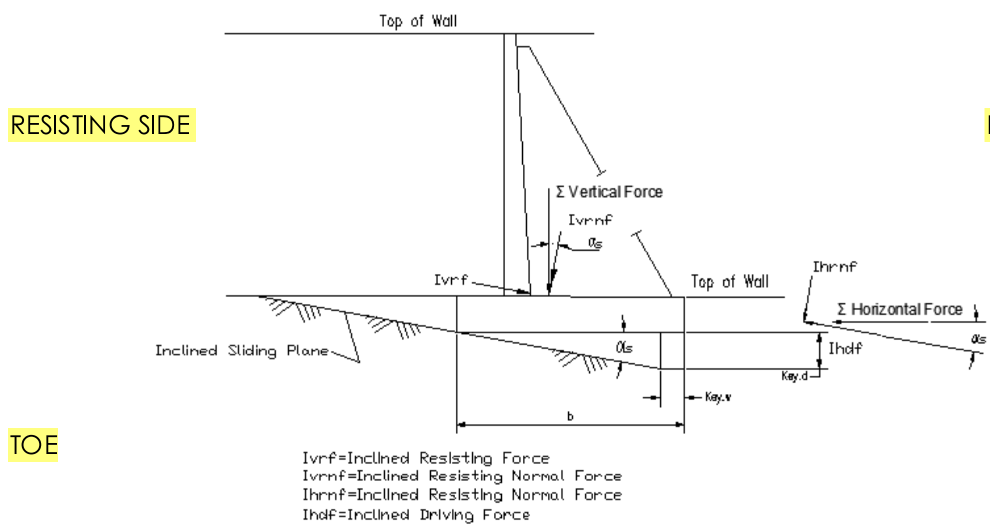
$\Sigma H_{UN3} := \Sigma H_{Water.UN3} + \Sigma H_{soil.UN3} + \Sigma H_{I.UN3} = -3617.21 \cdot kN$

Sliding Factor of Safety: $FS_{HorizSliding.UN3} := \dfrac{\tan_{\phi} \cdot \Sigma V_{UN3}}{|\Sigma H_{UN3}|} = 1.67$

$FS_{HorizSliding.UN3.Check} :=$ | "OKAY" if $FS_{HorizSliding.UN3} \geq FS_{req.UN3.sl}$ | "Horizontal Sliding (No Key or Void Behind Key) Fail ! Revise Structure !" otherwise

= "OKAY"

CHECK SLIDING ALONG INCLINED SLIDING PLANE FROM HEEL KEY TO TOE, WITH BEDROCK MASS MOBILIZED BY REINFOCREDE CONCRETE KEY)



$\Sigma V_{UN3} = 12392.33 \cdot kN$

$V_{rs} = 5775 \cdot kN$

$\alpha s = 0.11$

as degrees= $\alpha s \cdot \left(\dfrac{180}{\pi}\right) = 6.52$

Resolve $\Sigma Vert_{UN3}$ & $\Sigma Horiz_{UN3}$

$\Sigma V_{InclinedUN3} := \cos(\alpha s) \cdot \left(\Sigma V_{UN3} + V_{rs}\right) + \sin(\alpha s) \cdot |\Sigma H_{UN3}| = 18460.6 \cdot kN$

$\Sigma H_{InclinedUN3} := \cos(\alpha s) \cdot |\Sigma H_{UN3}| - \sin(\alpha s) \cdot \left(\Sigma V_{UN3} + V_{rs}\right) = 1531.0 \cdot kN$

(With properly engineered reinforced concrete Key, horizontal sliding plane thru Toe is protected, critical sliding plane is relocated to the INCLINED SLIDING PLANE FROM HEEL KEY To TOE, Bedrock Mass above this examined plane is mobilized by reinforced concrete key and combined into Structural Wedge.)

Inclined Sliding Plane Length

$L_{incline} = 18.61 \, m$

Safety Factor for Sliding Inclined Failure Plane

$FS_{InclinedlSlidingUN3} := \dfrac{\Sigma V_{InclinedUN3} \cdot \tan\left(\phi_{rock} \cdot \dfrac{\pi}{180}\right)}{|\Sigma H_{InclinedUN3}|} = 5.88$

UN3 CASE

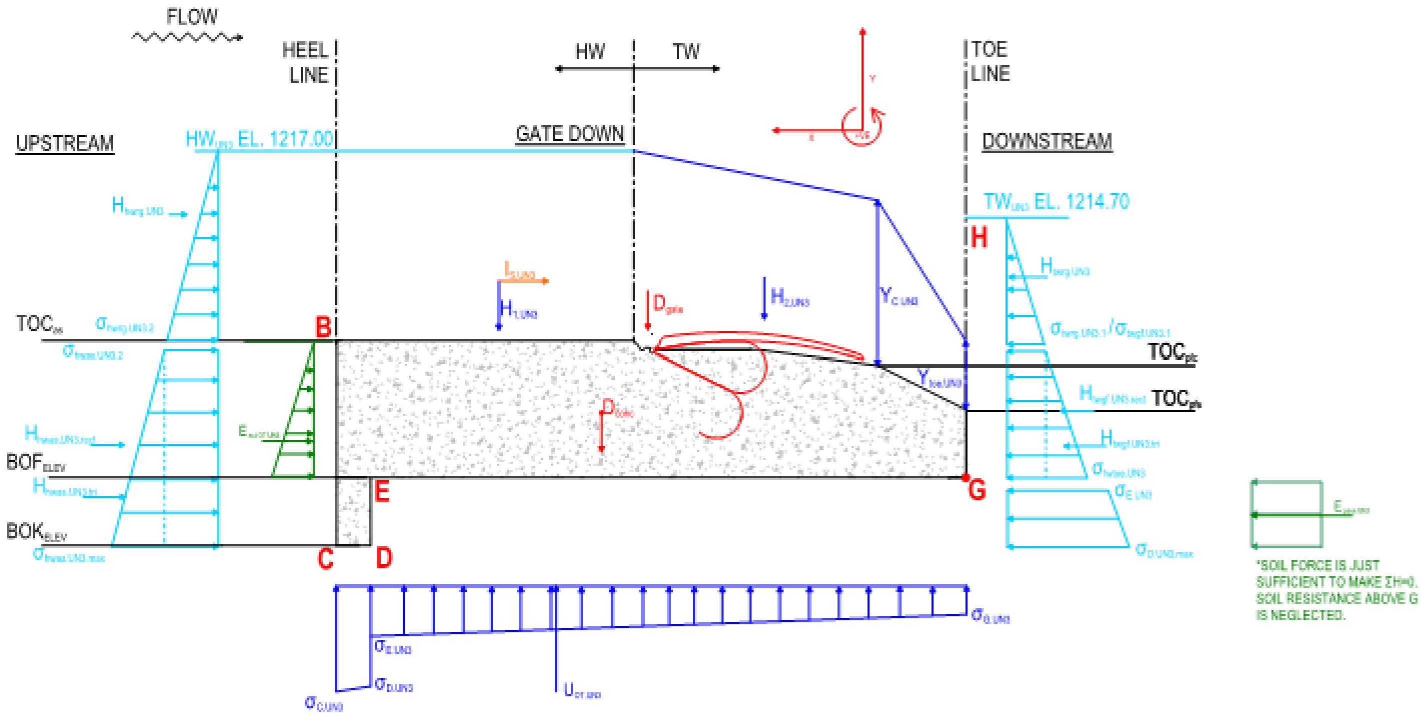
MONOLITH OVERTURNING STABILITY ANALYSIS

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stability of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1 $Ratio_{OT.UN3.min} := 0.33$



Uplift Loads for Overturning Stability Analysis

Line of Creep:

Change in Water Head: $\Delta_{h.UN3} := HW_{UN3} - TW_{UN3} = 2.3\,m$

Length from Point C to Point G: $L_{CG} = 18.61\,m$

Length from Various Points to Points: $L_{CD} = 1\,m$ $L_{DE} = 2\,m$ $L_{EG} = 17.5\,m$

$L_{GH.UN3} := TW_{UN3} - BOF_{elev} = 8.7\,m$

Length from Point C, D, E to G: $L_{CDEG} = 20.5\,m$ $L_{CDE} = 3\,m$

Water Pressure at Point C: $\sigma_{C.UN3} := \sigma_{hwas.UN3.2} = -127.53 \cdot kPa$

Water Pressure at Point G: $\sigma_{G.UN3} := \sigma_{twtoe.UN3} \cdot -1 = -85.35 \cdot kPa$

Water Pressure at Point D: $\sigma_{D.UN3} := -\gamma_w \cdot \left[\left(HW_{UN3} - BOK_{elev} \right) - \dfrac{\Delta_{h.UN3} \cdot L_{CD}}{L_{CDEG}} \right] = -126.43 \cdot kPa$

Water Pressure at Point E: $\sigma_{E.UN3} := -\gamma_w \cdot \left[\left(HW_{UN3} - BOF_{elev} \right) - \dfrac{\Delta_{h.UN3} \cdot L_{CDE}}{L_{CDEG}} \right] = -104.61 \cdot kPa$

Uplift for Overturning Analysis on Bottom of Key: $U_{OT.UN3.key} := \dfrac{\sigma_{C.UN3} + \sigma_{D.UN3}}{2} \cdot L_{CD} \cdot W_b = -1904.7 \cdot kN$

Acting at: $U_{OT.UN3.key.loc} := \dfrac{L_{CD} \cdot \left(2 \cdot \sigma_{C.UN3} + \sigma_{D.UN3}\right)}{3 \left(\sigma_{C.UN3} + \sigma_{D.UN3}\right)} + L_{EG} = 18\,m$

UN3 CASE

Uplift for Overturning Analysis on Bottom of Footing:
$$U_{OT.UN3.ftg} := \frac{\sigma_{E.UN3} + \sigma_{G.UN3}}{2} \cdot L_{EG} \cdot W_b = -24931.61 \cdot kN$$

Acting at:
$$U_{OT.UN3.ftg.loc} := \frac{L_{EG} \cdot \left(\sigma_{G.UN3} + 2 \cdot \sigma_{E.UN3}\right)}{3\left(\sigma_{G.UN3} + \sigma_{E.UN3}\right)} = 9.05\,m$$

Uplift Load for Overturning Analysis:
$$U_{OT.UN3} := U_{OT.UN3.key} + U_{OT.UN3.ftg} = -26836.3 \cdot kN$$

Uplift Load Acting from Toe:
$$U_{OT.UN3.loc} := \frac{U_{OT.UN3.key} \cdot U_{OT.UN3.key.loc} + U_{OT.UN3.ftg} \cdot U_{OT.UN3.ftg.loc}}{U_{OT.UN3}} = 9.68\,m$$

<u>All Vertical Loads Applicable to Overturning Stability Analysis</u>

Total Concrete Dead Loads: $D_{conc} = 24618.6 \cdot kN$ at: $X_{conc.loc} = 10.06\,m$

Dead Load of Gate: $D_{Gate} = 210.0 \cdot kN$ $X_{gate} = 6.60\,m$

Water Weight (HW) on Apron Slab: $H_{1.UN3} = 9012.9 \cdot kN$ $H_{1.UN3.loc} = 14.13\,m$

Water Weight (TW) on Gate Footing: $H_{2.UN3} = 8087.5 \cdot kN$ $H_{2.UN3.loc} = 5.37\,m$

Uplift Load for Overturning Analysis: $U_{OT.UN3} = -26836.3 \cdot kN$ $U_{OT.UN3.loc} = 9.68 \cdot m$

Sum of All Overturning Analysis Vertical Load:
$$\Sigma V_{UN3.OT} := D_{conc} + D_{Gate} + H_{1.UN3} + H_{2.UN3} + U_{OT.UN3} = 15092.71 \cdot kN$$

Sum of All Overturning Analysis Vertical Load Moments:
$$\Sigma M_{V.UN3.OT} := D_{conc} \cdot X_{conc.loc} + D_{Gate} \cdot X_{gate} + H_{1.UN3} \cdot H_{1.UN3.loc} + H_{2.UN3} \cdot H_{2.UN3.loc} + U_{OT.UN3} \cdot U_{OT.UN3.loc} = 159905.29 \cdot kN \cdot m$$

<u>Lateral Tailwater Loads for Overturning Stability Analysis</u>

TW Lateral Load on Gate Footing (No Key - Overturning Values Adjusted):
$$H_{twgf.UN3} := H_{twgf.UN3.tri} + H_{twgf.UN3.rect} = 3943.62 \cdot kN$$

Acting at:
$$H_{twgf.UN3.loc} := \frac{\frac{h_{toe}}{3} \cdot H_{twgf.UN3.tri} + \frac{h_{toe}}{2} \cdot H_{twgf.UN3.rect}}{H_{twgf.UN3}} = 1.8\,m$$

Horizontal Tailwater Pressure Top of Key (Overturning Analysis):
$$\sigma_{twtk.OT.UN3} := \sigma_{E.UN3} \cdot -1 = 104.61 \cdot kPa$$

Horizontal Tailwater Pressure Bottom of Key (Overturning Analysis):
$$\sigma_{twbk.OT.UN3} := \sigma_{D.UN3} \cdot -1 = 126.43 \cdot kPa$$

Triangular Distribution Unit Load Acting at Key:
$$H_{twbk.OT.UN3.tri} := \frac{\left(\sigma_{twbk.OT.UN3} - \sigma_{twtk.OT.UN3}\right)}{2} \cdot d_{key} \cdot W_{tw.UN3} = 327.32 \cdot kN$$

Triangular Distribution Unit Load Acting at Key:
$$H_{twbk.OT.UN3.rect} := \sigma_{twtk.OT.UN3} \cdot d_{key} \cdot W_{tw.UN3} = 3138.24 \cdot kN$$

Total Horizontal Tailwater Load on Key (Overturning Values Adjusted):
$$H_{twkey.OT.UN3} := H_{twbk.OT.UN3.tri} + H_{twbk.OT.UN3.rect} = 3465.56 \cdot kN$$

Acting at:
$$H_{twkey.OT.UN3.loc} := \frac{H_{twbk.OT.UN3.tri} \cdot \frac{-2 \cdot d_{key}}{3} + H_{twbk.OT.UN3.rect} \cdot \frac{-d_{key}}{2}}{H_{twkey.OT.UN3}} = -1.03 \cdot m$$

Lateral Driving Earth Loads for Overturning Stability Analysis (at rest condition)

UN3 CASE

Depth of Driving Soil Loads (to top of key): $h_{E.OT.UN3} := TOC_{as} - BOF_{elev} = 4\,m$

At-Rest Soil Load: $E_{act.OT.UN3} := \dfrac{\left(K_{o.UN3} \cdot h_{E.OT.UN3}{}^{2}\right)}{2} \cdot \left(\gamma_r - \gamma_w\right) \cdot W_{hwas.UN3} \cdot -1 = -962.49 \cdot kN$

At Rest- Soil Load Acting from Toe: $E_{act.OT.UN3.loc} := \dfrac{h_{E.OT.UN3}}{3} = 1.33\,m$

All Lateral Loads Appliable to Overturning Stability Analysis

HW Lateral Load on Approach Slab:	$H_{hwas.UN3} = -8829.0 \cdot kN$	$H_{hwas.UN3.loc} = 0.70\,m$
HW Lateral Load on Reg. Gate:	$H_{hwrg.UN3} = 0.0 \cdot kN$	$H_{hwrg.UN3.loc} = 4.00\,m$
TW Lateral Load on Reg. Gate:	$H_{twrg.UN3} = 0.0 \cdot kN$	$H_{twrg.UN3.loc} = 4.00\,m$
TW Lateral Load on Gate Footing (No Key - Overturning Values Adjusted):	$H_{twgf.UN3} = 3943.62 \cdot kN$	$H_{twgf.UN3.loc} = 1.8\,m$
TW Lateral Load on Key:	$H_{twkey.OT.UN3} = 3465.56 \cdot kN$	$H_{twkey.OT.UN3.loc} = -1.03\,m$
Ice / Impact Load:	$I_{UN3} = 0.0 \cdot kN$	$I_{UN3.loc} = 3.70\,m$
Lateral Soil Load (driving):	$E_{act.OT.UN3} = -962.5 \cdot kN$	$E_{act.OT.UN3.loc} = 1.33\,m$

Resisting Lateral Soil Load as required to produce horizontal equilibrium:

$$E_{pas.OT.UN3} := -\left(H_{hwas.UN3} + H_{hwrg.UN3} + H_{twrg.UN3} + H_{twgf.UN3} + H_{twkey.OT.UN3} + I_{UN3} + E_{act.OT.UN3}\right) = 2382.31 \cdot kN$$

Acting at:

$$E_{pas.OT.UN3.loc} := -1 \cdot \frac{d_{key}}{2} = -1\,m$$

Sum of All Overturning Analysis Horizontal Load (ΣH=0):

$$\Sigma H_{UN3.OT} := H_{hwas.UN3} + H_{hwrg.UN3} + H_{twrg.UN3} + H_{twgf.UN3} + H_{twkey.OT.UN3} + I_{UN3} + E_{act.OT.UN3} + E_{pas.OT.UN3} = 0 \cdot kN$$

Sum of All Overturning Analysis Horizontal Load Moments:

$$\begin{aligned}\Sigma M_{H.UN3.OT} := {} & H_{hwas.UN3} \cdot H_{hwas.UN3.loc} + H_{hwrg.UN3} \cdot H_{hwrg.UN3.loc} + H_{twrg.UN3} \cdot H_{twrg.UN3.loc} \cdots = -6318.16 \cdot kN \cdot m \\ & + H_{twgf.UN3} \cdot H_{twgf.UN3.loc} + H_{twkey.OT.UN3} \cdot H_{twkey.OT.UN3.loc} + I_{UN3} \cdot I_{UN3.loc} \cdots \\ & + E_{act.OT.UN3} \cdot E_{act.OT.UN3.loc} + E_{pas.OT.UN3} \cdot E_{pas.OT.UN3.loc}\end{aligned}$$

Overturning Stability Analysis

$\Sigma M_{UN3.OT} := \Sigma M_{V.UN3.OT} + \Sigma M_{H.UN3.OT} = 153587.12 \cdot kN \cdot m$ $\quad X_{R.UN3} := \dfrac{\Sigma M_{UN3.OT}}{\Sigma V_{UN3.OT}} = 10.18\,m$ $\quad x_{OT.UN3} := X_{R.UN3} - \dfrac{L_b}{2} = 0.93\,m$

Overturning Resultant Ratio $\quad Ratio_{OT.UN3} := \dfrac{X_{R.UN3}}{L_b} = 0.55$

$$Ratio_{OT.UN3.check} := \begin{cases} \text{"OKAY"} & \text{if } Ratio_{OT.UN3} \ge Ratio_{OT.UN3.min} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

$$x_{OT.check.UN3} := \begin{cases} \text{"OKAY"} & \text{if } \left|x_{OT.UN3}\right| \le Kern \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

CHECK FOUNDATION BEARING CAPACITY (HORIZONTAL PLANE):

Bearing Pressure Under Toe:

$$\sigma_{ToeUN3.OT} := \frac{\Sigma V_{UN3.OT}}{L_b \cdot W_b} + \frac{\left(\Sigma V_{UN3.OT} \cdot x_{OT.UN3}\right)}{S_b} = 70.7 \cdot kPa$$

$$Bearing_{ChecktoeUN3.OT} := \begin{array}{|l} \text{"OKAY "} \;\; \text{if} \;\; \sigma_{ToeUN3.OT} < \sigma_{allow.UN3} \\ \text{"NG""} \;\; \text{otherwise} \end{array} = \text{"OKAY "}$$

Bearing Pressure Under Heel:

$$\sigma_{HeelUN3.OT} := \frac{\Sigma V_{UN3.OT}}{L_b \cdot W_b} - \frac{\left(\Sigma V_{UN3.OT} \cdot x_{OT.UN3}\right)}{S_b} = 38.0 \cdot kPa$$

$$Bearing_{CheckheelUN3.OT} := \left(\begin{array}{|l} \text{"OKAY "} \;\; \text{if} \;\; \sigma_{HeelUN3.OT} < \sigma_{allow.UN3} \wedge \sigma_{HeelUN3.OT} > 0 \\ \text{"NG""} \;\; \text{otherwise} \end{array}\right) = \text{"OKAY "}$$

SUMMARY OF STABILITY ASSESSMENT:

Sliding Factor of Safety: (Horizontal Plane)	$FS_{HorizSliding.UN3} = 1.67$	$FS_{HorizSliding.UN3.Check} = \text{"OKAY"}$

UN4 CASE

This load case is the Construction / Maintenance / Single Gate Bay Dewatered Load Case. One bay is open, while the other has been blocked off for gate maintenance. Calculation highlighted in Orange where calculation is affected.

CREST GATE (OBERMEYER)

Dead Load of Gates: $D_{Gate.UN4} := \frac{D_{Gate}}{2} = 105 \cdot kN$ Vendor supplied on Q-200 Series Dwg.

DEAD LOAD SUMMATION:

$\Sigma V_{DL.UN4} := D_{conc} + D_{Gate} = 24828.6 \cdot kN$

$\Sigma M_{DL.UN4} := D_{conc} \cdot X_{conc.loc} + D_{Gate.UN4} \cdot X_{gate} = 248250.79 \cdot kN \cdot m$

LATERAL WATER LOADS

HEADWATER (DRIVING):

Headwater Depth on Pier: $D_{hwg.UN4} := HW_{UN4} - TOC_{as} = 5.00\,m$

Thickness of Approach Slab (Including Key): $T_{as} = 6\,m$

Headwater Depth at Heel (U/S face): $D_{hwas.UN4} := HW_{UN4} - BOK_{elev} = 11.00\,m$

Headwater Load Unit Width on Approach Slab: $W_{hwas.UN4} := W_b = 15.00\,m$

Headwater Unit Load At Top of Approach Slab:

$$H_{hwas.UN4.1} := \frac{-\left(\gamma_w \cdot D_{hwg.UN4}^{\;2}\right)}{2} \cdot W_{hwas.UN4} = -1839.38 \cdot kN$$

Headwater Unit Load At Bottom of Approach Key:

$$H_{hwas.UN4.2} := \frac{-\left(\gamma_w \cdot D_{hwas.UN4}^{\;2}\right)}{2} \cdot W_{hwas.UN4} = -8902.6 \cdot kN$$

Headwater Line Load At Top of Approach Slab: $\sigma_{hwas.UN4.1} := -\left(\gamma_w \cdot D_{hwg.UN4}\right) = -49.05 \cdot kPa$

Headwater Line Load At Bottom of Approach Key: $\sigma_{hwas.UN4.2} := -\left(\gamma_w \cdot D_{hwas.UN4}\right) = -107.91 \cdot kPa$

Triangular Distribution Unit Load on Approach Slab and Key:

$$H_{hwas.UN4.2.tri} := \left(\frac{\sigma_{hwas.UN4.2} - \sigma_{hwas.UN4.1}}{2}\right) \cdot \left(T_{as} \cdot W_{hwas.UN4}\right) = -2648.7 \cdot kN$$

Rectangular Distribution Unit Load on Approach Slab and Key:

$$H_{hwas.UN4.2.rect} := \sigma_{hwas.UN4.1} \cdot \left(T_{as} \cdot W_{hwas.UN4}\right) = -4414.5 \cdot kN$$

Total Horizontal Headwater Load on Approach Slab:

$$H_{hwas.UN4} := H_{hwas.UN4.2.tri} + H_{hwas.UN4.2.rect} = -7063.2 \cdot kN$$

Apply Total Footing Headwater Load at:

$$H_{hwas.UN4.loc} := \frac{\left[H_{hwas.UN4.2.rect} \cdot \frac{\left(T_{as}\right)}{2} + H_{hwas.UN4.2.tri} \cdot \frac{\left(T_{as}\right)}{3}\right]}{H_{hwas.UN4.2.tri} + H_{hwas.UN4.2.rect}} - d_{key} = 0.63\,m$$

Regulating Gate (4A) Operating Condition:

Reg. Gate Down/Open Condition: $A1_{UN4} := TOP_{rg.UN4} \le TOC_{as}$

Reg. Crest Gate Up/Closed, with Top of Gate Higher than HW Elevation: $B1_{UN4} := TOP_{rg.UN4} \ge HW_{UN4} \wedge TOP_{rg.UN4} > TOC_{as}$

Reg. Crest Gate Up/Closed, with Top of Gate Lower than HW Elevation: $C1_{UN4} := TOP_{rg.UN4} > TOC_{as} \wedge HW_{UN4} > TOP_{rg.UN4} = 0$

Reg. Crest Gate Height: $H_{rg.UN4} := TOP_{rg.UN4} - TOC_{as} = 0\,m$

Headwater Depth at Reg. Crest Gate: $D_{hwrg.UN4} := HW_{UN4} - TOC_{as} = 5.00\,m$

Reg. Crest Gate Width: $W_{hwrg.UN4} := 15.00m$

Lateral Headwater Pressure at Bottom of Reg. Crest Gate:

$$\sigma_{hwrg.UN4.1} := \begin{cases} (0.0kPa) & \text{if } A1_{UN4} \\ -(\gamma_w \cdot D_{hwrg.UN4}) & \text{if } B1_{UN4} \\ -(\gamma_w \cdot D_{hwrg.UN4}) & \text{if } C1_{UN4} \end{cases} = 0.0 \cdot kPa$$

Lateral Headwater Pressure at Top of Reg. Crest Gate: (Load at HW Elevation On Reg. Crest Gate if HW is below TOG_{rg})

$$\sigma_{hwrg.UN4.2} := \begin{cases} (0.0kPa) & \text{if } A1_{UN4} \\ 0.0kPa & \text{if } B1_{UN4} \\ -\left[\gamma_w \cdot (HW_{UN4} - TOP_{rg.UN4})\right] & \text{if } C1_{UN4} \end{cases} = 0.0 \cdot kPa$$

Average Pressure acting on Reg. Crest Gate:

$$\sigma_{hwrg.UN4.avg} := \frac{(\sigma_{hwrg.UN4.1} + \sigma_{hwrg.UN4.2})}{2} = 0 \cdot kPa$$

Total Area of Crest Gate:

$$A_{hwrg.UN4} := \begin{cases} D_{hwrg.UN4} \cdot W_{hwrg.UN4} & \text{if } A1_{UN4} \\ D_{hwrg.UN4} \cdot W_{hwrg.UN4} & \text{if } B1_{UN4} \\ H_{rg.UN4} \cdot W_{hwrg.UN4} & \text{if } C1_{UN4} \end{cases} = 75 \cdot m^2$$

Total Horizontal Headwater Load on Reg. Crest Gate: $H_{hwrg.UN4} := \sigma_{hwrg.UN4.avg} \cdot A_{hwrg.UN4} = 0.0 \cdot kN$

Apply Total Reg. Crest Gate Headwater Load at:

$$H_{hwrg.UN4.loc} := \begin{cases} (TOC_{as} - BOF_{elev}) & \text{if } A1_{UN4} \\ \left[\frac{(HW_{UN4} - TOC_{as})}{3} + (TOC_{as} - BOF_{elev})\right] & \text{if } B1_{UN4} \\ \left[\frac{\sigma_{hwrg.UN4.2} \cdot A_{hwrg.UN4} \cdot \frac{(H_{rg.UN4})}{2} + \frac{(\sigma_{hwrg.UN4.1} - \sigma_{hwrg.UN4.2})}{2} \cdot A_{hwrg.UN4} \cdot \frac{(H_{rg.UN4})}{3}}{\sigma_{hwrg.UN4.2} \cdot A_{hwrg.UN4} + \frac{(\sigma_{hwrg.UN4.1} - \sigma_{hwrg.UN4.2})}{2} \cdot A_{hwrg.UN4}} \ldots \\ + (TOC_{as} - BOF_{elev})\right] & \text{if } C1_{UN4} \end{cases} = 4.0 \cdot m$$

LATERAL TAILWATER (RESISTING) Applied to Downstream Side of Reg. Crest Gate: UN4 CASE

Reg. Gate Down/Open Condition: $A2_{UN4} := TOP_{rg.UN4} \le TOC_{as}$

Reg. Crest Gate Up/Closed, with Top of Gate Higher than TW Elevation: $B2_{UN4} := TOP_{rg.UN4} \ge TW_{UN4} \wedge TOP_{rg.UN4} > TOC_{as} = 0$

Total Horizontal Tailwater Load on Reg. Crest Gate: $H_{twrg.UN4} := \sigma_{twrg.UN4.avg} \cdot A_{twrg.UN4} = 0.0 \cdot kN$

Apply Total Horiz. TW Load on Reg. Gate at:

$$H_{twrg.UN4.loc} := \begin{cases} \left(TOC_{as} - BOF_{elev}\right) & \text{if } A2_{UN4} \\ \left[\frac{\left(TW_{UN4} - TOC_{as}\right)}{3} + \left(TOC_{as} - BOF_{elev}\right)\right] & \text{if } B2_{UN4} \\ \left[\frac{\sigma_{twrg.UN4.2} \cdot A_{twrg.UN4} \cdot \frac{\left(H_{rg.UN4}\right)}{2} + \frac{\left(\sigma_{twrg.UN4.1} - \sigma_{twrg.UN4.2}\right)}{2} A_{twrg.UN4} \cdot \frac{\left(H_{rg.UN4}\right)}{3}}{\sigma_{twrg.UN4.2} \cdot A_{twrg.UN4} + \frac{\left(\sigma_{twrg.UN4.1} - \sigma_{twrg.UN4.2}\right)}{2} \cdot A_{twrg.UN4}} \ldots \\ + \left(TOC_{as} - BOF_{elev}\right)\right] & \text{if } C2_{UN4} \end{cases} = 4.0 \cdot m$$

LATERAL WATER LOADS (continued)

UN4 CASE

TAILWATER (RESISTING) Applied to Concrete Structure:

Tailwater Depth At top of Gate Base Footing Elevation: $D_{twgf.UN4} := TW_{UN4} - TOC_{as} = 1.90\,m$

Water Depth at bottom of Gate Base Footing: $D_{twtoe.UN4} := TW_{UN4} - BOF_{elev} = 5.90\,m$

Footing Thickness at Toe $h_{toe} = 4\,m$

Unit Width of D/S face of crest for application of Tailwater Load: $W_{tw.UN4} := W_b = 15.00\,m$

Tailwater Pressure At Top of Gate Footing: $\sigma_{twgf.UN4} := \left(\gamma_w \cdot D_{twgf.UN4}\right) = 18.64 \cdot kPa$

Tailwater Line Load At Bottom of Gate Footing: $\sigma_{twtoe.UN4} := \left(\gamma_w \cdot D_{twtoe.UN4}\right) = 57.88 \cdot kPa$

Triangular Distribution Unit Load on Gate Footing Base $H_{twgf.UN4.tri} := \left(\dfrac{\sigma_{twtoe.UN4} - \sigma_{twgf.UN4}}{2}\right) \cdot \left(h_{toe} \cdot W_{tw.UN4}\right) = 1177.2 \cdot kN$

Rectangular Distribution Unit Load on Gate Footing Base: $H_{twgf.UN4.rect} := \sigma_{twgf.UN4} \cdot \left(h_{toe} \cdot W_{tw.UN4}\right) = 1118.34 \cdot kN$

Tailwater Pressure At Bottom of Sliding Failure Plane: $\sigma_{twbk.UN4} := \left(HW_{UN4} - BOK_{elev}\right) \cdot \gamma_w = 107.91 \cdot kPa$

Triangular Distribution Unit Load Below Footing: $H_{twbk.UN4.tri} := \dfrac{\left(\sigma_{twbk.UN4} - \sigma_{twtoe.UN4}\right)}{2} \cdot d_{key} \cdot W_{tw.UN4} = 750.46 \cdot kN$

Rectangular Distribution Load Below Footing Base: $H_{twbk.UN4.rect} := \sigma_{twtoe.UN4} \cdot d_{key} \cdot W_{tw.UN4} = 1736.37 \cdot kN$

Total Horizontal Tailwater Load on Gate Footing (including key):

$$H_{twgk.UN4} := H_{twgf.UN4.tri} + H_{twgf.UN4.rect} + H_{twbk.UN4.tri} + H_{twbk.UN4.rect} = 4782.38 \cdot kN$$

Apply Total Gate Footing Tailwater Load at:

$$H_{twgk.UN4.loc} := \frac{\left[H_{twgf.UN4.rect} \cdot \dfrac{\left(h_{toe}\right)}{2} + H_{twgf.UN4.tri} \cdot \dfrac{\left(h_{toe}\right)}{3} + H_{twbk.UN4.tri} \cdot \left(-d_{key} \cdot \dfrac{2}{3}\right) + H_{twbk.UN4.rect} \cdot \left(\dfrac{-d_{key}}{2}\right)\right]}{H_{twgf.UN4.tri} + H_{twgf.UN4.rect} + H_{twbk.UN4.tri} + H_{twbk.UN4.rect}} = 0.22\,m$$

SUMMATION OF LATERAL WATER LOADS:

$$\Sigma H_{Water.UN4} := H_{hwas.UN4} + H_{hwrg.UN4} + H_{twgk.UN4} + H_{twrg.UN4} = -2280.82 \cdot kN$$

$$\Sigma M_{Hwater.UN4} := H_{hwas.UN4} \cdot H_{hwas.UN4.loc} + H_{hwrg.UN4} \cdot H_{hwrg.UN4.loc} \cdots + H_{twgk.UN4} \cdot H_{twgk.UN4.loc} + H_{twrg.UN4} \cdot H_{twrg.UN4.loc} = -3345.21 \cdot kN \cdot m$$

VERTICAL WATER LOADS

UN4 CASE

HEADWATER:

Water Depth on top of Approach Slab: $d_{hw.UN4} := HW_{UN4} - TOC_{as} = 5.00\,m$

Length of Approach Slab: $L_{as} = 8.75\,m$

Width of Approach Slab: $w_{as} = 15.00\,m$

Weight on Apron is required for stability. Coffer U/S of pier nose must include fill to offset reduced water load.

Vertical Water Weight (H1) on Approach Slab: $H_{1.UN4} := \left(w_{as} \cdot d_{hw.UN4} \cdot L_{as}\right) \cdot \gamma_w \cdot \frac{3}{4} = 4828.4 \cdot kN$

Moment Arm for Application of Water Weight (H1) from toe: $H_{1.UN4.loc} := L_b - \frac{L_{as}}{2} = 14.13\,m$

TAILWATER:

Trapezoid Volume Above Gate Footing from Approach Slab to Crest: $V_{asc.UN4} := \left(L_{gf} - L_{gfc}\right) W_b \frac{d_{hw.UN4} + Y_{C.UN4}}{2} = 500.32 \cdot m^3$

Trapezoid Volume Above Gate Footing Crest to End of Gate Footing: $V_{gfc.UN4} := \left(L_{gfc} \cdot W_b\right) \frac{Y_{C.UN4} + Y_{TOE.UN4}}{2} = 108.42 \cdot m^3$

Load Above Gate Footing from Approach Slab to Crest: $H_{2.UN4.asc} := V_{asc.UN4} \cdot \gamma_w = 4908.15 \cdot kN$

Load Acting Above Footing Crest from Toe: $H_{2.UN4.asc.loc} := \frac{\left(L_{gf} - L_{gfc}\right) \cdot \left(2 \cdot d_{hw.UN4} + Y_{C.UN4}\right)}{3 \cdot \left(d_{hw.UN4} + Y_{C.UN4}\right)} + L_{gfc} = 6.26\,m$

Load Above Gate Footing from Crest to End: $H_{2.UN4.gfc} := V_{gfc.UN4} \cdot \gamma_w = 1063.6 \cdot kN$

Load Acting Above Gate Footing from Crest to End: $H_{2.UN4.gfc.loc} := \frac{\left(L_{gfc}\right) \cdot \left(2 \cdot Y_{C.UN4} + Y_{TOE.UN4}\right)}{3 \cdot \left(Y_{C.UN4} + Y_{TOE.UN4}\right)} = 1.54\,m$

Vertical Water Weight (H2) on Gate Footing: $H_{2.UN4} := H_{2.UN4.asc} + H_{2.UN4.gfc} = 5971.75 \cdot kN$

Moment Arm for Application of Water Weight (H2) from toe: $H_{2.UN4.loc} := \frac{H_{2.UN4.asc} \cdot H_{2.UN4.asc.loc} + H_{2.UN4.gfc} \cdot H_{2.UN4.gfc.loc}}{H_{2.UN4}} = 5.42\,m$

UPLIFT AT INCLINE SLIDING PLANE

UN4 CASE

Uplift pressure at U/S Face (heel): $U_{HW.UN4} := D_{hwas.UN4} \cdot \gamma_w = 107.9 \cdot \frac{kN}{m^2}$

Uplift pressure at D/S Face Stilling Basin: $U_{TW.UN4} := \left(D_{twtoe.UN4}\right) \cdot \gamma_w = 57.88 \cdot \frac{kN}{m^2}$

Length from U/S of Gate Structure to D/S of Stilling Basin: $L_{overall} = 18.50\,m$

Difference between Uplift pressure at HW and TW: $U_{diff.UN4} := U_{HW.UN4} - U_{TW.UN4} = 50.03 \cdot \frac{kN}{m^2}$

Slope of difference between between Uplift pressure at HW and TW: $U_{slope.UN4} := \frac{U_{diff.UN4}}{L_{overall}} = 2.70 \cdot \frac{kN}{m^2 \cdot m}$

Tailwater Pressure at toe of Gate Structure: $U_{press.toe.gs.UN4} := U_{TW.UN4} + \left(L_{overall} - L_b\right) \cdot U_{slope.UN4} = 57.88 \cdot \frac{kN}{m^2}$

Uniform uplift force UA Under Gate Structure due to TW (rectangle): $U_{A.UN4} := U_{press.toe.gs.UN4} \cdot L_b \cdot W_b \cdot -1 = -16061.42 \cdot kN$

Moment Arm from Toe of Gate Structure for Uplift UA: $L_{A.UN4} := \left(\frac{L_b}{2}\right) = 9.25\,m$

Linearly Decreasing Uplift Force UN4B Under Gate Structure due to HW-TW Differential (triangle): $U_{B.UN4} := \frac{1}{2} \cdot \left(U_{HW.UN4} - U_{press.toe.gs.UN4}\right) \cdot L_b \cdot W_b \cdot -1 = -6941.8 \cdot kN$

Moment Arm from Toe of Gate Structure for Uplift UB: $L_{B.UN4} := \frac{2}{3} \cdot L_b = 12.33\,m$

Total Resultant Uplift force: $U_{UN4} := U_{A.UN4} + U_{B.UN4} = -23003.22 \cdot kN$

Resultant Location from Toe: $U_{UN4.loc} := \frac{\left(U_{A.UN4} \cdot L_{A.UN4} + U_{B.UN4} \cdot L_{B.UN4}\right)}{\left(U_{A.UN4} + U_{B.UN4}\right)} = 10.18\,m$

$\Sigma V_{water.UN4} := H_{1.UN4} + H_{2.UN4} + U_{UN4} = -12203.11 \cdot kN$

$\Sigma M_{Vwater.UN4} := H_{1.UN4} \cdot H_{1.UN4.loc} + H_{2.UN4} \cdot H_{2.UN4.loc} + U_{UN4} \cdot U_{UN4.loc} = -133615.63 \cdot kN \cdot m$

SOIL LOADS

UN4 CASE

Equivalent Fluid Pressure (EFP):

At rest lateral pressure coefficient: $K_{o.UN4} := 1 - \sin(\phi_{backfill}) = 0.658$ (Section 5.3, Design Criteria)

Headwater Pier Footing Unit Width: $W_{hwas.UN4} = 15.00\,m$

Tailwater Pier Footing Unit Width: $W_{tw.UN4} = 15.00\,m$

Pier Footing Thickness at Heel: $t_{hf.UN4} := TOC_{as} - BOK_{elev} = 6.00\,m$

Fixed Crest Footing Thickness at Toe: $t_{tf.UN4} := TOC_{pfe} - BOF_{elev} = 2.00\,m$

Lateral Driving Force (Headwater Side - at rest condition)

At-Rest Soil Load:

$$E_{act.UN4} := \frac{\left(K_{o.UN4} \cdot t_{hf.UN4}^{\;2}\right)}{2} \cdot \left(\gamma_r - \gamma_w\right) \cdot W_{hwas.UN4} \cdot -1 = -2165.61 \cdot kN$$

Acting at:

$$E_{act.UN4.loc} := \frac{t_{hf.UN4}}{3} = 2.00\,m$$

Lateral Resisting Force (Tailwater Side - at rest condition)

At-rest Soil Load:

$$E_{pass.UN4} := \frac{\left(K_{o.UN4} \cdot t_{tf.UN4}^{\;2}\right)}{2} \cdot \left(\gamma_r - \gamma_w\right) \cdot W_{tw.UN4} = 240.62 \cdot kN$$

Acting at:

$$E_{pass.UN4.loc} := \frac{t_{tf.UN4}}{3} = 0.67\,m$$

$$\Sigma H_{soil.UN4} := E_{act.UN4} + E_{pass.UN4} = -1924.99 \cdot kN$$

$$\Sigma M_{soil.UN4} := E_{act.UN4} \cdot E_{act.UN4.loc} + E_{pass.UN4} \cdot E_{pass.UN4.loc} = -4170.8 \cdot kN \cdot m$$

ICE / IMPACT LOADS (ASSUME NO ICE LOADING ON TAILWATER SIDE)

ICE & IMPACT LOADS DO NOT APPLY FOR THIS LOAD CASE

Static Ice load on Gates:

$$I_{G.UN4} := \begin{cases} 00\,\dfrac{kN}{m} & \text{if } TOP_{rg.UN4} \le TOC_{as} \\ 0\,\dfrac{kN}{m} & \text{if } TOP_{rg.UN4} > TOC_{as} \end{cases} = 0 \cdot \frac{kN}{m}$$

(Section 7.7, Design Criteria)

Ice Loading Unit Width on Reg. Gate: $W_{rg.UN4} := 15.00m$ (Input value for load case)

Total Ice Load on Structure: $I_{UN4} := -\left(I_{G.UN4} \cdot W_{rg.UN4}\right) = 0 \cdot kN$

Apply Ice load at: $I_{UN4.loc} := \left(TOP_{rg.UN4} - BOF_{elev} - 0.30m\right) = 3.70\,m$

$$\Sigma H_{I.UN4} := I_{UN4} = 0 \cdot kN$$

$$\Sigma M_{I.UN4} := I_{UN4} \cdot I_{UN4.loc} = 0 \cdot kN \cdot m$$

(SEISMIC LOAD (NOT APPLICABLE FOR THIS LOAD CASE)

UN4 CASE

SUMMARY OF LOADS

	Loads	Moment Arm
Dead load of Concrete Structure:	$D_{conc} = 24618.6 \cdot kN$	$X_{conc.loc} = 10.06\,m$
Obermyer Gate Weight:	$D_{Gate.UN4} = 105.0 \cdot kN$	$X_{gate} = 6.60\,m$
HW Lateral Load on Approach Slab:	$H_{hwas.UN4} = -7063.2 \cdot kN$	$H_{hwas.UN4.loc} = 0.63\,m$
HW Lateral Load on Reg. Gate:	$H_{hwrg.UN4} = 0.0 \cdot kN$	$H_{hwrg.UN4.loc} = 4.00\,m$
TW Lateral Load on Reg. Footing (Including Key - Sliding Check Loads):	$H_{twgk.UN4} = 4782.38 \cdot kN$	$H_{twgk.UN4.loc} = 0.22\,m$
TW Lateral Load on Reg. Gate:	$H_{twrg.UN4} = 0.0 \cdot kN$	$H_{twrg.UN4.loc} = 4.00\,m$
Vertical HW Load on Approach Slab:	$H_{1.UN4} = 4828.4 \cdot kN$	$H_{1.UN4.loc} = 14.13\,m$
Vertical TW Load on Pier Footing (crest):	$H_{2.UN4} = 5971.8 \cdot kN$	$H_{2.UN4.loc} = 5.42\,m$
Uplift:	$U_{UN4} = -23003.2 \cdot kN$	$U_{UN4.loc} = 10.18\,m$

FLOATATION ANALYSIS:

ACCEPTANCE PARAMETERS

Required Factor of Safety: $FS_{req.FUN4} := 1.3$

VERTICAL LOADS RESISTING:

Dead Load: $\Sigma V_{DL} = 24828.6 \cdot kN$

Water Weight H1+H2: $\Sigma V_{H.FUN4} := H_{1.UN4} + H_{2.UN4} = 10800.11 \cdot kN$

Summation Vertical Resisting: $\Sigma V_{FUN4} := \Sigma V_{DL} + \Sigma V_{H.FUN4} = 35628.7 \cdot kN$

VERTICAL LOADS UPLIFT:

Uplift: $U_{UN4} = -23003.22 \cdot kN$

Factor of Safety Floatation:

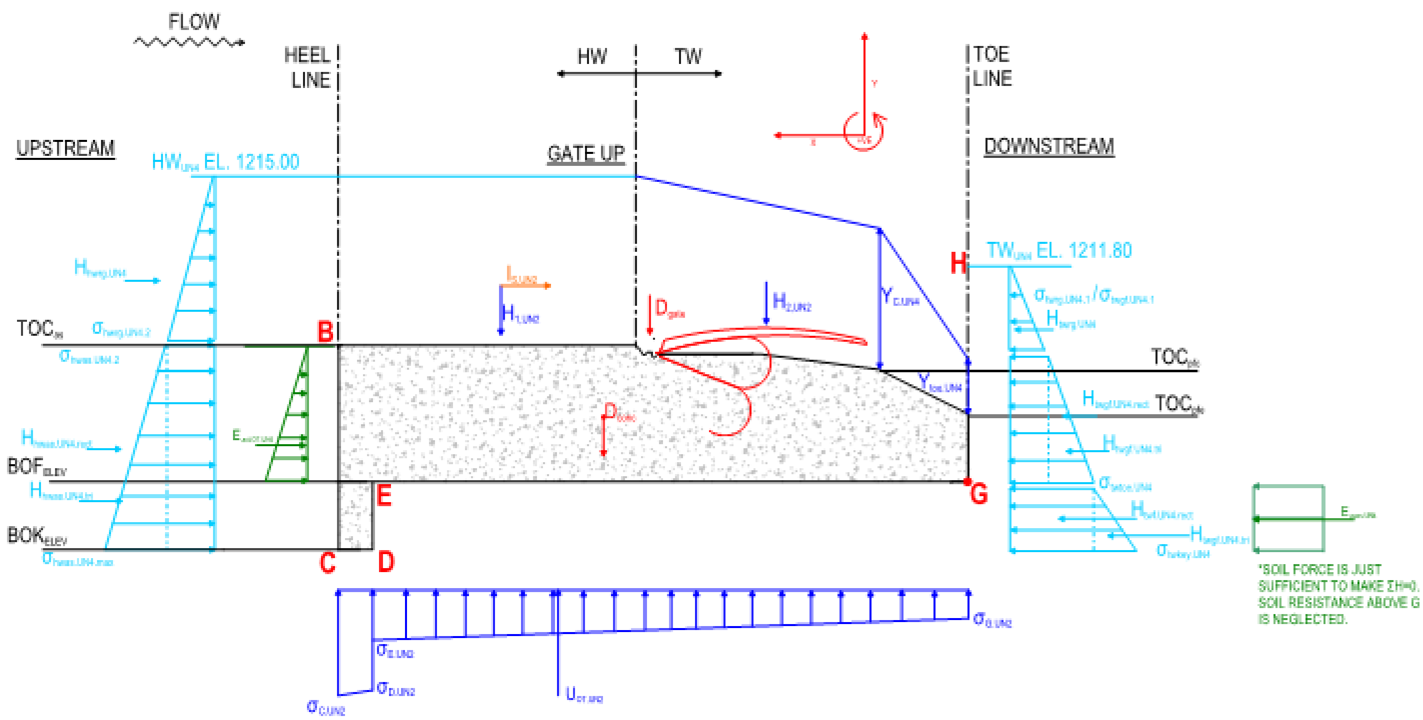
$$FS_{act.FUN4} := \frac{\Sigma V_{FUN4}}{|U_{UN4}|} = 1.55$$

$$FS_{check.FUN4} := \begin{cases} \text{"OKAY"} & \text{if } FS_{act.FUN4} \ge FS_{req.FUN4} \\ \text{"ANCHORS REQUIRED"} & \text{if } FS_{act.FUN4} < FS_{req.FUN4} \end{cases} = \text{"OKAY"}$$

MONOLITH OVERTURNING STABILITY ANALYSIS

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stability of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1 $Ratio_{OT.UN4.min} := 0.33$



Uplift Loads for Overturning Stability Analysis

Line of Creep:

Change in Water Head: $\Delta_{h.UN4} := HW_{UN4} - TW_{UN4} = 3.1\ m$

Length from Point C to Point G: $L_{CG} = 18.61\ m$

Length from Various Points to Points: $L_{CD} = 1\ m$ $\quad L_{DE} = 2\ m$ $\quad L_{EG} = 17.5\ m$

$L_{GH.UN4} := TW_{UN4} - BOF_{elev} = 5.9\ m$

Length from Point C, D, E to G: $L_{CDEG} = 20.5\ m$ $\quad L_{CDE} = 3\ m$

Water Pressure at Point C: $\sigma_{C.UN4} := \sigma_{hwas.UN4.2} = -107.91 \cdot kPa$

Water Pressure at Point G: $\sigma_{G.UN4} := \sigma_{twtoe.UN4} \cdot -1 = -57.88 \cdot kPa$

Water Pressure at Point D:

$$\sigma_{D.UN4} := -\gamma_w \cdot \left[\left(HW_{UN4} - BOK_{elev} \right) - \frac{\Delta_{h.UN4} \cdot L_{CD}}{L_{CDEG}} \right] = -106.43 \cdot kPa$$

Water Pressure at Point E:

$$\sigma_{E.UN4} := -\gamma_w \cdot \left[\left(HW_{UN4} - BOF_{elev} \right) - \frac{\Delta_{h.UN4} \cdot L_{CDE}}{L_{CDEG}} \right] = -83.84 \cdot kPa$$

Uplift for Overturning Analysis on Bottom of Key:

$$U_{OT.UN4.key} := \frac{\sigma_{C.UN4} + \sigma_{D.UN4}}{2} \cdot L_{CD} \cdot W_b = -1607.52 \cdot kN$$

Acting at:

$$U_{OT.UN4.key.loc} := \frac{L_{CD} \cdot \left(2 \cdot \sigma_{C.UN4} + \sigma_{D.UN4} \right)}{3 \left(\sigma_{C.UN4} + \sigma_{D.UN4} \right)} + L_{EG} = 18\ m$$

UN4 CASE

Uplift for Overturning Analysis on Bottom of Footing: $U_{OT.UN4.ftg} := \frac{\sigma_{E.UN4} + \sigma_{G.UN4}}{2} \cdot L_{EG} \cdot W_b = -18600.57 \cdot kN$

Acting at: $U_{OT.UN4.ftg.loc} := \frac{L_{EG} \cdot (\sigma_{G.UN4} + 2 \cdot \sigma_{E.UN4})}{3(\sigma_{G.UN4} + \sigma_{E.UN4})} = 9.28\,m$

Uplift Load for Overturning Analysis: $U_{OT.UN4} := U_{OT.UN4.key} + U_{OT.UN4.ftg} = -20208.09 \cdot kN$

Uplift Load Acting from Toe: $U_{OT.UN4.loc} := \frac{U_{OT.UN4.key} \cdot U_{OT.UN4.key.loc} + U_{OT.UN4.ftg} \cdot U_{OT.UN4.ftg.loc}}{U_{OT.UN4}} = 9.98\,m$

<u>All Vertical Loads Applicable to Overturning Stability Analysis</u>

Total Concrete Dead Loads:	$D_{conc} = 24618.6 \cdot kN$	at:	$X_{conc.loc} = 10.06\,m$
Dead Load of Gate:	$D_{Gate} = 210.0 \cdot kN$		$X_{gate} = 6.60\,m$
Water Weight (HW) on Apron Slab:	$H_{1.UN4} = 4828.4 \cdot kN$		$H_{1.UN4.loc} = 14.13\,m$
Water Weight (TW) on Gate Footing:	$H_{2.UN4} = 5971.8 \cdot kN$		$H_{2.UN4.loc} = 5.42\,m$
Uplift Load for Overturning Analysis:	$U_{OT.UN4} = -20208.09 \cdot kN$		$U_{OT.UN4.loc} = 9.98 \cdot m$

Sum of All Overturning Analysis Vertical Load:

$$\Sigma V_{UN4.OT} := D_{conc} + D_{Gate} + H_{1.UN4} + H_{2.UN4} + U_{OT.UN4} = 15420.62 \cdot kN$$

Sum of All Overturning Analysis Vertical Load Moments:

$$\Sigma M_{V.UN4.OT} := D_{conc} \cdot X_{conc.loc} + D_{Gate} \cdot X_{gate} + H_{1.UN4} \cdot H_{1.UN4.loc} + H_{2.UN4} \cdot H_{2.UN4.loc} + U_{OT.UN4} \cdot U_{OT.UN4.loc} = 147881.57 \cdot kN \cdot m$$

<u>Lateral Tailwater Loads for Overturning Stability Analysis</u>

TW Lateral Load on Gate Footing (No Key - Overturning Values Adjusted): $H_{twgf.UN4} := H_{twgf.UN4.tri} + H_{twgf.UN4.rect} = 2295.54 \cdot kN$

Acting at: $H_{twgf.UN4.loc} := \frac{\frac{h_{toe}}{3} \cdot H_{twgf.UN4.tri} + \frac{h_{toe}}{2} \cdot H_{twgf.UN4.rect}}{H_{twgf.UN4}} = 1.66\,m$

Horizontal Tailwater Pressure Top of Key (Overturning Analysis): $\sigma_{twtk.OT.UN4} := \sigma_{E.UN4} \cdot -1 = 83.84 \cdot kPa$

Horizontal Tailwater Pressure Bottom of Key (Overturning Analysis): $\sigma_{twbk.OT.UN4} := \sigma_{D.UN4} \cdot -1 = 106.43 \cdot kPa$

Triangular Distribution Unit Load Acting at Key: $H_{twbk.OT.UN4.tri} := \frac{(\sigma_{twbk.OT.UN4} - \sigma_{twtk.OT.UN4})}{2} \cdot d_{key} \cdot W_{tw.UN4} = 338.8 \cdot kN$

Triangular Distribution Unit Load Acting at Key: $H_{twbk.OT.UN4.rect} := \sigma_{twtk.OT.UN4} \cdot d_{key} \cdot W_{tw.UN4} = 2515.19 \cdot kN$

Total Horizontal Tailwater Load on Key (Overturning Values Adjusted): $H_{twkey.OT.UN4} := H_{twbk.OT.UN4.tri} + H_{twbk.OT.UN4.rect} = 2853.99 \cdot kN$

Acting at: $H_{twkey.OT.UN4.loc} := \frac{H_{twbk.OT.UN4.tri} \cdot \frac{-2 \cdot d_{key}}{3} + H_{twbk.OT.UN4.rect} \cdot \frac{-d_{key}}{2}}{H_{twkey.OT.UN4}} = -1.04 \cdot m$

UN4 CASE

Lateral Driving Earth Loads for Overturning Stability Analysis (at rest condition)

Depth of Driving Soil Loads (to top of key): $h_{E.OT.UN4} := TOC_{as} - BOF_{elev} = 4\ m$

At-Rest Soil Load: $E_{act.OT.UN4} := \frac{\left(K_{o.UN4} \cdot h_{E.OT.UN4}^{\ 2}\right)}{2} \cdot \left(\gamma_r - \gamma_w\right) \cdot W_{hwas.UN4} \cdot -1 = -962.49 \cdot kN$

At Rest- Soil Load Acting from Toe: $E_{act.OT.UN4.loc} := \frac{h_{E.OT.UN4}}{3} = 1.33\ m$

All Lateral Loads Appliable to Overturning Stability Analysis

HW Lateral Load on Approach Slab:	$H_{hwas.UN4} = -7063.2 \cdot kN$	$H_{hwas.UN4.loc} = 0.63\ m$
HW Lateral Load on Reg. Gate:	$H_{hwrg.UN4} = 0.0 \cdot kN$	$H_{hwrg.UN4.loc} = 4.00\ m$
TW Lateral Load on Reg. Gate:	$H_{twrg.UN4} = 0.0 \cdot kN$	$H_{twrg.UN4.loc} = 4.00\ m$
TW Lateral Load on Gate Footing (No Key - Overturning Values Adjusted):	$H_{twgf.UN4} = 2295.54 \cdot kN$	$H_{twgf.UN4.loc} = 1.66\ m$
TW Lateral Load on Key:	$H_{twkey.OT.UN4} = 2853.99 \cdot kN$	$H_{twkey.OT.UN4.loc} = -1.04\ m$
Ice / Impact Load:	$I_{UN4} = 0.0 \cdot kN$	$I_{UN4.loc} = 3.70\ m$
Lateral Soil Load (driving):	$E_{act.OT.UN4} = -962.5 \cdot kN$	$E_{act.OT.UN4.loc} = 1.33\ m$

Resisting Lateral Soil Load as required to produce horizontal equilibrium:

$$E_{pas.OT.UN4} := -\left(H_{hwas.UN4} + H_{hwrg.UN4} + H_{twrg.UN4} + H_{twgf.UN4} + H_{twkey.OT.UN4} + I_{UN4} + E_{act.OT.UN4}\right) = 2876.16 \cdot kN$$

Acting at:

$$E_{pas.OT.UN4.loc} := -1 \cdot \frac{d_{key}}{2} = -1\ m$$

Sum of All Overturning Analysis Horizontal Load (ΣH=0):

$$\Sigma H_{UN4.OT} := H_{hwas.UN4} + H_{hwrg.UN4} + H_{twrg.UN4} + H_{twgf.UN4} + H_{twkey.OT.UN4} + I_{UN4} + E_{act.OT.UN4} + E_{pas.OT.UN4} = 0 \cdot kN$$

Sum of All Overturning Analysis Horizontal Load Moments:

$$\Sigma M_{H.UN4.OT} := H_{hwas.UN4} \cdot H_{hwas.UN4.loc} + H_{hwrg.UN4} \cdot H_{hwrg.UN4.loc} + H_{twrg.UN4} \cdot H_{twrg.UN4.loc} \cdots + H_{twgf.UN4} \cdot H_{twgf.UN4.loc} + H_{twkey.OT.UN4} \cdot H_{twkey.OT.UN4.loc} + I_{UN4} \cdot I_{UN4.loc} \cdots + E_{act.OT.UN4} \cdot E_{act.OT.UN4.loc} + E_{pas.OT.UN4} \cdot E_{pas.OT.UN4.loc} = -7734.63 \cdot kN \cdot m$$

Overturning Stability Analysis

$\Sigma M_{UN4.OT} := \Sigma M_{V.UN4.OT} + \Sigma M_{H.UN4.OT} = 140146.94 \cdot kN \cdot m$

$X_{R.UN4} := \frac{\Sigma M_{UN4.OT}}{\Sigma V_{UN4.OT}} = 9.09\ m$ $\quad x_{OT.UN4} := X_{R.UN4} - \frac{L_b}{2} = -0.16\ m$

Overturning Resultant Ratio $\quad Ratio_{OT.UN4} := \frac{X_{R.UN4}}{L_b} = 0.49$

$Ratio_{OT.UN4.check} :=$ "OKAY" if $Ratio_{OT.UN4} \geq Ratio_{OT.UN4.min}$; "Revise Structure" otherwise $=$ "OKAY"

$x_{OT.check.UN4} :=$ "OKAY" if $\left|x_{OT.UN4}\right| \leq Kern$; "Revise Structure" otherwise $=$ "OKAY"

CHECK FOUNDATION BEARING CAPACITY (HORIZONTAL PLANE):

UN4 CASE

Bearing Pressure Under Toe: $\sigma_{ToeUN4.OT} := \frac{\Sigma V_{UN4.OT}}{L_b \cdot W_b} + \frac{(\Sigma V_{UN4.OT} \cdot x_{OT.UN4})}{S_b} = 52.7 \cdot kPa$

$Bearing_{ChecktoeUN4.OT} := \begin{vmatrix} \text{"OKAY "} & \text{if} \quad \sigma_{ToeUN4.OT} < \sigma_{allow.UN4} \\ \text{"NG""} & \text{otherwise} \end{vmatrix} = \text{"OKAY "}$

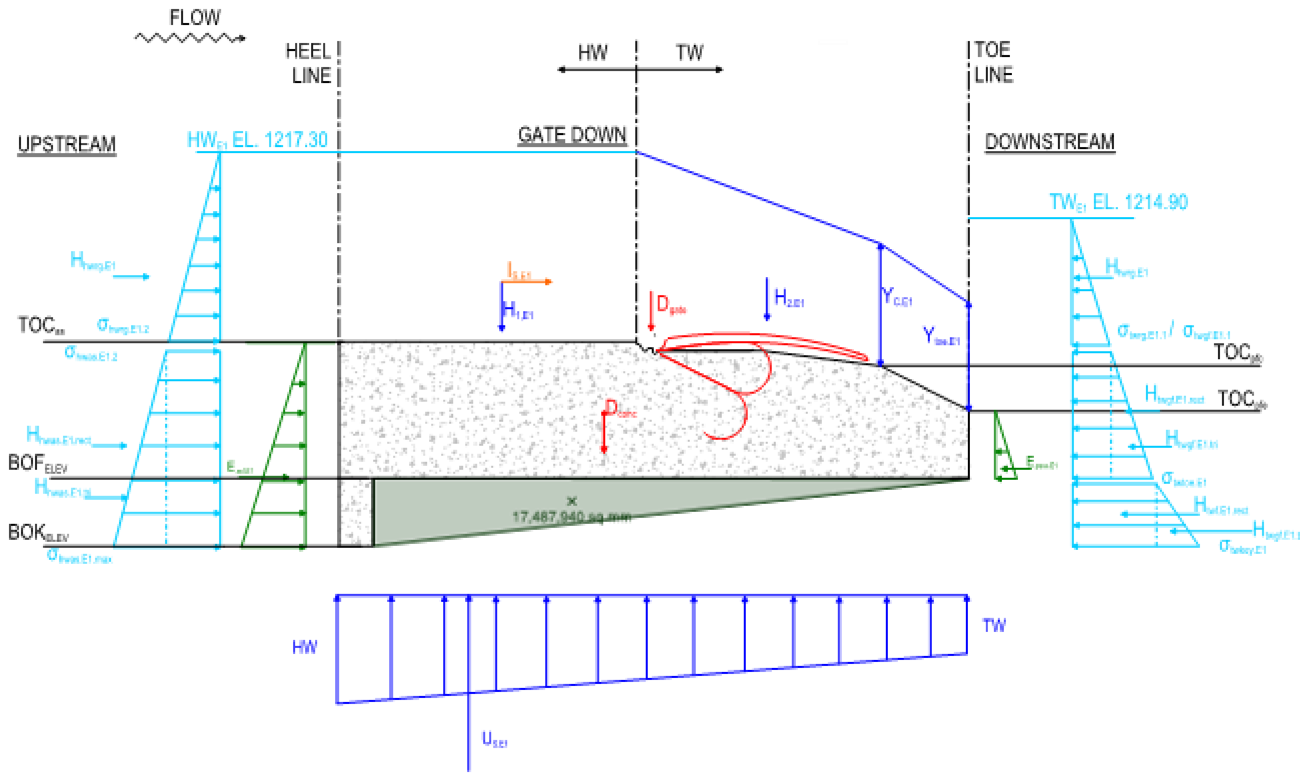
Bearing Pressure Under Heel: $\sigma_{HeelUN4.OT} := \frac{\Sigma V_{UN4.OT}}{L_b \cdot W_b} - \frac{(\Sigma V_{UN4.OT} \cdot x_{OT.UN4})}{S_b} = 58.5 \cdot kPa$

$Bearing_{CheckheelUN4.OT} := \left(\begin{vmatrix} \text{"OKAY "} & \text{if} \quad \sigma_{HeelUN4.OT} < \sigma_{allow.UN4} \wedge \sigma_{HeelUN4.OT} > 0 \\ \text{"NG""} & \text{otherwise} \end{vmatrix} \right) = \text{"OKAY "}$

SUMMARY OF STABILITY ASSESSMENT:

Sliding Factor of Safety: (Horizontal Plane)	$FS_{HorizSliding.UN4} = 1.46$	$FS_{HorizSliding.UN4.Check} = \text{"OKAY"}$
Sliding Factor of Safety: (Inclined Plane)	$FS_{InclinedlSlidingUN4} = 4.38$	$FS_{InclinedSliding.check.UN4} = \text{"OKAY "}$
Eccentricity: (Inclined Plane)	$e_{UN4} = 0.00\,m$	$e_{check.UN4} = \text{"Okay"}$
Bearing Pressure At Heel: (Inclined Plane)	$\sigma_{heel.UN4} = 67 \cdot kPa$	$\sigma_{heel.UN4.check} = \text{"Okay"}$
Bearing Pressure At Toe: (Inclined Plane)	$\sigma_{toe.UN4} = 67 \cdot kPa$	$\sigma_{toe.UN4.1.check} = \text{"Okay"}$
Flotation Factor of Safety (horizontal plane)	$FS_{act.FUN4} = 1.55$	$FS_{check.FUN4} = \text{"OKAY"}$
Overturning Resultant Ratio: (horizontal plane)	$Ratio_{OT.UN4} = 0.49$	$Ratio_{OT.UN4.check} = \text{"OKAY"}$
Eccentricity: (horizontal plane)	$x_{OT.UN4} = -0.16\,m$	$x_{OT.check.UN4} = \text{"OKAY"}$
Bearing Pressure At Heel: (horizontal plane)	$\sigma_{HeelUN4.OT} = 58 \cdot kPa$	$Bearing_{CheckheelUN4.OT} = \text{"OKAY "}$
Bearing Pressure At Toe: (horizontal plane)	$\sigma_{ToeUN4.OT} = 53 \cdot kPa$	$Bearing_{ChecktoeUN4.OT} = \text{"OKAY "}$

E1 DESIGN CASE



ACCEPTANCE PARAMETERS

Required Factor of Safety for Sliding:	$FS_{req.E1.sl} := 1.1$	(Without Cohesion) (Section 8.1, Design Criteria)
Resultant Within Middle Third of Base:	$e \le \frac{L_b}{6} \wedge e \ge \frac{-L_b}{6}$	
Allowable Rock Bearing Pressure:	$\sigma_{allow.E1} := 1740 \cdot \frac{kN}{m^2}$	(Section 5.2, Design Criteria)

INPUT PARAMETERS

Headwater Elevation:	$HW_{E1} := 1217.30m$	(Section 8.3, Design Criteria)
Tailwater Elevation:	$TW_{E1} := 1214.90m$	(Section 8.3, Design Criteria)
Bottom of Footing Elevation:	$BOF_{elev} = 1206\,m$	
Approach Slab Top of Concrete Elevation at Upstream Face:	$TOC_{as} = 1210\,m$	
Footing Top of Concrete Elevation at Stilling Basin:	$TOC_{pfe} = 1208\,m$	
Footing Top of Concrete Elevation at Center of Footing:	$TOC_{pfc} = 1209.3\,m$	
Top of Guard/Regulating Gate Elevation:	$TOP_{rg.E1} := 1210.00m$ $TOP_{gg.E1} := 1210.00m$	
Bottom of Key Elevation:	$BOK_{elev} = 1204\,m$	

Gates are open when top of gate elevation is at 1210.00m

Gates are closed/up when top of gate elevation is at 1215.0m

Crestwater Elevation: Dynamic Flow $EL_{C.E1} := 1214.87m$

$$Y_{C.E1} := \begin{cases} (EL_{C.E1} - TOC_{pfc}) & \text{if } TOP_{rg.E1} \le HW_{E1} \\ (TW_{E1} - TOC_{pfc}) & \text{if } TOP_{rg.E1} > HW_{E1} \end{cases} = 5.57 \cdot m$$

Toewater Elevation: $EL_{TOE.E1} := 1211.06m$

$$Y_{TOE.E1} := \begin{cases} (EL_{TOE.E1} - TOC_{pfe}) & \text{if } TOP_{rg.E1} \le HW_{E1} \\ (TW_{E1} - TOC_{pfe}) & \text{if } TOP_{rg.E1} > HW_{E1} \end{cases} = 3.06 \cdot m$$

LATERAL WATER LOADS

E1 CASE

HEADWATER (DRIVING):

Headwater Depth on Gate: $D_{hwg.E1} := HW_{E1} - TOC_{as} = 7.30\,m$

Thickness of Approach Slab (Including Key): $T_{as} = 6\,m$

Headwater Depth at Heel (U/S face): $D_{hwas.E1} := HW_{E1} - BOK_{elev} = 13.30\,m$

Headwater Load Unit Width on Approach Slab: $W_{hwas.E1} := W_b = 15.00\,m$

Headwater Unit Load At Top of Approach Slab:

$$H_{hwas.E1.1} := \frac{-\left(\gamma_w \cdot D_{hwg.E1}{}^2\right)}{2} \cdot W_{hwas.E1} = -3920.81 \cdot kN$$

Headwater Unit Load At Bottom of Approach Key:

$$H_{hwas.E1.2} := \frac{-\left(\gamma_w \cdot D_{hwas.E1}{}^2\right)}{2} \cdot W_{hwas.E1} = -13014.7 \cdot kN$$

Headwater Line Load At Top of Approach Slab: $\sigma_{hwas.E1.1} := -\left(\gamma_w \cdot D_{hwg.E1}\right) = -71.61 \cdot kPa$

Headwater Line Load At Bottom of Approach Key: $\sigma_{hwas.E1.2} := -\left(\gamma_w \cdot D_{hwas.E1}\right) = -130.47 \cdot kPa$

Triangular Distribution Unit Load on Approach Slab and Key:

$$H_{hwas.E1.2.tri} := \left(\frac{\sigma_{hwas.E1.2} - \sigma_{hwas.E1.1}}{2}\right) \cdot \left(T_{as} \cdot W_{hwas.E1}\right) = -2648.7 \cdot kN$$

Rectangular Distribution Unit Load on Approach Slab and Key:

$$H_{hwas.E1.2.rect} := \sigma_{hwas.E1.1} \cdot \left(T_{as} \cdot W_{hwas.E1}\right) = -6445.17 \cdot kN$$

Total Horizontal Headwater Load on Approach Slab:

$$H_{hwas.E1} := H_{hwas.E1.2.tri} + H_{hwas.E1.2.rect} = -9093.87 \cdot kN$$

Apply Total Footing Headwater Load at:

$$H_{hwas.E1.loc} := \frac{\left[H_{hwas.E1.2.rect} \cdot \frac{\left(T_{as}\right)}{2} + H_{hwas.E1.2.tri} \cdot \frac{\left(T_{as}\right)}{3}\right]}{H_{hwas.E1.2.tri} + H_{hwas.E1.2.rect}} - d_{key} = 0.71\,m$$

Regulating Gate (4A) Operating Condition:

Reg. Gate Down/Open Condition: $A1_{E1} := TOP_{rg.E1} \le TOC_{as}$

Reg. Crest Gate Up/Closed, with Top of Gate Higher than HW Elevation: $B1_{E1} := TOP_{rg.E1} \ge HW_{E1} \wedge TOP_{rg.E1} > TOC_{as}$

Reg. Crest Gate Up/Closed, with Top of Gate Lower than HW Elevation: $C1_{E1} := TOP_{rg.E1} > TOC_{as} \wedge HW_{E1} > TOP_{rg.E1} = 0$

Reg. Crest Gate Height: $H_{rg.E1} := TOP_{rg.E1} - TOC_{as} = 0\,m$

Headwater Depth at Reg. Crest Gate: $D_{hwrg.E1} := HW_{E1} - TOC_{as} = 7.30\,m$

Reg. Crest Gate Width: $W_{hwrg.E1} := 15.00m$

Lateral Headwater Pressure at Bottom of Reg. Crest Gate:

$$\sigma_{hwrg.E1.1} := \left| \begin{array}{l} (0.0kPa) \text{ if } A1_{E1} \\ -\left(\gamma_w \cdot D_{hwrg.E1}\right) \text{ if } B1_{E1} \\ -\left(\gamma_w \cdot D_{hwrg.E1}\right) \text{ if } C1_{E1} \end{array} \right. = 0.0 \cdot kPa$$

Lateral Headwater Pressure at Top of Reg. Crest Gate: (Load at HW Elevation On Reg. Crest Gate if HW is below TOG_{rg})

$$\sigma_{hwrg.E1.2} := \left| \begin{array}{l} (0.0kPa) \text{ if } A1_{E1} \\ 0.0kPa \text{ if } B1_{E1} \\ -\left[\gamma_w \cdot \left(HW_{E1} - TOP_{rg.E1}\right)\right] \text{ if } C1_{E1} \end{array} \right. = 0.0 \cdot kPa$$

Average Pressure acting on Reg. Crest Gate:

$$\sigma_{hwrg.E1.avg} := \frac{\left(\sigma_{hwrg.E1.1} + \sigma_{hwrg.E1.2}\right)}{2} = 0 \cdot kPa$$

Total Area of Crest Gate:

$$A_{hwrg.E1} := \left| \begin{array}{l} D_{hwrg.E1} \cdot W_{hwrg.E1} \text{ if } A1_{E1} \\ D_{hwrg.E1} \cdot W_{hwrg.E1} \text{ if } B1_{E1} \\ H_{rg.E1} \cdot W_{hwrg.E1} \text{ if } C1_{E1} \end{array} \right. = 109.5 \cdot m^2$$

Total Horizontal Headwater Load on Reg. Crest Gate: $H_{hwrg.E1} := \sigma_{hwrg.E1.avg} \cdot A_{hwrg.E1} = 0.0 \cdot kN$

Apply Total Reg. Crest Gate Headwater Load at:

$$H_{hwrg.E1.loc} := \left| \begin{array}{l} \left(TOC_{as} - BOF_{elev}\right) \text{ if } A1_{E1} \\ \left[\frac{\left(HW_{E1} - TOC_{as}\right)}{3} + \left(TOC_{as} - BOF_{elev}\right)\right] \text{ if } B1_{E1} \\ \left[\frac{\sigma_{hwrg.E1.2} \cdot A_{hwrg.E1} \cdot \frac{\left(H_{rg.E1}\right)}{2} + \frac{\left(\sigma_{hwrg.E1.1} - \sigma_{hwrg.E1.2}\right)}{2} \cdot A_{hwrg.E1} \cdot \frac{\left(H_{rg.E1}\right)}{3}}{\sigma_{hwrg.E1.2} \cdot A_{hwrg.E1} + \frac{\left(\sigma_{hwrg.E1.1} - \sigma_{hwrg.E1.2}\right)}{2} \cdot A_{hwrg.E1}} \ldots \\ + \left(TOC_{as} - BOF_{elev}\right) \right] \text{ if } C1_{E1} \end{array} \right. = 4.0 \cdot m$$

LATERAL TAILWATER (RESISTING) Applied to Downstream Side of Reg. Crest Gate: E1 CASE

Reg. Gate Down/Open Condition: $A2_{E1} := TOP_{rg.E1} \le TOC_{as}$

Reg. Crest Gate Up/Closed, with Top of Gate Higher than TW Elevation: $B2_{E1} := TOP_{rg.E1} \ge TW_{E1} \wedge TOP_{rg.E1} > TOC_{as} = 0$

Reg. Crest Gate Up/Closed, with Top of Gate Lower than TW Elevation: $C2_{E1} := TOP_{rg.E1} > TOC_{as} \wedge TW_{E1} > TOP_{rg.E1} = 0$

Tailwater Depth at Reg. Crest Gate: $D_{twrg.E1} := TW_{E1} - TOC_{as} = 4.90\,m$

Reg. Crest Gate Width: $W_{twrg.E1} := 15.00m$

Lateral Water Load at Bottom of Reg. Crest Gate:

$$\sigma_{twrg.E1.1} := \left| \begin{array}{ll} (0.0kPa) & \text{if } A2_{E1} \\ (\gamma_w \cdot D_{twrg.E1}) & \text{if } B2_{E1} \\ (\gamma_w \cdot D_{twrg.E1}) & \text{if } C2_{E1} \end{array} \right. = 0.0 \cdot kPa$$

Lateral Water Load at Top of Reg. Crest Gate:
(Load at TW Elevation On Reg. Crest Gate if TW is below TOG_{rg})

$$\sigma_{twrg.E1.2} := \left| \begin{array}{ll} (0.0kPa) & \text{if } A2_{E1} \\ 0.0kPa & \text{if } B2_{E1} \\ \left[\gamma_w \cdot (TW_{E1} - TOP_{rg.E1})\right] & \text{if } C2_{E1} \end{array} \right. = 0.0 \cdot kPa$$

Average Pressure acting on Reg. Crest Gate:

$$\sigma_{twrg.E1.avg} := \frac{(\sigma_{twrg.E1.1} + \sigma_{twrg.E1.2})}{2} = 0 \cdot kPa$$

Total Area water acting on Crest Gate:

$$A_{twrg.E1} := \left| \begin{array}{ll} D_{twrg.E1} \cdot W_{twrg.E1} & \text{if } A2_{E1} \\ D_{twrg.E1} \cdot W_{twrg.E1} & \text{if } B2_{E1} \\ H_{rg.E1} \cdot W_{twrg.E1} & \text{if } C2_{E1} \end{array} \right. = 73.5 \cdot m^2$$

Total Horizontal Tailwater Load on Reg. Crest Gate: $H_{twrg.E1} := \sigma_{twrg.E1.avg} \cdot A_{twrg.E1} = 0.0 \cdot kN$

Apply Total Horiz. TW Load on Reg. Gate at:

$$H_{twrg.E1.loc} := \left| \begin{array}{ll} (TOC_{as} - BOF_{elev}) & \text{if } A2_{E1} \\ \left[\frac{(TW_{E1} - TOC_{as})}{3} + (TOC_{as} - BOF_{elev})\right] & \text{if } B2_{E1} \\ \left[\frac{\sigma_{twrg.E1.2} \cdot A_{twrg.E1} \cdot \frac{(H_{rg.E1})}{2} + \frac{(\sigma_{twrg.E1.1} - \sigma_{twrg.E1.2})}{2} A_{twrg.E1} \cdot \frac{(H_{rg.E1})}{3}}{\sigma_{twrg.E1.2} \cdot A_{twrg.E1} + \frac{(\sigma_{twrg.E1.1} - \sigma_{twrg.E1.2})}{2} \cdot A_{twrg.E1}} \ldots \\ + (TOC_{as} - BOF_{elev})\right] & \text{if } C2_{E1} \end{array} \right. = 4.0 \cdot m$$

TAILWATER (RESISTING) Applied to Concrete Structure:

Tailwater Depth At top of Gate Base Footing Elevation: $D_{twgf.E1} := TW_{E1} - TOC_{as} = 4.90\,m$

Water Depth at bottom of Gate Base Footing: $D_{twtoe.E1} := TW_{E1} - BOF_{elev} = 8.90\,m$

Footing Thickness at Toe $h_{toe} = 4\,m$

Unit Width of D/S face of crest for application of Tailwater Load: $W_{tw.E1} := W_b = 15.00\,m$

Tailwater Pressure At Top of Gate Footing: $\sigma_{twgf.E1} := \left(\gamma_w \cdot D_{twgf.E1}\right) = 48.07 \cdot kPa$

Tailwater Line Load At Bottom of Gate Footing: $\sigma_{twtoe.E1} := \left(\gamma_w \cdot D_{twtoe.E1}\right) = 87.31 \cdot kPa$

Triangular Distribution Unit Load on Gate Footing Base $H_{twgf.E1.tri} := \left(\frac{\sigma_{twtoe.E1} - \sigma_{twgf.E1}}{2}\right) \cdot \left(h_{toe} \cdot W_{tw.E1}\right) = 1177.2 \cdot kN$

Rectangular Distribution Unit Load on Gate Footing Base: $H_{twgf.E1.rect} := \sigma_{twgf.E1} \cdot \left(h_{toe} \cdot W_{tw.E1}\right) = 2884.14 \cdot kN$

Tailwater Pressure At Bottom of Sliding Failure Plane: $\sigma_{twbk.E1} := \left(HW_{E1} - BOK_{elev}\right) \cdot \gamma_w = 130.47 \cdot kPa$

Triangular Distribution Unit Load Below Footing: $H_{twbk.E1.tri} := \frac{\left(\sigma_{twbk.E1} - \sigma_{twtoe.E1}\right)}{2} \cdot d_{key} \cdot W_{tw.E1} = 647.46 \cdot kN$

Rectangular Distribution Load Below Footing Base: $H_{twbk.E1.rect} := \sigma_{twtoe.E1} \cdot d_{key} \cdot W_{tw.E1} = 2619.27 \cdot kN$

Total Horizontal Tailwater Load on Gate Footing (including key):

$$H_{twgk.E1} := H_{twgf.E1.tri} + H_{twgf.E1.rect} + H_{twbk.E1.tri} + H_{twbk.E1.rect} = 7328.07 \cdot kN$$

Apply Total Gate Footing Tailwater Load at:

$$H_{twgk.E1.loc} := \frac{\left[H_{twgf.E1.rect} \cdot \frac{\left(h_{toe}\right)}{2} + H_{twgf.E1.tri} \cdot \frac{\left(h_{toe}\right)}{3} + H_{twbk.E1.tri} \cdot \left(-d_{key} \cdot \frac{2}{3}\right) + H_{twbk.E1.rect} \cdot \left(\frac{-d_{key}}{2}\right)\right]}{H_{twgf.E1.tri} + H_{twgf.E1.rect} + H_{twbk.E1.tri} + H_{twbk.E1.rect}} = 0.53\,m$$

SUMMATION OF LATERAL WATER LOADS:

$$\Sigma H_{Water.E1} := H_{hwas.E1} + H_{hwrg.E1} + H_{twgk.E1} + H_{twrg.E1} = -1765.8 \cdot kN$$

$$\Sigma M_{Hwater.E1} := H_{hwas.E1} \cdot H_{hwas.E1.loc} + H_{hwrg.E1} \cdot H_{hwrg.E1.loc} \cdots + H_{twgk.E1} \cdot H_{twgk.E1.loc} + H_{twrg.E1} \cdot H_{twrg.E1.loc} = -2589.84 \cdot kN \cdot m$$

VERTICAL WATER LOADS

E1 CASE

HEADWATER:

Water Depth on top of Approach Slab: $d_{hw.E1} := HW_{E1} - TOC_{as} = 7.30\,m$

Length of Approach Slab: $L_{as} = 8.75\,m$

Width of Approach Slab: $w_{as} = 15.00\,m$

Vertical Water Weight (H1) on Approach Slab: $H_{1.E1} := \left(w_{as} \cdot d_{hw.E1} \cdot L_{as}\right) \cdot \gamma_w = 9399.2 \cdot kN$

Moment Arm for Application of Water Weight (H1) from toe: $H_{1.E1.loc} := L_b - \dfrac{L_{as}}{2} = 14.13\,m$

TAILWATER:

Trapezoid Volume Above Gate Footing from Approach Slab to Crest: $V_{asc.E1} := \left(L_{gf} - L_{gfc}\right) W_b \dfrac{d_{hw.E1} + Y_{C.E1}}{2} = 690.15 \cdot m^3$

Trapezoid Volume Above Gate Footing Crest to End of Gate Footing: $V_{gfc.E1} := \left(L_{gfc} \cdot W_b\right) \dfrac{Y_{C.E1} + Y_{TOE.E1}}{2} = 168.28 \cdot m^3$

Load Above Gate Footing from Approach Slab to Crest: $H_{2.E1.asc} := V_{asc.E1} \cdot \gamma_w = 6770.41 \cdot kN$

Load Acting Above Footing Crest from Toe: $H_{2.E1.asc.loc} := \dfrac{\left(L_{gf} - L_{gfc}\right) \cdot \left(2 \cdot d_{hw.E1} + Y_{C.E1}\right)}{3 \cdot \left(d_{hw.E1} + Y_{C.E1}\right)} + L_{gfc} = 6.34\,m$

Load Above Gate Footing from Crest to End: $H_{2.E1.gfc} := V_{gfc.E1} \cdot \gamma_w = 1650.88 \cdot kN$

Load Acting Above Gate Footing from Crest to End: $H_{2.E1.gfc.loc} := \dfrac{\left(L_{gfc}\right) \cdot \left(2 \cdot Y_{C.E1} + Y_{TOE.E1}\right)}{3 \cdot \left(Y_{C.E1} + Y_{TOE.E1}\right)} = 1.43\,m$

Vertical Water Weight (H2) on Gate Footing: $H_{2.E1} := H_{2.E1.asc} + H_{2.E1.gfc} = 8421.28 \cdot kN$

Moment Arm for Application of Water Weight (H2) from toe: $H_{2.E1.loc} := \dfrac{H_{2.E1.asc} \cdot H_{2.E1.asc.loc} + H_{2.E1.gfc} \cdot H_{2.E1.gfc.loc}}{H_{2.E1}} = 5.37\,m$

UPLIFT AT INCLINE SLIDING PLANE

E1 CASE

Uplift pressure at U/S Face (heel):	$U_{HW.E1} := D_{hwas.E1} \cdot \gamma_w = 130.5 \cdot \frac{kN}{m^2}$
Uplift pressure at D/S Face Stilling Basin:	$U_{TW.E1} := \left(D_{twtoe.E1}\right) \cdot \gamma_w = 87.31 \cdot \frac{kN}{m^2}$
Length from U/S of Gate Structure to D/S of Stilling Basin:	$L_{overall} = 18.50\,m$
Difference between Uplift pressure at HW and TW:	$U_{diff.E1} := U_{HW.E1} - U_{TW.E1} = 43.16 \cdot \frac{kN}{m^2}$
Slope of difference between between Uplift pressure at HW and TW:	$U_{slope.E1} := \frac{U_{diff.E1}}{L_{overall}} = 2.33 \cdot \frac{kN}{m^2 \cdot m}$
Tailwater Pressure at toe of Gate Structure:	$U_{press.toe.gs.E1} := U_{TW.E1} + \left(L_{overall} - L_b\right) \cdot U_{slope.E1} = 87.31 \cdot \frac{kN}{m^2}$
Uniform uplift force UA Under Gate Structure due to TW (rectangle):	$U_{A.E1} := U_{press.toe.gs.E1} \cdot L_b \cdot W_b \cdot -1 = -24228.25 \cdot kN$
Moment Arm from Toe of Gate Structure for Uplift UA:	$L_{A.E1} := \left(\frac{L_b}{2}\right) = 9.25\,m$
Linearly Decreasing Uplift Force E1B Under Gate Structure due to HW-TW Differential (triangle):	$U_{B.E1} := \frac{1}{2} \cdot \left(U_{HW.E1} - U_{press.toe.gs.E1}\right) \cdot L_b \cdot W_b \cdot -1 = -5989 \cdot kN$
Moment Arm from Toe of Gate Structure for Uplift UB:	$L_{B.E1} := \frac{2}{3} \cdot L_b = 12.33\,m$
Total Resultant Uplift force:	$U_{E1} := U_{A.E1} + U_{B.E1} = -30217.25 \cdot kN$
Resultant Location from Toe:	$U_{E1.loc} := \frac{\left(U_{A.E1} \cdot L_{A.E1} + U_{B.E1} \cdot L_{B.E1}\right)}{\left(U_{A.E1} + U_{B.E1}\right)} = 9.86\,m$

$\Sigma V_{water.E1} := H_{1.E1} + H_{2.E1} + U_{E1} = -12396.76 \cdot kN$

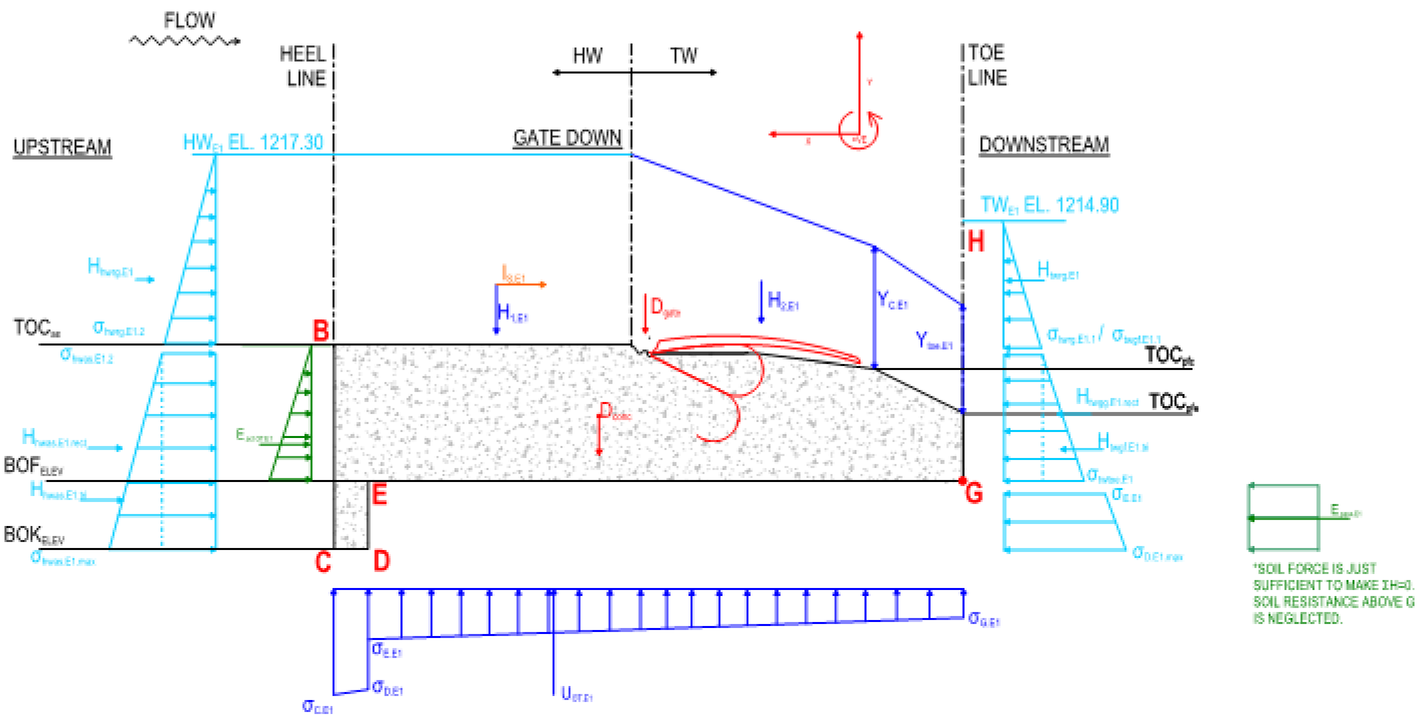
MONOLITH OVERTURNING STABILITY ANALYSIS

E1 CASE

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stability of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1 $\quad Ratio_{OT.E1.min} := 0.25$



Uplift Loads for Overturning Stability Analysis

Line of Creep:

Change in Water Head: $\Delta_{h.E1} := HW_{E1} - TW_{E1} = 2.4\,m$

Length from Point C to Point G: $L_{CG} = 18.61\ m$

Length from Various Points to Points: $L_{CD} = 1\ m \quad L_{DE} = 2\ m \quad L_{EG} = 17.5\,m$

$L_{GH.E1} := TW_{E1} - BOF_{elev} = 8.9\ m$

Length from Point C, D, E to G: $L_{CDEG} = 20.5\,m \quad L_{CDE} = 3\,m$

Water Pressure at Point C: $\sigma_{C.E1} := \sigma_{hwas.E1.2} = -130.47 \cdot kPa$

Water Pressure at Point G: $\sigma_{G.E1} := \sigma_{twtoe.E1} \cdot -1 = -87.31 \cdot kPa$

Water Pressure at Point D: $\sigma_{D.E1} := -\gamma_w \cdot \left[\left(HW_{E1} - BOK_{elev} \right) - \frac{\Delta_{h.E1} \cdot L_{CD}}{L_{CDEG}} \right] = -129.32 \cdot kPa$

Water Pressure at Point E: $\sigma_{E.E1} := -\gamma_w \cdot \left[\left(HW_{E1} - BOF_{elev} \right) - \frac{\Delta_{h.E1} \cdot L_{CDE}}{L_{CDEG}} \right] = -107.41 \cdot kPa$

Uplift for Overturning Analysis on Bottom of Key: $U_{OT.E1.key} := \frac{\sigma_{C.E1} + \sigma_{D.E1}}{2} \cdot L_{CD} \cdot W_b = -1948.48 \cdot kN$

Acting at: $U_{OT.E1.key.loc} := \frac{L_{CD} \cdot \left(2 \cdot \sigma_{C.E1} + \sigma_{D.E1} \right)}{3 \left(\sigma_{C.E1} + \sigma_{D.E1} \right)} + L_{EG} = 18\,m$

E1 CASE

Uplift for Overturning Analysis on Bottom of Footing:
$$U_{OT.E1.ftg} := \frac{\sigma_{E.E1} + \sigma_{G.E1}}{2} \cdot L_{EG} \cdot W_b = -25556.55 \cdot kN$$

Acting at:
$$U_{OT.E1.ftg.loc} := \frac{L_{EG} \cdot \left(\sigma_{G.E1} + 2 \cdot \sigma_{E.E1}\right)}{3\left(\sigma_{G.E1} + \sigma_{E.E1}\right)} = 9.05\,m$$

Uplift Load for Overturning Analysis:
$$U_{OT.E1} := U_{OT.E1.key} + U_{OT.E1.ftg} = -27505.03 \cdot kN$$

Uplift Load Acting from Toe:
$$U_{OT.E1.loc} := \frac{U_{OT.E1.key} \cdot U_{OT.E1.key.loc} + U_{OT.E1.ftg} \cdot U_{OT.E1.ftg.loc}}{U_{OT.E1}} = 9.69\,m$$

All Vertical Loads Applicable to Overturning Stability Analysis

		at:	
Total Concrete Dead Loads:	$D_{conc} = 24618.6 \cdot kN$		$X_{conc.loc} = 10.06\,m$
Dead Load of Gate:	$D_{Gate} = 210.0 \cdot kN$		$X_{gate} = 6.60\,m$
Water Weight (HW) on Apron Slab:	$H_{1.E1} = 9399.2 \cdot kN$		$H_{1.E1.loc} = 14.13\,m$
Water Weight (TW) on Gate Footing:	$H_{2.E1} = 8421.3 \cdot kN$		$H_{2.E1.loc} = 5.37\,m$
Uplift Load for Overturning Analysis:	$U_{OT.E1} = -27505.03 \cdot kN$		$U_{OT.E1.loc} = 9.69 \cdot m$

Sum of All Overturning Analysis Vertical Load:
$$\Sigma V_{E1.OT} := D_{conc} + D_{Gate} + H_{1.E1} + H_{2.E1} + U_{OT.E1} = 15144.06 \cdot kN$$

Sum of All Overturning Analysis Vertical Load Moments:
$$\Sigma M_{V.E1.OT} := D_{conc} \cdot X_{conc.loc} + D_{Gate} \cdot X_{gate} + H_{1.E1} \cdot H_{1.E1.loc} + H_{2.E1} \cdot H_{2.E1.loc} + U_{OT.E1} \cdot U_{OT.E1.loc} = 160565.73 \cdot kN \cdot m$$

Lateral Tailwater Loads for Overturning Stability Analysis

TW Lateral Load on Gate Footing (No Key - Overturning Values Adjusted):
$$H_{twgf.E1} := H_{twgf.E1.tri} + H_{twgf.E1.rect} = 4061.34 \cdot kN$$

Acting at:
$$H_{twgf.E1.loc} := \frac{\frac{h_{toe}}{3} \cdot H_{twgf.E1.tri} + \frac{h_{toe}}{2} \cdot H_{twgf.E1.rect}}{H_{twgf.E1}} = 1.81\,m$$

Horizontal Tailwater Pressure Top of Key (Overturning Analysis):
$$\sigma_{twtk.OT.E1} := \sigma_{E.E1} \cdot -1 = 107.41 \cdot kPa$$

Horizontal Tailwater Pressure Bottom of Key (Overturning Analysis):
$$\sigma_{twbk.OT.E1} := \sigma_{D.E1} \cdot -1 = 129.32 \cdot kPa$$

Triangular Distribution Unit Load Acting at Key:
$$H_{twbk.OT.E1.tri} := \frac{\left(\sigma_{twbk.OT.E1} - \sigma_{twtk.OT.E1}\right)}{2} \cdot d_{key} \cdot W_{tw.E1} = 328.75 \cdot kN$$

Triangular Distribution Unit Load Acting at Key:
$$H_{twbk.OT.E1.rect} := \sigma_{twtk.OT.E1} \cdot d_{key} \cdot W_{tw.E1} = 3222.23 \cdot kN$$

Total Horizontal Tailwater Load on Key (Overturning Values Adjusted):
$$H_{twkey.OT.E1} := H_{twbk.OT.E1.tri} + H_{twbk.OT.E1.rect} = 3550.98 \cdot kN$$

Acting at:
$$H_{twkey.OT.E1.loc} := \frac{H_{twbk.OT.E1.tri} \cdot \frac{-2 \cdot d_{key}}{3} + H_{twbk.OT.E1.rect} \cdot \frac{-d_{key}}{2}}{H_{twkey.OT.E1}} = -1.03 \cdot m$$

E1 CASE

Lateral Driving Earth Loads for Overturning Stability Analysis (at rest condition)

Depth of Driving Soil Loads (to top of key): $h_{E.OT.E1} := TOC_{as} - BOF_{elev} = 4\,m$

At-Rest Soil Load: $E_{act.OT.E1} := \frac{K_{o.E1} \cdot h_{E.OT.E1}^{2}}{2} \cdot (\gamma_r - \gamma_w) \cdot W_{hwas.E1} \cdot -1 = -962.49 \cdot kN$

At Rest- Soil Load Acting from Toe: $E_{act.OT.E1.loc} := \frac{h_{E.OT.E1}}{3} = 1.33\,m$

All Lateral Loads Appliable to Overturning Stability Analysis

HW Lateral Load on Approach Slab:	$H_{hwas.E1} = -9093.9 \cdot kN$	$H_{hwas.E1.loc} = 0.71\,m$
HW Lateral Load on Reg. Gate:	$H_{hwrg.E1} = 0.0 \cdot kN$	$H_{hwrg.E1.loc} = 4.00\,m$
TW Lateral Load on Reg. Gate:	$H_{twrg.E1} = 0.0 \cdot kN$	$H_{twrg.E1.loc} = 4.00\,m$
TW Lateral Load on Gate Footing (No Key - Overturning Values Adjusted):	$H_{twgf.E1} = 4061.34 \cdot kN$	$H_{twgf.E1.loc} = 1.81\,m$
TW Lateral Load on Key:	$H_{twkey.OT.E1} = 3550.98 \cdot kN$	$H_{twkey.OT.E1.loc} = -1.03\,m$
Ice / Impact Load:	$I_{E1} = 0.0 \cdot kN$	$I_{E1.loc} = 3.70\,m$
Lateral Soil Load (driving):	$E_{act.OT.E1} = -962.5 \cdot kN$	$E_{act.OT.E1.loc} = 1.33\,m$

Resisting Lateral Soil Load as required to produce horizontal equilibrium:

$$E_{pas.OT.E1} := -\left(H_{hwas.E1} + H_{hwrg.E1} + H_{twrg.E1} + H_{twgf.E1} + H_{twkey.OT.E1} + I_{E1} + E_{act.OT.E1}\right) = 2444.04 \cdot kN$$

Acting at:

$$E_{pas.OT.E1.loc} := -1 \cdot \frac{d_{key}}{2} = -1\,m$$

Sum of All Overturning Analysis Horizontal Load (ΣH=0):

$$\Sigma H_{E1.OT} := H_{hwas.E1} + H_{hwrg.E1} + H_{twrg.E1} + H_{twgf.E1} + H_{twkey.OT.E1} + I_{E1} + E_{act.OT.E1} + E_{pas.OT.E1} = 0 \cdot kN$$

Sum of All Overturning Analysis Horizontal Load Moments:

$$\Sigma M_{H.E1.OT} := H_{hwas.E1} \cdot H_{hwas.E1.loc} + H_{hwrg.E1} \cdot H_{hwrg.E1.loc} + H_{twrg.E1} \cdot H_{twrg.E1.loc} \cdots + H_{twgf.E1} \cdot H_{twgf.E1.loc} + H_{twkey.OT.E1} \cdot H_{twkey.OT.E1.loc} + I_{E1} \cdot I_{E1.loc} \cdots + E_{act.OT.E1} \cdot E_{act.OT.E1.loc} + E_{pas.OT.E1} \cdot E_{pas.OT.E1.loc} = -6495.22 \cdot kN \cdot m$$

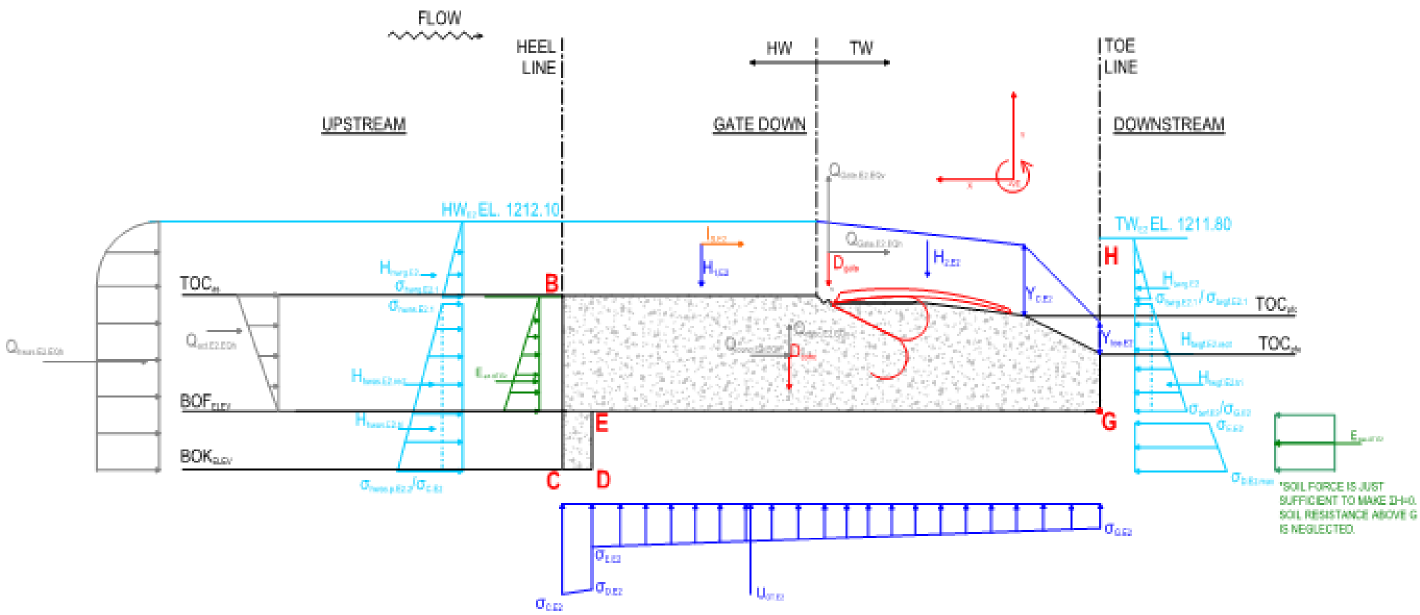
MONOLITH OVERTURNING STABILITY ANALYSIS

Seismic Case $Q_{E2.1}$: 100% Horizontal Seismic Force, No Vertical

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stability of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1 $Ratio_{overturning.allow.Extreme} := 0.25$ Resultant within Base



All Vertical Loads Appliable to Overturning Stability Analysis

Total Concrete Dead Loads:	$D_{conc} = 24618.6 \cdot kN$	at:	$X_{conc.loc} = 10.06\,m$
Dead Load of Gate:	$D_{Gate} = 210.0 \cdot kN$		$X_{gate} = 6.60\,m$
Water Weight (HW) on Apron Slab:	$H_{1.U1} = 2703.9 \cdot kN$		$H_{1.U1.loc} = 14.13\,m$
Water Weight (TW) on Gate Footing:	$H_{2.U1} = 2699.2 \cdot kN$		$H_{2.U1.loc} = 5.34\,m$
Uplift Load for Overturning Analysis:	$U_{OT.U1} = -16456.3 \cdot kN$		$U_{OT.U1.loc} = 9.48 \cdot m$
Vertical Seismic Component of Concrete Structure:	$Q_{conc.E2.EQv.1} = 0$		$X_{conc.loc} = 10.06\,m$
Vertical Seismic Component of Crest Gate:	$Q_{Gate.E2.EQv.1} = 0$		$X_{gate} = 6.60\,m$

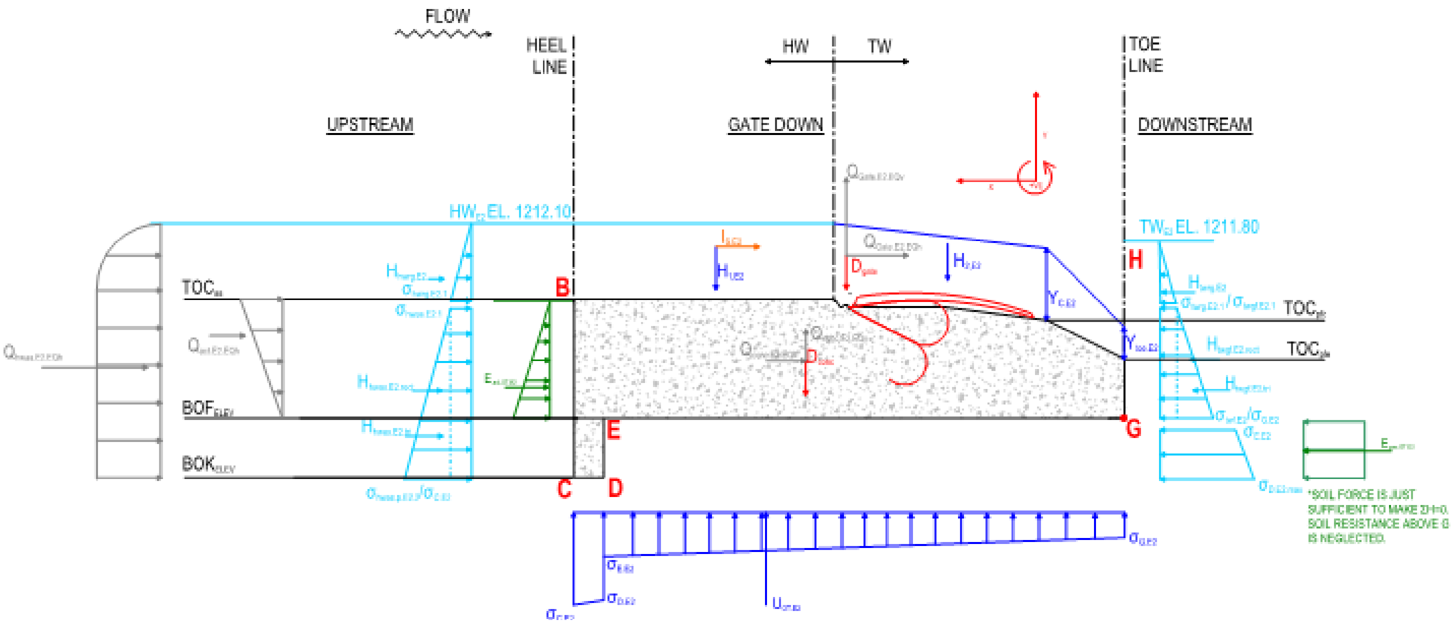
MONOLITH OVERTURNING STABILITY ANALYSIS

E2.2 CASE

Seismic Case $Q_{E2.2}$: 100% Horizontal Seismic Force, 30% Vertical

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stability of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1 $Ratio_{overturning.allow.Extreme} = 0.25$ Resultant within Base



All Vertical Loads Appliable to Overturning Stability Analysis

Total Concrete Dead Loads:	$D_{conc} = 24618.6 \cdot kN$	at:	$X_{conc.loc} = 10.06\,m$
Dead Load of Gate:	$D_{Gate} = 210.0 \cdot kN$		$X_{gate} = 6.60\,m$
Water Weight (HW) on Apron Slab:	$H_{1.U1} = 2703.9 \cdot kN$		$H_{1.U1.loc} = 14.13\,m$
Water Weight (TW) on Gate Footing:	$H_{2.U1} = 2699.2 \cdot kN$		$H_{2.U1.loc} = 5.34\,m$
Uplift Load for Overturning Analysis:	$U_{OT.U1} = -16456.3 \cdot kN$		$U_{OT.U1.loc} = 9.48 \cdot m$
Vertical Seismic Component of Concrete Structure:	$Q_{conc.E2.EQv.2} = -738.56 \cdot kN$		$X_{conc.loc} = 10.06\,m$
Vertical Seismic Component of Crest Gate:	$Q_{Gate.E2.EQv.2} = -6.3 \cdot kN$		$X_{gate} = 6.60\,m$
Vertical Seismic Component of Headwater over Apron Slab:	$Q_{H1.E2.EQv.2} = -81.12 \cdot kN$		$H_{1.U1.loc} = 14.13\,m$
Vertical Seismic Component of Headwater over Fixed Crest Slab:	$Q_{H2.E2.EQv.2} = -80.98 \cdot kN$		$H_{2.U1.loc} = 5.34\,m$

Sum of All Overtuming Analysis Vertical Load:

$$\Sigma V_{E2.OT.2} := D_{conc} + D_{Gate} + H_{1.U1} + H_{2.U1} + U_{OT.U1} + \Sigma V_{Q.E2.EQv.2} = 12868.4 \cdot kN$$

Sum of All Overtuming Analysis Vertical Load Moments:

$$\Sigma M_{V.E2.OT.2} := D_{conc} \cdot X_{conc.loc} + D_{Gate} \cdot X_{gate} + H_{1.U1} \cdot H_{1.U1.loc} + H_{2.U1} \cdot H_{2.U1.loc} + U_{OT.U1} \cdot U_{OT.U1.loc} = 145582.24 \cdot kN \cdot m$$

Lateral Driving Earth Loads for Overturning Stability Analysis (at rest condition)

E2.2 CASE

Depth of Driving Soil Loads (to top of key): $h_{E.OT.E2.2} := TOC_{as} - BOF_{elev} = 4\ m$

static equilibrium Soil Load: $E_{act.OT.E2.2} := \frac{K_{o.U1} \cdot h_{E.OT.U1}^{2}}{2} \cdot (\gamma_r - \gamma_w) \cdot W_{hwas.U1} \cdot -1 = -962.49 \cdot kN$

E2.3 CASE

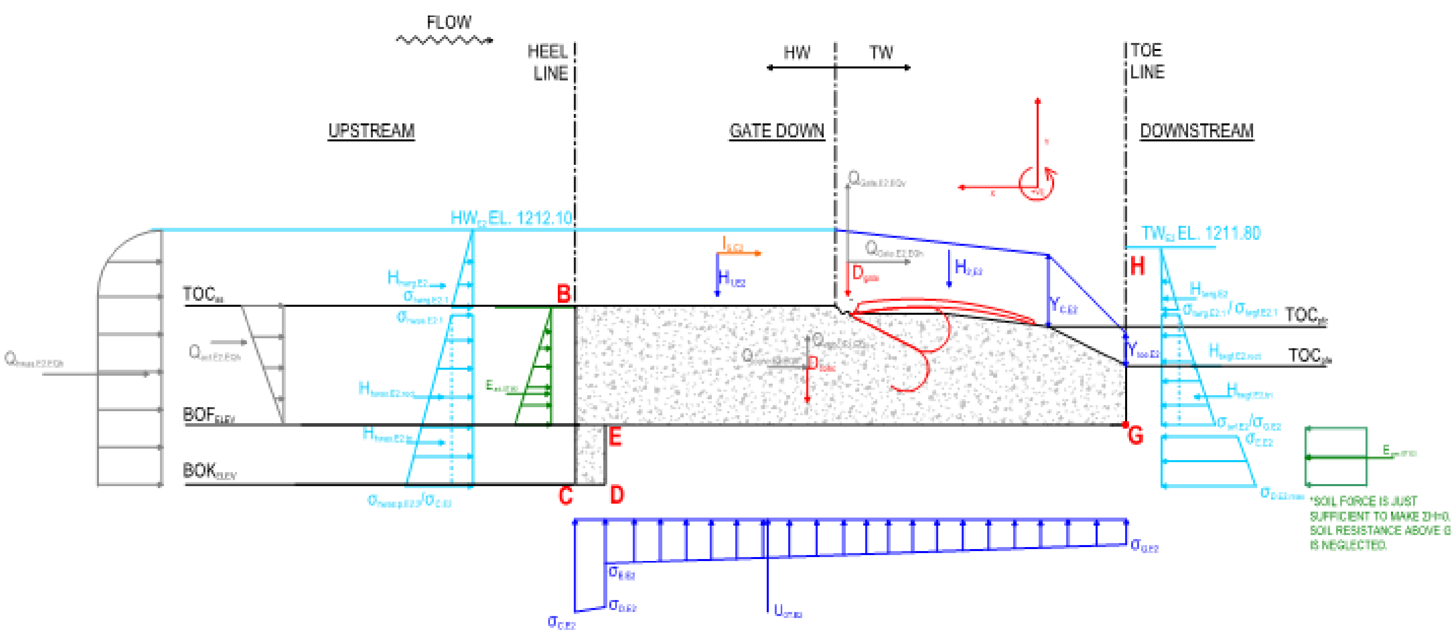
MONOLITH OVERTURNING STABILITY ANALYSIS

Seismic Case $Q_{E2.3}$: 30% Horizontal Seismic Force, 100% Vertical

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stability of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1 $Ratio_{overturning.allow.Extreme} = 0.25$ Resultant within Base



<u>All Vertical Loads Applicable to Overturning Stability Analysis</u>

Total Concrete Dead Loads: $D_{conc} = 24618.6 \cdot kN$ at: $X_{conc.loc} = 10.06\,m$

Dead Load of Gate: $D_{Gate} = 210.0 \cdot kN$ $X_{gate} = 6.60\,m$

Water Weight (HW) on Apron Slab: $H_{1.U1} = 2703.9 \cdot kN$ $H_{1.U1.loc} = 14.13\,m$

Water Weight (TW) on Gate Footing: $H_{2.U1} = 2699.2 \cdot kN$ $H_{2.U1.loc} = 5.34\,m$

Uplift Load for Overturning Analysis: $U_{OT.U1} = -16456.3 \cdot kN$ $U_{OT.U1.loc} = 9.48 \cdot m$

Vertical Seismic Component of Concrete Structure: $Q_{conc.E2.EQv.3} = -738.56 \cdot kN$ $X_{conc.loc} = 10.06\,m$

Vertical Seismic Component of Crest Gate: $Q_{Gate.E2.EQv.3} = -6.3 \cdot kN$ $X_{gate} = 6.60\,m$

Vertical Seismic Component of Headwater over Apron Slab: $Q_{H1.E2.EQv.3} = -81.12 \cdot kN$ $H_{1.U1.loc} = 14.13\,m$

Vertical Seismic Component of Headwater over Fixed Crest Slab: $Q_{H2.E2.EQv.3} = -80.98 \cdot kN$ $H_{2.U1.loc} = 5.34\,m$

Sum of All Overturning Analysis Vertical Load:

$$\Sigma V_{E2.OT.3} := D_{conc} + D_{Gate} + H_{1.U1} + H_{2.U1} + U_{OT.U1} + \Sigma V_{Q.E2.EQv.3} = 12868.4 \cdot kN$$

Sum of All Overturning Analysis Vertical Load Moments:

$$\Sigma M_{V.E2.OT.3} := D_{conc} \cdot X_{conc.loc} + D_{Gate} \cdot X_{gate} + H_{1.U1} \cdot H_{1.U1.loc} + H_{2.U1} \cdot H_{2.U1.loc} + U_{OT.U1} \cdot U_{OT.U1.loc} = 145582.24 \cdot kN \cdot m$$

Lateral Driving Earth Loads for Overturning Stability Analysis (at rest condition)

E2.3 CASE

Depth of Driving Soil Loads (to top of key): $h_{E.OT.E2.3} := TOC_{as} - BOF_{elev} = 4\,m$

Applicable Soil Load: $E_{act.OT.E2.3} := \dfrac{\left(K_{o.U1} \cdot h_{E.OT.U1}^{\;2}\right)}{2} \cdot \left(\gamma_r - \gamma_w\right) \cdot W_{hwas.U1} \cdot -1 = -962.49 \cdot kN$

At Rest- Soil Load Acting from Toe: $E_{act.OT.E2.3.loc} := \dfrac{h_{E.OT.U1}}{3} = 1.33\,m$

All Lateral Loads Applicable to Overturning Stability Analysis

HW Lateral Load on Approach Slab:	$H_{hwas.U1} = -4502.8 \cdot kN$	$H_{hwas.U1.loc} = 0.41\,m$
HW Lateral Load on Reg. Gate:	$H_{hwrg.U1} = 0.0 \cdot kN$	$H_{hwrg.U1.loc} = 4.00\,m$
TW Lateral Load on Reg. Gate:	$H_{twrg.U1} = 0.0 \cdot kN$	$H_{twrg.U1.loc} = 4.00\,m$
TW Lateral Load on Gate Footing (No Key - Overturning Values Adjusted):	$H_{twgf.U1} = 2236.68 \cdot kN$	$H_{twgf.U1.loc} = 1.65\,m$
TW Lateral Load on Key:	$H_{twkey.OT.U1} = 2080.92 \cdot kN$	$H_{twkey.OT.U1.loc} = -1.05\,m$
Ice / Impact Load:	$I_{U1} = 0.0 \cdot kN$	$I_{U1.loc} = 3.70\,m$
Lateral Soil Load (driving):	$E_{act.OT.U1} = -962.5 \cdot kN$	$E_{act.OT.U1.loc} = 1.33\,m$
Horizontal Seismic Component of Concrete Structure:	$Q_{conc.E2.EQh.3} = -1230.93 \cdot kN$	$Y_{conc.loc} = 1.87\,m$
Horizontal Seismic Component of Vertical Lift Gate:	$Q_{Gate.E2.EQh.3} = -10.5 \cdot kN$	$Y_{gate} = 3.90\,m$
Horizontal Seismic Component of Headwater on Gate:	$Q_{hwas.E2.EQh.3} = -281.59 \cdot kN$	$Y_{HWg.E2} = 3.24\,m$
Horizontal Seismic Component of Active Soil: (Section 5-5, USACE EM_1110-2-2100)	$Q_{act.E2.EQh.3} = -146.28 \cdot kN$	$Y_{E.act.E2} = 2.52\,m$

Resisting Lateral Soil Load as required to produce horizontal equilibrium:

$$E_{pas.OT.E2.3} := -\left(H_{hwas.U1} + H_{hwrg.U1} + H_{twrg.U1} + H_{twgf.U1} + H_{twkey.OT.U1} + I_{U1} + E_{act.OT.U1} + \Sigma H_{Q.E2.EQh.3.OT}\right) = 2999.84 \cdot kN$$

$$E_{pas.OT.E2.3.loc} := -1 \cdot \frac{d_{key}}{2} = -1\,m$$

Sum of All Overturning Analysis Horizontal Load (ΣH=0): Acting at:

$$\Sigma H_{E2.OT.3} := H_{hwas.U1} + H_{hwrg.U1} + H_{twrg.U1} + H_{twgf.U1} + H_{twkey.OT.U1} + I_{U1} + E_{act.OT.U1} + E_{pas.OT.E2.3} + \Sigma H_{Q.E2.EQh.3.OT} = 0 \cdot kN$$

Sum of All Overturning Analysis Horizontal Load Moments:

$$\Sigma M_{H.E2.OT.3} := H_{hwas.U1} \cdot H_{hwas.U1.loc} + H_{hwrg.U1} \cdot H_{hwrg.U1.loc} + H_{twrg.U1} \cdot H_{twrg.U1.loc} \cdots + H_{twgf.U1} \cdot H_{twgf.U1.loc} + H_{twkey.OT.U1} \cdot H_{twkey.OT.U1.loc} + I_{U1} \cdot I_{U1.loc} \cdots + E_{act.OT.U1} \cdot E_{act.OT.U1.loc} + E_{pas.OT.U1} \cdot E_{pas.OT.U1.loc} + \Sigma M_{Q.E2.3} = -16320.76 \cdot kN \cdot m$$

Overturning Stability Analysis

$$\Sigma M_{E2.OT.3} := \Sigma M_{V.E2.OT.3} + \Sigma M_{H.E2.OT.3} = 129261.48 \cdot kN \cdot m$$

$$X_{R.E2.3} := \frac{\Sigma M_{E2.OT.3}}{\Sigma V_{E2.OT.3}} = 10.04\,m \qquad x_{OT.E2.3} := X_{R.E2.3} - \frac{L_b}{2} = 0.79\,m$$

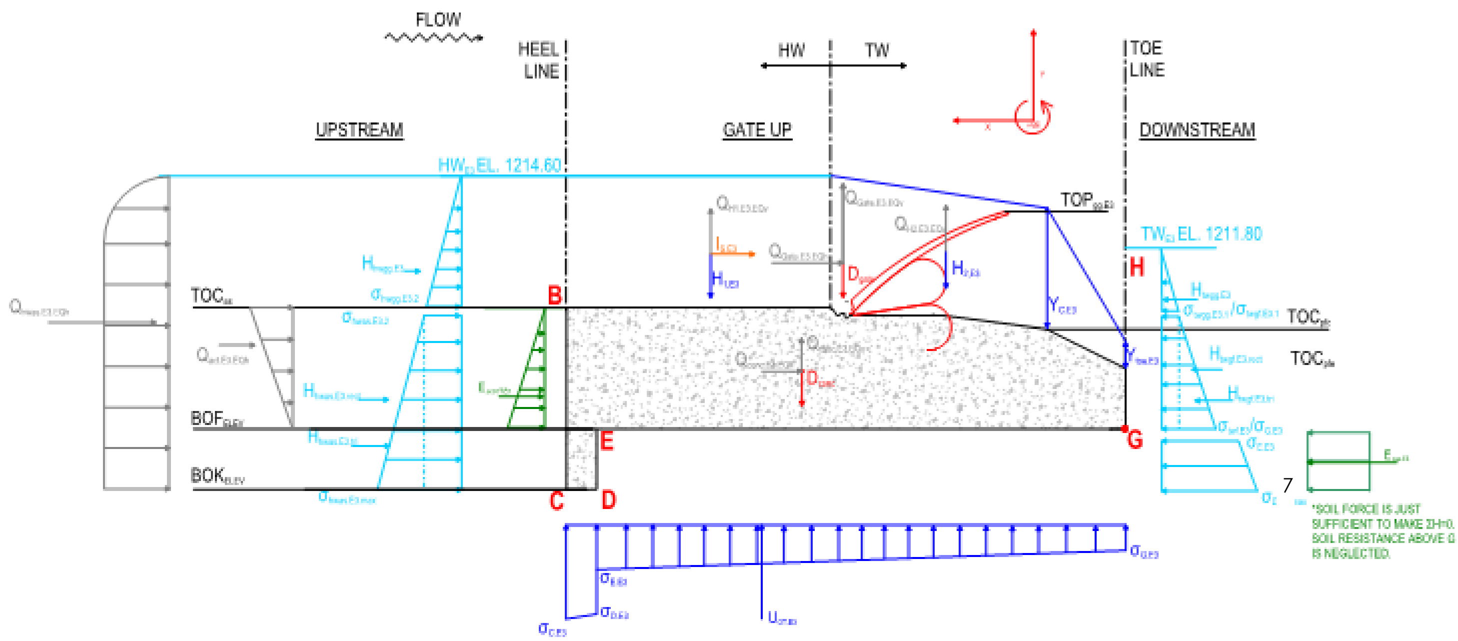
MONOLITH OVERTURNING STABILITY ANALYSIS

Seismic Case $Q_{E3.1}$: 100% Horizontal Seismic Force, No Vertical

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stability of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1 $Ratio_{overturning.allow.Extreme} = 0.25$ Resultant within Base



All Vertical Loads Appliable to Overturning Stability Analysis

Total Concrete Dead Loads:	$D_{conc} = 24618.6 \cdot kN$	at:	$X_{conc.loc} = 10.06\,m$
Dead Load of Gate:	$D_{Gate} = 210.0 \cdot kN$		$X_{gate} = 6.60\,m$
Water Weight (HW) on Apron Slab:	$H_{1.U2} = 5922.8 \cdot kN$		$H_{1.U2.loc} = 14.13\,m$
Water Weight (TW) on Gate Footing:	$H_{2.U2} = 5730.2 \cdot kN$		$H_{2.U2.loc} = 5.43\,m$
Uplift Load for Overturning Analysis:	$U_{OT.U2} = -19563.05 \cdot kN$		$U_{OT.U2.loc} = 9.94 \cdot m$
Vertical Seismic Component of Concrete Structure:	$Q_{conc.E3.EQv.1} = 0$		$X_{conc.loc} = 10.06\,m$
Vertical Seismic Component of Crest Gate:	$Q_{Gate.E3.EQv.1} = 0$		$X_{gate} = 6.60\,m$
Vertical Seismic Component of Headwater over Apron Slab:	$Q_{H1.E3.EQv.1} = 0$		$H_{1.U2.loc} = 14.13\,m$
Vertical Seismic Component of Headwater over Fixed Crest Slab:	$Q_{H2.E3.EQv.1} = 0$		$H_{2.U2.loc} = 5.43\,m$

Sum of All Overturning Analysis Vertical Load:

$$\Sigma V_{E3.OT.1} := D_{conc} + D_{Gate} + H_{1.U2} + H_{2.U2} + U_{OT.U2} + \Sigma V_{Q.E3.EQv.1} = 16918.58 \cdot kN$$

Sum of All Overturning Analysis Vertical Load Moments:

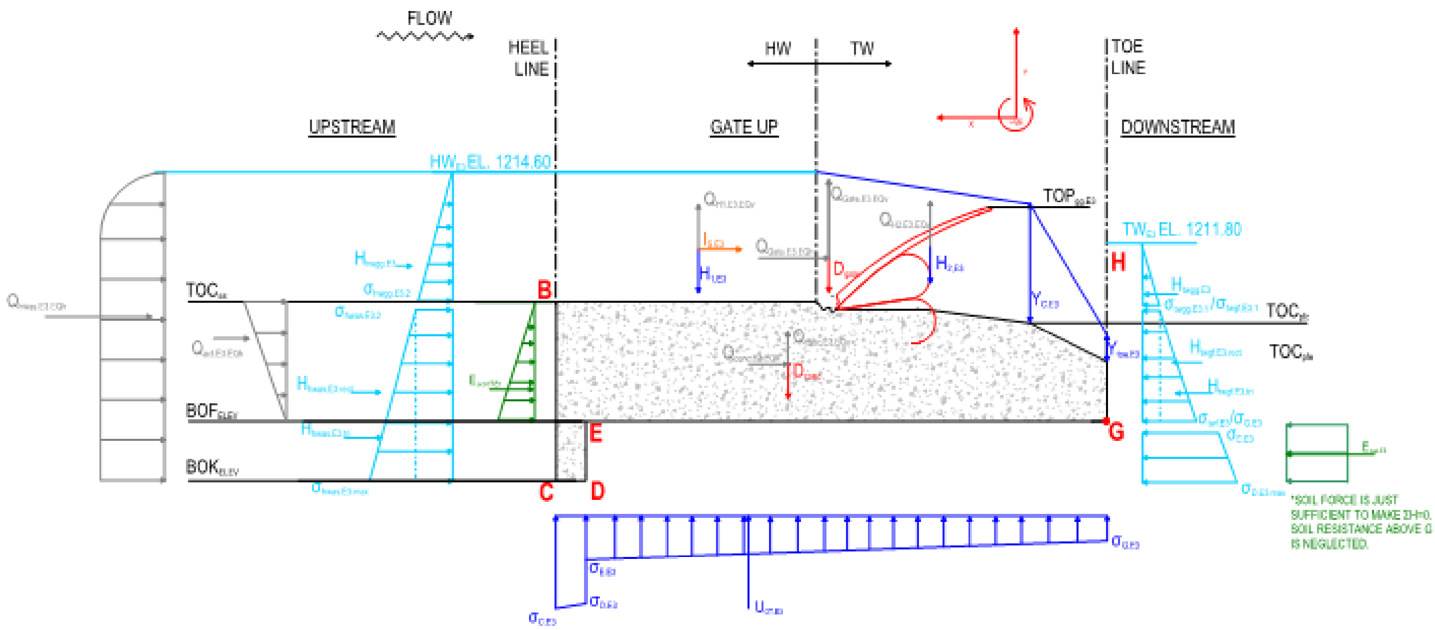
MONOLITH OVERTURNING STABILITY ANALYSIS

E3.2 CASE

Seismic Case $Q_{E3.2}$: 100% Horizontal Seismic Force, 30% Vertical

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stability of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1 $Ratio_{overturning.allow.Extreme} = 0.25$ Resultant within Base



All Vertical Loads Appliable to Overturning Stability Analysis

Total Concrete Dead Loads:	$D_{conc} = 24618.6\cdot kN$	at:	$X_{conc.loc} = 10.06\,m$
Dead Load of Gate:	$D_{Gate} = 210.0\cdot kN$		$X_{gate} = 6.60\,m$
Water Weight (HW) on Apron Slab:	$H_{1.U2} = 5922.8\cdot kN$		$H_{1.U2.loc} = 14.13\,m$
Water Weight (TW) on Gate Footing:	$H_{2.U2} = 5730.2\cdot kN$		$H_{2.U2.loc} = 5.43\,m$
Uplift Load for Overturning Analysis:	$U_{OT.U2} = -19563.05\cdot kN$		$U_{OT.U2.loc} = 9.94\cdot m$
Vertical Seismic Component of Concrete Structure:	$Q_{conc.E3.EQv.2} = -738.56\cdot kN$		$X_{conc.loc} = 10.06\,m$
Vertical Seismic Component of Crest Gate:	$Q_{Gate.E3.EQv.2} = -6.3\cdot kN$		$X_{gate} = 6.60\,m$
Vertical Seismic Component of Headwater over Apron Slab:	$Q_{H1.E3.EQv.2} = -81.12\cdot kN$		$H_{1.U2.loc} = 14.13\,m$
Vertical Seismic Component of Headwater over Fixed Crest Slab:	$Q_{H2.E3.EQv.2} = -80.98\cdot kN$		$H_{2.U2.loc} = 5.43\,m$

Sum of All Overturning Analysis Vertical Load:

$$\Sigma V_{E3.OT.2} := D_{conc} + D_{Gate} + H_{1.U2} + H_{2.U2} + U_{OT.U2} + \Sigma V_{Q.E3.EQv.2} = 16011.63\cdot kN$$

Sum of All Overturning Analysis Vertical Load Moments:

$$\Sigma M_{V.E3.OT.2} := D_{conc}\cdot X_{conc.loc} + D_{Gate}\cdot X_{gate} + H_{1.U2}\cdot H_{1.U2.loc} + H_{2.U2}\cdot H_{2.U2.loc} + U_{OT.U2}\cdot U_{OT.U2.loc} = 169206.88\cdot kN\cdot m$$

Lateral Driving Earth Loads for Overturning Stability Analysis (at rest condition)

E3.2 CASE

Depth of Driving Soil Loads (to top of key): $h_{E.OT.E3.2} := TOC_{as} - BOF_{elev} = 4\,m$

static equilibrium Soil Load: $E_{act.OT.E3.2} := \dfrac{\left(K_{o.U1} \cdot h_{E.OT.U2}{}^{2}\right)}{2} \cdot \left(\gamma_r - \gamma_w\right) \cdot W_{hwas.U2} \cdot -1 = -962.49 \cdot kN$

At Rest- Soil Load Acting from Toe: $E_{act.OT.E3..loc} := \dfrac{h_{E.OT.U2}}{3} = 1.33\,m$

All Lateral Loads Appliable to Overturning Stability Analysis

HW Lateral Load on Approach Slab:	$H_{hwas.U2} = -6710.0 \cdot kN$	$H_{hwas.U2.loc} = 0.61\,m$

Appendix E.2-2 STILLING BASIN

Calculation Section I

Results Summary Table (overview)

Table E.2-2.1 – Service Spillway – Stilling Basin

Load Case	Headwater/ Tailwater Elevation (m)	Vertical Force Down (kN)	Uplift Force (kN)	Floatation Safety Factor (FSF)		Anchor Force Required (kPa)
				Required	Calculated	
F1 Usual Normal Operation	1212.1 / 1211.8	22123.0	15123.5	1.50	1.46	2.1
F2 Unusual 2013 Flood	1215.8 / 1213.1	25470.6	19973.3	1.30	1.28	1.9
F3 Unusual Const./Dewatered	1214.6/ 1211.8	12337.5	14535.7	1.30	0.83	27.0
F4 Extreme Ineffective Drain	1215.8 / 1211.9	22380.5	17634.2	1.10	1.27	0.0

Notes:
1. See Appendix E.2 for definition of monolith description, analysis methodology, and stability calculations.
2. Analysis assumes inclined sliding plane, interface friction angle Φ = 26 degrees, and no cohesion.
3. Reported seismic results are controlling values for the three combinations of vertical and horizontal seismic load considered.

Calculation Section II

Results Summary Table (detailed)

SERVICE SPILLWAY STILLING BASIN FLOATATION SUMMARY (2B & 4B)					
Load Combo	Σ Vertical Forces (Down) (kN)	Σ Uplift Forces (kN)	FSF Floatation Required	FSF Floatation Actual	Required Anchor Force (kN/m2)
F1	22123.0	15123.5	1.50	1.46	2.1
F2	25470.6	19973.3	1.30	1.28	1.9
F3	12337.5	14535.7	1.30	0.83	27.0
F4	22380.5	17634.2	1.10	1.27	0.0

SS-2B/4B Stilling Basin Floatation Calculations

Project Number: 110773396

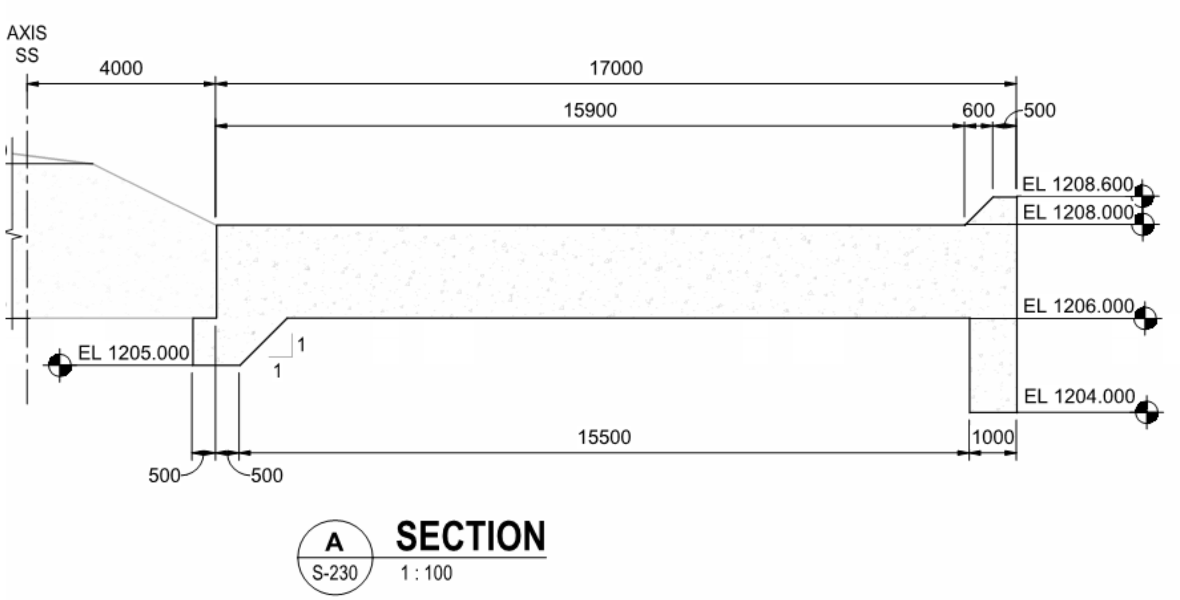
Project Title: SR1 Project

Client: Alberta Transportation

Engineer: D. CHEUK Date: 01/28/2018

Checker: Sean Xiao Date: 11/13/2018

Calculation for: Service Spillway Monolith-2B Stilling Basin Floatation Check



BASE SECTION PROPERTIES

Gate Structure Base Width: $L_b := 18.50m$

Base Length: $L_{sb} := 17.50m$ $\quad$ $Kern := \frac{L_{sb}}{6} = 2.92\,m$

Base Width: $W_{sb} := 15.00m$

Area of Base: $A_{sb} := L_{sb} \cdot W_{sb} = 262.5\,m^2$

Section Modulus of Base: $S_{sb} := \frac{\left(W_{sb} \cdot L_{sb}^2\right)}{6} = 765.6\,m^3$

Top of Concrete Elevation: $TOC := 1208.00m$

Bottom of Concrete Elevation: $BOF_{elev} := 1206.00m$

FOOTINGS

Stilling Basin Footing Thickness: $h_{sb} := 2.00m$

Stilling Basin Footing Width: $W_{sb} = 15.00\,m$

Stilling Basin Footing Length: $L_{sb} = 17.50\,m$

Total Apron Slab Footing Volume: $V_{sb} := h_{sb} \cdot W_{sb} \cdot L_{sb} = 525.0 \cdot m^3$

MATERIAL PROPERTIES

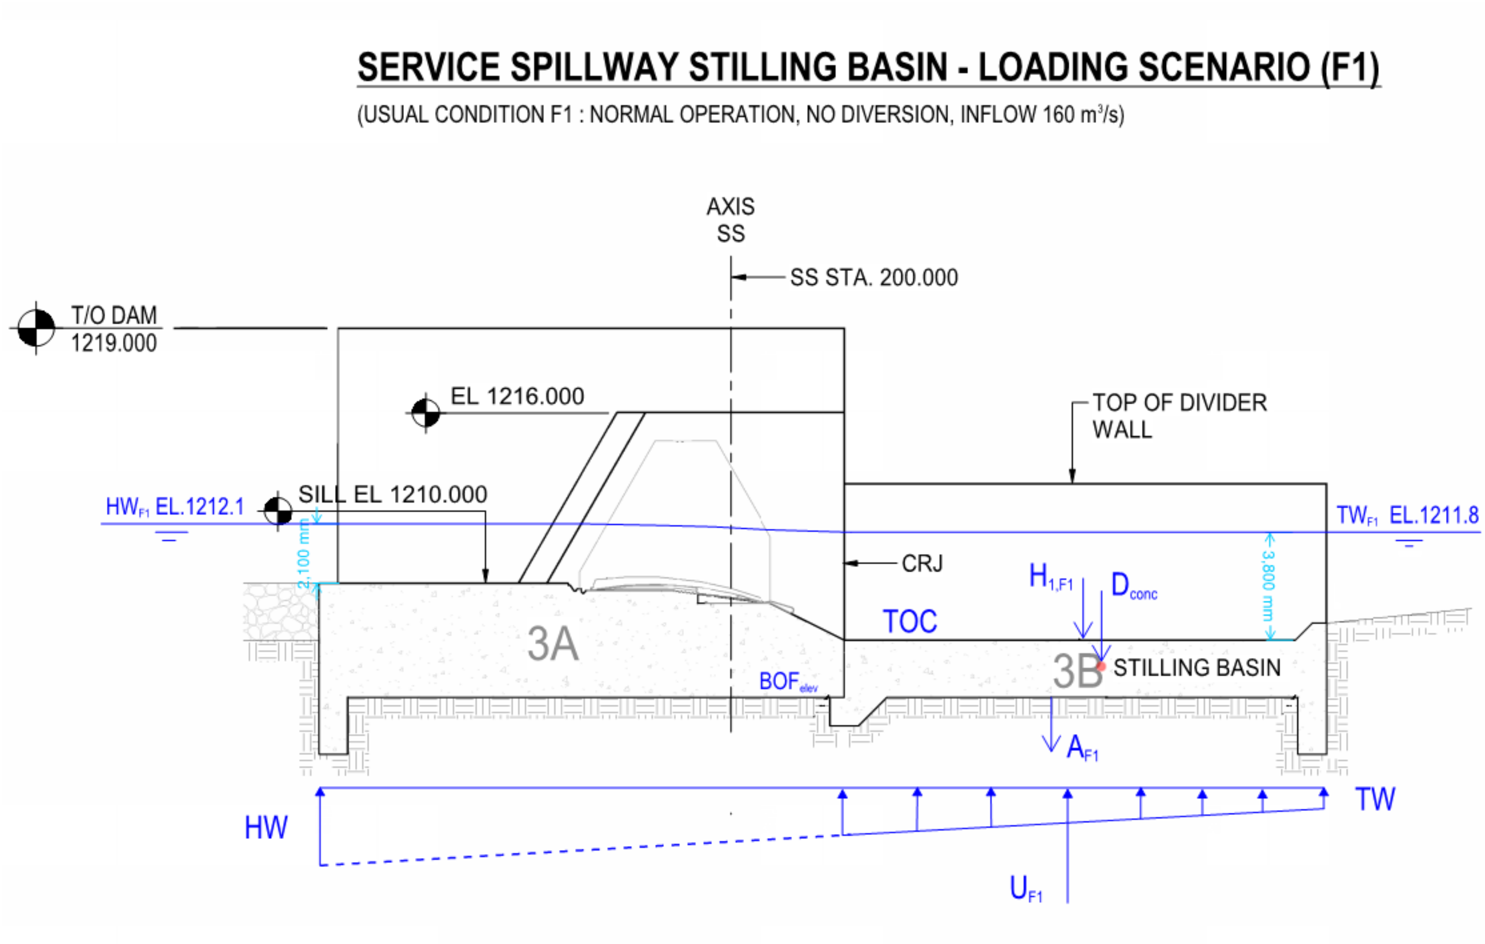
Unit Weight of Concrete: $\gamma_c := 23.5 \frac{kN}{m^3}$ (Section 7.1, Design Criteria)

Unit Weight of Water: $\gamma_w := 9.81 \frac{kN}{m^3}$ (Section 7.2, Design Criteria)

CONCRETE DEAD LOADS

Total Concrete Dead Loads: $D_{conc} := V_{sb} \cdot \gamma_c = 12337.5 \cdot kN$

F1 DESIGN CASE



ACCEPTANCE PARAMETERS

Required Factor of Safety: $FS_{req.F1} := 1.5$ (Without Cohesion)

(Section 8.1, Design Criteria)

VERTICAL WATER LOADS

Headwater Elevation: $H_{hw.F1} := 1212.10m$

Tailwater Elevation: $H_{tw.F1} := 1211.80m$

Include Vertical Water Load in Analysis?: $n_{F1} := 1$ n=1 Yes; n=0 No

Vertical Tailwater Load: $H_{1.F1} := \gamma_w \cdot L_{sb} \cdot W_{sb} \cdot \left(H_{tw.F1} - TOC\right) \cdot n_{F1} = 9785.5 \cdot kN$

WATER UPLIFT

F1 CASE

Uplift pressure at heel of Gated Structure: $U_{HW.F1} := \left(H_{hw.F1} - BOF_{elev}\right) \cdot \gamma_w = 59.8 \cdot \frac{kN}{m^2}$

Uplift pressure at Toe of Stilling Basin: $U_{TW.F1} := \left(H_{tw.F1} - BOF_{elev}\right) \cdot \gamma_w = 56.9 \cdot \frac{kN}{m^2}$

Length from Heel of Gate Structure to Toe of Stilling Basin: $L_{overall.F1} := L_b + L_{sb} = 36.00\, m$

Difference between Uplift pressure at Heel of Gate Structure and Uplift Pressure at Toe of Stilling Basin: $U_{diff.F1} := U_{HW.F1} - U_{TW.F1} = 2.9 \cdot \frac{kN}{m^2}$

Slope of difference between Uplift pressure at Heel of Gate Structure and Uplift Pressure at Toe of Stilling Basin: $U_{slope.F1} := \frac{U_{diff.F1}}{L_{overall.F1}} = 0.08 \cdot \frac{kN}{m^2 \cdot m}$

Tailwater Pressure at toe of Gate Structure / Heel of Stilling Basin: $U_{press.heel.sb.F1} := U_{TW.F1} + \left(L_{sb}\right) \cdot U_{slope.F1} = 58.3 \cdot \frac{kN}{m^2}$

Uniform uplift force: $U_{A.F1} := U_{TW.F1} \cdot L_{sb} \cdot W_{sb} \cdot -1 = -14935.7 \cdot kN$

Triangular uplift force: $U_{B.F1} := \frac{1}{2} \cdot \left(U_{press.heel.sb.F1} - U_{TW.F1}\right) \cdot L_{sb} \cdot W_{sb} \cdot -1 = -187.8 \cdot kN$

Total Resultant Uplift force: $U_{F1} := U_{A.F1} + U_{B.F1} = -15123.5 \cdot kN$

$\Sigma V_{water.F1} := H_{1.F1} + U_{F1} = -5338 \cdot kN$

FLOATATION ANALYSIS:

$\Sigma DL_{F1} := D_{conc} = 12337.5 \cdot kN$

$\Sigma H_{vert.F1} := H_{1.F1} = 9785.5 \cdot kN$

$VtForceDown_{F1} := \Sigma DL_{F1} + \Sigma H_{vert.F1} = 22123 \cdot kN$

$\Sigma Up_{F1} := U_{F1} = -15123.5 \cdot kN$

$\Sigma Fy_{F1} := \Sigma DL_{F1} + \Sigma H_{vert.F1} + \Sigma Up_{F1} = 6999.5 \cdot kN$

Factor of Safety: $FS_{act.F1} := \frac{\left(\Sigma DL_{F1} + \Sigma H_{vert.F1}\right)}{\left|\Sigma Up_{F1}\right|} = 1.46$

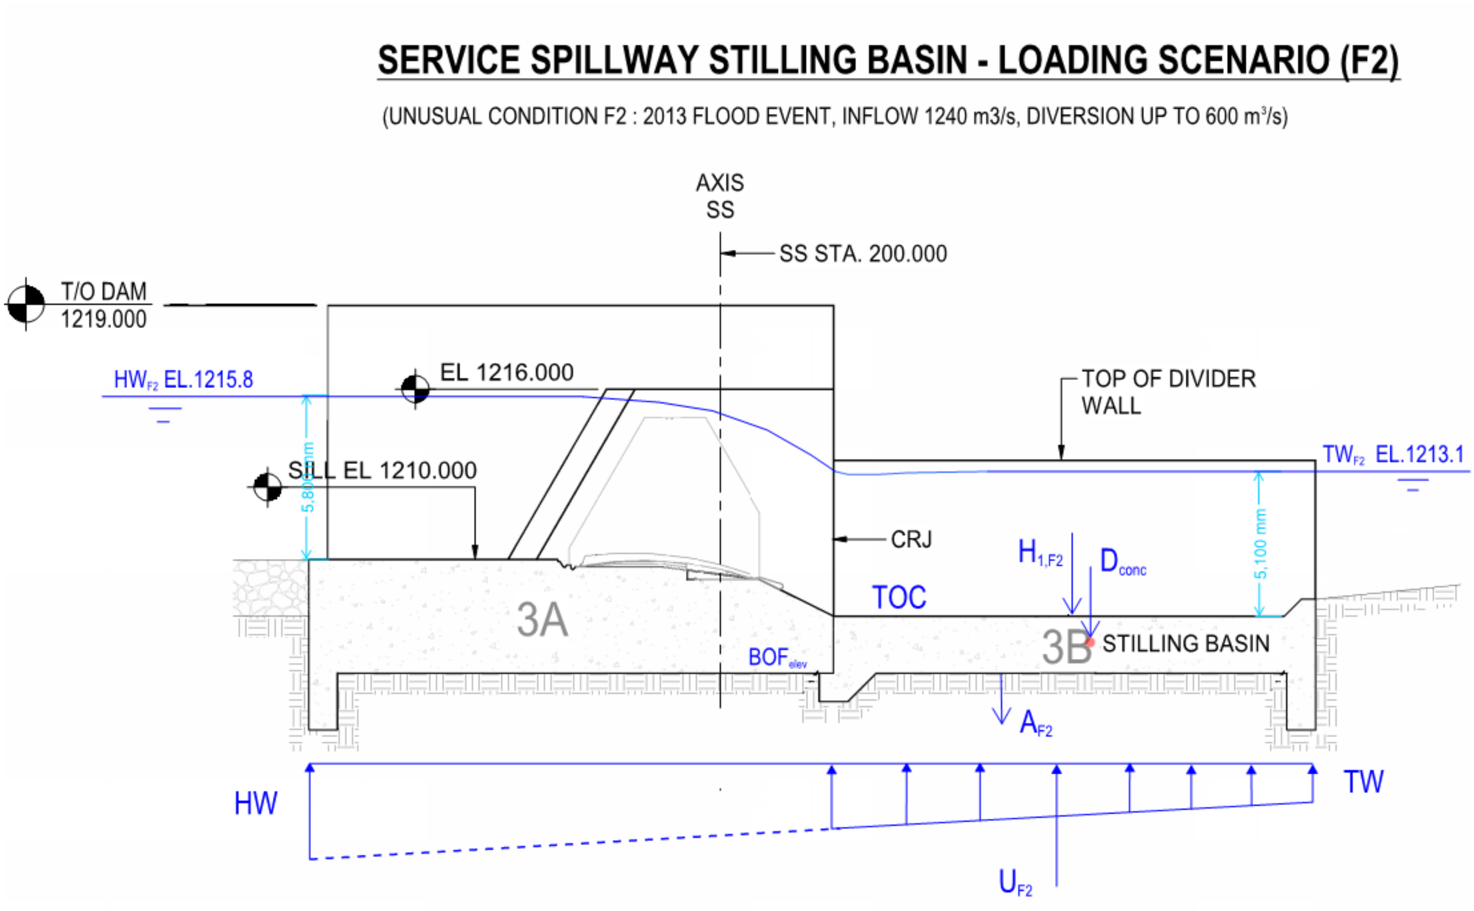
$$FS_{check.F1} := \begin{cases} \text{"OKAY"} & \text{if } FS_{act.F1} \ge FS_{req.F1} \\ \text{"ANCHORS REQUIRED"} & \text{if } FS_{act.F1} < FS_{req.F1} \end{cases} = \text{"ANCHORS REQUIRED"}$$

Anchor Force Required to Meet Factor of Safety Requirements:

$$A_{F1} := \begin{cases} (0.0kN) & \text{if } FS_{act.F1} \ge FS_{req.F1} \\ \left(\left|\Sigma Up_{F1}\right| \cdot FS_{req.F1} - \Sigma DL_{F1} - \Sigma H_{vert.F1}\right) & \text{if } FS_{act.F1} < FS_{req.F1} \end{cases} = 562.3 \cdot kN$$

Required anchor force over stilling basin Area: $A_{F1.Area} := \frac{A_{F1}}{\left(L_{sb} \cdot W_{sb}\right)} = 2.1 \cdot \frac{kN}{m^2}$

F2 DESIGN CASE



ACCEPTANCE PARAMETERS

Required Factor of Safety: $FS_{req.F2} := 1.3$ (Without Cohesion)

(Section 8.1, Design Criteria)

VERTICAL WATER LOADS

Headwater Elevation: $H_{hw.F2} := 1215.80m$

Tailwater Elevation: $H_{tw.F2} := 1213.10m$

Include Vertical Water Load in Analysis?: $n_{F2} := 1$ n=1 Yes; n=0 No

Vertical Tailwater Load: $H_{1.F2} := \gamma_w \cdot L_{sb} \cdot W_{sb} \cdot \left(H_{tw.F2} - TOC\right) \cdot n_{F2} = 13133.1 \cdot kN$

WATER UPLIFT

F2 CASE

$FS_{check.F4} := \begin{cases} \text{"OKAY"} & \text{if } FS_{act.F4} \geq FS_{req.F4} \\ \text{"ANCHORS REQUIRED"} & \text{if } FS_{act.F4} < FS_{req.F4} \end{cases} = \text{"OKAY"}$

Anchor Force Required to Meet Factor of Safety Requirements:

$A_{F4} := \begin{cases} (0.0kN) & \text{if } FS_{act.F4} \geq FS_{req.F4} \\ \left(\left|\Sigma Up_{F4}\right|\cdot FS_{req.F4} - \Sigma DL_{F4} - \Sigma H_{vert.F4}\right) & \text{if } FS_{act.F4} < FS_{req.F4} \end{cases} = 0.0\cdot kN$

Required anchor force over stilling basin Area: $A_{F4.Area} := \frac{A_{F4}}{\left(L_{sb}\cdot W_{sb}\right)} = 0.0\cdot\frac{kN}{m^2}$

Appendix E.2-3 RIGHT ABUTMENT PIER

SS-1A Right Abutment Stability Calculations

Project Number: 110773396

Project Title: SR1 Project

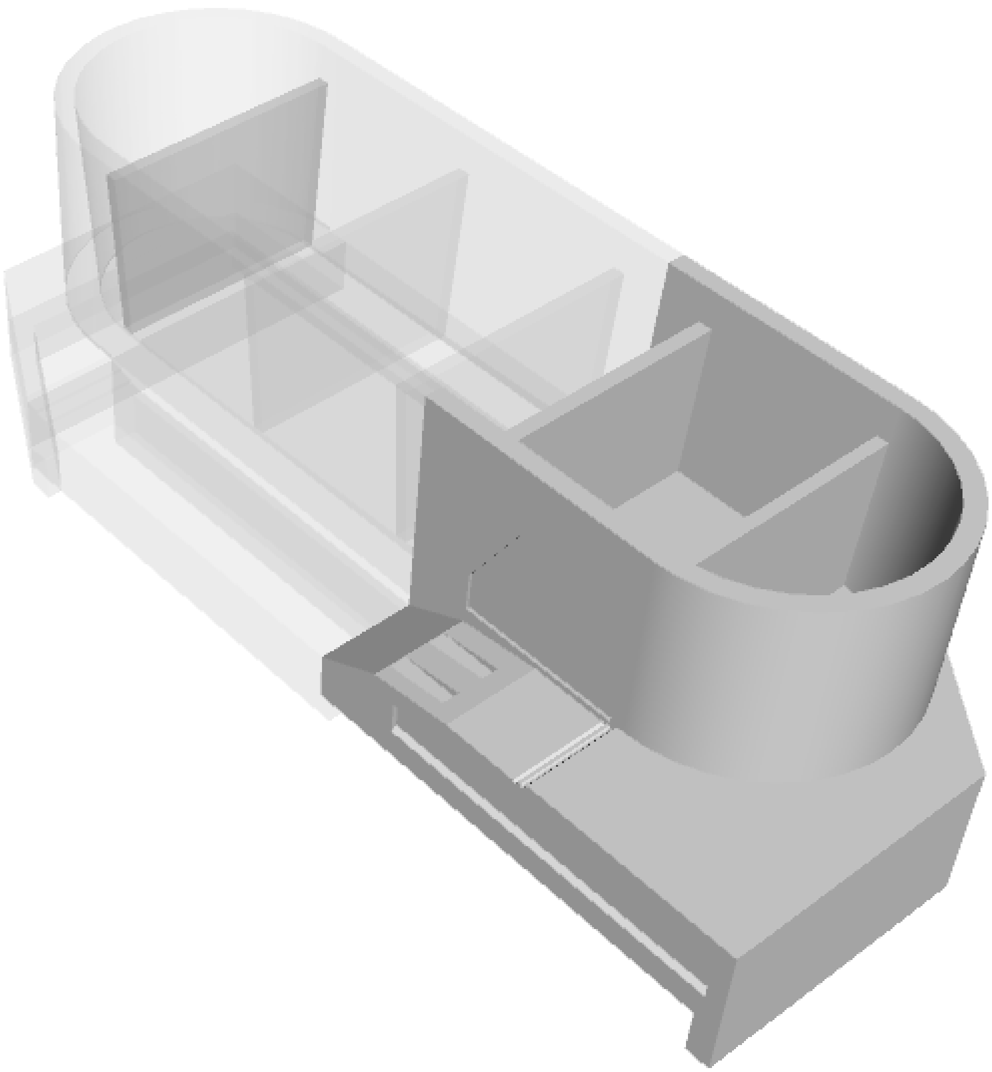
Client: Alberta Transportation

Engineer: Dave Crawford, Derek Cheuk Date: 06/25/2020

Checker: Sean Xiao Date: 06/25/2020

Calculation for: Service Spillway Right Abutment SS-1A

Structure Isometric:

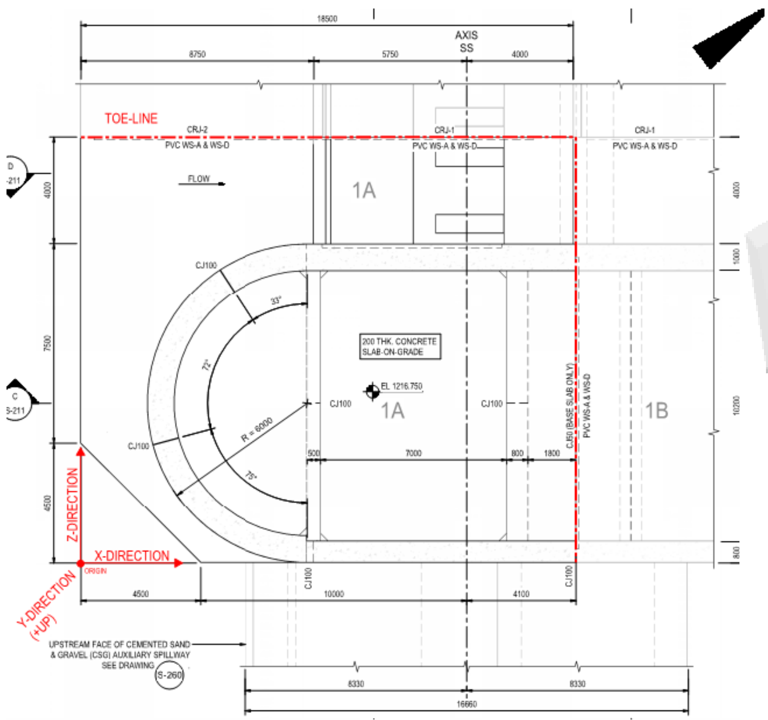


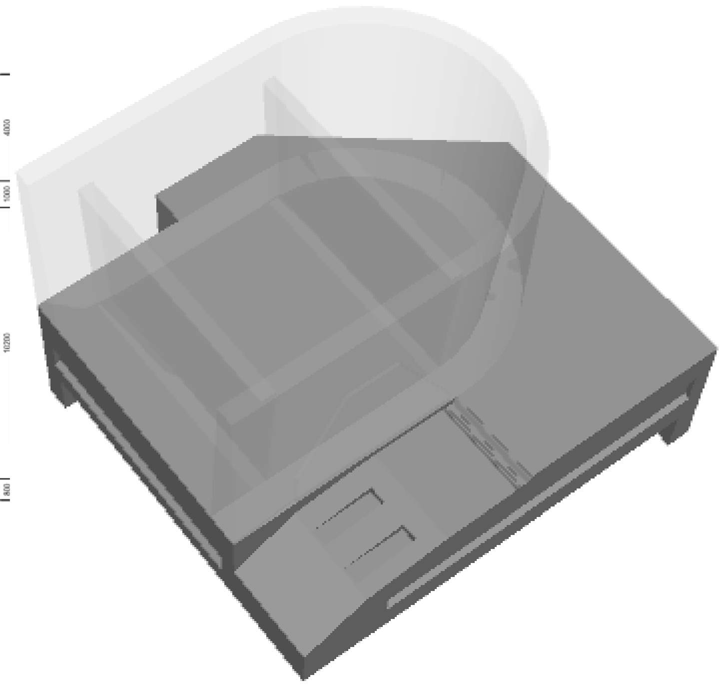
SERVICE SPILLWAY - RIGHT ABUTMENT (ABUTMENT PIER) - 1A

User Input

SERVICE SPILLWAY DEIMENSIONAL INPUT PARAMETERS

BASE SECTION PROPERTIES





Base Length: L_b Varies (See Plan)

$L_B := 18.5m$

$Kern_x := \frac{L_B}{6} = 3.08\ m$

Base Width: W_B Varies, (See Plan)

$W_B := 16.0 \cdot m$

$Kern_z := \frac{W_B}{6} = 2.67\ m$

1A Gate Water Flow Width: $W_{BG} := 4.0m$

Area of Base: $A_b := 285.875m^2$ (From Section Prop. Spreadsheet)

X Center of Gravity From Toe: $X_{BCG} := L_B - 9.5245m = 8.98\ m$ (From Section Prop. Spreadsheet)

Z Center of Gravity From Toe: $Z_{BCG} := W_B - 8.23m = 7.77\ m$

Section Modulus of Base about X-axis: (Top, Z-Direction) $S_{bz.t} := 754.248m^3$ (From Section Prop. Spreadsheet)

Section Modulus of Base: (Bottom, Z-Direction) $S_{bz.b} := 712.052m^3$

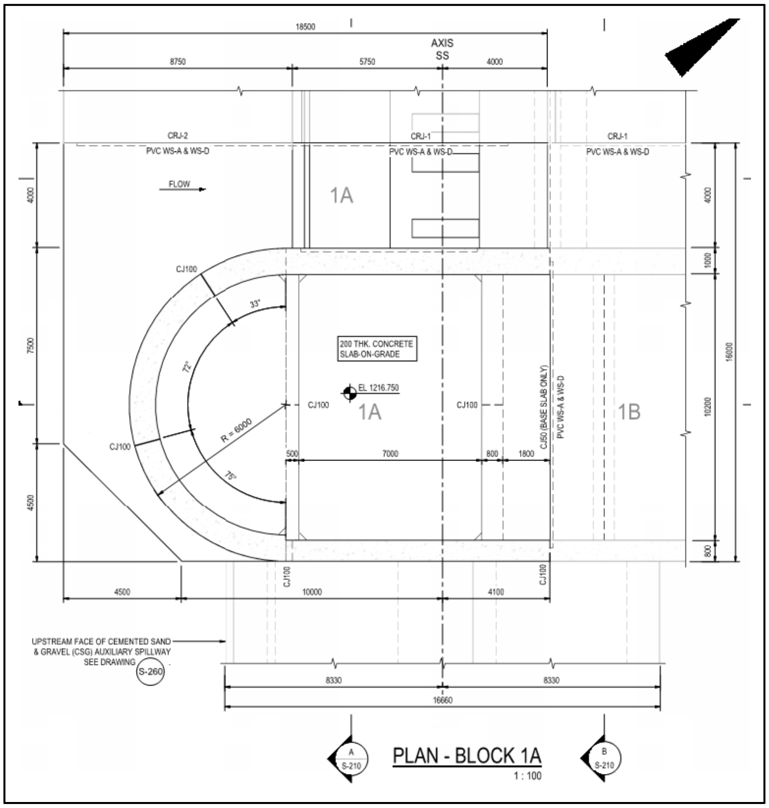
Section Modulus of Base about Z-axis: (Left, X-Direction) $S_{bx.L} := 819.058m^3$

Section Modulus of Base: (Right, X-Direction) $S_{bx.R} := 869.154m^3$

Moment of Inertia of Base: (about X-Direction) $I_{bx} := 5.860 \cdot 10^{15} mm^4 = 5860\ m^4$ (From Section Prop. Spreadsheet)

Moment of Inertia of Base: (about Y-Direction) $I_{by} := 7.801 \cdot 10^{15} mm^4 = 7801\ m^4$

ABUTMENT WALL PROPERTIES



Outside-to-Outside Wall Width: $W_{wall} := 12m$

Top of Wall Elevation: $EL_{TOP.wall} := 1218.0m$

Top of Footing Elevation: (High Point) $EL_{TOP.FTG} := 1210.0m$

Max Height of Wall: $h_w := EL_{TOP.wall} - EL_{TOP.FTG} = 8\ m$

Wall Top Width: $w_{wt} := 1.0m$

Wall Bottom Width: $w_{wb} := 1.0m$

Wall Average Width: $w_{w.avg} := \dfrac{(w_{wt} + w_{wb})}{2} = 1\ m$

Wall Cross Sectional Area: $A_{wall} := w_{wt} \cdot h_w + 0.5(w_{wb} - w_{wt}) \cdot h_w = 8\ m^2$

Radius of wall curvature: $r_{wall} := 6m$

Area of Semicircular Wall: $A_{semicircle} := \dfrac{\pi \cdot r_{wall}^2}{2} - \dfrac{\pi \cdot (r_{wall} - w_{w.avg})^2}{2} = 17.28\ m^2$

Wall Volume in Semicircle: $V_{wall.cyl} := h_w \cdot A_{semicircle} = 138.23 \cdot m^3$

Length of Straight Wall: $L_{wall} := 10.m$

Wall Volume in Straight Line: $V_{wall.s} := A_{wall} \cdot (L_{wall} \cdot 2) = 160 \cdot m^3$ (Two exterior straight walls)

Abutment Wall X C.O.G. (Semi-Cylinder):

$$X_{WC} := \frac{4 \cdot \left[r_{wall}^3 - (r_{wall} - w_{w.avg})^3 \right]}{3 \cdot \pi \cdot \left[r_{wall}^2 - (r_{wall} - w_{w.avg})^2 \right]} + L_{wall} = 13.5111\ m$$

INTERIOR WALLS

Top of Interior Wall Elevation: $EL_{TOP.i.wall} := 1216.5m$

Max Height of Interior Wall: $h_{i.w} := EL_{TOP.i.wall} - EL_{TOP.FTG} = 6.5\,m$

Width of Interior Wall 1: $w_{w1} := 0.5m$

Width of Interior Wall 2: $w_{w2} := 0.8m$

Length of Interior Walls: $L_{i.w} := W_{wall} - 2 \cdot w_{wt} - 2 \cdot \left[0.5 \cdot \left(w_{wb} - w_{wt}\right)\right] = 10\,m$

Volume of Interior Wall 1: $V_{w1} := h_{i.w} \cdot L_{i.w} \cdot w_{w1} = 32.5 \cdot m^3$

Volume of Interior Wall 2: $V_{w2} := h_{i.w} \cdot L_{i.w} \cdot w_{w2} = 52 \cdot m^3$

TOP CONCRETE CAP

Radius of Concrete Cap (Cylinder): $r_{cap.c} := 5.0m$

Area of Concrete Cap (Cylinder): $A_{cap.c} := \dfrac{\pi \cdot \left(r_{cap.c}\right)^2}{2} = 39.27\,m^2$

Width of Concrete Cap: $w_c := 10m$ (From Revit Model)

Elevation at Top of Concrete Cap: $EL_{cap.top} := 1216.7m$

Elevation at Top of Concrete Cap: $EL_{cap.bot} := 1216.5m$

Cap Thickness: $t_{cap} := EL_{cap.top} - EL_{cap.bot} = 0.2\,m$

Volume of Concrete Cap (Cylinder): $V_{cap.c} := t_{cap} \cdot A_{cap.c} = 7.85 \cdot m^3$

Volume of Concrete Cap Straight: $V_{cap.s} := t_{cap} \cdot w_c \cdot L_{wall} = 20 \cdot m^3$

FOOTINGS

Bottom of Footing (Elevation): $EL_{FTG.bot} := 1206.0m$

Top of Footing Elevation: $EL_{FTG.top} := 1210.0m$

Footing Thickness (rect): $t_{FTG} := EL_{FTG.top} - EL_{FTG.bot} = 4\,m$

Footing Cross Sectional Area: $A_{FTG} := A_b = 285.88\,m^2$

Total Footing Volume: $V_{FTG} := t_{FTG} \cdot A_{FTG} = 1143.5 \cdot m^3$

$V_{Crest} := 6.1 \cdot m^2 \cdot W_{BG} = 24.4 \cdot m^3$

$X_{Crest} := 2.91 \cdot m$ $Z_{Crest} := 2 \cdot m$

$Y_{Crest} := 1.489 \cdot m$

(To reduce concrete volume for Crest Gate, from Bluebeam Measurement)

$V_{FTG0} := V_{FTG} - V_{Crest} = 1119.1 \cdot m^3$

SHEAR KEY PROPERTIES

Key depth: $d_{key} := 2.0m$

Key width: $w_{key} := 1.0m$

FOUNDATION PARAMETERS

Granular Fill Internal Angle of Friction: $\phi := 34 \cdot \dfrac{\pi}{180} = 0.593$ Radians (Section 5.3, Design Criteria)

Friction Angle at Base Concrete / Rock Interface: $\phi_{rock} := 26 \cdot \dfrac{\pi}{180}$ (Section 5.2, Design Criteria)

Base Friction Coefficient: $\tan_{\phi} := \tan\left(\phi_{rock}\right) = 0.488$ radians

ROCK FILL PROPERTIES

Rock Fill Width (Average): $w_{fill} := W_{wall} - 2 \cdot w_{wt} - 2 \cdot \left[\frac{(w_{wb} - w_{wt})}{2} \right] = 10\,m$

Rock Fill Length 1 (Rectangle): $L_{fill.1} := 7.0m$

Rock Fill Length 2 (Rectangle): $L_{fill.2} := 1.7m$

Rock Fill Volume 1 (Box): $V_{fill.1} := w_{fill} \cdot L_{fill.1} \cdot (h_{i.w}) = 455 \cdot m^3$

Rock Fill Volume 2 (Box): $V_{fill.2} := w_{fill} \cdot L_{fill.2} \cdot (h_{i.w}) = 110.5 \cdot m^3$

Rock Fill Area 3 (Semi-Cylinder): $A_{fill.cyl} := \frac{\pi \cdot (r_{wall} - w_{w.avg})^2}{2} = 39.27\,m^2$

Rock Fill Volume 3 (Semi-Cylinder): $V_{fill.cyl} := A_{fill.cyl} \cdot h_{i.w} = 255.25 \cdot m^3$

MATERIAL PROPERTIES

Unit Weight of Concrete: $\gamma_c := 23.5 \frac{kN}{m^3}$ (Section 7.1, Design Criteria)

Unit Weight of Rock Fill: $\gamma_r := 22.0 \frac{kN}{m^3}$ (Section 5.3, Design Criteria)

$\phi_{backfill} := \left(20 \frac{\pi}{180} \right) = 0.35$ radians Assume Rip Rap Backfill

Unit Weight of Water: $\gamma_w := 9.81 \frac{kN}{m^3}$ (Section 7.2, Design Criteria)

CONCRETE DEAD LOADS

Exterior Wall (Cylinder): $D_{w.cyl} := V_{wall.cyl} \cdot \gamma_c = 3248.4 \cdot kN$

Exterior Wall (Straight): $D_{w.s} := V_{wall.s} \cdot \gamma_c = 3760 \cdot kN$

Interior Wall 1: $D_{i.w1} := V_{w1} \cdot \gamma_c = 763.8 \cdot kN$

Interior Wall 2: $D_{i.w2} := V_{w2} \cdot \gamma_c = 1222 \cdot kN$

Concrete Cap (Semicircle): $D_{c.c} := V_{cap.c} \cdot \gamma_c = 184.6 \cdot kN$

Concrete Cap (Straight): $D_{c.s} := V_{cap.s} \cdot \gamma_c = 470 \cdot kN$

Footing (rect): $D_{Fr} := V_{FTG} \cdot \gamma_c = 26872.3 \cdot kN$

Total Concrete Dead Loads: $D_{conc} := D_{w.cyl} + D_{w.s} + D_{i.w1} + D_{i.w2} + D_{c.c} + D_{c.s} + D_{Fr} - V_{Crest} \cdot \gamma_c = 35947.6 \cdot kN$

ROCK FILL DEAD LOADS

Rock Fill (Box 1): $D_{fill1} := V_{fill.1} \cdot \gamma_r = 10010 \cdot kN$

Rock Fill (Box 2): $D_{fill2} := V_{fill.2} \cdot \gamma_r = 2431 \cdot kN$

Rock Fill (Cylinder): $D_{fill.cyl} := V_{fill.cyl} \cdot \gamma_r = 5615.6 \cdot kN$

Total Rock Fill Dead Loads: $D_{fill} := D_{fill1} + D_{fill2} + D_{fill.cyl} = 18056.6 \cdot kN$

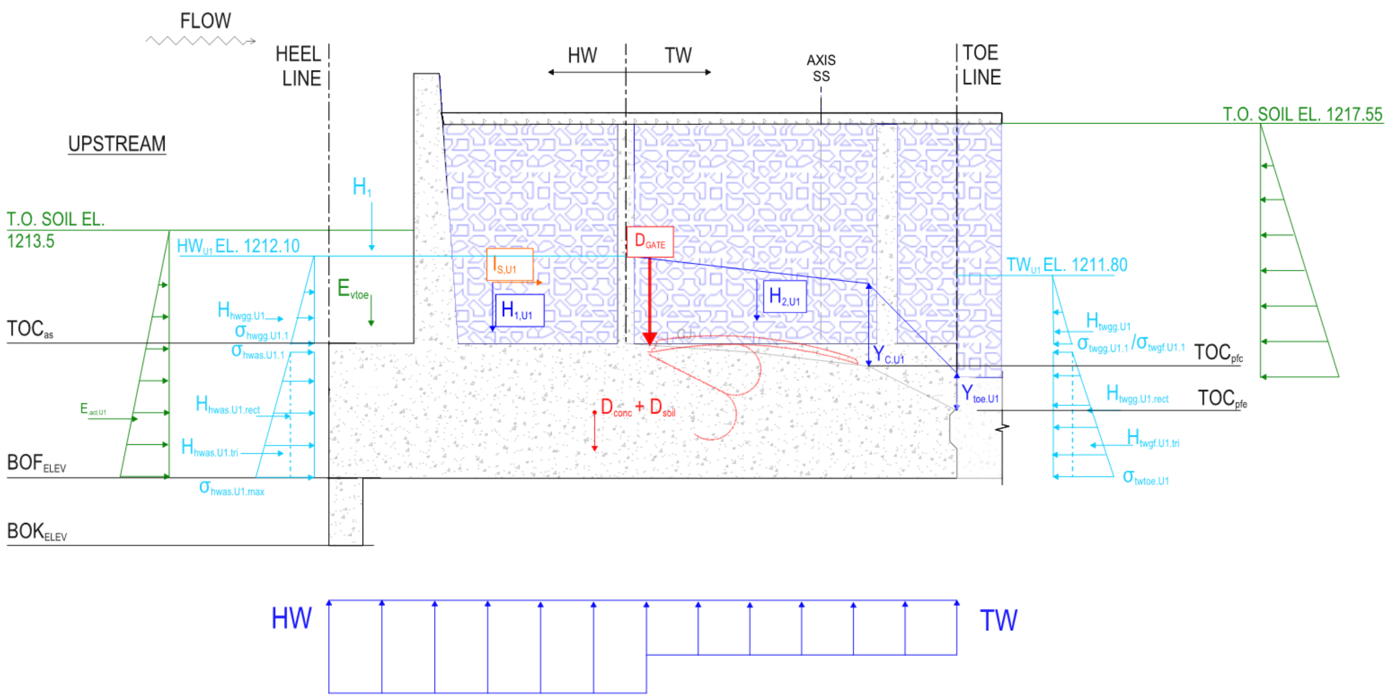
U1 DESIGN CASE



ACCEPTANCE PARAMETERS

Required Factor of Safety for Sliding:	$FS_{req.U1.sl} := 1.5$	(Without Cohesion)
		(Section 8.1, Design Criteria)
Resultant Within Middle Third of Base:	$e \le \frac{L_B}{6} \wedge e \ge \frac{-L_B}{6}$	
Allowable Rock Bearing Pressure:	$\sigma_{allow.U1} := 1270 \cdot \frac{kN}{m^2}$	(Section 5.2, Design Criteria)
Required Factor of Safety for Flotation:	$FS_{req.U1.flt} := 1.5$	

INPUT PARAMETERS

Headwater Elevation:	$HW_{U1} := 1212.10m$	(Section 8.2, Design Criteria)
Tailwater Elevation:	$TW_{U1} := 1211.80m$	(Section 8.2, Design Criteria)
Bottom of Footing Elevation:	$BOF_{elev} := 1206.00m$	
Approch Slab Top of Concrete Elevation at Upstream Face:	$TOC_{as} := 1210.00m$	
Abutment Footing Top of Concrete Elevation at Stilling Basin:	$TOC_{afe} := 1208.00m$	
Abutment Footing Top of Concrete Elevation at Footing:	$TOC_{afc} := 1209.734m$	Gates are open when top of gate elevation is at 1210.00m
Abutment Footing Top of Concrete Elevation at Footing Notch:	$TOC_{afc.n} := 1209.30m$	
Top of Guard Gate Elevation:	$TOP_{gg.U1} := 1210.00m$	Gates are closed/up when top of gate elevation is at 1215.0m
Bottom of Key Elevation:	$BOK_{elev} := BOF_{elev} - d_{key} = 1204\,m$	

Water Elevation above Crest of Guard Gate:

$EL_{C.U1} := 1211.4m$

$$Y_{C.U1} := \begin{cases} (EL_{C.U1} - TOC_{afc.n}) & \text{if } TOP_{gg.U1} \le HW_{U1} \\ (TW_{U1} - TOC_{afc.n}) & \text{if } TOP_{gg.U1} > HW_{U1} \end{cases} = 2.1 \cdot m$$

Water Elevation above Guard Gate Toe: Submerged by Hydraulic 2D Model

$EL_{TOE.U1} := 1208.46m$

$$Y_{TOE.U1} := \begin{cases} (EL_{TOE.U1} - TOC_{afe}) & \text{if } TOP_{gg.U1} \le HW_{U1} \\ (TW_{U1} - TOC_{afe}) & \text{if } TOP_{gg.U1} > HW_{U1} \end{cases} = 0.46 \cdot m$$

LATERAL WATER LOADS

HEADWATER (DRIVING X-DIRECTION):

Headwater Depth on Abutment: $D_{hwa.U1} := HW_{U1} - TOC_{as} = 2.10\ m$

Headwater Load Unit Width Projected Surface Area of Abutment: $W_{hwa.U1} := 2 \cdot r_{wall} = 12.00\ m$

Total Horizontal Headwater Load on Abutment:

$$H_{hwa.U1} := \frac{-\left(\gamma_w \cdot D_{hwa.U1}^{\ 2}\right)}{2} \cdot W_{hwa.U1} = -259.6 \cdot kN$$

Apply Total Abutment Headwater Load at:

$$H_{hwa.U1.loc} := \frac{D_{hwa.U1}}{3} + \left(TOC_{as} - BOF_{elev}\right) = 4.70\ m$$

Apply Total Abutment Headwater Load at (from toe):

$H_{hwa.U1.loc.z} := 4m + r_{wall} = 10.00\ m$ (Gate Footing + Radius of Wall)

Thickness of Approach Slab: $T_{as} := \left(TOC_{as} - BOF_{elev}\right) = 4\ m$

Headwater Depth at Heel (U/S face): $D_{hwas.U1} := HW_{U1} - BOF_{elev} = 6.10\ m$

Headwater Load Unit Width on Projected Approach Slab: $W_{hwas.U1} := W_B = 16.00\ m$

Headwater Line Load At Top of Approach Slab: $\sigma_{hwas.U1.1} := -\left(\gamma_w \cdot D_{hwa.U1}\right) = -20.6 \cdot kPa$

Headwater Load At Bottom Elevation of Approach Slab: $\sigma_{hwas.U1.2} := -\left(\gamma_w \cdot D_{hwas.U1}\right) = -59.84 \cdot kPa$

Trianglular Distribution Unit Load on Approach Slab:

$$H_{hwas.U1.2.tri} := \left(\frac{\sigma_{hwas.U1.2} - \sigma_{hwas.U1.1}}{2}\right) \cdot \left(T_{as} \cdot W_{hwas.U1}\right) = -1255.68 \cdot kN$$

Rectangular Distribution Unit Load on Approach Slab:

$$H_{hwas.U1.2.rect} := \sigma_{hwas.U1.1} \cdot \left(T_{as} \cdot W_{hwas.U1}\right) = -1318.46 \cdot kN$$

Total Horizontal Headwater Load on Approach Slab:

$$H_{hwas.U1} := H_{hwas.U1.2.tri} + H_{hwas.U1.2.rect} = -2574.14 \cdot kN$$

Apply Total Footing Headwater Load at:

$$H_{hwas.U1.loc} := \frac{\left[H_{hwas.U1.2.rect} \cdot \frac{\left(T_{as}\right)}{2} + H_{hwas.U1.2.tri} \cdot \frac{\left(T_{as}\right)}{3}\right]}{H_{hwas.U1.2.tri} + H_{hwas.U1.2.rect}} = 1.67\ m$$

Apply Total Footing Headwater Load at (from toe):

$$H_{hwas.U1.loc.z} := \frac{W_B}{2} = 8.00\ m$$

Guard Gate (2A) Operating Condition: U1 - Fully Open

Guard Gate Down/Open Condition: $A1_{U1} := TOP_{gg.U1} \le TOC_{as}$

Guard Crest Gate Up/Closed, with Top of Gate Higher than HW Elevation: $B1_{U1} := TOP_{gg.U1} \ge HW_{U1} \wedge TOP_{gg.U1} > TOC_{as}$

Guard Crest Gate Up/Closed, with Top of Gate Lower than HW Elevation: $C1_{U1} := TOP_{gg.U1} > TOC_{as} \wedge HW_{U1} > TOP_{gg.U1}$

Guard Crest Gate Height: $H_{gg.U1} := TOP_{gg.U1} - TOC_{as} = 0\,m$

Headwater Depth at Guard Crest Gate: $D_{hwgg.U1} := HW_{U1} - TOC_{as} = 2.10\,m$

Guard Crest Gate Width: $W_{hwgg.U1} := 4m$

Lateral Headwater Pressure at Bottom of Guard Crest Gate:

$$\sigma_{hwgg.U1.1} := \begin{cases} (0.0kPa) & \text{if } A1_{U1} \\ -(\gamma_w \cdot D_{hwgg.U1}) & \text{if } B1_{U1} \\ -(\gamma_w \cdot D_{hwgg.U1}) & \text{if } C1_{U1} \end{cases} = 0.0 \cdot kPa$$

Lateral Headwater Pressure at Top of Guard Crest Gate: (Load at HW Elevation On Guard Crest Gate if HW is below TOG_{rg})

$$\sigma_{hwgg.U1.2} := \begin{cases} (0.0kPa) & \text{if } A1_{U1} \\ 0.0kPa & \text{if } B1_{U1} \\ -[\gamma_w \cdot (HW_{U1} - TOP_{gg.U1})] & \text{if } C1_{U1} \end{cases} = 0.0 \cdot kPa$$

Average Pressure acting on Guard Crest Gate:

$$\sigma_{hwgg.U1.avg} := \frac{(\sigma_{hwgg.U1.1} + \sigma_{hwgg.U1.2})}{2} = 0 \cdot kPa$$

Total Area water acting on Crest Gate:

$$A_{hwgg.U1} := \begin{cases} D_{hwgg.U1} \cdot W_{hwgg.U1} & \text{if } A1_{U1} \\ D_{hwgg.U1} \cdot W_{hwgg.U1} & \text{if } B1_{U1} \\ H_{gg.U1} \cdot W_{hwgg.U1} & \text{if } C1_{U1} \end{cases} = 8.4 \cdot m^2$$

Total Horizontal Headwater Load on Guard Crest Gate: $H_{hwgg.U1} := \sigma_{hwgg.U1.avg} \cdot A_{hwgg.U1} = 0.0 \cdot kN$

Apply Total Guard Crest Gate Headwater Load at:

$$H_{hwgg.U1.loc} := \begin{cases} (TOC_{as} - BOF_{elev}) & \text{if } A1_{U1} \\ \left[\frac{(HW_{U1} - TOC_{as})}{3} + (TOC_{as} - BOF_{elev})\right] & \text{if } B1_{U1} \\ \left[\frac{\sigma_{hwgg.U1.2} \cdot A_{hwgg.U1} \cdot \frac{(H_{gg.U1})}{2} + \frac{(\sigma_{hwgg.U1.1} - \sigma_{hwgg.U1.2})}{2} A_{hwgg.U1} \cdot \frac{(H_{gg.U1})}{3}}{\sigma_{hwgg.U1.2} \cdot A_{hwgg.U1} + \frac{(\sigma_{hwgg.U1.1} - \sigma_{hwgg.U1.2})}{2} \cdot A_{hwgg.U1}} \ldots + (TOC_{as} - BOF_{elev})\right] & \text{if } C1_{U1} \end{cases} = 4.0 \cdot m$$

Apply Total Guard Crest Gate Headwater Load at (From toe):

$$H_{hwgg.U1.loc.z} := \frac{W_{hwgg.U1}}{2} = 2\,m$$

LATERAL TAILWATER (RESISTING) Applied to Downstream Side of Guard Crest Gate: U1 CASE

Guard Gate Down/Open Condition: $A2_{U1} := TOP_{gg.U1} \le TOC_{as}$

Guard Crest Gate Up/Closed, with Top of Gate Higher than TW Elevation: $B2_{U1} := TOP_{gg.U1} \ge TW_{U1} \wedge TOP_{gg.U1} > TOC_{as}$

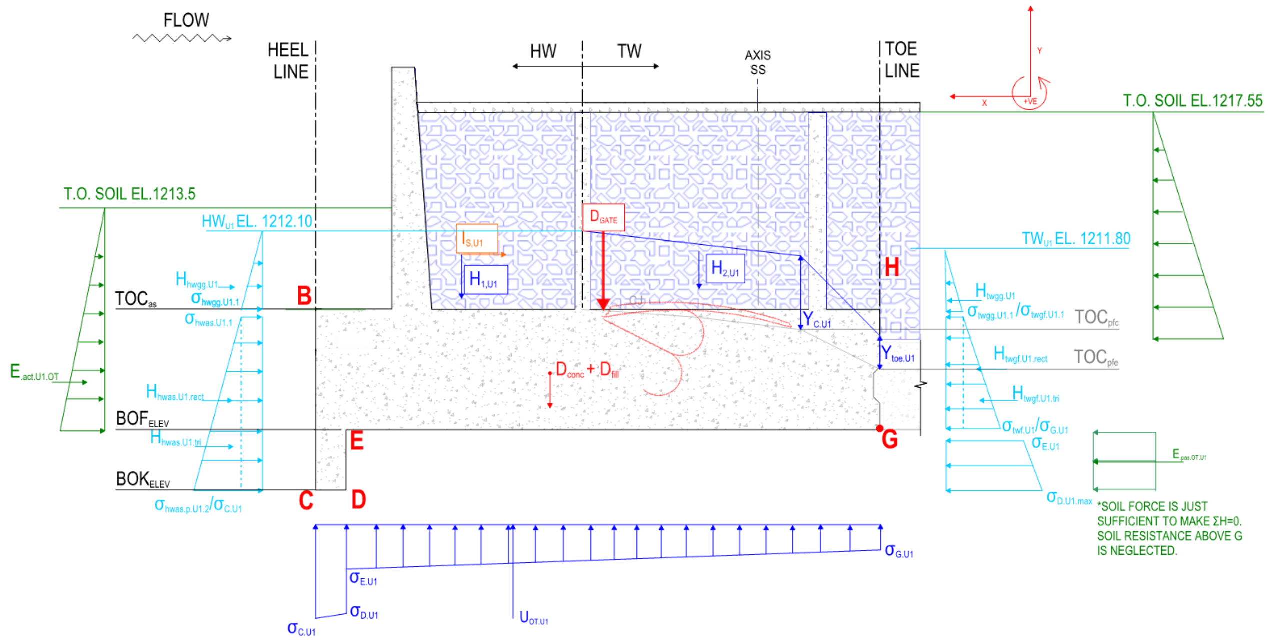
MONOLITH OVERTURNING STABILITY ANALYSIS

U1 CASE

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stablity of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for staticequilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1 $Ratio_{OT.U1.min} := 0.333$ at Rock Foundation



Uplift Loads for Overturning Stability Analysis (X-Direction)

Line of Creep:

Change in Water Head: $\Delta_{h.U1} := HW_{U1} - TW_{U1} = 0.3\ m$

Length from Point C to Point G: $L_{CG} := \sqrt{d_{key}^2 + L_B^2} = 18.61\ m$

Length from Various Points to Points: $L_{CD} := w_{key} = 1\ m$ $L_{DE} := d_{key} = 2\ m$ $L_{EG} := L_B - L_{CD} = 17.5\ m$

$L_{GH} := TW_{U1} - TOC_{afe} = 3.8\ m$

Length from Point C, D, E to G: $L_{CDEG} := L_{CD} + L_{DE} + L_{EG} = 20.5\ m$ $L_{CDE} := L_{CD} + L_{DE} = 3\ m$

Water Pressure at Point C & G: $\sigma_{C.U1} := \sigma_{hwas.U1.2} = -59.84 \cdot kPa$ $\sigma_{G.U1} := \sigma_{twtoe.U1} \cdot -1 = -56.9 \cdot kPa$

Water Pressure at Point D: $$\sigma_{D.U1} := -\gamma_w \cdot \left[\left(HW_{U1} - BOK_{elev}\right) - \frac{\Delta_{h.U1} \cdot L_{CD}}{L_{CDEG}}\right] = -79.32 \cdot kPa$$

Water Pressure at Point E: $$\sigma_{E.U1} := -\gamma_w \cdot \left[\left(HW_{U1} - BOF_{elev}\right) - \frac{\Delta_{h.U1} \cdot L_{CDE}}{L_{CDEG}}\right] = -59.41 \cdot kPa$$

Uplift for Overturning Analysis on Bottom of Key: $$U_{OT.U1.key} := \frac{\sigma_{C.U1} + \sigma_{D.U1}}{2} \cdot L_{CD} \cdot W_B = -1113.27 \cdot kN$$

Acting at: $$U_{OT.U1.key.loc} := \frac{L_{CD} \cdot \left(2 \cdot \sigma_{C.U1} + \sigma_{D.U1}\right)}{3\left(\sigma_{C.U1} + \sigma_{D.U1}\right)} + L_{EG} = 17.98\ m$$

U1 CASE

Uplift for Overturning Analysis on Bottom of Footing:

$$U_{OT.U1.ftg} := \frac{\sigma_{E.U1} + \sigma_{G.U1}}{2} \cdot L_{EG} \cdot W_B = -16283.16 \cdot kN$$

Acting at:

$$U_{OT.U1.ftg.loc} := \frac{L_{EG} \cdot \left(\sigma_{G.U1} + 2 \cdot \sigma_{E.U1}\right)}{3\left(\sigma_{G.U1} + \sigma_{E.U1}\right)} = 8.81\ m$$

Uplift Load for Overturning Analysis:

$$U_{OT.U1} := U_{OT.U1.key} + U_{OT.U1.ftg} = -17396.43 \cdot kN$$

Uplift Load Acting from Toe:

$$U_{OT.U1.loc} := \frac{U_{OT.U1.key} \cdot U_{OT.U1.key.loc} + U_{OT.U1.ftg} \cdot U_{OT.U1.ftg.loc}}{U_{OT.U1}} = 9.4\ m$$

<u>All Vertical Loads Appliable to Overturning Stability Analysis</u>

		at:	
Total Concrete Dead Loads:	$D_{conc} = 35947.58 \cdot kN$		$X_{conc.loc} = 8.81\ m$
Dead Load of Gate:	$D_{Gate} = 56.0 \cdot kN$		$X_{gate} = 9.50\ m$
Total Fill Loads:	$D_{fill} = 18056.6 \cdot kN$		$X_{fill.loc} = 7.31\ m$
Water Weight (HW) on Apron Slab:	$H_{1.U1} = 1640.8 \cdot kN$		$H_{1.U1.loc.x} = 14.42\ m$
Water Weight (TW) on Guard Gate Footing:	$H_{2.U1} = 731.0 \cdot kN$		$H_{2.U1.loc.x} = 5.28\ m$
Uplift Load for Overturning Analysis:	$U_{OT.U1} = -17396.43 \cdot kN$		$U_{OT.U1.loc} = 9.4 \cdot m$

Sum of All Overturning Analysis Vertical Load:

$$\Sigma V_{U1.OT} := D_{conc} + D_{Gate} + D_{fill} + H_{1.U1} + H_{2.U1} + U_{OT.U1} = 39035.55 \cdot kN$$

Sum of All Overturning Analysis Vertical Load Moments:

$$\Sigma M_{V.U1.OT} := \left(\begin{aligned} &D_{conc} \cdot X_{conc.loc} + D_{Gate} \cdot X_{gate} + D_{fill} \cdot X_{fill.loc} + H_{1.U1} \cdot H_{1.U1.loc.x} \ldots \\ &+ H_{2.U1} \cdot H_{2.U1.loc.x} + U_{OT.U1} \cdot U_{OT.U1.loc} \end{aligned}\right) = 313340.49 \cdot kN \cdot m$$

<u>Lateral Tailwater Loads for Overturning Stability Analysis</u>

TW Lateral Load on Gate Footing (No Key - Overturning Values Adjusted):

$$H_{twgf.U1} = 2385.79 \cdot kN$$

$$U_{OT.U1} \cdot U_{OT.U1.loc} = -163516397.85\ J$$

Acting at:

$$H_{twgf.U1.loc} = 1.65\ m$$

Horizontal Tailwater Pressure Top of Key (Overturning Analysis):

$$\sigma_{twtk.OT.U1} := \sigma_{E.U1} \cdot -1 = 59.41 \cdot kPa$$

Horizontal Tailwater Pressure Bottom of Key (Overturning Analysis):

$$\sigma_{twbk.OT.U1} := \sigma_{D.U1} \cdot -1 = 79.32 \cdot kPa$$

Triangular Distribution Unit Load Acting at Key:

$$H_{twbk.OT.U1.tri} := \frac{\left(\sigma_{twbk.OT.U1} - \sigma_{twtk.OT.U1}\right)}{2} \cdot d_{key} \cdot W_{tw.U1} = 318.51 \cdot kN$$

Triangular Distribution Unit Load Acting at Key:

$$H_{twbk.OT.U1.rect} := \sigma_{twtk.OT.U1} \cdot d_{key} \cdot W_{tw.U1} = 1901.13 \cdot kN$$

Total Horizontal Tailwater Load on Key (Overturning Values Adjusted):

$$H_{twkey.OT.U1} := H_{twbk.OT.U1.tri} + H_{twbk.OT.U1.rect} = 2219.64 \cdot kN$$

Acting at:

$$H_{twkey.OT.U1.loc} := \frac{H_{twbk.OT.U1.tri} \cdot \frac{-2 \cdot d_{key}}{3} + H_{twbk.OT.U1.rect} \cdot \frac{-d_{key}}{2}}{H_{twkey.OT.U1}} = -1.05 \cdot m$$

Lateral Driving Earth Loads for Overturning Stability Analysis (at rest condition)

U1 CASE

Depth of Driving Soil Loads (to top of key): $h_{E.OT.U1} := TOC_{as} - BOF_{elev} = 4\ m$

At-Rest Soil Load: $E_{act.OT.U1} := \dfrac{\left(K_{o.U1} \cdot h_{E.OT.U1}\right)^2}{2} \cdot \left(\gamma_r - \gamma_w\right) \cdot W_{hwas.U1} \cdot -1 = -1026.66 \cdot kN$

At Rest- Soil Load Acting from Toe: $E_{act.OT.U1.loc} := \dfrac{h_{E.OT.U1}}{3} = 1.33\ m$

All Lateral Loads Appliable to Overturning Stability Analysis (X-direction)

HW Lateral Load on Approach Slab:	$H_{hwas.U1} = -2574.1 \cdot kN$	$H_{hwas.U1.loc} = 1.67\ m$
HW Lateral Load on Guard Gate:	$H_{hwgg.U1} = 0.0 \cdot kN$	$H_{hwgg.U1.loc} = 4.00\ m$
HW Lateral Load on Abutment:	$H_{hwa.U1} = -259.6 \cdot kN$	$H_{hwa.U1.loc} = 4.70\ m$
TW Lateral Load on Abutment:	$H_{twa.U1} = 190.7 \cdot kN$	$H_{twa.U1.loc} = 4.60\ m$
TW Lateral Load on Guard Gate:	$H_{twgg.U1} = 0.0 \cdot kN$	$H_{twgg.U1.loc} = 4.00\ m$
TW Lateral Load on Gate Footing (No Key - Overturning Values Adjusted):	$H_{twgf.U1} = 2385.79 \cdot kN$	$H_{twgf.U1.loc} = 1.65\ m$
TW Lateral Load on Key:	$H_{twkey.OT.U1} = 2219.64 \cdot kN$	$H_{twkey.OT.U1.loc} = -1.05\ m$
Ice / Impact Load:	$I_{U1} = 0.0 \cdot kN$	$I_{U1.loc.y} = 5.80\ m$
Lateral Soil Load (driving):	$E_{act.OT.U1} = -1026.7 \cdot kN$	$E_{act.OT.U1.loc} = 1.33\ m$

Resisting Lateral Soil Load as required to produce horizontal equilibrium:

$$E_{pas.OT.x.U1} := -\left(\begin{array}{l} H_{hwas.U1} + H_{hwgg.U1} + H_{hwgg.U1} + H_{twgg.U1} \cdots \\ + H_{twgf.U1} + H_{twkey.OT.U1} + I_{U1} + E_{act.OT.U1} \end{array}\right) = -1004.63 \cdot kN$$

Acting at:

$$E_{pas.OT.U1.loc} := -1 \cdot \frac{d_{key}}{2} = -1\ m$$

Sum of All Overturning Analysis Horizontal Load (ΣH=0):

$$\Sigma H_{U1.OT.x} := H_{hwas.U1} + H_{hwgg.U1} + H_{twgg.U1} + H_{twgf.U1} + H_{twkey.OT.U1} + I_{U1} + E_{act.OT.U1} + E_{pas.OT.x.U1} = 0 \cdot kN$$

Sum of All Overturning Analysis Horizontal Load Moments:

$$\begin{aligned} \Sigma M_{H.U1.OT.x} := {} & H_{hwas.U1} \cdot H_{hwas.U1.loc} + H_{hwgg.U1} \cdot H_{hwgg.U1.loc} \cdots \\ & + H_{twgg.U1} \cdot H_{twgg.U1.loc} + H_{twgf.U1} \cdot H_{twgf.U1.loc} \cdots \\ & + H_{twkey.OT.U1} \cdot H_{twkey.OT.U1.loc} + I_{U1} \cdot I_{U1.loc.y} \cdots \\ & + E_{act.OT.U1} \cdot E_{act.OT.U1.loc} + E_{pas.OT.x.U1} \cdot E_{pas.OT.U1.loc} \end{aligned} = -3066.77 \cdot kN \cdot m$$

Overturning Stability Analysis (X-Direction)

$$\Sigma M_{U1.OT.x} := \Sigma M_{V.U1.OT} + \Sigma M_{H.U1.OT.x} = 310273.73 \cdot kN \cdot m$$

$$X_{R.U1} := \frac{\Sigma M_{U1.OT.x}}{\Sigma V_{U1.OT}} = 7.95\ m \qquad x_{OT.U1} := X_{R.U1} - \frac{L_B}{2} = -1.3\ m$$

Overturning Resultant Ratio

$$Ratio_{OT.x.U1} := \frac{X_{R.U1}}{L_B} = 0.43$$

$$Ratio_{OT.x.U1.check} := \begin{array}{|l} \text{"OKAY"} \ \ \text{if} \ \ Ratio_{OT.x.U1} \geq Ratio_{OT.U1.min} \\ \text{"Revise Structure"} \ \ \text{otherwise} \end{array} = \text{"OKAY"}$$

$$x_{OT.check.U1} := \begin{array}{|l} \text{"OKAY"} \ \ \text{if} \ \ \left|x_{OT.U1}\right| \leq Kern_x \\ \text{"Revise Structure"} \ \ \text{otherwise} \end{array} = \text{"OKAY"}$$

All Lateral Loads Appliable to Overturning Stability Analysis (Z-direction)

U1 CASE

Z-Direction Lateral Soil Load on Abutment Before RCC (driving): $E_{act.a.U1.z} = -819.5 \cdot kN$ $\quad E_{act.a.U1.z.loc.y} = 4.00\ m$

Z-Direction Lateral Lateral Soil Load on Approach Slab Before RCC (driving): $E_{act.as.U1.z} = -2192.6 \cdot kN$ $\quad E_{act.as.U1.z.loc.y} = 1.76\ m$

Z-Direction Lateral Soil Load on Abutment After RCC (driving): $E_{act.RCC.U1.z} = -9.24 \cdot kN$ $\quad E_{act.RCC.U1.z.loc.y} = 10.03\ m$

Z-Direction Lateral Soil Load on Abutment at RCC Steps (driving): $E_{act.RCC.s.U1.z} = -16.94 \cdot kN$ $\quad E_{act.RCC.s.U1.z.loc.y} = 9.43 \cdot m$

Resisting Lateral Soil Load as required to produce horizontal equilibrium:

$$E_{pas.OT.z.U1} := -\left(E_{act.a.U1.z} + E_{act.as.U1.z} + E_{act.RCC.U1.z} + E_{act.RCC.s.U1.z}\right) = 3038.27 \cdot kN$$

Acting at:

$$E_{pas.OT.U1.loc} = -1\ m$$

Sum of All Overturning Analysis Horizontal Load (ΣH=0):

$$\Sigma H_{U1.OT.z} := E_{act.a.U1.z} + E_{act.as.U1.z} + E_{act.RCC.U1.z} + E_{act.RCC.s.U1.z} + E_{pas.OT.z.U1} = 0 \cdot kN$$

Sum of All Overturning Analysis Horizontal Load Moments:

$$\Sigma M_{H.U1.OT.z} := E_{act.a.U1.z} \cdot E_{act.a.U1.z.loc.y} + E_{act.as.U1.z} \cdot E_{act.as.U1.z.loc.y} \cdots + E_{act.RCC.U1.z} \cdot E_{act.RCC.U1.z.loc.y} + E_{act.RCC.s.U1.z} \cdot E_{act.RCC.s.U1.z.loc.y} \cdots + E_{pas.OT.x.U1} \cdot E_{pas.OT.U1.loc} = -6389.04 \cdot kN \cdot m$$

Overturning Stability Analysis (Z-Direction)

$$\Sigma M_{U1.OT.z} := \Sigma M_{V.U1.OT} + \Sigma M_{H.U1.OT.z} = 306951.45 \cdot kN \cdot m$$

$$z_{R.U1} := \frac{\Sigma M_{U1.OT.z}}{\Sigma V_{U1.OT}} = 7.86\ m \qquad z_{OT.U1} := z_{R.U1} - \frac{W_B}{2} = -0.14\ m$$

Overturning Resultant Ratio

Lateral Headwater Pressure at Top of Guard Crest Gate:
(Load at HW Elevation On Guard Crest Gate if HW is below TOG_{rg})

$$\sigma_{hwgg.U2.2} := \begin{cases} (0.0kPa) & \text{if } A1_{U2} \\ 0.0kPa & \text{if } B1_{U2} \\ -[\gamma_w \cdot (HW_{U2} - TOP_{gg.U2})] & \text{if } C1_{U2} \end{cases} = 0.0 \cdot kPa$$

Average Pressure acting on Guard Crest Gate:

$$\sigma_{hwgg.U2.avg} := \frac{(\sigma_{hwgg.U2.1} + \sigma_{hwgg.U2.2})}{2} = -22.56 \cdot kPa$$

Total Area water acting on Crest Gate:

$$A_{hwgg.U2} := \begin{cases} D_{hwgg.U2} \cdot W_{hwgg.U2} & \text{if } A1_{U2} \\ D_{hwgg.U2} \cdot W_{hwgg.U2} & \text{if } B1_{U2} \\ H_{gg.U2} \cdot W_{hwgg.U2} & \text{if } C1_{U2} \end{cases} = 18.4 \cdot m^2$$

Total Horizontal Headwater Load on Guard Crest Gate: $H_{hwgg.U2} := \sigma_{hwgg.U2.avg} \cdot A_{hwgg.U2} = -415.2 \cdot kN$

Apply Total Guard Crest Gate Headwater Load at:

$$H_{hwgg.U2.loc} := \begin{cases} (TOC_{as} - BOF_{elev}) & \text{if } A1_{U2} \\ \left[\frac{(HW_{U2} - TOC_{as})}{3} + (TOC_{as} - BOF_{elev})\right] & \text{if } B1_{U2} \\ \left[\frac{\sigma_{hwgg.U2.2} \cdot A_{hwgg.U2} \cdot \frac{(H_{gg.U2})}{2} + \frac{(\sigma_{hwgg.U2.1} - \sigma_{hwgg.U2.2})}{2} A_{hwgg.U2} \cdot \frac{(H_{gg.U2})}{3}}{\sigma_{hwgg.U2.2} \cdot A_{hwgg.U2} + \frac{(\sigma_{hwgg.U2.1} - \sigma_{hwgg.U2.2})}{2} \cdot A_{hwgg.U2}} \cdots \\ + (TOC_{as} - BOF_{elev})\right] & \text{if } C1_{U2} \end{cases} = 5.5 \cdot m$$

Apply Total Guard Crest Gate Headwater Load at (From toe): $H_{hwgg.U2.loc.z} := \frac{W_{hwgg.U2}}{2} = 2\,m$

LATERAL TAILWATER (RESISTING) Applied to Downstream Side of Guard Crest Gate: U2 CASE

Guard Gate Down/Open Condition: $A2_{U2} := TOP_{gg.U2} \le TOC_{as}$

Guard Crest Gate Up/Closed, with Top of Gate Higher than TW Elevation: $B2_{U2} := TOP_{gg.U2} \ge TW_{U2} \wedge TOP_{gg.U2} > TOC_{as}$

Guard Crest Gate Up/Closed, with Top of Gate Lower than TW Elevation: $C2_{U2} := TOP_{gg.U2} > TOC_{as} \wedge TW_{U2} > TOP_{gg.U2}$

Tailwater Depth at Guard Crest Gate: $D_{twgg.U2} := TW_{U2} - TOC_{as} = 1.80\ m$

Guard Crest Gate Height: $H_{gg.U2} = 5\ m$

Guard Crest Gate Width: $W_{twgg.U2} := 4.00m$

Lateral Water Load at Bottom of Guard Crest Gate:

$$\sigma_{twgg.U2.1} := \begin{array}{|l} (0.0kPa) \text{ if } A2_{U2} \\ (\gamma_w \cdot D_{twgg.U2}) \text{ if } B2_{U2} \\ (\gamma_w \cdot D_{twgg.U2}) \text{ if } C2_{U2} \end{array} = 17.7 \cdot kPa$$

Lateral Water Load at Top of Guard Crest Gate:
(Load at TW Elevation On Guard Crest Gate if TW is below TOG_{gg})

$$\sigma_{twgg.U2.2} := \begin{array}{|l} (0.0kPa) \text{ if } A2_{U2} \\ 0.0kPa \text{ if } B2_{U2} \\ \left[\gamma_w \cdot (TW_{U2} - TOP_{gg.U2})\right] \text{ if } C2_{U2} \end{array} = 0.0 \cdot kPa$$

Average Pressure acting on Guard Crest Gate:

$$\sigma_{twgg.U2.avg} := \frac{(\sigma_{twgg.U2.1} + \sigma_{twgg.U2.2})}{2} = 8.83 \cdot kPa$$

Total Area water acting on Crest Gate:

$$A_{twgg.U2} := \begin{array}{|l} D_{twgg.U2} \cdot W_{twgg.U2} \text{ if } A2_{U2} \\ D_{twgg.U2} \cdot W_{twgg.U2} \text{ if } B2_{U2} \\ H_{gg.U2} \cdot W_{twgg.U2} \text{ if } C2_{U2} \end{array} = 7.2 \cdot m^2$$

Total Horizontal Headwater Load on Guard Crest Gate: $H_{twgg.U2} := \sigma_{twgg.U2.avg} \cdot A_{twgg.U2} = 63.6 \cdot kN$

Apply Total Horiz. TW Load on Guard Gate at:

$$H_{twgg.U2.loc} := \begin{array}{|l} (TOC_{as} - BOF_{elev}) \text{ if } A2_{U2} \\ \left[\frac{(TW_{U2} - TOC_{as})}{3} + (TOC_{as} - BOF_{elev})\right] \text{ if } B2_{U2} \\ \left[\frac{\sigma_{twgg.U2.2} \cdot A_{twgg.U2} \cdot \frac{(H_{gg.U2})}{2} + \frac{(\sigma_{twgg.U2.1} - \sigma_{twgg.U2.2})}{2} A_{twgg.U2} \cdot \frac{(H_{gg.U2})}{3}}{\sigma_{twgg.U2.2} \cdot A_{twgg.U2} + \frac{(\sigma_{twgg.U2.1} - \sigma_{twgg.U2.2})}{2} \cdot A_{twgg.U2}} \ldots \\ + (TOC_{as} - BOF_{elev})\right] \text{ if } C2_{U2} \end{array} = 4.6 \cdot m$$

Apply Total Guard Crest Gate Headwater Load at (From toe): $H_{twgg.U2.loc.z} := \frac{W_{twgg.U2}}{2} = 2\ m$

LATERAL WATER LOADS (continued)

U2 CASE

TAILWATER (RESISTING) Applied to Concrete Strucuture:

Tailwater Depth on Top of Abutment Footing: $D_{twa.U2} := TW_{U2} - TOC_{as} = 1.80\ m$

Tailwater Load Unit Width on Abutment: $W_{twa.U2} := 2 \cdot r_{wall} = 12.00\ m$

Total Horizontal Tailwater Load on Abutment: $H_{twa.U2} := \frac{\left(\gamma_w \cdot D_{twa.U2}^{\ 2}\right)}{2} \cdot W_{twa.U2} = 190.7 \cdot kN$

Apply Total Abutment Tailwater Load at: $H_{twa.U2.loc} := \frac{D_{twa.U2}}{3} + \left(TOC_{as} - BOF_{elev}\right) = 4.60\ m$

Apply Total Abutment Tailwater Load at (from Toe Line): $H_{twa.U2.loc.z} := W_{twgg.U2} + r_{wall} = 10\ m$

Footing Thickness for horizontal at Toe: $h_{toe} = 4\ m$

Tailwater Depth At top of Gate Base Footing Elevation: $D_{twgf.U2} := TW_{U2} - TOC_{as} = 1.80\ m$

Water Depth at bottom of Gate Base Footing (Excluding Key): $D_{twtoe.U2} := TW_{U2} - BOF_{elev} = 5.80\ m$

Water Depth at bottom of Gate Base Footing (Including Key):

Unit Width of D/S face of crest for applicaiton of Tailwater Load: $W_{tw.U2} := W_B = 16.00\ m$

Tailwater Pressure At Top of Gate Footing: $\sigma_{twgf.U2} := \left(\gamma_w \cdot D_{twgf.U2}\right) = 17.66 \cdot kPa$

Tailwater Line Load At Bottom of Gate Footing (Excluding Key): $\sigma_{twtoe.U2} := \left(\gamma_w \cdot D_{twtoe.U2}\right) = 56.9 \cdot kPa$

Trianglular Distribution Unit Load on Gate Footing Base: $H_{twgf.U2.tri} := \left(\frac{\sigma_{twtoe.U2} - \sigma_{twgf.U2}}{2}\right) \cdot \left[\left(T_{as}\right) \cdot W_{tw.U2}\right] = 1255.68 \cdot kN$

Rectangular Distribution Unit Load on Gate Footing Base: $H_{twgf.U2.rect} := \sigma_{twgf.U2} \cdot \left[\left(T_{as}\right) \cdot W_{tw.U2}\right] = 1130.11 \cdot kN$

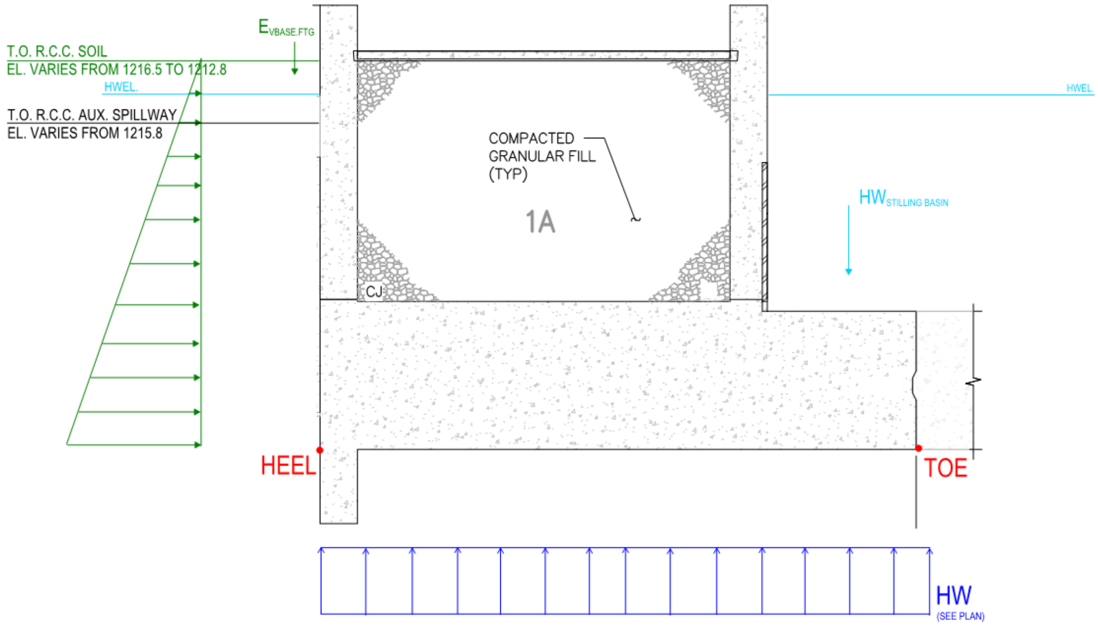
Total Horizontal Tailwater Headwater Load on Gate Footing: $H_{twgf.U2} := H_{twgf.U2.tri} + H_{twgf.U2.rect} = 2385.79 \cdot kN$

Apply Total Gate Footing Tailwater Load at:

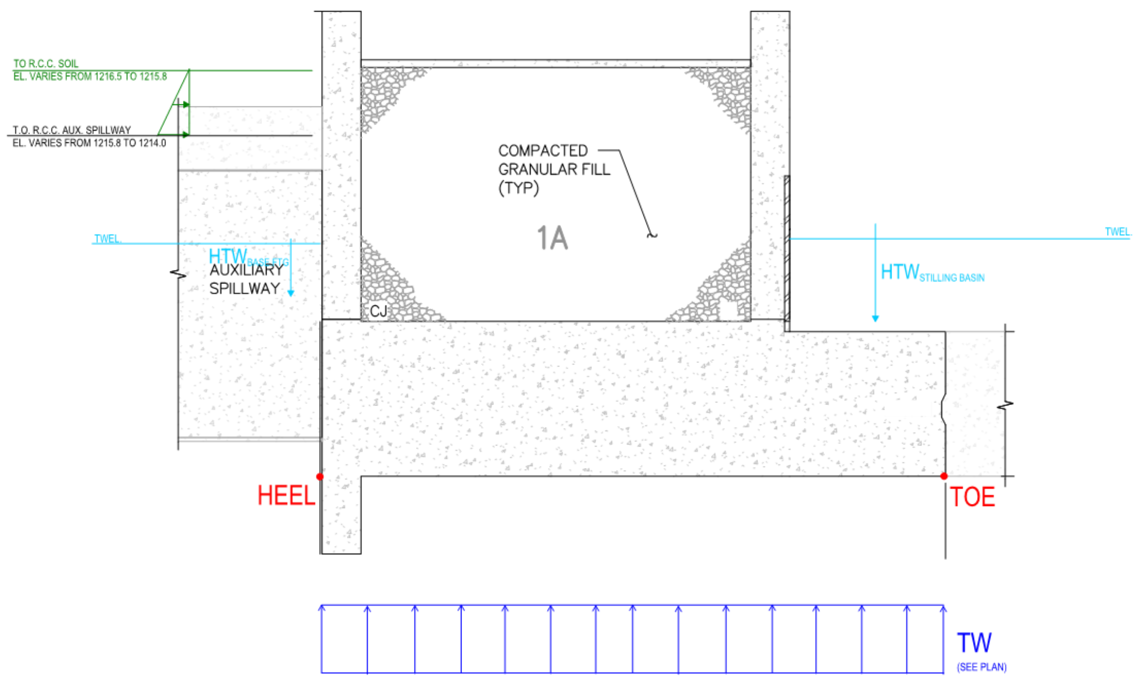
$$H_{twgf.U2.loc} := \frac{\left[H_{twgf.U2.rect} \cdot \frac{\left(T_{as}\right)}{2} + H_{twgf.U2.tri} \cdot \frac{\left(T_{as}\right)}{3}\right]}{H_{twgf.U2.tri} + H_{twgf.U2.rect}} = 1.65\ m$$

Apply Total Gate Footing Tailwater Load at (From Toe Line): $H_{twgf.U2.loc.z} := \frac{W_B}{2} = 8.00\ m$

SUMMATION OF LATERAL WATER LOADS: U2 CASE



SECTION 1A BEFORE GATES & AUX. SPILLWAY RCC



SECTION 1A AFTER GATES & AUX. SPILLWAY RCC

$$\Sigma H_{Water.U2.x} := H_{hwa.U2} + H_{hwas.U2} + H_{hwgg.U2} + H_{twa.U2} + H_{twgf.U2} + H_{twgg.U2} = -3164.31 \cdot kN$$

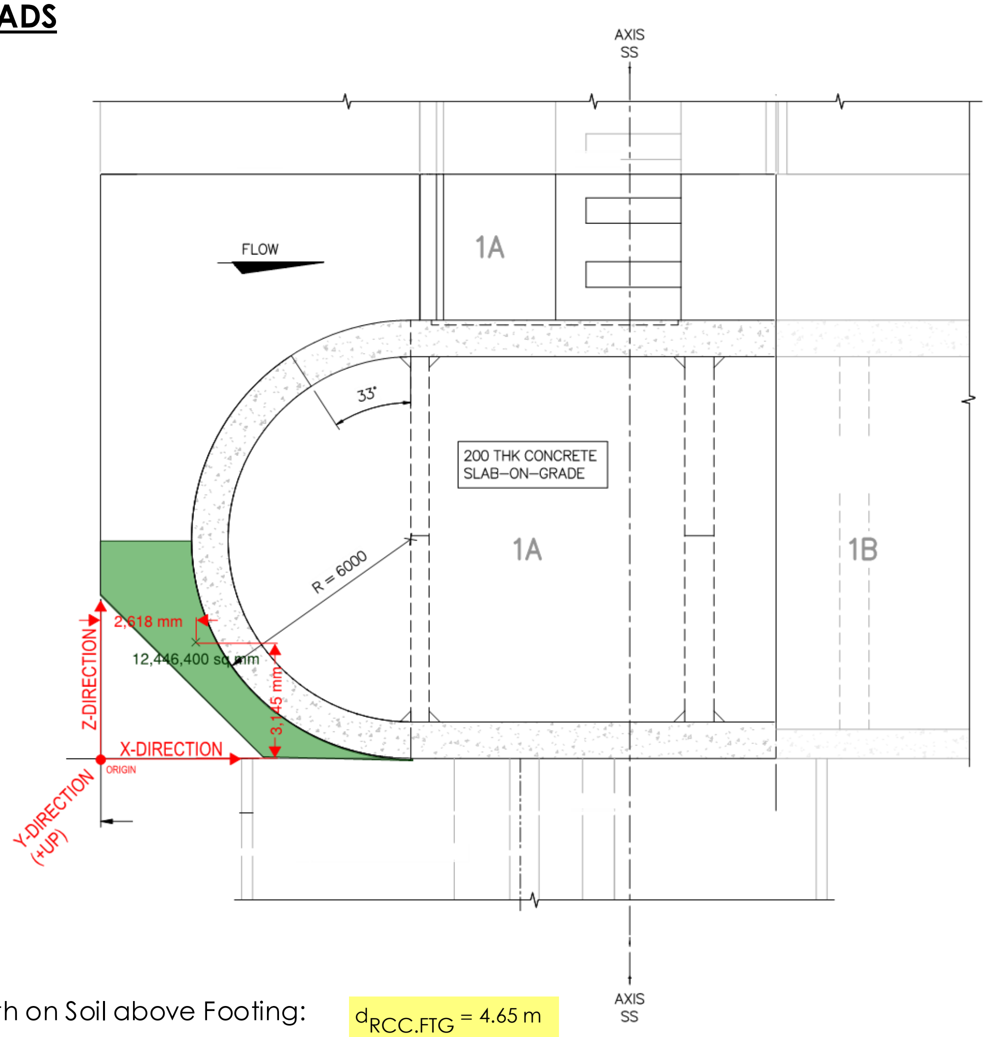
(at Halfway point of RCC Steps)

$$\Sigma H_{soil.U2.z} := \left(E_{act.a.U2.z} + E_{act.as.U2.z} + E_{act.RCC.U2.z} + E_{act.RCC.s.U2.z}\right) = -3038.27 \cdot kN$$

$$\Sigma M_{soil.U2.z} := E_{act.a.U2.z} \cdot E_{act.a.U2.z.loc.y} + E_{act.as.U2.z} \cdot E_{act.as.U2.z.loc.y} \cdots + E_{act.RCC.U2.z} \cdot E_{act.RCC.U2.z.loc.y} + E_{act.RCC.s.U2.z} \cdot E_{act.RCC.s.U2.z.loc.y} = -7393.67 \cdot kN \cdot m$$

VERTICAL SOIL LOADS

U2 CASE



Average Depth on Soil above Footing: $d_{RCC.FTG} = 4.65\ m$

Area of Footing with Soil above: $A_{ftg.soil} = 0$ (From Bluebeam REVU)

Vertical Water Weight (H1) on Approach Slab: $E_{1.U2} := (A_{ftg.soil} \cdot d_{RCC.FTG}) \cdot (\gamma_r - \gamma_w) = 0.0 \cdot kN$

Moment Arm for Applicaiton of Water Weight (H1) from toe (X-Direction): $E_{1.U2.loc.x} := L_B - 5.607m = 12.89\ m$ (From Geom. Scaled on REVU)

Moment Arm for Applicaiton of Water Weight (H1) from toe (Z-Direction): $E_{1.U2.loc.z} := W_B - 3.145m = 12.86\ m$ (From Geom. Scaled on REVU)

$\Sigma E_{U2} := E_{1.U2} = 0 \cdot kN$

$\Sigma M_{E.U2.x} := E_{1.U2} \cdot E_{1.U2.loc.x} = 0 \cdot kN \cdot m$

$\Sigma M_{E.U2.z} := E_{1.U2} \cdot E_{1.U2.loc.z} = 0 \cdot kN \cdot m$

IMPACT LOADS (DEBRIS LOADING FROM MEMO)

Total Impact Load on Structure: $I_{U2} := 0kN$ (SS Abutment) - 50 Year Flood

Apply Ice load at: $I_{U2.loc.y} := (HW_{U2} - BOF_{elev} - 0.30m) = 8.30\ m$

$\Sigma H_{I.U2} := I_{U2} = 0 \cdot kN$

$\Sigma M_{I.U2} := I_{U2} \cdot I_{U2.loc.y} = 0 \cdot kN \cdot m$

SEISMIC LOAD (NOT APPLICABLE FOR THIS LOAD CASE)

U2 CASE

SUMMARY OF LOADS

	Loads	Moment Arm	
Dead load of Concrete Structure:	$D_{conc} = 35947.6 \cdot kN$	$X_{conc.loc} = 8.81\ m$	$Z_{conc.loc} = 8.46\ m$
Obermyer Gate Weight:	$D_{Gate} = 56.0 \cdot kN$	$X_{gate} = 9.50\ m$	$Z_{gate} = 2.00\ m$
Dead load of Fill:	$D_{fill} = 18056.6 \cdot kN$	$X_{fill.loc} = 7.31\ m$	$Z_{fill.loc} = 10.00\ m$
HW Lateral Load on Abutment:	$H_{hwa.U2} = -1245.5 \cdot kN$	$H_{hwa.U2.loc} = 5.53\ m$	
HW Lateral Load on Approach Slab:	$H_{hwas.U2} = -4143.7 \cdot kN$	$H_{hwas.U2.loc} = 1.80\ m$	
HW Lateral Load on Guard Gate:	$H_{hwgg.U2} = -415.2 \cdot kN$	$H_{hwgg.U2.loc} = 5.53\ m$	
TW Lateral Load on Abutment:	$H_{twa.U2} = 190.7 \cdot kN$	$H_{twa.U2.loc} = 4.60\ m$	
TW Lateral Load on Pier Footing:	$H_{twgf.U2} = 2385.79 \cdot kN$	$H_{twgf.U2.loc} = 1.65\ m$	
TW Lateral Load on Guard Gate:	$H_{twgg.U2} = 63.6 \cdot kN$	$H_{twgg.U2.loc} = 4.60\ m$	
Vertical HW Load on Approach Slab:	$H_{1.U2} = 3594.1 \cdot kN$	$H_{1.U2.loc.x} = 14.42\ m$	$H_{1.U2.loc.z} = 4.73\ m$
Vertical TW Load on Pier Footing (crest):	$H_{2.U2} = 1322.9 \cdot kN$	$H_{2.U2.loc.x} = 5.25\ m$	$H_{2.U2.loc.z} = 2.00\ m$
Uplift:	$U_{U2} = -20816.5 \cdot kN$	$U_{U2.loc.x} = 10.11\ m$	$U_{U2.loc.z} = 8.25\ m$
X-Direction Lateral Soil Load on Abutment (driving):	$E_{act.a.U2.x} = 0.0 \cdot kN$	$E_{act.a.U2.x.loc.y} = 4.00\ m$	
X-Direction Lateral Lateral Soil Load on Approach Slab (driving):	$E_{act.as.U2.x} = -1026.7 \cdot kN$	$E_{act.as.U2.x.loc.y} = 1.33\ m$	
Lateral Soil Load (resisting):	$E_{pass.U2.x} = 2880.26 \cdot kN$	$E_{pass.U2.x.loc.y} = 4.83\ m$	
Z-Direction Lateral Soil Load on Abutment Before RCC (driving):	$E_{act.a.U2.z} = -819.5 \cdot kN$	$E_{act.a.U2.z.loc.y} = 4.00\ m$	
Z-Direction Lateral Lateral Soil Load on Approach Slab Before RCC (driving):	$E_{act.as.U2.z} = -2192.6 \cdot kN$	$E_{act.as.U2.z.loc.y} = 1.76\ m$	
Z-Direction Lateral Soil Load on Abutment After RCC (driving):	$E_{act.RCC.U2.z} = -9.24 \cdot kN$	$E_{act.RCC.U2.z.loc.y} = 10.03\ m$	
Z-Direction Lateral Soil Load on Abutment at RCC Steps (driving):	$E_{act.RCC.s.U2.z} = -16.94 \cdot kN$	$E_{act.RCC.s.U2.z.loc.y} = 9.43 \cdot m$	
Vertical Soil Load on Footing:	$E_{1.U2} = 0 \cdot kN$	$E_{1.U2.loc.x} = 12.89\ m$	$E_{1.U2.loc.z} = 12.86\ m$
Ice / Impact Load:	$I_{U2} = 0.0 \cdot kN$	$I_{U2.loc.y} = 8.30\ m$	

STABILITY ASSESSMENT (SLIDNG, BEARING, FLOTATION AND OVERTURNING): U2 CASE

CHECK SLIDING (X-Direction & Z-Direction) ALONG HORIZONTAL PLANE THRU TOE, IGNORING BEDROCK MOBILIZED BY STRUCTURAL HEEL KEY, OR VOID BEHIND KEY

Sum of Vertical Forces:

$$\Sigma V_{U2} := \Sigma V_{DL} + \Sigma V_{water.U2} + \Sigma E_{U2} = 38160.6 \cdot kN$$

Sum of Horizontal Forces (X-Direction):

$$\Sigma H_{U2.x} := \Sigma H_{Water.U2.x} + \Sigma H_{soil.U2.x} + \Sigma H_{I.U2} = -1310.71 \cdot kN$$

Sum of Horizontal Forces (Z-Direction):

$$\Sigma H_{U2.z} := \Sigma H_{Water.U2.z} + \Sigma H_{soil.U2.z} = -3038.27 \cdot kN$$

Sum of Horizontal Forces (resultant):

$$\Sigma H_{U2} := \sqrt{\Sigma H_{U2.x}^{\ 2} + \Sigma H_{U2.z}^{\ 2}} = 3308.93 \cdot kN$$

Sliding Factor of Safety:

$$FS_{HorizSliding.U2.x} := \frac{\tan_{\phi} \cdot \Sigma V_{U2}}{\left|\Sigma H_{U2.x}\right|} = 14.20 \qquad FS_{HorizSliding.U2.z} := \frac{\tan_{\phi} \cdot \Sigma V_{U2}}{\left|\Sigma H_{U2.z}\right|} = 6.13$$

Sliding Factor of Safety:

$$FS_{HorizSliding.U2} := \frac{\tan_{\phi} \cdot \Sigma V_{U2}}{\sqrt{\Sigma H_{U2.x}^{\ 2} + \Sigma H_{U2.z}^{\ 2}}} = 5.62$$

$$FS_{HorizSliding.U2.Check.x} := \begin{cases} \text{"OKAY"} & \text{if } FS_{HorizSliding.U2.x} \geq FS_{req.U2.sl} \\ \text{"Horizontal Sliding (No Key or Void Behind Key) Fail ! Revise Structure !"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

$$FS_{HorizSliding.U2.Check.z} := \begin{cases} \text{"OKAY"} & \text{if } FS_{HorizSliding.U2.z} \geq FS_{req.U2.sl} \\ \text{"Horizontal Sliding (No Key or Void Behind Key) Fail ! Revise Structure !"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

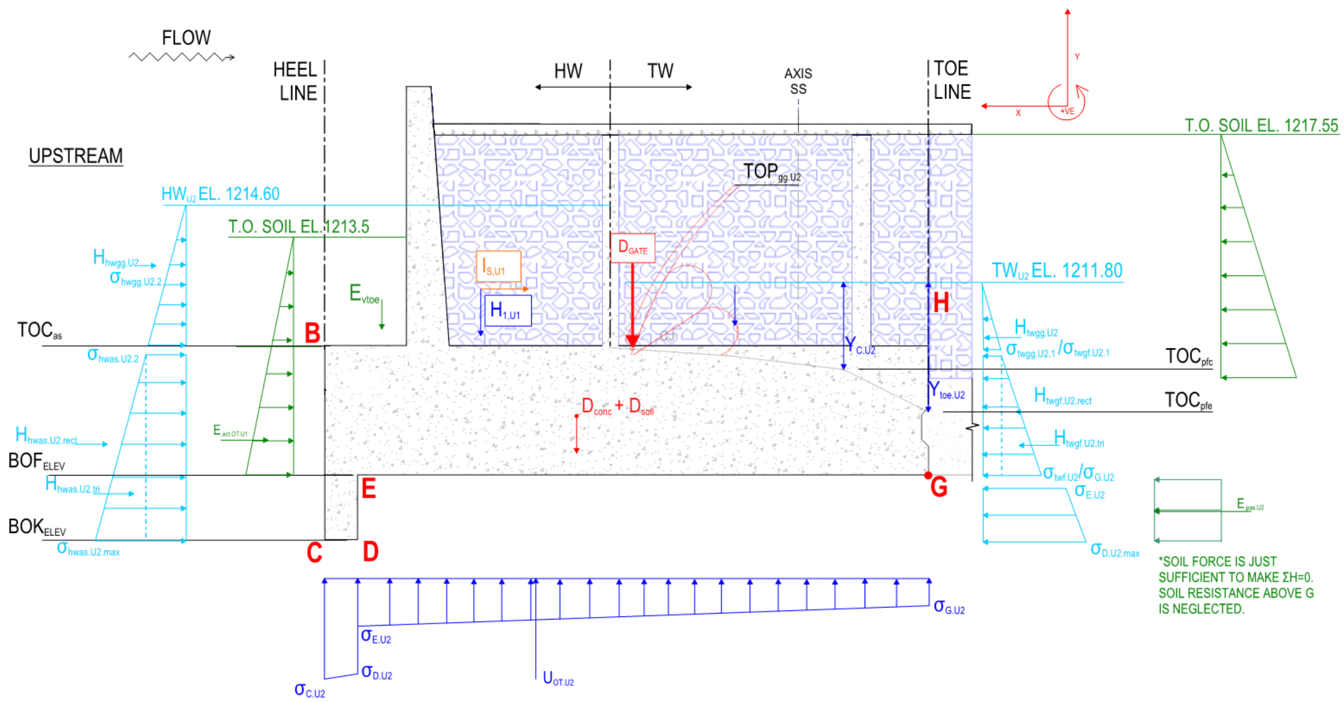
MONOLITH OVERTURNING STABILITY ANALYSIS

U2 CASE

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stablity of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for staticequilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1 $Ratio_{OT.U2.min} := 0.333$ at Rock Foundation



Uplift Loads for Overturning Stability Analysis (X-Direction)

Line of Creep:

Change in Water Head: $\Delta_{h.U2} := HW_{U2} - TW_{U2} = 2.8\ m$

Length from Point C to Point G: $L_{CG} = 18.61\ m$

Length from Various Points to Points: $L_{CD} = 1\ m$ $L_{DE} = 2\ m$ $L_{EG} = 17.5\ m$

$L_{GH.U2} := TW_{U2} - TOC_{afe} = 3.8\ m$

Length from Point C, D, E to G: $L_{CDEG} = 20.5\ m$ $L_{CDE} = 3\ m$

Water Pressure at Point C & G: $\sigma_{C.U2} := \sigma_{hwas.U2.2} = -84.37 \cdot kPa$ $\sigma_{G.U2} := \sigma_{twtoe.U2} \cdot -1 = -56.9 \cdot kPa$

Water Pressure at Point D:

$$\sigma_{D.U2} := -\gamma_w \cdot \left[\left(HW_{U2} - BOK_{elev} \right) - \frac{\Delta_{h.U2} \cdot L_{CD}}{L_{CDEG}} \right] = -102.65 \cdot kPa$$

Water Pressure at Point E:

$$\sigma_{E.U2} := -\gamma_w \cdot \left[\left(HW_{U2} - BOF_{elev} \right) - \frac{\Delta_{h.U2} \cdot L_{CDE}}{L_{CDEG}} \right] = -80.35 \cdot kPa$$

Uplift for Overturning Analysis on Bottom of Key:

$$U_{OT.U2.key} := \frac{\sigma_{C.U2} + \sigma_{D.U2}}{2} \cdot L_{CD} \cdot W_B = -1496.1 \cdot kN$$

Acting at:

$$U_{OT.U2.key.loc} := \frac{L_{CD} \cdot \left(2 \cdot \sigma_{C.U2} + \sigma_{D.U2} \right)}{3 \left(\sigma_{C.U2} + \sigma_{D.U2} \right)} + L_{EG} = 17.98\ m$$

U2 CASE

Uplift for Overturning Analysis on Bottom of Footing:

$$U_{OT.U2.ftg} := \frac{\sigma_{E.U2} + \sigma_{G.U2}}{2} \cdot L_{EG} \cdot W_B = -19214.2 \cdot kN$$

Acting at:

$$U_{OT.U2.ftg.loc} := \frac{L_{EG} \cdot \left(\sigma_{G.U2} + 2 \cdot \sigma_{E.U2}\right)}{3\left(\sigma_{G.U2} + \sigma_{E.U2}\right)} = 9.25\ m$$

Uplift Load for Overturning Analysis:

$$U_{OT.U2} := U_{OT.U2.key} + U_{OT.U2.ftg} = -20710.3 \cdot kN$$

Uplift Load Acting from Toe:

$$U_{OT.U2.loc} := \frac{U_{OT.U2.key} \cdot U_{OT.U2.key.loc} + U_{OT.U2.ftg} \cdot U_{OT.U2.ftg.loc}}{U_{OT.U2}} = 9.88\ m$$

<u>All Vertical Loads Appliable to Overturning Stability Analysis</u>

		at:	
Total Concrete Dead Loads:	$D_{conc} = 35947.58 \cdot kN$		$X_{conc.loc} = 8.81\ m$
Dead Load of Gate:	$D_{Gate} = 56.0 \cdot kN$		$X_{gate} = 9.50\ m$
Total Fill Loads:	$D_{fill} = 18056.6 \cdot kN$		$X_{fill.loc} = 7.31\ m$
Water Weight (HW) on Apron Slab:	$H_{1.U2} = 3594.1 \cdot kN$		$H_{1.U2.loc.x} = 14.42\ m$
Water Weight (TW) on Guard Gate Footing:	$H_{2.U2} = 1322.9 \cdot kN$		$H_{2.U2.loc.x} = 5.25\ m$
Uplift Load for Overturning Analysis:	$U_{OT.U2} = -20710.3 \cdot kN$		$U_{OT.U2.loc} = 9.88 \cdot m$

Sum of All Overturning Analysis Vertical Load:

$$\Sigma V_{U2.OT} := D_{conc} + D_{Gate} + D_{fill} + H_{1.U2} + H_{2.U2} + U_{OT.U2} = 38266.81 \cdot kN$$

Sum of All Overturning Analysis Vertical Load Moments:

$$\Sigma M_{V.U2.OT} := \left(\begin{array}{l} D_{conc} \cdot X_{conc.loc} + D_{Gate} \cdot X_{gate} + D_{fill} \cdot X_{fill.loc} + H_{1.U2} \cdot H_{1.U2.loc.x} \ldots \\ + H_{2.U2} \cdot H_{2.U2.loc.x} + U_{OT.U2} \cdot U_{OT.U2.loc} \end{array}\right) = 303506.69 \cdot kN \cdot m$$

<u>Lateral Tailwater Loads for Overturning Stability Analysis</u>

TW Lateral Load on Gate Footing (No Key - Overturning Values Adjusted): $H_{twgf.U2} = 2385.79 \cdot kN$

Acting at: $H_{twgf.U2.loc} = 1.65\ m$

Horizontal Tailwater Pressure Top of Key (Overturning Analysis): $\sigma_{twtk.OT.U2} := \sigma_{E.U2} \cdot -1 = 80.35 \cdot kPa$

Horizontal Tailwater Pressure Bottom of Key (Overturning Analysis): $\sigma_{twbk.OT.U2} := \sigma_{D.U2} \cdot -1 = 102.65 \cdot kPa$

Triangular Distribution Unit Load Acting at Key:

$$H_{twbk.OT.U2.tri} := \frac{\left(\sigma_{twbk.OT.U2} - \sigma_{twtk.OT.U2}\right)}{2} \cdot d_{key} \cdot W_{tw.U2} = 356.8 \cdot kN$$

Triangular Distribution Unit Load Acting at Key:

$$H_{twbk.OT.U2.rect} := \sigma_{twtk.OT.U2} \cdot d_{key} \cdot W_{tw.U2} = 2571.08 \cdot kN$$

Total Horizontal Tailwater Load on Key (Overturning Values Adjusted):

$$H_{twkey.OT.U2} := H_{twbk.OT.U2.tri} + H_{twbk.OT.U2.rect} = 2927.88 \cdot kN$$

Acting at:

$$H_{twkey.OT.U2.loc} := \frac{H_{twbk.OT.U2.tri} \cdot \frac{-2 \cdot d_{key}}{3} + H_{twbk.OT.U2.rect} \cdot \frac{-d_{key}}{2}}{H_{twkey.OT.U2}} = -1.04 \cdot m$$

Lateral Driving Earth Loads for Overturning Stability Analysis (at rest condition)

U2 CASE

Depth of Driving Soil Loads (to top of key): $h_{E.OT.U2} := TOC_{as} - BOF_{elev} = 4\ m$

At-Rest Soil Load: $E_{act.OT.U2} := \frac{\left(K_{o.U2} \cdot h_{E.OT.U2}^{2}\right)}{2} \cdot (\gamma_r - \gamma_w) \cdot W_{hwas.U2} \cdot -1 = -1026.66 \cdot kN$

At Rest- Soil Load Acting from Toe: $E_{act.OT.U2.loc} := \frac{h_{E.OT.U2}}{3} = 1.33\ m$

All Lateral Loads Appliable to Overturning Stability Analysis (X-direction)

HW Lateral Load on Approach Slab:	$H_{hwas.U2} = -4143.7 \cdot kN$	$H_{hwas.U2.loc} = 1.80\ m$
HW Lateral Load on Guard Gate:	$H_{hwgg.U2} = -415.2 \cdot kN$	$H_{hwgg.U2.loc} = 5.53\ m$
HW Lateral Load on Abutment:	$H_{hwa.U2} = -1245.5 \cdot kN$	$H_{hwa.U2.loc} = 5.53\ m$
TW Lateral Load on Abutment:	$H_{twa.U2} = 190.7 \cdot kN$	$H_{twa.U2.loc} = 4.60\ m$
TW Lateral Load on Guard Gate:	$H_{twgg.U2} = 63.6 \cdot kN$	$H_{twgg.U2.loc} = 4.60\ m$
TW Lateral Load on Gate Footing (No Key - Overturning Values Adjusted):	$H_{twgf.U2} = 2385.79 \cdot kN$	$H_{twgf.U2.loc} = 1.65\ m$
TW Lateral Load on Key:	$H_{twkey.OT.U2} = 2927.88 \cdot kN$	$H_{twkey.OT.U2.loc} = -1.04\ m$
Ice / Impact Load:	$I_{U2} = 0.0 \cdot kN$	$I_{U2.loc.y} = 8.30\ m$
Lateral Soil Load (driving):	$E_{act.OT.U2} = -1026.7 \cdot kN$	$E_{act.OT.U2.loc} = 1.33\ m$

Resisting Lateral Soil Load as required to produce horizontal equilibrium:

$$E_{pas.OT.x.U2} := -\left(H_{hwas.U2} + H_{hwgg.U2} + H_{hwgg.U2} + H_{twgg.U2} \cdots + H_{twgf.U2} + H_{twkey.OT.U2} + I_{U2} + E_{act.OT.U2}\right) = 623.48 \cdot kN$$

Acting at:

$$E_{pas.OT.U2.loc} := -1 \cdot \frac{d_{key}}{2} = -1\ m$$

Sum of All Overturning Analysis Horizontal Load (ΣH=0):

$$\Sigma H_{U2.OT.x} := H_{hwas.U2} + H_{hwgg.U2} + H_{twgg.U2} + H_{twgf.U2} + H_{twkey.OT.U2} + I_{U2} + E_{act.OT.U2} + E_{pas.OT.x.U2} = 415.16 \cdot kN$$

Sum of All Overturning Analysis Horizontal Load Moments:

$$\Sigma M_{H.U2.OT.x} := H_{hwas.U2} \cdot H_{hwas.U2.loc} + H_{hwgg.U2} \cdot H_{hwgg.U2.loc} \cdots + H_{twgg.U2} \cdot H_{twgg.U2.loc} + H_{twgf.U2} \cdot H_{twgf.U2.loc} \cdots + H_{twkey.OT.U2} \cdot H_{twkey.OT.U2.loc} + I_{U2} \cdot I_{U2.loc.y} \cdots + E_{act.OT.U2} \cdot E_{act.OT.U2.loc} + E_{pas.OT.x.U2} \cdot E_{pas.OT.U2.loc} = -10559.87 \cdot kN \cdot m$$

Overturning Stability Analysis (X-Direction)

$$\Sigma M_{U2.OT.x} := \Sigma M_{V.U2.OT} + \Sigma M_{H.U2.OT.x} = 292946.82 \cdot kN \cdot m$$

$$X_{R.U2} := \frac{\Sigma M_{U2.OT.x}}{\Sigma V_{U2.OT}} = 7.66\ m \qquad x_{OT.U2} := X_{R.U2} - \frac{L_B}{2} = -1.59\ m$$

Overturning Resultant Ratio

$$Ratio_{OT.x.U2} := \frac{X_{R.U2}}{L_B} = 0.41$$

$$Ratio_{OT.x.U2.check} := \begin{cases} \text{"OKAY"} & \text{if } Ratio_{OT.x.U2} \geq Ratio_{OT.U2.min} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

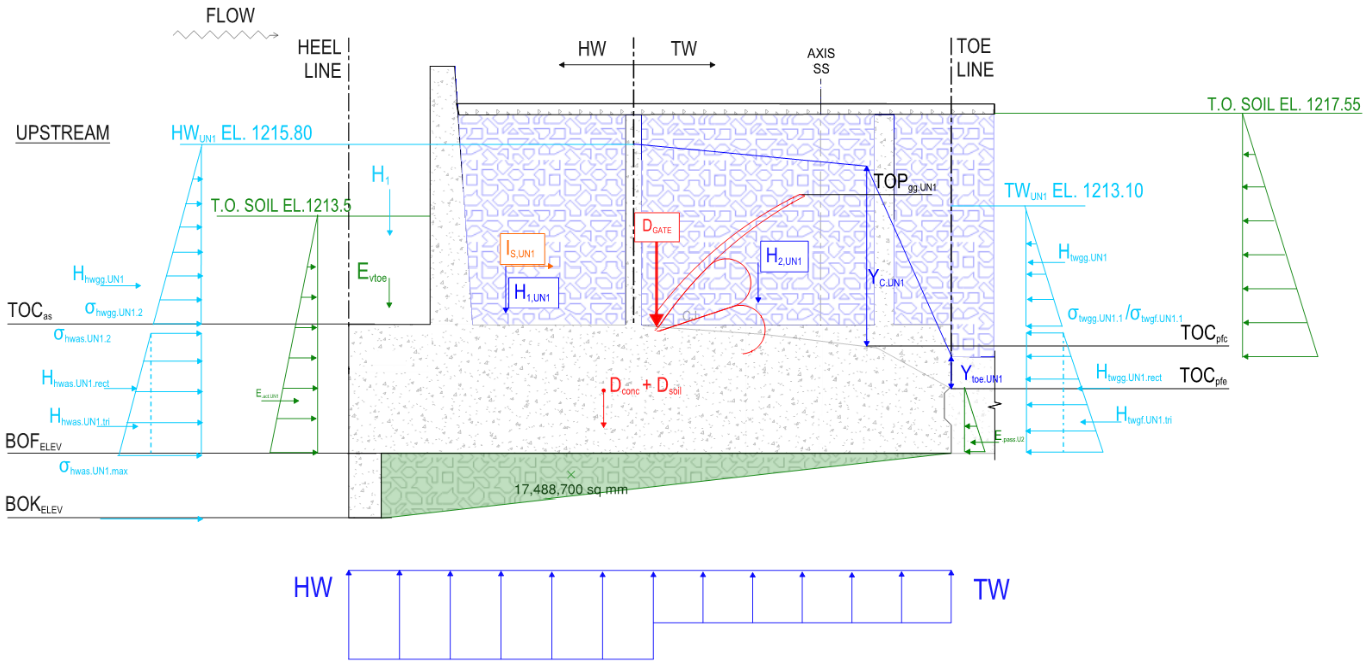
SUMMARY OF STABILITY ASSESSMENT:

U2 CASE

Sliding Factor of Safety: (Horizontal Plane)	$FS_{HorizSliding.U2} = 5.62$	$FS_{HorizSliding.U2.Check} = \text{"OKAY"}$
Flotation Factor of Safety (horizontal plane)	$FS_{act.FU2} = 2.83$	$FS_{check.FU2} = \text{"OKAY"}$
Overturning Resultant Ratio: (X-direction)	$Ratio_{OT.x.U2} = 0.41$	$Ratio_{OT.x.U2.check} = \text{"OKAY"}$
Overturning Resultant Ratio: (Z-direction)	$Ratio_{OT.z.U2} = 0.42$	$Ratio_{OT.z.U2.check} = \text{"OKAY"}$
Eccentricity: (horizontal plane)	$x_{OT.U2} = -1.59\ m$	$x_{OT.check.U2} = \text{"OKAY"}$
Eccentricity: (horizontal plane)	$z_{OT.U2} = -0.28\ m$	$z_{OT.check.U2} = \text{"OKAY"}$
Bearing Pressure At Heel(x)- Heel(z): (horizontal plane)	$\sigma_{heel.U2} = 120 \cdot kPa$	$\sigma_{heel.U2.check} = \text{"Okay"}$
Bearing Pressure At Toe(x)-Toe(z): (horizontal plane)	$\sigma_{toe.U2} = 146 \cdot kPa$	$\sigma_{toe.U2.check} = \text{"Okay"}$
Bearing Pressure at Heel(x)-Toe(z): (horizontal plane)	$\sigma_{heeltoe.U2} = 42 \cdot kPa$	$\sigma_{heeltoe.U2.check} = \text{"Okay"}$
Bearing Pressure at Toe(x)-Heel(z): (horizontal plane)	$\sigma_{toeheel.U2} = 225 \cdot kPa$	$\sigma_{toe.U2.check} = \text{"Okay"}$

UN1 DESIGN CASE



ACCEPTANCE PARAMETERS

Required Factor of Safety for Sliding:	$FS_{req.UN1.sl} := 1.3$	(Without Cohesion)
		(Section 8.1, Design Criteria)
Resultant Within Middle Third of Base:	$e \le \frac{L_B}{6} \wedge e \ge \frac{-L_B}{6}$	
Allowable Rock Bearing Pressure:	$\sigma_{allow.UN1} := 1270 \cdot \frac{kN}{m^2}$	(Section 5.2, Design Criteria)
Required Factor of Safety for Flotation:	$FS_{req.UN1.flt} := 1.3$	

INPUT PARAMETERS

Headwater Elevation:	$HW_{UN1} := 1215.80m$	(Section 8.2, Design Criteria)
Tailwater Elevation:	$TW_{UN1} := 1213.10m$	(Section 8.2, Design Criteria)
Bottom of Footing Elevation:	$BOF_{elev} = 1206\,m$	
Approch Slab Top of Concrete Elevation at Upstream Face:	$TOC_{as} = 1210\,m$	
Abutment Footing Top of Concrete Elevation at Stilling Basin:	$TOC_{afe} = 1208\,m$	
Abutment Footing Top of Concrete Elevation at Footing:	$TOC_{afc} = 1209.73\,m$	Gates are open when top of gate elevation is at 1210.00m
Abutment Footing Top of Concrete Elevation at Footing Notch:	$TOC_{afc.n} = 1209.3\,m$	
Top of Guard Gate Elevation:	$TOP_{gg.UN1} := 1213.50m$	Gates are closed/up when top of gate elevation is at 1215.0m
Bottom of Key Elevation:	$BOK_{elev} = 1204\,m$	

UN1 CASE

Water Elevation above Crest of Guard Gate:

$EL_{C.UN1} := 1215.03m$

$$Y_{C.UN1} := \begin{cases} (EL_{C.UN1} - TOC_{afc.n}) & \text{if } TOP_{gg.UN1} \le HW_{UN1} \\ (TW_{UN1} - TOC_{afc.n}) & \text{if } TOP_{gg.UN1} > HW_{UN1} \end{cases} = 5.73 \cdot m$$

Water Elevation above Guard Gate Toe:
Submerged by Hydraulic 2D Model

$EL_{TOE.UN1} := 1208.48m$

$$Y_{TOE.UN1} := \begin{cases} (EL_{TOE.UN1} - TOC_{afe}) & \text{if } TOP_{gg.UN1} \le HW_{UN1} \\ (TW_{UN1} - TOC_{afe}) & \text{if } TOP_{gg.UN1} > HW_{UN1} \end{cases} = 0.48 \cdot m$$

LATERAL WATER LOADS

HEADWATER (DRIVING X-DIRECTION):

Headwater Depth on Abutment: $D_{hwa.UN1} := HW_{UN1} - TOC_{as} = 5.80\ m$

Headwater Load Unit Width Projected Surface Area of Abutment: $W_{hwa.UN1} := 2 \cdot r_{wall} = 12.00\ m$

Total Horizontal Headwater Load on Abutment:

$$H_{hwa.UN1} := \frac{-\left(\gamma_w \cdot D_{hwa.UN1}^{\ 2}\right)}{2} \cdot W_{hwa.UN1} = -1980.1 \cdot kN$$

Apply Total Abutment Headwater Load at:

$$H_{hwa.UN1.loc} := \frac{D_{hwa.UN1}}{3} + \left(TOC_{as} - BOF_{elev}\right) = 5.93\ m$$

Apply Total Abutment Headwater Load at (from toe):

$H_{hwa.UN1.loc.z} := 4m + r_{wall} = 10.00\ m$ (Gate Footing + Radius of Wall)

Thickness of Approach Slab: $T_{as} = 4\ m$

Headwater Depth at Heel (U/S face): $D_{hwas.UN1} := HW_{UN1} - BOF_{elev} = 9.80\ m$

Headwater Load Unit Width on Projected Approach Slab: $W_{hwas.UN1} := W_B = 16.00\ m$

Headwater Line Load At Top of Approach Slab:

$$\sigma_{hwas.UN1.1} := -\left(\gamma_w \cdot D_{hwa.UN1}\right) = -56.9 \cdot kPa$$

Headwater Line Load At Bottom of Approach Slab:

$$\sigma_{hwas.UN1.2} := -\left(\gamma_w \cdot D_{hwas.UN1}\right) = -96.14 \cdot kPa$$

Trianglular Distribution Unit Load on Approach Slab:

$$H_{hwas.UN1.2.tri} := \left(\frac{\sigma_{hwas.UN1.2} - \sigma_{hwas.UN1.1}}{2}\right) \cdot \left(T_{as} \cdot W_{hwas.UN1}\right) = -1255.68 \cdot kN$$

Rectangular Distribution Unit Load on Approach Slab:

$$H_{hwas.UN1.2.rect} := \sigma_{hwas.UN1.1} \cdot \left(T_{as} \cdot W_{hwas.UN1}\right) = -3641.47 \cdot kN$$

Total Horizontal Headwater Load on Approach Slab:

$$H_{hwas.UN1} := H_{hwas.UN1.2.tri} + H_{hwas.UN1.2.rect} = -4897.15 \cdot kN$$

Apply Total Footing Headwater Load at:

$$H_{hwas.UN1.loc} := \frac{\left[H_{hwas.UN1.2.rect} \cdot \frac{\left(T_{as}\right)}{2} + H_{hwas.UN1.2.tri} \cdot \frac{\left(T_{as}\right)}{3}\right]}{H_{hwas.UN1.2.tri} + H_{hwas.UN1.2.rect}} = 1.83\ m$$

Apply Total Footing Headwater Load at (from toe):

$$H_{hwas.UN1.loc.z} := \frac{W_B}{2} = 8.00\ m$$

Guard Gate (2A) Operating Condition: Right Crest Gate at EL 1213.5

Guard Gate Down/Open Condition: $A1_{UN1} := TOP_{gg.UN1} \le TOC_{as}$

Guard Crest Gate Up/Closed, with Top of Gate Higher than HW Elevation: $B1_{UN1} := TOP_{gg.UN1} \ge HW_{UN1} \wedge TOP_{gg.UN1} > TOC_{as}$

Guard Crest Gate Up/Closed, with Top of Gate Lower than HW Elevation: $C1_{UN1} := TOP_{gg.UN1} > TOC_{as} \wedge HW_{UN1} > TOP_{gg.UN1}$

Guard Crest Gate Height: $H_{gg.UN1} := TOP_{gg.UN1} - TOC_{as} = 3.5\,m$

Headwater Depth at Guard Crest Gate: $D_{hwgg.UN1} := HW_{UN1} - TOC_{as} = 5.80\,m$

Guard Crest Gate Width: $W_{hwgg.UN1} := 4.00m$

Lateral Headwater Pressure at Bottom of Guard Crest Gate:

$$\sigma_{hwgg.UN1.1} := \begin{vmatrix} (0.0kPa) & \text{if } A1_{UN1} \\ -(\gamma_w \cdot D_{hwgg.UN1}) & \text{if } B1_{UN1} \\ -(\gamma_w \cdot D_{hwgg.UN1}) & \text{if } C1_{UN1} \end{vmatrix} = -56.9 \cdot kPa$$

Lateral Headwater Pressure at Top of Guard Crest Gate: (Load at HW Elevation On Guard Crest Gate if HW is below TOG_{rg})

$$\sigma_{hwgg.UN1.2} := \begin{vmatrix} (0.0kPa) & \text{if } A1_{UN1} \\ 0.0kPa & \text{if } B1_{UN1} \\ -\left[\gamma_w \cdot (HW_{UN1} - TOP_{gg.UN1})\right] & \text{if } C1_{UN1} \end{vmatrix} = -22.6 \cdot kPa$$

Average Pressure acting on Guard Crest Gate:

$$\sigma_{hwgg.UN1.avg} := \frac{(\sigma_{hwgg.UN1.1} + \sigma_{hwgg.UN1.2})}{2} = -39.73 \cdot kPa$$

Total Area water acting on Crest Gate:

$$A_{hwgg.UN1} := \begin{vmatrix} D_{hwgg.UN1} \cdot W_{hwgg.UN1} & \text{if } A1_{UN1} \\ D_{hwgg.UN1} \cdot W_{hwgg.UN1} & \text{if } B1_{UN1} \\ H_{gg.UN1} \cdot W_{hwgg.UN1} & \text{if } C1_{UN1} \end{vmatrix} = 14 \cdot m^2$$

Total Horizontal Headwater Load on Guard Crest Gate: $H_{hwgg.UN1} := \sigma_{hwgg.UN1.avg} \cdot A_{hwgg.UN1} = -556.2 \cdot kN$

Apply Total Guard Crest Gate Headwater Load at:

$$H_{hwgg.UN1.loc} := \begin{vmatrix} (TOC_{as} - BOF_{elev}) & \text{if } A1_{UN1} \\ \left[\frac{(HW_{UN1} - TOC_{as})}{3} + (TOC_{as} - BOF_{elev})\right] & \text{if } B1_{UN1} \\ \left[\frac{\sigma_{hwgg.UN1.2} \cdot A_{hwgg.UN1} \cdot \frac{(H_{gg.UN1})}{2} + \frac{(\sigma_{hwgg.UN1.1} - \sigma_{hwgg.UN1.2})}{2} A_{hwgg.UN1} \cdot \frac{(H_{gg.UN1})}{3}}{\sigma_{hwgg.UN1.2} \cdot A_{hwgg.UN1} + \frac{(\sigma_{hwgg.UN1.1} - \sigma_{hwgg.UN1.2})}{2} \cdot A_{hwgg.UN1}} \dots \\ + (TOC_{as} - BOF_{elev}) \right] & \text{if } C1_{UN1} \end{vmatrix} = 5.5 \cdot m$$

Apply Total Guard Crest Gate Headwater Load at (From toe): $H_{hwgg.UN1.loc.z} := \frac{W_{hwgg.UN1}}{2} = 2\,m$

LATERAL TAILWATER (RESISTING) Applied to Downstream Side of Guard Crest Gate: UN1 CASE

Guard Gate Down/Open Condition: $A2_{UN1} := TOP_{gg.UN1} \le TOC_{as}$

Guard Crest Gate Up/Closed, with Top of Gate Higher than TW Elevation: $B2_{UN1} := TOP_{gg.UN1} \ge TW_{UN1} \wedge TOP_{gg.UN1} > TOC_{as}$

Guard Crest Gate Up/Closed, with Top of Gate Lower than TW Elevation: $C2_{UN1} := TOP_{gg.UN1} > TOC_{as} \wedge TW_{UN1} > TOP_{gg.UN1}$

Tailwater Depth at Guard Crest Gate: $D_{twgg.UN1} := TW_{UN1} - TOC_{as} = 3.10\ m$

Guard Crest Gate Height: $H_{gg.UN1} = 3.5\ m$

Guard Crest Gate Width: $W_{twgg.UN1} := 4.00m$

Lateral Water Load at Bottom of Guard Crest Gate:

$$\sigma_{twgg.UN1.1} := \begin{cases} (0.0kPa) & \text{if } A2_{UN1} \\ (\gamma_w \cdot D_{twgg.UN1}) & \text{if } B2_{UN1} \\ (\gamma_w \cdot D_{twgg.UN1}) & \text{if } C2_{UN1} \end{cases} = 30.4 \cdot kPa$$

Lateral Water Load at Top of Guard Crest Gate:
(Load at TW Elevation On Guard Crest Gate if TW is below TOG_{gg})

$$\sigma_{twgg.UN1.2} := \begin{cases} (0.0kPa) & \text{if } A2_{UN1} \\ 0.0kPa & \text{if } B2_{UN1} \\ \left[\gamma_w \cdot (TW_{UN1} - TOP_{gg.UN1})\right] & \text{if } C2_{UN1} \end{cases} = 0.0 \cdot kPa$$

Average Pressure acting on Guard Crest Gate:

$$\sigma_{twgg.UN1.avg} := \frac{(\sigma_{twgg.UN1.1} + \sigma_{twgg.UN1.2})}{2} = 15.21 \cdot kPa$$

Total Area water acting on Crest Gate:

$$A_{twgg.UN1} := \begin{cases} D_{twgg.UN1} \cdot W_{twgg.UN1} & \text{if } A2_{UN1} \\ D_{twgg.UN1} \cdot W_{twgg.UN1} & \text{if } B2_{UN1} \\ H_{gg.UN1} \cdot W_{twgg.UN1} & \text{if } C2_{UN1} \end{cases} = 12.4 \cdot m^2$$

Total Horizontal Headwater Load on Guard Crest Gate: $H_{twgg.UN1} := \sigma_{twgg.UN1.avg} \cdot A_{twgg.UN1} = 188.5 \cdot kN$

Apply Total Horiz. TW Load on Guard Gate at:

$$H_{twgg.UN1.loc} := \begin{cases} (TOC_{as} - BOF_{elev}) & \text{if } A2_{UN1} \\ \left[\frac{(TW_{UN1} - TOC_{as})}{3} + (TOC_{as} - BOF_{elev})\right] & \text{if } B2_{UN1} \\ \left[\frac{\sigma_{twgg.UN1.2} \cdot A_{twgg.UN1} \cdot \frac{(H_{gg.UN1})}{2} + \frac{(\sigma_{twgg.UN1.1} - \sigma_{twgg.UN1.2})}{2} A_{twgg.UN1} \cdot \frac{(H_{gg.UN1})}{3}}{\sigma_{twgg.UN1.2} \cdot A_{twgg.UN1} + \frac{(\sigma_{twgg.UN1.1} - \sigma_{twgg.UN1.2})}{2} \cdot A_{twgg.UN1}} \dots \\ + (TOC_{as} - BOF_{elev})\right] & \text{if } C2_{UN1} \end{cases} = 5.0 \cdot m$$

Apply Total Guard Crest Gate Headwater Load at (From toe): $H_{twgg.UN1.loc.z} := \frac{W_{twgg.UN1}}{2} = 2\ m$

LATERAL WATER LOADS (continued)

UN1 CASE

TAILWATER (RESISTING) Applied to Concrete Strucuture:

Tailwater Depth on Top of Abutment Footing: $D_{twa.UN1} := TW_{UN1} - TOC_{as} = 3.10\ m$

Tailwater Load Unit Width on Abutment: $W_{twa.UN1} := 2 \cdot r_{wall} = 12.00\ m$

Total Horizontal Tailwater Load on Abutment: $H_{twa.UN1} := \dfrac{\left(\gamma_w \cdot D_{twa.UN1}{}^2\right)}{2} \cdot W_{twa.UN1} = 565.6 \cdot kN$

Apply Total Abutment Tailwater Load at: $H_{twa.UN1.loc} := \dfrac{D_{twa.UN1}}{3} + \left(TOC_{as} - BOF_{elev}\right) = 5.03\ m$

Apply Total Abutment Tailwater Load at (from Toe Line): $H_{twa.UN1.loc.z} := W_{twgg.UN1} + r_{wall} = 10\ m$

Footing Thickness for horizontal at Toe: $h_{toe} = 4\ m$

Tailwater Depth At top of Gate Base Footing Elevation: $D_{twgf.UN1} := TW_{UN1} - TOC_{as} = 3.10\ m$

Water Depth at bottom of Gate Base Footing (Excluding Key): $D_{twtoe.UN1} := TW_{UN1} - BOF_{elev} = 7.10\ m$

Water Depth at bottom of Gate Base Footing (Including Key): $D_{twkey.UN1} := HW_{UN1} - BOK_{elev} = 11.80\ m$

Unit Width of D/S face of crest for applicaiton of Tailwater Load: $W_{tw.UN1} := W_B = 16.00\ m$

(Conservatively taken resisting water in front of 1.5m RCC Auxiliary Spillway as Tailwater elevation)

Tailwater Pressure At Top of Gate Footing: $\sigma_{twgf.UN1} := \left(\gamma_w \cdot D_{twgf.UN1}\right) = 30.41 \cdot kPa$

Tailwater Line Load At Bottom of Gate Footing (Excluding Key): $\sigma_{twtoe.UN1} := \left(\gamma_w \cdot D_{twtoe.UN1}\right) = 69.65 \cdot kPa$

Trianglular Distribution Unit Load on Gate Footing Base: $H_{twgf.UN1.tri} := \left(\dfrac{\sigma_{twtoe.UN1} - \sigma_{twgf.UN1}}{2}\right) \cdot \left[\left(T_{as} - d_{key}\right) \cdot W_{tw.UN1}\right] = 627.84 \cdot kN$

Rectangular Distribution Unit Load on Gate Footing Base: $H_{twgf.UN1.rect} := \sigma_{twgf.UN1} \cdot \left[\left(T_{as} - d_{key}\right) \cdot W_{tw.UN1}\right] = 973.15 \cdot kN$

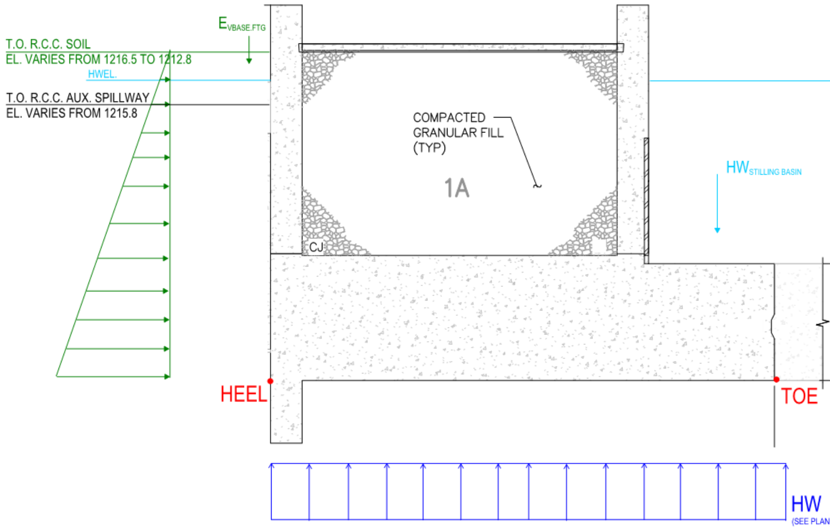
Total Horizontal Tailwater Headwater Load on Gate Footing: $H_{twgf.UN1} := H_{twgf.UN1.tri} + H_{twgf.UN1.rect} = 1600.99 \cdot kN$

Apply Total Gate Footing Tailwater Load at:

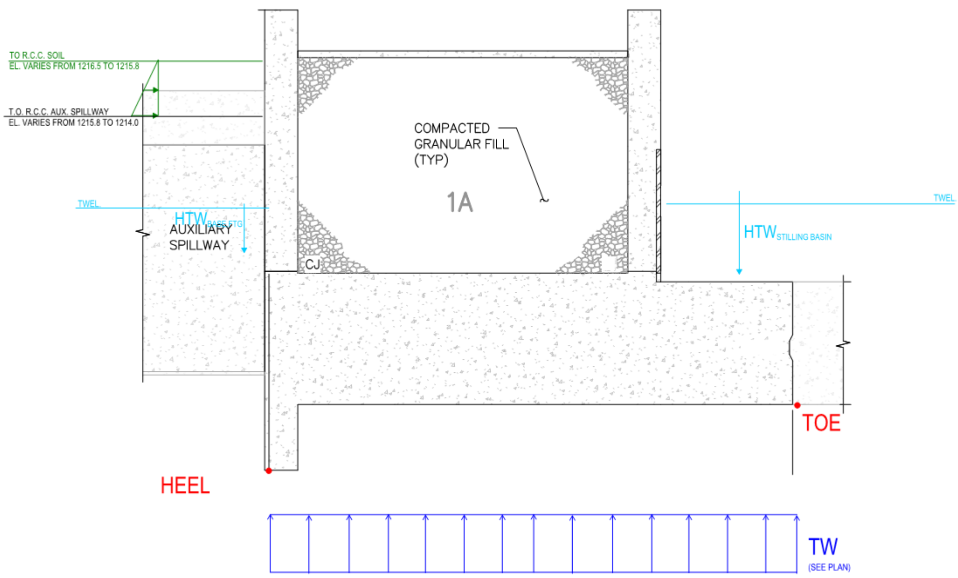
$$H_{twgf.UN1.loc} := \frac{\left[H_{twgf.UN1.rect} \cdot \dfrac{\left(T_{as}\right)}{2} + H_{twgf.UN1.tri} \cdot \dfrac{\left(T_{as}\right)}{3}\right]}{H_{twgf.UN1.tri} + H_{twgf.UN1.rect}} = 1.74\ m$$

Apply Total Gate Footing Tailwater Load at (From Toe Line): $H_{twgf.UN1.loc.z} := \dfrac{W_B}{2} = 8.00\ m$

SUMMATION OF LATERAL WATER LOADS:



SECTION 1A BEFORE GATES & AUX. SPILLWAY RCC



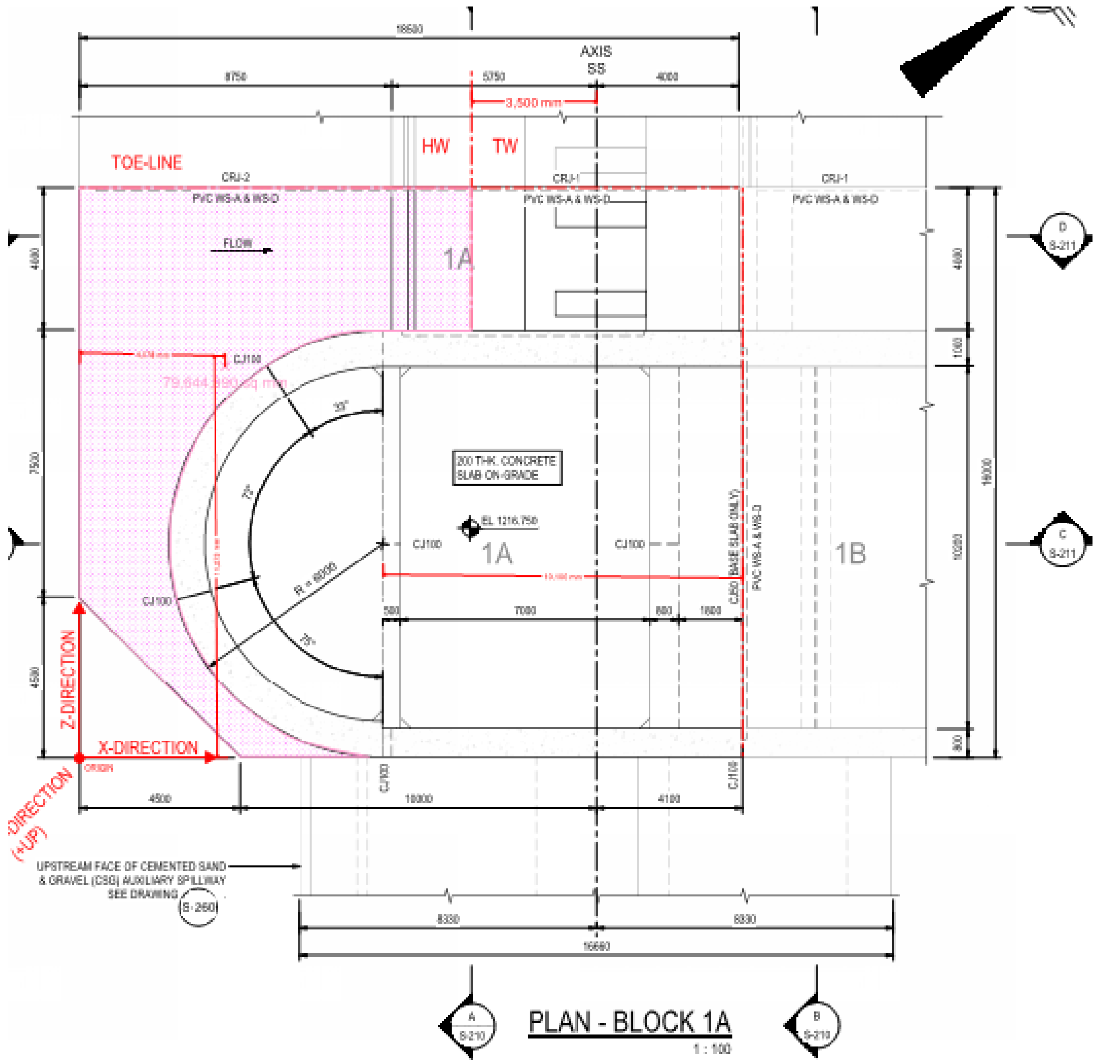
SECTION 1A AFTER GATES & AUX. SPILLWAY RCC

$\Sigma H_{Water.UN1.x} := H_{hwa.UN1} + H_{hwas.UN1} + H_{hwgg.UN1} + H_{twa.UN1} + H_{twgf.UN1} + H_{twgg.UN1} = -5078.24 \cdot kN$

$\Sigma M_{HWater.UN1.x} := H_{hwa.UN1} \cdot H_{hwa.UN1.loc} + H_{hwas.UN1} \cdot H_{hwas.UN1.loc} + H_{hwgg.UN1} \cdot H_{hwgg.UN1.loc} \ldots = -17184.06 \cdot kN \cdot m$
$+ H_{twa.UN1} \cdot H_{twa.UN1.loc} + H_{twgf.UN1} \cdot H_{twgf.UN1.loc} + H_{twgg.UN1} \cdot H_{twgg.UN1.loc}$

$\Sigma H_{Water.UN1.z} := 0kN$

$\Sigma M_{HWater.UN1.z} := 0 \cdot kN \cdot m$



HEADWATER:

Water Depth on top of Approach Slab: $d_{hw.UN1} := HW_{UN1} - TOC_{as} = 5.80\ m$

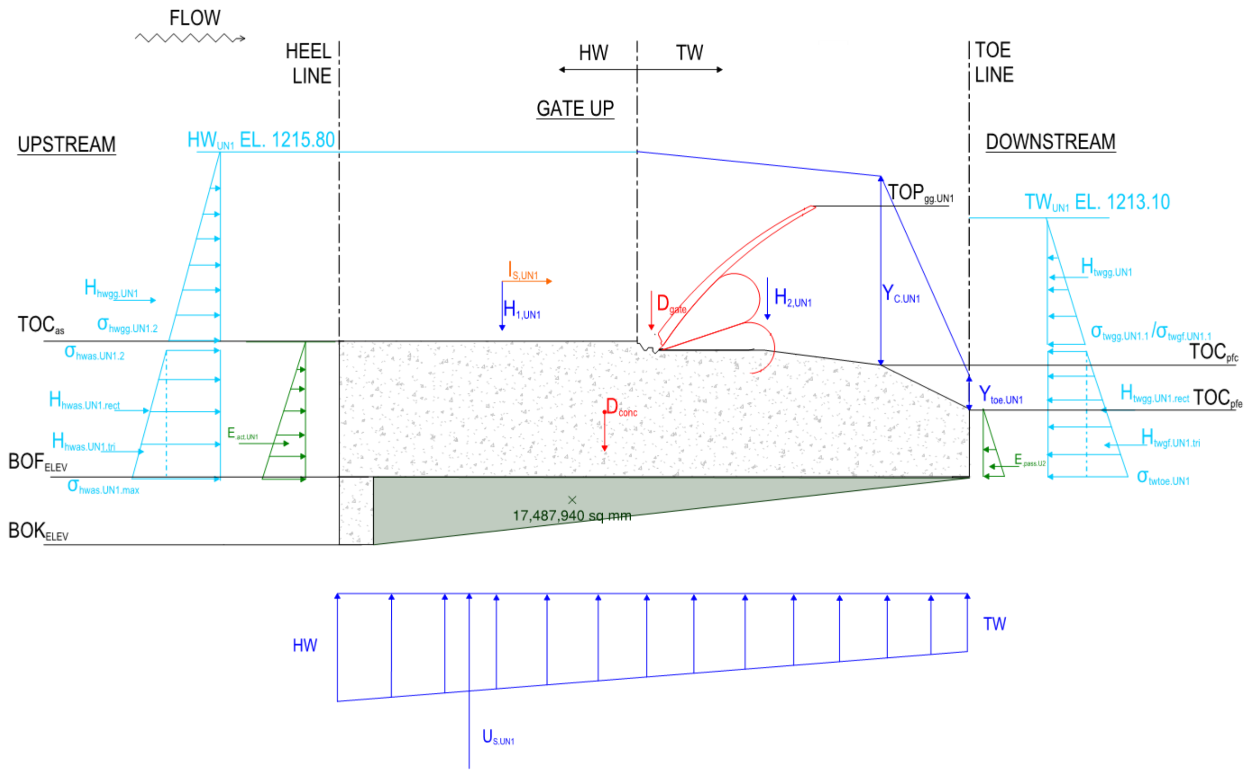
Water Area on top of Approach Slab: $A_{as} = 79.64\ m^2$ (From Geom. Scaled on REVU)

Vertical Water Weight (H1) on Approach Slab: $H_{1.UN1} := \left(A_{as} \cdot d_{hw.UN1}\right) \cdot \gamma_w = 4531.6 \cdot kN$

Moment Arm for Applicaiton of Water Weight (H1) from toe (X-Direction): $H_{1.UN1.loc.x} := L_B - 4.078m = 14.42\ m$ (From Geom. Scaled on REVU)

Moment Arm for Applicaiton of Water Weight (H1) from toe (Z-Direction): $H_{1.UN1.loc.z} := W_B - 11.273m = 4.73\ m$ (From Geom. Scaled on REVU)

TAILWATER:



Approach Slab Length: $L_{as} = 8.75\ m$

Gate Footing Length: $L_{gf} = 9.75\ m$

Gate Footing Crest Length: $L_{gfc} = 2.25\ m$

TAILWATER:

Trapezoid Volume Above Gate Footing from Approach Slab to Crest:

$$V_{asc.UN1} := \left(L_{gf} - L_{gfc}\right) W_{twgg.UN1} \frac{d_{hw.UN1} + Y_{C.UN1}}{2} = 172.95 \cdot m^3$$

Trapezoid Volume Above Gate Footing Crest to End of Gate Footing:

$$V_{gfc.UN1} := \left(L_{gfc} \cdot W_{twgg.UN1}\right) \frac{Y_{C.UN1} + Y_{TOE.UN1}}{2} = 27.95 \cdot m^3$$

Load Above Gate Footing from Approach Slab to Crest:

$$H_{2.UN1.asc} := V_{asc.UN1} \cdot \gamma_w = 1696.64 \cdot kN$$

Load Acting Above Footing Crest from Toe:

$$H_{2.UN1.asc.loc.x} := \frac{\left(L_{gf} - L_{gfc}\right) \cdot \left(2 \cdot d_{hw.UN1} + Y_{C.UN1}\right)}{3 \cdot \left(d_{hw.UN1} + Y_{C.UN1}\right)} + L_{gfc} = 6.01\ m$$

Load Above Gate Footing from Crest to End:

$$H_{2.UN1.gfc} := V_{gfc.UN1} \cdot \gamma_w = 274.14 \cdot kN$$

Load Acting Above Gate Footing from Crest to End:

$$H_{2.UN1.gfc.loc.x} := \frac{\left(L_{gfc}\right) \cdot \left(2 \cdot Y_{C.UN1} + Y_{TOE.UN1}\right)}{3 \cdot \left(Y_{C.UN1} + Y_{TOE.UN1}\right)} = 1.44\ m$$

Vertical Water Weight (H2) on Gate Footing:

$$H_{2.UN1} := H_{2.UN1.asc} + H_{2.UN1.gfc} = 1970.78 \cdot kN$$

Moment Arm for Application of Water Weight (H2) from toe:

$$H_{2.UN1.loc.x} := \frac{H_{2.UN1.asc} \cdot H_{2.UN1.asc.loc.x} + H_{2.UN1.gfc} \cdot H_{2.UN1.gfc.loc.x}}{H_{2.UN1}} = 5.37\ m$$

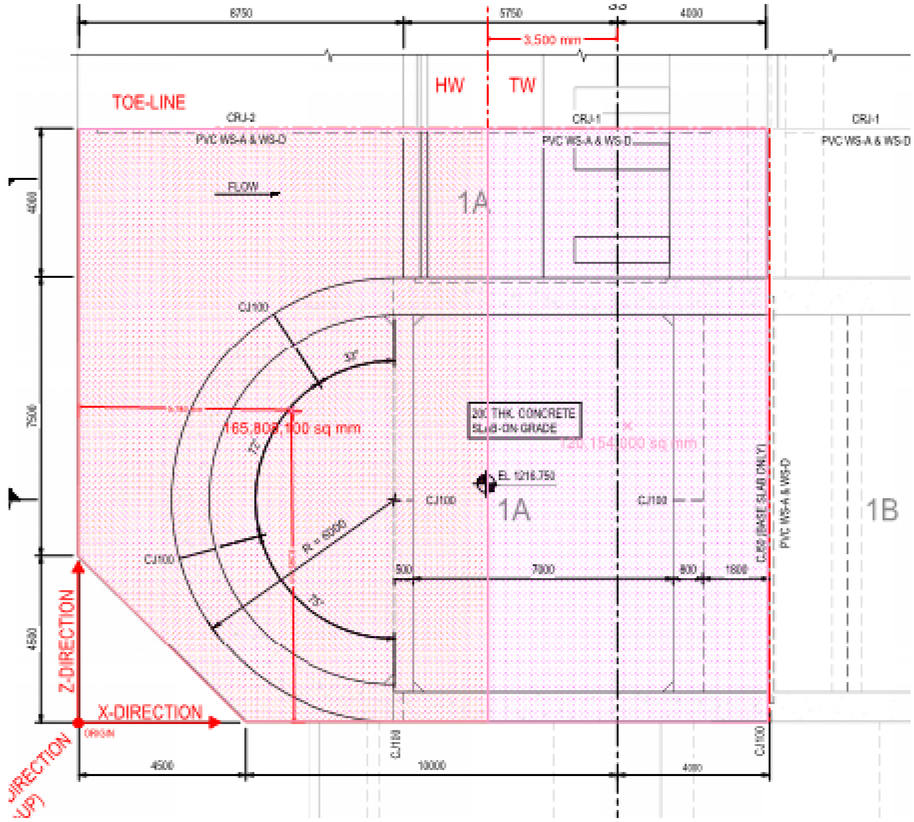
Moment Arm for Applicaiton of Water Weight (H2) from toe (Z-Direction):

$$H_{2.UN1.loc.z} := 2.0m$$

UPLIFT

UN1 CASE

(Assuming constant Headwater Uplift at front and constant Tailwater Uplift at back of footing base)



Uplift pressure at U/S Face (heel): $U_{HW.UN1} := D_{hwas.UN1} \cdot \gamma_w = 96.1 \cdot \frac{kN}{m^2}$

Uplift pressure at D/S Face Stilling Basin: $U_{TW.UN1} := D_{twtoe.UN1} \cdot \gamma_w = 69.65 \cdot \frac{kN}{m^2}$

Area of Uplift Force From Headwater Side: $A_{HWU.UN1} := 165.81 m^2$ (From Bluebeam REVU)

Area of Uplift Force From Tailwater Side: $A_{TWU.UN1} := 120 m^2$ (From Bluebeam REVU)

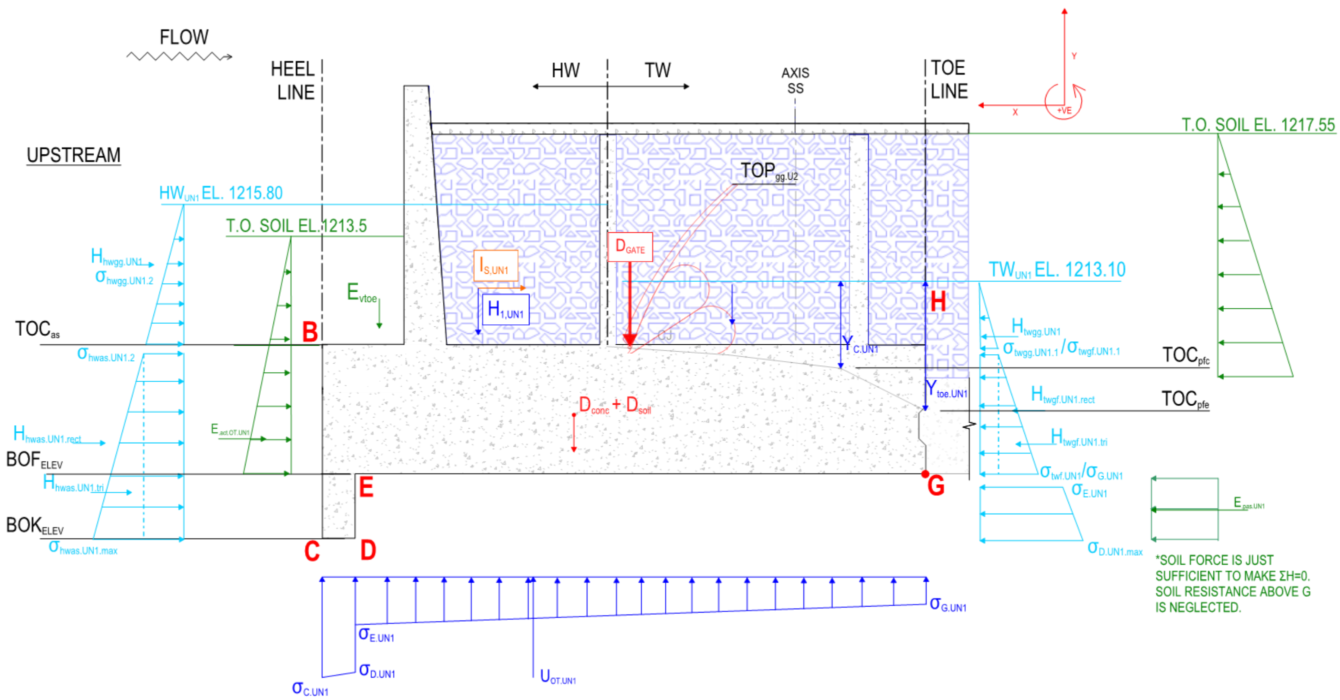
MONOLITH OVERTURNING STABILITY ANALYSIS

UN1 CASE

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stablity of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for staticequilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1 $Ratio_{OT.UN1.min} := 0.333$ at Rock Foundation



Uplift Loads for Overturning Stability Analysis (X-Direction)

Line of Creep:

Change in Water Head: $\Delta_{h.UN1} := HW_{UN1} - TW_{UN1} = 2.7\ m$

Length from Point C to Point G: $L_{CG} = 18.61\ m$

Length from Various Points to Points: $L_{CD} = 1\ m$ $L_{DE} = 2\ m$ $L_{EG} = 17.5\ m$

$L_{GH.UN1} := TW_{UN1} - TOC_{afe} = 5.1\ m$

Length from Point C, D, E to G: $L_{CDEG} = 20.5\ m$ $L_{CDE} = 3\ m$

Water Pressure at Point C & G: $\sigma_{C.UN1} := \sigma_{hwas.UN1.2} = -96.14 \cdot kPa$ $\sigma_{G.UN1} := \sigma_{twtoe.UN1} \cdot -1 = -69.65 \cdot kPa$

Water Pressure at Point D:

$$\sigma_{D.UN1} := -\gamma_w \cdot \left[\left(HW_{UN1} - BOK_{elev} \right) - \frac{\Delta_{h.UN1} \cdot L_{CD}}{L_{CDEG}} \right] = -114.47 \cdot kPa$$

Water Pressure at Point E:

$$\sigma_{E.UN1} := -\gamma_w \cdot \left[\left(HW_{UN1} - BOF_{elev} \right) - \frac{\Delta_{h.UN1} \cdot L_{CDE}}{L_{CDEG}} \right] = -92.26 \cdot kPa$$

Uplift for Overturning Analysis on Bottom of Key:

$$U_{OT.UN1.key} := \frac{\sigma_{C.UN1} + \sigma_{D.UN1}}{2} \cdot L_{CD} \cdot W_B = -1684.83 \cdot kN$$

Acting at:

$$U_{OT.UN1.key.loc} := \frac{L_{CD} \cdot \left(2 \cdot \sigma_{C.UN1} + \sigma_{D.UN1} \right)}{3 \left(\sigma_{C.UN1} + \sigma_{D.UN1} \right)} + L_{EG} = 17.99\ m$$

UN1 CASE

Uplift for Overturning Analysis on Bottom of Footing:

$$U_{OT.UN1.ftg} := \frac{\sigma_{E.UN1} + \sigma_{G.UN1}}{2} \cdot L_{EG} \cdot W_B = -22667.8 \cdot kN$$

Acting at:

$$U_{OT.UN1.ftg.loc} := \frac{L_{EG} \cdot \left(\sigma_{G.UN1} + 2 \cdot \sigma_{E.UN1}\right)}{3\left(\sigma_{G.UN1} + \sigma_{E.UN1}\right)} = 9.16\ m$$

Uplift Load for Overtuming Analysis:

$$U_{OT.UN1} := U_{OT.UN1.key} + U_{OT.UN1.ftg} = -24352.63 \cdot kN$$

Uplift Load Acting from Toe:

$$U_{OT.UN1.loc} := \frac{U_{OT.UN1.key} \cdot U_{OT.UN1.key.loc} + U_{OT.UN1.ftg} \cdot U_{OT.UN1.ftg.loc}}{U_{OT.UN1}} = 9.77\ m$$

<u>All Vertical Loads Appliable to Overturning Stability Analysis</u>

Total Concrete Dead Loads:	$D_{conc} = 35947.58 \cdot kN$	at:	$X_{conc.loc} = 8.81\ m$
Dead Load of Gate:	$D_{Gate} = 56.0 \cdot kN$		$X_{gate} = 9.50\ m$
Total Fill Loads:	$D_{fill} = 18056.6 \cdot kN$		$X_{fill.loc} = 7.31\ m$
Water Weight (HW) on Apron Slab:	$H_{1.UN1} = 4531.6 \cdot kN$		$H_{1.UN1.loc.x} = 14.42\ m$
Water Weight (TW) on Guard Gate Footing:	$H_{2.UN1} = 1970.8 \cdot kN$		$H_{2.UN1.loc.x} = 5.37\ m$
Uplift Load for Overtuming Analysis:	$U_{OT.UN1} = -24352.63 \cdot kN$		$U_{OT.UN1.loc} = 9.77 \cdot m$

Sum of All Overturning Analysis Vertical Load:

$$\Sigma V_{UN1.OT} := D_{conc} + D_{Gate} + D_{fill} + H_{1.UN1} + H_{2.UN1} + U_{OT.UN1} = 36209.96 \cdot kN$$

Sum of All Overturning Analysis Vertical Load Moments:

$$\Sigma M_{V.UN1.OT} := \begin{pmatrix} D_{conc} \cdot X_{conc.loc} + D_{Gate} \cdot X_{gate} + D_{fill} \cdot X_{fill.loc} + H_{1.UN1} \cdot H_{1.UN1.loc.x} \cdots \\ + H_{2.UN1} \cdot H_{2.UN1.loc.x} + U_{OT.UN1} \cdot U_{OT.UN1.loc} \end{pmatrix} = 287396.11 \cdot kN \cdot m$$

<u>Lateral Tailwater Loads for Overturning Stability Analysis</u>

TW Lateral Load on Gate Footing (No Key - Overturning Values Adjusted):

$$H_{twgf.UN1} = 1600.99 \cdot kN$$

Acting at:

$$H_{twgf.UN1.loc} = 1.74\ m$$

Horizontal Tailwater Pressure Top of Key (Overturning Analysis):

$$\sigma_{twtk.OT.UN1} := \sigma_{E.UN1} \cdot -1 = 92.26 \cdot kPa$$

Horizontal Tailwater Pressure Bottom of Key (Overturning Analysis):

$$\sigma_{twbk.OT.UN1} := \sigma_{D.UN1} \cdot -1 = 114.47 \cdot kPa$$

Triangular Distribution Unit Load Acting at Key:

$$H_{twbk.OT.UN1.tri} := \frac{\left(\sigma_{twbk.OT.UN1} - \sigma_{twtk.OT.UN1}\right)}{2} \cdot d_{key} \cdot W_{tw.UN1} = 355.27 \cdot kN$$

Triangular Distribution Unit Load Acting at Key:

$$H_{twbk.OT.UN1.rect} := \sigma_{twtk.OT.UN1} \cdot d_{key} \cdot W_{tw.UN1} = 2952.38 \cdot kN$$

Total Horizontal Tailwater Load on Key (Overturning Values Adjusted):

$$H_{twkey.OT.UN1} := H_{twbk.OT.UN1.tri} + H_{twbk.OT.UN1.rect} = 3307.64 \cdot kN$$

Acting at:

$$H_{twkey.OT.UN1.loc} := \frac{H_{twbk.OT.UN1.tri} \cdot \frac{-2 \cdot d_{key}}{3} + H_{twbk.OT.UN1.rect} \cdot \frac{-d_{key}}{2}}{H_{twkey.OT.UN1}} = -1.04 \cdot m$$

Lateral Driving Earth Loads for Overturning Stability Analysis (at rest condition)

UN1 CASE

Depth of Driving Soil Loads (to top of key): $h_{E.OT.UN1} := TOC_{as} - BOF_{elev} = 4\ m$

At-Rest Soil Load: $E_{act.OT.UN1} := \frac{\left(K_{o.UN1} \cdot h_{E.OT.UN1}{}^2\right)}{2} \cdot \left(\gamma_r - \gamma_w\right) \cdot W_{hwas.UN1} \cdot -1 = -1026.66 \cdot kN$

At Rest- Soil Load Acting from Toe: $E_{act.OT.UN1.loc} := \frac{h_{E.OT.UN1}}{3} = 1.33\ m$

All Lateral Loads Appliable to Overturning Stability Analysis (X-direction)

HW Lateral Load on Approach Slab:	$H_{hwas.UN1} = -4897.2 \cdot kN$	$H_{hwas.UN1.loc} = 1.83\ m$
HW Lateral Load on Guard Gate:	$H_{hwgg.UN1} = -556.2 \cdot kN$	$H_{hwgg.UN1.loc} = 5.50\ m$
HW Lateral Load on Abutment:	$H_{hwa.UN1} = -1980.1 \cdot kN$	$H_{hwa.UN1.loc} = 5.93\ m$
TW Lateral Load on Abutment:	$H_{twa.UN1} = 565.6 \cdot kN$	$H_{twa.UN1.loc} = 5.03\ m$
TW Lateral Load on Guard Gate:	$H_{twgg.UN1} = 188.5 \cdot kN$	$H_{twgg.UN1.loc} = 5.03\ m$
TW Lateral Load on Gate Footing (No Key - Overturning Values Adjusted):	$H_{twgf.UN1} = 1600.99 \cdot kN$	$H_{twgf.UN1.loc} = 1.74\ m$
TW Lateral Load on Key:	$H_{twkey.OT.UN1} = 3307.64 \cdot kN$	$H_{twkey.OT.UN1.loc} = -1.04\ m$
Ice / Impact Load:	$I_{UN1} = 1502.0 \cdot kN$	$I_{UN1.loc.y} = 9.50\ m$
Lateral Soil Load (driving):	$E_{act.OT.UN1} = -1026.7 \cdot kN$	$E_{act.OT.UN1.loc} = 1.33\ m$

Resisting Lateral Soil Load as required to produce horizontal equilibrium:

$$E_{pas.OT.x.UN1} := -\left(H_{hwas.UN1} + H_{hwgg.UN1} + H_{hwgg.UN1} + H_{twgg.UN1} \cdots + H_{twgf.UN1} + H_{twkey.OT.UN1} + I_{UN1} + E_{act.OT.UN1}\right) = 437.08 \cdot kN$$

Acting at:

$$E_{pas.OT.UN1.loc} := -1 \cdot \frac{d_{key}}{2} = -1\ m$$

Sum of All Overturning Analysis Horizontal Load (ΣH=0):

$$\Sigma H_{UN1.OT.x} := H_{hwas.UN1} + H_{hwgg.UN1} + H_{twgg.UN1} + H_{twgf.UN1} + H_{twkey.OT.UN1} + I_{UN1} + E_{act.OT.UN1} + E_{pas.OT.x.UN1} = 556.23 \cdot kN$$

Sum of All Overturning Analysis Horizontal Load Moments:

$$\Sigma M_{H.UN1.OT.x} := H_{hwas.UN1} \cdot H_{hwas.UN1.loc} + H_{hwgg.UN1} \cdot H_{hwgg.UN1.loc} \cdots + H_{twgg.UN1} \cdot H_{twgg.UN1.loc} + H_{twgf.UN1} \cdot H_{twgf.UN1.loc} \cdots + H_{twkey.OT.UN1} \cdot H_{twkey.OT.UN1.loc} + I_{UN1} \cdot I_{UN1.loc.y} \cdots + E_{act.OT.UN1} \cdot E_{act.OT.UN1.loc} + E_{pas.OT.x.UN1} \cdot E_{pas.OT.UN1.loc} = 754.14 \cdot kN \cdot m$$

Overturning Stability Analysis (X-Direction)

$$\Sigma M_{UN1.OT.x} := \Sigma M_{V.UN1.OT} + \Sigma M_{H.UN1.OT.x} = 288150.24 \cdot kN \cdot m$$

$$X_{R.UN1} := \frac{\Sigma M_{UN1.OT.x}}{\Sigma V_{UN1.OT}} = 7.96\ m \qquad x_{OT.UN1} := X_{R.UN1} - \frac{L_B}{2} = -1.29\ m$$

Overturning Resultant Ratio

$$Ratio_{OT.x.UN1} := \frac{X_{R.UN1}}{L_B} = 0.43$$

$$Ratio_{OT.x.UN1.check} := \begin{cases} \text{"OKAY"} & \text{if } Ratio_{OT.x.UN1} \ge Ratio_{OT.UN1.min} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

$$x_{OT.check.UN1} := \begin{cases} \text{"OKAY"} & \text{if } \left|x_{OT.UN1}\right| \le Kern_x \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

All Lateral Loads Appliable to Overturning Stability Analysis (Z-direction)

UN1 CASE

Z-Direction Lateral Soil Load on Abutment Before RCC (driving): $E_{act.a.UN1.z} = -819.5 \cdot kN$ $E_{act.a.UN1.z.loc.y} = 4.00\ m$

Z-Direction Lateral Lateral Soil Load on Approach Slab Before RCC (driving): $E_{act.as.UN1.z} = -2192.6 \cdot kN$ $E_{act.as.UN1.z.loc.y} = 1.76\ m$

Z-Direction Lateral Soil Load on Abutment After RCC (driving): $E_{act.RCC.UN1.z} = -9.24 \cdot kN$ $E_{act.RCC.UN1.z.loc.y} = 10.03\ m$

Z-Direction Lateral Soil Load on Abutment at RCC Steps (driving): $E_{act.RCC.s.UN1.z} = -16.94 \cdot kN$ $E_{act.RCC.s.UN1.z.loc.y} = 9.43 \cdot m$

Resisting Lateral Soil Load as required to produce horizontal equilibrium:

$$E_{pas.OT.z.UN1} := -\left(E_{act.a.UN1.z} + E_{act.as.UN1.z} + E_{act.RCC.UN1.z} + E_{act.RCC.s.UN1.z}\right) = 3038.27 \cdot kN$$

Acting at:

$$E_{pas.OT.UN1.loc} = -1\ m$$

Sum of All Overturning Analysis Horizontal Load (ΣH=0):

$$\Sigma H_{UN1.OT.z} := E_{act.a.UN1.z} + E_{act.as.UN1.z} + E_{act.RCC.UN1.z} + E_{act.RCC.s.UN1.z} + E_{pas.OT.z.UN1} = 0 \cdot kN$$

Sum of All Overturning Analysis Horizontal Load Moments:

$$\begin{aligned}\Sigma M_{H.UN1.OT.z} := {} & E_{act.a.UN1.z} \cdot E_{act.a.UN1.z.loc.y} + E_{act.as.UN1.z} \cdot E_{act.as.UN1.z.loc.y} \cdots \\ & + E_{act.RCC.UN1.z} \cdot E_{act.RCC.UN1.z.loc.y} + E_{act.RCC.s.UN1.z} \cdot E_{act.RCC.s.UN1.z.loc.y} \cdots \\ & + E_{pas.OT.x.UN1} \cdot E_{pas.OT.UN1.loc}\end{aligned} = -7830.75 \cdot kN \cdot m$$

Overturning Stability Analysis (Z-Direction)

$$\Sigma M_{UN1.OT.z} := \Sigma M_{V.UN1.OT} + \Sigma M_{H.UN1.OT.z} = 279565.35 \cdot kN \cdot m$$

$$z_{R.UN1} := \frac{\Sigma M_{UN1.OT.z}}{\Sigma V_{UN1.OT}} = 7.72\ m \qquad z_{OT.UN1} := z_{R.UN1} - \frac{W_B}{2} = -0.28\ m$$

Overturning Resultant Ratio

$$Ratio_{OT.z.UN1} := \frac{z_{R.UN1}}{L_B} = 0.42$$

$$Ratio_{OT.z.UN1.check} := \begin{array}{|l} \text{"OKAY"} \quad \text{if} \quad Ratio_{OT.z.UN1} \geq Ratio_{OT.UN1.min} \\ \text{"Revise Structure"} \quad \text{otherwise} \end{array} = \text{"OKAY"}$$

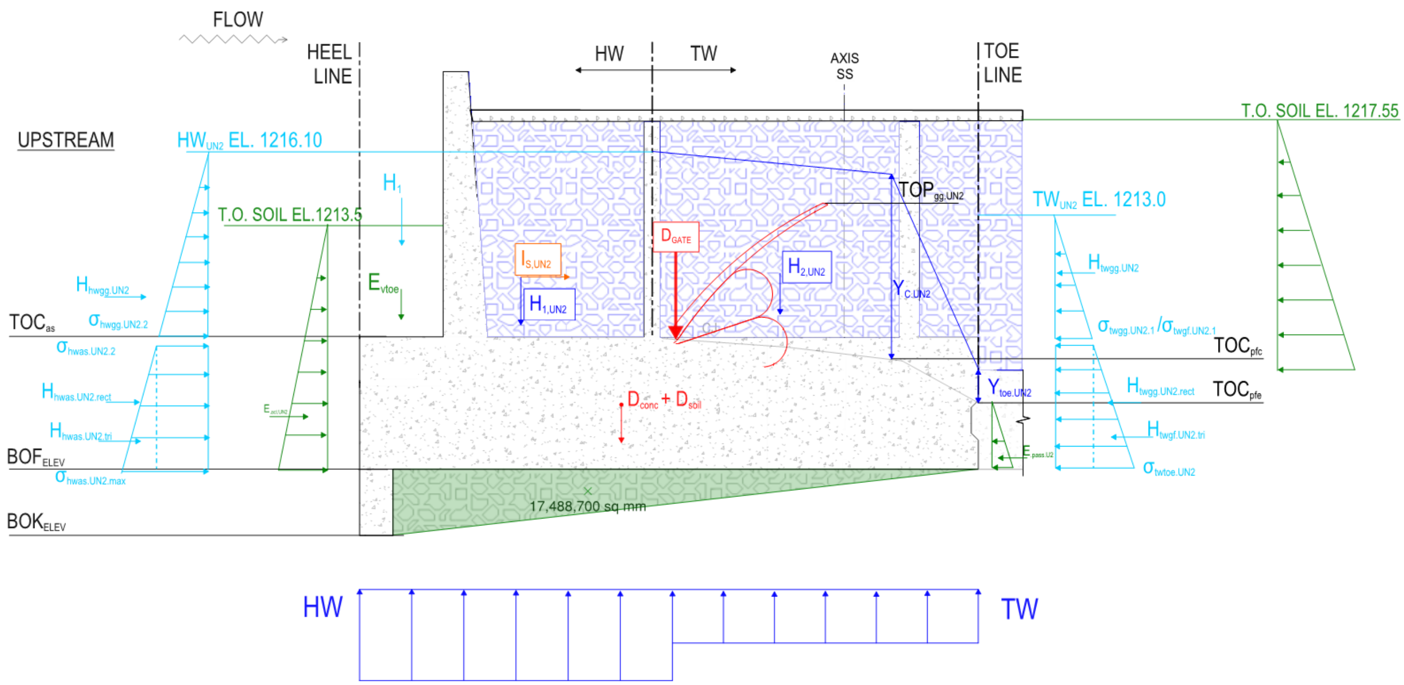
UN2 DESIGN CASE



ACCEPTANCE PARAMETERS

Required Factor of Safety for Sliding:	$FS_{req.UN2.sl} := 1.3$	(Without Cohesion)
Resultant Within Middle Third of Base:	$e \le \frac{L_B}{6} \wedge e \ge \frac{-L_B}{6}$	(Section 8.1, Design Criteria)
Allowable Rock Bearing Pressure:	$\sigma_{allow.UN2} := 1270 \cdot \frac{kN}{m^2}$	(Section 5.2, Design Criteria)
Required Factor of Safety for Flotation:	$FS_{req.UN2.flt} := 1.3$	

INPUT PARAMETERS

Headwater Elevation:	$HW_{UN2} := 1216.10m$	(Section 8.2, Design Criteria)
Tailwater Elevation:	$TW_{UN2} := 1213.00m$	(Section 8.2, Design Criteria)
Bottom of Footing Elevation:	$BOF_{elev} = 1206\,m$	
Approch Slab Top of Concrete Elevation at Upstream Face:	$TOC_{as} = 1210\,m$	
Abutment Footing Top of Concrete Elevation at Stilling Basin:	$TOC_{afe} = 1208\,m$	
Abutment Footing Top of Concrete Elevation at Footing:	$TOC_{afc} = 1209.73\,m$	Gates are open when top of gate elevation is at 1210.00m
Abutment Footing Top of Concrete Elevation at Footing Notch:	$TOC_{afc.n} = 1209.3\,m$	
Top of Guard Gate Elevation:	$TOP_{gg.UN2} := 1215.0m$	Gates are closed/up when top of gate elevation is at 1215.0m
Bottom of Key Elevation:	$BOK_{elev} = 1204\,m$	

UN2 CASE

Water Elevation above Crest of Guard Gate:

$EL_{C.UN2} := 1215.73m$

$$Y_{C.UN2} := \begin{cases} (EL_{C.UN2} - TOC_{afc.n}) & \text{if } TOP_{gg.UN2} \le HW_{UN2} \\ (TW_{UN2} - TOC_{afc.n}) & \text{if } TOP_{gg.UN2} > HW_{UN2} \end{cases} = 6.43 \cdot m$$

Water Elevation above Guard Gate Toe: Submerged by Hydraulic 2D Model

$EL_{TOE.UN2} := 1213.0m$

$$Y_{TOE.UN2} := \begin{cases} (EL_{TOE.UN2} - TOC_{afe}) & \text{if } TOP_{gg.UN2} \le HW_{UN2} \\ (TW_{UN2} - TOC_{afe}) & \text{if } TOP_{gg.UN2} > HW_{UN2} \end{cases} = 5 \cdot m$$

LATERAL WATER LOADS

HEADWATER (DRIVING X-DIRECTION):

Headwater Depth on Abutment: $D_{hwa.UN2} := HW_{UN2} - TOC_{as} = 6.10\text{ m}$

Headwater Load Unit Width Projected Surface Area of Abutment: $W_{hwa.UN2} := 2 \cdot r_{wall} = 12.00\text{ m}$

Total Horizontal Headwater Load on Abutment:

$$H_{hwa.UN2} := \frac{-\left(\gamma_w \cdot D_{hwa.UN2}{}^2\right)}{2} \cdot W_{hwa.UN2} = -2190.2 \cdot kN$$

Apply Total Abutment Headwater Load at:

$$H_{hwa.UN2.loc} := \frac{D_{hwa.UN2}}{3} + (TOC_{as} - BOF_{elev}) = 6.03\text{ m}$$

Apply Total Abutment Headwater Load at (from toe): $H_{hwa.UN2.loc.z} := 4m + r_{wall} = 10.00\text{ m}$ (Gate Footing + Radius of Wall)

Thickness of Approach Slab: $T_{as} = 4\text{ m}$

Headwater Depth at Heel (U/S face): $D_{hwas.UN2} := HW_{UN2} - BOF_{elev} = 10.10\text{ m}$

Headwater Load Unit Width on Projected Approach Slab: $W_{hwas.UN2} := W_B = 16.00\text{ m}$

Headwater Line Load At Top of Approach Slab: $\sigma_{hwas.UN2.1} := -(\gamma_w \cdot D_{hwa.UN2}) = -59.84 \cdot kPa$

Headwater Line Load At Bottom of Approach Slab: $\sigma_{hwas.UN2.2} := -(\gamma_w \cdot D_{hwas.UN2}) = -99.08 \cdot kPa$

Trianglular Distribution Unit Load on Approach Slab:

$$H_{hwas.UN2.2.tri} := \left(\frac{\sigma_{hwas.UN2.2} - \sigma_{hwas.UN2.1}}{2}\right) \cdot (T_{as} \cdot W_{hwas.UN2}) = -1255.68 \cdot kN$$

Rectangular Distribution Unit Load on Approach Slab:

$$H_{hwas.UN2.2.rect} := \sigma_{hwas.UN2.1} \cdot (T_{as} \cdot W_{hwas.UN2}) = -3829.82 \cdot kN$$

Total Horizontal Headwater Load on Approach Slab:

$$H_{hwas.UN2} := H_{hwas.UN2.2.tri} + H_{hwas.UN2.2.rect} = -5085.5 \cdot kN$$

Apply Total Footing Headwater Load at:

$$H_{hwas.UN2.loc} := \frac{\left[H_{hwas.UN2.2.rect} \cdot \frac{(T_{as})}{2} + H_{hwas.UN2.2.tri} \cdot \frac{(T_{as})}{3}\right]}{H_{hwas.UN2.2.tri} + H_{hwas.UN2.2.rect}} = 1.84\text{ m}$$

Apply Total Footing Headwater Load at (from toe):

$$H_{hwas.UN2.loc.z} := \frac{W_B}{2} = 8.00\text{ m}$$

Guard Gate (2A) Operating Condition: Right Crest Gate at EL 1215.0

Guard Gate Down/Open Condition: $A1_{UN2} := TOP_{gg.UN2} \le TOC_{as}$

Guard Crest Gate Up/Closed, with Top of Gate Higher than HW Elevation: $B1_{UN2} := TOP_{gg.UN2} \ge HW_{UN2} \wedge TOP_{gg.UN2} > TOC_{as}$

Guard Crest Gate Up/Closed, with Top of Gate Lower than HW Elevation: $C1_{UN2} := TOP_{gg.UN2} > TOC_{as} \wedge HW_{UN2} > TOP_{gg.UN2}$

Guard Crest Gate Height: $H_{gg.UN2} := TOP_{gg.UN2} - TOC_{as} = 5\ m$

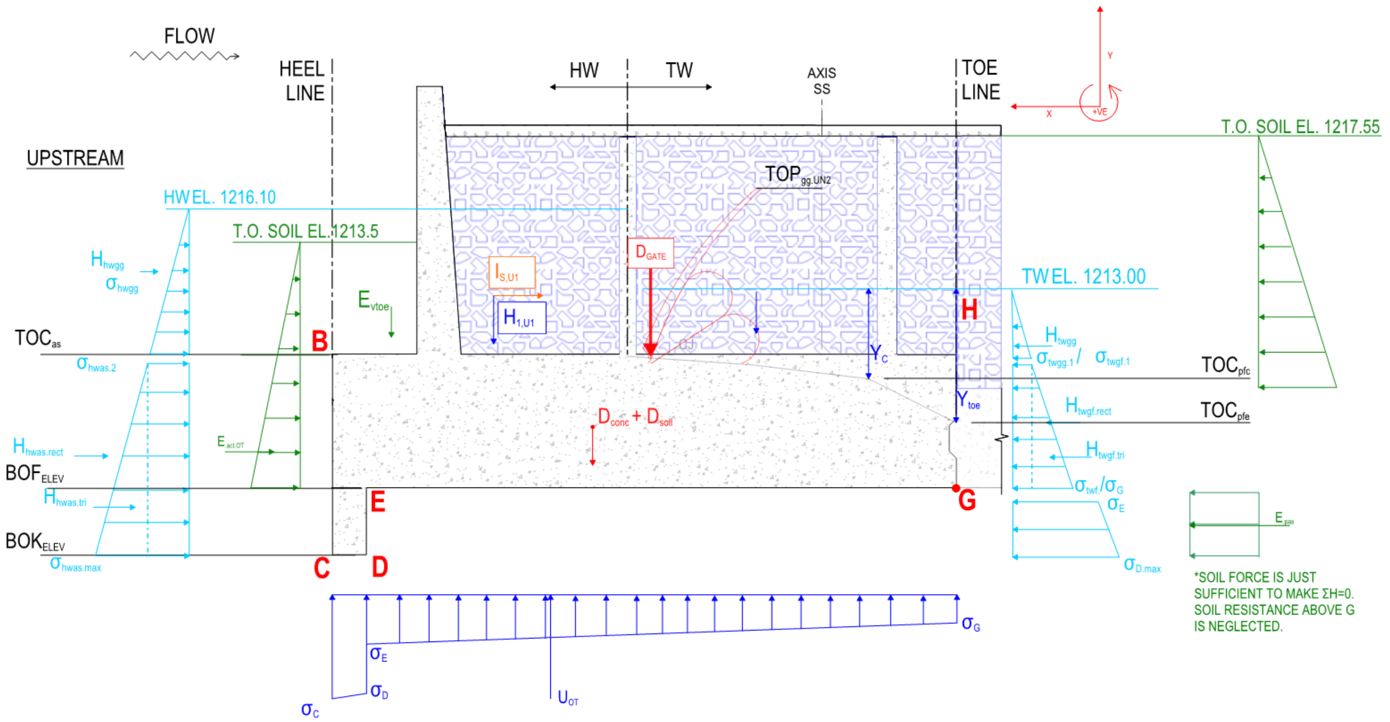
MONOLITH OVERTURNING STABILITY ANALYSIS

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stablity of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for staticequilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1 $Ratio_{OT.UN2.min} := 0.333$ at Rock Foundation



Uplift Loads for Overturning Stability Analysis (X-Direction)

Line of Creep:

Change in Water Head: $\Delta_{h.UN2} := HW_{UN2} - TW_{UN2} = 3.1\ m$

Length from Point C to Point G: $L_{CG} = 18.61\ m$

Length from Various Points to Points: $L_{CD} = 1\ m$ $L_{DE} = 2\ m$ $L_{EG} = 17.5\ m$

$L_{GH.UN2} := TW_{UN2} - TOC_{afe} = 5\ m$

Length from Point C, D, E to G: $L_{CDEG} = 20.5\ m$ $L_{CDE} = 3\ m$

Water Pressure at Point C & G: $\sigma_{C.UN2} := \sigma_{hwas.UN2.2} = -99.08 \cdot kPa$ $\sigma_{G.UN2} := \sigma_{twtoe.UN2} \cdot -1 = -68.67 \cdot kPa$

Water Pressure at Point D:

$$\sigma_{D.UN2} := -\gamma_w \cdot \left[\left(HW_{UN2} - BOK_{elev} \right) - \frac{\Delta_{h.UN2} \cdot L_{CD}}{L_{CDEG}} \right] = -117.22 \cdot kPa$$

Water Pressure at Point E:

$$\sigma_{E.UN2} := -\gamma_w \cdot \left[\left(HW_{UN2} - BOF_{elev} \right) - \frac{\Delta_{h.UN2} \cdot L_{CDE}}{L_{CDEG}} \right] = -94.63 \cdot kPa$$

Uplift for Overturning Analysis on Bottom of Key:

$$U_{OT.UN2.key} := \frac{\sigma_{C.UN2} + \sigma_{D.UN2}}{2} \cdot L_{CD} \cdot W_B = -1730.39 \cdot kN$$

Acting at:

$$U_{OT.UN2.key.loc} := \frac{L_{CD} \cdot \left(2 \cdot \sigma_{C.UN2} + \sigma_{D.UN2} \right)}{3 \left(\sigma_{C.UN2} + \sigma_{D.UN2} \right)} + L_{EG} = 17.99\ m$$

Uplift for Overturning Analysis on Bottom of Footing: $U_{OT.UN2.ftg} := \frac{\sigma_{E.UN2} + \sigma_{G.UN2}}{2} \cdot L_{EG} \cdot W_B = -22862.09 \cdot kN$

UN2 CASE

Acting at: $U_{OT.UN2.ftg.loc} := \frac{L_{EG} \cdot \left(\sigma_{G.UN2} + 2 \cdot \sigma_{E.UN2}\right)}{3\left(\sigma_{G.UN2} + \sigma_{E.UN2}\right)} = 9.21\ m$

Uplift Load for Overturning Analysis: $U_{OT.UN2} := U_{OT.UN2.key} + U_{OT.UN2.ftg} = -24592.47 \cdot kN$

Uplift Load Acting from Toe: $U_{OT.UN2.loc} := \frac{U_{OT.UN2.key} \cdot U_{OT.UN2.key.loc} + U_{OT.UN2.ftg} \cdot U_{OT.UN2.ftg.loc}}{U_{OT.UN2}} = 9.83\ m$

All Vertical Loads Appliable to Overturning Stability Analysis

		at:	
Total Concrete Dead Loads:	$D_{conc} = 35947.58 \cdot kN$		$X_{conc.loc} = 8.81\ m$
Dead Load of Gate:	$D_{Gate} = 56.0 \cdot kN$		$X_{gate} = 9.50\ m$
Total Fill Loads:	$D_{fill} = 18056.6 \cdot kN$		$X_{fill.loc} = 7.31\ m$
Water Weight (HW) on Apron Slab:	$H_{1.UN2} = 4766.0 \cdot kN$		$H_{1.UN2.loc.x} = 14.42\ m$
Water Weight (TW) on Guard Gate Footing:	$H_{2.UN2} = 2348.4 \cdot kN$		$H_{2.UN2.loc.x} = 4.94\ m$
Uplift Load for Overturning Analysis:	$U_{OT.UN2} = -24592.47 \cdot kN$		$U_{OT.UN2.loc} = 9.83 \cdot m$

Sum of All Overturning Analysis Vertical Load:

$$\Sigma V_{UN2.OT} := D_{conc} + D_{Gate} + D_{fill} + H_{1.UN2} + H_{2.UN2} + U_{OT.UN2} = 36582.1 \cdot kN$$

Sum of All Overturning Analysis Vertical Load Moments:

$$\Sigma M_{V.UN2.OT} := \begin{pmatrix} D_{conc} \cdot X_{conc.loc} + D_{Gate} \cdot X_{gate} + D_{fill} \cdot X_{fill.loc} + H_{1.UN2} \cdot H_{1.UN2.loc.x} \cdots \\ + H_{2.UN2} \cdot H_{2.UN2.loc.x} + U_{OT.UN2} \cdot U_{OT.UN2.loc} \end{pmatrix} = 287893.79 \cdot kN \cdot m$$

Lateral Tailwater Loads for Overturning Stability Analysis

TW Lateral Load on Gate Footing (No Key - Overturning Values Adjusted): $H_{twgf.UN2} = 1569.6 \cdot kN$

Acting at: $H_{twgf.UN2.loc} = 1.73\ m$

Horizontal Tailwater Pressure Top of Key (Overturning Analysis): $\sigma_{twtk.OT.UN2} := \sigma_{E.UN2} \cdot -1 = 94.63 \cdot kPa$

Horizontal Tailwater Pressure Bottom of Key (Overturning Analysis): $\sigma_{twbk.OT.UN2} := \sigma_{D.UN2} \cdot -1 = 117.22 \cdot kPa$

Triangular Distribution Unit Load Acting at Key: $H_{twbk.OT.UN2.tri} := \frac{\left(\sigma_{twbk.OT.UN2} - \sigma_{twtk.OT.UN2}\right)}{2} \cdot d_{key} \cdot W_{tw.UN2} = 361.39 \cdot kN$

Triangular Distribution Unit Load Acting at Key: $H_{twbk.OT.UN2.rect} := \sigma_{twtk.OT.UN2} \cdot d_{key} \cdot W_{tw.UN2} = 3028.18 \cdot kN$

Total Horizontal Tailwater Load on Key (Overturning Values Adjusted): $H_{twkey.OT.UN2} := H_{twbk.OT.UN2.tri} + H_{twbk.OT.UN2.rect} = 3389.57 \cdot kN$

Acting at: $H_{twkey.OT.UN2.loc} := \frac{H_{twbk.OT.UN2.tri} \cdot \frac{-2 \cdot d_{key}}{3} + H_{twbk.OT.UN2.rect} \cdot \frac{-d_{key}}{2}}{H_{twkey.OT.UN2}} = -1.04 \cdot m$

Lateral Driving Earth Loads for Overturning Stability Analysis (at rest condition)

UN2 CASE

Depth of Driving Soil Loads (to top of key): $h_{E.OT.UN2} := TOC_{as} - BOF_{elev} = 4\ m$

At-Rest Soil Load: $E_{act.OT.UN2} := \frac{\left(K_{o.UN2} \cdot h_{E.OT.UN2}^{\ 2}\right)}{2} \cdot \left(\gamma_r - \gamma_w\right) \cdot W_{hwas.UN2} \cdot -1 = -1026.66 \cdot kN$

At Rest- Soil Load Acting from Toe: $E_{act.OT.UN2.loc} := \frac{h_{E.OT.UN2}}{3} = 1.33\ m$

All Lateral Loads Appliable to Overturning Stability Analysis (X-direction)

HW Lateral Load on Approach Slab:	$H_{hwas.UN2} = -5085.5 \cdot kN$	$H_{hwas.UN2.loc} = 1.84\ m$
HW Lateral Load on Guard Gate:	$H_{hwgg.UN2} = -706.3 \cdot kN$	$H_{hwgg.UN2.loc} = 5.92\ m$
HW Lateral Load on Abutment:	$H_{hwa.UN2} = -2190.2 \cdot kN$	$H_{hwa.UN2.loc} = 6.03\ m$
TW Lateral Load on Abutment:	$H_{twa.UN2} = 529.7 \cdot kN$	$H_{twa.UN2.loc} = 5.00\ m$
TW Lateral Load on Guard Gate:	$H_{twgg.UN2} = 176.6 \cdot kN$	$H_{twgg.UN2.loc} = 5.00\ m$
TW Lateral Load on Gate Footing (No Key - Overturning Values Adjusted):	$H_{twgf.UN2} = 1569.6 \cdot kN$	$H_{twgf.UN2.loc} = 1.73\ m$
TW Lateral Load on Key:	$H_{twkey.OT.UN2} = 3389.57 \cdot kN$	$H_{twkey.OT.UN2.loc} = -1.04\ m$
Ice / Impact Load:	$I_{UN2} = 1502.0 \cdot kN$	$I_{UN2.loc.y} = 9.80\ m$
Lateral Soil Load (driving):	$E_{act.OT.UN2} = -1026.7 \cdot kN$	$E_{act.OT.UN2.loc} = 1.33\ m$

Resisting Lateral Soil Load as required to produce horizontal equilibrium:

$$E_{pas.OT.x.UN2} := -\left(H_{hwas.UN2} + H_{hwgg.UN2} + H_{hwgg.UN2} + H_{twgg.UN2} \cdots \atop + H_{twgf.UN2} + H_{twkey.OT.UN2} + I_{UN2} + E_{act.OT.UN2}\right) = 887.05 \cdot kN$$

Acting at:

$$E_{pas.OT.UN2.loc} := -1 \cdot \frac{d_{key}}{2} = -1\ m$$

Sum of All Overturning Analysis Horizontal Load (ΣH=0):

$$\Sigma H_{UN2.OT.x} := H_{hwas.UN2} + H_{hwgg.UN2} + H_{twgg.UN2} + H_{twgf.UN2} + H_{twkey.OT.UN2} + I_{UN2} + E_{act.OT.UN2} + E_{pas.OT.x.UN2} = 706.32 \cdot kN$$

Sum of All Overturning Analysis Horizontal Load Moments:

$$\begin{aligned} \Sigma M_{H.UN2.OT.x} := {} & H_{hwas.UN2} \cdot H_{hwas.UN2.loc} + H_{hwgg.UN2} \cdot H_{hwgg.UN2.loc} \cdots \\ & + H_{twgg.UN2} \cdot H_{twgg.UN2.loc} + H_{twgf.UN2} \cdot H_{twgf.UN2.loc} \cdots \\ & + H_{twkey.OT.UN2} \cdot H_{twkey.OT.UN2.loc} + I_{UN2} \cdot I_{UN2.loc.y} \cdots \\ & + E_{act.OT.UN2} \cdot E_{act.OT.UN2.loc} + E_{pas.OT.x.UN2} \cdot E_{pas.OT.UN2.loc} \end{aligned} = -959.04 \cdot kN \cdot m$$

Overturning Stability Analysis (X-Direction)

$$\Sigma M_{UN2.OT.x} := \Sigma M_{V.UN2.OT} + \Sigma M_{H.UN2.OT.x} = 286934.74 \cdot kN \cdot m$$

$$X_{R.UN2} := \frac{\Sigma M_{UN2.OT.x}}{\Sigma V_{UN2.OT}} = 7.84\ m \qquad x_{OT.UN2} := X_{R.UN2} - \frac{L_B}{2} = -1.41\ m$$

Overturning Resultant Ratio

$$Ratio_{OT.x.UN2} := \frac{X_{R.UN2}}{L_B} = 0.42$$

$$Ratio_{OT.x.UN2.check} := \begin{cases} \text{"OKAY"} & \text{if } Ratio_{OT.x.UN2} \ge Ratio_{OT.UN2.min} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

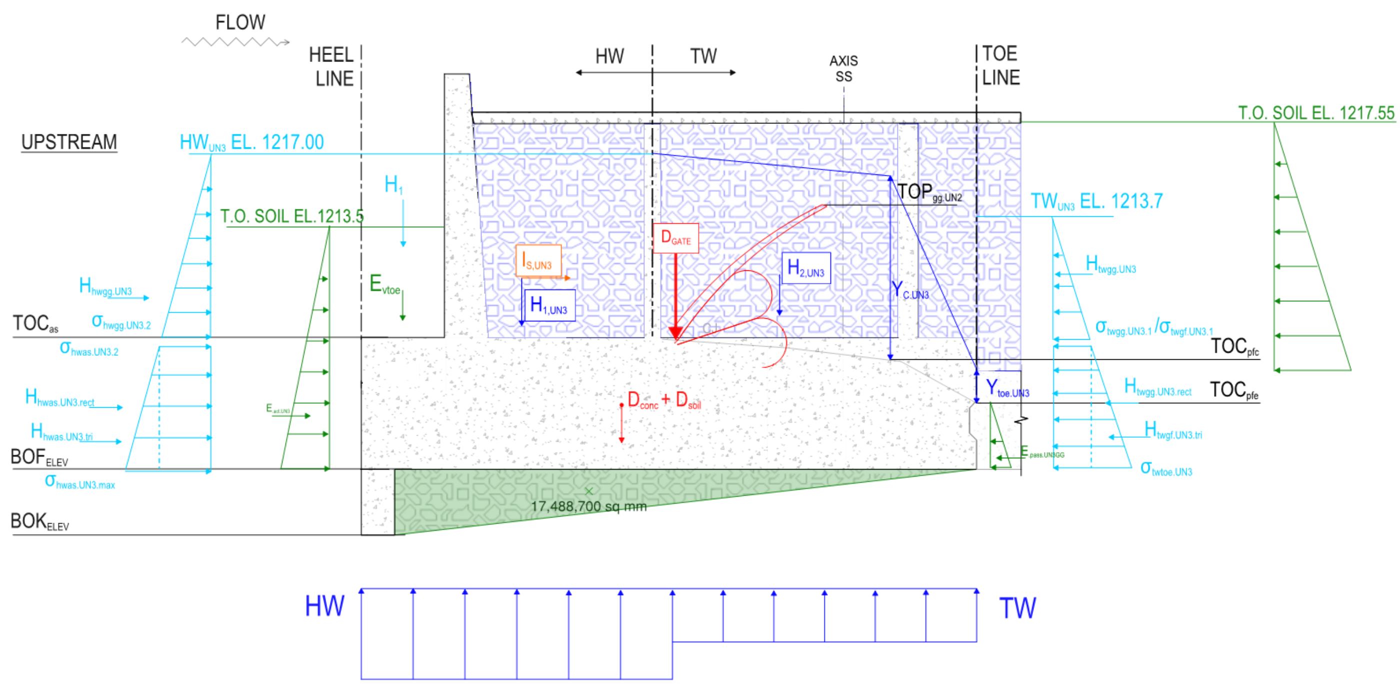
UN3 DESIGN CASE



ACCEPTANCE PARAMETERS

Required Factor of Safety for Sliding: $FS_{req.UN3.sl} := 1.3$ (Without Cohesion)

(Section 8.1, Design Criteria)

Resultant Within Middle Third of Base: $e \le \frac{L_B}{6} \wedge e \ge \frac{-L_B}{6}$

Allowable Rock Bearing Pressure: $\sigma_{allow.UN3} := 1270 \cdot \frac{kN}{m^2}$ (Section 5.2, Design Criteria)

Required Factor of Safety for Flotation: $FS_{req.UN3.flt} := 1.3$

INPUT PARAMETERS

Headwater Elevation: $HW_{UN3} := 1217.0m$ (Section 8.2, Design Criteria)

Tailwater Elevation: $TW_{UN3} := 1213.7m$ (Section 8.2, Design Criteria)

Bottom of Footing Elevation: $BOF_{elev} = 1206\,m$

Approch Slab Top of Concrete Elevation at Upstream Face: $TOC_{as} = 1210\,m$

Abutment Footing Top of Concrete Elevation at Stilling Basin: $TOC_{afe} = 1208\,m$

Abutment Footing Top of Concrete Elevation at Footing: $TOC_{afc} = 1209.73\,m$

Abutment Footing Top of Concrete Elevation at Footing Notch: $TOC_{afc.n} = 1209.3\,m$

Gates are open when top of gate elevation is at 1210.00m

Top of Guard Gate Elevation: $TOP_{gg.UN3} := 1210.0m$

Bottom of Key Elevation: $BOK_{elev} = 1204\,m$

Gates are closed/up when top of gate elevation is at 1215.0m

Water Elevation above Crest of Guard Gate:

$EL_{C.UN3} := 1214.67m$

$$Y_{C.UN3} := \begin{cases} (EL_{C.UN3} - TOC_{afc.n}) & \text{if } TOP_{gg.UN3} \le HW_{UN3} \\ (TW_{UN3} - TOC_{afc.n}) & \text{if } TOP_{gg.UN3} > HW_{UN3} \end{cases} = 5.37 \cdot m$$

Water Elevation above Guard Gate Toe: Submerged by Hydraulic 2D Model

$EL_{TOE.UN3} := 1210.89m$

$$Y_{TOE.UN3} := \begin{cases} (EL_{TOE.UN3} - TOC_{afe}) & \text{if } TOP_{gg.UN3} \le HW_{UN3} \\ (TW_{UN3} - TOC_{afe}) & \text{if } TOP_{gg.UN3} > HW_{UN3} \end{cases} = 2.89 \cdot m$$

LATERAL WATER LOADS

HEADWATER (DRIVING X-DIRECTION):

Headwater Depth on Abutment: $D_{hwa.UN3} := HW_{UN3} - TOC_{as} = 7.00\ m$

Headwater Load Unit Width Projected Surface Area of Abutment: $W_{hwa.UN3} := 2 \cdot r_{wall} = 12.00\ m$

Total Horizontal Headwater Load on Abutment:

$$H_{hwa.UN3} := \frac{-(\gamma_w \cdot D_{hwa.UN3}{}^2)}{2} \cdot W_{hwa.UN3} = -2884.1 \cdot kN$$

Apply Total Abutment Headwater Load at:

$$H_{hwa.UN3.loc} := \frac{D_{hwa.UN3}}{3} + (TOC_{as} - BOF_{elev}) = 6.33\ m$$

Apply Total Abutment Headwater Load at (from toe): $H_{hwa.UN3.loc.z} := 4m + r_{wall} = 10.00\ m$ (Gate Footing + Radius of Wall)

Thickness of Approach Slab: $T_{as} = 4\ m$

Headwater Depth at Heel (U/S face): $D_{hwas.UN3} := HW_{UN3} - BOF_{elev} = 11.00\ m$

Headwater Load Unit Width on Projected Approach Slab: $W_{hwas.UN3} := W_B = 16.00\ m$

Headwater Line Load At Top of Approach Slab: $\sigma_{hwas.UN3.1} := -(\gamma_w \cdot D_{hwa.UN3}) = -68.67 \cdot kPa$

Headwater Line Load At Bottom of Approach Slab: $\sigma_{hwas.UN3.2} := -(\gamma_w \cdot D_{hwas.UN3}) = -107.91 \cdot kPa$

Trianglular Distribution Unit Load on Approach Slab:

$$H_{hwas.UN3.2.tri} := \left(\frac{\sigma_{hwas.UN3.2} - \sigma_{hwas.UN3.1}}{2}\right) \cdot (T_{as} \cdot W_{hwas.UN3}) = -1255.68 \cdot kN$$

Rectangular Distribution Unit Load on Approach Slab:

$$H_{hwas.UN3.2.rect} := \sigma_{hwas.UN3.1} \cdot (T_{as} \cdot W_{hwas.UN3}) = -4394.88 \cdot kN$$

Total Horizontal Headwater Load on Approach Slab:

$$H_{hwas.UN3} := H_{hwas.UN3.2.tri} + H_{hwas.UN3.2.rect} = -5650.56 \cdot kN$$

Apply Total Footing Headwater Load at:

$$H_{hwas.UN3.loc} := \frac{\left[H_{hwas.UN3.2.rect} \cdot \frac{(T_{as})}{2} + H_{hwas.UN3.2.tri} \cdot \frac{(T_{as})}{3}\right]}{H_{hwas.UN3.2.tri} + H_{hwas.UN3.2.rect}} = 1.85\ m$$

Apply Total Footing Headwater Load at (from toe):

$$H_{hwas.UN3.loc.z} := \frac{W_B}{2} = 8.00\ m$$

Guard Gate (2A) Operating Condition: Fully Open

Guard Gate Down/Open Condition: $A1_{UN3} := TOP_{gg.UN3} \le TOC_{as}$

Guard Crest Gate Up/Closed, with Top of Gate Higher than HW Elevation: $B1_{UN3} := TOP_{gg.UN3} \ge HW_{UN3} \wedge TOP_{gg.UN3} > TOC_{as}$

Guard Crest Gate Up/Closed, with Top of Gate Lower than HW Elevation: $C1_{UN3} := TOP_{gg.UN3} > TOC_{as} \wedge HW_{UN3} > TOP_{gg.UN3}$

Guard Crest Gate Height: $H_{gg.UN3} := TOP_{gg.UN3} - TOC_{as} = 0\ m$

Headwater Depth at Guard Crest Gate: $D_{hwgg.UN3} := HW_{UN3} - TOC_{as} = 7.00\ m$

Guard Crest Gate Width: $W_{hwgg.UN3} := 4.00m$

Lateral Headwater Pressure at Bottom of Guard Crest Gate:

$$\sigma_{hwgg.UN3.1} := \begin{cases} (0.0kPa) & \text{if } A1_{UN3} \\ -(\gamma_w \cdot D_{hwgg.UN3}) & \text{if } B1_{UN3} \\ -(\gamma_w \cdot D_{hwgg.UN3}) & \text{if } C1_{UN3} \end{cases} = 0.0 \cdot kPa$$

Lateral Headwater Pressure at Top of Guard Crest Gate:
(Load at HW Elevation On Guard Crest Gate if HW is below TOG_{rg})

$$\sigma_{hwgg.UN3.2} := \begin{cases} (0.0kPa) & \text{if } A1_{UN3} \\ 0.0kPa & \text{if } B1_{UN3} \\ -\left[\gamma_w \cdot (HW_{UN3} - TOP_{gg.UN3})\right] & \text{if } C1_{UN3} \end{cases} = 0.0 \cdot kPa$$

Average Pressure acting on Guard Crest Gate:

$$\sigma_{hwgg.UN3.avg} := \frac{(\sigma_{hwgg.UN3.1} + \sigma_{hwgg.UN3.2})}{2} = 0 \cdot kPa$$

Total Area water acting on Crest Gate:

$$A_{hwgg.UN3} := \begin{cases} D_{hwgg.UN3} \cdot W_{hwgg.UN3} & \text{if } A1_{UN3} \\ D_{hwgg.UN3} \cdot W_{hwgg.UN3} & \text{if } B1_{UN3} \\ H_{gg.UN3} \cdot W_{hwgg.UN3} & \text{if } C1_{UN3} \end{cases} = 28 \cdot m^2$$

Total Horizontal Headwater Load on Guard Crest Gate:

$$H_{hwgg.UN3} := \sigma_{hwgg.UN3.avg} \cdot A_{hwgg.UN3} = 0.0 \cdot kN$$

Apply Total Guard Crest Gate Headwater Load at:

$$H_{hwgg.UN3.loc} := \begin{cases} (TOC_{as} - BOF_{elev}) & \text{if } A1_{UN3} \\ \left[\frac{(HW_{UN3} - TOC_{as})}{3} + (TOC_{as} - BOF_{elev})\right] & \text{if } B1_{UN3} \\ \left[\frac{\sigma_{hwgg.UN3.2} \cdot A_{hwgg.UN3} \cdot \frac{(H_{gg.UN3})}{2} + \frac{(\sigma_{hwgg.UN3.1} - \sigma_{hwgg.UN3.2})}{2} \cdot A_{hwgg.UN3} \cdot \frac{(H_{gg.UN3})}{3}}{\sigma_{hwgg.UN3.2} \cdot A_{hwgg.UN3} + \frac{(\sigma_{hwgg.UN3.1} - \sigma_{hwgg.UN3.2})}{2} \cdot A_{hwgg.UN3}} \ldots \\ + (TOC_{as} - BOF_{elev})\right] & \text{if } C1_{UN3} \end{cases} = 4.0 \cdot m$$

Apply Total Guard Crest Gate Headwater Load at (From toe):

$$H_{hwgg.UN3.loc.z} := \frac{W_{hwgg.UN3}}{2} = 2\ m$$

LATERAL TAILWATER (RESISTING) Applied to Downstream Side of Guard Crest Gate: UN3 CASE

Guard Gate Down/Open Condition: $A2_{UN3} := TOP_{gg.UN3} \le TOC_{as}$

Guard Crest Gate Up/Closed, with Top of Gate Higher than TW Elevation: $B2_{UN3} := TOP_{gg.UN3} \ge TW_{UN3} \wedge TOP_{gg.UN3} > TOC_{as}$

Guard Crest Gate Up/Closed, with Top of Gate Lower than TW Elevation: $C2_{UN3} := TOP_{gg.UN3} > TOC_{as} \wedge TW_{UN3} > TOP_{gg.UN3}$

Tailwater Depth at Guard Crest Gate: $D_{twgg.UN3} := TW_{UN3} - TOC_{as} = 3.70\ m$

Guard Crest Gate Height: $H_{gg.UN3} = 0\ m$

Guard Crest Gate Width: $W_{twgg.UN3} := 4.00m$

Lateral Water Load at Bottom of Guard Crest Gate:

$$\sigma_{twgg.UN3.1} := \begin{vmatrix} (0.0kPa) & \text{if} & A2_{UN3} \\ (\gamma_w \cdot D_{twgg.UN3}) & \text{if} & B2_{UN3} \\ (\gamma_w \cdot D_{twgg.UN3}) & \text{if} & C2_{UN3} \end{vmatrix} = 0.0 \cdot kPa$$

Lateral Water Load at Top of Guard Crest Gate:
(Load at TW Elevation On Guard Crest Gate if TW is below TOG_{gg})

$$\sigma_{twgg.UN3.2} := \begin{vmatrix} (0.0kPa) & \text{if} & A2_{UN3} \\ 0.0kPa & \text{if} & B2_{UN3} \\ \left[\gamma_w \cdot \left(\left(TW_{UN3} - TOP_{gg.UN3}\right)\right)\right] & \text{if} & C2_{UN3} \end{vmatrix} = 0.0 \cdot kPa$$

Average Pressure acting on Guard Crest Gate:

$$\sigma_{twgg.UN3.avg} := \frac{\left(\sigma_{twgg.UN3.1} + \sigma_{twgg.UN3.2}\right)}{2} = 0 \cdot kPa$$

Total Area water acting on Crest Gate:

$$A_{twgg.UN3} := \begin{vmatrix} D_{twgg.UN3} \cdot W_{twgg.UN3} & \text{if} & A2_{UN3} \\ D_{twgg.UN3} \cdot W_{twgg.UN3} & \text{if} & B2_{UN3} \\ H_{gg.UN3} \cdot W_{twgg.UN3} & \text{if} & C2_{UN3} \end{vmatrix} = 14.8 \cdot m^2$$

Total Horizontal Headwater Load on Guard Crest Gate: $H_{twgg.UN3} := \sigma_{twgg.UN3.avg} \cdot A_{twgg.UN3} = 0.0 \cdot kN$

Apply Total Horiz. TW Load on Guard Gate at:

$$H_{twgg.UN3.loc} := \begin{vmatrix} \left(TOC_{as} - BOF_{elev}\right) & \text{if} & A2_{UN3} \\ \left[\frac{\left(TW_{UN3} - TOC_{as}\right)}{3} + \left(TOC_{as} - BOF_{elev}\right)\right] & \text{if} & B2_{UN3} \\ \left[\frac{\sigma_{twgg.UN3.2} \cdot A_{twgg.UN3} \cdot \frac{\left(H_{gg.UN3}\right)}{2} + \frac{\left(\sigma_{twgg.UN3.1} - \sigma_{twgg.UN3.2}\right)}{2} \cdot A_{twgg.UN3} \cdot \frac{\left(H_{gg.UN3}\right)}{3}}{\sigma_{twgg.UN3.2} \cdot A_{twgg.UN3} + \frac{\left(\sigma_{twgg.UN3.1} - \sigma_{twgg.UN3.2}\right)}{2} \cdot A_{twgg.UN3}} \ldots \atop + \left(TOC_{as} - BOF_{elev}\right)\right] & \text{if} & C2_{UN3} \end{vmatrix} = 4.0 \cdot m$$

Apply Total Guard Crest Gate Headwater Load at (From toe): $H_{twgg.UN3.loc.z} := \frac{W_{twgg.UN3}}{2} = 2\ m$

LATERAL WATER LOADS (continued)

UN3 CASE

TAILWATER (RESISTING) Applied to Concrete Strucuture:

Tailwater Depth on Top of Abutment Footing: $D_{twa.UN3} := TW_{UN3} - TOC_{as} = 3.70\ m$

Tailwater Load Unit Width on Abutment: $W_{twa.UN3} := 2 \cdot r_{wall} = 12.00\ m$

Total Horizontal Tailwater Load on Abutment: $H_{twa.UN3} := \dfrac{\left(\gamma_w \cdot D_{twa.UN3}{}^2\right)}{2} \cdot W_{twa.UN3} = 805.8 \cdot kN$

Apply Total Abutment Tailwater Load at: $H_{twa.UN3.loc} := \dfrac{D_{twa.UN3}}{3} + \left(TOC_{as} - BOF_{elev}\right) = 5.23\ m$

Apply Total Abutment Tailwater Load at (from Toe Line): $H_{twa.UN3.loc.z} := W_{twgg.UN3} + r_{wall} = 10\ m$

Footing Thickness for horizontal at Toe: $h_{toe} = 4\ m$

Tailwater Depth At top of Gate Base Footing Elevation: $D_{twgf.UN3} := TW_{UN3} - TOC_{as} = 3.70\ m$

Water Depth at bottom of Gate Base Footing (Excluding Key): $D_{twtoe.UN3} := TW_{UN3} - BOF_{elev} = 7.70\ m$

Water Depth at bottom of Gate Base Footing (Including Key): $D_{twkey.UN3} := HW_{UN3} - BOK_{elev} = 13.00\ m$

Unit Width of D/S face of crest for applicaiton of Tailwater Load: $W_{tw.UN3} := W_B = 16.00\ m$

(Conservatively taken resisting water in front of 1.5m RCC Auxiliary Spillway as Tailwater elevation)

Tailwater Pressure At Top of Gate Footing: $\sigma_{twgf.UN3} := \left(\gamma_w \cdot D_{twgf.UN3}\right) = 36.3 \cdot kPa$

Tailwater Line Load At Bottom of Gate Footing (Excluding Key): $\sigma_{twtoe.UN3} := \left(\gamma_w \cdot D_{twtoe.UN3}\right) = 75.54 \cdot kPa$

Trianglular Distribution Unit Load on Gate Footing Base: $H_{twgf.UN3.tri} := \left(\dfrac{\sigma_{twtoe.UN3} - \sigma_{twgf.UN3}}{2}\right) \cdot \left[\left(T_{as} - d_{key}\right) \cdot W_{tw.UN3}\right] = 627.84 \cdot kN$

Rectangular Distribution Unit Load on Gate Footing Base: $H_{twgf.UN3.rect} := \sigma_{twgf.UN3} \cdot \left[\left(T_{as} - d_{key}\right) \cdot W_{tw.UN3}\right] = 1161.5 \cdot kN$

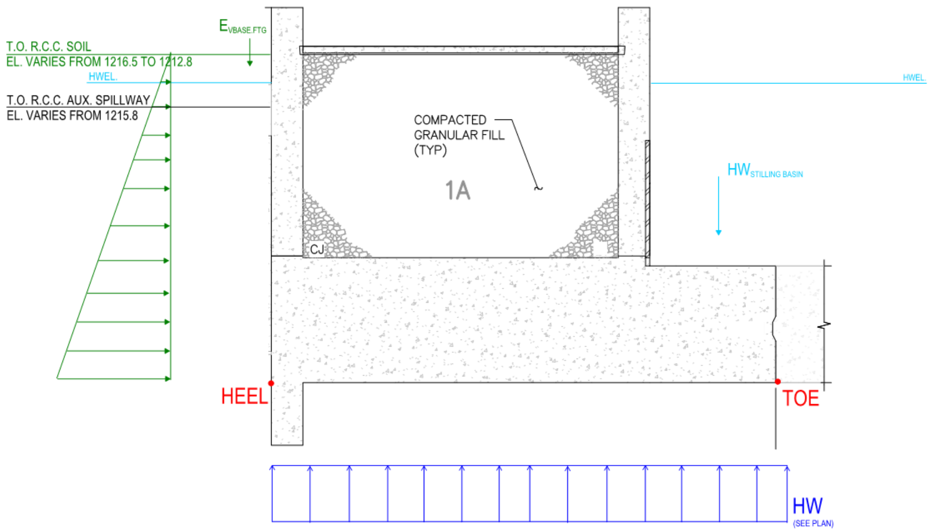
Total Horizontal Tailwater Headwater Load on Gate Footing: $H_{twgf.UN3} := H_{twgf.UN3.tri} + H_{twgf.UN3.rect} = 1789.34 \cdot kN$

Apply Total Gate Footing Tailwater Load at:

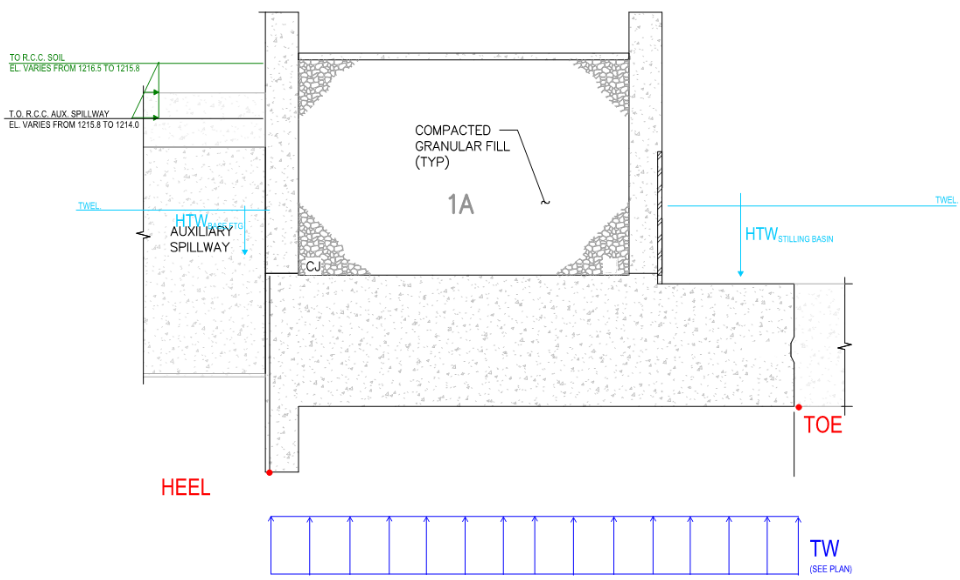
$$H_{twgf.UN3.loc} := \frac{\left[H_{twgf.UN3.rect} \cdot \frac{\left(T_{as}\right)}{2} + H_{twgf.UN3.tri} \cdot \frac{\left(T_{as}\right)}{3}\right]}{H_{twgf.UN3.tri} + H_{twgf.UN3.rect}} = 1.77\ m$$

Apply Total Gate Footing Tailwater Load at (From Toe Line): $H_{twgf.UN3.loc.z} := \dfrac{W_B}{2} = 8.00\ m$

SUMMATION OF LATERAL WATER LOADS:



SECTION 1A BEFORE GATES & AUX. SPILLWAY RCC

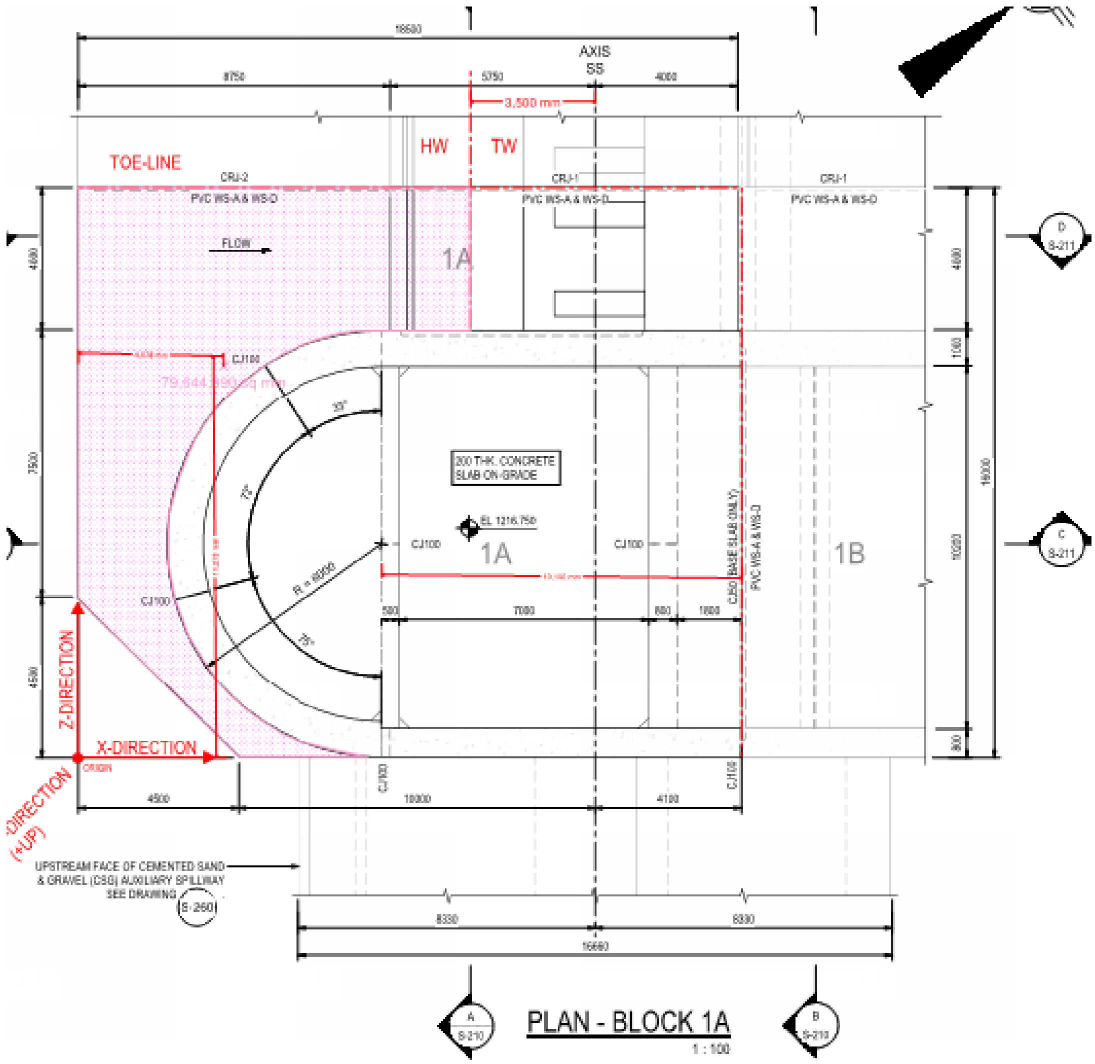


SECTION 1A AFTER GATES & AUX. SPILLWAY RCC

$$\Sigma H_{Water.UN3.x} := H_{hwa.UN3} + H_{hwas.UN3} + H_{hwgg.UN3} + H_{twa.UN3} + H_{twgf.UN3} + H_{twgg.UN3} = -5939.56 \cdot kN$$

$$\Sigma M_{HWater.UN3.x} := H_{hwa.UN3} \cdot H_{hwa.UN3.loc} + H_{hwas.UN3} \cdot H_{hwas.UN3.loc} + H_{hwgg.UN3} \cdot H_{hwgg.UN3.loc} \cdots + H_{twa.UN3} \cdot H_{twa.UN3.loc} + H_{twgf.UN3} \cdot H_{twgf.UN3.loc} + H_{twgg.UN3} \cdot H_{twgg.UN3.loc} = -21353.11 \cdot kN \cdot m$$

$$\Sigma H_{Water.UN3.z} := 0kN \qquad \Sigma M_{HWater.UN3.z} := 0 \cdot kN \cdot m$$



HEADWATER:

Water Depth on top of Approach Slab: $d_{hw.UN3} := HW_{UN3} - TOC_{as} = 7.00\ m$

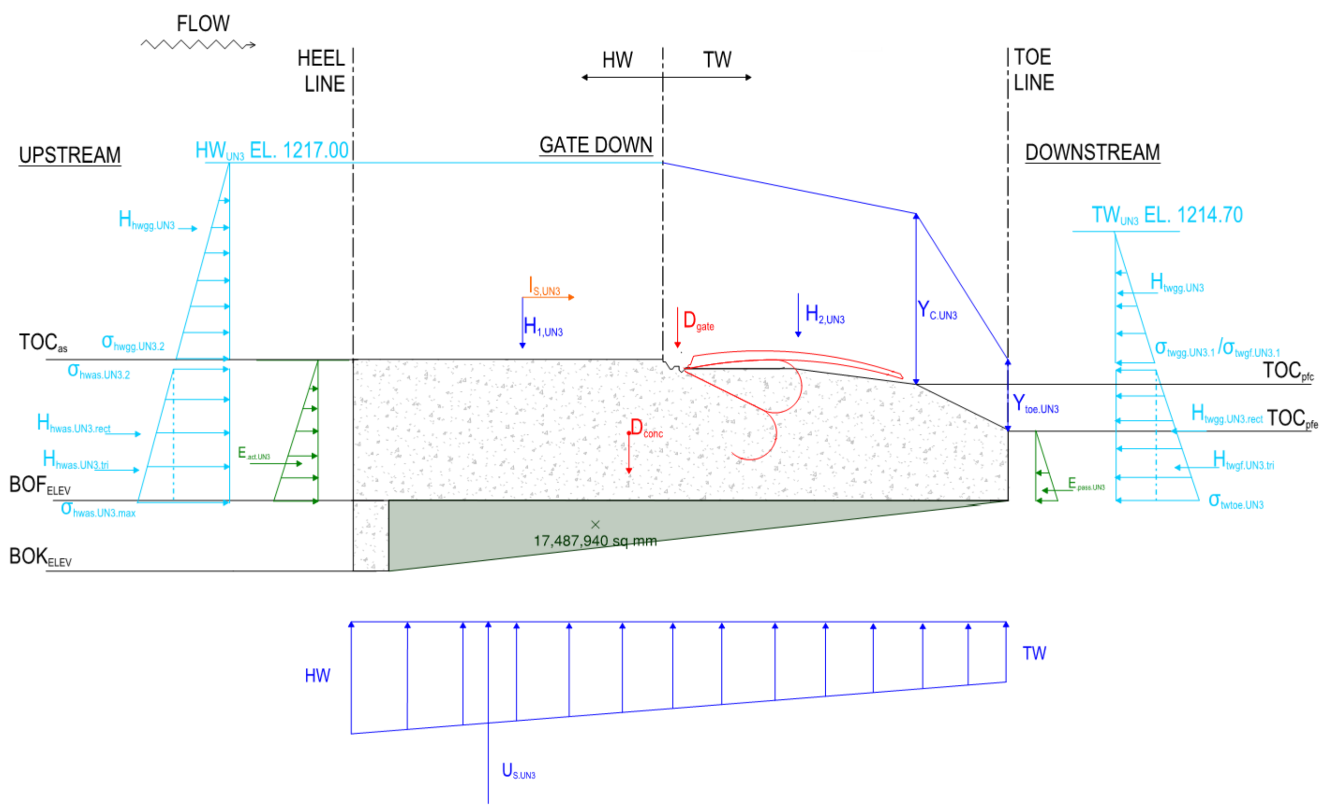
Water Area on top of Approach Slab: $A_{as} = 79.64\ m^2$ (From Geom. Scaled on REVU)

Vertical Water Weight (H1) on Approach Slab: $H_{1.UN3} := \left(A_{as} \cdot d_{hw.UN3}\right) \cdot \gamma_w = 5469.2 \cdot kN$

Moment Arm for Applicaiton of Water Weight (H1) from toe (X-Direction): $H_{1.UN3.loc.x} := L_B - 4.078m = 14.42\ m$ (From Geom. Scaled on REVU)

Moment Arm for Applicaiton of Water Weight (H1) from toe (Z-Direction): $H_{1.UN3.loc.z} := W_B - 11.273m = 4.73\ m$ (From Geom. Scaled on REVU)

TAILWATER:



Approach Slab Length: $L_{as} = 8.75\,m$

Gate Footing Length: $L_{gf} = 9.75\,m$

Gate Footing Crest Length: $L_{gfc} = 2.25\,m$

TAILWATER:

Trapezoid Volume Above Gate Footing from Approach Slab to Crest:

$$V_{asc.UN3} := \left(L_{gf} - L_{gfc}\right) W_{twgg.UN3} \frac{d_{hw.UN3} + Y_{C.UN3}}{2} = 185.55 \cdot m^3$$

Trapezoid Volume Above Gate Footing Crest to End of Gate Footing:

$$V_{gfc.UN3} := \left(L_{gfc} \cdot W_{twgg.UN3}\right) \frac{Y_{C.UN3} + Y_{TOE.UN3}}{2} = 37.17 \cdot m^3$$

Load Above Gate Footing from Approach Slab to Crest:

$$H_{2.UN3.asc} := V_{asc.UN3} \cdot \gamma_w = 1820.25 \cdot kN$$

Load Acting Above Footing Crest from Toe:

$$H_{2.UN3.asc.loc.x} := \frac{\left(L_{gf} - L_{gfc}\right) \cdot \left(2 \cdot d_{hw.UN3} + Y_{C.UN3}\right)}{3 \cdot \left(d_{hw.UN3} + Y_{C.UN3}\right)} + L_{gfc} = 6.16\,m$$

Load Above Gate Footing from Crest to End:

$$H_{2.UN3.gfc} := V_{gfc.UN3} \cdot \gamma_w = 364.64 \cdot kN$$

Load Acting Above Gate Footing from Crest to End:

$$H_{2.UN3.gfc.loc.x} := \frac{\left(L_{gfc}\right) \cdot \left(2 \cdot Y_{C.UN3} + Y_{TOE.UN3}\right)}{3 \cdot \left(Y_{C.UN3} + Y_{TOE.UN3}\right)}$$

Vertical Water Weight (H2) on Gate Footing:

$$H_{2.UN3} := H_{2.UN3.asc} + H_{2.UN3.gfc} = 2184.88 \cdot kN$$

Moment Arm for Application of Water Weight (H2) from toe:

$$H_{2.UN3.loc.x} := \frac{H_{2.UN3.asc} \cdot H_{2.UN3.asc.loc.x} + H_{2.UN3.gfc} \cdot H_{2.UN3.gfc.loc.x}}{H_{2.UN3}} = 5.34\,m$$

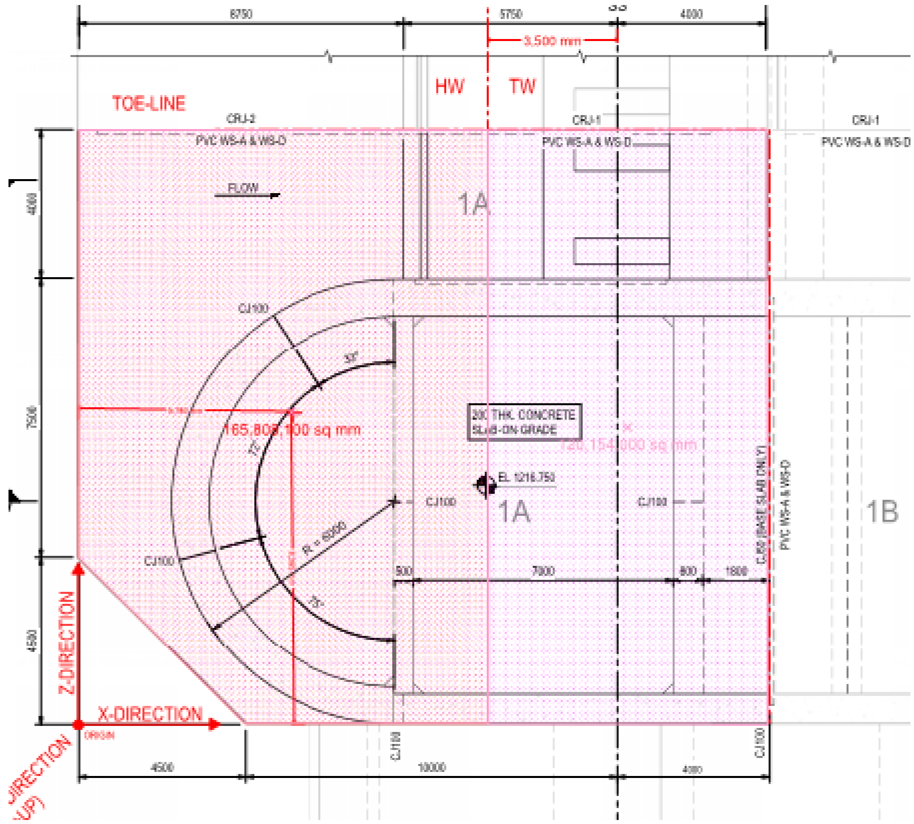
Moment Arm for Applicaiton of Water Weight (H2) from toe (Z-Direction):

$$H_{2.UN3.loc.z} := 2.0m$$

UPLIFT

UN3 CASE

(Assuming constant Headwater Uplift at front and constant Tailwater Uplift at back of footing base)



Uplift pressure at U/S Face (heel): $U_{HW.UN3} := D_{hwas.UN3} \cdot \gamma_w = 107.9 \cdot \frac{kN}{m^2}$

Uplift pressure at D/S Face Stilling Basin: $U_{TW.UN3} := D_{twtoe.UN3} \cdot \gamma_w = 75.54 \cdot \frac{kN}{m^2}$

Area of Uplift Force From Headwater Side: $A_{HWU.UN3} := 165.81 m^2$ (From Bluebeam REVU)

Area of Uplift Force From Tailwater Side: $A_{TWU.UN3} := 120 m^2$ (From Bluebeam REVU)

Uplift Force From Headwater Side: $U_{A.UN3} := -U_{HW.UN3} \cdot A_{HWU.UN3} = -17892.56 \cdot kN$

Uplift Force From Headwater Side: $U_{B.UN3} := -U_{TW.UN3} \cdot A_{TWU.UN3} = -9064.44 \cdot kN$

Uplift Centroid of Area From Headwater Side to Toe: $X_{U.A} = 13.22 m$ $Z_{U.A} = 7.63 m$ (From Bluebeam REVU)

Uplift Centroid of Area From Tailwater Side to Toe: $X_{U.B} = 3.75 m$ $Z_{U.B} = 8 m$ (From Bluebeam REVU)

Total Resultant Uplift force: $U_{UN3} := U_{A.UN3} + U_{B.UN3} = -26957 \cdot kN$

Resultant Location from Toe Rect. Load (X-Direction): $U_{UN3.loc.x} := \frac{\left(U_{A.UN3} \cdot X_{U.A} + U_{B.UN3} \cdot X_{U.B}\right)}{\left(U_{A.UN3} + U_{B.UN3}\right)} = 10.04 m$

Resultant Location from Toe Rect. Load (Z-Direction): $U_{UN3.loc.z} := \frac{\left[U_{A.UN3} \cdot \left(W_B - Z_{U.A}\right) + U_{B.UN3} \cdot \left(W_B - Z_{U.B}\right)\right]}{\left(U_{A.UN3} + U_{B.UN3}\right)} = 8.24 m$

SEISMIC LOAD (NOT APPLICABLE FOR THIS LOAD CASE)

UN3 CASE

SUMMARY OF LOADS

	Loads	Moment Arm	
Dead load of Concrete Structure:	$D_{conc} = 35947.6 \cdot kN$	$X_{conc.loc} = 8.81\ m$	$Z_{conc.loc} = 8.46\ m$
Obermyer Gate Weight:	$D_{Gate} = 56.0 \cdot kN$	$X_{gate} = 9.50\ m$	$Z_{gate} = 2.00\ m$
Dead load of Fill:	$D_{fill} = 18056.6 \cdot kN$	$X_{fill.loc} = 7.31\ m$	$Z_{fill.loc} = 10.00\ m$
HW Lateral Load on Abutment:	$H_{hwa.UN3} = -2884.1 \cdot kN$	$H_{hwa.UN3.loc} = 6.33\ m$	
HW Lateral Load on Approach Slab:	$H_{hwas.UN3} = -5650.6 \cdot kN$	$H_{hwas.UN3.loc} = 1.85\ m$	
HW Lateral Load on Guard Gate:	$H_{hwgg.UN3} = 0.0 \cdot kN$	$H_{hwgg.UN3.loc} = 4.00\ m$	
TW Lateral Load on Abutment:	$H_{twa.UN3} = 805.8 \cdot kN$	$H_{twa.UN3.loc} = 5.23\ m$	
TW Lateral Load on Pier Footing:	$H_{twgf.UN3} = 1789.34 \cdot kN$	$H_{twgf.UN3.loc} = 1.77\ m$	
TW Lateral Load on Guard Gate:	$H_{twgg.UN3} = 0.0 \cdot kN$	$H_{twgg.UN3.loc} = 4.00\ m$	
Vertical HW Load on Approach Slab:	$H_{1.UN3} = 5469.2 \cdot kN$	$H_{1.UN3.loc.x} = 14.42\ m$	$H_{1.UN3.loc.z} = 4.73\ m$
Vertical TW Load on Pier Footing (crest):	$H_{2.UN3} = 2184.9 \cdot kN$	$H_{2.UN3.loc.x} = 5.34\ m$	$H_{2.UN3.loc.z} = 2.00\ m$
Uplift:	$U_{UN3} = -26957.0 \cdot kN$	$U_{UN3.loc.x} = 10.04\ m$	$U_{UN3.loc.z} = 8.24\ m$
X-Direction Lateral Soil Load on Abutment (driving):	$E_{act.a.UN3.x} = 0.0 \cdot kN$	$E_{act.a.UN3.x.loc.y} = 2.00\ m$	
X-Direction Lateral Lateral Soil Load on Approach Slab (driving):	$E_{act.as.UN3.x} = -1026.7 \cdot kN$	$E_{act.as.UN3.x.loc.y} = 1.33\ m$	
Lateral Soil Load (resisting):	$E_{pass.UN3.x} = 2880.26 \cdot kN$	$E_{pass.UN3.x.loc.y} = 2.83\ m$	
Z-Direction Lateral Soil Load on Abutment Before RCC (driving):	$E_{act.a.UN3.z} = -819.5 \cdot kN$	$E_{act.a.UN3.z.loc.y} = 4.00\ m$	
Z-Direction Lateral Lateral Soil Load on Approach Slab Before RCC (driving):	$E_{act.as.UN3.z} = -2192.6 \cdot kN$	$E_{act.as.UN3.z.loc.y} = 1.76\ m$	
Z-Direction Lateral Soil Load on Abutment After RCC (driving):	$E_{act.RCC.UN3.z} = -9.24 \cdot kN$	$E_{act.RCC.UN3.z.loc.y} = 10.03\ m$	
Z-Direction Lateral Soil Load on Abutment at RCC Steps (driving):	$E_{act.RCC.s.UN3.z} = -16.94\ kN$	$E_{act.RCC.s.UN3.z.loc.y} = 9.43 \cdot m$	
Vertical Soil Load on Footing:	$E_{1.UN3} = 0 \cdot kN$	$E_{1.UN3.loc.x} = 12.89\ m$	$E_{1.UN3.loc.z} = 12.86\ m$
Ice / Impact Load:	$I_{UN3} = 1975.0 \cdot kN$	$I_{UN3.loc.y} = 10.70\ m$	

STABILITY ASSESSMENT (SLIDNG, BEARING, FLOTATION AND OVERTURNING): UN3 CASE

CHECK SLIDING (X-Direction & Z-Direction) ALONG HORIZONTAL PLANE THRU TOE, IGNORING BEDROCK MOBILIZED BY STRUCTURAL HEEL KEY, OR VOID BEHIND KEY

Sum of Vertical Forces:

$$\Sigma V_{UN3} := \Sigma V_{DL} + \Sigma V_{water.UN3} + \Sigma E_{UN3} = 34757.3 \cdot kN$$

Sum of Horizontal Forces (X-Direction):

$$\Sigma H_{UN3.x} := \Sigma H_{Water.UN3.x} + \Sigma H_{soil.UN3.x} + \Sigma H_{I.UN3} = -2110.96 \cdot kN$$

Sum of Horizontal Forces (Z-Direction):

$$\Sigma H_{UN3.z} := \Sigma H_{Water.UN3.z} + \Sigma H_{soil.UN3.z} = -3038.27 \cdot kN$$

Sum of Horizontal Forces (resultant):

$$\Sigma H_{UN3} := \sqrt{\Sigma H_{UN3.x}{}^2 + \Sigma H_{UN3.z}{}^2} = 3699.62 \cdot kN$$

Sliding Factor of Safety:

$$FS_{HorizSliding.UN3.x} := \frac{\tan_{\phi} \cdot \Sigma V_{UN3}}{\left|\Sigma H_{UN3.x}\right|} = 8.03 \qquad FS_{HorizSliding.UN3.z} := \frac{\tan_{\phi} \cdot \Sigma V_{UN3}}{\left|\Sigma H_{UN3.z}\right|} = 5.58$$

Sliding Factor of Safety:

$$FS_{HorizSliding.UN3} := \frac{\tan_{\phi} \cdot \Sigma V_{UN3}}{\sqrt{\Sigma H_{UN3.x}{}^2 + \Sigma H_{UN3.z}{}^2}} = 4.58$$

$$FS_{HorizSliding.UN3.Check.x} := \begin{cases} \text{"OKAY"} & \text{if } FS_{HorizSliding.UN3.x} \geq FS_{req.UN3.sl} \\ \text{"Horizontal Sliding (No Key or Void Behind Key) Fail ! Revise Structure !"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

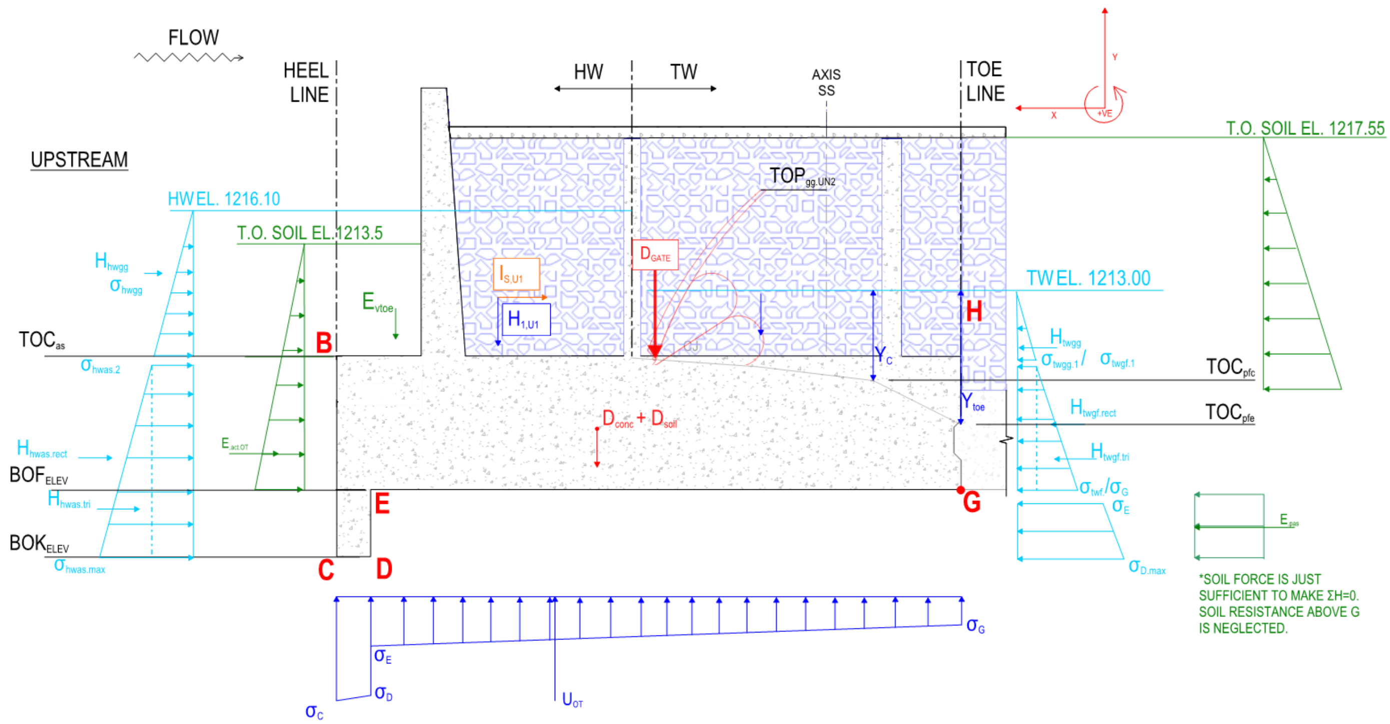
MONOLITH OVERTURNING STABILITY ANALYSIS

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stablity of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for staticequilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1 $Ratio_{OT.UN3.min} := 0.333$ at Rock Foundation



Uplift Loads for Overturning Stability Analysis (X-Direction)

Line of Creep:

Change in Water Head: $\Delta_{h.UN3} := HW_{UN3} - TW_{UN3} = 3.3\,m$

Length from Point C to Point G: $L_{CG} = 18.61\,m$

Length from Various Points to Points: $L_{CD} = 1\,m$ $L_{DE} = 2\,m$ $L_{EG} = 17.5\,m$

$L_{GH.UN3} := TW_{UN3} - TOC_{afe} = 5.7\,m$

Length from Point C, D, E to G: $L_{CDEG} = 20.5\,m$ $L_{CDE} = 3\,m$

Water Pressure at Point C & G: $\sigma_{C.UN3} := \sigma_{hwas.UN3.2} = -107.91 \cdot kPa$ $\sigma_{G.UN3} := \sigma_{twtoe.UN3} \cdot -1 = -75.54 \cdot kPa$

Water Pressure at Point D:

$$\sigma_{D.UN3} := -\gamma_w \cdot \left[\left(HW_{UN3} - BOK_{elev}\right) - \frac{\Delta_{h.UN3} \cdot L_{CD}}{L_{CDEG}}\right] = -125.95 \cdot kPa$$

Water Pressure at Point E:

$$\sigma_{E.UN3} := -\gamma_w \cdot \left[\left(HW_{UN3} - BOF_{elev}\right) - \frac{\Delta_{h.UN3} \cdot L_{CDE}}{L_{CDEG}}\right] = -103.17 \cdot kPa$$

Uplift for Overturning Analysis on Bottom of Key:

$$U_{OT.UN3.key} := \frac{\sigma_{C.UN3} + \sigma_{D.UN3}}{2} \cdot L_{CD} \cdot W_B = -1870.89 \cdot kN$$

Acting at:

$$U_{OT.UN3.key.loc} := \frac{L_{CD} \cdot \left(2 \cdot \sigma_{C.UN3} + \sigma_{D.UN3}\right)}{3\left(\sigma_{C.UN3} + \sigma_{D.UN3}\right)} + L_{EG} = 17.99\,m$$

Uplift for Overturning Analysis on Bottom of Footing:

$$U_{OT.UN3.ftg} := \frac{\sigma_{E.UN3} + \sigma_{G.UN3}}{2} \cdot L_{EG} \cdot W_B = -25019.33 \cdot kN$$

UN3 CASE

Acting at:

$$U_{OT.UN3.ftg.loc} := \frac{L_{EG} \cdot \left(\sigma_{G.UN3} + 2 \cdot \sigma_{E.UN3}\right)}{3\left(\sigma_{G.UN3} + \sigma_{E.UN3}\right)} = 9.2\,m$$

Uplift Load for Overtuming Analysis:

$$U_{OT.UN3} := U_{OT.UN3.key} + U_{OT.UN3.ftg} = -26890.21 \cdot kN$$

Uplift Load Acting from Toe:

$$U_{OT.UN3.loc} := \frac{U_{OT.UN3.key} \cdot U_{OT.UN3.key.loc} + U_{OT.UN3.ftg} \cdot U_{OT.UN3.ftg.loc}}{U_{OT.UN3}} = 9.81\,m$$

All Vertical Loads Appliable to Overturning Stability Analysis

Total Concrete Dead Loads:	$D_{conc} = 35947.58 \cdot kN$	at:	$X_{conc.loc} = 8.81\,m$
Dead Load of Gate:	$D_{Gate} = 56.0 \cdot kN$		$X_{gate} = 9.50\,m$
Total Fill Loads:	$D_{fill} = 18056.6 \cdot kN$		$X_{fill.loc} = 7.31\,m$
Water Weight (HW) on Apron Slab:	$H_{1.UN3} = 5469.2 \cdot kN$		$H_{1.UN3.loc.x} = 14.42\,m$
Water Weight (TW) on Guard Gate Footing:	$H_{2.UN3} = 2184.9 \cdot kN$		$H_{2.UN3.loc.x} = 5.34\,m$
Uplift Load for Overtuming Analysis:	$U_{OT.UN3} = -26890.21 \cdot kN$		$U_{OT.UN3.loc} = 9.81 \cdot m$

Sum of All Overturning Analysis Vertical Load:

$$\Sigma V_{UN3.OT} := D_{conc} + D_{Gate} + D_{fill} + H_{1.UN3} + H_{2.UN3} + U_{OT.UN3} = 34824.06 \cdot kN$$

Sum of All Overturning Analysis Vertical Load Moments:

$$\Sigma M_{V.UN3.OT} := \begin{pmatrix} D_{conc} \cdot X_{conc.loc} + D_{Gate} \cdot X_{gate} + D_{fill} \cdot X_{fill.loc} + H_{1.UN3} \cdot H_{1.UN3.loc.x} \cdots \\ + H_{2.UN3} \cdot H_{2.UN3.loc.x} + U_{OT.UN3} \cdot U_{OT.UN3.loc} \end{pmatrix} = 276025.45 \cdot kN \cdot m$$

Lateral Tailwater Loads for Overturning Stability Analysis

TW Lateral Load on Gate Footing (No Key - Overturning Values Adjusted):

$$H_{twgf.UN3} = 1789.34 \cdot kN$$

Acting at:

$$H_{twgf.UN3.loc} = 1.77\,m$$

Horizontal Tailwater Pressure Top of Key (Overturning Analysis):

$$\sigma_{twtk.OT.UN3} := \sigma_{E.UN3} \cdot -1 = 103.17 \cdot kPa$$

Horizontal Tailwater Pressure Bottom of Key (Overturning Analysis):

$$\sigma_{twbk.OT.UN3} := \sigma_{D.UN3} \cdot -1 = 125.95 \cdot kPa$$

Triangular Distribution Unit Load Acting at Key:

$$H_{twbk.OT.UN3.tri} := \frac{\left(\sigma_{twbk.OT.UN3} - \sigma_{twtk.OT.UN3}\right)}{2} \cdot d_{key} \cdot W_{tw.UN3} = 364.45 \cdot kN$$

Triangular Distribution Unit Load Acting at Key:

$$H_{twbk.OT.UN3.rect} := \sigma_{twtk.OT.UN3} \cdot d_{key} \cdot W_{tw.UN3} = 3301.52 \cdot kN$$

Total Horizontal Tailwater Load on Key (Overturning Values Adjusted):

$$H_{twkey.OT.UN3} := H_{twbk.OT.UN3.tri} + H_{twbk.OT.UN3.rect} = 3665.97 \cdot kN$$

Acting at:

$$H_{twkey.OT.UN3.loc} := \frac{H_{twbk.OT.UN3.tri} \cdot \frac{-2 \cdot d_{key}}{3} + H_{twbk.OT.UN3.rect} \cdot \frac{-d_{key}}{2}}{H_{twkey.OT.UN3}} = -1.03 \cdot m$$

Lateral Driving Earth Loads for Overturning Stability Analysis (at rest condition)

UN3 CASE

Depth of Driving Soil Loads (to top of key): $h_{E.OT.UN3} := TOC_{as} - BOF_{elev} = 4\,m$

At-Rest Soil Load: $E_{act.OT.UN3} := \dfrac{\left(K_{o.UN3} \cdot h_{E.OT.UN3}^{2}\right)}{2} \cdot (\gamma_r - \gamma_w) \cdot W_{hwas.UN3} \cdot -1 = -1026.66 \cdot kN$

At Rest- Soil Load Acting from Toe: $E_{act.OT.UN3.loc} := \dfrac{h_{E.OT.UN3}}{3} = 1.33\,m$

All Lateral Loads Appliable to Overturning Stability Analysis (X-direction)

HW Lateral Load on Approach Slab:	$H_{hwas.UN3} = -5650.6 \cdot kN$	$H_{hwas.UN3.loc} = 1.85\,m$
HW Lateral Load on Guard Gate:	$H_{hwgg.UN3} = 0.0 \cdot kN$	$H_{hwgg.UN3.loc} = 4.00\,m$
HW Lateral Load on Abutment:	$H_{hwa.UN3} = -2884.1 \cdot kN$	$H_{hwa.UN3.loc} = 6.33\,m$
TW Lateral Load on Abutment:	$H_{twa.UN3} = 805.8 \cdot kN$	$H_{twa.UN3.loc} = 5.23\,m$
TW Lateral Load on Guard Gate:	$H_{twgg.UN3} = 0.0 \cdot kN$	$H_{twgg.UN3.loc} = 4.00\,m$
TW Lateral Load on Gate Footing (No Key - Overturning Values Adjusted):	$H_{twgf.UN3} = 1789.34 \cdot kN$	$H_{twgf.UN3.loc} = 1.77\,m$
TW Lateral Load on Key:	$H_{twkey.OT.UN3} = 3665.97 \cdot kN$	$H_{twkey.OT.UN3.loc} = -1.03\,m$
Ice / Impact Load:	$I_{UN3} = 1975.0 \cdot kN$	$I_{UN3.loc.y} = 10.70\,m$
Lateral Soil Load (driving):	$E_{act.OT.UN3} = -1026.7 \cdot kN$	$E_{act.OT.UN3.loc} = 1.33\,m$

Resisting Lateral Soil Load as required to produce horizontal equilibrium:

$$E_{pas.OT.x.UN3} := -\left(H_{hwas.UN3} + H_{hwgg.UN3} + H_{hwgg.UN3} + H_{twgg.UN3} \cdots + H_{twgf.UN3} + H_{twkey.OT.UN3} + I_{UN3} + E_{act.OT.UN3}\right) = -753.1 \cdot kN$$

Acting at:

$$E_{pas.OT.UN3.loc} := -1 \cdot \frac{d_{key}}{2} = -1\,m$$

Sum of All Overturning Analysis Horizontal Load (ΣH=0):

$$\Sigma H_{UN3.OT.x} := H_{hwas.UN3} + H_{hwgg.UN3} + H_{twgg.UN3} + H_{twgf.UN3} + H_{twkey.OT.UN3} + I_{UN3} + E_{act.OT.UN3} + E_{pas.OT.x.UN3} = -0 \cdot kN$$

Sum of All Overturning Analysis Horizontal Load Moments:

$$\begin{aligned}\Sigma M_{H.UN3.OT.x} := {} & H_{hwas.UN3} \cdot H_{hwas.UN3.loc} + H_{hwgg.UN3} \cdot H_{hwgg.UN3.loc} \cdots \\ & + H_{twgg.UN3} \cdot H_{twgg.UN3.loc} + H_{twgf.UN3} \cdot H_{twgf.UN3.loc} \cdots \\ & + H_{twkey.OT.UN3} \cdot H_{twkey.OT.UN3.loc} + I_{UN3} \cdot I_{UN3.loc.y} \cdots \\ & + E_{act.OT.UN3} \cdot E_{act.OT.UN3.loc} + E_{pas.OT.x.UN3} \cdot E_{pas.OT.UN3.loc} = 9425.39 \cdot kN \cdot m\end{aligned}$$

Overturning Stability Analysis (X-Direction)

$$\Sigma M_{UN3.OT.x} := \Sigma M_{V.UN3.OT} + \Sigma M_{H.UN3.OT.x} = 285450.84 \cdot kN \cdot m$$

$$X_{R.UN3} := \frac{\Sigma M_{UN3.OT.x}}{\Sigma V_{UN3.OT}} = 8.2\,m \qquad x_{OT.UN3} := X_{R.UN3} - \frac{L_B}{2} = -1.05\,m$$

Overturning Resultant Ratio

$$Ratio_{OT.x.UN3} := \frac{X_{R.UN3}}{L_B} = 0.44$$

$$Ratio_{OT.x.UN3.check} := \begin{cases} \text{"OKAY"} & \text{if } Ratio_{OT.x.UN3} \ge Ratio_{OT.UN3.min} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

$$x_{OT.check.UN3} := \begin{cases} \text{"OKAY"} & \text{if } \left|x_{OT.UN3}\right| \le Kern_x \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

All Lateral Loads Appliable to Overturning Stability Analysis (Z-direction)

UN3 CASE

Z-Direction Lateral Soil Load on Abutment Before RCC (driving): $E_{act.a.UN3.z} = -819.5 \cdot kN$ $E_{act.a.UN3.z.loc.y} = 4.00\ m$

Z-Direction Lateral Lateral Soil Load on Approach Slab Before RCC (driving): $E_{act.as.UN3.z} = -2192.6 \cdot kN$ $E_{act.as.UN3.z.loc.y} = 1.76\ m$

Z-Direction Lateral Soil Load on Abutment After RCC (driving): $E_{act.RCC.UN3.z} = -9.24 \cdot kN$ $E_{act.RCC.UN3.z.loc.y} = 10.03\ m$

Z-Direction Lateral Soil Load on Abutment at RCC Steps (driving): $E_{act.RCC.s.UN3.z} = -16.94 \cdot kN$ $E_{act.RCC.s.UN3.z.loc.y} = 9.43 \cdot m$

Resisting Lateral Soil Load as required to produce horizontal equilibrium:

$$E_{pas.OT.z.UN3} := -\left(E_{act.a.UN3.z} + E_{act.as.UN3.z} + E_{act.RCC.UN3.z} + E_{act.RCC.s.UN3.z}\right) = 3038.27 \cdot kN$$

Acting at:

$$E_{pas.OT.UN3.loc} = -1\ m$$

Sum of All Overturning Analysis Horizontal Load (ΣH=0):

$$\Sigma H_{UN3.OT.z} := E_{act.a.UN3.z} + E_{act.as.UN3.z} + E_{act.RCC.UN3.z} + E_{act.RCC.s.UN3.z} + E_{pas.OT.z.UN3} = 0 \cdot kN$$

Sum of All Overturning Analysis Horizontal Load Moments:

IMPACT LOADS (DEBRIS LOADING FROM MEMO)

Total Impact Load on Structure: $I_{UN4} := 0kN$ (SS Abutment) - Construction/Maintenance

Apply Ice load at: $I_{UN4.loc.y} := \left(HW_{UN4} - BOF_{elev} - 0.30m\right) = 8.70\ m$

$\Sigma H_{I.UN4} := I_{UN4} = 0 \cdot kN$

$\Sigma M_{I.UN4} := I_{UN4} \cdot I_{UN4.loc.y} = 0 \cdot kN \cdot m$

SEISMIC LOAD (NOT APPLICABLE FOR THIS LOAD CASE)

UN4 CASE

SUMMARY OF LOADS

	Loads	Moment Arm	
Dead load of Concrete Structure:	$D_{conc} = 35947.6 \cdot kN$	$X_{conc.loc} = 8.81\ m$	$Z_{conc.loc} = 8.46\ m$
Obermyer Gate Weight:	$D_{Gate} = 56.0 \cdot kN$	$X_{gate} = 9.50\ m$	$Z_{gate} = 2.00\ m$
Dead load of Fill:	$D_{fill} = 18056.6 \cdot kN$	$X_{fill.loc} = 7.31\ m$	$Z_{fill.loc} = 10.00\ m$
HW Lateral Load on Abutment:	$H_{hwa.UN4} = -1471.5 \cdot kN$	$H_{hwa.UN4.loc} = 5.67\ m$	
HW Lateral Load on Approach Slab:	$H_{hwas.UN4} = -4394.9 \cdot kN$	$H_{hwas.UN4.loc} = 1.81\ m$	
HW Lateral Load on Guard Gate:	$H_{hwgg.UN4} = -490.5 \cdot kN$	$H_{hwgg.UN4.loc} = 5.67\ m$	
TW Lateral Load on Abutment:	$H_{twa.UN4} = 212.5 \cdot kN$	$H_{twa.UN4.loc} = 4.63\ m$	
TW Lateral Load on Pier Footing:	$H_{twgf.UN4} = 1224.29 \cdot kN$	$H_{twgf.UN4.loc} = 1.66\ m$	
TW Lateral Load on Guard Gate:	$H_{twgg.UN4} = 70.8 \cdot kN$	$H_{twgg.UN4.loc} = 4.63\ m$	
Vertical HW Load on Approach Slab:	$H_{1.UN4} = 2929.9 \cdot kN$	$H_{1.UN4.loc.x} = 14.42\ m$	$H_{1.UN4.loc.z} = 4.73\ m$
Vertical TW Load on Pier Footing (crest):	$H_{2.UN4} = 1405.3 \cdot kN$	$H_{2.UN4.loc.x} = 5.30\ m$	$H_{2.UN4.loc.z} = 2.00\ m$
Uplift:	$U_{UN4} = -21584.8 \cdot kN$	$U_{UN4.loc.x} = 10.17\ m$	$U_{UN4.loc.z} = 8.25\ m$
X-Direction Lateral Soil Load on Abutment (driving):	$E_{act.a.UN4.x} = 0.0 \cdot kN$	$E_{act.a.UN4.x.loc.y} = 2.00\ m$	
X-Direction Lateral Lateral Soil Load on Approach Slab (driving):	$E_{act.as.UN4.x} = -1026.7 \cdot kN$	$E_{act.as.UN4.x.loc.y} = 1.33\ m$	
Lateral Soil Load (resisting):	$E_{pass.UN4.x} = 2880.26 \cdot kN$	$E_{pass.UN4.x.loc.y} = 2.83\ m$	
Z-Direction Lateral Soil Load on Abutment Before RCC (driving):	$E_{act.a.UN4.z} = -819.5 \cdot kN$	$E_{act.a.UN4.z.loc.y} = 4.00\ m$	
Z-Direction Lateral Lateral Soil Load on Approach Slab Before RCC (driving):	$E_{act.as.UN4.z} = -2192.6 \cdot kN$	$E_{act.as.UN4.z.loc.y} = 1.76\ m$	
Z-Direction Lateral Soil Load on Abutment After RCC (driving):	$E_{act.RCC.UN4.z} = -9.24 \cdot kN$	$E_{act.RCC.UN4.z.loc.y} = 10.03\ m$	
Z-Direction Lateral Soil Load on Abutment at RCC Steps (driving):	$E_{act.RCC.s.UN4.z} = -16.94 \cdot kN$	$E_{act.RCC.s.UN4.z.loc.y} = 9.43 \cdot m$	
Vertical Soil Load on Footing:	$E_{1.UN4} = 0 \cdot kN$	$E_{1.UN4.loc.x} = 12.89\ m$	$E_{1.UN4.loc.z} = 12.86\ m$
Ice / Impact Load:	$I_{UN4} = 0.0 \cdot kN$	$I_{UN4.loc.y} = 8.70\ m$	

STABILITY ASSESSMENT (SLIDNG, BEARING, FLOTATION AND OVERTURNING): UN4 CASE

CHECK SLIDING (X-Direction & Z-Direction) ALONG HORIZONTAL PLANE THRU TOE, IGNORING BEDROCK MOBILIZED BY STRUCTURAL HEEL KEY, OR VOID BEHIND KEY

Sum of Vertical Forces:

$\Sigma V_{UN4} := \Sigma V_{DL} + \Sigma V_{water.UN4} + \Sigma E_{UN4} = 36810.6 \cdot kN$

Sum of Horizontal Forces (X-Direction):

$\Sigma H_{UN4.x} := \Sigma H_{Water.UN4.x} + \Sigma H_{soil.UN4.x} + \Sigma H_{I.UN4} = -2995.67 \cdot kN$

Sum of Horizontal Forces (Z-Direction):

$\Sigma H_{UN4.z} := \Sigma H_{Water.UN4.z} + \Sigma H_{soil.UN4.z} = -3038.27 \cdot kN$

Sum of Horizontal Forces (resultant):

$$\Sigma H_{UN4} := \sqrt{\Sigma H_{UN4.x}^{\;2} + \Sigma H_{UN4.z}^{\;2}} = 4266.75 \cdot kN$$

Sliding Factor of Safety:

$$FS_{HorizSliding.UN4.x} := \frac{\tan_{\phi} \cdot \Sigma V_{UN4}}{\left|\Sigma H_{UN4.x}\right|} = 5.99 \qquad FS_{HorizSliding.UN4.z} := \frac{\tan_{\phi} \cdot \Sigma V_{UN4}}{\left|\Sigma H_{UN4.z}\right|} = 5.91$$

Sliding Factor of Safety:

$$FS_{HorizSliding.UN4} := \frac{\tan_{\phi} \cdot \Sigma V_{UN4}}{\sqrt{\Sigma H_{UN4.x}^{\;2} + \Sigma H_{UN4.z}^{\;2}}} = 4.21$$

$$FS_{HorizSliding.UN4.Check.x} := \begin{array}{|l} \text{"OKAY" if } FS_{HorizSliding.UN4.x} \geq FS_{req.UN4.sl} \\ \text{"Horizontal Sliding (No Key or Void Behind Key) Fail ! Revise Structure !" otherwise} \end{array} = \text{"OKAY"}$$

$$FS_{HorizSliding.UN4.Check.z} := \begin{array}{|l} \text{"OKAY" if } FS_{HorizSliding.UN4.z} \geq FS_{req.UN4.sl} \\ \text{"Horizontal Sliding (No Key or Void Behind Key) Fail ! Revise Structure !" otherwise} \end{array} = \text{"OKAY"}$$

$$FS_{HorizSliding.UN4.Check} := \begin{array}{|l} \text{"OKAY" if } FS_{HorizSliding.UN4} \geq FS_{req.UN4.sl} \\ \text{"Horizontal Sliding (No Key or Void Behind Key) Fail ! Revise Structure !" otherwise} \end{array} = \text{"OKAY"}$$

CHECK FOUNDATION BEARING CAPACITY

Sum of the Moments (X-Direction):

$$\Sigma M_{UN4.x} := \Sigma M_{DL.x} + \Sigma M_{HWater.UN4.x} + \Sigma M_{Vwater.UN4.x} + \Sigma M_{I.UN4} + \Sigma M_{soil.UN4.x} = 270526 \cdot kN \cdot m$$

Eccentricity:

$$e_{UN4.x} := X_{BCG} - \frac{\Sigma M_{UN4.x}}{\Sigma V_{UN4}} = 1.63\ m$$

Eccentricity Check:

$$e_{check.UN4.x} := \begin{array}{|l} \text{"Okay" if } e_{UN4.x} \leq Kern_x \\ \text{"Revise Structure" otherwise} \end{array}$$

$e_{check.UN4.x} = \text{"Okay"}$

Foundation Bearing Pressures (X-Direction):

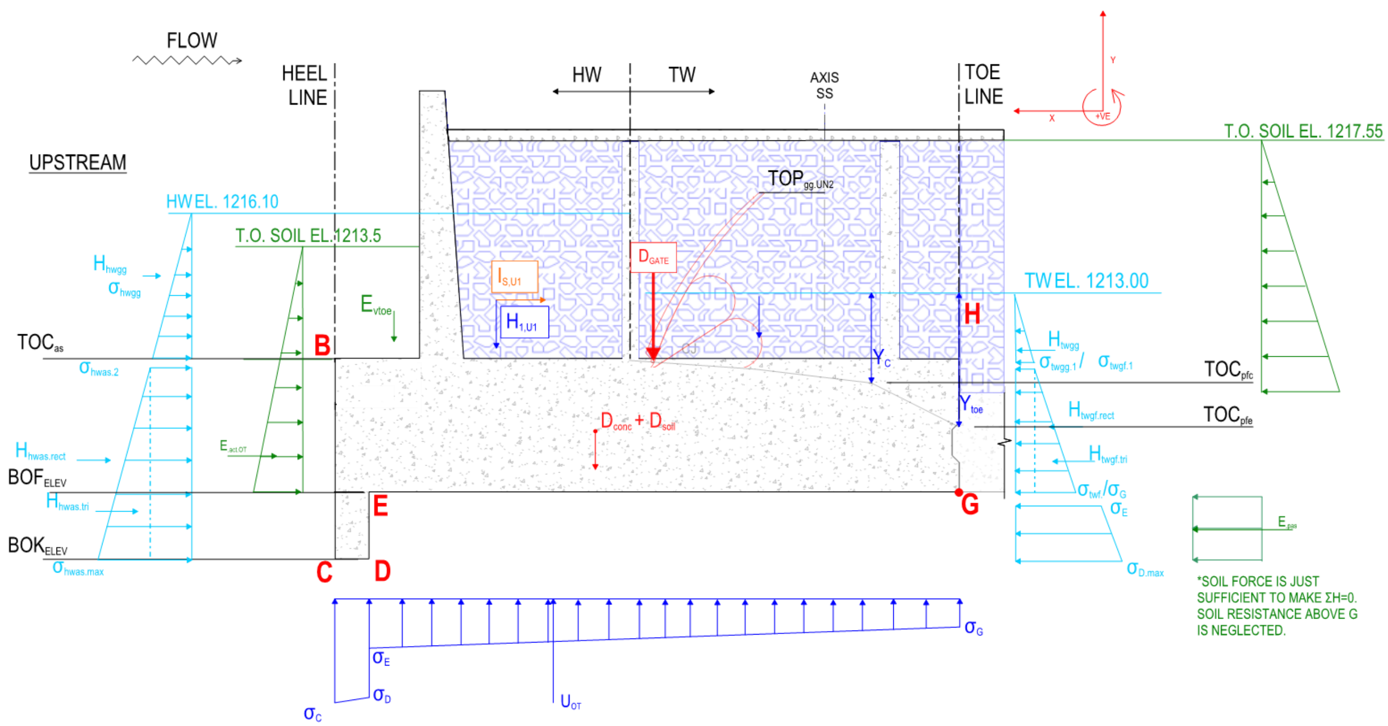
MONOLITH OVERTURNING STABILITY ANALYSIS

UN4 CASE

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stablity of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for staticequilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1 $Ratio_{OT.UN4.min} := 0.333$ at Rock Foundation



Uplift Loads for Overturning Stability Analysis (X-Direction)

Line of Creep:

Change in Water Head: $\Delta_{h.UN4} := HW_{UN4} - TW_{UN4} = 3.1\ m$

Length from Point C to Point G: $L_{CG} = 18.61\ m$

Length from Various Points to Points: $L_{CD} = 1\ m$ $L_{DE} = 2\ m$ $L_{EG} = 17.5\ m$

$L_{GH.UN4} := TW_{UN4} - TOC_{afe} = 3.9\ m$

Length from Point C, D, E to G: $L_{CDEG} = 20.5\ m$ $L_{CDE} = 3\ m$

Water Pressure at Point C & G: $\sigma_{C.UN4} := \sigma_{hwas.UN4.2} = -88.29 \cdot kPa$ $\sigma_{G.UN4} := \sigma_{twtoe.UN4} \cdot -1 = -57.88 \cdot kPa$

Water Pressure at Point D:
$$\sigma_{D.UN4} := -\gamma_w \cdot \left[\left(HW_{UN4} - BOK_{elev} \right) - \frac{\Delta_{h.UN4} \cdot L_{CD}}{L_{CDEG}} \right] = -106.43 \cdot kPa$$

Water Pressure at Point E:
$$\sigma_{E.UN4} := -\gamma_w \cdot \left[\left(HW_{UN4} - BOF_{elev} \right) - \frac{\Delta_{h.UN4} \cdot L_{CDE}}{L_{CDEG}} \right] = -83.84 \cdot kPa$$

Uplift for Overturning Analysis on Bottom of Key:
$$U_{OT.UN4.key} := \frac{\sigma_{C.UN4} + \sigma_{D.UN4}}{2} \cdot L_{CD} \cdot W_B = -1557.73 \cdot kN$$

Acting at:
$$U_{OT.UN4.key.loc} := \frac{L_{CD} \cdot \left(2 \cdot \sigma_{C.UN4} + \sigma_{D.UN4} \right)}{3 \left(\sigma_{C.UN4} + \sigma_{D.UN4} \right)} + L_{EG} = 17.98\ m$$

UN4 CASE

Uplift for Overturning Analysis on Bottom of Footing: $U_{OT.UN4.ftg} := \frac{\sigma_{E.UN4} + \sigma_{G.UN4}}{2} \cdot L_{EG} \cdot W_B = -19840.61 \cdot kN$

Acting at: $U_{OT.UN4.ftg.loc} := \frac{L_{EG} \cdot \left(\sigma_{G.UN4} + 2 \cdot \sigma_{E.UN4}\right)}{3\left(\sigma_{G.UN4} + \sigma_{E.UN4}\right)} = 9.28\ m$

Uplift Load for Overtuming Analysis: $U_{OT.UN4} := U_{OT.UN4.key} + U_{OT.UN4.ftg} = -21398.34 \cdot kN$

Uplift Load Acting from Toe: $U_{OT.UN4.loc} := \frac{U_{OT.UN4.key} \cdot U_{OT.UN4.key.loc} + U_{OT.UN4.ftg} \cdot U_{OT.UN4.ftg.loc}}{U_{OT.UN4}} = 9.92\ m$

<u>All Vertical Loads Appliable to Overturning Stability Analysis</u>

Total Concrete Dead Loads:	$D_{conc} = 35947.58 \cdot kN$	at:	$X_{conc.loc} = 8.81\ m$
Dead Load of Gate:	$D_{Gate} = 56.0 \cdot kN$		$X_{gate} = 9.50\ m$
Total Fill Loads:	$D_{fill} = 18056.6 \cdot kN$		$X_{fill.loc} = 7.31\ m$
Water Weight (HW) on Apron Slab:	$H_{1.UN4} = 2929.9 \cdot kN$		$H_{1.UN4.loc.x} = 14.42\ m$
Water Weight (TW) on Guard Gate Footing:	$H_{2.UN4} = 1405.3 \cdot kN$		$H_{2.UN4.loc.x} = 5.30\ m$
Uplift Load for Overtuming Analysis:	$U_{OT.UN4} = -21398.34 \cdot kN$		$U_{OT.UN4.loc} = 9.92 \cdot m$

Sum of All Overturning Analysis Vertical Load:

$$\Sigma V_{UN4.OT} := D_{conc} + D_{Gate} + D_{fill} + H_{1.UN4} + H_{2.UN4} + U_{OT.UN4} = 36997.06 \cdot kN$$

Sum of All Overturning Analysis Vertical Load Moments:

$$\Sigma M_{V.UN4.OT} := \begin{pmatrix} D_{conc} \cdot X_{conc.loc} + D_{Gate} \cdot X_{gate} + D_{fill} \cdot X_{fill.loc} + H_{1.UN4} \cdot H_{1.UN4.loc.x} \cdots \\ + H_{2.UN4} \cdot H_{2.UN4.loc.x} + U_{OT.UN4} \cdot U_{OT.UN4.loc} \end{pmatrix} = 286818.79 \cdot kN \cdot m$$

<u>Lateral Tailwater Loads for Overturning Stability Analysis</u>

TW Lateral Load on Gate Footing (No Key - Overturning Values Adjusted): $H_{twgf.UN4} = 1224.29 \cdot kN$

Acting at: $H_{twgf.UN4.loc} = 1.66\ m$

Horizontal Tailwater Pressure Top of Key (Overturning Analysis): $\sigma_{twtk.OT.UN4} := \sigma_{E.UN4} \cdot -1 = 83.84 \cdot kPa$

Horizontal Tailwater Pressure Bottom of Key (Overturning Analysis): $\sigma_{twbk.OT.UN4} := \sigma_{D.UN4} \cdot -1 = 106.43 \cdot kPa$

Triangular Distribution Unit Load Acting at Key: $H_{twbk.OT.UN4.tri} := \frac{\left(\sigma_{twbk.OT.UN4} - \sigma_{twtk.OT.UN4}\right)}{2} \cdot d_{key} \cdot W_{tw.UN4} = 361.39 \cdot kN$

Triangular Distribution Unit Load Acting at Key: $H_{twbk.OT.UN4.rect} := \sigma_{twtk.OT.UN4} \cdot d_{key} \cdot W_{tw.UN4} = 2682.87 \cdot kN$

Total Horizontal Tailwater Load on Key (Overturning Values Adjusted): $H_{twkey.OT.UN4} := H_{twbk.OT.UN4.tri} + H_{twbk.OT.UN4.rect} = 3044.26 \cdot kN$

Acting at: $H_{twkey.OT.UN4.loc} := \frac{H_{twbk.OT.UN4.tri} \cdot \frac{-2 \cdot d_{key}}{3} + H_{twbk.OT.UN4.rect} \cdot \frac{-d_{key}}{2}}{H_{twkey.OT.UN4}} = -1.04 \cdot m$

Lateral Driving Earth Loads for Overturning Stability Analysis (at rest condition)

UN4 CASE

Depth of Driving Soil Loads (to top of key): $h_{E.OT.UN4} := TOC_{as} - BOF_{elev} = 4\ m$

At-Rest Soil Load: $E_{act.OT.UN4} := \frac{\left(K_{o.UN4} \cdot h_{E.OT.UN4}{}^{2}\right)}{2} \cdot \left(\gamma_r - \gamma_w\right) \cdot W_{hwas.UN4} \cdot -1 = -1026.66 \cdot kN$

At Rest- Soil Load Acting from Toe: $E_{act.OT.UN4.loc} := \frac{h_{E.OT.UN4}}{3} = 1.33\ m$

All Lateral Loads Appliable to Overturning Stability Analysis (X-direction)

HW Lateral Load on Approach Slab:	$H_{hwas.UN4} = -4394.9 \cdot kN$	$H_{hwas.UN4.loc} = 1.81\ m$
HW Lateral Load on Guard Gate:	$H_{hwgg.UN4} = -490.5 \cdot kN$	$H_{hwgg.UN4.loc} = 5.67\ m$
HW Lateral Load on Abutment:	$H_{hwa.UN4} = -1471.5 \cdot kN$	$H_{hwa.UN4.loc} = 5.67\ m$
TW Lateral Load on Abutment:	$H_{twa.UN4} = 212.5 \cdot kN$	$H_{twa.UN4.loc} = 4.63\ m$
TW Lateral Load on Guard Gate:	$H_{twgg.UN4} = 70.8 \cdot kN$	$H_{twgg.UN4.loc} = 4.63\ m$
TW Lateral Load on Gate Footing (No Key - Overturning Values Adjusted):	$H_{twgf.UN4} = 1224.29 \cdot kN$	$H_{twgf.UN4.loc} = 1.66\ m$
TW Lateral Load on Key:	$H_{twkey.OT.UN4} = 3044.26 \cdot kN$	$H_{twkey.OT.UN4.loc} = -1.04\ m$
Ice / Impact Load:	$I_{UN4} = 0.0 \cdot kN$	$I_{UN4.loc.y} = 8.70\ m$
Lateral Soil Load (driving):	$E_{act.OT.UN4} = -1026.7 \cdot kN$	$E_{act.OT.UN4.loc} = 1.33\ m$

Resisting Lateral Soil Load as required to produce horizontal equilibrium:

$$E_{pas.OT.x.UN4} := -\left(\begin{array}{l} H_{hwas.UN4} + H_{hwgg.UN4} + H_{hwgg.UN4} + H_{twgg.UN4} \cdots \\ + H_{twgf.UN4} + H_{twkey.OT.UN4} + I_{UN4} + E_{act.OT.UN4} \end{array}\right) = 2063.16 \cdot kN$$

Acting at:

$$E_{pas.OT.UN4.loc} := -1 \cdot \frac{d_{key}}{2} = -1\ m$$

Sum of All Overturning Analysis Horizontal Load (ΣH=0):

$$\Sigma H_{UN4.OT.x} := H_{hwas.UN4} + H_{hwgg.UN4} + H_{twgg.UN4} + H_{twgf.UN4} + H_{twkey.OT.UN4} + I_{UN4} + E_{act.OT.UN4} + E_{pas.OT.x.UN4} = 490.5 \cdot kN$$

Sum of All Overturning Analysis Horizontal Load Moments:

$$\begin{aligned} \Sigma M_{H.UN4.OT.x} := {} & H_{hwas.UN4} \cdot H_{hwas.UN4.loc} + H_{hwgg.UN4} \cdot H_{hwgg.UN4.loc} \cdots \\ & + H_{twgg.UN4} \cdot H_{twgg.UN4.loc} + H_{twgf.UN4} \cdot H_{twgf.UN4.loc} \cdots \\ & + H_{twkey.OT.UN4} \cdot H_{twkey.OT.UN4.loc} + I_{UN4} \cdot I_{UN4.loc.y} \cdots \\ & + E_{act.OT.UN4} \cdot E_{act.OT.UN4.loc} + E_{pas.OT.x.UN4} \cdot E_{pas.OT.UN4.loc} \end{aligned} = -14970.72 \cdot kN \cdot m$$

Overturning Stability Analysis (X-Direction)

$$\Sigma M_{UN4.OT.x} := \Sigma M_{V.UN4.OT} + \Sigma M_{H.UN4.OT.x} = 271848.07 \cdot kN \cdot m$$

$$X_{R.UN4} := \frac{\Sigma M_{UN4.OT.x}}{\Sigma V_{UN4.OT}} = 7.35\ m \qquad x_{OT.UN4} := X_{R.UN4} - \frac{L_B}{2} = -1.9\ m$$

Overturning Resultant Ratio

$$Ratio_{OT.x.UN4} := \frac{X_{R.UN4}}{L_B} = 0.4$$

$$Ratio_{OT.x.UN4.check} := \left| \begin{array}{l} \text{"OKAY"} \quad \text{if} \quad Ratio_{OT.x.UN4} \ge Ratio_{OT.UN4.min} \\ \text{"Revise Structure"} \quad \text{otherwise} \end{array} \right. = \text{"OKAY"}$$

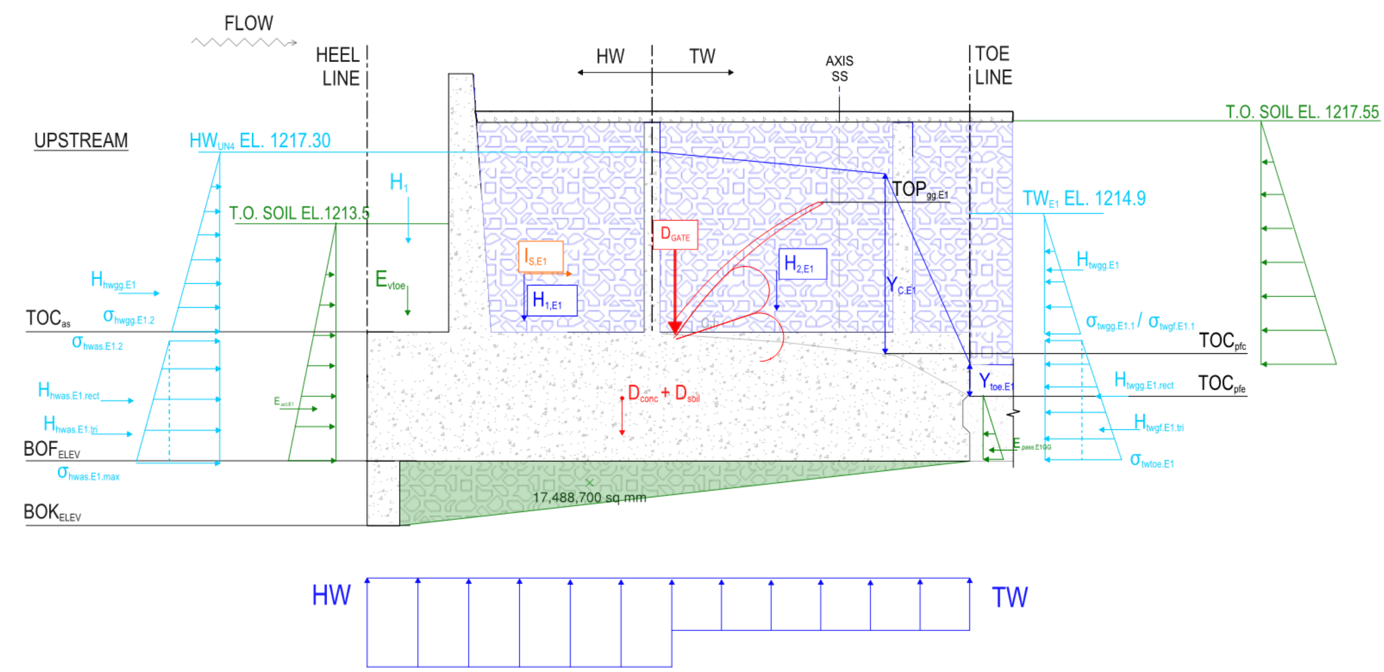
Bearing Pressure at Toe(x)-Heel(z): (horizontal plane)	$\sigma_{toeheel.UN4} = 240 \cdot kPa$	$\sigma_{toe.UN4.check} =$ "Okay"

E1 DESIGN CASE



ACCEPTANCE PARAMETERS

Required Factor of Safety for Sliding:	$FS_{req.E1.sl} := 1.0$	(Without Cohesion)
		(Section 8.1, Design Criteria)
Resultant Within Middle Third of Base:	$e \le \frac{L_B}{6} \wedge e \ge \frac{-L_B}{6}$	
Allowable Rock Bearing Pressure:	$\sigma_{allow.E1} := 1740 \cdot \frac{kN}{m^2}$	(Section 5.2, Design Criteria)
Required Factor of Safety for Flotation:	$FS_{req.E1.flt} := 1.1$	

INPUT PARAMETERS

Headwater Elevation:	$HW_{E1} := 1217.3m$	(Section 8.2, Design Criteria)
Tailwater Elevation:	$TW_{E1} := 1214.9m$	(Section 8.2, Design Criteria)
Bottom of Footing Elevation:	$BOF_{elev} = 1206\,m$	
Approch Slab Top of Concrete Elevation at Upstream Face:	$TOC_{as} = 1210\,m$	
Abutment Footing Top of Concrete Elevation at Stilling Basin:	$TOC_{afe} = 1208\,m$	
Abutment Footing Top of Concrete Elevation at Footing:	$TOC_{afc} = 1209.73\,m$	Gates are open when top of gate elevation is at 1210.00m
Abutment Footing Top of Concrete Elevation at Footing Notch:	$TOC_{afc.n} = 1209.3\,m$	
Top of Guard Gate Elevation:	$TOP_{gg.E1} := 1210.0m$	Gates are closed/up when top of gate elevation is at 1215.0m
Bottom of Key Elevation:	$BOK_{elev} = 1204\,m$	

E1 CASE

Water Elevation above Crest of Guard Gate:

$EL_{C.E1} := 1211.9m$

$$Y_{C.E1} := \begin{cases} (EL_{C.E1} - TOC_{afc.n}) & \text{if } TOP_{gg.E1} \le HW_{E1} \\ (TW_{E1} - TOC_{afc.n}) & \text{if } TOP_{gg.E1} > HW_{E1} \end{cases} = 2.6 \cdot m$$

Water Elevation above Guard Gate Toe: Submerged by Hydraulic 2D Model

$EL_{TOE.E1} := 1211.9m$

$$Y_{TOE.E1} := \begin{cases} (EL_{TOE.E1} - TOC_{afe}) & \text{if } TOP_{gg.E1} \le HW_{E1} \\ (TW_{E1} - TOC_{afe}) & \text{if } TOP_{gg.E1} > HW_{E1} \end{cases} = 3.9 \cdot m$$

LATERAL WATER LOADS

HEADWATER (DRIVING X-DIRECTION):

Headwater Depth on Abutment: $D_{hwa.E1} := HW_{E1} - TOC_{as} = 7.30\ m$

Headwater Load Unit Width Projected Surface Area of Abutment: $W_{hwa.E1} := 2 \cdot r_{wall} = 12.00\ m$

Total Horizontal Headwater Load on Abutment:

$$H_{hwa.E1} := \frac{-\left(\gamma_w \cdot D_{hwa.E1}{}^2\right)}{2} \cdot W_{hwa.E1} = -3136.6 \cdot kN$$

Apply Total Abutment Headwater Load at:

$$H_{hwa.E1.loc} := \frac{D_{hwa.E1}}{3} + \left(TOC_{as} - BOF_{elev}\right) = 6.43\ m$$

Apply Total Abutment Headwater Load at (from toe):

$H_{hwa.E1.loc.z} := 4m + r_{wall} = 10.00\ m$ (Gate Footing + Radius of Wall)

Thickness of Approach Slab: $T_{as} = 4\ m$

Headwater Depth at Heel (U/S face): $D_{hwas.E1} := HW_{E1} - BOF_{elev} = 11.30\ m$

Headwater Load Unit Width on Projected Approach Slab: $W_{hwas.E1} := W_B = 16.00\ m$

Headwater Line Load At Top of Approach Slab: $\sigma_{hwas.E1.1} := -\left(\gamma_w \cdot D_{hwa.E1}\right) = -71.61 \cdot kPa$

Headwater Line Load At Bottom of Approach Slab: $\sigma_{hwas.E1.2} := -\left(\gamma_w \cdot D_{hwas.E1}\right) = -110.85 \cdot kPa$

Trianglular Distribution Unit Load on Approach Slab:

$$H_{hwas.E1.2.tri} := \left(\frac{\sigma_{hwas.E1.2} - \sigma_{hwas.E1.1}}{2}\right) \cdot \left(T_{as} \cdot W_{hwas.E1}\right) = -1255.68 \cdot kN$$

Rectangular Distribution Unit Load on Approach Slab:

$$H_{hwas.E1.2.rect} := \sigma_{hwas.E1.1} \cdot \left(T_{as} \cdot W_{hwas.E1}\right) = -4583.23 \cdot kN$$

Total Horizontal Headwater Load on Approach Slab:

$$H_{hwas.E1} := H_{hwas.E1.2.tri} + H_{hwas.E1.2.rect} = -5838.91 \cdot kN$$

Apply Total Footing Headwater Load at:

$$H_{hwas.E1.loc} := \frac{\left[H_{hwas.E1.2.rect} \cdot \frac{\left(T_{as}\right)}{2} + H_{hwas.E1.2.tri} \cdot \frac{\left(T_{as}\right)}{3}\right]}{H_{hwas.E1.2.tri} + H_{hwas.E1.2.rect}} = 1.86\ m$$

Apply Total Footing Headwater Load at (from toe):

$$H_{hwas.E1.loc.z} := \frac{W_B}{2} = 8.00\ m$$

Guard Gate (2A) Operating Condition: Fully Open

Guard Gate Down/Open Condition: $A1_{E1} := TOP_{gg.E1} \le TOC_{as}$

Guard Crest Gate Up/Closed, with Top of Gate Higher than HW Elevation: $B1_{E1} := TOP_{gg.E1} \ge HW_{E1} \wedge TOP_{gg.E1} > TOC_{as}$

Guard Crest Gate Up/Closed, with Top of Gate Lower than HW Elevation: $C1_{E1} := TOP_{gg.E1} > TOC_{as} \wedge HW_{E1} > TOP_{gg.E1}$

Guard Crest Gate Height: $H_{gg.E1} := TOP_{gg.E1} - TOC_{as} = 0\ m$

Headwater Depth at Guard Crest Gate: $D_{hwgg.E1} := HW_{E1} - TOC_{as} = 7.30\ m$

Guard Crest Gate Width: $W_{hwgg.E1} := 4.0m$

Lateral Headwater Pressure at Bottom of Guard Crest Gate:

$$\sigma_{hwgg.E1.1} := \begin{cases} (0.0kPa) & \text{if } A1_{E1} \\ -(\gamma_w \cdot D_{hwgg.E1}) & \text{if } B1_{E1} \\ -(\gamma_w \cdot D_{hwgg.E1}) & \text{if } C1_{E1} \end{cases} = 0.0 \cdot kPa$$

Lateral Headwater Pressure at Top of Guard Crest Gate: (Load at HW Elevation On Guard Crest Gate if HW is below TOG_{rg})

$$\sigma_{hwgg.E1.2} := \begin{cases} (0.0kPa) & \text{if } A1_{E1} \\ 0.0kPa & \text{if } B1_{E1} \\ -\left[\gamma_w \cdot (HW_{E1} - TOP_{gg.E1})\right] & \text{if } C1_{E1} \end{cases} = 0.0 \cdot kPa$$

Average Pressure acting on Guard Crest Gate:

$$\sigma_{hwgg.E1.avg} := \frac{(\sigma_{hwgg.E1.1} + \sigma_{hwgg.E1.2})}{2} = 0 \cdot kPa$$

Total Area water acting on Crest Gate:

$$A_{hwgg.E1} := \begin{cases} D_{hwgg.E1} \cdot W_{hwgg.E1} & \text{if } A1_{E1} \\ D_{hwgg.E1} \cdot W_{hwgg.E1} & \text{if } B1_{E1} \\ H_{gg.E1} \cdot W_{hwgg.E1} & \text{if } C1_{E1} \end{cases} = 29.2 \cdot m^2$$

Total Horizontal Headwater Load on Guard Crest Gate: $H_{hwgg.E1} := \sigma_{hwgg.E1.avg} \cdot A_{hwgg.E1} = 0.0\ kN$

Apply Total Guard Crest Gate Headwater Load at:

$$H_{hwgg.E1.loc} := \begin{cases} (TOC_{as} - BOF_{elev}) & \text{if } A1_{E1} \\ \left[\frac{(HW_{E1} - TOC_{as})}{3} + (TOC_{as} - BOF_{elev})\right] & \text{if } B1_{E1} \\ \left[\frac{\sigma_{hwgg.E1.2} \cdot A_{hwgg.E1} \cdot \frac{(H_{gg.E1})}{2} + \frac{(\sigma_{hwgg.E1.1} - \sigma_{hwgg.E1.2})}{2} A_{hwgg.E1} \cdot \frac{(H_{gg.E1})}{3}}{\sigma_{hwgg.E1.2} \cdot A_{hwgg.E1} + \frac{(\sigma_{hwgg.E1.1} - \sigma_{hwgg.E1.2})}{2} \cdot A_{hwgg.E1}} \ldots \\ + (TOC_{as} - BOF_{elev})\right] & \text{if } C1_{E1} \end{cases} = 4.0 \cdot m$$

Apply Total Guard Crest Gate Headwater Load at (From toe): $H_{hwgg.E1.loc.z} := \frac{W_{hwgg.E1}}{2} = 2\ m$

LATERAL TAILWATER (RESISTING) Applied to Downstream Side of Guard Crest Gate: **E1-F CASE**

Guard Gate Down/Open Condition: $A2_{E1} := TOP_{gg.E1} \le TOC_{as}$

Guard Crest Gate Up/Closed, with Top of Gate Higher than TW Elevation: $B2_{E1} := TOP_{gg.E1} \ge TW_{E1} \wedge TOP_{gg.E1} > TOC_{as}$

Guard Crest Gate Up/Closed, with Top of Gate Lower than TW Elevation: $C2_{E1} := TOP_{gg.E1} > TOC_{as} \wedge TW_{E1} > TOP_{gg.E1}$

Tailwater Depth at Guard Crest Gate: $D_{twgg.E1} := TW_{E1} - TOC_{as} = 4.90\ m$

Guard Crest Gate Height: $H_{gg.E1} = 0\ m$

Guard Crest Gate Width: $W_{twgg.E1} := 4.0m$

Lateral Water Load at Bottom of Guard Crest Gate:

$$\sigma_{twgg.E1.1} := \begin{cases} (0.0kPa) & \text{if } A2_{E1} \\ (\gamma_w \cdot D_{twgg.E1}) & \text{if } B2_{E1} \\ (\gamma_w \cdot D_{twgg.E1}) & \text{if } C2_{E1} \end{cases} = 0.0 \cdot kPa$$

Lateral Water Load at Top of Guard Crest Gate:
(Load at TW Elevation On Guard Crest Gate if TW is below TOG_{gg})

$$\sigma_{twgg.E1.2} := \begin{cases} (0.0kPa) & \text{if } A2_{E1} \\ 0.0kPa & \text{if } B2_{E1} \\ \left[\gamma_w \cdot \left(\left(TW_{E1} - TOP_{gg.E1}\right)\right)\right] & \text{if } C2_{E1} \end{cases} = 0.0 \cdot kPa$$

Average Pressure acting on Guard Crest Gate:

$$\sigma_{twgg.E1.avg} := \frac{(\sigma_{twgg.E1.1} + \sigma_{twgg.E1.2})}{2} = 0 \cdot kPa$$

Total Area water acting on Crest Gate:

$$A_{twgg.E1} := \begin{cases} D_{twgg.E1} \cdot W_{twgg.E1} & \text{if } A2_{E1} \\ D_{twgg.E1} \cdot W_{twgg.E1} & \text{if } B2_{E1} \\ H_{gg.E1} \cdot W_{twgg.E1} & \text{if } C2_{E1} \end{cases} = 19.6 \cdot m^2$$

Total Horizontal Headwater Load on Guard Crest Gate: $H_{twgg.E1} := \sigma_{twgg.E1.avg} \cdot A_{twgg.E1} = 0.0 \cdot kN$

Apply Total Horiz. TW Load on Guard Gate at:

$$H_{twgg.E1.loc} := \begin{cases} (TOC_{as} - BOF_{elev}) & \text{if } A2_{E1} \\ \left[\frac{(TW_{E1} - TOC_{as})}{3} + (TOC_{as} - BOF_{elev})\right] & \text{if } B2_{E1} \\ \left[\frac{\sigma_{twgg.E1.2} \cdot A_{twgg.E1} \cdot \frac{(H_{gg.E1})}{2} + \frac{(\sigma_{twgg.E1.1} - \sigma_{twgg.E1.2})}{2} \cdot A_{twgg.E1} \cdot \frac{(H_{gg.E1})}{3}}{\sigma_{twgg.E1.2} \cdot A_{twgg.E1} + \frac{(\sigma_{twgg.E1.1} - \sigma_{twgg.E1.2})}{2} \cdot A_{twgg.E1}} \cdots \right. \\ \left. + (TOC_{as} - BOF_{elev}) \right] & \text{if } C2_{E1} \end{cases} = 4.0 \cdot m$$

Apply Total Guard Crest Gate Headwater Load at (From toe): $H_{twgg.E1.loc.z} := \frac{W_{twgg.E1}}{2} = 2\ m$

LATERAL WATER LOADS (continued)

E1 CASE

TAILWATER (RESISTING) Applied to Concrete Strucuture:

Tailwater Depth on Top of Abutment Footing: $D_{twa.E1} := TW_{E1} - TOC_{as} = 4.90\ m$

Tailwater Load Unit Width on Abutment: $W_{twa.E1} := 2 \cdot r_{wall} = 12.00\ m$

Total Horizontal Tailwater Load on Abutment: $H_{twa.E1} := \frac{\left(\gamma_w \cdot D_{twa.E1}{}^2\right)}{2} \cdot W_{twa.E1} = 1413.2 \cdot kN$

Apply Total Abutment Tailwater Load at: $H_{twa.E1.loc} := \frac{D_{twa.E1}}{3} + \left(TOC_{as} - BOF_{elev}\right) = 5.63\ m$

Apply Total Abutment Tailwater Load at (from Toe Line): $H_{twa.E1.loc.z} := W_{twgg.E1} + r_{wall} = 10\ m$

Footing Thickness for horizontal at Toe: $h_{toe} = 4\ m$

Tailwater Depth At top of Gate Base Footing Elevation: $D_{twgf.E1} := TW_{E1} - TOC_{as} = 4.90\ m$

Water Depth at bottom of Gate Base Footing (Excluding Key): $D_{twtoe.E1} := TW_{E1} - BOF_{elev} = 8.90\ m$

Water Depth at bottom of Gate Base Footing (Including Key): $D_{twkey.E1} := HW_{E1} - BOK_{elev} = 13.30\ m$

Unit Width of D/S face of crest for applicaiton of Tailwater Load: $W_{tw.E1} := W_B = 16.00\ m$

(Conservatively taken resisting water in front of 1.5m RCC Auxiliary Spillway as Tailwater elevation)

Tailwater Pressure At Top of Gate Footing: $\sigma_{twgf.E1} := \left(\gamma_w \cdot D_{twgf.E1}\right) = 48.07 \cdot kPa$

Tailwater Line Load At Bottom of Gate Footing (Excluding Key): $\sigma_{twtoe.E1} := \left(\gamma_w \cdot D_{twtoe.E1}\right) = 87.31 \cdot kPa$

Trianglular Distribution Unit Load on Gate Footing Base: $H_{twgf.E1.tri} := \left(\frac{\sigma_{twtoe.E1} - \sigma_{twgf.E1}}{2}\right) \cdot \left[\left(T_{as} - d_{key}\right) \cdot W_{tw.E1}\right] = 627.84 \cdot kN$

Rectangular Distribution Unit Load on Gate Footing Base: $H_{twgf.E1.rect} := \sigma_{twgf.E1} \cdot \left[\left(T_{as} - d_{key}\right) \cdot W_{tw.E1}\right] = 1538.21 \cdot kN$

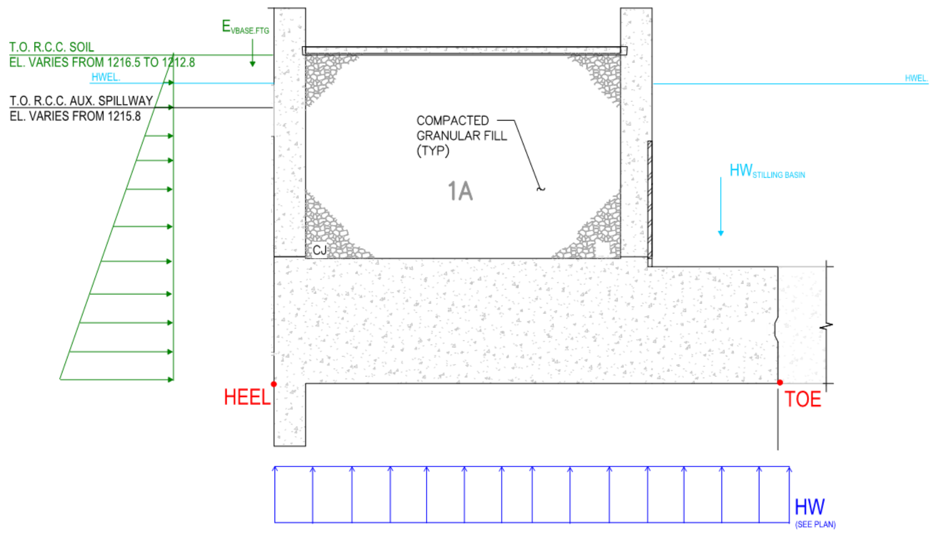
Total Horizontal Tailwater Headwater Load on Gate Footing: $H_{twgf.E1} := H_{twgf.E1.tri} + H_{twgf.E1.rect} = 2166.05 \cdot kN$

Apply Total Gate Footing Tailwater Load at:

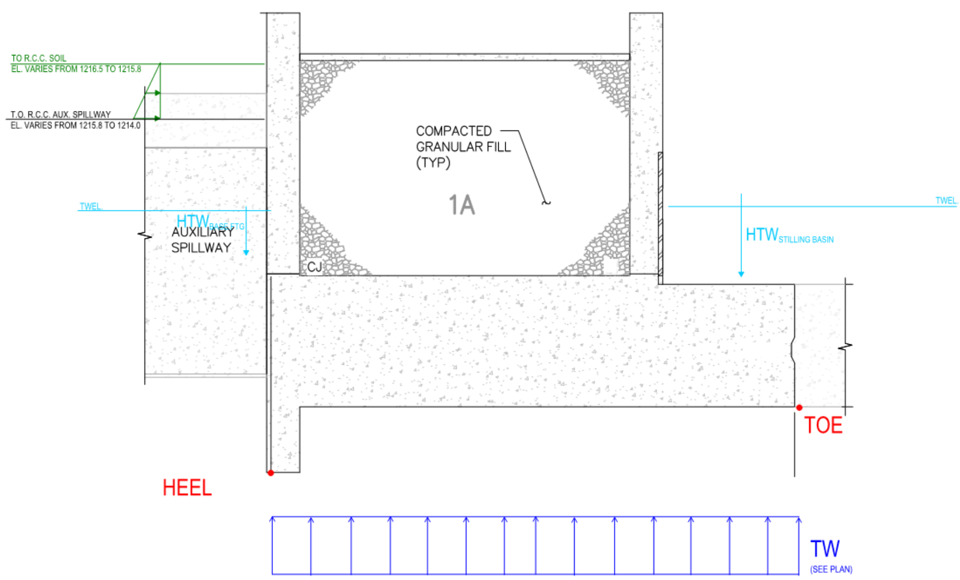
$$H_{twgf.E1.loc} := \frac{\left[H_{twgf.E1.rect} \cdot \frac{\left(T_{as}\right)}{2} + H_{twgf.E1.tri} \cdot \frac{\left(T_{as}\right)}{3}\right]}{H_{twgf.E1.tri} + H_{twgf.E1.rect}} = 1.81\ m$$

Apply Total Gate Footing Tailwater Load at (From Toe Line): $H_{twgf.E1.loc.z} := \frac{W_B}{2} = 8.00\ m$

SUMMATION OF LATERAL WATER LOADS:



SECTION 1A BEFORE GATES & AUX. SPILLWAY RCC



SECTION 1A AFTER GATES & AUX. SPILLWAY RCC

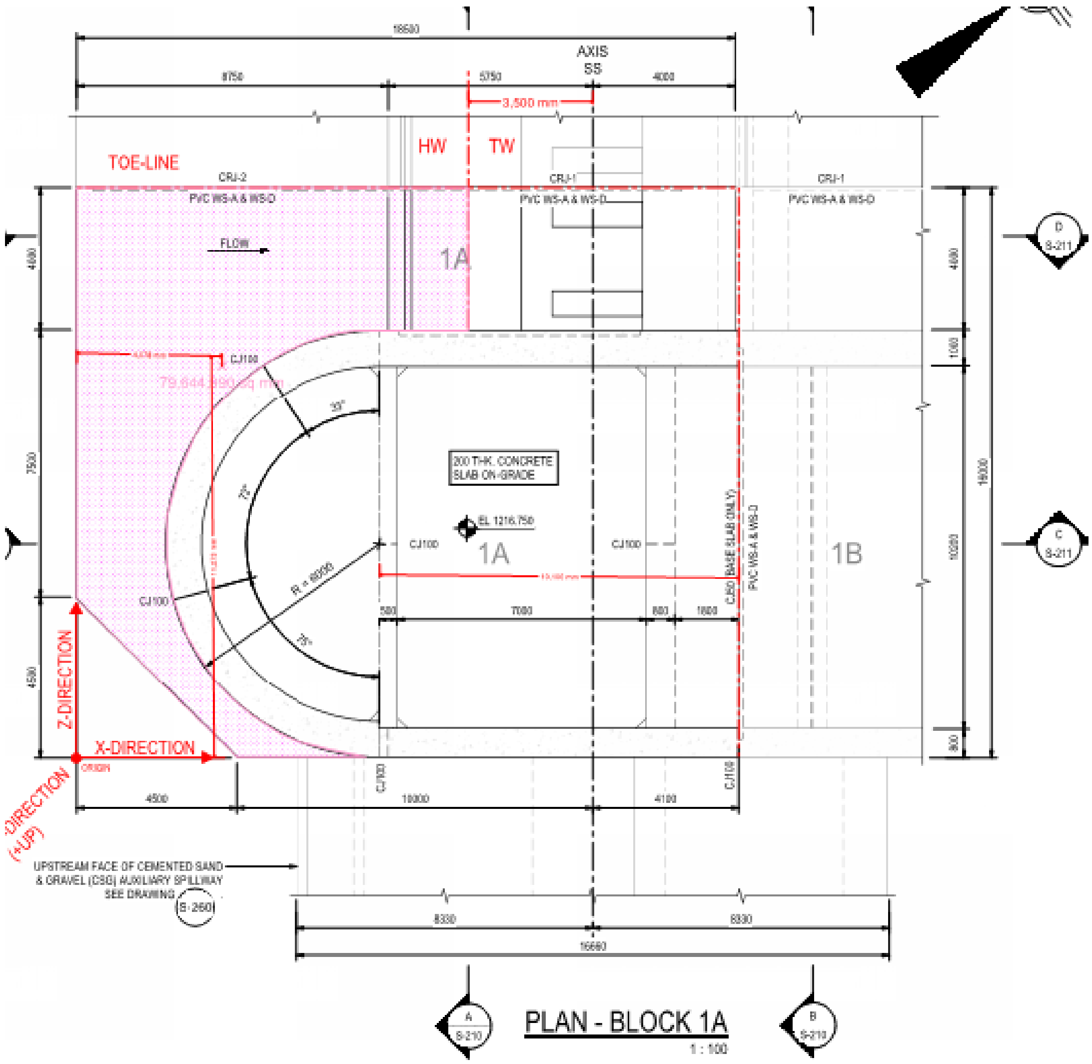
$$\Sigma H_{Water.E1.x} := H_{hwa.E1} + H_{hwas.E1} + H_{hwgg.E1} + H_{twa.E1} + H_{twgf.E1} + H_{twgg.E1} = -5396.28 \cdot kN$$

$$\Sigma M_{HWater.E1.x} := H_{hwa.E1} \cdot H_{hwa.E1.loc} + H_{hwas.E1} \cdot H_{hwas.E1.loc} + H_{hwgg.E1} \cdot H_{hwgg.E1.loc} \dots + H_{twa.E1} \cdot H_{twa.E1.loc} + H_{twgf.E1} \cdot H_{twgf.E1.loc} + H_{twgg.E1} \cdot H_{twgg.E1.loc} = -19145.09 \cdot kN \cdot m$$

$\Sigma H_{Water.E1.z} := 0kN$ $\Sigma M_{HWater.E1.z} := 0 \cdot kN \cdot m$

VERTICAL WATER LOADS

E1 CASE



HEADWATER:

Water Depth on top of Approach Slab: $d_{hw.E1} := HW_{E1} - TOC_{as} = 7.30\ m$

Water Area on top of Approach Slab: $A_{as} = 79.64\ m^2$ (From Geom. Scaled on REVU)

Vertical Water Weight (H1) on Approach Slab: $H_{1.E1} := \left(A_{as} \cdot d_{hw.E1}\right) \cdot \gamma_w = 5703.6 \cdot kN$

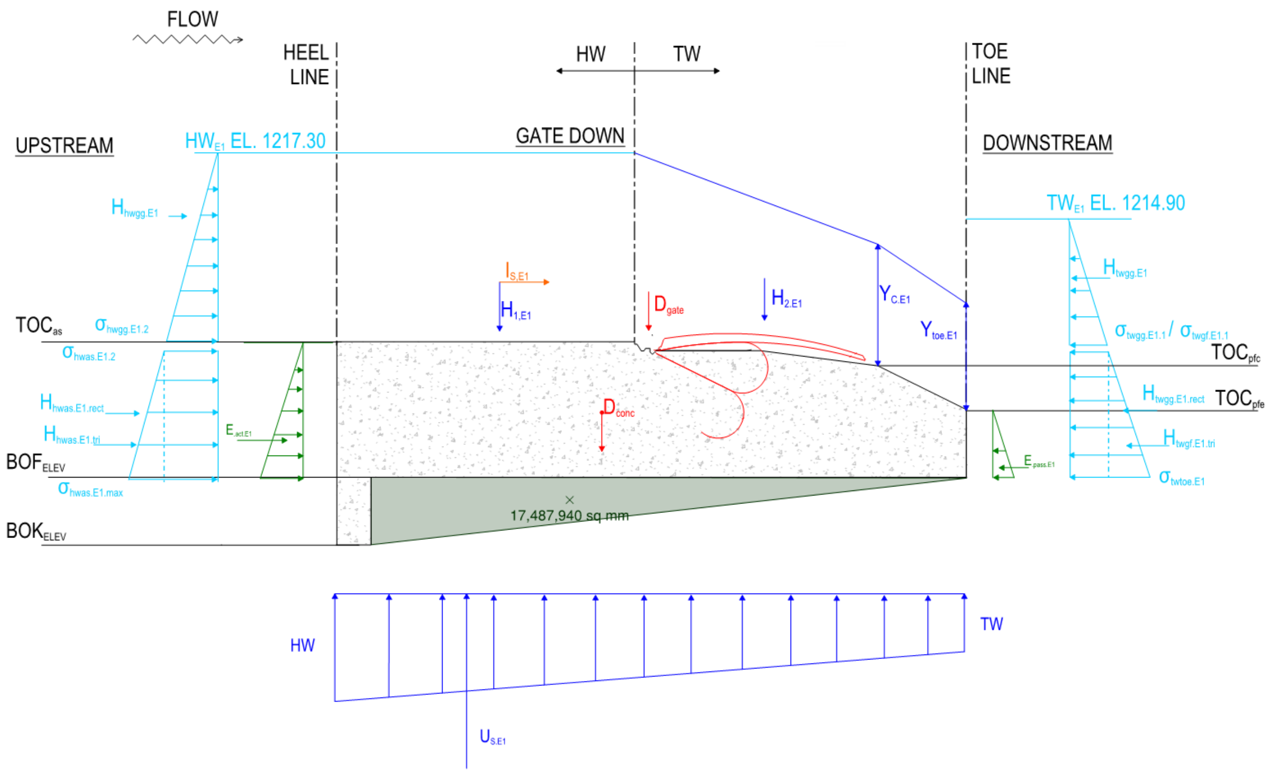
Moment Arm for Applicaiton of Water Weight (H1) from toe (X-Direction): $H_{1.E1.loc.x} := L_B - 4.078m = 14.42\ m$ (From Geom. Scaled on REVU)

Moment Arm for Applicaiton of Water Weight (H1) from toe (Z-Direction): $H_{1.E1.loc.z} := W_B - 11.273m = 4.73\ m$ (From Geom. Scaled on REVU)

VERTICAL WATER LOADS

E1 CASE

TAILWATER:



Approach Slab Length: $L_{as} = 8.75\ m$

Gate Footing Length: $L_{gf} = 9.75\ m$

Gate Footing Crest Length: $L_{gfc} = 2.25\ m$

TAILWATER:

Trapezoid Volume Above Gate Footing from Approach Slab to Crest:

$$V_{asc.E1} := \left(L_{gf} - L_{gfc}\right) W_{twgg.E1} \frac{d_{hw.E1} + Y_{C.E1}}{2} = 148.5 \cdot m^3$$

Trapezoid Volume Above Gate Footing Crest to End of Gate Footing:

$$V_{gfc.E1} := \left(L_{gfc} \cdot W_{twgg.E1}\right) \frac{Y_{C.E1} + Y_{TOE.E1}}{2} = 29.25 \cdot m^3$$

Load Above Gate Footing from Approach Slab to Crest:

$$H_{2.E1.asc} := V_{asc.E1} \cdot \gamma_w = 1456.79 \cdot kN$$

Load Acting Above Footing Crest from Toe:

$$H_{2.E1.asc.loc.x} := \frac{\left(L_{gf} - L_{gfc}\right) \cdot \left(2 \cdot d_{hw.E1} + Y_{C.E1}\right)}{3 \cdot \left(d_{hw.E1} + Y_{C.E1}\right)} + L_{gfc} = 6.59\ m$$

Load Above Gate Footing from Crest to End:

$$H_{2.E1.gfc} := V_{gfc.E1} \cdot \gamma_w = 286.94 \cdot kN$$

Load Acting Above Gate Footing from Crest to End:

$$H_{2.E1.gfc.loc.x} := \frac{\left(L_{gfc}\right) \cdot \left(2 \cdot Y_{C.E1} + Y_{TOE.E1}\right)}{3 \cdot \left(Y_{C.E1} + Y_{TOE.E1}\right)}$$

Vertical Water Weight (H2) on Gate Footing:

$$H_{2.E1} := H_{2.E1.asc} + H_{2.E1.gfc} = 1743.73 \cdot kN$$

Moment Arm for Application of Water Weight (H2) from toe:

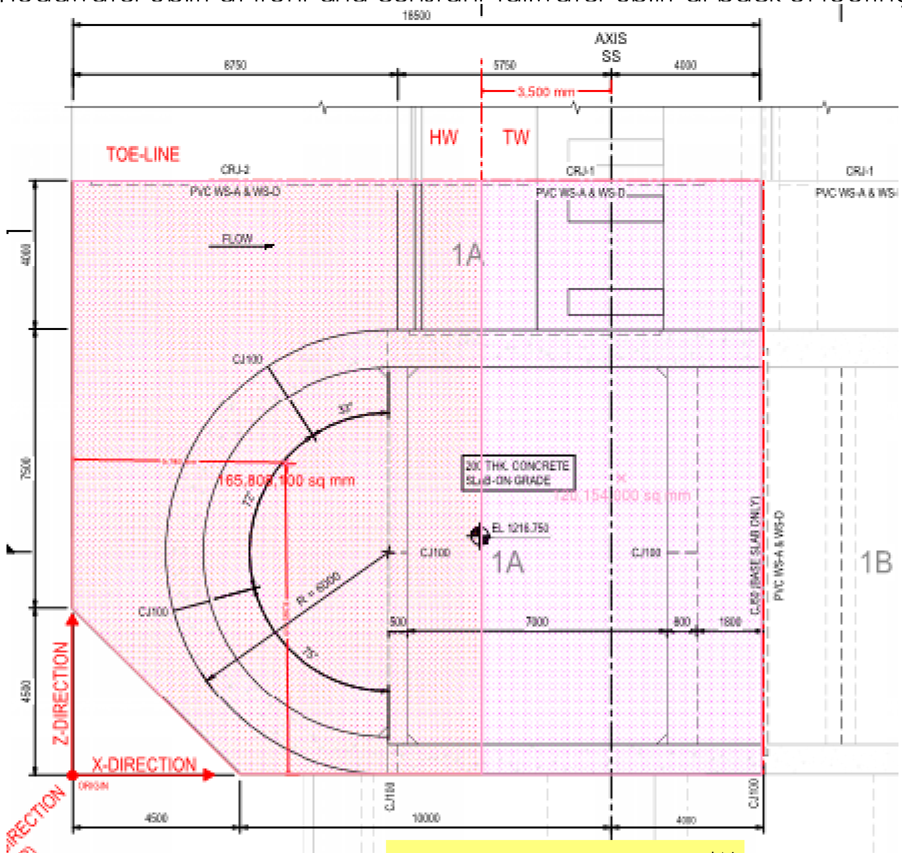
$$H_{2.E1.loc.x} := \frac{H_{2.E1.asc} \cdot H_{2.E1.asc.loc.x} + H_{2.E1.gfc} \cdot H_{2.E1.gfc.loc.x}}{H_{2.E1}} = 5.68\ m$$

Moment Arm for Applicaiton of Water Weight (H2) from toe (Z-Direction):

$$H_{2.E1.loc.z} := 2.0m$$

UPLIFT

(Assuming constant Headwater Uplift at front and constant Tailwater Uplift at back of footing base)



Uplift pressure at U/S Face (heel): $U_{HW.E1} := D_{hwas.E1} \cdot \gamma_w = 110.9 \cdot \frac{kN}{m^2}$

Uplift pressure at D/S Face Stilling Basin: $U_{TW.E1} := D_{twtoe.E1} \cdot \gamma_w = 87.31 \cdot \frac{kN}{m^2}$

Area of Uplift Force From Headwater Side: $A_{HWU.E1} := 165.81 m^2$ (From Bluebeam REVU)

Area of Uplift Force From Tailwater Side: $A_{TWU.E1} := 120.0 m^2$ (From Bluebeam REVU)

Uplift Force From Headwater Side: $U_{A.E1} := -U_{HW.E1} \cdot A_{HWU.E1} = -18380.54 \cdot kN$

Uplift Force From Headwater Side: $U_{B.E1} := -U_{TW.E1} \cdot A_{TWU.E1} = -10477.08 \cdot kN$

Uplift Centroid of Area From Headwater Side to Toe: $X_{U.A} = 13.22 m$ $Z_{U.A} = 7.63 m$ (From Bluebeam REVU)

Uplift Centroid of Area From Tailwater Side to Toe: $X_{U.B} = 3.75 m$ $Z_{U.B} = 8 m$ (From Bluebeam REVU)

Total Resultant Uplift force: $U_{E1} := U_{A.E1} + U_{B.E1} = -28857.62 \cdot kN$

Resultant Location from Toe Rect. Load (X-Direction): $U_{E1.loc.x} := \frac{\left(U_{A.E1} \cdot X_{U.A} + U_{B.E1} \cdot X_{U.B}\right)}{\left(U_{A.E1} + U_{B.E1}\right)} = 9.78 m$

Resultant Location from Toe Rect. Load (Z-Direction): $U_{E1.loc.z} := \frac{\left[U_{A.E1} \cdot \left(W_B - Z_{U.A}\right) + U_{B.E1} \cdot \left(W_B - Z_{U.B}\right)\right]}{\left(U_{A.E1} + U_{B.E1}\right)} = 8.23 m$

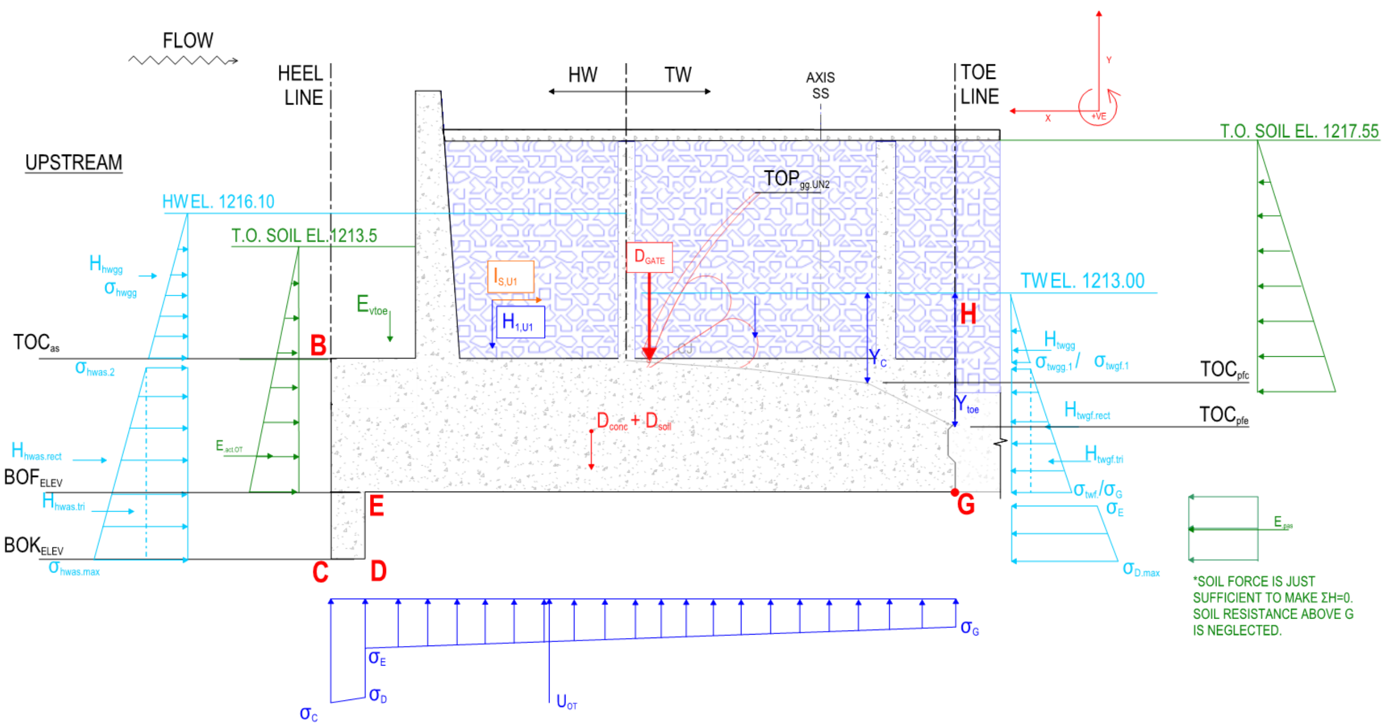
MONOLITH OVERTURNING STABILITY ANALYSIS

E1 CASE

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stablity of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for staticequilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1 $Ratio_{OT.E1.min} := 0.25$ at Rock Foundation



Uplift Loads for Overturning Stability Analysis (X-Direction)

Line of Creep:

Change in Water Head: $\Delta_{h.E1} := HW_{E1} - TW_{E1} = 2.4\,m$

Length from Point C to Point G: $L_{CG} = 18.61\,m$

Length from Various Points to Points: $L_{CD} = 1\,m$ $L_{DE} = 2\,m$ $L_{EG} = 17.5\,m$

$L_{GH.E1} := TW_{E1} - TOC_{afe} = 6.9\,m$

Length from Point C, D, E to G: $L_{CDEG} = 20.5\,m$ $L_{CDE} = 3\,m$

Water Pressure at Point C & G: $\sigma_{C.E1} := \sigma_{hwas.E1.2} = -110.85 \cdot kPa$ $\sigma_{G.E1} := \sigma_{twtoe.E1} \cdot -1 = -87.31 \cdot kPa$

Water Pressure at Point D:

$$\sigma_{D.E1} := -\gamma_w \cdot \left[\left(HW_{E1} - BOK_{elev} \right) - \frac{\Delta_{h.E1} \cdot L_{CD}}{L_{CDEG}} \right] = -129.32 \cdot kPa$$

Water Pressure at Point E:

$$\sigma_{E.E1} := -\gamma_w \cdot \left[\left(HW_{E1} - BOF_{elev} \right) - \frac{\Delta_{h.E1} \cdot L_{CDE}}{L_{CDEG}} \right] = -107.41 \cdot kPa$$

Uplift for Overturning Analysis on Bottom of Key:

$$U_{OT.E1.key} := \frac{\sigma_{C.E1} + \sigma_{D.E1}}{2} \cdot L_{CD} \cdot W_B = -1921.42 \cdot kN$$

Acting at:

$$U_{OT.E1.key.loc} := \frac{L_{CD} \cdot \left(2 \cdot \sigma_{C.E1} + \sigma_{D.E1} \right)}{3 \left(\sigma_{C.E1} + \sigma_{D.E1} \right)} + L_{EG} = 17.99\,m$$

E1 CASE

Uplift for Overturning Analysis on Bottom of Footing: $U_{OT.E1.ftg} := \frac{\sigma_{E.E1} + \sigma_{G.E1}}{2} \cdot L_{EG} \cdot W_B = -27260.32 \cdot kN$

Acting at: $U_{OT.E1.ftg.loc} := \frac{L_{EG} \cdot (\sigma_{G.E1} + 2 \cdot \sigma_{E.E1})}{3(\sigma_{G.E1} + \sigma_{E.E1})} = 9.05\ m$

Uplift Load for Overturning Analysis: $U_{OT.E1} := U_{OT.E1.key} + U_{OT.E1.ftg} = -29181.74 \cdot kN$

Uplift Load Acting from Toe: $U_{OT.E1.loc} := \frac{U_{OT.E1.key} \cdot U_{OT.E1.key.loc} + U_{OT.E1.ftg} \cdot U_{OT.E1.ftg.loc}}{U_{OT.E1}} = 9.64\ m$

All Vertical Loads Appliable to Overturning Stability Analysis

Total Concrete Dead Loads:	$D_{conc} = 35947.58 \cdot kN$	at:	$X_{conc.loc} = 8.81\ m$
Dead Load of Gate:	$D_{Gate} = 56.0 \cdot kN$		$X_{gate} = 9.50\ m$
Total Fill Loads:	$D_{fill} = 18056.6 \cdot kN$		$X_{fill.loc} = 7.31\ m$
Water Weight (HW) on Apron Slab:	$H_{1.E1} = 5703.6 \cdot kN$		$H_{1.E1.loc.x} = 14.42\ m$
Water Weight (TW) on Guard Gate Footing:	$H_{2.E1} = 1743.7 \cdot kN$		$H_{2.E1.loc.x} = 5.68\ m$
Uplift Load for Overturning Analysis:	$U_{OT.E1} = -29181.74 \cdot kN$		$U_{OT.E1.loc} = 9.64 \cdot m$

Sum of All Overturning Analysis Vertical Load:

$$\Sigma V_{E1.OT} := D_{conc} + D_{Gate} + D_{fill} + H_{1.E1} + H_{2.E1} + U_{OT.E1} = 32325.78 \cdot kN$$

Sum of All Overturning Analysis Vertical Load Moments:

$$\Sigma M_{V.E1.OT} := \left(\begin{array}{l} D_{conc} \cdot X_{conc.loc} + D_{Gate} \cdot X_{gate} + D_{fill} \cdot X_{fill.loc} + H_{1.E1} \cdot H_{1.E1.loc.x} \ldots \\ + H_{2.E1} \cdot H_{2.E1.loc.x} + U_{OT.E1} \cdot U_{OT.E1.loc} \end{array}\right) = 260199.77 \cdot kN \cdot m$$

Lateral Tailwater Loads for Overturning Stability Analysis

TW Lateral Load on Gate Footing (No Key - Overturning Values Adjusted): $H_{twgf.E1} = 2166.05 \cdot kN$

Acting at: $H_{twgf.E1.loc} = 1.81\ m$

Horizontal Tailwater Pressure Top of Key (Overturning Analysis): $\sigma_{twtk.OT.E1} := \sigma_{E.E1} \cdot -1 = 107.41 \cdot kPa$

Horizontal Tailwater Pressure Bottom of Key (Overturning Analysis): $\sigma_{twbk.OT.E1} := \sigma_{D.E1} \cdot -1 = 129.32 \cdot kPa$

Triangular Distribution Unit Load Acting at Key: $H_{twbk.OT.E1.tri} := \frac{(\sigma_{twbk.OT.E1} - \sigma_{twtk.OT.E1})}{2} \cdot d_{key} \cdot W_{tw.E1} = 350.67 \cdot kN$

Triangular Distribution Unit Load Acting at Key: $H_{twbk.OT.E1.rect} := \sigma_{twtk.OT.E1} \cdot d_{key} \cdot W_{tw.E1} = 3437.04 \cdot kN$

Total Horizontal Tailwater Load on Key (Overturning Values Adjusted): $H_{twkey.OT.E1} := H_{twbk.OT.E1.tri} + H_{twbk.OT.E1.rect} = 3787.71 \cdot kN$

Acting at:

$$H_{twkey.OT.E1.loc} := \frac{H_{twbk.OT.E1.tri} \cdot \frac{-2 \cdot d_{key}}{3} + H_{twbk.OT.E1.rect} \cdot \frac{-d_{key}}{2}}{H_{twkey.OT.E1}} = -1.03 \cdot m$$

Lateral Driving Earth Loads for Overturning Stability Analysis (at rest condition)

E1 CASE

Depth of Driving Soil Loads (to top of key): $h_{E.OT.E1} := TOC_{as} - BOF_{elev} = 4\ m$

At-Rest Soil Load: $E_{act.OT.E1} := \frac{\left(K_{o.E1} \cdot h_{E.OT.E1}^{2}\right)}{2} \cdot \left(\gamma_r - \gamma_w\right) \cdot W_{hwas.E1} \cdot -1 = -1026.66 \cdot kN$

At Rest- Soil Load Acting from Toe: $E_{act.OT.E1.loc} := \frac{h_{E.OT.E1}}{3} = 1.33\ m$

All Lateral Loads Appliable to Overturning Stability Analysis (X-direction)

HW Lateral Load on Approach Slab:	$H_{hwas.E1} = -5838.9 \cdot kN$	$H_{hwas.E1.loc} = 1.86\ m$
HW Lateral Load on Guard Gate:	$H_{hwgg.E1} = 0.0 \cdot kN$	$H_{hwgg.E1.loc} = 4.00\ m$
HW Lateral Load on Abutment:	$H_{hwa.E1} = -3136.6 \cdot kN$	$H_{hwa.E1.loc} = 6.43\ m$
TW Lateral Load on Abutment:	$H_{twa.E1} = 1413.2 \cdot kN$	$H_{twa.E1.loc} = 5.63\ m$
TW Lateral Load on Guard Gate:	$H_{twgg.E1} = 0.0 \cdot kN$	$H_{twgg.E1.loc} = 4.00\ m$
TW Lateral Load on Gate Footing (No Key - Overturning Values Adjusted):	$H_{twgf.E1} = 2166.05 \cdot kN$	$H_{twgf.E1.loc} = 1.81\ m$
TW Lateral Load on Key:	$H_{twkey.OT.E1} = 3787.71 \cdot kN$	$H_{twkey.OT.E1.loc} = -1.03\ m$
Ice / Impact Load:	$I_{E1} = 5704.0 \cdot kN$	$I_{E1.loc.y} = 11.00\ m$
Lateral Soil Load (driving):	$E_{act.OT.E1} = -1026.7 \cdot kN$	$E_{act.OT.E1.loc} = 1.33\ m$

Resisting Lateral Soil Load as required to produce horizontal equilibrium:

$$E_{pas.OT.x.E1} := -\left(H_{hwas.E1} + H_{hwgg.E1} + H_{hwgg.E1} + H_{twgg.E1} \cdots + H_{twgf.E1} + H_{twkey.OT.E1} + I_{E1} + E_{act.OT.E1}\right) = -4792.19 \cdot kN$$

Acting at:

$$E_{pas.OT.E1.loc} := -1 \cdot \frac{d_{key}}{2} = -1\ m$$

Sum of All Overturning Analysis Horizontal Load (ΣH=0):

$$\Sigma H_{E1.OT.x} := H_{hwas.E1} + H_{hwgg.E1} + H_{twgg.E1} + H_{twgf.E1} + H_{twkey.OT.E1} + I_{E1} + E_{act.OT.E1} + E_{pas.OT.x.E1} = 0 \cdot kN$$

Sum of All Overturning Analysis Horizontal Load Moments:

$$\begin{aligned}\Sigma M_{H.E1.OT.x} := {} & H_{hwas.E1} \cdot H_{hwas.E1.loc} + H_{hwgg.E1} \cdot H_{hwgg.E1.loc} \cdots \\ & + H_{twgg.E1} \cdot H_{twgg.E1.loc} + H_{twgf.E1} \cdot H_{twgf.E1.loc} \cdots \\ & + H_{twkey.OT.E1} \cdot H_{twkey.OT.E1.loc} + I_{E1} \cdot I_{E1.loc.y} \cdots \\ & + E_{act.OT.E1} \cdot E_{act.OT.E1.loc} + E_{pas.OT.x.E1} \cdot E_{pas.OT.E1.loc}\end{aligned} = 55335.54 \cdot kN \cdot m$$

Overturning Stability Analysis (X-Direction)

$$\Sigma M_{E1.OT.x} := \Sigma M_{V.E1.OT} + \Sigma M_{H.E1.OT.x} = 315535.31 \cdot kN \cdot m$$

$$X_{R.E1} := \frac{\Sigma M_{E1.OT.x}}{\Sigma V_{E1.OT}} = 9.76\ m \qquad x_{OT.E1} := X_{R.E1} - \frac{L_B}{2} = 0.51\ m$$

Overturning Resultant Ratio

$$Ratio_{OT.x.E1} := \frac{X_{R.E1}}{L_B} = 0.53$$

$$Ratio_{OT.x.E1.check} := \begin{vmatrix} \text{"OKAY"} & \text{if } Ratio_{OT.x.E1} \geq Ratio_{OT.E1.min} \\ \text{"Revise Structure"} & \text{otherwise} \end{vmatrix} = \text{"OKAY"}$$

$$x_{OT.check.E1} := \begin{vmatrix} \text{"OKAY"} & \text{if } \left|x_{OT.E1}\right| \leq Kern_x \\ \text{"Revise Structure"} & \text{otherwise} \end{vmatrix} = \text{"OKAY"}$$

All Lateral Loads Appliable to Overturning Stability Analysis (Z-direction)

E1 CASE

Z-Direction Lateral Soil Load on Abutment Before RCC (driving): $E_{act.a.E1.z} = -819.5 \cdot kN$ $E_{act.a.E1.z.loc.y} = 4.00\ m$

Z-Direction Lateral Lateral Soil Load on Approach Slab Before RCC (driving): $E_{act.as.E1.z} = -2192.6 \cdot kN$ $E_{act.as.E1.z.loc.y} = 1.76\ m$

Z-Direction Lateral Soil Load on Abutment After RCC (driving): $E_{act.RCC.E1.z} = -9.24 \cdot kN$ $E_{act.RCC.E1.z.loc.y} = 10.03\ m$

Z-Direction Lateral Soil Load on Abutment at RCC Steps (driving): $E_{act.RCC.s.E1.z} = -16.94 \cdot kN$ $E_{act.RCC.s.E1.z.loc.y} = 9.43 \cdot m$

Resisting Lateral Soil Load as required to produce horizontal equilibrium:

$$E_{pas.OT.z.E1} := -\left(E_{act.a.E1.z} + E_{act.as.E1.z} + E_{act.RCC.E1.z} + E_{act.RCC.s.E1.z}\right) = 3038.27 \cdot kN$$

Acting at:

$$E_{pas.OT.E1.loc} = -1\ m$$

Sum of All Overturning Analysis Horizontal Load (ΣH=0):

$$\Sigma H_{E1.OT.z} := E_{act.a.E1.z} + E_{act.as.E1.z} + E_{act.RCC.E1.z} + E_{act.RCC.s.E1.z} + E_{pas.OT.z.E1} = 0 \cdot kN$$

Sum of All Overturning Analysis Horizontal Load Moments:

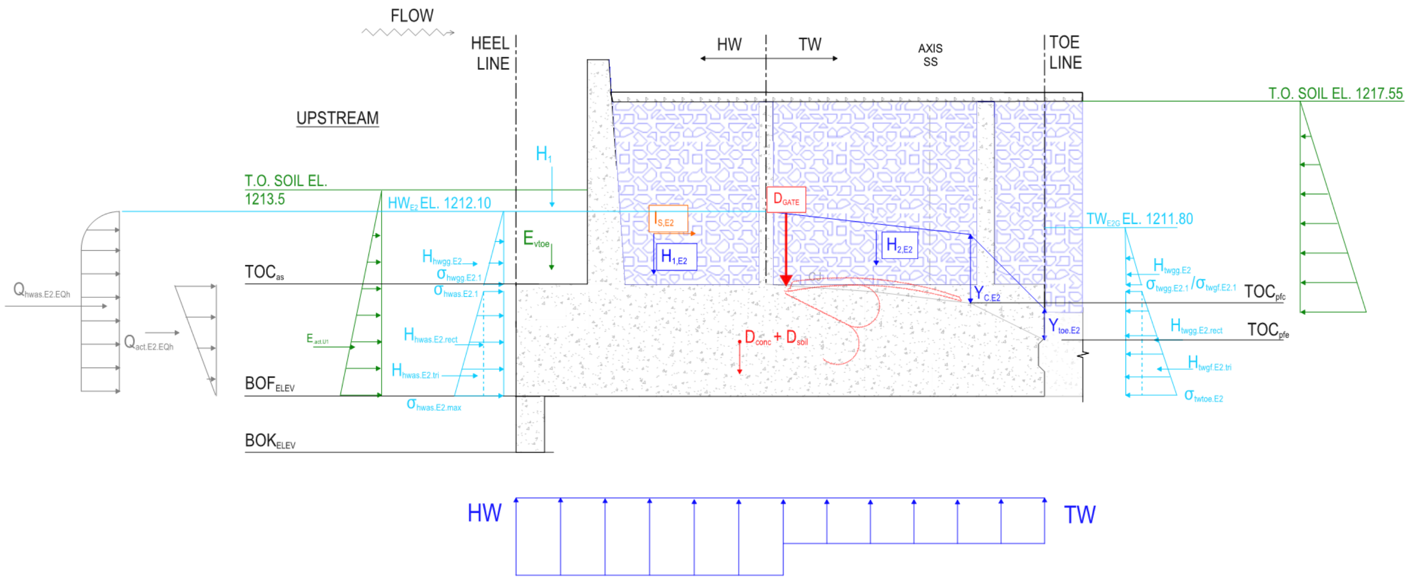
SUMMARY OF STABILITY ASSESSMENT:

E1 CASE

Sliding Factor of Safety: (Horizontal Plane)	$FS_{HorizSliding.E1} = 4.27$	$FS_{HorizSliding.E1.Check} =$ "OKAY"
Flotation Factor of Safety (horizontal plane)	$FS_{act.FE1} = 2.13$	$FS_{check.FE1} =$ "OKAY"
Overturning Resultant Ratio: (X-direction)	$Ratio_{OT.x.E1} = 0.53$	$Ratio_{OT.x.E1.check} =$ "OKAY"
Overturning Resultant Ratio: (Z-direction)	$Ratio_{OT.z.E1} = 0.43$	$Ratio_{OT.z.E1.check} =$ "OKAY"
Eccentricity: (horizontal plane)	$x_{OT.E1} = 0.51\ m$	$x_{OT.check.E1} =$ "OKAY"
Eccentricity: (horizontal plane)	$z_{OT.E1} = -0.03\ m$	$z_{OT.check.E1} =$ "OKAY"
Bearing Pressure At Heel(x)- Heel(z): (horizontal plane)	$\sigma_{heel.E1} = 158 \cdot kPa$	$\sigma_{heel.E1.check} =$ "Okay"
Bearing Pressure At Toe(x)-Toe(z): (horizontal plane)	$\sigma_{toe.E1} = 73 \cdot kPa$	$\sigma_{toe.E1.check} =$ "Okay"
Bearing Pressure at Heel(x)-Toe(z): (horizontal plane)	$\sigma_{heeltoe.E1} = 112 \cdot kPa$	$\sigma_{heeltoe.E1.check} =$ "Okay"
Bearing Pressure at Toe(x)-Heel(z): (horizontal plane)	$\sigma_{toeheel.E1} = 118 \cdot kPa$	$\sigma_{toe.E1.check} =$ "Okay"

E2 DESIGN CASE



U1 CASE PLUS SEISMIC

ACCEPTANCE PARAMETERS

Required Factor of Safety for Sliding: $FS_{req.E2.sl} := 1.0$ (Without Cohesion) (Section 8.1, Design Criteria)

Resultant Within Middle Half of Base: $e \le \frac{L_b}{4} \wedge e \ge \frac{-L_b}{4}$

Allowable Rock Bearing Pressure: $\sigma_{allow.E2} := 1740 \cdot \frac{kN}{m^2}$ (Section 5.2, Design Criteria)

Required Factor of Safety for Flotation: $FS_{req.E2.flt} := 1.1$

INPUT PARAMETERS

Headwater Elevation: $HW_{E2} := 1212.10m$ (Section 8.3, Design Criteria)

Tailwater Elevation: $TW_{E2} := 1211.80m$ (Section 8.3, Design Criteria)

Bottom of Footing Elevation: $BOF_{elev} = 1206.00\ m$

Approach Slab Top of Concrete Elevation at Upstream Face: $TOC_{as} = 1210.00\ m$

Abutment Footing Top of Concrete Elevation at Stilling Basin: $TOC_{afe} = 1208\ m$

Abutment Footing Top of Concrete Elevation at Footing: $TOC_{afc} = 1209.73\ m$

Abutment Footing Top of Concrete Elevation at Footing Notch: $TOC_{afc.n} = 1209.3\ m$

Top of Guard Gate Elevation: $TOP_{gg.E2} := 1210.0m$

Bottom of Key Elevation: $BOK_{elev} = 1204\ m$

Gates are open when top of gate elevation is at 1210.0m

Gates are closed/up when top of gate elevation is at 1215.0m

SEISMIC LOAD (Three combinations of E_h and E_v considered) — E2.1 CASE

Seismic Case $Q_{E2.1}$ - 100% Horizontal Seismic Force, No Vertical

Include Seismic Load in Analysis? $Eq_{E2.1} := 1$ 0 = No, 1 = Yes

Horizontal Seismic Coefficient: $K_{h.E2.1} := -0.17$

Vertical Seismic Coefficient: $K_{v.E2.1} := -0.00$

Vertical Tailwater on Approach Slab: $H_{1.U1} = 1640.77 \cdot kN$

Acting At: $H_{1.U1.loc.x} = 14.42\ m$ $H_{1.U1.loc.z} = 4.73\ m$

Width of HW acting on Approach Slab (Z-dir.): $W_{hwas.U1.z} := 7.9m$

Width of TW acting on 1A Foundation (Z-dir.): $W_{twf.U1.z} := L_B - W_{hwas.U1.z} = 10.6\ m$

HORIZONTAL SEISMIC LOADS — **Loads** — **Moment Arm**

Horiz Seismic Component of Concrete: $Q_{conc.E2.EQh.1} := D_{conc} \cdot K_{h.E2.1} \cdot Eq_{E2.1} = -6111.1 \cdot kN$ $Y_{conc.loc} = 3.62\ m$

Horiz Seismic Component of Gates: $Q_{Gate.E2.EQh.1} := D_{Gate} \cdot K_{h.E2.1} \cdot Eq_{E2.1} = -9.5 \cdot kN$ $Y_{gate} = 4.00\ m$

Horiz Seismic Component of Fill: $Q_{fill.E2.EQh.1} := D_{fill} \cdot K_{h.E2.1} \cdot Eq_{E2.1} = -3069.6 \cdot kN$ $Y_{fill.loc} = 7.25\ m$

Horizontal Seismic Component of Headwater - Sliding (X-dir.):

$$Q_{hwas.E2.EQh.1.x} := \left(\frac{7}{12}\right) \cdot K_{h.E2.1} \cdot \gamma_w \cdot \left(HW_{U1} - BOF_{elev}\right)^2 \cdot W_{hwas.U1} \cdot Eq_{E2.1} = -579.2 \cdot kN$$

Linear pressure superimposed at Corners by both Moment_X and Moment_Z not considered in seismic case.

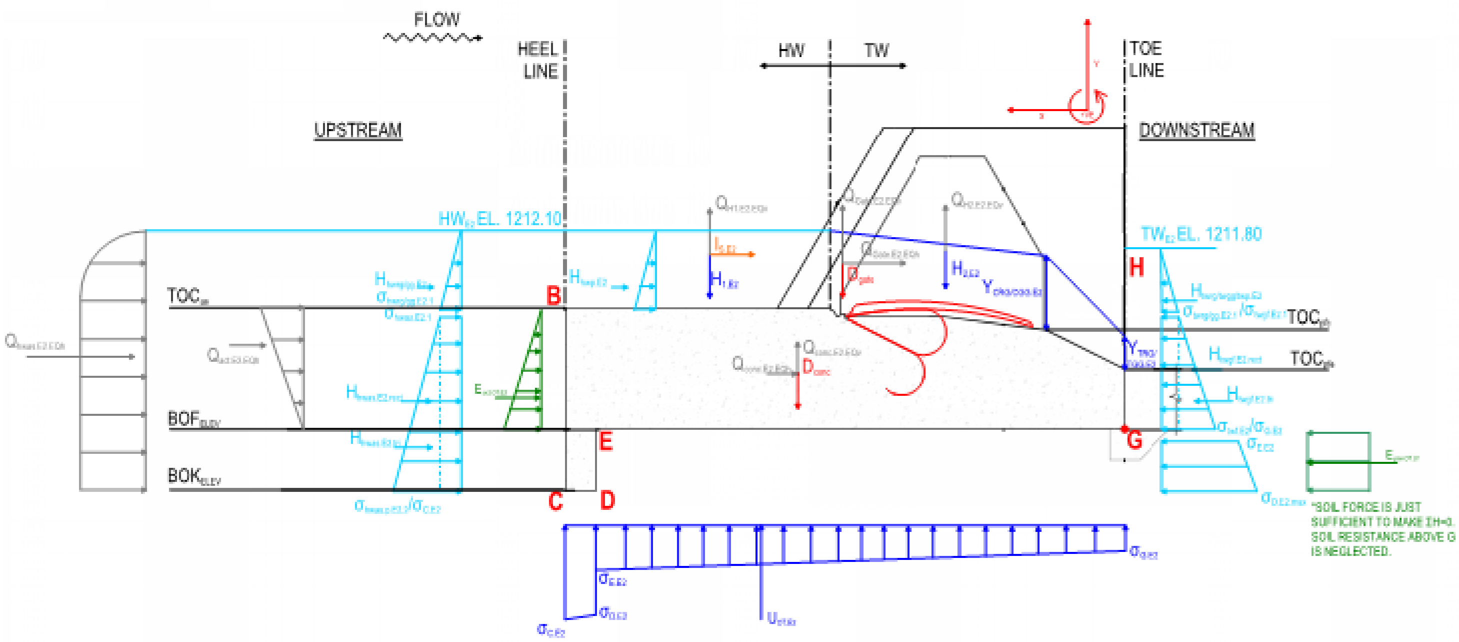
MONOLITH OVERTURNING STABILITY ANALYSIS

E2.1 CASE

Seismic Case $Q_{E2.1}$: 100% Horizontal Seismic Force, No Vertical

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stability of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1 $Ratio_{overturning.allow.Extreme} := 0.25$ Resultant within Base



All Vertical Loads Applicable to Overturning Stability Analysis

Total Concrete Dead Loads:	$D_{conc} = 35947.58 \cdot kN$	at:	$X_{conc.loc} = 8.81\ m$
Dead Load of Gate:	$D_{Gate} = 56.0 \cdot kN$		$X_{gate} = 9.50\ m$
Water Weight (HW) on Apron Slab:	$H_{1.U1} = 1640.8 \cdot kN$		$H_{1.U1.loc.x} = 14.42\ m$
Water Weight (TW) on Gate Footing:	$H_{2.U1} = 731.0 \cdot kN$		$H_{2.U1.loc.x} = 5.28\ m$
Uplift Load for Overtuming Analysis:	$U_{OT.U1} = -17396.43 \cdot kN$		$U_{OT.U1.loc} = 9.4 \cdot m$
Vertical Seismic Component of Concrete Structure:	$Q_{conc.E2.EQv.1} = 0$		$X_{conc.loc} = 8.81\ m$
Vertical Seismic Component of Crest Gate:	$Q_{Gate.E2.EQv.1} = 0$		$X_{gate} = 9.50\ m$

Vertical Seismic Component of Headwater over Fixed Crest Slab:	$Q_{H2.E2.EQv.1} = 0$		$H_{2.U1.loc.x} = 5.28\ m$

Sum of All Overturning Analysis Vertical Load:

$$\Sigma V_{E2.OT.1} := D_{conc} + D_{Gate} + H_{1.U1} + H_{2.U1} + U_{OT.U1} + \Sigma V_{Q.E2.EQv.1} = 20978.95 \cdot kN$$

Sum of All Overturning Analysis Vertical Load Moments:

$$\Sigma M_{V.E2.OT.1} := D_{conc} \cdot X_{conc.loc} + D_{Gate} \cdot X_{gate} + H_{1.U1} \cdot H_{1.U1.loc.x} + H_{2.U1} \cdot H_{2.U1.loc.x} + U_{OT.U1} \cdot U_{OT.U1.loc} = 181354.01 \cdot kN \cdot m$$

Lateral Driving Earth Loads for Overturning Stability Analysis (at rest condition) **E2.1 CASE**

Depth of Driving Soil Loads (to top of key): $h_{E.OT.E2.1} := TOC_{as} - BOF_{elev} = 4\ m$

Applicable Soil Load: $E_{act.OT.E2.1} := \frac{\left(K_{o.U1} \cdot h_{E.OT.U1}{}^{2}\right)}{2} \cdot \left(\gamma_r - \gamma_w\right) \cdot W_{hwas.U1} \cdot -1 = -1026.66 \cdot kN$

At Rest- Soil Load Acting from Toe: $E_{act.OT.E2.1.loc} := \frac{h_{E.OT.U1}}{3} = 1.33\ m$

All Lateral Loads Applicable to Overturning Stability Analysis

HW Lateral Load on Approach Slab:	$H_{hwas.U1} = -2574.1 \cdot kN$	$H_{hwas.U1.loc} = 1.67\ m$
HW Lateral Load on Guard Gate:	$H_{hwgg.U1} = 0.0 \cdot kN$	$H_{hwgg.U1.loc} = 4.00\ m$
TW Lateral Load on Guard Gate:	$H_{twgg.U1} = 0.0 \cdot kN$	$H_{twgg.U1.loc} = 4.00\ m$
TW Lateral Load on Gate Footing (No Key - Overturning Values Adjusted):	$H_{twgf.U1} = 2385.79 \cdot kN$	$H_{twgf.U1.loc} = 1.65\ m$
TW Lateral Load on Key:	$H_{twkey.OT.U1} = 2219.64 \cdot kN$	$H_{twkey.OT.U1.loc} = -1.05\ m$
Ice / Impact Load:	$I_{U1} = 0.0 \cdot kN$	$I_{U1.loc.y} = 5.80\ m$
Lateral Soil Load (driving):	$E_{act.OT.U1} = -1026.7 \cdot kN$	$E_{act.OT.U1.loc} = 1.33\ m$
Horizontal Seismic Component of Concrete Structure:	$Q_{conc.E2.EQh.1} = -6111.09 \cdot kN$	$Y_{conc.loc} = 3.62\ m$
Horizontal Seismic Component of Vertical Lift Gate:	$Q_{Gate.E2.EQh.1} = -9.52 \cdot kN$	$Y_{gate} = 4.00\ m$
Horizontal Seismic Component of Headwater on Slab Footing:	$Q_{hwas.E2.EQh.1.x} = -579.18 \cdot kN$	$Y_{HWg.E2.x} = 2.44\ m$
Horizontal Seismic Component of Active Soil: (Section 5-5, USACE EM_1110-2-2100)	$Q_{act.E2.EQh.1.x} = -530.51 \cdot kN$	$Y_{E.act.E2.x} = 2.52\ m$

Resisting Lateral Soil Load as required to produce horizontal equilibrium:

$E_{pas.OT.E2.1} := -\left(H_{hwas.U1} + H_{hwgg.U1} + H_{twgg.U1} + H_{twgf.U1} + H_{twkey.OT.U1} + I_{U1} + E_{act.OT.U1} + \Sigma H_{Q.E2.EQh.1.OT.x}\right) = 105.06 \cdot kN$

Acting at: $E_{pas.OT.E2.1.loc} := -1 \cdot \frac{d_{key}}{2} = -1\ m$

Sum of All Overturning Analysis Horizontal Load (ΣH=0):

$\Sigma H_{E2.OT.1} := H_{hwas.U1} + H_{hwgg.U1} + H_{twgg.U1} + H_{twgf.U1} + H_{twkey.OT.U1} + I_{U1} + E_{act.OT.U1} + E_{pas.OT.E2.1} + \Sigma H_{Q.E2.EQh.1.OT.x} = 0 \cdot kN$

Sum of All Overturning Analysis Horizontal Load Moments:

$$\Sigma M_{H.E2.OT.1} := H_{hwas.U1} \cdot H_{hwas.U1.loc} + H_{hwgg.U1} \cdot H_{hwgg.U1.loc} + H_{twgg.U1} \cdot H_{twgg.U1.loc} \cdots + H_{twgf.U1} \cdot H_{twgf.U1.loc} + H_{twkey.OT.U1} \cdot H_{twkey.OT.U1.loc} + I_{U1} \cdot I_{U1.loc.y} \cdots + E_{act.OT.U1} \cdot E_{act.OT.U1.loc} + E_{pas.OT.x.U1} \cdot E_{pas.OT.U1.loc} + \Sigma M_{Q.E2.1} = -47509.42 \cdot kN \cdot m$$

Overturning Stability Analysis

$\Sigma M_{E2.OT.1} := \Sigma M_{V.E2.OT.1} + \Sigma M_{H.E2.OT.1} = 133844.58 \cdot kN \cdot m$

$X_{R.E2.1} := \frac{\Sigma M_{E2.OT.1}}{\Sigma V_{E2.OT.1}} = 6.38\ m$ $\qquad x_{OT.E2.1} := X_{R.E2.1} - \frac{L_B}{2} = -2.87\ m$

Overturning Resultant Ratio

$Ratio_{OT.E2.1} := \frac{X_{R.E2.1}}{L_B} = 0.34$

$Ratio_{OT.E2.1.check} := \begin{cases} \text{"OKAY"} & \text{if } Ratio_{OT.E2.1} \geq Ratio_{overturning.allow.Extreme} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"OKAY"}$

SEISMIC LOAD (Three combinations of E_h and E_v considered)

E2.2 CASE

Seismic Case $Q_{E2.2}$ - 100% Horizontal Seismic Force, 30% Vertical

Include Seismic Load in Analysis? $Eq_{E2.2} := 1$ 0 = No, 1 = Yes

Horizontal Seismic Coefficient: $K_{h.E2.2} := -0.17$

Vertical Seismic Coefficient: $K_{v.E2.2} := -0.03$

Vertical Tailwater on Approach Slab: $H_{1.U1} = 1640.77 \cdot kN$

Acting At: $H_{1.U1.loc.x} = 14.42\ m$ $H_{1.U1.loc.z} = 4.73\ m$

$\sigma_{toeheel.E2.2.check} = \text{"Okay"}$

Small Tension in corner is calculated under E2.2 Load Case, - to be reviewed in detail using 3D analysis during final design and cracked base to be reviewed as applicable, however due to the average compression along each exterior foundation line the tension appears to be minimal.

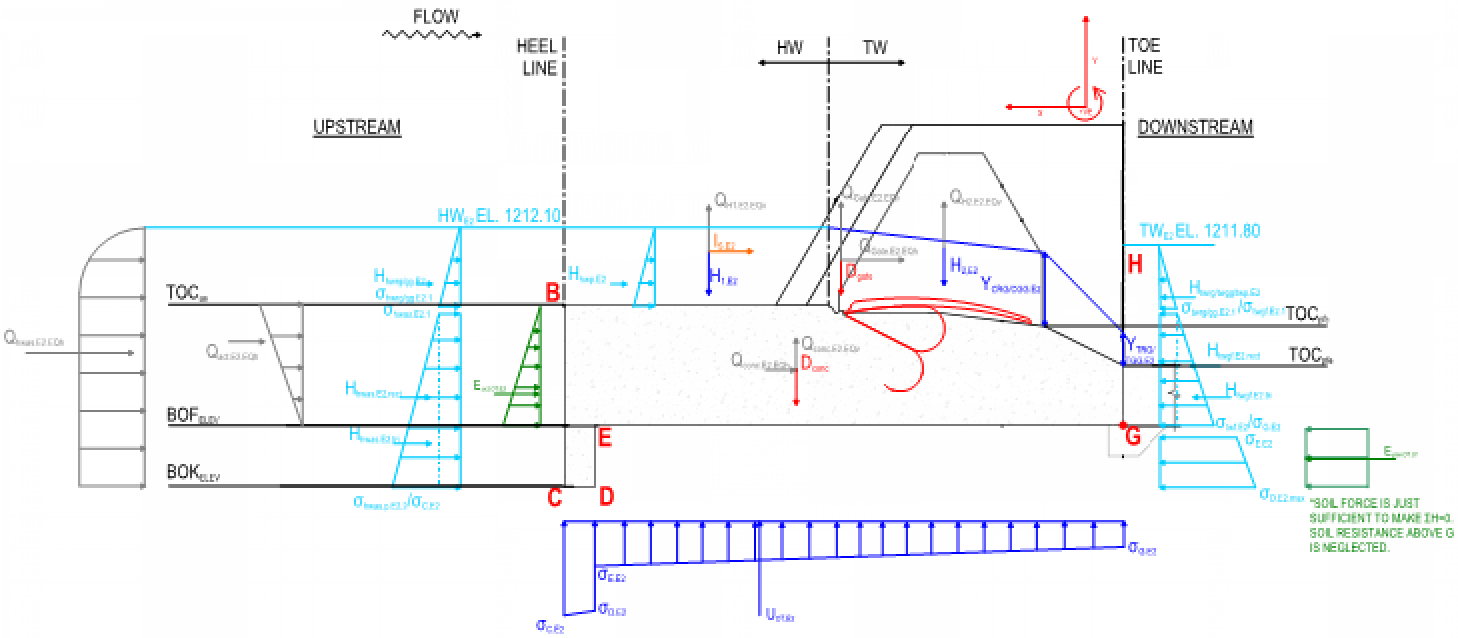
E2.2 CASE

MONOLITH OVERTURNING STABILITY ANALYSIS

Seismic Case $Q_{E2.2}$: 100% Horizontal Seismic Force, 30% Vertical

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stability of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1 $Ratio_{overturning.allow.Extreme} = 0.25$ Resultant within Base



<u>All Vertical Loads Applicable to Overturning Stability Analysis</u>

Total Concrete Dead Loads:	$D_{conc} = 35947.58 \cdot kN$	at:	$X_{conc.loc} = 8.81\ m$
Dead Load of Gate:	$D_{Gate} = 56.0 \cdot kN$		$X_{gate} = 9.50\ m$
Water Weight (HW) on Apron Slab:	$H_{1.U1} = 1640.8 \cdot kN$		$H_{1.U1.loc.x} = 14.42\ m$
Water Weight (TW) on Gate Footing:	$H_{2.U1} = 731.0 \cdot kN$		$H_{2.U1.loc.x} = 5.28\ m$
Uplift Load for Overturning Analysis:	$U_{OT.U1} = -17396.43 \cdot kN$		$U_{OT.U1.loc} = 9.4 \cdot m$
Vertical Seismic Component of Concrete Structure:	$Q_{conc.E2.EQv.2} = -1078.43 \cdot kN$		$X_{conc.loc} = 8.81\ m$
Vertical Seismic Component of Crest Gate:	$Q_{Gate.E2.EQv.2} = -1.68 \cdot kN$		$X_{gate} = 9.50\ m$
Vertical Seismic Component of Headwater over Apron Slab:	$Q_{H1.E2.EQv.2} = -49.22 \cdot kN$		$H_{1.U1.loc.x} = 14.42\ m$
Vertical Seismic Component of Headwater over Fixed Crest Slab:	$Q_{H2.E2.EQv.2} = -21.93 \cdot kN$		$H_{2.U1.loc.x} = 5.28\ m$

Sum of All Overturning Analysis Vertical Load:

$$\Sigma V_{E2.OT.2} := D_{conc} + D_{Gate} + H_{1.U1} + H_{2.U1} + U_{OT.U1} + \Sigma V_{Q.E2.EQv.2} = 19285.99 \cdot kN$$

Sum of All Overturning Analysis Vertical Load Moments:

$$\Sigma M_{V.E2.OT.2} := D_{conc} \cdot X_{conc.loc} + D_{Gate} \cdot X_{gate} + H_{1.U1} \cdot H_{1.U1.loc.x} + H_{2.U1} \cdot H_{2.U1.loc.x} + U_{OT.U1} \cdot U_{OT.U1.loc} = 181354.01 \cdot kN \cdot m$$

Lateral Driving Earth Loads for Overturning Stability Analysis (at rest condition)

E2.2 CASE

Depth of Driving Soil Loads (to top of key): $h_{E.OT.E2.2} := TOC_{as} - BOF_{elev} = 4\ m$

Applicable Soil Load: $E_{act.OT.E2.2} := \frac{\left(K_{o.U1} \cdot h_{E.OT.U1}{}^{2}\right)}{2} \cdot \left(\gamma_r - \gamma_w\right) \cdot W_{hwas.U1} \cdot -1 = -1026.66 \cdot kN$

At Rest- Soil Load Acting from Toe: $E_{act.OT.E2.2.loc} := \frac{h_{E.OT.U1}}{3} = 1.33\ m$

All Lateral Loads Applicable to Overturning Stability Analysis

HW Lateral Load on Approach Slab:	$H_{hwas.U1} = -2574.1 \cdot kN$	$H_{hwas.U1.loc} = 1.67\ m$
HW Lateral Load on Guard Gate:	$H_{hwgg.U1} = 0.0 \cdot kN$	$H_{hwgg.U1.loc} = 4.00\ m$
TW Lateral Load on Guard Gate:	$H_{twgg.U1} = 0.0 \cdot kN$	$H_{twgg.U1.loc} = 4.00\ m$
TW Lateral Load on Gate Footing (No Key - Overturning Values Adjusted):	$H_{twgf.U1} = 2385.79 \cdot kN$	$H_{twgf.U1.loc} = 1.65\ m$
TW Lateral Load on Key:	$H_{twkey.OT.U1} = 2219.64 \cdot kN$	$H_{twkey.OT.U1.loc} = -1.05\ m$
Ice / Impact Load:	$I_{U1} = 0.0 \cdot kN$	$I_{U1.loc.y} = 5.80\ m$
Lateral Soil Load (driving):	$E_{act.OT.U1} = -1026.7 \cdot kN$	$E_{act.OT.U1.loc} = 1.33\ m$
Horizontal Seismic Component of Concrete Structure:	$Q_{conc.E2.EQh.2} = -6111.09 \cdot kN$	$Y_{conc.loc} = 3.62\ m$
Horizontal Seismic Component of Vertical Lift Gate:	$Q_{Gate.E2.EQh.2} = -9.52 \cdot kN$	$Y_{gate} = 4.00\ m$
Horizontal Seismic Component of Headwater on Slab Footing:	$Q_{hwas.E2.EQh.2.x} = -1021.23 \cdot kN$	$Y_{HWg.E2.x} = 2.44\ m$
Horizontal Seismic Component of Active Soil: (Section 5-5, USACE EM_1110-2-2100)	$Q_{act.E2.EQh.2.x} = -1193.64 \cdot kN$	$Y_{E.act.E2.x} = 2.52\ m$

Resisting Lateral Soil Load as required to produce horizontal equilibrium:

$$E_{pas.OT.E2.2} := -\left(H_{hwas.U1} + H_{hwgg.U1} + H_{twgg.U1} + H_{twgf.U1} + H_{twkey.OT.U1} + I_{U1} + E_{act.OT.U1} + \Sigma H_{Q.E2.EQh.2.OT.x}\right) = 547.11 \cdot kN$$

Acting at: $E_{pas.OT.E2.2.loc} := -1 \cdot \frac{d_{key}}{2} = -1\ m$

Sum of All Overturning Analysis Horizontal Load (ΣH=0):

$$\Sigma H_{E2.OT.2} := H_{hwas.U1} + H_{hwgg.U1} + H_{twgg.U1} + H_{twgf.U1} + H_{twkey.OT.U1} + I_{U1} + E_{act.OT.U1} + E_{pas.OT.E2.2} + \Sigma H_{Q.E2.EQh.2.OT.x} = 0 \cdot kN$$

Sum of All Overturning Analysis Horizontal Load Moments:

$$\Sigma M_{H.E2.OT.2} := H_{hwas.U1} \cdot H_{hwas.U1.loc} + H_{hwgg.U1} \cdot H_{hwgg.U1.loc} + H_{twgg.U1} \cdot H_{twgg.U1.loc} \cdots = -47509.42 \cdot kN \cdot m$$
$$+ H_{twgf.U1} \cdot H_{twgf.U1.loc} + H_{twkey.OT.U1} \cdot H_{twkey.OT.U1.loc} + I_{U1} \cdot I_{U1.loc.y} \cdots$$
$$+ E_{act.OT.U1} \cdot E_{act.OT.U1.loc} + E_{pas.OT.x.U1} \cdot E_{pas.OT.U1.loc} + \Sigma M_{Q.E2.2}$$

Overturning Stability Analysis

$\Sigma M_{E2.OT.2} := \Sigma M_{V.E2.OT.2} + \Sigma M_{H.E2.OT.2} = 133844.58 \cdot kN \cdot m$

$X_{R.E2.2} := \frac{\Sigma M_{E2.OT.2}}{\Sigma V_{E2.OT.2}} = 6.94\ m$ $x_{OT.E2.2} := X_{R.E2.2} - \frac{L_B}{2} = -2.31\ m$

Overturning Resultant Ratio

$Ratio_{OT.E2.2} := \frac{X_{R.E2.2}}{L_B} = 0.38$

$Ratio_{OT.E2.2.check} :=$ | "OKAY" if $Ratio_{OT.E2.2} \geq Ratio_{overturning.allow.Extreme}$ = "OKAY"
"Revise Structure" otherwise

SEISMIC LOAD (Three combinations of E_h and E_v considered)

Seismic Case $Q_{E2.3}$ - 30% Horizontal Seismic Force, 100% Vertical

Include Seismic Load in Analysis? $Eq_{E2.3} := 1$ 0 = No, 1 = Yes

Horizontal Seismic Coefficient: $K_{h.E2.3} := -0.05$

Vertical Seismic Coefficient: $K_{v.E2.3} := -0.10$

Vertical Tailwater on Approach Slab: $H_{1.U1} = 1640.77 \cdot kN$

Acting At: $H_{1.U1.loc.x} = 14.42\,m$ $H_{1.U1.loc.z} = 4.73\,m$

Width of HW acting on Approach Slab (Z-dir.): $W_{hwas.U1.z} = 7.9\,m$

Width of TW acting on 1A Foundation (Z-dir.): $W_{twf.U1.z} = 10.6\,m$

HORIZONTAL SEISMIC LOADS	Loads	Moment Arm
Horiz Seismic Component of Concrete:	$Q_{conc.E2.EQh.3} := D_{conc} \cdot K_{h.E2.3} \cdot Eq_{E2.3} = -1797.4 \cdot kN$	$Y_{conc.loc} = 3.62\,m$
Horiz Seismic Component of Gates:	$Q_{Gate.E2.EQh.3} := D_{Gate} \cdot K_{h.E2.3} \cdot Eq_{E2.3} = -2.8 \cdot kN$	$Y_{gate} = 4.00\,m$
Horiz Seismic Component of Fill:	$Q_{fill.E2.EQh.3} := D_{fill} \cdot K_{h.E2.3} \cdot Eq_{E2.3} = -902.8 \cdot kN$	$Y_{fill.loc} = 7.25\,m$

Horizontal Seismic Component of Headwater - Sliding (X-dir.):

$$Q_{hwas.E2.EQh.3.x} := \left(\frac{7}{12}\right) \cdot K_{h.E2.3} \cdot \gamma_w \cdot \left(HW_{U1} - BOK_{elev}\right)^2 \cdot W_{hwas.U1} \cdot Eq_{E2.3} = -300.4 \cdot kN$$

$$Y_{HWg.E2.x} = 2.44\,m$$

Horizontal Seismic Component of Headwater - Sliding (Z-dir.):

$$Q_{hwas.E2.EQh.3.z} := \left(\frac{7}{12}\right) \cdot K_{h.E2.3} \cdot \gamma_w \cdot \left(HW_{U1} - BOK_{elev}\right)^2 \cdot W_{hwas.U1.z} \cdot Eq_{E2.3} = -148.3 \cdot kN$$

$$Y_{HWg.E2.z} = 2.44\,m$$

Horizontal Seismic Component of Tailwater - Sliding (Z-dir.):

Foundation Bearing Pressures (X-Direction):

Bearing Pressure at Heel:

$$\sigma_{heel.E2.3.x} := \frac{\Sigma V_{E2.3}}{A_b} - \frac{\Sigma V_{E2.3} \cdot e_{E2.3.x}}{S_{bx.L}} = 75.19 \cdot \frac{kN}{m^2}$$

$$\sigma_{heel.E2.3.check.x} := \left(\begin{cases} \text{"Okay"} & \text{if } \sigma_{heel.E2.3.x} \le \sigma_{allow.E2} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} \right)$$

$\sigma_{heel.E2.3.check.x} = \text{"Okay"}$

Bearing Pressure at Toe:

$$\sigma_{toe.E2.3.x} := \frac{\Sigma V_{E2.3}}{A_b} + \frac{\Sigma V_{E2.3} \cdot e_{E2.3.x}}{S_{bx.R}} = 160.42 \cdot \frac{kN}{m^2}$$

$$\sigma_{toe.E2.3.check.x} := \begin{cases} \text{"Okay"} & \text{if } \sigma_{toe.E2.3.x} \le \sigma_{allow.E2} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases}$$

$\sigma_{toe.E2.3.check.x} = \text{"Okay"}$

Sum of the Moments (Z-Direction):

$$\Sigma M_{E2.3.z} := \Sigma M_{U1.z} + \Sigma M_{Q.E2.3.z} = 284009 \cdot kN \cdot m$$

Eccentricity:

$$e_{E2.3.z} := Z_{BCG} - \frac{\Sigma M_{E2.3.z}}{\Sigma V_{E2.3}} = -0.57\ m$$

Eccentricity Check:

$$e_{check.E2.3.z} := \begin{cases} \text{"Okay"} & \text{if } e_{E2.3.z} \le \frac{W_B}{4} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases}$$

$e_{check.E2.3.z} = \text{"Okay"}$

Foundation Bearing Pressures (Z-Direction):

Bearing Pressure at Heel:

$$\sigma_{heel.E2.3.z} := \frac{\Sigma V_{E2.3}}{A_b} - \frac{\Sigma V_{E2.3} \cdot e_{E2.3.z}}{S_{bz.b}} = 146.49 \cdot \frac{kN}{m^2}$$

$$\sigma_{heel.E2.3.check.z} := \left(\begin{cases} \text{"Okay"} & \text{if } \sigma_{heel.E2.3.z} \le \sigma_{allow.E2} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} \right)$$

$\sigma_{heel.E2.3.check.z} = \text{"Okay"}$

Bearing Pressure at Toe:

$$\sigma_{toe.E2.3.z} := \frac{\Sigma V_{E2.3}}{A_b} + \frac{\Sigma V_{E2.3} \cdot e_{E2.3.z}}{S_{bz.t}} = 93.18 \cdot \frac{kN}{m^2}$$

$$\sigma_{toe.E2.3.check.z} := \begin{cases} \text{"Okay"} & \text{if } \sigma_{heel.E3.3.z} \le \sigma_{allow.E3} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases}$$

$\sigma_{toe.E3.3.check.z} = \text{"Okay"}$

X-dir. Eccentricity without lateral seismic dead loads:

$$e_{E2.3.x.\sigma} := X_{mass} - \frac{\Sigma M_{E2.3.x} - \Sigma M_{Q.E2.3}}{\Sigma V_{E2.3}} = 0.01\ m$$

Z-dir. Eccentricity without lateral seismic dead loads:

$$e_{E2.3.z.\sigma} := Z_{mass} - \frac{\Sigma M_{E2.3.z} - \Sigma M_{Q.E2.3}}{\Sigma V_{E2.3}} = 0.24\ m$$

Foundation Bearing Pressure (Combined):

Linear pressure superimposed at Corners by both Moment_X and Moment_Z

Bearing Pressure at Heel(x)-Heel(z):

$$\sigma_{heel.E2.3} := \min\left(\frac{\Sigma V_{E2.3}}{A_b} - \frac{\Sigma V_{E2.3} \cdot e_{E2.3.x.\sigma}}{S_{bx.L}} - \frac{\Sigma V_{E2.3} \cdot e_{E2.3.z}}{S_{bz.b}}, \frac{\Sigma V_{E2.3}}{A_b} - \frac{\Sigma V_{E2.3} \cdot e_{E2.3.x}}{S_{bx.L}} - \frac{\Sigma V_{E2.3} \cdot e_{E2.3.z.\sigma}}{S_{bz.b}}\right) = 63.7 \cdot kPa$$

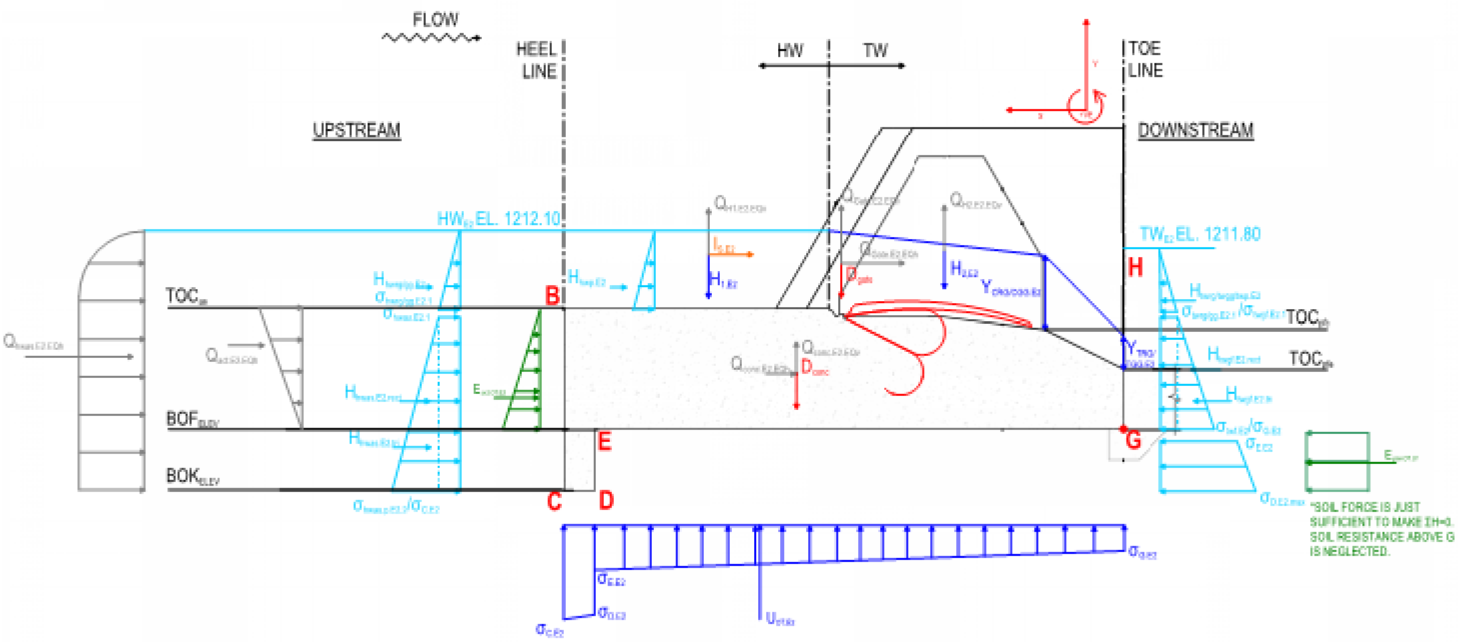
E2.3 CASE

MONOLITH OVERTURNING STABILITY ANALYSIS

Seismic Case $Q_{E2.3}$: 30% Horizontal Seismic Force, 100% Vertical

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stability of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1 $Ratio_{overturning.allow.Extreme} = 0.25$ Resultant within Base



All Vertical Loads Applicable to Overturning Stability Analysis

Total Concrete Dead Loads: $D_{conc} = 35947.58 \cdot kN$ at: $X_{conc.loc} = 8.81\ m$

Dead Load of Gate: $D_{Gate} = 56.0 \cdot kN$ $X_{gate} = 9.50\ m$

Water Weight (HW) on Apron Slab: $H_{1.U1} = 1640.8 \cdot kN$ $H_{1.U1.loc.x} = 14.42\ m$

Water Weight (TW) on Gate Footing: $H_{2.U1} = 731.0 \cdot kN$ $H_{2.U1.loc.x} = 5.28\ m$

Uplift Load for Overtuming Analysis: $U_{OT.U1} = -17396.43 \cdot kN$ $U_{OT.U1.loc} = 9.4 \cdot m$

Vertical Seismic Component of Concrete Structure: $Q_{conc.E2.EQv.3} = -3594.76 \cdot kN$ $X_{conc.loc} = 8.81\ m$

Vertical Seismic Component of Crest Gate: $Q_{Gate.E2.EQv.3} = -5.6 \cdot kN$ $X_{gate} = 9.50\ m$

Vertical Seismic Component of Headwater over Apron Slab: $Q_{H1.E2.EQv.3} = -164.08 \cdot kN$ $H_{1.U1.loc.x} = 14.42\ m$

Vertical Seismic Component of Headwater over Fixed Crest Slab: $Q_{H2.E2.EQv.3} = -73.1 \cdot kN$ $H_{2.U1.loc.x} = 5.28\ m$

Sum of All Overturning Analysis Vertical Load:

$$\Sigma V_{E2.OT.3} := D_{conc} + D_{Gate} + H_{1.U1} + H_{2.U1} + U_{OT.U1} + \Sigma V_{Q.E2.EQv.3} = 15335.75 \cdot kN$$

Sum of All Overturning Analysis Vertical Load Moments:

$$\Sigma M_{V.E2.OT.3} := D_{conc} \cdot X_{conc.loc} + D_{Gate} \cdot X_{gate} + H_{1.U1} \cdot H_{1.U1.loc.x} + H_{2.U1} \cdot H_{2.U1.loc.x} + U_{OT.U1} \cdot U_{OT.U1.loc} = 181354.01 \cdot kN \cdot m$$

Lateral Driving Earth Loads for Overturning Stability Analysis (at rest condition)

E2.3 CASE

Depth of Driving Soil Loads (to top of key): $h_{E.OT.E2.3} := TOC_{as} - BOF_{elev} = 4\ m$

Applicable Soil Load: $E_{act.OT.E2.3} := \frac{\left(K_{o.U1} \cdot h_{E.OT.U1}\right)^2}{2} \cdot \left(\gamma_r - \gamma_w\right) \cdot W_{hwas.U1} \cdot -1 = -1026.66 \cdot kN$

At Rest- Soil Load Acting from Toe: $E_{act.OT.E2.3.loc} := \frac{h_{E.OT.U1}}{3} = 1.33\ m$

All Lateral Loads Applicable to Overturning Stability Analysis

HW Lateral Load on Approach Slab:	$H_{hwas.U1} = -2574.1 \cdot kN$	$H_{hwas.U1.loc} = 1.67\ m$
HW Lateral Load on Guard Gate:	$H_{hwgg.U1} = 0.0 \cdot kN$	$H_{hwgg.U1.loc} = 4.00\ m$
TW Lateral Load on Guard Gate:	$H_{twgg.U1} = 0.0 \cdot kN$	$H_{twgg.U1.loc} = 4.00\ m$
TW Lateral Load on Gate Footing (No Key - Overturning Values Adjusted):	$H_{twgf.U1} = 2385.79 \cdot kN$	$H_{twgf.U1.loc} = 1.65\ m$
TW Lateral Load on Key:	$H_{twkey.OT.U1} = 2219.64 \cdot kN$	$H_{twkey.OT.U1.loc} = -1.05\ m$
Ice / Impact Load:	$I_{U1} = 0.0 \cdot kN$	$I_{U1.loc.y} = 5.80\ m$
Lateral Soil Load (driving):	$E_{act.OT.U1} = -1026.7 \cdot kN$	$E_{act.OT.U1.loc} = 1.33\ m$
Horizontal Seismic Component of Concrete Structure:	$Q_{conc.E2.EQh.3} = -1797.38 \cdot kN$	$Y_{conc.loc} = 3.62\ m$
Horizontal Seismic Component of Vertical Lift Gate:	$Q_{Gate.E2.EQh.3} = -2.8 \cdot kN$	$Y_{gate} = 4.00\ m$
Horizontal Seismic Component of Headwater on Slab Footing:	$Q_{hwas.E2.EQh.3.x} = -300.36 \cdot kN$	$Y_{HWg.E2.x} = 2.44\ m$
Horizontal Seismic Component of Active Soil: (Section 5-5, USACE EM_1110-2-2100)	$Q_{act.E2.EQh.3.x} = -351.07 \cdot kN$	$Y_{E.act.E2.x} = 2.52\ m$

Resisting Lateral Soil Load as required to produce horizontal equilibrium:

$$E_{pas.OT.E2.3} := -\left(H_{hwas.U1} + H_{hwgg.U1} + H_{twgg.U1} + H_{twgf.U1} + H_{twkey.OT.U1} + I_{U1} + E_{act.OT.U1} + \Sigma H_{Q.E2.EQh.3.OT.x}\right) = -548.24 \cdot kN$$

Acting at: $E_{pas.OT.E2.3.loc} := -1 \cdot \frac{d_{key}}{2} = -1\ m$

Sum of All Overturning Analysis Horizontal Load (ΣH=0):

$$\Sigma H_{E2.OT.3} := H_{hwas.U1} + H_{hwgg.U1} + H_{twgg.U1} + H_{twgf.U1} + H_{twkey.OT.U1} + I_{U1} + E_{act.OT.U1} + E_{pas.OT.E2.3} + \Sigma H_{Q.E2.EQh.3.OT.x} = -0 \cdot kN$$

Sum of All Overturning Analysis Horizontal Load Moments:

$$\begin{aligned}\Sigma M_{H.E2.OT.3} := & H_{hwas.U1} \cdot H_{hwas.U1.loc} + H_{hwgg.U1} \cdot H_{hwgg.U1.loc} + H_{twgg.U1} \cdot H_{twgg.U1.loc} \cdots = -16138.14 \cdot kN \cdot m \\ & + H_{twgf.U1} \cdot H_{twgf.U1.loc} + H_{twkey.OT.U1} \cdot H_{twkey.OT.U1.loc} + I_{U1} \cdot I_{U1.loc.y} \cdots \\ & + E_{act.OT.U1} \cdot E_{act.OT.U1.loc} + E_{pas.OT.x.U1} \cdot E_{pas.OT.U1.loc} + \Sigma M_{Q.E2.3}\end{aligned}$$

Overturning Stability Analysis

$\Sigma M_{E2.OT.3} := \Sigma M_{V.E2.OT.3} + \Sigma M_{H.E2.OT.3} = 165215.87 \cdot kN \cdot m$

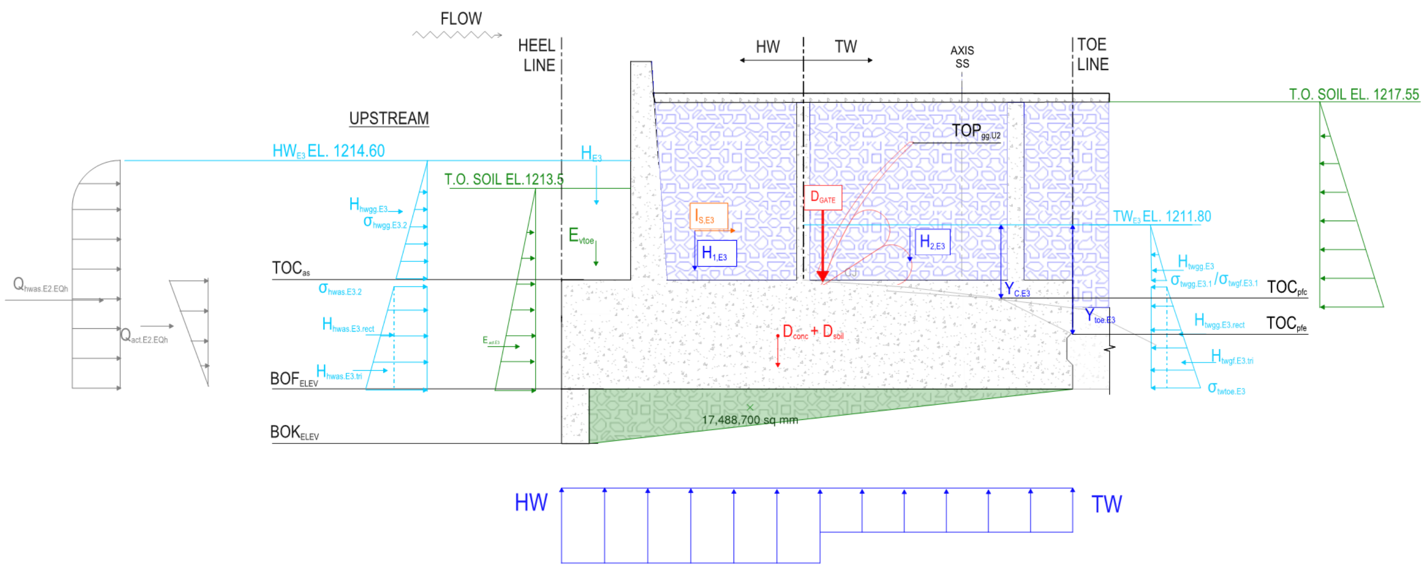
$X_{R.E2.3} := \frac{\Sigma M_{E2.OT.3}}{\Sigma V_{E2.OT.3}} = 10.77\ m$ $\quad X_{OT.E2.3} := X_{R.E2.3} - \frac{L_B}{2} = 1.52\ m$

Overturning Resultant Ratio

$Ratio_{OT.E2.3} := \frac{X_{R.E2.3}}{L_B} = 0.58$

$Ratio_{OT.E2.3.check} := \begin{cases} \text{"OKAY"} & \text{if } Ratio_{OT.E2.3} \geq Ratio_{overturning.allow.Extreme} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"OKAY"}$

E3 DESIGN CASE



U2 CASE PLUS SEISMIC

ACCEPTANCE PARAMETERS

Required Factor of Safety for Sliding: $FS_{req.E3.sl} := 1.0$ (Without Cohesion) (Section 8.1, Design Criteria)

Resultant Within Middle Half of Base: $e \le \frac{L_b}{4} \wedge e \ge \frac{-L_b}{4}$

Allowable Rock Bearing Pressure: $\sigma_{allow.E3} := 1740 \cdot \frac{kN}{m^2}$ (Section 5.2, Design Criteria)

Required Factor of Safety for Flotation: $FS_{req.E3.flt} := 1.1$

INPUT PARAMETERS

Headwater Elevation: $HW_{E3} := 1214.60m$ (Section 8.3, Design Criteria)

Tailwater Elevation: $TW_{E3} := 1211.80m$ (Section 8.3, Design Criteria)

Bottom of Footing Elevation: $BOF_{elev} = 1206.00\,m$

Approach Slab Top of Concrete Elevation at Upstream Face: $TOC_{as} = 1210.00\,m$

Abutment Footing Top of Concrete Elevation at Stilling Basin: $TOC_{afe} = 1208\,m$

Abutment Footing Top of Concrete Elevation at Footing: $TOC_{afc} = 1209.73\,m$

Abutment Footing Top of Concrete Elevation at Footing Notch: $TOC_{afc.n} = 1209.3\,m$

Gates are open when top of gate elevation is at 1210.00m

Top of Guard Gate Elevation: $TOP_{gg.E3} := 1215.0m$

Bottom of Key Elevation: $BOK_{elev} = 1204\,m$

Gates are closed/up when top of gate elevation is at 1215.0m

SEISMIC LOAD (Three combinations of E_h and E_v considered) — E3.1 CASE

Seismic Case $Q_{E3.1}$ - 100% Horizontal Seismic Force, No Vertical

Include Seismic Load in Analysis? $Eq_{E3.1} := 1$ — 0 = No, 1 = Yes

Horizontal Seismic Coefficient: $K_{h.E3.1} := -0.17$

Vertical Seismic Coefficient: $K_{v.E3.1} := -0.00$

Vertical Tailwater on Approach Slab: $H_{1.U2} = 3594.06 \cdot kN$

Acting At: $H_{1.U2.loc.x} = 14.42\ m$ $H_{1.U2.loc.z} = 4.73\ m$

Width of HW acting on Approach Slab (Z-dir.): $W_{hwas.U2.z} := 7.9m$

Width of TW acting on 1A Foundation (Z-dir.): $W_{twf.U2.z} := L_B - W_{hwas.U2.z} = 10.6\ m$

HORIZONTAL SEISMIC LOADS — **Loads** — **Moment Arm**

Horiz Seismic Component of Concrete: $Q_{conc.E3.EQh.1} := D_{conc} \cdot K_{h.E3.1} \cdot Eq_{E3.1} = -6111.1 \cdot kN$ $Y_{conc.loc} = 3.62\ m$

Horiz Seismic Component of Gates: $Q_{Gate.E3.EQh.1} := D_{Gate} \cdot K_{h.E3.1} \cdot Eq_{E3.1} = -9.5 \cdot kN$ $Y_{gate} = 4.00\ m$

Horiz Seismic Component of Fill: $Q_{fill.E3.EQh.1} := D_{fill} \cdot K_{h.E3.1} \cdot Eq_{E3.1} = -3069.6 \cdot kN$ $Y_{fill.loc} = 7.25\ m$

E3.1 CASE

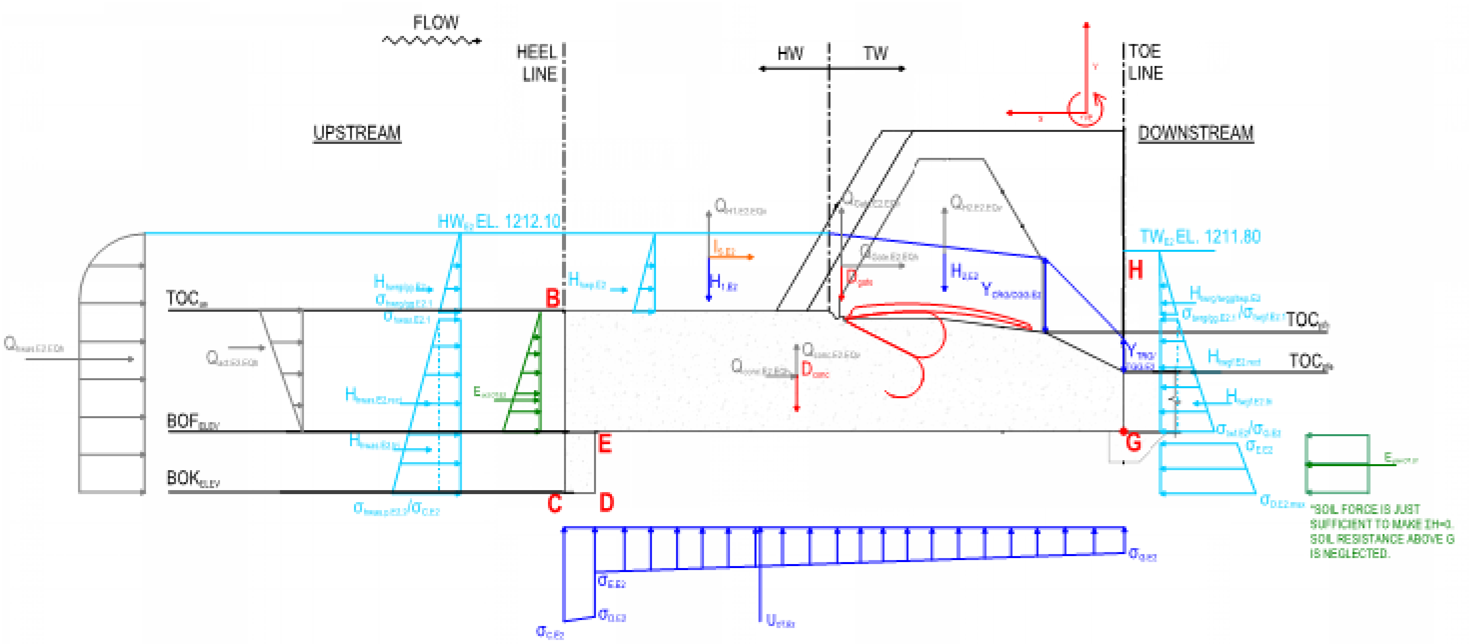
MONOLITH OVERTURNING STABILITY ANALYSIS

Seismic Case $Q_{E3.1}$: 100% Horizontal Seismic Force, No Vertical

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stability of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1 $Ratio_{overturning.allow.Extreme} = 0.25$ Resultant within Base



All Vertical Loads Applicable to Overturning Stability Analysis

Total Concrete Dead Loads:	$D_{conc} = 35947.58 \cdot kN$	at:	$X_{conc.loc} = 8.81\ m$
Dead Load of Gate:	$D_{Gate} = 56.0 \cdot kN$		$X_{gate} = 9.50\ m$
Water Weight (HW) on Apron Slab:	$H_{1.U2} = 3594.1 \cdot kN$		$H_{1.U2.loc.x} = 14.42\ m$
Water Weight (TW) on Gate Footing:	$H_{2.U2} = 1322.9 \cdot kN$		$H_{2.U2.loc.x} = 5.25\ m$
Uplift Load for Overtuming Analysis:	$U_{OT.U2} = -20710.3 \cdot kN$		$U_{OT.U2.loc} = 9.88 \cdot m$
Vertical Seismic Component of Concrete Structure:	$Q_{conc.E3.EQv.1} = 0 \cdot kN$		$X_{conc.loc} = 8.81\ m$
Vertical Seismic Component of Crest Gate:	$Q_{Gate.E3.EQv.1} = 0 \cdot kN$		$X_{gate} = 9.50\ m$
Vertical Seismic Component of Headwater over Apron Slab:	$Q_{H1.E3.EQv.1} = 0 \cdot kN$		$H_{1.U2.loc.x} = 14.42\ m$
Vertical Seismic Component of Headwater over Fixed Crest Slab:	$Q_{H2.E3.EQv.1} = 0 \cdot kN$		$H_{2.U2.loc.x} = 5.25\ m$

Sum of All Overturning Analysis Vertical Load:

$$\Sigma V_{E3.OT.1} := D_{conc} + D_{Gate} + H_{1.U2} + H_{2.U2} + U_{OT.U2} + \Sigma V_{Q.E3.EQv.1} = 20210.22 \cdot kN$$

Sum of All Overturning Analysis Vertical Load Moments:

$$\Sigma M_{V.E3.OT.1} := D_{conc} \cdot X_{conc.loc} + D_{Gate} \cdot X_{gate} + H_{1.U2} \cdot H_{1.U2.loc.x} + H_{2.U2} \cdot H_{2.U2.loc.x} + U_{OT.U2} \cdot U_{OT.U2.loc} = 171520.21 \cdot kN \cdot m$$

Lateral Driving Earth Loads for Overturning Stability Analysis (at rest condition)

E3.1 CASE

Depth of Driving Soil Loads (to top of key): $h_{E.OT.E3.1} := TOC_{as} - BOF_{elev} = 4\ m$

Applicable Soil Load: $E_{act.OT.E3.1} := \frac{\left(K_{o.U2} \cdot h_{E.OT.U2}\right)^2}{2} \cdot \left(\gamma_r - \gamma_w\right) \cdot W_{hwas.U2} \cdot -1 = -1026.66 \cdot kN$

At Rest- Soil Load Acting from Toe: $E_{act.OT.E3.1.loc} := \frac{h_{E.OT.U2}}{3} = 1.33\ m$

All Lateral Loads Applicable to Overturning Stability Analysis

HW Lateral Load on Approach Slab:	$H_{hwas.U2} = -4143.7 \cdot kN$	$H_{hwas.U2.loc} = 1.80\ m$
HW Lateral Load on Guard Gate:	$H_{hwgg.U2} = -415.2 \cdot kN$	$H_{hwgg.U2.loc} = 5.53\ m$
TW Lateral Load on Guard Gate:	$H_{twgg.U2} = 63.6 \cdot kN$	$H_{twgg.U2.loc} = 4.60\ m$
TW Lateral Load on Gate Footing (No Key - Overturning Values Adjusted):	$H_{twgf.U2} = 2385.79 \cdot kN$	$H_{twgf.U2.loc} = 1.65\ m$
TW Lateral Load on Key:	$H_{twkey.OT.U2} = 2927.88 \cdot kN$	$H_{twkey.OT.U2.loc} = -1.04\ m$
Ice / Impact Load:	$I_{U2} = 0.0 \cdot kN$	$I_{U2.loc.y} = 8.30\ m$
Lateral Soil Load (driving):	$E_{act.OT.U2} = -1026.7 \cdot kN$	$E_{act.OT.U2.loc} = 1.33\ m$
Horizontal Seismic Component of Concrete Structure:	$Q_{conc.E3.EQh.1} = -6111.09 \cdot kN$	$Y_{conc.loc} = 3.62\ m$
Horizontal Seismic Component of Vertical Lift Gate:	$Q_{Gate.E3.EQh.1} = -9.52 \cdot kN$	$Y_{gate} = 4.00\ m$
Horizontal Seismic Component of Headwater on Slab Footing:	$Q_{hwas.E3.EQh.1.x} = -1151.2 \cdot kN$	$Y_{HWg.E3.x} = 3.84\ m$
Horizontal Seismic Component of Active Soil: (Section 5-5, USACE EM_1110-2-2100)	$Q_{act.E3.EQh.1.x} = -530.51 \cdot kN$	$Y_{E.act.E3.x} = 2.52\ m$

Resisting Lateral Soil Load as required to produce horizontal equilibrium:

$$E_{pas.OT.E3.1} := -\left(H_{hwas.U2} + H_{hwgg.U2} + H_{twgg.U2} + H_{twgf.U2} + H_{twkey.OT.U2} + I_{U2} + E_{act.OT.U2} + \Sigma H_{Q.E3.EQh.1.OT.x}\right) = 1890.03 \cdot kN$$

Acting a $E_{pas.OT.E3.1.loc} := -1 \cdot \frac{d_{key}}{2} = -1\ m$

Sum of All Overturning Analysis Horizontal Load (ΣH=0):

$$\Sigma H_{E3.OT.1} := H_{hwas.U2} + H_{hwgg.U2} + H_{twgg.U2} + H_{twgf.U2} + H_{twkey.OT.U2} + I_{U2} + E_{act.OT.U2} + E_{pas.OT.E3.1} + \Sigma H_{Q.E3.EQh.1.OT.x} = 0 \cdot kN$$

Sum of All Overturning Analysis Horizontal Load Moments:

$$\Sigma M_{H.E3.OT.1} := H_{hwas.U2} \cdot H_{hwas.U2.loc} + H_{hwgg.U2} \cdot H_{hwgg.U2.loc} + H_{twgg.U2} \cdot H_{twgg.U2.loc} \cdots + H_{twgf.U2} \cdot H_{twgf.U2.loc} + H_{twkey.OT.U2} \cdot H_{twkey.OT.U2.loc} + I_{U2} \cdot I_{U2.loc.y} \cdots + E_{act.OT.U2} \cdot E_{act.OT.U2.loc} + E_{pas.OT.x.U2} \cdot E_{pas.OT.U2.loc} + \Sigma M_{Q.E3.1} = -55002.53 \cdot kN \cdot m$$

Overturning Stability Analysis

$$\Sigma M_{E3.OT.1} := \Sigma M_{V.E3.OT.1} + \Sigma M_{H.E3.OT.1} = 116517.68 \cdot kN \cdot m$$

$$X_{R.E3.1} := \frac{\Sigma M_{E3.OT.1}}{\Sigma V_{E3.OT.1}} = 5.77\ m \qquad x_{OT.E3.1} := X_{R.E3.1} - \frac{L_B}{2} = -3.48\ m$$

Overturning Resultant Ratio

$$Ratio_{OT.E3.1} := \frac{X_{R.E3.1}}{L_B} = 0.31$$

$$Ratio_{OT.E3.1.check} := \begin{cases} \text{"OKAY"} & \text{if } Ratio_{OT.E3.1} \geq Ratio_{overturning.allow.Extreme} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

SEISMIC LOAD (Three combinations of E_h and E_v considered)

E3.2 CASE

Seismic Case $Q_{E3.2}$ - 100% Horizontal Seismic Force, 30% Vertical

Include Seismic Load in Analysis? $Eq_{E3.2} := 1$ 0 = No, 1 = Yes

Horizontal Seismic Coefficient: $K_{h.E3.2} := -0.17$

Vertical Seismic Coefficient: $K_{v.E3.2} := -0.03$

Vertical Tailwater on Approach Slab: $H_{1.U2} = 3594.06 \cdot kN$

Acting At: $H_{1.U2.loc.x} = 14.42\ m$ $H_{1.U2.loc.z} = 4.73\ m$

Width of HW acting on Approach Slab (Z-dir.): $W_{hwas.U2.z} = 7.9\ m$

Width of TW acting on 1A Foundation (Z-dir.): $W_{twf.U2.z} = 10.6\ m$

HORIZONTAL SEISMIC LOADS — **Loads** — **Moment Arm**

Small Tension in corner is calculated under E2.2 Load Case, - to be reviewed in detail using 3D analysis during final design and cracked base to be reviewed as applicable, however due to the average compression along each exterior foundation line the tension appears to be minimal.

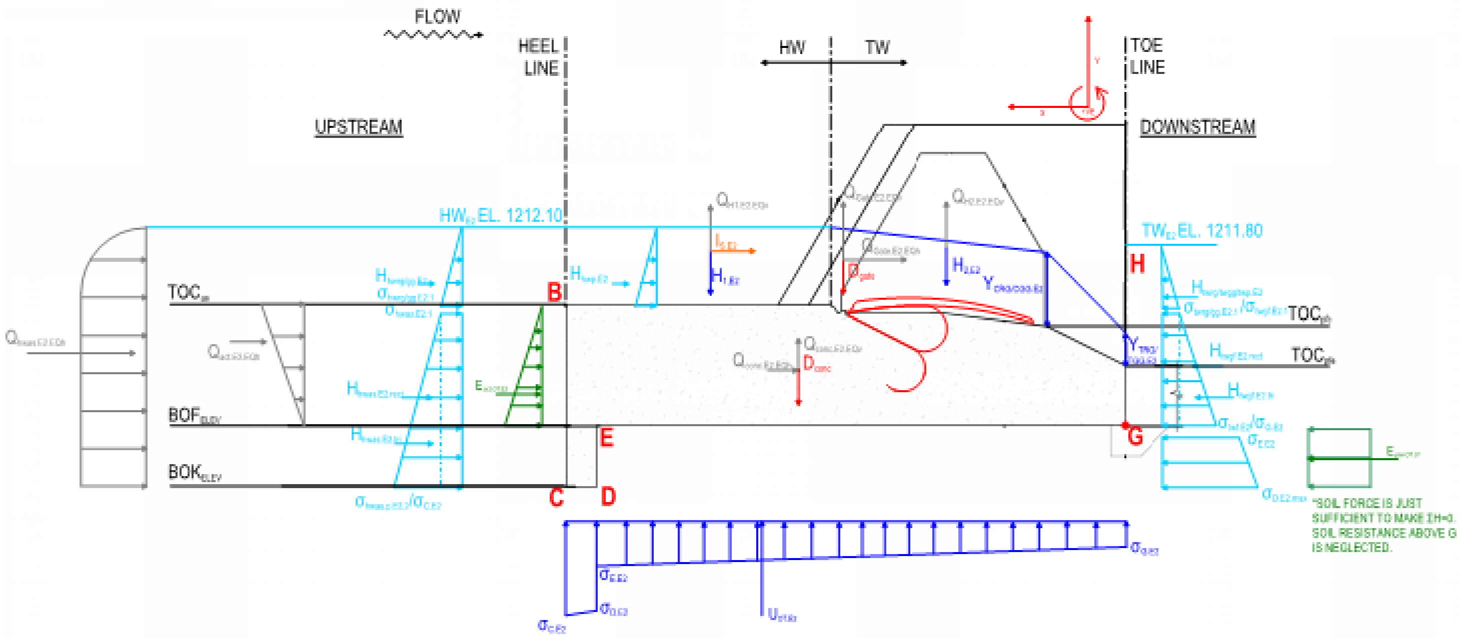
E3.2 CASE

MONOLITH OVERTURNING STABILITY ANALYSIS

Seismic Case $Q_{E3.2}$: 100% Horizontal Seismic Force, 30%ertical

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stability of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1 $Ratio_{overturning.allow.Extreme} = 0.25$ Resultant within Base



All Vertical Loads Applicable to Overturning Stability Analysis

Total Concrete Dead Loads:	$D_{conc} = 35947.58 \cdot kN$	at:	$X_{conc.loc} = 8.81\ m$
Dead Load of Gate:	$D_{Gate} = 56.0 \cdot kN$		$X_{gate} = 9.50\ m$
Water Weight (HW) on Apron Slab:	$H_{1.U2} = 3594.1 \cdot kN$		$H_{1.U2.loc.x} = 14.42\ m$
Water Weight (TW) on Gate Footing:	$H_{2.U2} = 1322.9 \cdot kN$		$H_{2.U2.loc.x} = 5.25\ m$
Uplift Load for Overtuming Analysis:	$U_{OT.U2} = -20710.3 \cdot kN$		$U_{OT.U2.loc} = 9.88 \cdot m$
Vertical Seismic Component of Concrete Structure:	$Q_{conc.E3.EQv.2} = -1078.43 \cdot kN$		$X_{conc.loc} = 8.81\ m$
Vertical Seismic Component of Crest Gate:	$Q_{Gate.E3.EQv.2} = -1.68 \cdot kN$		$X_{gate} = 9.50\ m$
Vertical Seismic Component of Headwater over Apron Slab:	$Q_{H1.E3.EQv.2} = -107.82 \cdot kN$		$H_{1.U2.loc.x} = 14.42\ m$
Vertical Seismic Component of Headwater over Fixed Crest Slab:	$Q_{H2.E3.EQv.2} = -39.69 \cdot kN$		$H_{2.U2.loc.x} = 5.25\ m$

Sum of All Overturning Analysis Vertical Load:

$$\Sigma V_{E3.OT.2} := D_{conc} + D_{Gate} + H_{1.U2} + H_{2.U2} + U_{OT.U2} + \Sigma V_{Q.E3.EQv.2} = 18440.9 \cdot kN$$

Sum of All Overturning Analysis Vertical Load Moments:

$$\Sigma M_{V.E3.OT.2} := D_{conc} \cdot X_{conc.loc} + D_{Gate} \cdot X_{gate} + H_{1.U2} \cdot H_{1.U2.loc.x} + H_{2.U2} \cdot H_{2.U2.loc.x} + U_{OT.U2} \cdot U_{OT.U2.loc} = 171520.21 \cdot kN \cdot m$$

Lateral Driving Earth Loads for Overturning Stability Analysis (at rest condition)

E3.2 CASE

Depth of Driving Soil Loads (to top of key): $h_{E.OT.E3.2} := TOC_{as} - BOF_{elev} = 4\ m$

Applicable Soil Load: $E_{act.OT.E3.2} := \frac{\left(K_{o.U2} \cdot h_{E.OT.U2}\right)^2}{2} \cdot \left(\gamma_r - \gamma_w\right) \cdot W_{hwas.U2} \cdot -1 = -1026.66 \cdot kN$

At Rest- Soil Load Acting from Toe: $E_{act.OT.E3.2.loc} := \frac{h_{E.OT.U2}}{3} = 1.33\ m$

All Lateral Loads Applicable to Overturning Stability Analysis

HW Lateral Load on Approach Slab:	$H_{hwas.U2} = -4143.7 \cdot kN$	$H_{hwas.U2.loc} = 1.80\ m$
HW Lateral Load on Guard Gate:	$H_{hwgg.U2} = -415.2 \cdot kN$	$H_{hwgg.U2.loc} = 5.53\ m$
TW Lateral Load on Guard Gate:	$H_{twgg.U2} = 63.6 \cdot kN$	$H_{twgg.U2.loc} = 4.60\ m$
TW Lateral Load on Gate Footing (No Key - Overturning Values Adjusted):	$H_{twgf.U2} = 2385.79 \cdot kN$	$H_{twgf.U2.loc} = 1.65\ m$
TW Lateral Load on Key:	$H_{twkey.OT.U2} = 2927.88 \cdot kN$	$H_{twkey.OT.U2.loc} = -1.04\ m$
Ice / Impact Load:	$I_{U2} = 0.0 \cdot kN$	$I_{U2.loc.y} = 8.30\ m$
Lateral Soil Load (driving):	$E_{act.OT.U2} = -1026.7 \cdot kN$	$E_{act.OT.U2.loc} = 1.33\ m$
Horizontal Seismic Component of Concrete Structure:	$Q_{conc.E3.EQh.2} = -6111.09 \cdot kN$	$Y_{conc.loc} = 3.62\ m$
Horizontal Seismic Component of Vertical Lift Gate:	$Q_{Gate.E3.EQh.2} = -9.52 \cdot kN$	$Y_{gate} = 4.00\ m$
Horizontal Seismic Component of Headwater on Slab Footing:	$Q_{hwas.E3.EQh.2.x} = -1748.91 \cdot kN$	$Y_{HWg.E3.x} = 3.84\ m$
Horizontal Seismic Component of Active Soil: (Section 5-5, USACE EM_1110-2-2100)	$Q_{act.E3.EQh.2.x} = -1193.64 \cdot kN$	$Y_{E.act.E3.x} = 2.52\ m$

Resisting Lateral Soil Load as required to produce horizontal equilibrium:

$$E_{pas.OT.E3.2} := -\left(H_{hwas.U2} + H_{hwgg.U2} + H_{twgg.U2} + H_{twgf.U2} + H_{twkey.OT.U2} + I_{U2} + E_{act.OT.U2} + \Sigma H_{Q.E3.EQh.2.OT.x}\right) = 2487.74 \cdot kN$$

Acting at: $E_{pas.OT.E3.2.loc} := -1 \cdot \frac{d_{key}}{2} = -1\ m$

Sum of All Overturning Analysis Horizontal Load (ΣH=0):

$$\Sigma H_{E3.OT.2} := H_{hwas.U2} + H_{hwgg.U2} + H_{twgg.U2} + H_{twgf.U2} + H_{twkey.OT.U2} + I_{U2} + E_{act.OT.U2} + E_{pas.OT.E3.2} + \Sigma H_{Q.E3.EQh.2.OT.x} = 0 \cdot kN$$

Sum of All Overturning Analysis Horizontal Load Moments:

$$\begin{aligned}\Sigma M_{H.E3.OT.2} := {} & H_{hwas.U2} \cdot H_{hwas.U2.loc} + H_{hwgg.U2} \cdot H_{hwgg.U2.loc} + H_{twgg.U2} \cdot H_{twgg.U2.loc} \cdots = -55002.53 \cdot kN \cdot m \\ & + H_{twgf.U2} \cdot H_{twgf.U2.loc} + H_{twkey.OT.U2} \cdot H_{twkey.OT.U2.loc} + I_{U2} \cdot I_{U2.loc.y} \cdots \\ & + E_{act.OT.U2} \cdot E_{act.OT.U2.loc} + E_{pas.OT.x.U2} \cdot E_{pas.OT.U2.loc} + \Sigma M_{Q.E3.2}\end{aligned}$$

Overturning Stability Analysis

$$\Sigma M_{E3.OT.2} := \Sigma M_{V.E3.OT.2} + \Sigma M_{H.E3.OT.2} = 116517.68 \cdot kN \cdot m$$

$$X_{R.E3.2} := \frac{\Sigma M_{E3.OT.2}}{\Sigma V_{E3.OT.2}} = 6.32\ m \qquad x_{OT.E3.2} := X_{R.E3.2} - \frac{L_B}{2} = -2.93\ m$$

Overturning Resultant Ratio

$$Ratio_{OT.E3.2} := \frac{X_{R.E3.2}}{L_B} = 0.34$$

$$Ratio_{OT.E3.2.check} := \left| \begin{array}{l} \text{"OKAY"} \quad \text{if} \quad Ratio_{OT.E3.2} \geq Ratio_{overturning.allow.Extreme} \\ \text{"Revise Structure"} \quad \text{otherwise} \end{array} \right. = \text{"OKAY"}$$

SEISMIC LOAD (Three combinations of E_h and E_v considered) E3.3 CASE

Seismic Case $Q_{E3.3}$ - 30% Horizontal Seismic Force, 100% Vertical

Include Seismic Load in Analysis? $Eq_{E3.3} := 1$ 0 = No, 1 = Yes

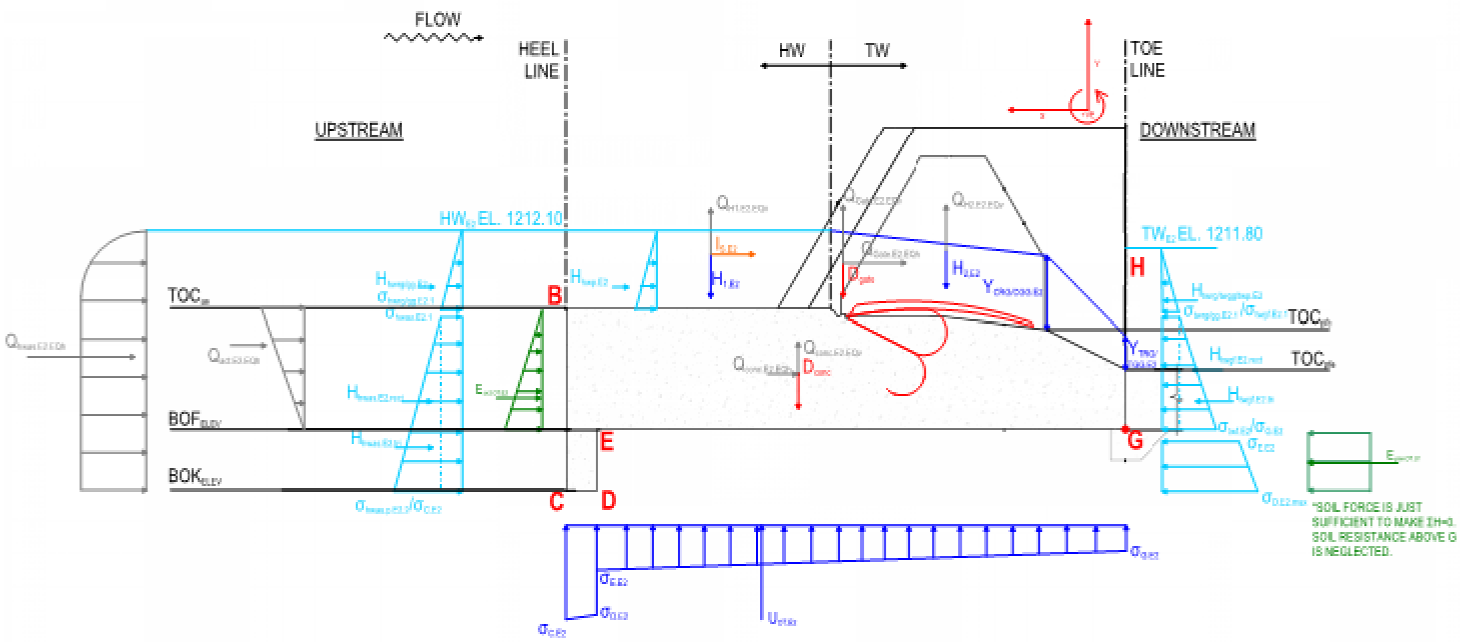
MONOLITH OVERTURNING STABILITY ANALYSIS

Seismic Case $Q_{E3.3}$: 30% Horizontal Seismic Force, 100% Vertical

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stability of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1 $Ratio_{overturning.allow.Extreme} = 0.25$ Resultant within Base



All Vertical Loads Applicable to Overturning Stability Analysis

Total Concrete Dead Loads:	$D_{conc} = 35947.58 \cdot kN$	at:	$X_{conc.loc} = 8.81\ m$
Dead Load of Gate:	$D_{Gate} = 56.0 \cdot kN$		$X_{gate} = 9.50\ m$
Water Weight (HW) on Apron Slab:	$H_{1.U2} = 3594.1 \cdot kN$		$H_{1.U2.loc.x} = 14.42\ m$
Water Weight (TW) on Gate Footing:	$H_{2.U2} = 1322.9 \cdot kN$		$H_{2.U2.loc.x} = 5.25\ m$
Uplift Load for Overturning Analysis:	$U_{OT.U2} = -20710.3 \cdot kN$		$U_{OT.U2.loc} = 9.88 \cdot m$
Vertical Seismic Component of Concrete Structure:	$Q_{conc.E3.EQv.3} = -3594.76 \cdot kN$		$X_{conc.loc} = 8.81\ m$
Vertical Seismic Component of Crest Gate:	$Q_{Gate.E3.EQv.3} = -5.6 \cdot kN$		$X_{gate} = 9.50\ m$
Vertical Seismic Component of Headwater over Apron Slab:	$Q_{H1.E3.EQv.3} = -359.41 \cdot kN$		$H_{1.U2.loc.x} = 14.42\ m$
Vertical Seismic Component of Headwater over Fixed Crest Slab:	$Q_{H2.E3.EQv.3} = -132.29 \cdot kN$		$H_{2.U2.loc.x} = 5.25\ m$

Sum of All Overturning Analysis Vertical Load:

$$\Sigma V_{E3.OT.3} := D_{conc} + D_{Gate} + H_{1.U2} + H_{2.U2} + U_{OT.U2} + \Sigma V_{Q.E3.EQv.3} = 14312.51 \cdot kN$$

Sum of All Overturning Analysis Vertical Load Moments:

$$\Sigma M_{V.E3.OT.3} := D_{conc} \cdot X_{conc.loc} + D_{Gate} \cdot X_{gate} + H_{1.U2} \cdot H_{1.U2.loc.x} + H_{2.U2} \cdot H_{2.U2.loc.x} + U_{OT.U2} \cdot U_{OT.U2.loc} = 171520.21 \cdot kN \cdot m$$

Lateral Driving Earth Loads for Overturning Stability Analysis (at rest condition)

E3.3 CASE

Depth of Driving Soil Loads (to top of key): $h_{E.OT.E3.3} := TOC_{as} - BOF_{elev} = 4\ m$

Applicable Soil Load: $E_{act.OT.E3.3} := \frac{\left(K_{o.U2} \cdot h_{E.OT.U2}\right)^2}{2} \cdot \left(\gamma_r - \gamma_w\right) \cdot W_{hwas.U2} \cdot -1 = -1026.66 \cdot kN$

At Rest- Soil Load Acting from Toe: $E_{act.OT.E3.3.loc} := \frac{h_{E.OT.U2}}{3} = 1.33\ m$

All Lateral Loads Applicable to Overturning Stability Analysis

HW Lateral Load on Approach Slab:	$H_{hwas.U2} = -4143.7 \cdot kN$	$H_{hwas.U2.loc} = 1.80\ m$
HW Lateral Load on Guard Gate:	$H_{hwgg.U2} = -415.2 \cdot kN$	$H_{hwgg.U2.loc} = 5.53\ m$
TW Lateral Load on Guard Gate:	$H_{twgg.U2} = 63.6 \cdot kN$	$H_{twgg.U2.loc} = 4.60\ m$
TW Lateral Load on Gate Footing (No Key - Overturning Values Adjusted):	$H_{twgf.U2} = 2385.79 \cdot kN$	$H_{twgf.U2.loc} = 1.65\ m$
TW Lateral Load on Key:	$H_{twkey.OT.U2} = 2927.88 \cdot kN$	$H_{twkey.OT.U2.loc} = -1.04\ m$
Ice / Impact Load:	$I_{U2} = 0.0 \cdot kN$	$I_{U2.loc.y} = 8.30\ m$
Lateral Soil Load (driving):	$E_{act.OT.U2} = -1026.7 \cdot kN$	$E_{act.OT.U2.loc} = 1.33\ m$
Horizontal Seismic Component of Concrete Structure:	$Q_{conc.E3.EQh.3} = -1797.38 \cdot kN$	$Y_{conc.loc} = 3.62\ m$
Horizontal Seismic Component of Vertical Lift Gate:	$Q_{Gate.E3.EQh.3} = -2.8 \cdot kN$	$Y_{gate} = 4.00\ m$
Horizontal Seismic Component of Headwater on Slab Footing:	$Q_{hwas.E3.EQh.3.x} = -514.38 \cdot kN$	$Y_{HWg.E3.x} = 3.84\ m$
Horizontal Seismic Component of Active Soil: (Section 5-5, USACE EM_1110-2-2100)	$Q_{act.E3.EQh.3.x} = -351.07 \cdot kN$	$Y_{E.act.E3.x} = 2.52\ m$

Resisting Lateral Soil Load as required to produce horizontal equilibrium:

$$E_{pas.OT.E3.3} := -\left(H_{hwas.U2} + H_{hwgg.U2} + H_{twgg.U2} + H_{twgf.U2} + H_{twkey.OT.U2} + I_{U2} + E_{act.OT.U2} + \Sigma H_{Q.E3.EQh.3.OT.x}\right) = 878.74 \cdot kN$$

Acting at: $E_{pas.OT.E3.3.loc} := -1 \cdot \frac{d_{key}}{2} = -1\ m$

Sum of All Overturning Analysis Horizontal Load (ΣH=0):

$$\Sigma H_{E3.OT.3} := H_{hwas.U2} + H_{hwgg.U2} + H_{twgg.U2} + H_{twgf.U2} + H_{twkey.OT.U2} + I_{U2} + E_{act.OT.U2} + E_{pas.OT.E3.3} + \Sigma H_{Q.E3.EQh.3.OT.x} = 0 \cdot kN$$

Sum of All Overturning Analysis Horizontal Load Moments:

$$\begin{aligned}\Sigma M_{H.E3.OT.3} := {} & H_{hwas.U2} \cdot H_{hwas.U2.loc} + H_{hwgg.U2} \cdot H_{hwgg.U2.loc} + H_{twgg.U2} \cdot H_{twgg.U2.loc} \cdots = -23631.24 \cdot kN \cdot m \\ & + H_{twgf.U2} \cdot H_{twgf.U2.loc} + H_{twkey.OT.U2} \cdot H_{twkey.OT.U2.loc} + I_{U2} \cdot I_{U2.loc.y} \cdots \\ & + E_{act.OT.U2} \cdot E_{act.OT.U2.loc} + E_{pas.OT.x.U2} \cdot E_{pas.OT.U2.loc} + \Sigma M_{Q.E3.3}\end{aligned}$$

Overturning Stability Analysis

$$\Sigma M_{E3.OT.3} := \Sigma M_{V.E3.OT.3} + \Sigma M_{H.E3.OT.3} = 147888.96 \cdot kN \cdot m$$

$$X_{R.E3.3} := \frac{\Sigma M_{E3.OT.3}}{\Sigma V_{E3.OT.3}} = 10.33\ m \qquad x_{OT.E3.3} := X_{R.E3.3} - \frac{L_B}{2} = 1.08\ m$$

Overturning Resultant Ratio

$$Ratio_{OT.E3.3} := \frac{X_{R.E3.3}}{L_B} = 0.56$$

$$Ratio_{OT.E3.3.check} := \begin{cases} \text{"OKAY"} & \text{if } Ratio_{OT.E3.3} \geq Ratio_{overturning.allow.Extreme} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

Notes:
1. See Appendix E.2 for definition of wall section description, analysis methodology, and stability calculations.
2. Analysis assumes inclined sliding plane, interface friction angle Φ = 26 degrees, and no cohesion.
3. Seismic results utilize active soil pressure coefficients for stability values reported.

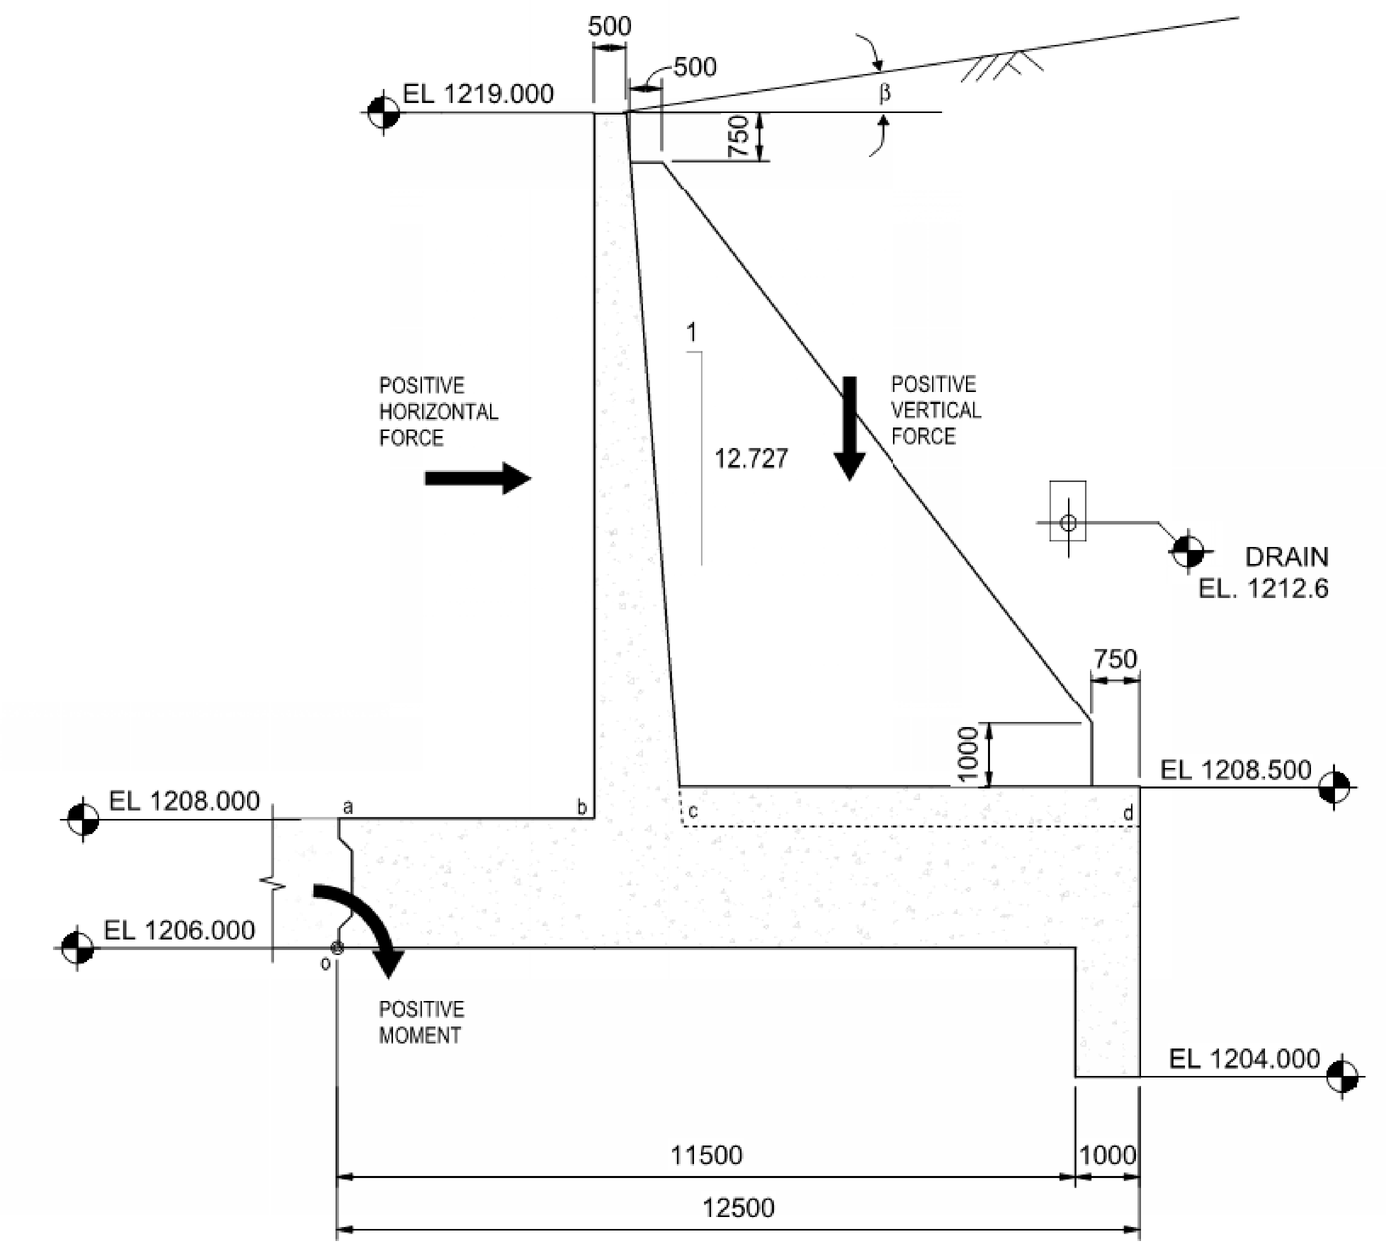
SS-5B Retaining Wall Stability Calculations

Project Number:	110773396
Project Title:	SR1 - Diversion Structure
Client:	Alberta Transportation
Engineer:	Lawrence Choi — Date: 12/11/2018
Checker:	Sean Xiao — Date: 12/18/2018

Calculation for: Retaining Wall - Service Spillway Left - Block 5B



REGION COLOR CONVENTION

User Input

Calulation Highlights

Results

WALL GEOMETRY:

Top of Wall Elevation: $T_w := 1219.0 \cdot m$

Top of Footing Elevation: $Top_{ftg} := 1208.0 \cdot m$

Thickness of Footing: $t_{ftg} := 2.0m$

Bottom of Footing Elevation: $Bot_{ftg} := Top_{ftg} - t_{ftg} = 1206\,m$

Overall Height of wall: $h_w := T_w - Bot_{ftg} = 13.00\,m$

Thickness of Wall: Base: $t_{wb} := 1.364 \cdot m$ Top: $t_{wt} := 0.50m$

Length of toe: $L_{ab} := 4.0m$

Total Length of Footing: $b := 12.5m$

Length of heel: $L_{cd} := b - L_{ab} - t_{wb} = 7.136\,m$

Unit Width of Wall for analysis: $B := 1.00m$

SHEAR KEY GEOMETRY:

	Toe	Heel	
Key depth:	$Key_{t.d} := 0m$	$Key_{h.d} := 2m$	(Assumption: $Key_{h.d}$ >= $Key_{t.d}$)
Key width:	$Key_{t.w} := 0m$	$Key_{h.w} := 1m$	
Face of Key from Point O:	$Key_{t.loc} := 0 \cdot m$	$Key_{h.loc} := 11.5 \cdot m$	

Horizontal Distance between Keys: $Key_{hdist} := Key_{h.loc} - Key_{t.loc} - Key_{t.w} = 11.5\,m$

Key Depth Diff. (from point O): $Key_{vdist} := -Key_{h.d} + Key_{t.d} = -2\,m$

BASE PROPERTIES:

Base Area: $A_b := b \cdot B = 12.5\,m^2$

Centroidal Distance for Footing (from Toe): $Y_t := \frac{b}{2} = 6.25\,m$

RETAINED SOIL GEOMETRY:

Slope of retained ground surface: $\beta := 0 \cdot \frac{\pi}{180} = 0.00$

Height of retained earth at heel: $H_w := T_w - Bot_{ftg} + \left(t_{wb} + L_{cd} - t_{wt}\right) \cdot \tan(\beta) = 13.00\,m$

RETAINING WALL GEOMETRY CHECKS:

(Foundation Analysis & Design Bowles)

$$t_{bcheck} := \begin{cases} \text{"OKAY"} & \text{if } t_{ftg} \geq \frac{H_w}{12} \\ \text{"Warning"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

$$t_{wcheck} := \begin{cases} \text{"OKAY"} & \text{if } t_{wb} \geq \frac{H_w}{12} \\ \text{"Warning"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

$$b_{check} := \begin{cases} \text{"OKAY"} & \text{if } \frac{b}{H_w} \geq .4 \wedge \frac{b}{H_w} \leq 80 \\ \text{"Warning"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

$$L_{abcheck} := \begin{cases} \text{"OKAY"} & \text{if } \frac{L_{ab}}{b} \geq .25 \wedge \frac{L_{ab}}{b} \leq .4 \\ \text{"Warning"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

Material Properties:

Unit Weight of Water: $\gamma_w := 9.8 \frac{kN}{m^3}$ (Section 7.2, Design Criteria)

Unit Weight of Concrete: $\gamma_c := 23.5 \frac{kN}{m^3}$

Unit Weight of Soil (Moist): $\gamma_m := 20.0 \frac{kN}{m^3}$ (Section 5.3, Design Criteria) assumed moisture content (w) = 5%

Unit Weight Soil (Saturated): $\gamma_{sat} := 22.0 \frac{kN}{m^3}$ (Assuming Specific Gravity = 2.7

Unit Weight Soil (buoyant): $\gamma_b := \gamma_{sat} - \gamma_w = 12.2 \cdot \frac{kN}{m^3}$

Weight of Soil/Concrete above toe: $\gamma_{toe} := 22.0 \frac{kN}{m^3}$

Unit Weight of Rock: $\gamma_r := 25.6 \frac{kN}{m^3}$ (Section 7.2, Design Criteria)

Foundation Parameters:

Glacial Till Internal Friction: $\phi := 27 \cdot \frac{\pi}{180} = 0.471$

Bedrock Internal Friction Angle: $\phi_r := 24 \cdot \frac{\pi}{180} = 0.419$

Friction Angle at Base Concrete / Rock Interface: $\phi_{rock} := 26$

Base Friction Coefficient: $tan_{\phi rock} := \tan\left(\phi_{rock} \frac{\pi}{180}\right) = 0.488$ radians

Rip Rap Backfill, Refer Dwg. C-214 $\phi_{backfill} := \left(20 \frac{\pi}{180}\right) = 0.349$ radians

Shear strength along rock Failure plane $s_r := \frac{13100 \frac{kN}{m^2}}{2} = 6550 \cdot \frac{kN}{m^2}$ (Stantec Design Memo 8/8/16)

CONCRETE DEAD LOAD:

Area of Footing: $A_{ftg} := t_{ftg} \cdot b = 25\,m^2$

Weight of Footing: $D_{ftg} := A_{ftg} \cdot B \cdot \gamma_c = 587.5 \cdot kN$

Area of Stem (without batter): $A_{w1} := t_{wt} \cdot \left(h_w - t_{ftg}\right) = 5.5\,m^2$

Weight of Stem: $D_{w1} := A_{w1} \cdot B \cdot \gamma_c = 129.3 \cdot kN$

Area of stem Batter: $A_{w2} := \dfrac{\left(t_{wb} - t_{wt}\right)}{2} \left(h_w - t_{ftg}\right) = 4.75\,m^2$

Weight of Batter: $D_{w2} := A_{w2} \cdot B \cdot \gamma_c = 111.7 \cdot kN$

Slope of batter: $S_{batter} := \dfrac{t_{wb} - t_{wt}}{h_w - t_{ftg}} = 0.079$

Area of Key $A_{t.key} := Key_{t.d} \cdot Key_{t.w} = 0$ $A_{h.key} := Key_{h.d} \cdot Key_{h.w} = 2\,m^2$

Weight of Key $D_{t.key} := A_{t.key} \cdot B \cdot \gamma_c = 0 \cdot kN$ $D_{h.key} := A_{h.key} \cdot B \cdot \gamma_c = 47 \cdot kN$

Centroidal Horizontal Distance of Wall (From Toe):

$$H_{cent} := \frac{A_{w1} \cdot \left(L_{ab} + \frac{t_{wt}}{2}\right) + A_{w2} \cdot \left(L_{ab} + t_{wt} + \frac{t_{wb} - t_{wt}}{3}\right) + A_{ftg} \cdot \frac{b}{2} + A_{t.key} \cdot \left(Key_{t.loc} + \frac{Key_{t.w}}{2}\right) + A_{h.key} \cdot \left(Key_{h.loc} + \frac{Key_{h.w}}{2}\right)}{A_{w1} + A_{w2} + A_{ftg} + A_{t.key} + A_{h.key}} = 6.08\,m$$

Centroidal Vertical Distance of Wall (Above Base of Footing):

$$V_{Cent} := \frac{A_{ftg} \cdot \frac{t_{ftg}}{2} + A_{w1} \cdot \left[t_{ftg} + \frac{\left(h_w - t_{ftg}\right)}{2}\right] + A_{w2} \cdot \left[t_{ftg} + \frac{\left(h_w - t_{ftg}\right)}{3}\right] + A_{t.key} \cdot \left(\frac{-Key_{t.d}}{2}\right) + A_{h.key} \cdot \left(\frac{-Key_{h.d}}{2}\right)}{A_{ftg} + A_{w1} + A_{w2} + A_{t.key} + A_{h.key}} = 2.45\,m$$

$\Sigma V_{conc} := D_{ftg} + D_{w1} + D_{w2} + D_{t.key} + D_{h.key} = 875.4 \cdot kN$

$\Sigma M_{conc} := \Sigma V_{conc} \cdot H_{cent} = 5319.9\,m \cdot kN$

ROCK SECTION MOBILIZED FOR INCLINDED SLIDING FAILURE

Area of Rock Section Mobilized: $A_{rocksection} := \left(Key_{t.d} + Key_{h.d}\right) \cdot \dfrac{Key_{hdist}}{2} = 11.5\,m^2$

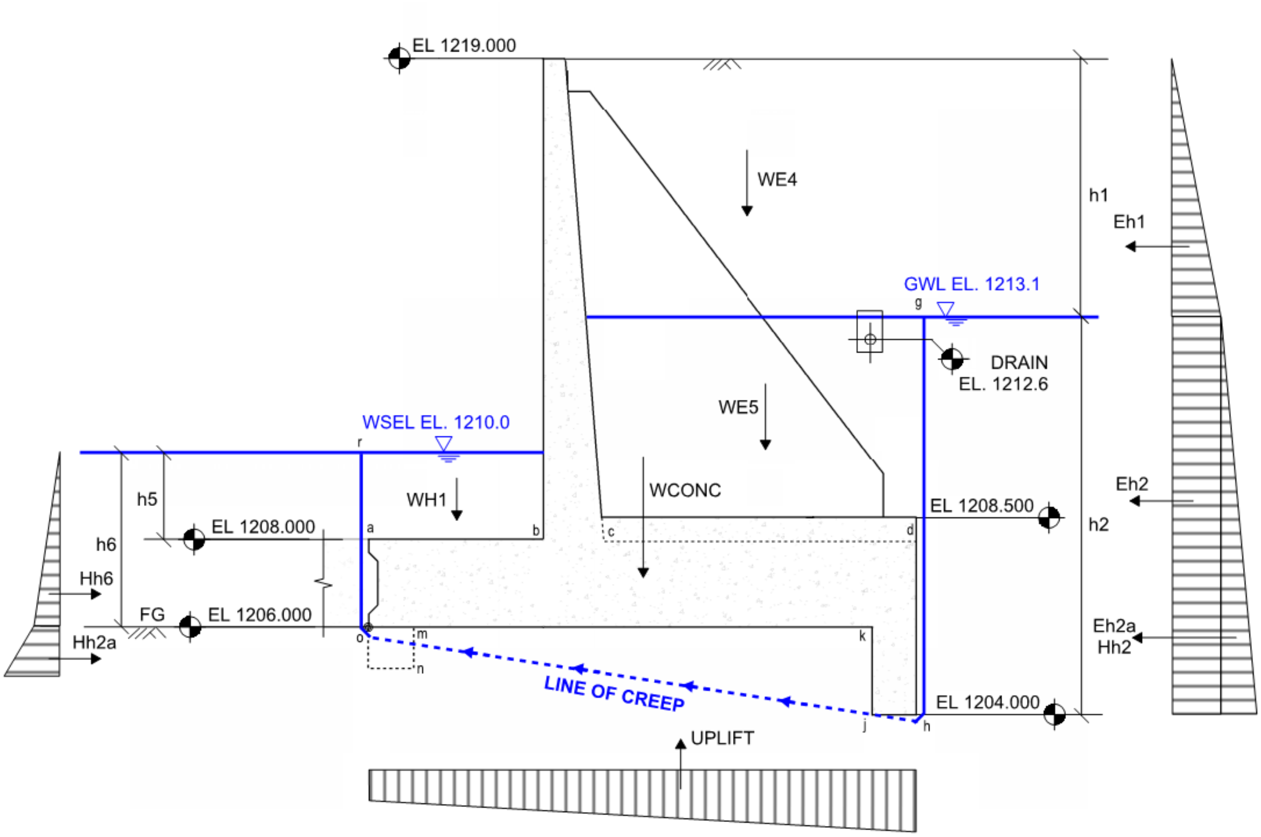
Rock Mass Mobilized: $V_{rocksection} := A_{rocksection} \cdot \gamma_r \cdot B = 294.4 \cdot kN$

(Pore pressure taken along assumed inclined sliding plane)

Distance from Toe to COG of Rock Section: $L_{rocksection} := \dfrac{Key_{hdist} \cdot \left(2 \cdot Key_{h.d} + Key_{t.d}\right)}{3\left(Key_{h.d} + Key_{t.d}\right)} + Key_{t.w} = 7.667\,m$

$\Sigma M_{rocksection} := V_{rocksection} \cdot L_{rocksection} = 2257.1\,m \cdot kN$

LOAD CASE U1 - NORMAL OPERATION



U1 DESIGN CASE

LOAD CASE U1 ACCEPTANCE PARAMETERS

FS sliding:

Usual (U) 1.5 (without cohesion) (Table 3-3, USACE EM 1110-2-2100)

Resultant Location:

Usual (U) Inside middle third ~100% base in compression

Required Factor of Safety for Sliding: $FS_{sliding.reqU1} := 1.5$ (Without Cohesion)

Allowable rock bearing pressure: $\sigma_{allowU1} := 1270kPa$ (Section 5.2, Design Criteria EM 1110-2-2100 Section 3-10)

Overturning Required Resultant Ratio: $X_{R.reqU1} := 0.333$ (EM 1110-2-2502, Figure 4-4)

Required Factor of Safety for Floatation $FS_{req.U1.flt} := 1.5$

SOIL HEIGHTS and Water Levels:

LOAD CASE U1

Heel Conditions:

Groundwater Elevation at Heel: $GWL_{U1} := 1213.1 m$

Distance from Finish Grade to Groundwater at Heel: $h_{1U1} := \left[T_w - GWL_{U1} + \left(L_{cd} + t_{wb} - t_{wt}\right)\cdot \tan(\beta)\right] = 5.90\ m$

Distance from Water Surface to Bottom of Footing at Heel: $h_{2U1} := GWL_{U1} - Bot_{ftg} + Key_{h.d} = 9.10\ m$

Toe Conditions:

Water Surface Elevation at Toe: $WSEL_{U1} := 1210.0m$

Water Surface Elevation at Toe for Uplift: $UWSEL_{U1} := 1210.0\cdot m$

Finish Grade at Toe providing lateral resistance: $FG_{toeU1} := 1206.0\cdot m$

Soil Depth Above top of footing: $h_{3aU1} := FG_{toeU1} - Top_{ftg} = -2\ m$

$$h_{3U1} := \begin{vmatrix} h_{3aU1} & \text{if } FG_{toeU1} - Top_{ftg} \geq 0 \\ 0 & \text{otherwise} \end{vmatrix} = 0$$

Resisting Fill at Toe: $h_{4U1} := FG_{toeU1} - Bot_{ftg} + Key_{t.d} = 0.00\ m$

Distance from Water Level to Top of Footing: $h_{5U1} := WSEL_{U1} - Top_{ftg} = 2.00\ m$

Distance from Water Surface to Bottom of Footing: $h_{6U1} := WSEL_{U1} - Bot_{ftg} + Key_{t.d} = 4.00\cdot m$

Soil Depth Above WSEL: $h_{7aU1} := FG_{toeU1} - WSEL_{U1} = -4\ m$

$$h_{7U1} := \begin{vmatrix} h_{7aU1} & \text{if } FG_{toeU1} - WSEL_{U1} \geq 0 \\ 0 & \text{otherwise} \end{vmatrix} = 0$$

Soil Depth Below WSEL:

$$h_{8U1} := \begin{vmatrix} WSEL_{U1} - Bot_{ftg} + Key_{t.d} & \text{if } FG_{toeU1} - WSEL_{U1} \geq 0 \\ h_{4U1} & \text{otherwise} \end{vmatrix} = 0$$

For Line of Creep Method: $L_{ho.U1} := \sqrt{b^2 + \left(Key_{h.d} - Key_{t.d}\right)^2} = 12.659\ m$

Head Loss from Point g:

$\Delta h_{g.hj.U1} := h_{2U1} = 9.1\ m$ (to point h & j)

$\Delta h_{g.km.U1} := GWL_{U1} - Bot_{ftg} = 7.1\ m$ (to point k & m)

$\Delta h_{g.no.U1} := GWL_{U1} - Bot_{ftg} + Key_{t.d} = 7.1\ m$ (to point n & o)

$\Delta h_{g.p.U1} := GWL_{U1} - FG_{toeU1} = 7.1\ m$ (to point p*)

$\Delta h_{g.r.U1} := GWL_{U1} - UWSEL_{U1} = 3.1\ m$ (to point r)

Surcharge

Surcharge on Heel: $S1_{U1} := 0.0 \frac{kN}{m^2}$

* same as point "o" in this case

Calculate Soil Lateral Pressure Coefficients:

LOAD CASE U1

For all load cases except seismic, soil loading to be based on At-Rest Condition.
Calculate at-rest pressure coefficient Ko based on Jaky's (1944) equation.

Soil At Rest Static Coefficient: $K_o := \frac{1 - \sin(\phi)}{1 + \sin(\beta)} = 0.546$ (Eq. 3-6, USACE EM 1110-2-2502)

Lateral - Driving Force (Headwater Side)

Lateral Soil Load:

Surcharge Load: $E_{s1U1} := S1_{U1} \cdot K_o \cdot \left(H_w + Key_{h.d}\right) \cdot B \cdot -1 = 0 \cdot kN$

Moment Arm (from bottom of footing): $E_{s1locU1} := \frac{H_w + Key_{h.d}}{2} + Key_{vdist} = 5.50\ m$

Moist Soil Load above GWL: $E_{h1U1} := \frac{\gamma_m \cdot K_o \cdot h_{1U1}^{\ 2}}{2} B \cdot -1 = -190.1 \cdot kN$

Moment Arm (from bottom of footing): $E_{h1locU1} := \frac{h_{1U1}}{3} + h_{2U1} + Key_{vdist} = 9.07\ m$

Saturated Soil Load below GWL:
(rectangular component) $E_{h2U1} := \left(\gamma_m \cdot K_o \cdot h_{1U1}\right) \cdot \left(h_{2U1}\right) \cdot B \cdot -1 = -586.3 \cdot kN$

Moment Arm (from bottom of footing): $E_{h2locU1} := \frac{h_{2U1}}{2} + Key_{vdist} = 2.55\ m$

Saturated Soil Load below GWL:
(triangular component) $E_{h2aU1} := \frac{\left(\gamma_{sat} - \gamma_w\right) \cdot K_o \cdot h_{2U1}^{\ 2}}{2} \cdot B \cdot -1 = -275.8 \cdot kN$

Moment Arm (from bottom of footing): $E_{h2alocU1} := \frac{h_{2U1}}{3} + Key_{vdist} = 1.03\ m$

Lateral Water Load:

Water Load GWL to Bottom of Key $H_{h2U1} := \frac{\gamma_w \cdot h_{2U1}^{\ 2}}{2} \cdot B \cdot -1 = -405.8 \cdot kN$

Moment Arm (from bottom of footing): $H_{h2locU1} := \frac{h_{2U1}}{3} + Key_{vdist} = 1.03\ m$

$\Sigma H_{SoildriveU1} := E_{s1U1} + E_{h1U1} + E_{h2U1} + E_{h2aU1} + H_{h2U1} = -1458.0 \cdot kN$

$\Sigma M_{LateralSoildriveU1} := E_{s1U1} \cdot E_{s1locU1} + E_{h1U1} \cdot E_{h1locU1} + E_{h2U1} \cdot E_{h2locU1} + E_{h2aU1} \cdot E_{h2alocU1} + H_{h2U1} \cdot H_{h2locU1} = -3922.6\ m \cdot kN$

Lateral - Resisting Force (Tailwater Side)

LOAD CASE U1

Lateral Water Load:

Water Load WSEL to Bot. of Footing: $H_{h6U1} := \frac{\gamma_w \cdot h_{6U1}^2}{2} \cdot B = 78.4 \cdot kN$

Moment Arm (from bot. of toe key): $H_{h6locU1} := \frac{h_{6U1}}{3} = 1.33\ m$

Water Load Bot. of Footing to Bot. of H. Key: $H_{h2aU1} := \left[\left(UWSEL_{U1} - Bot_{ftg} + Key_{t.d}\right) + h_{2U1}\right] \cdot \frac{Key_{h.d}}{2} \cdot \gamma_w \cdot B = 128.4 \cdot kN$

Moment Arm (from bot. of toe key): $H_{h2alocU1} := \frac{Key_{h.d} \cdot \left[2 \cdot \left(UWSEL_{U1} - Bot_{ftg} + Key_{t.d}\right) + h_{2U1}\right]}{3\left[h_{2U1} + \left(UWSEL_{U1} - Bot_{ftg} + Key_{t.d}\right)\right]} \ldots + Key_{vdist} = -1.13\ m$

Lateral Soil Load:

Moist Soil Load above WSEL: $E_{h7U1} := \frac{\gamma_m \cdot K_o \cdot h_{7U1}^2}{2} \cdot B = 0.0 \cdot kN$

Moment Arm (from bot. of toe key): $E_{h7locU1} := h_{6U1} + \frac{h_{7U1}}{3} + Key_{vdist} = 2.00\ m$

Saturated Soil Load below WSEL:
(rectangular component) $E_{h8U1} := \left(\gamma_m \cdot K_o \cdot h_{7U1}\right) \cdot h_{8U1} \cdot B = 0.0 \cdot kN$

Moment Arm (from bot. of toe key): $E_{h8locU1} := \frac{h_{8U1}}{2} = 0.00\ m$

Saturated Soil Load below WSEL:
(triangular component) $E_{h8aU1} := \frac{\left[\left(\gamma_{sat} - \gamma_w\right) \cdot K_o\right] \cdot h_{8U1}^2}{2} \cdot B = 0.0 \cdot kN$

Moment Arm (from bot. of footing): $E_{h8alocU1} := \frac{h_{8U1}}{3} = 0.00\ m$

Lateral Resistance from Stilling Basin:

Lateral Resistance from Stilling Basin: $P_{sbU1} := 430kN$ (Force needed to achieve the required sliding factor of safety in case UN2)

Moment Arm (from bot. of toe key): $P_{sblocU1} := \frac{t_{ftg}}{2} + Key_{t.d} = 1.00\ m$

$$\Sigma H_{SoilresistU1} := H_{h6U1} + H_{h2aU1} + E_{h7U1} + E_{h8U1} + E_{h8aU1} + P_{sbU1} = 636.8 \cdot kN$$

$$\Sigma M_{HorizSoilResistU1} := H_{h6U1} \cdot H_{h6locU1} + H_{h2aU1} \cdot H_{h2alocU1} + E_{h7U1} \cdot E_{h7locU1} \ldots + E_{h8U1} \cdot E_{h8locU1} + E_{h8aU1} \cdot E_{h8alocU1} + P_{sbU1} \cdot P_{sblocU1} = 389.5\ m \cdot kN$$

Vertical Force:

UPLIFT: Linear distribution from water at heel to water at toe:

$$\Sigma V_{UpliftU1} := \left[\left(UWSEL_{U1} - Bot_{ftg} + Key_{t.d}\right) + h_{2U1}\right] \cdot \frac{b}{2} \cdot \gamma_w \cdot B \cdot -1 = -802.375 \cdot kN$$

Moment Arm (from Point O): $V_{UpliftU1aloc} := \frac{b \cdot \left[2 \cdot h_{2U1} + \left(UWSEL_{U1} - Bot_{ftg} + Key_{t.d}\right)\right]}{3\left[h_{2U1} + \left(UWSEL_{U1} - Bot_{ftg} + Key_{t.d}\right)\right]} = 7.061\ m$

$$\Sigma M_{UpliftU1} := \Sigma V_{UpliftU1} \cdot V_{UpliftU1aloc} = -5665.625 \cdot kN \cdot m$$

Vertical Force (con't):

Weight of soil and water over toe:

Water Above the Top of Footing: $W_{H1U1} := \gamma_w \cdot h_{5U1} \cdot L_{ab} \cdot B = 78.4 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E1locU1} := \frac{L_{ab}}{2} = 2\,m$

Soil above top of footing: $W_{E6U1} := \gamma_b \cdot h_{3U1} \cdot L_{ab} \cdot B = 0.0 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E6locU1} := \frac{L_{ab}}{2} = 2\,m$

Vertical Load Due to Surcharge: $S_{U1} := S1_{U1} \cdot L_{cd} \cdot B = 0$ $\quad S_{U1loc} := b - \frac{L_{cd}}{2} = 8.93\,m$

Weight of soil and water over heel:

Moist Soil for sloped grade above top of wall:

Length of sloped portion of soil above top of wall: $L_{E3U1} := \left(L_{cd} + t_{wb} - t_{wt}\right) = 8.00\,m$

Height of sloped soil above top of wall over heel: $h_{E3locU1} := \left(L_{E3U1}\right) \cdot \tan(\beta) = 0.00\,m$

Weight of sloped soil above top of wall: $W_{E3U1} := \frac{\gamma_m}{2} \cdot h_{E3locU1} \cdot L_{E3U1} \cdot B = 0.0 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E3locU1} := L_{ab} + t_{wt} + \frac{2}{3} \cdot L_{E3U1} = 9.83\,m$

Moist soil from top of wall to groundwater level:

Height of soil from top of wall and top of GWL: $h_{1U1} = 5.90\,m$

Length from edge of wall at GWL to edge of heel: $L_{E4U1} := L_{E3U1} - \left(h_{1U1} \cdot S_{batter}\right) = 7.54\,m$

Weight of soil over heel from top of wall to GWL: $W_{E4U1} := \gamma_m \cdot h_{1U1} \cdot \frac{\left(L_{E3U1} + L_{E4U1}\right)}{2} \cdot B = 916.7 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E4locU1} := b - \frac{L_{E3U1}^{2} + L_{E3U1} \cdot L_{E4U1} + L_{E4U1}^{2}}{3\left(L_{E3U1} + L_{E4U1}\right)} = 8.61\,m$

Saturated soil from groundwater to top of footing:

Height of soil from GWL to top of heel: $h_{E4U1} := h_{2U1} - t_{ftg} - Key_{h.d} = 5.10\,m$

Weight of soil over heel from GWL to top of heel: $W_{E5U1} := \left(\gamma_{sat}\right) \cdot h_{E4U1} \cdot \frac{\left(L_{E4U1} + L_{cd}\right)}{2} \cdot B = 823.1 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E5locU1} := b - \frac{L_{E4U1}^{2} + L_{E4U1} \cdot L_{cd} + L_{cd}^{2}}{3\left(L_{E4U1} + L_{cd}\right)} = 8.83\,m$

$\Sigma V_{SoilWaterU1} := W_{H1U1} + W_{E6U1} + W_{E3U1} + W_{E4U1} + W_{E5U1} + S_{U1} = 1818.2 \cdot kN$

$$\Sigma M_{VertSoilWaterResistU1} := W_{H1U1} \cdot W_{E1locU1} + W_{E6U1} \cdot W_{E6locU1} \cdots + W_{E3U1} \cdot W_{E3locU1} + W_{E4U1} \cdot W_{E4locU1} + W_{E5U1} \cdot W_{E5locU1} + S_{U1} \cdot S_{U1loc} = 15322.6\,m \cdot kN$$

STABILITY ASSESSMENT:

LOAD CASE U1

CHECK SLIDING ALONG HORIZONTAL SLIDING PLANE:

Summation of the vertical forces:

$$\Sigma V_{U1} := \Sigma V_{conc} + \Sigma V_{SoilWaterU1} + \Sigma V_{UpliftU1} = 1891.2 \cdot kN$$

Summation of the horizontal forces:

$$\Sigma H_{U1} := \Sigma H_{SoildriveU1} + \Sigma H_{SoilresistU1} = -821.2 \cdot kN$$

Safety Factor for Sliding Horizontal Failure Plane

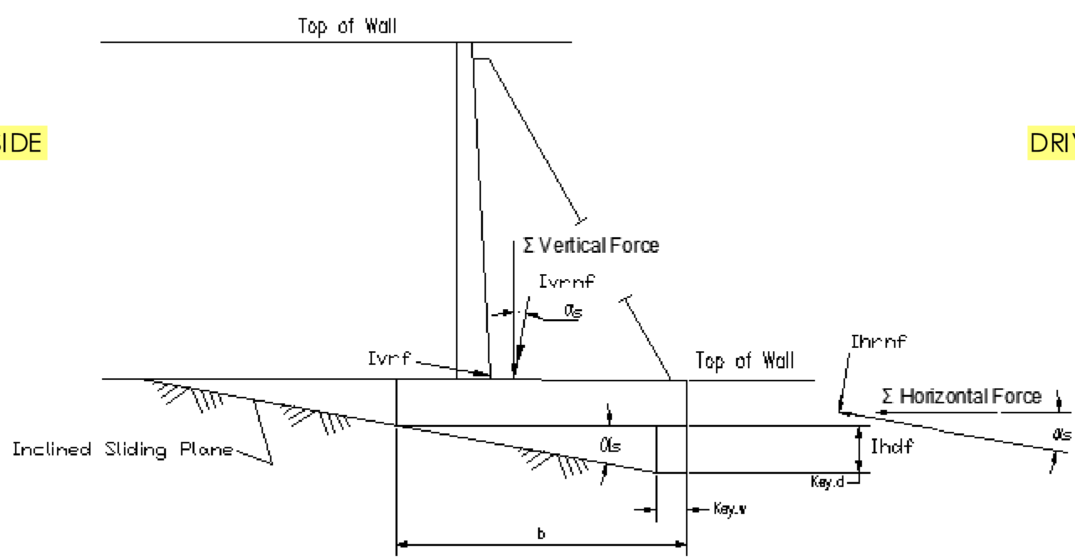
$$FS_{Horiz.SlidingU1} := \frac{\left|\Sigma V_{U1}\right| \cdot \tan\left(\phi_{rock} \cdot \frac{\pi}{180}\right)}{\left|\Sigma H_{U1}\right|} = 1.12$$

$$FS_{Sliding.check1.U1} := \begin{cases} \text{"OKAY "} & \text{if } FS_{Horiz.SlidingU1} > FS_{sliding.reqU1} \\ \text{"Key req""} & \text{otherwise} \end{cases} = \text{"Key req""}$$

CHECK FACTOR OF SAFETY SLIDING WITH KEY (INCLINED SLIDING PLANE):

RESISTING SIDE

DRIVING SIDE



TOE

HEEL

Ivrf=Inclined Resisting Force
Ivrnf=Inclined Resisting Normal Force
Ihrnf=Inclined Resisting Normal Force
Ihdf=Inclined Driving Force

$$\alpha s := \operatorname{atan}\left(\frac{-Key_{vdist}}{Key_{hdist}}\right) = 0.172 \qquad \text{as degrees=} \qquad \alpha s \cdot \left(\frac{180}{\pi}\right) = 9.87$$

(With properly engineered reinforced concrete Key, horizontal sliding plane thru Toe is protected, critical sliding plane is relocated to the INCLINED SLIDING PLANE FROM HEEL KEY To TOE, Bedrock Mass above this examing plane is mobilized by reinforced concrete key and combined into Structural Wedge.)

Resolve ΣV_{U1} & ΣH_{U1}

$$\Sigma V_{InclinedU1} := \cos(\alpha s) \cdot \left(\left|\Sigma V_{U1} + V_{rocksection}\right|\right) + \sin(\alpha s) \cdot \left|\Sigma H_{U1}\right| = 2294.0 \cdot kN$$

$$\Sigma H_{InclinedU1} := \cos(\alpha s) \cdot \left|\Sigma H_{U1}\right| - \sin(\alpha s) \cdot \left(\left|\Sigma V_{U1} + V_{rocksection}\right|\right) = 434.5 \cdot kN$$

LOAD CASE U1

Safety Factor for Sliding Inclined Failure Plane

$$FS_{InclinedlSlidingU1} := \frac{\Sigma V_{InclinedU1} \cdot \tan(\phi_r)}{\Sigma H_{InclinedU1}} = 2.35$$

$$FS_{Sliding.check2.U1} := \begin{cases} \text{"OKAY "} & \text{if } FS_{InclinedlSlidingU1} > FS_{sliding.reqU1} \\ \text{"NG - Revise Structure""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

CHECK FOUNDATION ECCENTRICITY:

Summation of the resisting moments about the toe:

$$\Sigma M_{resU1} := \Sigma M_{conc} + \Sigma M_{VertSoilWaterResistU1} + \Sigma M_{HorizSoilResistU1} + \Sigma M_{rocksection} = 23289 \cdot kN \cdot m$$

Summation of the overturning moments about the toe:

$$\Sigma M_{oU1} := \Sigma M_{LateralSoildriveU1} + \Sigma M_{UpliftU1} = -9588 \cdot kN \cdot m$$

Total moment: $\Sigma M_{U1} := \Sigma M_{resU1} + \Sigma M_{oU1} = 13700.7 \cdot kN \cdot m$

Normal force to base: $\Sigma V_{InclinedU1} = 2294.0 \cdot kN$

Inclined Sliding Plane Length: $L_{incline} := \frac{b}{\cos(\alpha s)} = 12.7\,m$

Eccentricity (inclined plane): $ex_{U1} := \frac{L_{incline}}{2} - \frac{\Sigma M_{U1}}{\Sigma V_{InclinedU1}} = 0.37\,m$ $\quad Kern := \frac{L_{incline}}{6} = 2.115\,m$

Eccentricity Check: $e_{check.U1} := \begin{cases} \text{"Okay"} & \text{if } ex_{U1} \le Kern \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"Okay"}$

CHECK FOUNDATION BEARING CAPACITY:

Base Section Modulus: $S_b := \frac{1}{6}\left(B \cdot L_{incline}^{\;2}\right) = 26.83\,m^3$

Bearing Pressure Under Toe:

$$\sigma_{ToeU1} := \begin{cases} \left(\frac{\Sigma V_{InclinedU1}}{L_{incline} \cdot B} + \frac{\Sigma V_{InclinedU1} \cdot ex_{U1}}{S_b}\right) & \text{if } \frac{\Sigma V_{InclinedU1} \cdot ex_{U1}}{S_b} \le \frac{\Sigma V_{InclinedU1}}{L_{incline} \cdot B} \\ \frac{2 \cdot \Sigma V_{InclinedU1}}{B \cdot 3\left(\frac{b}{2} - ex_{U1}\right)} & \text{otherwise} \end{cases} = 212.6 \cdot kPa$$

CHECK OVERTURNING

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stablity of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1

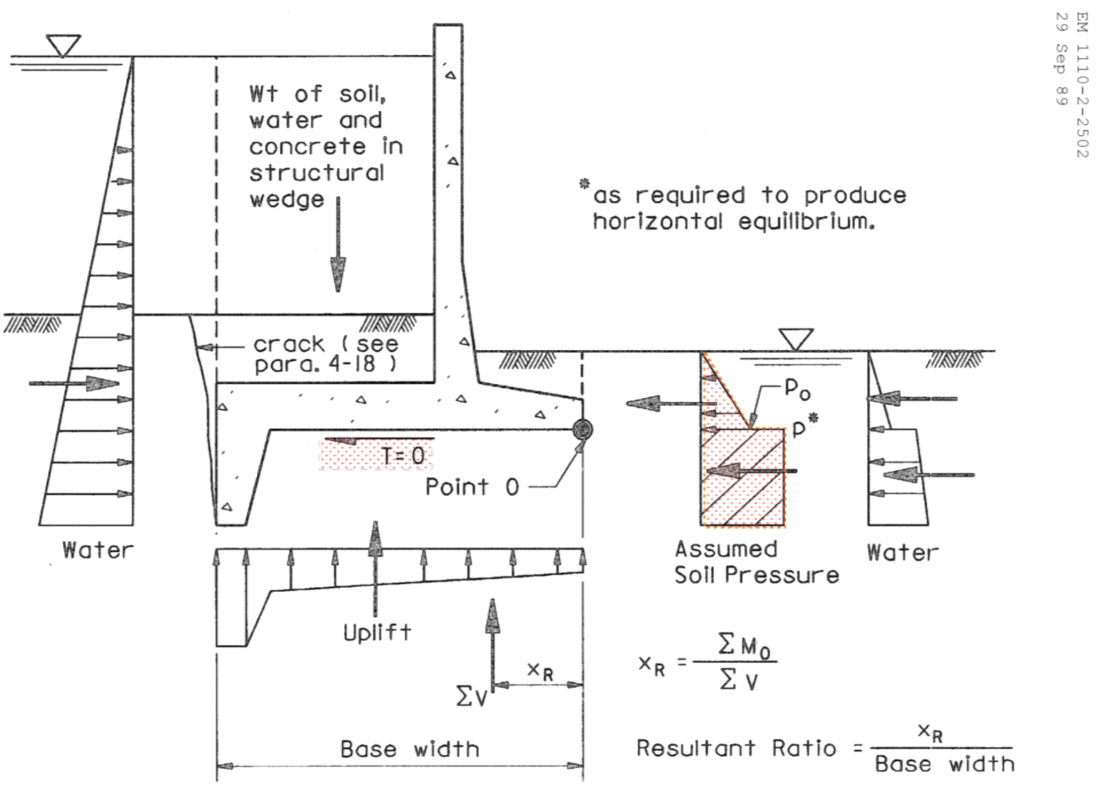

Figure 4-5. Forces for overturning analysis for wall with horizontal base and key

Modify Uplift for Overturning Analysis: **LOAD CASE U1**

(Uplift is calculated along the concrete/rock contact using the Line of Creep method)

Water Pressure at h: $u_{h.U1} := \Delta h_{g.hj.U1} \cdot \gamma_w = 89.18 \cdot kPa$

Water Pressure at o: $u_{o.U1} := \left(\Delta h_{g.no.U1} - \frac{\Delta h_{g.r.U1} \cdot L_{ho.U1}}{L_{ho.U1}}\right) \cdot \gamma_w = 39.2 \cdot kPa$

Head loss between point h and o: $\Delta h_{ho.U1} := \Delta h_{g.r.U1} \cdot \frac{L_{ho.U1}}{L_{ho.U1}} = 3.1\ m$

Length of concrete base (h -> o): $L_{baseho.U1} := Key_{h.w} + Key_{h.d} + Key_{hdist} + Key_{t.d} + Key_{t.w} = 14.5\ m$

Head loss along h -> j: $\Delta h_{hj.U1} := \Delta h_{ho.U1} \cdot \frac{Key_{h.w}}{L_{baseho.U1}} = 0.214\ m$

Water Pressure at j: $u_{j.U1} := \left(\Delta h_{g.hj.U1} - \Delta h_{hj.U1}\right) \cdot \gamma_w = 87.08 \cdot kPa$

Head loss along h -> k: $\Delta h_{hjk.U1} := \Delta h_{ho.U1} \cdot \left(\frac{Key_{h.w} + Key_{h.d}}{L_{baseho.U1}}\right) = 0.641\ m$

Water Pressure at k: $u_{k.U1} := \left(\Delta h_{g.km.U1} - \Delta h_{hjk.U1}\right) \cdot \gamma_w = 63.29 \cdot kPa$

Head loss along h -> m: $\Delta h_{hjkm.U1} := \Delta h_{ho.U1} \cdot \left(\frac{Key_{h.w} + Key_{h.d} + Key_{hdist}}{L_{baseho.U1}}\right) = 3.1\ m$

Water Pressure at m: $u_{m.U1} := \left(\Delta h_{g.km.U1} - \Delta h_{hjkm.U1}\right) \cdot \gamma_w = 39.20 \cdot kPa$

Head loss along h -> n: $\Delta h_{hjkmn.U1} := \Delta h_{ho.U1} \cdot \left(\frac{Key_{h.w} + Key_{h.d} + Key_{hdist} + Key_{t.d}}{L_{baseho.U1}}\right) = 3.1\ m$

Water Pressure at n: $u_{n.U1} := \left(\Delta h_{g.no.U1} - \Delta h_{hjkmn.U1}\right) \cdot \gamma_w = 39.20 \cdot kPa$

Uplift under key at heel: $V_{ulkeyhU1.OT} := \frac{\left(u_{h.U1} + u_{j.U1}\right) \cdot Key_{h.w}}{2} \cdot B \cdot -1 = -88.132 \cdot kN$

Moment Arm (from Point O): $V_{ulkeyhU1loc.OT} := b - \frac{Key_{h.w} \cdot \left(2 \cdot u_{j.U1} + u_{h.U1}\right)}{3 \cdot \left(u_{j.U1} + u_{h.U1}\right)} = 12.002\ m$

Uplift under base: $V_{ulbaseU1.OT} := \frac{\left(u_{k.U1} + u_{m.U1}\right) \cdot Key_{hdist}}{2} \cdot B \cdot -1 = -589.343 \cdot kN$

Moment Arm (from Point O): $V_{ulbaseU1loc.OT} := b - Key_{h.w} - \frac{Key_{hdist} \cdot \left(2 \cdot u_{m.U1} + u_{k.U1}\right)}{3 \cdot \left(u_{m.U1} + u_{k.U1}\right)} = 6.201\ m$

Uplift under key at toe: $V_{ulkeytU1.OT} := \frac{\left(u_{n.U1} + u_{o.U1}\right) \cdot Key_{t.w}}{2} \cdot B \cdot -1 = 0 \cdot kN$

Moment Arm (from Point O): $V_{ulkeytU1loc.OT} := \frac{Key_{t.w} \cdot \left(2 \cdot u_{n.U1} + u_{o.U1}\right)}{3 \cdot \left(u_{n.U1} + u_{o.U1}\right)} = 0$

$$\Sigma V_{UpliftU1.OT} := V_{ulkeyhU1.OT} + V_{ulbaseU1.OT} + V_{ulkeytU1.OT} = -677 \cdot kN$$

$$U_{U1.loc.OT} := \frac{V_{ulkeyhU1.OT} \cdot V_{ulkeyhU1loc.OT} + V_{ulbaseU1.OT} \cdot V_{ulbaseU1loc.OT} + V_{ulkeytU1.OT} \cdot V_{ulkeytU1loc.OT}}{\Sigma V_{UpliftU1.OT}} = 6.96\ m$$

$$\Sigma M_{UpliftU1.OT} := \Sigma V_{UpliftU1.OT} \cdot U_{U1.loc.OT} = -4712.0 \cdot kN \cdot m$$

Modify Lateral Water Pressure (Resisting) for Overturning Analysis:

(Resisting water pressure is calculated using the Line of Creep method)

Water Load at Key (heel): $H_{h2U1.OT} := \frac{u_{k.U1} + u_{j.U1}}{2} \cdot Key_{h.d} B = 150.4 \cdot kN$

Moment Arm (from Point O): $H_{h2locU1.OT} := \frac{Key_{h.d} \cdot (2 \cdot u_{k.U1} + u_{j.U1})}{3(u_{k.U1} + u_{j.U1})} + Key_{vdist} = -1.05\ m$

Water Load at Key (toe): $H_{h6U1.OT} := \frac{u_{o.U1} \cdot (UWSEL_{U1} - Bot_{ftg} + Key_{t.d})}{2} \cdot B = 78 \cdot kN$

Moment Arm (from Point O): $H_{h6locU1.OT} := \frac{UWSEL_{U1} - Bot_{ftg} + Key_{t.d}}{3} = 1.33\ m$

$$\Sigma H_{waterresistU1.OT} := H_{h2U1.OT} + H_{h6U1.OT} = 228.78 \cdot kN$$

$$H_{waterresistlocU1.OT} := \frac{H_{h2U1.OT} \cdot H_{h2locU1.OT} + H_{h6U1.OT} \cdot H_{h6locU1.OT}}{\Sigma H_{waterresistU1.OT}} = -0.235\ m$$

$$\Sigma M_{waterresistU1.OT} := \Sigma H_{waterresistU1.OT} \cdot H_{waterresistlocU1.OT} = -53.78 \cdot kN \cdot m$$

Modify Lateral Soil Loads for Overturning Analysis:

(Lateral soil loads are calculated down to Point O instead of bottom of shear key)

Driving Soil Load (Headwater Side):

Surcharge Load: $E_{s1U1.OT} := S1_{U1} \cdot K_o \cdot (H_w + Key_{h.d} + Key_{vdist}) \cdot B \cdot -1 = 0 \cdot kN$

Moment Arm (from Point O): $E_{s1locU1.OT} := \frac{H_w + Key_{h.d} + Key_{vdist}}{2} = 6.50\ m$

Moist Soil Load above GWL: $E_{h1U1.OT} := \frac{\gamma_m \cdot K_o \cdot h_{1U1}^2}{2} B \cdot -1 = -190.1 \cdot kN$

Moment Arm (from Point O): $E_{h1locU1.OT} := \frac{h_{1U1}}{3} + h_{2U1} + Key_{vdist} = 9.07\ m$

Saturated Soil Load below GWL:
(rectangular component)
$E_{h2U1.OT} := (\gamma_m \cdot K_o \cdot h_{1U1}) \cdot (h_{2U1} + Key_{vdist}) \cdot B \cdot -1 = -457.4 \cdot kN$

Moment Arm (from Point O): $E_{h2locU1.OT} := \frac{h_{2U1} + Key_{vdist}}{2} = 3.55\ m$

Saturated Soil Load below GWL:
(triangular component)
$E_{h2aU1.OT} := \frac{(\gamma_{sat} - \gamma_w) \cdot K_o \cdot (h_{2U1} + Key_{vdist})^2}{2} \cdot B \cdot -1 = -167.9 \cdot kN$

Moment Arm (from Point O): $E_{h2alocU1.OT} := \frac{h_{2U1} + Key_{vdist}}{3} = 2.37\ m$

Resisting Soil Load (Tailwater Side):

(Determine resisting soil load based on depth variation between the keys (ie. Key_{vdist}). In case where key at heel is deeper than key at toe (ie. $Key_{vdist} < 0$), resisting soil load (p*) is assumed to produce horizontal equilibrium as per Figure 4-5 above. Resisting soil load (p_o) is neglected.)

Total Driving Force: $\Sigma H_{SoildriveU1.OT} := E_{s1U1.OT} + E_{h1U1.OT} + E_{h2U1.OT} + E_{h2aU1.OT} + H_{h2U1} = -1221.2 \cdot kN$

Total Resisting Force: $\Sigma H_{waterresistU1.OT} = 228.8 \cdot kN$

Assumed Soil Load p*: $E_{h8U1a.OT} := \left(\Sigma H_{SoildriveU1.OT} + \Sigma H_{waterresistU1.OT}\right) \cdot -1 = 992.401 \cdot kN$

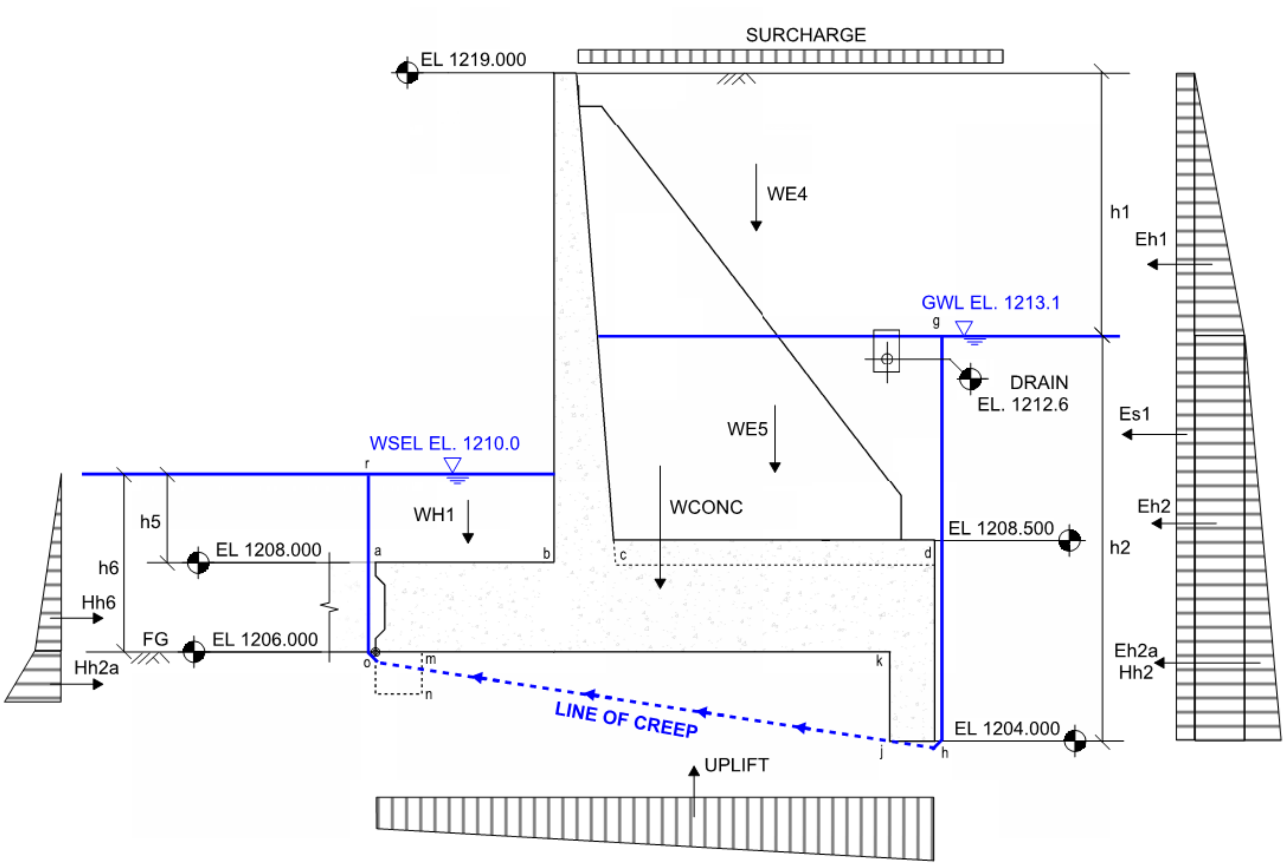
LOAD CASE UN1 - NORMAL OPERATION + SURCHARGE



UN1 DESIGN CASE

LOAD CASE UN1 ACCEPTANCE PARAMETERS

FS sliding:

Unusual (UN) 1.3 (without cohesion) (Table 3-3, USACE EM 1110-2-2100)

Resultant Location:

Unsual (UN) Inside middle third ~100% base in compression

Required Factor of Safety for Sliding: $FS_{sliding.reqUN1} := 1.3$ (Without Cohesion)

Allowable rock bearing pressure: $\sigma_{allowUN1} := 1470kPa$ (Section 5.2, Design Criteria EM 1110-2-2100 Section 3-10)

Overturning Required Resultant Ratio: $X_{R.reqUN1} := 0.333$ (EM 1110-2-2502, Figure 4-4)

Required Factor of Safety for Floatation $FS_{req.UN1.flt} := 1.3$

SOIL HEIGHTS and Water Levels:

LOAD CASE UN1

Heel Conditions:

Groundwater Elevation at Heel: $GWL_{UN1} := 1213.1m$

Distance from Finish Grade to Groundwater at Heel: $h_{1UN1} := \left[T_w - GWL_{UN1} + \left(L_{cd} + t_{wb} - t_{wt}\right)\cdot \tan(\beta)\right] = 5.90\ m$

Distance from Water Surface to Bottom of Footing at Heel: $h_{2UN1} := GWL_{UN1} - Bot_{ftg} + Key_{h.d} = 9.10\ m$

Toe Conditions:

Water Surface Elevation at Toe: $WSEL_{UN1} := 1210.0m$

Water Surface Elevation at Toe for Uplift: $UWSEL_{UN1} := 1210.0\cdot m$

Finish Grade at Toe providing lateral resistance: $FG_{toeUN1} := 1206.0\cdot m$

Soil Depth Above top of footing: $h_{3aUN1} := FG_{toeUN1} - Top_{ftg} = -2\ m$

$$h_{3UN1} := \begin{cases} h_{3aUN1} & \text{if } FG_{toeUN1} - Top_{ftg} \geq 0 \\ 0 & \text{otherwise} \end{cases} = 0$$

Resisting Fill at Toe: $h_{4UN1} := FG_{toeUN1} - Bot_{ftg} + Key_{t.d} = 0.00\ m$

Distance from Water Level to Top of Footing at Toe: $h_{5UN1} := WSEL_{UN1} - Top_{ftg} = 2.00\ m$

Distance from Water Surface to Bottom of Footing at Toe: $h_{6UN1} := WSEL_{UN1} - Bot_{ftg} + Key_{t.d} = 4.00\ m$

Soil Depth Above WSEL: $h_{7aUN1} := FG_{toeUN1} - WSEL_{UN1} = -4\ m$

$$h_{7UN1} := \begin{cases} h_{7aUN1} & \text{if } FG_{toeUN1} - WSEL_{UN1} \geq 0 \\ 0 & \text{otherwise} \end{cases} = 0$$

Soil Depth Below WSEL:

$$h_{8UN1} := \begin{cases} WSEL_{UN1} - Bot_{ftg} + Key_{t.d} & \text{if } FG_{toeUN1} - WSEL_{UN1} \geq 0 \\ h_{4UN1} & \text{otherwise} \end{cases} = 0$$

For Line of Creep Method: $L_{ho.UN1} := \sqrt{b^2 + \left(Key_{h.d} - Key_{t.d}\right)^2} = 12.659\ m$

Head Loss from Point g:

$\Delta h_{g.hj.UN1} := h_{2UN1} = 9.1\ m$ (to point h & j)

$\Delta h_{g.km.UN1} := GWL_{UN1} - Bot_{ftg} = 7.1\ m$ (to point k & m)

$\Delta h_{g.no.UN1} := GWL_{UN1} - Bot_{ftg} + Key_{t.d} = 7.1\ m$ (to point n & o)

$\Delta h_{g.p.UN1} := GWL_{UN1} - FG_{toeUN1} = 7.1\ m$ (to point p*)

$\Delta h_{g.r.UN1} := GWL_{UN1} - UWSEL_{UN1} = 3.1\ m$ (to point r)

Surcharge

Surcharge on Heel: $S1_{UN1} := 15.0\ \frac{kN}{m^2}$

* same as point "o" in this case

Calculate Soil Lateral Pressure Coefficients:

LOAD CASE UN1

For all load cases except seismic, soil loading to be based on At-Rest Condition.
Calculate at-rest pressure coefficient Ko based on Jaky's (1944) equation.

Soil At Rest Static Coefficient: $K_o := \dfrac{1 - \sin(\phi)}{1 + \sin(\beta)} = 0.546$ (Eq. 3-6, USACE EM 1110-2-2502)

Lateral - Driving Force

Static At-Rest:

Surcharge Load: $E_{s1UN1} := S1_{UN1} \cdot K_o \cdot \left(H_w + Key_{h.d}\right) \cdot B \cdot -1 = -122.852 \cdot kN$

Moment Arm (from bottom of footing): $E_{s1locUN1} := \dfrac{H_w + Key_{h.d}}{2} + Key_{vdist} = 5.50\ m$

Moist Soil Load above GWL: $E_{h1UN1} := \dfrac{\gamma_m \cdot K_o \cdot h_{1UN1}^{\ 2}}{2} B \cdot -1 = -190.1 \cdot kN$

Moment Arm (from bottom of footing): $E_{h1locUN1} := \dfrac{h_{1UN1}}{3} + h_{2UN1} + Key_{vdist} = 9.07\ m$

Saturated Soil Load below GWL:
(rectangular component)
$E_{h2UN1} := \left(\gamma_m \cdot K_o \cdot h_{1UN1}\right) \cdot \left(h_{2UN1}\right) \cdot B \cdot -1 = -586.3 \cdot kN$

Moment Arm (from bottom of footing): $E_{h2locUN1} := \dfrac{h_{2UN1}}{2} + Key_{vdist} = 2.55\ m$

Saturated Soil Load below GWT:
(triangular L
$E_{h2aUN1} := \dfrac{\left(\gamma_{sat} - \gamma_w\right) \cdot K_o \cdot h_{2UN1}^{\ 2}}{2} \cdot B \cdot -1 = -275.8 \cdot kN$

Moment Arm (from bottom of footing): $E_{h2alocUN1} := \dfrac{h_{2UN1}}{3} + Key_{vdist} = 1.03\ m$

Lateral Water Load:

Water Load GWL to Bottom of Key $H_{h2UN1} := \dfrac{\gamma_w \cdot h_{2UN1}^{\ 2}}{2} \cdot B \cdot -1 = -405.8 \cdot kN$

Moment Arm (from bottom of footing): $H_{h2locUN1} := \dfrac{h_{2UN1}}{3} + Key_{vdist} = 1.03\ m$

$\Sigma H_{SoildriveUN1} := E_{s1UN1} + E_{h1UN1} + E_{h2UN1} + E_{h2aUN1} + H_{h2UN1} = -1580.8 \cdot kN$

$$\Sigma M_{LateralSoildriveUN1} := E_{s1UN1} \cdot E_{s1locUN1} + E_{h1UN1} \cdot E_{h1locUN1} + E_{h2UN1} \cdot E_{h2locUN1} \ldots = -4598.3\ m \cdot kN$$
$$+ E_{h2aUN1} \cdot E_{h2alocUN1} + H_{h2UN1} \cdot H_{h2locUN1}$$

Lateral - Resisting Force

LOAD CASE UN1

Lateral Water Load:

Water Load WSEL to Bottom of Footing: $H_{h6UN1} := \frac{\gamma_w \cdot h_{6UN1}^2}{2} \cdot B = 78.4 \cdot kN$

Moment Arm (from bot. of toe key): $H_{h6locUN1} := \frac{h_{6UN1}}{3} = 1.33\ m$

Water Load Bot. of Footing to Bot. of H. Key: $H_{h2aUN1} := \left[\left(UWSEL_{UN1} - Bot_{ftg} + Key_{t.d}\right) + h_{2UN1}\right] \cdot \frac{Key_{h.d}}{2} \cdot \gamma_w \cdot B = 128.4 \cdot kN$

Moment Arm (from bot. of toe key): $H_{h2alocUN1} := \frac{Key_{h.d} \cdot \left[2 \cdot \left(UWSEL_{UN1} - Bot_{ftg} + Key_{t.d}\right) + h_{2UN1}\right]}{3\left[h_{2UN1} + \left(UWSEL_{UN1} - Bot_{ftg} + Key_{t.d}\right)\right]} \cdots + Key_{vdist} = -1.13\ m$

Lateral Soil Load:

Moist Soil Load above WSEL: $E_{h7UN1} := \frac{\gamma_m \cdot K_o \cdot h_{7UN1}^2}{2} \cdot B = 0.0 \cdot kN$

Moment Arm (from bot. of toe key): $E_{h7locUN1} := h_{6UN1} + \frac{h_{7UN1}}{3} + Key_{vdist} = 2.00\ m$

Saturated Soil Load below WSEL: (rectangular component) $E_{h8UN1} := \left(\gamma_m \cdot K_o \cdot h_{7UN1}\right) \cdot h_{8UN1} \cdot B = 0.0 \cdot kN$

Moment Arm (from bot. of toe key): $E_{h8locUN1} := \frac{h_{8UN1}}{2} = 0.00\ m$

Saturated Soil Load below WSEL: (triangular component) $E_{h8aUN1} := \frac{\left[\left(\gamma_{sat} - \gamma_w\right) \cdot K_o\right] \cdot h_{8UN1}^2}{2} \cdot B = 0.0 \cdot kN$

Moment Arm (from bot. of footing): $E_{h8alocUN1} := \frac{h_{8UN1}}{3} = 0.00\ m$

Lateral Resistance from Stilling Basin:

Lateral Resistance from Stilling Basin: $P_{sbUN1} := 430kN$ (Force needed to achieve the required sliding factor of safety in case UN2)

Moment Arm (from bot. of toe key): $P_{sblocUN1} := \frac{t_{ftg}}{2} + Key_{t.d} = 1.00\ m$

$$\Sigma H_{SoilresistUN1} := H_{h6UN1} + H_{h2aUN1} + E_{h7UN1} + E_{h8UN1} + E_{h8aUN1} + P_{sbUN1} = 636.8 \cdot kN$$

$$\Sigma M_{HorizSoilResistUN1} := H_{h6UN1} \cdot H_{h6locUN1} + H_{h2aUN1} \cdot H_{h2alocUN1} + E_{h7UN1} \cdot E_{h7locUN1} \cdots + E_{h8UN1} \cdot E_{h8locUN1} + E_{h8aUN1} \cdot E_{h8alocUN1} + P_{sbUN1} \cdot P_{sblocUN1} = 389.5\ m \cdot kN$$

Vertical Force:

UPLIFT: Linear distribution from water at heel to water at toe:

$$\Sigma V_{UpliftUN1} := \left[\left(UWSEL_{UN1} - Bot_{ftg} + Key_{t.d}\right) + h_{2UN1}\right] \cdot \frac{b}{2} \cdot \gamma_w \cdot B \cdot -1 = -802.375 \cdot kN$$

Moment Arm (from Point O): $V_{UpliftUN1aloc} := \frac{b \cdot \left[2 \cdot h_{2UN1} + \left(UWSEL_{UN1} - Bot_{ftg} + Key_{t.d}\right)\right]}{3\left[h_{2UN1} + \left(UWSEL_{UN1} - Bot_{ftg} + Key_{t.d}\right)\right]} = 7.061\ m$

$$\Sigma M_{UpliftUN1} := \Sigma V_{UpliftUN1} \cdot V_{UpliftUN1aloc} = -5665.625 \cdot kN \cdot m$$

Weight of soil and water over toe:

Water Above the Top of Footing: $W_{H1UN1} := \gamma_w \cdot h_{5UN1} \cdot L_{ab} \cdot B = 78.4 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E1locUN1} := \frac{L_{ab}}{2} = 2\,m$

Soil above top of footing: $W_{E6UN1} := \gamma_b \cdot h_{3UN1} \cdot L_{ab} \cdot B = 0.0 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E6locUN1} := \frac{L_{ab}}{2} = 2\,m$

Vertical Load Due to Surcharge: $S_{UN1} := S1_{UN1} \cdot L_{cd} \cdot B = 107.04 \cdot kN$ $S_{UN1loc} := b - \frac{L_{cd}}{2} = 8.93\,m$

Weight of soil and water over heel:

Moist Soil for sloped grade above top of wall:

Length of sloped portion of soil above top of wall: $L_{E3UN1} := \left(L_{cd} + t_{wb} - t_{wt}\right) = 8.00\,m$

Height of sloped soil above top of wall over heel: $h_{E3locUN1} := \left(L_{E3UN1}\right) \cdot \tan(\beta) = 0.00\,m$

Weight of sloped soil above top of wall: $W_{E3UN1} := \frac{\gamma_m}{2} \cdot h_{E3locUN1} \cdot L_{E3UN1} \cdot B = 0.0 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E3locUN1} := L_{ab} + t_{wt} + \frac{2}{3} \cdot L_{E3UN1} = 9.83\,m$

Moist soil from top of wall to groundwater level:

Height of soil from top of wall and top of GWL: $h_{1UN1} = 5.90\,m$

Length from edge of wall at GWL to edge of heel: $L_{E4UN1} := L_{E3UN1} - \left(h_{1UN1} \cdot S_{batter}\right) = 7.54\,m$

Weight of soil over heel from top of wall to GWL: $W_{E4UN1} := \gamma_m \cdot h_{1UN1} \cdot \frac{\left(L_{E3UN1} + L_{E4UN1}\right)}{2} \cdot B = 916.7 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E4locUN1} := b - \frac{L_{E3UN1}^{\;2} + L_{E3UN1} \cdot L_{E4UN1} + L_{E4UN1}^{\;2}}{3\left(L_{E3UN1} + L_{E4UN1}\right)} = 8.61\,m$

Saturated soil from groundwater to top of footing:

Height of soil from GWL to top of heel: $h_{E4UN1} := h_{2UN1} - t_{ftg} - Key_{h.d} = 5.10\,m$

Weight of soil over heel from GWL to top of heel: $W_{E5UN1} := \left(\gamma_{sat}\right) \cdot h_{E4UN1} \cdot \frac{\left(L_{E4UN1} + L_{cd}\right)}{2} \cdot B = 823.1 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E5locUN1} := b - \frac{L_{E4UN1}^{\;2} + L_{E4UN1} \cdot L_{cd} + L_{cd}^{\;2}}{3\left(L_{E4UN1} + L_{cd}\right)} = 8.83\,m$

$$\Sigma V_{SoilWaterUN1} := W_{H1UN1} + W_{E6UN1} + W_{E3UN1} + W_{E4UN1} + W_{E5UN1} + S_{UN1} = 1925.2 \cdot kN$$

$$\Sigma M_{VertSoilWaterResistUN1} := W_{H1UN1} \cdot W_{E1locUN1} + W_{E6UN1} \cdot W_{E6locUN1} \cdots + W_{E3UN1} \cdot W_{E3locUN1} + W_{E4UN1} \cdot W_{E4locUN1} + W_{E5UN1} \cdot W_{E5locUN1} + S_{UN1} \cdot S_{UN1loc} = 16278.7\,m \cdot kN$$

Bearing Pressure Under Heel:

$$\sigma_{HeelUN1} := \begin{cases} \left(\frac{\Sigma V_{InclinedUN1}}{L_{incline} \cdot B} - \frac{\Sigma V_{InclinedUN1} \cdot ex_{UN1}}{S_b}\right) & \text{if } \frac{\Sigma V_{InclinedUN1} \cdot ex_{UN1}}{S_b} \le \frac{\Sigma V_{InclinedUN1}}{L_{incline} \cdot B} \\ 0 & \text{otherwise} \end{cases} = 139.6 \cdot kPa$$

$$Bearing_{CheckheelUN1} := \left(\begin{cases} \text{"OKAY "} & \text{if } \sigma_{HeelUN1} < \sigma_{allowUN1} \wedge \sigma_{HeelUN1} > 0 \\ \text{"NG - perform cracked base analysis""} & \text{otherwise} \end{cases}\right) = \text{"OKAY "}$$

CHECK FLOATATION:

Safety Factor for Floatation:

$$FS_{FloatationUN1} := \frac{\Sigma V_{conc} + \Sigma V_{SoilWaterUN1}}{\left|\Sigma V_{UpliftUN1}\right|} = 3.49$$

$$FS_{Floatation.UN1.check} := \begin{cases} \text{"OKAY "} & \text{if } FS_{FloatationUN1} > FS_{req.UN1.flt} \\ \text{"Revise Structure""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

CHECK OVERTURNING

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stablity of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1

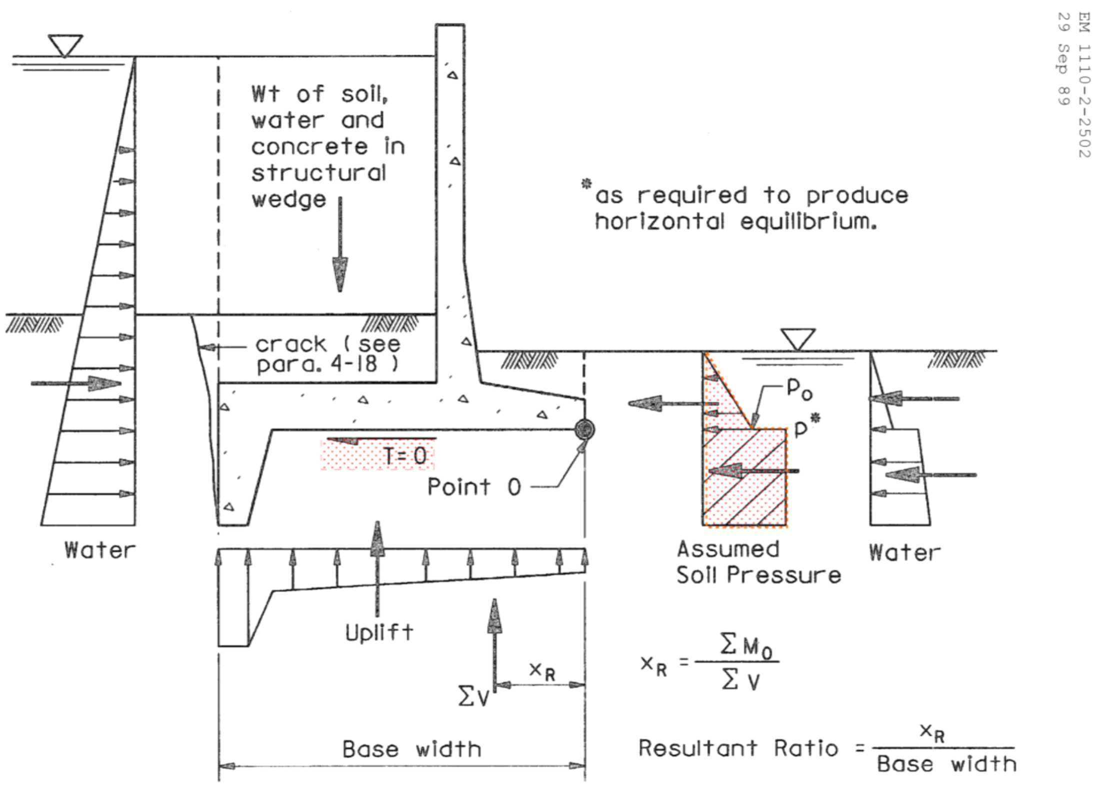

Figure 4-5. Forces for overturning analysis for wall with horizontal base and key

Modify Uplift for Overturning Analysis: **LOAD CASE UN1**

(Uplift is calculated along the concrete/rock contact using the Line of Creep method)

Water Pressure at h: $u_{h.UN1} := \Delta h_{g.hj.UN1} \cdot \gamma_w = 89.18 \cdot kPa$

Water Pressure at o: $u_{o.UN1} := \left(\Delta h_{g.no.UN1} - \frac{\Delta h_{g.r.UN1} \cdot L_{ho.UN1}}{L_{ho.UN1}}\right) \cdot \gamma_w = 39.2 \cdot kPa$

Head loss between point h and o: $\Delta h_{ho.UN1} := \Delta h_{g.r.UN1} \cdot \frac{L_{ho.UN1}}{L_{ho.UN1}} = 3.1\ m$

Length of concrete base (h -> o): $L_{baseho.UN1} := Key_{h.w} + Key_{h.d} + Key_{hdist} + Key_{t.d} + Key_{t.w} = 14.5\ m$

Head loss along h -> j: $\Delta h_{hj.UN1} := \Delta h_{ho.UN1} \cdot \frac{Key_{h.w}}{L_{baseho.UN1}} = 0.214\ m$

Water Pressure at j: $u_{j.UN1} := \left(\Delta h_{g.hj.UN1} - \Delta h_{hj.UN1}\right) \cdot \gamma_w = 87.08 \cdot kPa$

Head loss along h -> k: $\Delta h_{hjk.UN1} := \Delta h_{ho.UN1} \cdot \left(\frac{Key_{h.w} + Key_{h.d}}{L_{baseho.UN1}}\right) = 0.641\ m$

Water Pressure at k: $u_{k.UN1} := \left(\Delta h_{g.km.UN1} - \Delta h_{hjk.UN1}\right) \cdot \gamma_w = 63.29 \cdot kPa$

Head loss along h -> m: $\Delta h_{hjkm.UN1} := \Delta h_{ho.UN1} \cdot \left(\frac{Key_{h.w} + Key_{h.d} + Key_{hdist}}{L_{baseho.UN1}}\right) = 3.1\ m$

Water Pressure at m: $u_{m.UN1} := \left(\Delta h_{g.km.UN1} - \Delta h_{hjkm.UN1}\right) \cdot \gamma_w = 39.20 \cdot kPa$

Head loss along h -> n: $\Delta h_{hjkmn.UN1} := \Delta h_{ho.UN1} \cdot \left(\frac{Key_{h.w} + Key_{h.d} + Key_{hdist} + Key_{t.d}}{L_{baseho.UN1}}\right) = 3.1\ m$

Water Pressure at n: $u_{n.UN1} := \left(\Delta h_{g.no.UN1} - \Delta h_{hjkmn.UN1}\right) \cdot \gamma_w = 39.20 \cdot kPa$

Uplift under key at heel: $V_{ulkeyhUN1.OT} := \frac{\left(u_{h.UN1} + u_{j.UN1}\right) \cdot Key_{h.w}}{2} \cdot B \cdot -1 = -88.132 \cdot kN$

Moment Arm (from Point O): $V_{ulkeyhUN1loc.OT} := b - \frac{Key_{h.w} \cdot \left(2 \cdot u_{j.UN1} + u_{h.UN1}\right)}{3 \cdot \left(u_{j.UN1} + u_{h.UN1}\right)} = 12.002\ m$

Uplift under base: $V_{ulbaseUN1.OT} := \frac{\left(u_{k.UN1} + u_{m.UN1}\right) \cdot Key_{hdist}}{2} \cdot B \cdot -1 = -589.343 \cdot kN$

Moment Arm (from Point O): $V_{ulbaseUN1loc.OT} := b - Key_{h.w} - \frac{Key_{hdist} \cdot \left(2 \cdot u_{m.UN1} + u_{k.UN1}\right)}{3 \cdot \left(u_{m.UN1} + u_{k.UN1}\right)} = 6.201\ m$

Uplift under key at toe: $V_{ulkeytUN1.OT} := \frac{\left(u_{n.UN1} + u_{o.UN1}\right) \cdot Key_{t.w}}{2} \cdot B \cdot -1 = 0 \cdot kN$

Moment Arm (from Point O): $V_{ulkeytUN1loc.OT} := \frac{Key_{t.w} \cdot \left(2 \cdot u_{n.UN1} + u_{o.UN1}\right)}{3 \cdot \left(u_{n.UN1} + u_{o.UN1}\right)} = 0$

$$\Sigma V_{UpliftUN1.OT} := V_{ulkeyhUN1.OT} + V_{ulbaseUN1.OT} + V_{ulkeytUN1.OT} = -677 \cdot kN$$

$$U_{UN1.loc.OT} := \frac{V_{ulkeyhUN1.OT} \cdot V_{ulkeyhUN1loc.OT} + V_{ulbaseUN1.OT} \cdot V_{ulbaseUN1loc.OT} + V_{ulkeytUN1.OT} \cdot V_{ulkeytUN1loc.OT}}{\Sigma V_{UpliftUN1.OT}} = 6.96\ m$$

$$\Sigma M_{UpliftUN1.OT} := \Sigma V_{UpliftUN1.OT} \cdot U_{UN1.loc.OT} = -4712.0 \cdot kN \cdot m$$

Modify Lateral Water Pressure (Resisting) for Overturning Analysis:

(Resisting water pressure is calculated using the Line of Creep method)

Water Load at Key (heel): $H_{h2UN1.OT} := \dfrac{u_{k.UN1} + u_{j.UN1}}{2} \cdot Key_{h.d} B = 150.4 \cdot kN$

Moment Arm (from Point O): $H_{h2locUN1.OT} := \dfrac{Key_{h.d} \cdot (2 \cdot u_{k.UN1} + u_{j.UN1})}{3(u_{k.UN1} + u_{j.UN1})} + Key_{vdist} = -1.05\ m$

Water Load at Key (toe): $H_{h6UN1.OT} := \dfrac{u_{o.UN1} \cdot (UWSEL_{UN1} - Bot_{ftg} + Key_{t.d})}{2} \cdot B = 78 \cdot kN$

Moment Arm (from Point O): $H_{h6locUN1.OT} := \dfrac{UWSEL_{UN1} - Bot_{ftg} + Key_{t.d}}{3} = 1.33\ m$

$$\Sigma H_{waterresistUN1.OT} := H_{h2UN1.OT} + H_{h6UN1.OT} = 228.78 \cdot kN$$

$$H_{waterresistlocUN1.OT} := \frac{H_{h2UN1.OT} \cdot H_{h2locUN1.OT} + H_{h6UN1.OT} \cdot H_{h6locUN1.OT}}{\Sigma H_{waterresistUN1.OT}} = -0.235\ m$$

$$\Sigma M_{waterresistUN1.OT} := \Sigma H_{waterresistUN1.OT} \cdot H_{waterresistlocUN1.OT} = -53.78 \cdot kN \cdot m$$

Modify Lateral Soil Loads for Overturning Analysis:

(Lateral soil loads are calculated down to Point O instead of bottom of shear key)

Driving Soil Load (Headwater Side):

Surcharge Load: $E_{s1UN1.OT} := S1_{UN1} \cdot K_o \cdot (H_w + Key_{h.d} + Key_{vdist}) \cdot B \cdot -1 = -106.472 \cdot kN$

Moment Arm (from Point O): $E_{s1locUN1.OT} := \dfrac{H_w + Key_{h.d} + Key_{vdist}}{2} = 6.50\ m$

Moist Soil Load above GWL: $E_{h1UN1.OT} := \dfrac{\gamma_m \cdot K_o \cdot h_{1UN1}^{\ 2}}{2} B \cdot -1 = -190.1 \cdot kN$

Moment Arm (from Point O): $E_{h1locUN1.OT} := \dfrac{h_{1UN1}}{3} + h_{2UN1} + Key_{vdist} = 9.07\ m$

Saturated Soil Load below GWL:
(rectangular component) $E_{h2UN1.OT} := (\gamma_m \cdot K_o \cdot h_{1UN1}) \cdot (h_{2UN1} + Key_{vdist}) \cdot B \cdot -1 = -457.4 \cdot kN$

Moment Arm (from Point O): $E_{h2locUN1.OT} := \dfrac{h_{2UN1} + Key_{vdist}}{2} = 3.55\ m$

Saturated Soil Load below GWL:
(triangular component) $E_{h2aUN1.OT} := \dfrac{(\gamma_{sat} - \gamma_w) \cdot K_o \cdot (h_{2UN1} + Key_{vdist})^2}{2} \cdot B \cdot -1 = -167.9 \cdot kN$

Moment Arm (from Point O): $E_{h2alocUN1.OT} := \dfrac{h_{2UN1} + Key_{vdist}}{3} = 2.37\ m$

Resisting Soil Load (Tailwater Side):

(Determine resisting soil load based on depth variation between the keys (ie. Key_{vdist}). In case where key at heel is deeper than key at toe (ie. $Key_{vdist} < 0$), resisting soil load (p*) is assumed to produce horizontal equilibrium as per Figure 4-5 above. Resisting soil load (p_o) is neglected.)

Total Driving Force: $\Sigma H_{SoildriveUN1.OT} := E_{s1UN1.OT} + E_{h1UN1.OT} + E_{h2UN1.OT} + E_{h2aUN1.OT} + H_{h2UN1} = -1327.7 \cdot kN$

Total Resisting Force: $\Sigma H_{waterresistUN1.OT} = 228.8 \cdot kN$

Assumed Soil Load p*: $E_{h8UN1a.OT} := \left(\Sigma H_{SoildriveUN1.OT} + \Sigma H_{waterresistU1.OT}\right) \cdot -1 = 1098.873 \cdot kN$

Moment Arm (from Point O): $E_{h8UN1a.loc.OT} := \dfrac{Key_{vdist}}{2} = -1\,m$

$$E_{h8UN1.OT} := \begin{cases} E_{h8UN1a.OT} & \text{if } Key_{vdist} < 0 \\ \Sigma H_{SoilresistUN1} - H_{h6UN1} - H_{h2aUN1} - P_{sbUN1} & \text{otherwise} \end{cases} = 1098.873 \cdot kN$$

$$\Sigma M_{SoilresistUN1} := \begin{cases} E_{h8UN1a.OT} \cdot E_{h8UN1a.loc.OT} & \text{if } Key_{vdist} < 0 \\ \Sigma M_{HorizSoilResistUN1} - H_{h6UN1} \cdot H_{h6locUN1} - H_{h2aUN1} \cdot H_{h2alocUN1} - P_{sbUN1} \cdot P_{sblocUN1} & \text{otherwise} \end{cases} = -1098.873 \cdot kN \cdot m$$

Sum of Moment about Point O:

$$\Sigma M_{LateraldriveUN1.OT} := E_{s1UN1.OT} \cdot E_{s1locUN1.OT} + E_{h1UN1.OT} \cdot E_{h1locUN1.OT} + E_{h2UN1.OT} \cdot E_{h2locUN1.OT} \dots + E_{h2aUN1.OT} \cdot E_{h2alocUN1.OT} + H_{h2UN1} \cdot H_{h2locUN1} = -4855.9 \cdot kN \cdot m$$

$$\Sigma M_{LateralresistUN1.OT} := \Sigma M_{waterresistUN1.OT} + \Sigma M_{SoilresistUN1} = -1152.6 \cdot kN \cdot m$$

Total moment:

$$\Sigma M_{UN1.OT} := \Sigma M_{conc} + \Sigma M_{VertSoilWaterResistUN1} + \Sigma M_{UpliftUN1.OT} + \Sigma M_{LateraldriveUN1.OT} + \Sigma M_{LateralresistUN1.OT} = 10877.9 \cdot kN \cdot m$$

Total Vertical Force: $\Sigma V_{UN1.OT} := \Sigma V_{conc} + \Sigma V_{SoilWaterUN1} + \Sigma V_{UpllftUN1.OT} = 2123.2 \cdot kN$

Distance X_R: EM 1110-2-2502 Eq.4-1 $X_{R.UN1} := \dfrac{\Sigma M_{UN1.OT}}{\Sigma V_{UN1.OT}} = 5.123\,m$

Overturning Resultant Ratio $Ratio_{UN1.OT} := \dfrac{X_{R.UN1}}{b} = 0.41$

$$Ratio_{UN1.OT.check} := \begin{cases} \text{"OKAY "} & \text{if } Ratio_{UN1.OT} > X_{R.reqUN1} \\ \text{"Revise Structure""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

CHECK FOUNDATION ECCENTRICITY (HORIZONTAL PLANE):

Eccentricity (horizontal plan): $ex_{UN1.OT} := \dfrac{b}{2} - \dfrac{\Sigma M_{UN1.OT}}{\Sigma V_{UN1.OT}} = 1.13\,m$ $Kern_{OT} = 2.083\,m$

Eccentricity Check:

$$e_{check.UN1.OT} := \begin{cases} \text{"Okay"} & \text{if } ex_{UN1} \le Kern_{OT} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"Okay"}$$

LOAD CASE UN1

CHECK FOUNDATION BEARING CAPACITY (HORIZONTAL PLANE):

Base Section Modulus: $S_{b.OT} = 26.04\,m^3$

Bearing Pressure Under Toe:

$$\sigma_{ToeUN1.OT} := \begin{cases} \left(\dfrac{\Sigma V_{UN1.OT}}{b \cdot B} + \dfrac{\Sigma V_{UN1.OT} \cdot ex_{UN1.OT}}{S_{b.OT}}\right) & \text{if } \dfrac{\Sigma V_{UN1.OT}}{b \cdot B} \geq \dfrac{\Sigma V_{UN1.OT} \cdot ex_{UN1.OT}}{S_{b.OT}} \\ \dfrac{2 \cdot \Sigma V_{UN1.OT}}{B \cdot 3\left(\dfrac{b}{2} - ex_{UN1.OT}\right)} & \text{otherwise} \end{cases} = 261.7 \cdot kPa$$

$$Bearing_{ChecktoeUN1.OT} := \begin{cases} \text{"OKAY "} & \text{if } \sigma_{ToeUN1.OT} < \sigma_{allowUN1} \\ \text{"NG - for reference only""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

Bearing Pressure Under Heel:

$$\sigma_{HeelUN1.OT} := \begin{cases} \left(\dfrac{\Sigma V_{UN1.OT}}{b \cdot B} - \dfrac{\Sigma V_{UN1.OT} \cdot ex_{UN1.OT}}{S_{b.OT}}\right) & \text{if } \dfrac{\Sigma V_{UN1.OT}}{b \cdot B} \geq \dfrac{\Sigma V_{UN1.OT} \cdot ex_{UN1.OT}}{S_{b.OT}} \\ 0 & \text{otherwise} \end{cases} = 78.0 \cdot kPa$$

$$Bearing_{CheckheelUN1.OT} := \left(\begin{cases} \text{"OKAY "} & \text{if } \sigma_{HeelUN1.OT} < \sigma_{allowUN1} \wedge \sigma_{HeelUN1.OT} > 0 \\ \text{"NG - for reference only""} & \text{otherwise} \end{cases} \right) = \text{"OKAY "}$$

SUMMARY OF STABILITY ASSESSMENT:

UN2 DESIGN CASE

LOAD CASE UN2 ACCEPTANCE PARAMETERS

FS sliding:

Unusual (UN) 1.3 (without cohesion) (Table 3-3, USACE EM 1110-2-2100)

Resultant Location:

Unsual (UN) Inside middle third ~100% base in compression

Required Factor of Safety for Sliding: $FS_{sliding.reqUN2} := 1.3$ (Without Cohesion)

Allowable rock bearing pressure: $\sigma_{allowUN2} := 1470kPa$ (Section 5.2, Design Criteria EM 1110-2-2100 Section 3-10)

Overturning Required Resultant Ratio: $X_{R.reqUN2} := 0.333$ (EM 1110-2-2502, Figure 4-4)

Required Factor of Safety for Floatation $FS_{req.UN2.flt} := 1.3$

SOIL HEIGHTS and Water Levels:

LOAD CASE UN2

Heel Conditions:

Groundwater Elevation at Heel: $GWL_{UN2} := 1216.2m$

Distance from Finish Grade to Groundwater at Heel: $h_{1UN2} := \left[T_w - GWL_{UN2} + \left(L_{cd} + t_{wb} - t_{wt}\right)\cdot \tan(\beta)\right] = 2.80\ m$

Distance from Water Surface to Bottom of Footing at Heel: $h_{2UN2} := GWL_{UN2} - Bot_{ftg} + Key_{h.d} = 12.20\ m$

Toe Conditions:

Water Surface Elevation at Toe: $WSEL_{UN2} := 1210.0m$

Water Surface Elevation at Toe for Uplift: $UWSEL_{UN2} := 1216.2\cdot m$

Finish Grade at Toe providing lateral resistance: $FG_{toeUN2} := 1206.0\cdot m$

Soil Depth Above top of footing: $h_{3aUN2} := FG_{toeUN2} - Top_{ftg} = -2\ m$

$$h_{3UN2} := \begin{cases} h_{3aUN2} & \text{if } FG_{toeUN2} - Top_{ftg} \geq 0 \\ 0 & \text{otherwise} \end{cases} = 0$$

Resisting Fill at Toe: $h_{4UN2} := FG_{toeUN2} - Bot_{ftg} + Key_{t.d} = 0.00\ m$

Distance from Water Level to Top of Footing at Toe: $h_{5UN2} := WSEL_{UN2} - Top_{ftg} = 2.00\ m$

Distance from Water Surface to Bottom of Footing at Toe: $h_{6UN2} := WSEL_{UN2} - Bot_{ftg} + Key_{t.d} = 4.00\ m$

Soil Depth Above WSEL: $h_{7aUN2} := FG_{toeUN2} - WSEL_{UN2} = -4\ m$

$$h_{7UN2} := \begin{cases} h_{7aUN2} & \text{if } FG_{toeUN2} - WSEL_{UN2} \geq 0 \\ 0 & \text{otherwise} \end{cases} = 0$$

Soil Depth Below WSEL:

$$h_{8UN2} := \begin{cases} WSEL_{UN2} - Bot_{ftg} + Key_{t.d} & \text{if } FG_{toeUN2} - WSEL_{UN2} \geq 0 \\ h_{4UN2} & \text{otherwise} \end{cases} = 0$$

For Line of Creep Method: $L_{ho.UN2} := \sqrt{b^2 + \left(Key_{h.d} - Key_{t.d}\right)^2} = 12.659\ m$

Head Loss from Point g:

$\Delta h_{g.hj.UN2} := h_{2UN2} = 12.2\ m$ (to point h & j)

$\Delta h_{g.km.UN2} := GWL_{UN2} - Bot_{ftg} = 10.2\ m$ (to point k & m)

$\Delta h_{g.no.UN2} := GWL_{UN2} - Bot_{ftg} + Key_{t.d} = 10.2\ m$ (to point n & o)

$\Delta h_{g.p.UN2} := GWL_{UN2} - FG_{toeUN2} = 10.2\ m$ (to point p*)

$\Delta h_{g.r.UN2} := GWL_{UN2} - UWSEL_{UN2} = 0\ m$ (to point r)

Surcharge

Surcharge on Heel: $S1_{UN2} := 0.0 \frac{kN}{m^2}$

* same as point "o" in this case

Calculate Soil Lateral Pressure Coefficients:

LOAD CASE UN2

For all load cases except seismic, soil loading to be based on At-Rest Condition.
Calculate at-rest pressure coefficient Ko based on Jaky's (1944) equation.

Soil At Rest Static Coefficient: $K_o := \frac{1 - \sin(\phi)}{1 + \sin(\beta)} = 0.546$ (Eq. 3-6, USACE EM 1110-2-2502)

Lateral - Driving Force

Static At-Rest:

Surcharge Load: $E_{s1UN2} := S1_{UN2} \cdot K_o \cdot \left(H_w + Key_{h.d}\right) \cdot B \cdot -1 = 0 \cdot kN$

Moment Arm (from bottom of footing): $E_{s1locUN2} := \frac{H_w + Key_{h.d}}{2} + Key_{vdist} = 5.50\ m$

Moist Soil Load above GWL: $E_{h1UN2} := \frac{\gamma_m \cdot K_o \cdot h_{1UN2}^{\ 2}}{2} B \cdot -1 = -42.8 \cdot kN$

Moment Arm (from bottom of footing): $E_{h1locUN2} := \frac{h_{1UN2}}{3} + h_{2UN2} + Key_{vdist} = 11.13\ m$

Saturated Soil Load below GWL:
(rectangular component) $E_{h2UN2} := \left(\gamma_m \cdot K_o \cdot h_{1UN2}\right) \cdot h_{2UN2} \cdot B \cdot -1 = -373.0 \cdot kN$

Moment Arm (from bottom of footing): $E_{h2locUN2} := \frac{h_{2UN2}}{2} + Key_{vdist} = 4.10\ m$

Saturated Soil Load below GWL:
(triangular component) $E_{h2aUN2} := \frac{\left(\gamma_{sat} - \gamma_w\right) \cdot K_o \cdot h_{2UN2}^{\ 2}}{2} \cdot B \cdot -1 = -495.7 \cdot kN$

Moment Arm (from bottom of footing): $E_{h2alocUN2} := \frac{h_{2UN2}}{3} + Key_{vdist} = 2.07\ m$

Lateral Water Load:

Water Load GWL to Bottom of Key: $H_{h2UN2} := \frac{\gamma_w \cdot h_{2UN2}^{\ 2}}{2} \cdot B \cdot -1 = -729.3 \cdot kN$

Moment Arm (from bottom of footing): $H_{h2locUN2} := \frac{h_{2UN2}}{3} + Key_{vdist} = 2.07\ m$

$$\Sigma H_{SoildriveUN2} := E_{s1UN2} + E_{h1UN2} + E_{h2UN2} + E_{h2aUN2} + H_{h2UN2} = -1640.9 \cdot kN$$

$$\Sigma M_{LateralSoildriveUN2} := E_{s1UN2} \cdot E_{s1locUN2} + E_{h1UN2} \cdot E_{h1locUN2} + E_{h2UN2} \cdot E_{h2locUN2} \ldots + E_{h2aUN2} \cdot E_{h2alocUN2} + H_{h2UN2} \cdot H_{h2locUN2} = -4537.8\ m \cdot kN$$

Lateral - Resisting Force

LOAD CASE UN2

Lateral Water Load:

Water Load WSEL to Bottom of Footing: $H_{h6UN2} := \frac{\gamma_w \cdot h_{6UN2}^2}{2} \cdot B = 78.4 \cdot kN$

Moment Arm (from bot. of toe key): $H_{h6locUN2} := \frac{h_{6UN2}}{3} = 1.33\ m$

Water Load Bot. of Footing to Bot. of H. Key: $H_{h2aUN2} := \left[\left(UWSEL_{UN2} - Bot_{ftg} + Key_{t.d}\right) + h_{2UN2}\right] \cdot \frac{Key_{h.d}}{2} \cdot \gamma_w \cdot B = 219.5 \cdot kN$

Moment Arm (from bot. of toe key): $H_{h2alocUN2} := \frac{Key_{h.d} \cdot \left[2 \cdot \left(UWSEL_{UN2} - Bot_{ftg} + Key_{t.d}\right) + h_{2UN2}\right]}{3\left[h_{2UN2} + \left(UWSEL_{UN2} - Bot_{ftg} + Key_{t.d}\right)\right]} \dots + Key_{vdist} = -1.03\ m$

Lateral Soil Load:

Moist Soil Load above WSEL: $E_{h7UN2} := \frac{\gamma_m \cdot K_o \cdot h_{7UN2}^2}{2} \cdot B = 0.0 \cdot kN$

Moment Arm (from bot. of toe key): $E_{h7locUN2} := h_{6UN2} + \frac{h_{7UN2}}{3} + Key_{vdist} = 2.00\ m$

Saturated Soil Load below WSEL: (rectangular component) $E_{h8UN2} := \left(\gamma_m \cdot K_o \cdot h_{7UN2}\right) \cdot h_{8UN2} \cdot B = 0.0 \cdot kN$

Moment Arm (from bot. of toe key): $E_{h8locUN2} := \frac{h_{8UN2}}{2} = 0.00\ m$

Saturated Soil Load below WSEL: (triangular component) $E_{h8aUN2} := \frac{\left[\left(\gamma_{sat} - \gamma_w\right) \cdot K_o\right] \cdot h_{8UN2}^2}{2} \cdot B = 0.0 \cdot kN$

Moment Arm (from bot. of footing): $E_{h8alocUN2} := \frac{h_{8UN2}}{3} = 0.00\ m$

Lateral Resistance from Stilling Basin:

Lateral Resistance from Stilling Basin: $P_{sbUN2} := 430kN$ (Force needed to achieve the required sliding factor of safety in case UN2)

Moment Arm (from bot. of toe key): $P_{sblocUN2} := \frac{t_{ftg}}{2} + Key_{t.d} = 1.00\ m$

$\Sigma H_{SoilresistUN2} := H_{h6UN2} + H_{h2aUN2} + E_{h7UN2} + E_{h8UN2} + E_{h8aUN2} + P_{sbUN2} = 727.9 \cdot kN$

$\Sigma M_{HorizSoilResistUN2} := H_{h6UN2} \cdot H_{h6locUN2} + H_{h2aUN2} \cdot H_{h2alocUN2} + E_{h7UN2} \cdot E_{h7locUN2} \dots + E_{h8UN2} \cdot E_{h8locUN2} + E_{h8aUN2} \cdot E_{h8alocUN2} + P_{sbUN2} \cdot P_{sblocUN2} = 308.5\ m \cdot kN$

Vertical Force:

UPLIFT: Linear distribution from water at heel to water at toe:

$\Sigma V_{UpliftUN2} := \left[\left(UWSEL_{UN2} - Bot_{ftg} + Key_{t.d}\right) + h_{2UN2}\right] \cdot \frac{b}{2} \cdot \gamma_w \cdot B \cdot -1 = -1372 \cdot kN$

Moment Arm (from Point O): $V_{UpliftUN2aloc} := \frac{b \cdot \left[2 \cdot h_{2UN2} + \left(UWSEL_{UN2} - Bot_{ftg} + Key_{t.d}\right)\right]}{3\left[h_{2UN2} + \left(UWSEL_{UN2} - Bot_{ftg} + Key_{t.d}\right)\right]} = 6.436\ m$

$\Sigma M_{UpliftUN2} := \Sigma V_{UpliftUN2} \cdot V_{UpliftUN2aloc} = -8830.208 \cdot kN \cdot m$

Weight of soil and water over toe:

Water Above the Top of Footing: $W_{H1UN2} := \gamma_w \cdot h_{5UN2} \cdot L_{ab} \cdot B = 78.4 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E1locUN2} := \frac{L_{ab}}{2} = 2\,m$

Soil above top of footing: $W_{E6UN2} := \gamma_b \cdot h_{3UN2} \cdot L_{ab} \cdot B = 0.0 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E6locUN2} := \frac{L_{ab}}{2} = 2\,m$

Vertical Load Due to Surcharge: $S_{UN2} := S1_{UN2} \cdot L_{cd} \cdot B = 0 \cdot kN$ $\quad S_{UN2loc} := b - \frac{L_{cd}}{2} = 8.93\,m$

Weight of soil and water over heel:

Moist Soil for sloped grade above top of wall:

Length of sloped portion of soil above top of wall: $L_{E3UN2} := \left(L_{cd} + t_{wb} - t_{wt}\right) = 8.00\,m$

Height of sloped soil above top of wall over heel: $h_{E3locUN2} := \left(L_{E3UN2}\right) \cdot \tan(\beta) = 0.00\,m$

Weight of sloped soil above top of wall: $W_{E3UN2} := \frac{\gamma_m}{2} \cdot h_{E3locUN2} \cdot L_{E3UN2} \cdot B = 0.0 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E3locUN2} := L_{ab} + t_{wt} + \frac{2}{3} \cdot L_{E3UN2} = 9.83\,m$

Moist soil from top of wall to groundwater level:

Height of soil from top of wall and top of GWL: $h_{1UN2} = 2.80\,m$

Length from edge of wall at GWL to edge of heel: $L_{E4UN2} := L_{E3UN2} - \left(h_{1UN2} \cdot S_{batter}\right) = 7.78\,m$

Weight of soil over heel from top of wall to GWL: $W_{E4UN2} := \gamma_m \cdot h_{1UN2} \cdot \frac{\left(L_{E3UN2} + L_{E4UN2}\right)}{2} \cdot B = 441.8 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E4locUN2} := b - \frac{L_{E3UN2}^{\,2} + L_{E3UN2} \cdot L_{E4UN2} + L_{E4UN2}^{\,2}}{3\left(L_{E3UN2} + L_{E4UN2}\right)} = 8.55\,m$

Saturated soil from groundwater to top of footing:

Height of soil from GWL to top of heel: $h_{E4UN2} := h_{2UN2} - t_{ftg} - Key_{h.d} = 8.20\,m$

Weight of soil over heel from GWL to top of heel: $W_{E5UN2} := \left(\gamma_{sat}\right) \cdot h_{E4UN2} \cdot \frac{\left(L_{E4UN2} + L_{cd}\right)}{2} \cdot B = 1345.4 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E5locUN2} := b - \frac{L_{E4UN2}^{\,2} + L_{E4UN2} \cdot L_{cd} + L_{cd}^{\,2}}{3\left(L_{E4UN2} + L_{cd}\right)} = 8.77\,m$

$$\Sigma V_{SoilWaterUN2} := W_{H1UN2} + W_{E6UN2} + W_{E3UN2} + W_{E4UN2} + W_{E5UN2} + S_{UN2} = 1865.7 \cdot kN$$

$$\Sigma M_{VertSoilWaterResistUN2} := W_{H1UN2} \cdot W_{E1locUN2} + W_{E6UN2} \cdot W_{E6locUN2} \cdots + W_{E3UN2} \cdot W_{E3locUN2} + W_{E4UN2} \cdot W_{E4locUN2} + W_{E5UN2} \cdot W_{E5locUN2} + S_{UN2} \cdot S_{UN2loc} = 15734.3\,m \cdot kN$$

STABILITY ASSESSMENT:

LOAD CASE UN2

CHECK SLIDING ALONG HORIZONTAL SLIDING PLANE:

Summation of the vertical forces:

$$\Sigma V_{UN2} := \Sigma V_{conc} + \Sigma V_{SoilWaterUN2} + \Sigma V_{UpliftUN2} = 1369.1 \cdot kN$$

Summation of the horizontal forces:

$$\Sigma H_{UN2} := \Sigma H_{SoildriveUN2} + \Sigma H_{SoilresistUN2} = -913.0 \cdot kN$$

Safety Factor for Sliding Horizontal Failure Plane

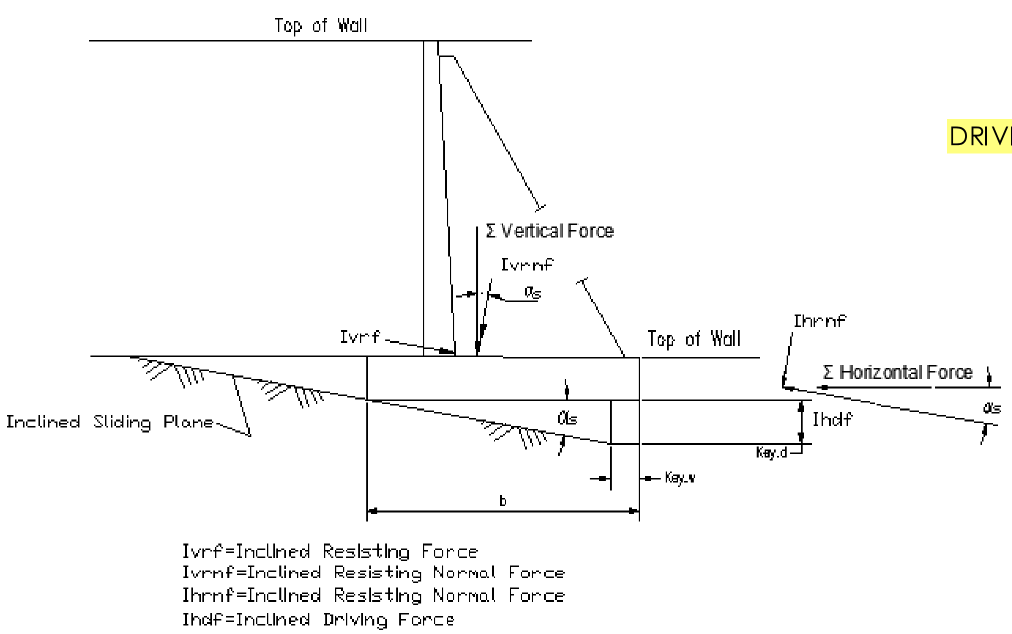
$$FS_{Horiz.SlidingUN2} := \frac{\left|\Sigma V_{UN2}\right| \cdot \tan\left(\phi_{rock} \cdot \frac{\pi}{180}\right)}{\left|\Sigma H_{UN2}\right|} = 0.73$$

$$FS_{Sliding.check1.UN2} := \begin{cases} \text{"OKAY "} & \text{if } FS_{Horiz.SlidingUN2} > FS_{sliding.reqUN2} \\ \text{"NG - key req""} & \text{otherwise} \end{cases} = \text{"NG - key req""}$$

CHECK FACTOR OF SAFETY SLIDING WITH KEY (INCLINED SLIDING PLANE):

RESISTING SIDE

DRIVING SIDE



TOE

HEEL

$\alpha s = 0.172$ as degrees= $\alpha s \cdot \left(\frac{180}{\pi}\right) = 9.87$

(With properly engineered reinforced concrete Key, horizontal sliding plane thru Toe is protected, critical sliding plane is relocated to the INCLINED SLIDING PLANE FROM HEEL KEY To TOE, Bedrock Mass above this examing plane is mobilized by reinforced concrete key and combined into Structural Wedge.)

Resolve ΣV_{UN2} & ΣH_{UN2}

$$\Sigma V_{InclinedUN2} := \cos(\alpha s) \cdot \left(\left|\Sigma V_{UN2} + V_{rocksection}\right|\right) + \sin(\alpha s) \cdot \left|\Sigma H_{UN2}\right| = 1795.3 \cdot kN$$

$$\Sigma H_{InclinedUN2} := \cos(\alpha s) \cdot \left|\Sigma H_{UN2}\right| - \sin(\alpha s) \cdot \left(\left|\Sigma V_{UN2} + V_{rocksection}\right|\right) = 614.4 \cdot kN$$

Safety Factor for Sliding Inclined Failure Plane

$$FS_{InclinedSlidingUN2} := \frac{\Sigma V_{InclinedUN2} \cdot \tan(\phi_r)}{\Sigma H_{InclinedUN2}} = 1.30$$

$$FS_{Sliding.check2.UN2} := \begin{cases} \text{"OKAY"} & \text{if } FS_{InclinedSlidingUN2} > FS_{sliding.reqUN2} \\ \text{"NG - Revise Structure"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

CHECK FOUNDATION ECCENTRICITY:

Summation of the resisting moments about the toe:

$$\Sigma M_{resUN2} := \Sigma M_{conc} + \Sigma M_{VertSoilWaterResistUN2} + \Sigma M_{HorizSoilResistUN2} + \Sigma M_{rocksection} = 23620 \cdot kN \cdot m$$

Summation of the overturning moments about the toe:

$$\Sigma M_{oUN2} := \Sigma M_{LateralSoildriveUN2} + \Sigma M_{UpliftUN2} = -13368 \cdot kN \cdot m$$

Total moment: $\Sigma M_{UN2} := \Sigma M_{resUN2} + \Sigma M_{oUN2} = 10251.7\ m \cdot kN$

Normal force to base: $\Sigma V_{InclinedUN2} = 1795.3 \cdot kN$

Inclined Sliding Plane Length: $L_{incline} = 12.7 \cdot m$

Eccentricity (inclined plane): $ex_{UN2} := \frac{L_{incline}}{2} - \frac{\Sigma M_{UN2}}{\Sigma V_{InclinedUN2}} = 0.63\ m$ $\quad Kern = 2.115\ m$

Eccentricity Check: $e_{check.UN2} := \begin{cases} \text{"Okay"} & \text{if } ex_{UN2} \le Kern \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"Okay"}$

CHECK FOUNDATION BEARING CAPACITY:

Base Section Modulus: $S_b = 26.83\ m^3$

Bearing Pressure Under Toe:

$$\sigma_{ToeUN2} := \begin{cases} \left(\frac{\Sigma V_{InclinedUN2}}{L_{incline} \cdot B} + \frac{\Sigma V_{InclinedUN2} \cdot ex_{UN2}}{S_b} \right) & \text{if } \frac{\Sigma V_{InclinedUN2} \cdot ex_{UN2}}{S_b} \le \frac{\Sigma V_{InclinedUN2}}{L_{incline} \cdot B} \\ \frac{2 \cdot \Sigma V_{InclinedUN2}}{B \cdot 3 \left(\frac{b}{2} - ex_{UN2} \right)} & \text{otherwise} \end{cases} = 183.9 \cdot kPa$$

$$Bearing_{ChecktoeUN2} := \begin{cases} \text{"OKAY"} & \text{if } \sigma_{ToeUN2} < \sigma_{allowUN2} \\ \text{"NG"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

Bearing Pressure Under Heel:

$$\sigma_{HeelUN2} := \begin{cases} \left(\frac{\Sigma V_{InclinedUN2}}{L_{incline} \cdot B} - \frac{\Sigma V_{InclinedUN2} \cdot ex_{UN2}}{S_b} \right) & \text{if } \frac{\Sigma V_{InclinedUN2} \cdot ex_{UN2}}{S_b} \le \frac{\Sigma V_{InclinedUN2}}{L_{incline} \cdot B} \\ 0 & \text{otherwise} \end{cases} = 99.1 \cdot kPa$$

CHECK FLOATATION:

Safety Factor for Floatation:

$$FS_{FloatationUN2} := \frac{\Sigma V_{conc} + \Sigma V_{SoilWaterUN2}}{\left|\Sigma V_{UpliftUN2}\right|} = 2.00$$

$$FS_{Floatation.UN2.check} := \begin{cases} \text{"OKAY "} & \text{if } FS_{FloatationUN2} > FS_{req.UN2.flt} \\ \text{"Revise Structure""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

CHECK OVERTURNING

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stablity of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1

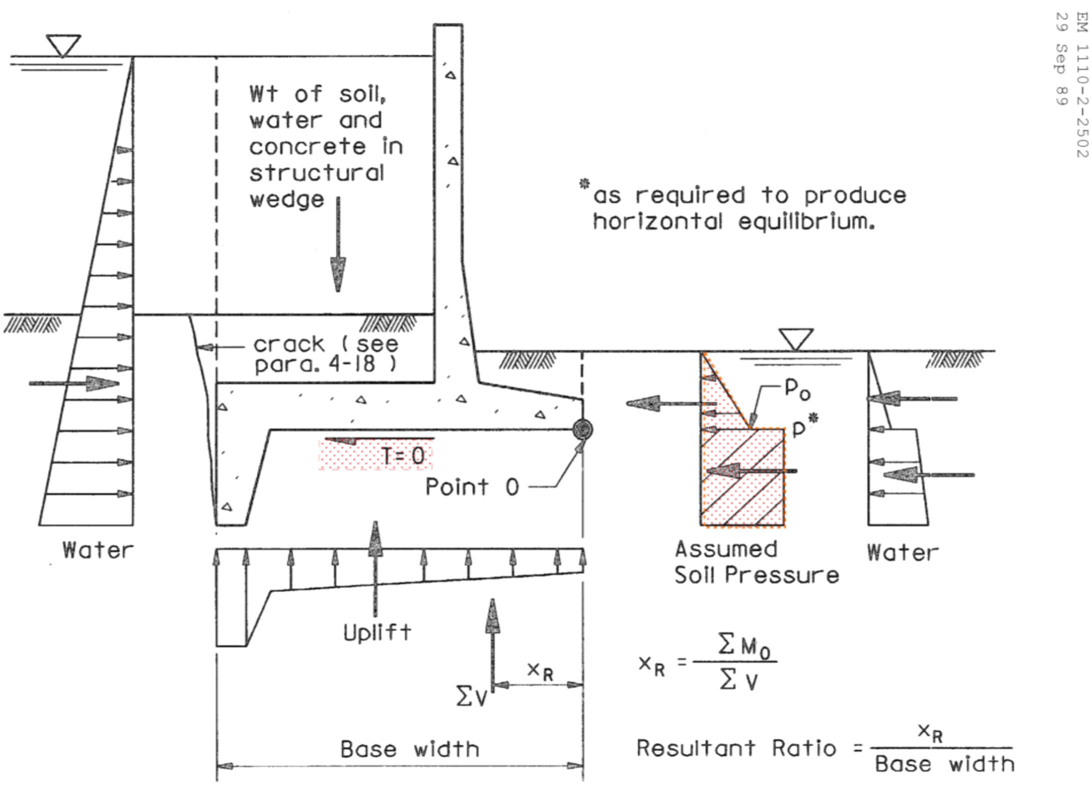

Figure 4-5. Forces for overturning analysis for wall with horizontal base and key

Modify Uplift for Overturning Analysis:

(Uplift is calculated along the concrete/rock contact using the Line of Creep method)

Water Pressure at h: $u_{h.UN2} := \Delta h_{g.hj.UN2} \cdot \gamma_w = 119.56 \cdot kPa$

Water Pressure at o: $u_{o.UN2} := \left(\Delta h_{g.no.UN2} - \frac{\Delta h_{g.r.UN2} \cdot L_{ho.UN2}}{L_{ho.UN2}}\right) \cdot \gamma_w = 99.96 \cdot kPa$

Head loss between point h and o: $\Delta h_{ho.UN2} := \Delta h_{g.r.UN2} \cdot \frac{L_{ho.UN2}}{L_{ho.UN2}} = 0\,m$

Length of concrete base (h -> o): $L_{baseho.UN2} := Key_{h.w} + Key_{h.d} + Key_{hdist} + Key_{t.d} + Key_{t.w} = 14.5\,m$

Head loss along h -> j: $\Delta h_{hj.UN2} := \Delta h_{ho.UN2} \cdot \frac{Key_{h.w}}{L_{baseho.UN2}} = 0\,m$

Water Pressure at j: $u_{j.UN2} := \left(\Delta h_{g.hj.UN2} - \Delta h_{hj.UN2}\right) \cdot \gamma_w = 119.56 \cdot kPa$

Head loss along h -> k: $\Delta h_{hjk.UN2} := \Delta h_{ho.UN2} \cdot \left(\frac{Key_{h.w} + Key_{h.d}}{L_{baseho.UN2}}\right) = 0\,m$

Water Pressure at k: $u_{k.UN2} := \left(\Delta h_{g.km.UN2} - \Delta h_{hjk.UN2}\right) \cdot \gamma_w = 99.96 \cdot kPa$

Head loss along h -> m: $\Delta h_{hjkm.UN2} := \Delta h_{ho.UN2} \cdot \left(\frac{Key_{h.w} + Key_{h.d} + Key_{hdist}}{L_{baseho.UN2}}\right) = 0\,m$

Water Pressure at m: $u_{m.UN2} := \left(\Delta h_{g.km.UN2} - \Delta h_{hjkm.UN2}\right) \cdot \gamma_w = 99.96 \cdot kPa$

Head loss along h -> n: $\Delta h_{hjkmn.UN2} := \Delta h_{ho.UN2} \cdot \left(\frac{Key_{h.w} + Key_{h.d} + Key_{hdist} + Key_{t.d}}{L_{baseho.UN2}}\right) = 0\,m$

Water Pressure at n: $u_{n.UN2} := \left(\Delta h_{g.no.UN2} - \Delta h_{hjkmn.UN2}\right) \cdot \gamma_w = 99.96 \cdot kPa$

Uplift under key at heel: $V_{ulkeyhUN2.OT} := \frac{\left(u_{h.UN2} + u_{j.UN2}\right) \cdot Key_{h.w}}{2} \cdot B \cdot -1 = -119.56 \cdot kN$

Moment Arm (from Point O): $V_{ulkeyhUN2loc.OT} := b - \frac{Key_{h.w} \cdot \left(2 \cdot u_{j.UN2} + u_{h.UN2}\right)}{3 \cdot \left(u_{j.UN2} + u_{h.UN2}\right)} = 12\,m$

Uplift under base: $V_{ulbaseUN2.OT} := \frac{\left(u_{k.UN2} + u_{m.UN2}\right) \cdot Key_{hdist}}{2} \cdot B \cdot -1 = -1149.54 \cdot kN$

Moment Arm (from Point O): $V_{ulbaseUN2loc.OT} := b - Key_{h.w} - \frac{Key_{hdist} \cdot \left(2 \cdot u_{m.UN2} + u_{k.UN2}\right)}{3 \cdot \left(u_{m.UN2} + u_{k.UN2}\right)} = 5.75\,m$

Uplift under key at toe: $V_{ulkeytUN2.OT} := \frac{\left(u_{n.UN2} + u_{o.UN2}\right) \cdot Key_{t.w}}{2} \cdot B \cdot -1 = 0 \cdot kN$

Moment Arm (from Point O): $V_{ulkeytUN2loc.OT} := \frac{Key_{t.w} \cdot \left(2 \cdot u_{n.UN2} + u_{o.UN2}\right)}{3 \cdot \left(u_{n.UN2} + u_{o.UN2}\right)} = 0$

$$\Sigma V_{UpliftUN2.OT} := V_{ulkeyhUN2.OT} + V_{ulbaseUN2.OT} + V_{ulkeytUN2.OT} = -1269 \cdot kN$$

$$U_{UN2.loc.OT} := \frac{V_{ulkeyhUN2.OT} \cdot V_{ulkeyhUN2loc.OT} + V_{ulbaseUN2.OT} \cdot V_{ulbaseUN2loc.OT} + V_{ulkeytUN2.OT} \cdot V_{ulkeytUN2loc.OT}}{\Sigma V_{UpliftUN2.OT}} = 6.34\,m$$

$$\Sigma M_{UpliftUN2.OT} := \Sigma V_{UpliftUN2.OT} \cdot U_{UN2.loc.OT} = -8044.6 \cdot kN \cdot m$$

Modify Lateral Water Pressure (Resisting) for Overturning Analysis:

(Resisting water pressure is calculated using the Line of Creep method)

Water Load at Key (heel): $H_{h2UN2.OT} := \frac{u_{k.UN2} + u_{j.UN2}}{2} \cdot Key_{h.d} B = 219.5 \cdot kN$

Moment Arm (from Point O): $H_{h2locUN2.OT} := \frac{Key_{h.d} \cdot (2 \cdot u_{k.UN2} + u_{j.UN2})}{3(u_{k.UN2} + u_{j.UN2})} + Key_{vdist} = -1.03\ m$

Water Load at Key (toe): $H_{h6UN2.OT} := \frac{u_{o.UN2} \cdot (UWSEL_{UN2} - Bot_{ftg} + Key_{t.d})}{2} \cdot B = 510 \cdot kN$

Moment Arm (from Point O): $H_{h6locUN2.OT} := \frac{UWSEL_{UN2} - Bot_{ftg} + Key_{t.d}}{3} = 3.40\ m$

$$\Sigma H_{waterresistUN2.OT} := H_{h2UN2.OT} + H_{h6UN2.OT} = 729.32 \cdot kN$$

$$H_{waterresistlocUN2.OT} := \frac{H_{h2UN2.OT} \cdot H_{h2locUN2.OT} + H_{h6UN2.OT} \cdot H_{h6locUN2.OT}}{\Sigma H_{waterresistUN2.OT}} = 2.067\ m$$

$$\Sigma M_{waterresistUN2.OT} := \Sigma H_{waterresistUN2.OT} \cdot H_{waterresistlocUN2.OT} = 1507.25 \cdot kN \cdot m$$

Modify Lateral Soil Loads for Overturning Analysis:

(Lateral soil loads are calculated down to Point O instead of bottom of shear key)

__**Driving Soil Load (Headwater Side):**__

Surcharge Load: $E_{s1UN2.OT} := S1_{UN2} \cdot K_o \cdot (H_w + Key_{h.d} + Key_{vdist}) \cdot B \cdot -1 = 0 \cdot kN$

Moment Arm (from Point O): $E_{s1locUN2.OT} := \frac{H_w + Key_{h.d} + Key_{vdist}}{2} = 6.50\ m$

Moist Soil Load above GWL: $E_{h1UN2.OT} := \frac{\gamma_m \cdot K_o \cdot h_{1UN2}^{\ 2}}{2} B \cdot -1 = -42.8 \cdot kN$

Moment Arm (from Point O): $E_{h1locUN2.OT} := \frac{h_{1UN2}}{3} + h_{2UN2} + Key_{vdist} = 11.13\ m$

Saturated Soil Load below GWL: (rectangular component) $E_{h2UN2.OT} := (\gamma_m \cdot K_o \cdot h_{1UN2}) \cdot (h_{2UN2} + Key_{vdist}) \cdot B \cdot -1 = -311.9 \cdot kN$

Moment Arm (from Point O): $E_{h2locUN2.OT} := \frac{h_{2UN2} + Key_{vdist}}{2} = 5.10\ m$

Saturated Soil Load below GWL: (triangular component) $E_{h2aUN2.OT} := \frac{(\gamma_{sat} - \gamma_w) \cdot K_o \cdot (h_{2UN2} + Key_{vdist})^2}{2} \cdot B \cdot -1 = -346.5 \cdot kN$

Moment Arm (from Point O): $E_{h2alocUN2.OT} := \frac{h_{2UN2} + Key_{vdist}}{3} = 3.40\ m$

Resisting Soil Load (Tailwater Side):

(Determine resisting soil load based on depth variation between the keys (ie. Key_{vdist}). In case where key at heel is deeper than key at toe (ie. Key_{vdist}< 0), resisting soil load (p*) is assumed to produce horizontal equilibrium as per Figure 4-5 above. Resisting soil load (p_o) is neglected.)

Total Driving Force: $\Sigma H_{SoildriveUN2.OT} := E_{s1UN2.OT} + E_{h1UN2.OT} + E_{h2UN2.OT} + E_{h2aUN2.OT} + H_{h2UN2} = -1430.5 \cdot kN$

Total Resisting Force: $\Sigma H_{waterresistUN2.OT} = 729.3 \cdot kN$

Assumed Soil Load p*: $E_{h8UN2a.OT} := \left(\Sigma H_{SoildriveUN2.OT} + \Sigma H_{waterresistUN2.OT}\right) \cdot -1 = 701.209 \cdot kN$

Moment Arm (from Point O): $E_{h8UN2a.loc.OT} := \frac{Key_{vdist}}{2} = -1\ m$

$$E_{h8UN2.OT} := \begin{cases} E_{h8UN2a.OT} & \text{if } Key_{vdist} < 0 \\ \Sigma H_{SoilresistUN2} - H_{h6UN2} - H_{h2aUN2} - P_{sbUN2} & \text{otherwise} \end{cases} = 701.209 \cdot kN$$

$$\Sigma M_{SoilresistUN2} := \begin{cases} E_{h8UN2a.OT} \cdot E_{h8UN2a.loc.OT} & \text{if } Key_{vdist} < 0 \\ \Sigma M_{HorizSoilResistUN2} - H_{h6UN2} \cdot H_{h6locUN2} - H_{h2aUN2} \cdot H_{h2alocUN2} - P_{sbUN2} \cdot P_{sblocUN2} & \text{otherwise} \end{cases} = -701.209 \cdot kN \cdot m$$

Sum of Moment about Point O:

$$\Sigma M_{LateraldriveUN2.OT} := E_{s1UN2.OT} \cdot E_{s1locUN2.OT} + E_{h1UN2.OT} \cdot E_{h1locUN2.OT} + E_{h2UN2.OT} \cdot E_{h2locUN2.OT} \ldots + E_{h2aUN2.OT} \cdot E_{h2alocUN2.OT} + H_{h2UN2} \cdot H_{h2locUN2} = -4752.6 \cdot kN \cdot m$$

$$\Sigma M_{LateralresistUN2.OT} := \Sigma M_{waterresistUN2.OT} + \Sigma M_{SoilresistUN2} = 806.0 \cdot kN \cdot m$$

Total moment:

$$\Sigma M_{UN2.OT} := \Sigma M_{conc} + \Sigma M_{VertSoilWaterResistUN2} + \Sigma M_{UpliftUN2.OT} + \Sigma M_{LateraldriveUN2.OT} + \Sigma M_{LateralresistUN2.OT} = 9063.0 \cdot kN \cdot m$$

Total Vertical Force: $\Sigma V_{UN2.OT} := \Sigma V_{conc} + \Sigma V_{SoilWaterUN2} + \Sigma V_{UplliftUN2.OT} = 1472.0 \cdot kN$

Distance X_R: EM 1110-2-2502 Eq.4-1 $X_{R.UN2} := \frac{\Sigma M_{UN2.OT}}{\Sigma V_{UN2.OT}} = 6.157\ m$

Overturning Resultant Ratio $Ratio_{UN2.OT} := \frac{X_{R.UN2}}{b} = 0.49$

$$Ratio_{UN2.OT.check} := \begin{cases} \text{"OKAY "} & \text{if } Ratio_{UN2.OT} > X_{R.reqUN2} \\ \text{"Revise Structure""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

CHECK FOUNDATION ECCENTRICITY (HORIZONTAL PLANE):

Eccentricity (horizontal plan): $ex_{UN2.OT} := \frac{b}{2} - \frac{\Sigma M_{UN2.OT}}{\Sigma V_{UN2.OT}} = 0.09\ m$ $Kern_{OT} = 2.083\ m$

Eccentricity Check:

$$e_{check.UN2.OT} := \begin{cases} \text{"Okay"} & \text{if } ex_{UN2} \le Kern_{OT} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"Okay"}$$

LOAD CASE UN2

CHECK FOUNDATION BEARING CAPACITY (HORIZONTAL PLANE):

Base Section Modulus: $S_{b.OT} = 26.04\,m^3$

Bearing Pressure Under Toe:

$$\sigma_{ToeUN2.OT} := \begin{cases} \left(\dfrac{\Sigma V_{UN2.OT}}{b\cdot B} + \dfrac{\Sigma V_{UN2.OT}\cdot ex_{UN2.OT}}{S_{b.OT}}\right) & \text{if } \dfrac{\Sigma V_{UN2.OT}}{b\cdot B} \geq \dfrac{\Sigma V_{UN2.OT}\cdot ex_{UN2.OT}}{S_{b.OT}} \\ \dfrac{2\cdot \Sigma V_{UN2.OT}}{B\cdot 3\left(\dfrac{b}{2} - ex_{UN2.OT}\right)} & \text{otherwise} \end{cases} = 123.0\cdot kPa$$

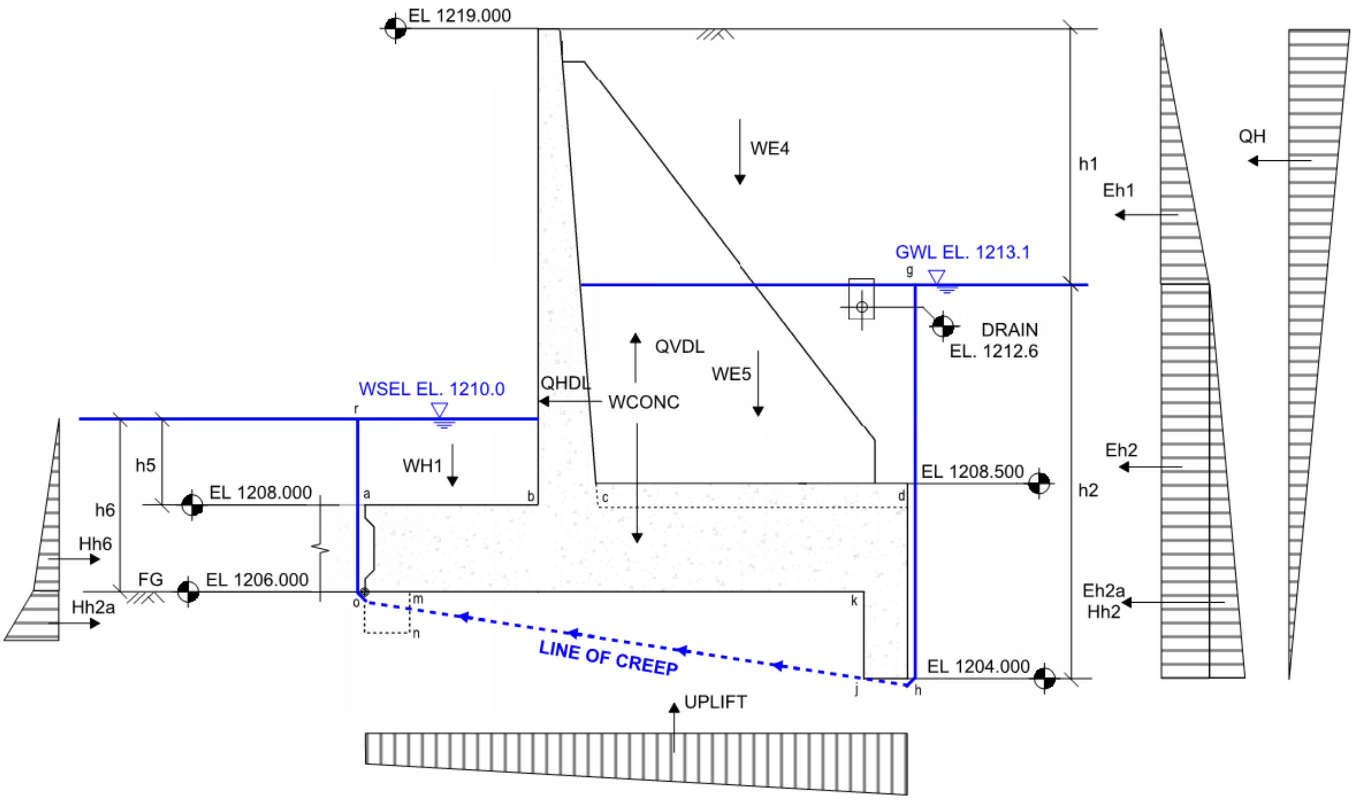
LOAD CASE E1 - SEISMIC LOADING



E1 DESIGN CASE

LOAD CASE E1 ACCEPTANCE PARAMETERS

FS sliding:

Extreme (E) loading)	1.0 (without cohesion, seismic	(Table 3-3, USACE EM 1110-2-2100)

Resultant Location:

Extremem (E) Inside middle half ~75% base in compression

Required Factor of Safety for Sliding:	$FS_{sliding.reqE1} := 1.0$	(Without Cohesion)
Allowable rock bearing pressure:	$\sigma_{allowE1} := 1740kPa$	(Section 5.2, Design Criteria EM 1110-2-2100 Section 3-10)
Overturning Required Resultant Ratio:	$X_{R.reqE1} := 0.25$	(EM 1110-2-2502, Figure 4-4)
Required Factor of Safety for Floatation	$FS_{req.E1.flt} := 1.1$	

SOIL HEIGHTS and Water Levels:

LOAD CASE E1

Heel Conditions:

Groundwater Elevation at Heel: $GWL_{E1} := 1213.1m$

Distance from Finish Grade to Groundwater at Heel: $h_{1E1} := \left[T_w - GWL_{E1} + \left(L_{cd} + t_{wb} - t_{wt}\right) \cdot \tan(\beta)\right] = 5.90\ m$

Distance from Water Surface to Bottom of Footing at Heel: $h_{2E1} := GWL_{E1} - Bot_{ftg} + Key_{h.d} = 9.10\ m$

Toe Conditions:

Water Surface Elevation at Toe: $WSEL_{E1} := 1210.0m$

Water Surface Elevation at Toe for Uplift: $UWSEL_{E1} := 1210.0 \cdot m$

Finish Grade at Toe providing lateral resistance: $FG_{toeE1} := 1206.0 \cdot m$

Soil Depth Above top of footing: $h_{3aE1} := FG_{toeE1} - Top_{ftg} = -2\ m$

$$h_{3E1} := \begin{cases} h_{3aE1} & \text{if } FG_{toeE1} - Top_{ftg} \geq 0 \\ 0 & \text{otherwise} \end{cases} = 0$$

Resisting Fill at Toe: $h_{4E1} := FG_{toeE1} - Bot_{ftg} + Key_{t.d} = 0.00\ m$

Distance from Water Level to Top of Footing at Toe: $h_{5E1} := WSEL_{E1} - Top_{ftg} = 2.00\ m$

Distance from Water Surface to Bottom of Footing at Toe: $h_{6E1} := WSEL_{E1} - Bot_{ftg} + Key_{t.d} = 4.00\ m$

Soil Depth Above WSEL: $h_{7aE1} := FG_{toeE1} - WSEL_{E1} = -4\ m$

$$h_{7E1} := \begin{cases} h_{7aE1} & \text{if } FG_{toeE1} - WSEL_{E1} \geq 0 \\ 0 & \text{otherwise} \end{cases} = 0$$

Soil Depth Below WSEL:

$$h_{8E1} := \begin{cases} WSEL_{E1} - Bot_{ftg} + Key_{t.d} & \text{if } FG_{toeE1} - WSEL_{E1} \geq 0 \\ h_{4E1} & \text{otherwise} \end{cases} = 0$$

For Line of Creep Method: $L_{ho.E1} := \sqrt{b^2 + \left(Key_{h.d} - Key_{t.d}\right)^2} = 12.659\ m$

Head Loss from Point g:

$\Delta h_{g.hj.E1} := h_{2E1} = 9.1\ m$ (to point h & j)

$\Delta h_{g.km.E1} := GWL_{E1} - Bot_{ftg} = 7.1\ m$ (to point k & m)

$\Delta h_{g.no.E1} := GWL_{E1} - Bot_{ftg} + Key_{t.d} = 7.1\ m$ (to point n & o)

$\Delta h_{g.p.E1} := GWL_{E1} - FG_{toeE1} = 7.1\ m$ (to point p*)

$\Delta h_{g.r.E1} := GWL_{E1} - UWSEL_{E1} = 3.1\ m$ (to point r)

Surcharge

Surcharge on Heel: $S1_{E1} := 0.0 \dfrac{kN}{m^2}$

* same as point "o" in this case

Calculate Soil Lateral Pressure Coefficients:

LOAD CASE E1

Calculate at-rest pressure coefficient K_o based on Jaky's (1944) equation.

Soil At Rest Static Coefficient:
(apply to resisting soil loads)

$$K_o := \frac{1 - \sin(\phi)}{1 + \sin(\beta)} = 0.546$$

(Eq. 3-6, USACE EM 1110-2-2502)

Calculate active pressure coefficient K_A based on Coulumb equations.

Determine Slope of Active Wedge: (cohesionless backfill with water table)

$$c_1 := 2 \cdot \tan(\phi) = 1.019 \qquad c_2 := 1 - \tan(\phi) \cdot \tan(\beta) - \frac{\tan(\beta)}{\tan(\phi)} = 1$$

(Eq. G-14 / G-15, USACE EM 1110-2-2100)

$$\alpha := \operatorname{atan}\left(\frac{c_1 + \sqrt{c_1^{\,2} + 4 \cdot c_2}}{2}\right) = 1.021 \qquad \alpha_{deg} := \alpha \cdot \frac{180}{\pi} = 58.5 \text{ degrees}$$

(Eq. G-13, USACE EM 1110-2-2100)

Soil Active Coefficient above GWL:

$$K_{Aagwt} := \left(\frac{1 - \tan(\phi) \cdot \cot(\alpha)}{1 + \tan(\phi) \cdot \tan(\alpha)}\right) \cdot \left(\frac{\tan(\alpha)}{\tan(\alpha) - \tan(\beta)}\right) = 0.376$$

Soil Active Coefficient below GWL:

$$K_{Abgwt} := \frac{1 - \tan(\phi) \cdot \cot(\alpha)}{1 + \tan(\phi) \cdot \tan(\alpha)} \cdot \left[1 + \left(\frac{\tan(\alpha)}{\tan(\alpha) - \tan(\beta)} - 1\right) \cdot \left(\frac{\gamma_m}{\gamma_{sat} - \gamma_w}\right)\right] = 0.376$$

(Eq. G-29, USACE EM 1110-2-2100)

Lateral - Driving Force

Static Copmonent : Active Pressure:

Surcharge Load:

$$E_{s1E1} := S1_{E1} \cdot K_{Aagwt} \cdot \left(H_w + Key_{h.d}\right) \cdot B \cdot -1 = 0 \cdot kN$$

Moment Arm (from bottom of footing):

$$E_{s1locE1} := \frac{H_w + Key_{h.d}}{2} + Key_{vdist} = 5.50\ m$$

Moist Soil Load above GWL:

$$E_{h1E1} := \frac{\gamma_m \cdot K_{Aagwt} \cdot h_{1E1}^{\,2}}{2} \cdot B \cdot -1 = -130.7 \cdot kN$$

Moment Arm (from bottom of footing):

$$E_{h1locE1} := \frac{h_{1E1}}{3} + h_{2E1} + Key_{vdist} = 9.07\ m$$

Saturated Soil Load below GWL:
(rectangular component)

$$E_{h2E1} := \left(\gamma_m \cdot K_{Abgwt} \cdot h_{1E1}\right) \cdot h_{2E1} \cdot B \cdot -1 = -403.2 \cdot kN$$

Moment Arm (from bottom of footing):

$$E_{h2locE1} := \frac{h_{2E1}}{2} + Key_{vdist} = 2.55\ m$$

Saturated Soil Load below GWL:
(triangular component)

$$E_{h2aE1} := \frac{\left(\gamma_{sat} - \gamma_w\right) \cdot K_{Abgwt} \cdot h_{2E1}^{\,2}}{2} \cdot B \cdot -1 = -189.7 \cdot kN$$

Moment Arm (from bottom of footing):

$$E_{h2alocE1} := \frac{h_{2E1}}{3} + Key_{vdist} = 1.03\ m$$

Lateral Water Load:

Water Load GWL to Bottom of Key

$$H_{h2E1} := \frac{\gamma_w \cdot h_{2E1}^{\,2}}{2} \cdot B \cdot -1 = -405.8 \cdot kN$$

Moment Arm (from bottom of footing):

$$H_{h2locE1} := \frac{h_{2E1}}{3} + Key_{vdist} = 1.03\ m$$

$$\Sigma H_{SoildriveE1} := E_{s1E1} + E_{h1E1} + E_{h2E1} + E_{h2aE1} + H_{h2E1} = -1129.4 \cdot kN$$

$$\Sigma M_{LateralSoildriveE1} := E_{s1E1} \cdot E_{s1locE1} + E_{h1E1} \cdot E_{h1locE1} + E_{h2E1} \cdot E_{h2locE1} \ldots + E_{h2aE1} \cdot E_{h2alocE1} + H_{h2E1} \cdot H_{h2locE1} = -2828.8\ m \cdot kN$$

Lateral - Resisting Force

LOAD CASE E1

Note: **Due to the relatively shallow depth of resisting soil/rock, a conservative apporach using at-rest coefficient in lieu of a passive wedge is used to calculate resisting forces.**

Lateral Water Load:

Water Load WSEL to Bottom of Footing: $H_{h6E1} := H_{h6U1} = 78.4 \cdot kN$

Moment Arm (from bot. of toe key): $H_{h6locE1} := H_{h6locU1} = 1.33\ m$

Water Load Bot. of Footing to Bot. of H. Key: $H_{h2aE1} := \left[\left(UWSEL_{E1} - Bot_{ftg} + Key_{t.d}\right) + h_{2E1}\right] \cdot \frac{Key_{h.d}}{2} \cdot \gamma_w \cdot B = 128.4 \cdot kN$

Moment Arm (from bot. of toe key):

$$H_{h2alocE1} := \frac{Key_{h.d} \cdot \left[2 \cdot \left(UWSEL_{E1} - Bot_{ftg} + Key_{t.d}\right) + h_{2E1}\right]}{3\left[h_{2E1} + \left(UWSEL_{E1} - Bot_{ftg} + Key_{t.d}\right)\right]} \ldots = -1.13\ m$$
$$+ Key_{vdist}$$

Lateral Soil Load:

Moist Soil Load above WSEL: $E_{h7E1} := \frac{\gamma_m \cdot K_o \cdot h_{7E1}^{\ 2}}{2} B = 0.0 \cdot kN$

Moment Arm (from bot. of toe key): $E_{h7locE1} := h_{6E1} + \frac{h_{7E1}}{3} + Key_{vdist} = 2.00\ m$

Saturated Soil Load below WSEL: (rectangular component) $E_{h8E1} := \left(\gamma_m \cdot K_o \cdot h_{7E1}\right) \cdot h_{8E1} \cdot B = 0.0 \cdot kN$

Moment Arm (from bot. of toe key): $E_{h8locE1} := \frac{h_{8E1}}{2} = 0.00\ m$

Saturated Soil Load below WSEL: (triangular component) $E_{h8aE1} := \frac{\left[\left(\gamma_{sat} - \gamma_w\right) \cdot K_o\right] \cdot h_{8E1}^{\ 2}}{2} \cdot B = 0.0 \cdot kN$

Moment Arm (from bot. of footing): $E_{h8alocE1} := \frac{h_{8E1}}{3} = 0.00\ m$

Lateral Resistance from Stilling Basin:

Lateral Resistance from Stilling Basin: $P_{sbE1} := 430kN$ (Force needed to achieve the required sliding factor of safety in case UN2)

Moment Arm (from bot. of toe key): $P_{sblocE1} := \frac{t_{ftg}}{2} + Key_{t.d} = 1.00\ m$

$$\Sigma H_{SoilresistE1} := H_{h6E1} + H_{h2aE1} + E_{h7E1} + E_{h8E1} + E_{h8aE1} + P_{sbE1} = 636.8 \cdot kN$$

$$\Sigma M_{HorizSoilResistE1} := H_{h6E1} \cdot H_{h6locE1} + H_{h2aE1} \cdot H_{h2alocE1} + E_{h7E1} \cdot E_{h7locE1} \ldots = 389.5\ m \cdot kN$$
$$+ E_{h8E1} \cdot E_{h8locE1} + E_{h8aE1} \cdot E_{h8alocE1} + P_{sbE1} \cdot P_{sblocE1}$$

Vertical Force:

UPLIFT: Linear distribution from water at heel to water at toe:

$$\Sigma V_{UpliftE1} := \left[\left(UWSEL_{E1} - Bot_{ftg} + Key_{t.d}\right) + h_{2E1}\right] \cdot \frac{b}{2} \cdot \gamma_w \cdot B \cdot -1 = -802.375 \cdot kN$$

Moment Arm (from Point O):

$$V_{UpliftE1aloc} := \frac{b \cdot \left[2 \cdot h_{2E1} + \left(UWSEL_{E1} - Bot_{ftg} + Key_{t.d}\right)\right]}{3\left[h_{2E1} + \left(UWSEL_{E1} - Bot_{ftg} + Key_{t.d}\right)\right]} = 7.061\ m$$

$$\Sigma M_{UpliftE1} := \Sigma V_{UpliftE1} \cdot V_{UpliftE1aloc} = -5665.625 \cdot kN \cdot m$$

Weight of soil and water over toe:

Water Above the Top of Footing: $W_{H1E1} := \gamma_w \cdot h_{5E1} \cdot L_{ab} \cdot B = 78.4 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E1locE1} := \frac{L_{ab}}{2} = 2\,m$

Soil above top of footing: $W_{E6E1} := \gamma_b \cdot h_{3E1} \cdot L_{ab} \cdot B = 0.0 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E6locE1} := \frac{L_{ab}}{2} = 2\,m$

Vertical Load Due to Surcharge: $S_{E1} := S1_{E1} \cdot L_{cd} \cdot B = 0 \cdot kN$ $\quad S_{E1loc} := b - \frac{L_{cd}}{2} = 8.93\,m$

Weight of soil and water over heel:

Moist Soil for sloped grade above top of wall:

Length of sloped portion of soil above top of wall: $L_{E3E1} := \left(L_{cd} + t_{wb} - t_{wt}\right) = 8.00\,m$

Height of sloped soil above top of wall over heel: $h_{E3locE1} := \left(L_{E3E1}\right) \cdot \tan(\beta) = 0.00\,m$

Weight of sloped soil above top of wall: $W_{E3E1} := \frac{\gamma_m}{2} \cdot h_{E3locE1} \cdot L_{E3E1} \cdot B = 0.0 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E3locE1} := L_{ab} + t_{wt} + \frac{2}{3} \cdot L_{E3E1} = 9.83\,m$

Moist soil from top of wall to groundwater level:

Height of soil from top of wall and top of GWL: $h_{1E1} = 5.90\,m$

Length from edge of wall at GWL to edge of heel: $L_{E4E1} := L_{E3E1} - \left(h_{1E1} \cdot S_{batter}\right) = 7.54\,m$

Weight of soil over heel from top of wall to GWL: $W_{E4E1} := \gamma_m \cdot h_{1E1} \cdot \frac{\left(L_{E3E1} + L_{E4E1}\right)}{2} \cdot B = 916.7 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E4locE1} := b - \frac{L_{E3E1}^{\,2} + L_{E3E1} \cdot L_{E4U1} + L_{E4E1}^{\,2}}{3\left(L_{E3E1} + L_{E4E1}\right)} = 8.61\,m$

Saturated soil from groundwater to top of footing:

Height of soil from GWL to top of heel: $h_{E4E1} := h_{2E1} - t_{ftg} - Key_{h.d} = 5.10\,m$

Weight of soil over heel from GWL to top of heel: $W_{E5E1} := \left(\gamma_{sat}\right) \cdot h_{E4E1} \cdot \frac{\left(L_{E4E1} + L_{cd}\right)}{2} \cdot B = 823.1 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E5locE1} := b - \frac{L_{E4E1}^{\,2} + L_{E4E1} \cdot L_{cd} + L_{cd}^{\,2}}{3\left(L_{E4E1} + L_{cd}\right)} = 8.83\,m$

$$\Sigma V_{SoilWaterE1} := W_{H1E1} + W_{E6E1} + W_{E3E1} + W_{E4E1} + W_{E5E1} + S_{E1} = 1818.2 \cdot kN$$

$$\Sigma M_{VertSoilWaterResistE1} := W_{H1E1} \cdot W_{E1locE1} + W_{E6E1} \cdot W_{E6locE1} \cdots + W_{E3E1} \cdot W_{E3locE1} + W_{E4E1} \cdot W_{E4locE1} + W_{E5E1} \cdot W_{E5locE1} + S_{E1} \cdot S_{E1loc} = 15322.6\,m \cdot kN$$

SESIMIC ANALYSIS:

LOAD CASE E1

Seismic coefficient will be applied to dead loads to calculate seismic force and force is applied at center of gravity of the mass. Vertical and Horizontal loads are applied in the "destabilizing direction"

SEISMIC PARAMETERS:

(Section 7.9, Design Criteria)

Peak Ground Acceleration for Seismic Load $PGA_{Horiz} := 0.26$ $PGA_{Vert} := 0.56 \cdot PGA_{Horiz} = 0.146$

In accordance with USACE EM 1110-2-2100 Section 4-7.b, consider 2/3 PGA as seismic coefficient for stabilitiy.

Horizontal Seismic coefficient for stabilty: $K_{hE1} := \frac{2}{3} PGA_{Horiz} = 0.173$

Vertical Seismic coefficient for stabilty: $K_{vE1} := \frac{2}{3} PGA_{Vert} = 0.097$

SEISMIC ACCELERATION OF RIGID MASSES (Q_D):

Vertical Load Application:

$\Sigma V_{conc} = 875.4 \cdot kN$

$Q_{v.conc} := \Sigma V_{conc} \cdot K_{vE1} \cdot -1 = -85 \cdot kN$ (assume acting upwards for adverse sliding effect)

Moment arm for siesmic load application (From Toe): $H_{cent} = 6.077\,m$

$M_{Qv.conc} := Q_{v.conc} \cdot H_{cent} = -516.4 \cdot kN \cdot m$

Lateral Load Application:

$Q_{h.conc} := \Sigma V_{conc} \cdot K_{hE1} \cdot -1 = -151.7 \cdot kN$

Moment arm for siesmic load application (Above Base of Footing): $V_{Cent} = 2.448\,m$

$M_{Q.conc} := Q_{h.conc} \cdot V_{Cent} = -371.4 \cdot kN \cdot m$

SEISMIC ACCELERATION OF SOIL WEDGE + WATER (Q_{EH}):

Vertical Load Application:

$\Sigma V_{SoilWaterE1} = 1818.2 \cdot kN$

$Q_{v.SoilWaterE1} := \Sigma V_{SoilWaterE1} \cdot K_{vE1} \cdot -1 = -176.5 \cdot kN$ (assume acting upwards for adverse sliding effect)

Moment arm for siesmic load application (From Toe): $e_{QE1} := \frac{\Sigma M_{VertSoilWaterResistE1}}{\Sigma V_{SoilWaterE1}} = 8.427\,m$

$M_{Qv.SoilWaterE1} := Q_{v.SoilWaterE1} \cdot e_{QE1} = -1487.3 \cdot kN \cdot m$

Lateral Load Application:

Seismic soil load is calculated based on Mononobe-Okabe method to determine combined static and dynamic coefficient (K_{AE}). Coulomb's active component (K_A) is subtracted from K_{AE} to obtain the seismic coefficient (ΔK_{AE}) for dynamic component of soil force.

Glacial Till Internal Friction (radians): $\phi = 0.471$

Seismic Inertia Angle (radians): $\psi := \operatorname{atan}\left(\frac{K_{hE1}}{1 - K_{vE1}}\right) = 0.190$

Inclination of batter (radians): $\theta := 0.00$ assuming zero is conservative

Slope of retained ground surface: $\beta = 0.00$

$$K_{AE} := \frac{\cos(\phi - \psi - \theta) \cdot \cos(\phi - \psi - \theta)}{\cos(\psi) \cdot \cos(\theta) \cdot \cos(\theta)\ \cos(\psi + \theta) \cdot \left(1 + \sqrt{\frac{\sin(\phi)\ \sin(\phi - \psi - \beta)}{\cos(\beta - \theta) \cdot \cos(\psi + \theta)}}\right)^2} = 0.519$$

$\Delta K_{AE} := K_{AE} - K_{Abgwt} = 0.143$

Dynamic component of active seismic wedge:

$$Q_{h.SoilWaterE1} := \Delta K_{AE} \cdot \left[\frac{\gamma_m \cdot \left(H_w + Key_{h.d}\right)^2}{2 \cdot (\tan(\alpha) - \tan(\beta))} + \frac{\left(\gamma_{sat} - \gamma_m\right) \cdot h_{2E1}{}^2}{2 \cdot \tan(\alpha)}\right] \cdot B \cdot -1 = -204.4 \cdot kN$$

(Eq. G-64, USACE EM 1110-2-2100)

Moment arm for siesmic load application (About Point O): $Q_{h.SoilWaterlocE1} := \frac{2}{3} \cdot \left(H_w + Key_{h.d}\right) + Key_{vdist} = 8.00\,m$

$M_{Q.h.SoilWaterE1} := Q_{h.SoilWaterE1} \cdot Q_{h.SoilWaterlocE1} = -1635.2 \cdot kN \cdot m$

STABILITY ASSESSMENT:

LOAD CASE E1

CHECK SLIDING ALONG HORIZONTAL SLIDING PLANE:

Summation of the vertical forces: $\Sigma V_{E1} := \Sigma V_{conc} + \Sigma V_{SoilWaterE1} + \Sigma V_{UpliftE1} + Q_{v.conc} + Q_{v.SoilWaterE1} = 1629.8 \cdot kN$

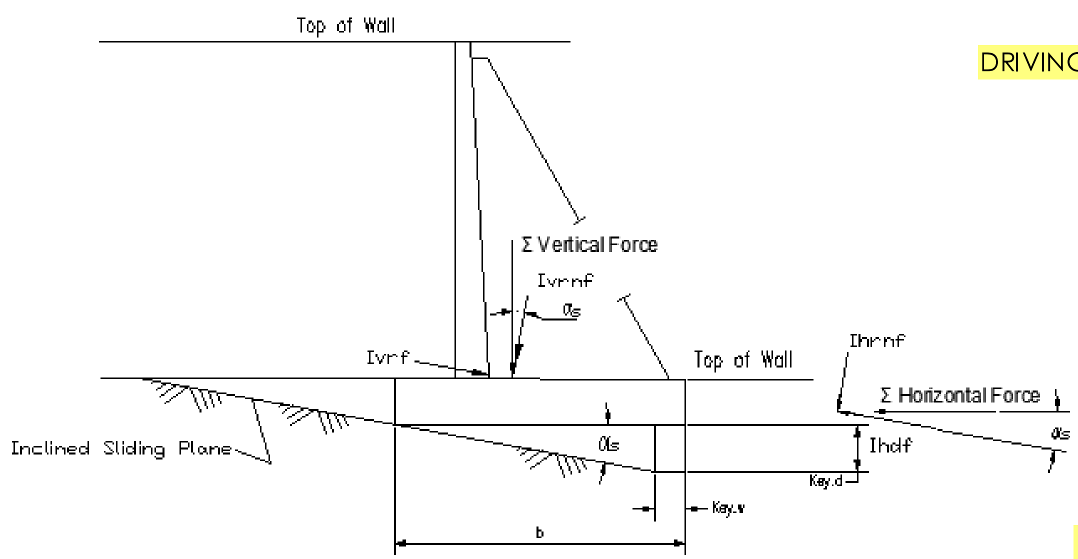
Summation of the horizontal forces: $\Sigma H_{E1} := \Sigma H_{SoildriveE1} + Q_{h.conc} + Q_{h.SoilWaterE1} + \Sigma H_{SoilresistE1} = -848.8 \cdot kN$

Safety Factor for Sliding Horizontal Failure Plane

$$FS_{Horiz.SlidingE1} := \frac{\left|\Sigma V_{E1}\right| \cdot \tan\left(\phi_{rock} \cdot \frac{\pi}{180}\right)}{\left|\Sigma H_{E1}\right|} = 0.94$$

$$FS_{Sliding.check1.E1} := \begin{cases} \text{"OKAY"} & \text{if } FS_{Horiz.SlidingE1} > FS_{sliding.reqE1} \\ \text{"NG - key req'"} & \text{otherwise} \end{cases} = \text{"NG - key req'"}$$

CHECK FACTOR OF SAFETY SLIDING WITH KEY (INCLINED SLIDING PLANE):



(With properly engineered reinforced concrete Key, horizontal sliding plane thru Toe is protected, critical sliding plane is relocated to the INCLINED SLIDING PLANE FROM HEEL KEY To TOE, Bedrock Mass above this examing plane is mobilized by reinforced concrete key and combined into Structural Wedge.)

Resolve ΣV_{E1} & ΣH_{E1}

$$\Sigma V_{InclinedE1} := \cos(\alpha s) \cdot \left(\left|\Sigma V_{E1} + V_{rocksection}\right|\right) + \sin(\alpha s) \cdot \left|\Sigma H_{E1}\right| = 2041.2 \cdot kN$$

$$\Sigma H_{InclinedE1} := \cos(\alpha s) \cdot \left|\Sigma H_{E1}\right| - \sin(\alpha s) \cdot \left(\left|\Sigma V_{E1} + V_{rocksection}\right|\right) = 506.5 \cdot kN$$

Safety Factor for Sliding Inclined Failure Plane

$$FS_{InclinedISlidingE1} := \frac{\Sigma V_{InclinedE1} \cdot \tan(\phi_r)}{\Sigma H_{InclinedE1}} = 1.79$$

$$FS_{Sliding.check2.E1} := \begin{cases} \text{"OKAY"} & \text{if } FS_{InclinedISlidingE1} > FS_{sliding.reqE1} \\ \text{"NG'"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

CHECK FOUNDATION ECCENTRICITY:

LOAD CASE E1

(Vertical seismic loads from concrete, soil and water are assumed acting downwards for adverse bearing effect)

Summation of the vertical forces: $\Sigma V_{seisE1} := \Sigma V_{conc} + \Sigma V_{SoilWaterE1} + \Sigma V_{UpliftE1} - Q_{v.conc} - Q_{v.SoilWaterE1} = 2152.7 \cdot kN$

Summation of the horizontal forces: $\Sigma H_{seisE1} := \Sigma H_{E1} = -848.8 \cdot kN$

Resolve ΣV_{seisE1} & ΣH_{seisE1}

$$\Sigma V_{InclinedseisE1} := \cos(\alpha s) \cdot \left(\left|\Sigma V_{seisE1} + V_{rocksection}\right|\right) + \sin(\alpha s) \cdot \left|\Sigma H_{seisE1}\right| = 2556.3 \cdot kN$$

$$\Sigma H_{InclinedseisE1} := \cos(\alpha s) \cdot \left|\Sigma H_{seisE1}\right| - \sin(\alpha s) \cdot \left(\left|\Sigma V_{seisE1} + V_{rocksection}\right|\right) = 416.9 \cdot kN$$

Summation of the resisting moments about the toe:

$$\Sigma M_{resE1} := \Sigma M_{conc} + \Sigma M_{VertSoilWaterResistE1} + \Sigma M_{HorizSoilResistE1} + \Sigma M_{rocksection} = 23289 \cdot kN \cdot m$$

Summation of seismic moments about the toe:

$$\Sigma M_{seisE1} := -M_{Qv.conc} + M_{Q.conc} - M_{Qv.SoilWaterE1} + M_{Q.h.SoilWaterE1} = -3 \cdot kN \cdot m$$

Summation of the overturning moments about the toe:

$$\Sigma M_{oE1} := \Sigma M_{LateralSoildriveE1} + \Sigma M_{UpliftE1} = -8494 \cdot kN \cdot m$$

Total moment: $\Sigma M_{E1} := \Sigma M_{resE1} + \Sigma M_{seisE1} + \Sigma M_{oE1} = 14791.7 \cdot kN \cdot m$

Normal force to base: $\Sigma V_{InclinedseisE1} = 2556.3 \cdot kN$

Inclined Sliding Plane Length: $L_{incline} = 12.7 \cdot m$

Eccentricity (inclined plane): $ex_{E1} := \dfrac{L_{incline}}{2} - \dfrac{\Sigma M_{E1}}{\Sigma V_{InclinedseisE1}} = 0.56\,m$ $\qquad Kern_{E1} := \dfrac{L_{incline}}{4} = 3.172\,m$

Eccentricity Check:

$$e_{check.E1} := \begin{cases} \text{"Okay"} & \text{if } ex_{E1} \le Kern \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"Okay"}$$

CHECK FOUNDATION BEARING CAPACITY:

Base Section Modulus: $S_b = 26.83\,m^3$

Bearing Pressure Under Toe:

$$\sigma_{ToeE1} := \begin{cases} \left(\dfrac{\Sigma V_{InclinedE1}}{L_{incline} \cdot B} + \dfrac{\Sigma V_{InclinedE1} \cdot ex_{E1}}{S_b}\right) & \text{if } \dfrac{\Sigma V_{InclinedE1} \cdot ex_{E1}}{S_b} \le \dfrac{\Sigma V_{InclinedE1}}{L_{incline} \cdot B} \\ \dfrac{2 \cdot \Sigma V_{InclinedE1}}{B \cdot 3\left(\dfrac{b}{2} - ex_{E1}\right)} & \text{otherwise} \end{cases} = 203.3 \cdot kPa$$

$$Bearing_{ChecktoeE1} := \begin{cases} \text{"OKAY "} & \text{if } \sigma_{ToeE1} < \sigma_{allowE1} \\ \text{"NG""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

Bearing Pressure Under Heel:

$$\sigma_{HeelE1} := \begin{cases} \left(\dfrac{\Sigma V_{InclinedE1}}{L_{incline} \cdot B} - \dfrac{\Sigma V_{InclinedE1} \cdot ex_{E1}}{S_b}\right) & \text{if } \dfrac{\Sigma V_{InclinedE1} \cdot ex_{E1}}{S_b} \le \dfrac{\Sigma V_{InclinedE1}}{L_{incline} \cdot B} \\ 0 & \text{otherwise} \end{cases} = 118.5 \cdot kPa$$

$$Bearing_{CheckheelE1} := \left(\begin{cases} \text{"OKAY "} & \text{if } \sigma_{HeelE1} < \sigma_{allowE1} \wedge \sigma_{HeelE1} > 0 \\ \text{"NG - perform cracked base analysis""} & \text{otherwise} \end{cases}\right) = \text{"OKAY "}$$

CHECK FLOATATION:

Safety Factor for Floatation:

$$FS_{FloatationE1} := \frac{\Sigma V_{conc} + \Sigma V_{SoilWaterE1} + Q_{v.conc} + Q_{v.SoilWaterE1}}{\left|\Sigma V_{UpliftE1}\right|} = 3.03$$

$$FS_{Floatation.E1.check} := \begin{cases} \text{"OKAY"} & \text{if } FS_{FloatationE1} > FS_{req.E1.flt} \\ \text{"Revise Structure""} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

CHECK OVERTURNING

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stablity of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1

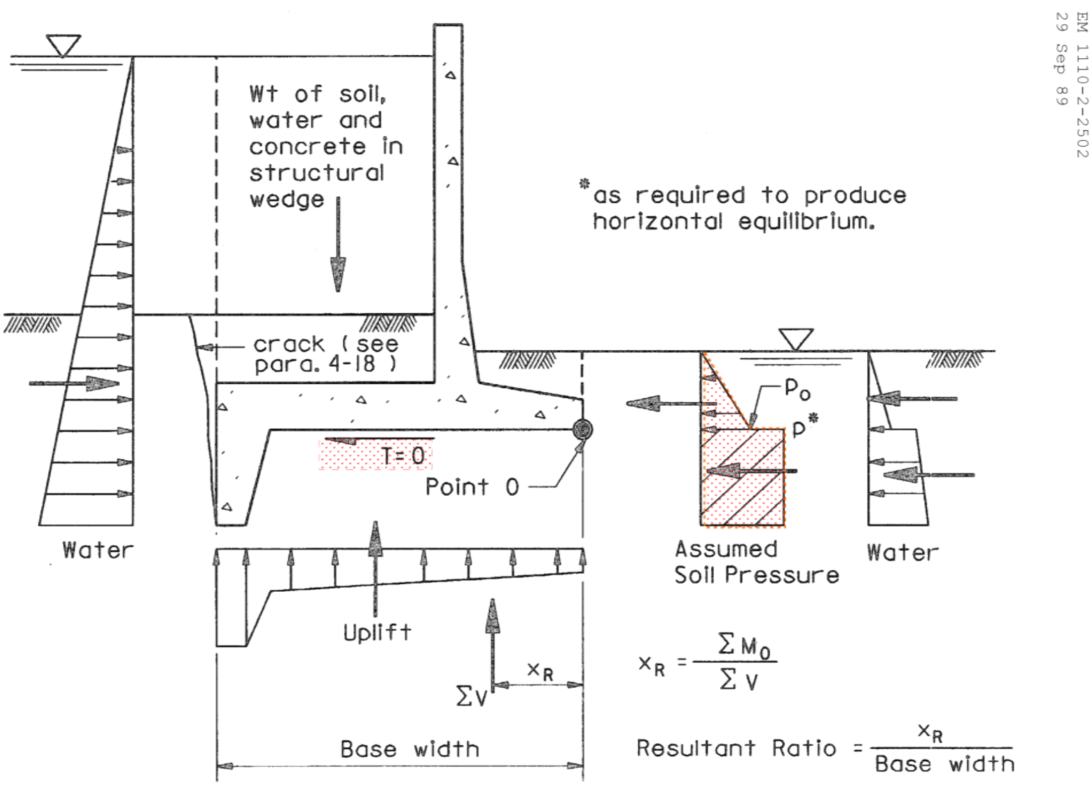


Figure 4-5. Forces for overturning analysis for wall with horizontal base and key

Modify Uplift for Overturning Analysis: **LOAD CASE E1**

(Uplift is calculated along the concrete/rock contact using the Line of Creep method)

Water Pressure at h: $u_{h.E1} := \Delta h_{g.hj.E1} \cdot \gamma_w = 89.18 \cdot kPa$

Water Pressure at o: $u_{o.E1} := \left(\Delta h_{g.no.E1} - \frac{\Delta h_{g.r.E1} \cdot L_{ho.E1}}{L_{ho.E1}}\right) \cdot \gamma_w = 39.2 \cdot kPa$

Head loss between point h and o: $\Delta h_{ho.E1} := \Delta h_{g.r.E1} \cdot \frac{L_{ho.E1}}{L_{ho.E1}} = 3.1\ m$

Length of concrete base (h -> o): $L_{baseho.E1} := Key_{h.w} + Key_{h.d} + Key_{hdist} + Key_{t.d} + Key_{t.w} = 14.5\ m$

Head loss along h -> j: $\Delta h_{hj.E1} := \Delta h_{ho.E1} \cdot \frac{Key_{h.w}}{L_{baseho.E1}} = 0.214\ m$

Water Pressure at j: $u_{j.E1} := \left(\Delta h_{g.hj.E1} - \Delta h_{hj.E1}\right) \cdot \gamma_w = 87.08 \cdot kPa$

Head loss along h -> k: $\Delta h_{hjk.E1} := \Delta h_{ho.E1} \cdot \left(\frac{Key_{h.w} + Key_{h.d}}{L_{baseho.E1}}\right) = 0.641\ m$

Water Pressure at k: $u_{k.E1} := \left(\Delta h_{g.km.E1} - \Delta h_{hjk.E1}\right) \cdot \gamma_w = 63.29 \cdot kPa$

Head loss along h -> m: $\Delta h_{hjkm.E1} := \Delta h_{ho.E1} \cdot \left(\frac{Key_{h.w} + Key_{h.d} + Key_{hdist}}{L_{baseho.E1}}\right) = 3.1\ m$

Water Pressure at m: $u_{m.E1} := \left(\Delta h_{g.km.E1} - \Delta h_{hjkm.E1}\right) \cdot \gamma_w = 39.20 \cdot kPa$

Head loss along h -> n: $\Delta h_{hjkmn.E1} := \Delta h_{ho.E1} \cdot \left(\frac{Key_{h.w} + Key_{h.d} + Key_{hdist} + Key_{t.d}}{L_{baseho.E1}}\right) = 3.1\ m$

Water Pressure at n: $u_{n.E1} := \left(\Delta h_{g.no.E1} - \Delta h_{hjkmn.E1}\right) \cdot \gamma_w = 39.20 \cdot kPa$

Uplift under key at heel: $V_{ulkeyhE1.OT} := \frac{\left(u_{h.E1} + u_{j.E1}\right) \cdot Key_{h.w}}{2} \cdot B \cdot -1 = -88.132 \cdot kN$

Moment Arm (from Point O): $V_{ulkeyhE1loc.OT} := b - \frac{Key_{h.w} \cdot \left(2 \cdot u_{j.E1} + u_{h.E1}\right)}{3 \cdot \left(u_{j.E1} + u_{h.E1}\right)} = 12.002\ m$

Uplift under base: $V_{ulbaseE1.OT} := \frac{\left(u_{k.E1} + u_{m.E1}\right) \cdot Key_{hdist}}{2} \cdot B \cdot -1 = -589.343 \cdot kN$

Moment Arm (from Point O): $V_{ulbaseE1loc.OT} := b - Key_{h.w} - \frac{Key_{hdist} \cdot \left(2 \cdot u_{m.E1} + u_{k.E1}\right)}{3 \cdot \left(u_{m.E1} + u_{k.E1}\right)} = 6.201\ m$

Uplift under key at toe: $V_{ulkeytE1.OT} := \frac{\left(u_{n.E1} + u_{o.E1}\right) \cdot Key_{t.w}}{2} \cdot B \cdot -1 = 0 \cdot kN$

Moment Arm (from Point O): $V_{ulkeytE1loc.OT} := \frac{Key_{t.w} \cdot \left(2 \cdot u_{n.E1} + u_{o.E1}\right)}{3 \cdot \left(u_{n.E1} + u_{o.E1}\right)} = 0$

$$\Sigma V_{UpliftE1.OT} := V_{ulkeyhE1.OT} + V_{ulbaseE1.OT} + V_{ulkeytE1.OT} = -677 \cdot kN$$

$$U_{E1.loc.OT} := \frac{V_{ulkeyhE1.OT} \cdot V_{ulkeyhE1loc.OT} + V_{ulbaseE1.OT} \cdot V_{ulbaseE1loc.OT} + V_{ulkeytE1.OT} \cdot V_{ulkeytE1loc.OT}}{\Sigma V_{UpliftE1.OT}} = 6.96\ m$$

$$\Sigma M_{UpliftE1.OT} := \Sigma V_{UpliftE1.OT} \cdot U_{E1.loc.OT} = -4712.0 \cdot kN \cdot m$$

LOAD CASE E1

Modify Lateral Water Pressure (Resisting) for Overturning Analysis:

(Resisting water pressure is calculated using the Line of Creep method)

Water Load at Key (heel): $H_{h2E1.OT} := \frac{u_{k.E1} + u_{j.E1}}{2} \cdot Key_{h.d} B = 150.4 \cdot kN$

Moment Arm (from Point O): $H_{h2locE1.OT} := \frac{Key_{h.d} \cdot \left(2 \cdot u_{k.E1} + u_{j.E1}\right)}{3\left(u_{k.E1} + u_{j.E1}\right)} + Key_{vdist} = -1.05\ m$

Water Load at Key (toe): $H_{h6E1.OT} := \frac{u_{o.E1} \cdot \left(UWSEL_{E1} - Bot_{ftg} + Key_{t.d}\right)}{2} \cdot B = 78 \cdot kN$

Moment Arm (from Point O): $H_{h6locE1.OT} := \frac{UWSEL_{E1} - Bot_{ftg} + Key_{t.d}}{3} = 1.33\ m$

$$\Sigma H_{waterresistE1.OT} := H_{h2E1.OT} + H_{h6E1.OT} = 228.78 \cdot kN$$

$$H_{waterresistlocE1.OT} := \frac{H_{h2E1.OT} \cdot H_{h2locE1.OT} + H_{h6E1.OT} \cdot H_{h6locE1.OT}}{\Sigma H_{waterresistE1.OT}} = -0.235\ m$$

$$\Sigma M_{waterresistE1.OT} := \Sigma H_{waterresistE1.OT} \cdot H_{waterresistlocE1.OT} = -53.78 \cdot kN \cdot m$$

Modify Lateral Soil Loads for Overturning Analysis:

(Lateral soil loads are calculated down to Point O instead of bottom of shear key)

Driving Soil Load (Headwater Side):

Surcharge Load: $E_{s1E1.OT} := S1_{E1} \cdot K_{Aagwt} \cdot \left(H_w + Key_{h.d} + Key_{vdist}\right) \cdot B \cdot -1 = 0 \cdot kN$

Moment Arm (from Point O): $E_{s1locE1.OT} := \frac{H_w + Key_{h.d} + Key_{vdist}}{2} = 6.50\ m$

Moist Soil Load above GWL: $E_{h1E1.OT} := \frac{\gamma_m \cdot K_{Aagwt} \cdot h_{1E1}^{\ 2}}{2} B \cdot -1 = -130.7 \cdot kN$

Moment Arm (from Point O): $E_{h1locE1.OT} := \frac{h_{1E1}}{3} + h_{2E1} + Key_{vdist} = 9.07\ m$

Saturated Soil Load below GWL: (rectangular component) $E_{h2E1.OT} := \left(\gamma_m \cdot K_{Aagwt} \cdot h_{1E1}\right) \cdot \left(h_{2E1} + Key_{vdist}\right) \cdot B \cdot -1 = -314.6 \cdot kN$

Moment Arm (from Point O): $E_{h2locE1.OT} := \frac{h_{2E1} + Key_{vdist}}{2} = 3.55\ m$

Saturated Soil Load below GWL: (triangular component) $E_{h2aE1.OT} := \frac{\left(\gamma_{sat} - \gamma_w\right) \cdot K_{Aagwt} \cdot \left(h_{2E1} + Key_{vdist}\right)^2}{2} \cdot B \cdot -1 = -115.5 \cdot kN$

Moment Arm (from Point O): $E_{h2alocE1.OT} := \frac{h_{2E1} + Key_{vdist}}{3} = 2.37\ m$

LOAD CASE E1

Resisting Soil Load (Tailwater Side):

(Determine resisting soil load based on depth variation between the keys (ie. Key_{vdist}). In case where key at heel is deeper than key at toe (ie. $Key_{vdist} < 0$), resisting soil load (p*) is assumed to produce horizontal equilibrium as per Figure 4-5 above. Resisting soil load (p_o) is neglected.)

Total Driving Force:
$$\Sigma H_{SoildriveE1.OT} := E_{s1E1.OT} + E_{h1E1.OT} + E_{h2E1.OT} + E_{h2aE1.OT} + H_{h2E1} \cdots + Q_{h.conc} + Q_{h.SoilWaterE1} = -1322.7 \cdot kN$$

Total Resisting Force:
$$\Sigma H_{waterresistE1.OT} = 228.779 \cdot kN$$

Assumed Soil Load p*:
$$E_{h8E1a.OT} := \left(\Sigma H_{SoildriveE1.OT} + \Sigma H_{waterresistE1.OT}\right) \cdot -1 = 1093.945 \cdot kN$$

Moment Arm (from Point O):
$$E_{h8E1a.loc.OT} := \frac{Key_{vdist}}{2} = -1\ m$$

$$E_{h8E1.OT} := \begin{cases} E_{h8E1a.OT} & \text{if } Key_{vdist} < 0 \\ \Sigma H_{SoilresistE1} - H_{h6E1} - H_{h2aE1} - P_{sbE1} & \text{otherwise} \end{cases} = 1093.945 \cdot kN$$

$$\Sigma M_{SoilresistE1} := \begin{cases} E_{h8E1a.OT} \cdot E_{h8E1a.loc.OT} & \text{if } Key_{vdist} < 0 \\ \Sigma M_{HorizSoilResistE1} - H_{h6E1} \cdot H_{h6locE1} - H_{h2aE1} \cdot H_{h2alocE1} - P_{sbE1} \cdot P_{sblocE1} & \text{otherwise} \end{cases} = -1093.945 \cdot kN \cdot m$$

Sum of Moment about Point O:

$$\Sigma M_{LateraldriveE1.OT} := E_{s1E1.OT} \cdot E_{s1locE1.OT} + E_{h1E1.OT} \cdot E_{h1locE1.OT} + E_{h2E1.OT} \cdot E_{h2locE1.OT} \cdots + E_{h2aE1.OT} \cdot E_{h2alocE1.OT} + H_{h2E1} \cdot H_{h2locE1} = -2994.7 \cdot kN \cdot m$$

$$\Sigma M_{LateralresistE1.OT} := \Sigma M_{waterresistE1.OT} + \Sigma M_{SoilresistE1} = -1147.7 \cdot kN \cdot m$$

$$\Sigma M_{seisE1.OT} := M_{Qv.conc} + M_{Q.conc} + M_{Qv.SoilWaterE1} + M_{Q.h.SoilWaterE1} = -4010 \cdot kN \cdot m$$

(seismic moment modified for the most adverse overturning effect)

Total moment:

$$\Sigma M_{E1.OT} := \Sigma M_{conc} + \Sigma M_{VertSoilWaterResistE1} + \Sigma M_{UpliftE1.OT} + \Sigma M_{LateraldriveE1.OT} + \Sigma M_{LateralresistE1.OT} + \Sigma M_{seisE1.OT} = 7777.7 \cdot kN \cdot m$$

Total Vertical Force:
$$\Sigma V_{E1.OT} := \Sigma V_{conc} + \Sigma V_{SoilWaterE1} + \Sigma V_{UpliftE1.OT} + Q_{v.conc} + Q_{v.SoilWaterE1} = 1754.7 \cdot kN$$

Distance X_R: EM 1110-2-2502 Eq.4-1
$$X_{R.E1} := \frac{\Sigma M_{E1.OT}}{\Sigma V_{E1.OT}} = 4.433\ m$$

Overturning Resultant Ratio
$$Ratio_{E1.OT} := \frac{X_{R.E1}}{b} = 0.35$$

$$Ratio_{E1.OT.check} := \begin{cases} \text{"OKAY "} & \text{if } Ratio_{E1.OT} > X_{R.reqE1} \\ \text{"Revise Structure""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

CHECK FOUNDATION ECCENTRICITY (HORIZONTAL PLANE):

Eccentricity (horizontal plan):
$$ex_{E1.OT} := \frac{b}{2} - \frac{\Sigma M_{E1.OT}}{\Sigma V_{E1.OT}} = 1.82\ m \qquad Kern_{E1.OT} := \frac{b}{4} = 3.125\ m$$

Eccentricity Check:
$$e_{check.E1.OT} := \begin{cases} \text{"Okay"} & \text{if } ex_{E1.OT} \le Kern_{E1.OT} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"Okay"}$$

LOAD CASE E1

CHECK FOUNDATION BEARING CAPACITY (HORIZONTAL PLANE):

Base Section Modulus: $S_{b.OT} = 26.04\,m^3$

Bearing Pressure Under Toe:

$$\sigma_{ToeE1.OT} := \begin{cases} \left(\frac{\Sigma V_{E1.OT}}{b \cdot B} + \frac{\Sigma V_{E1.OT} \cdot ex_{E1.OT}}{S_{b.OT}}\right) & \text{if } \frac{\Sigma V_{E1.OT}}{b \cdot B} \geq \frac{\Sigma V_{E1.OT} \cdot ex_{E1.OT}}{S_{b.OT}} \\ \frac{2 \cdot \Sigma V_{E1.OT}}{B \cdot 3\left(\frac{b}{2} - ex_{E1.OT}\right)} & \text{otherwise} \end{cases} = 262.8 \cdot kPa$$

$$Bearing_{ChecktoeE1.OT} := \begin{cases} \text{"OKAY "} & \text{if } \sigma_{ToeE1.OT} < \sigma_{allowE1} \\ \text{"NG - for reference only""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

Bearing Pressure Under Heel:

$$\sigma_{HeelE1.OT} := \begin{cases} \left(\frac{\Sigma V_{E1.OT}}{b \cdot B} - \frac{\Sigma V_{E1.OT} \cdot ex_{E1.OT}}{S_{b.OT}}\right) & \text{if } \frac{\Sigma V_{E1.OT}}{b \cdot B} \geq \frac{\Sigma V_{E1.OT} \cdot ex_{E1.OT}}{S_{b.OT}} \\ 0 & \text{otherwise} \end{cases} = 17.9 \cdot kPa$$

$$Bearing_{CheckheelE1.OT} := \left(\begin{cases} \text{"OKAY "} & \text{if } \sigma_{HeelE1.OT} < \sigma_{allowE1} \wedge \sigma_{HeelE1.OT} > 0 \\ \text{"NG - for reference only""} & \text{otherwise} \end{cases}\right) = \text{"OKAY "}$$

SUMMARY OF STABILITY ASSESSMENT:

LOAD CASE E1

Sliding Factor of Safety: (Horizontal Plane - Ref only)	$FS_{Horiz.SlidingE1} = 0.94$	$FS_{Sliding.check1.E1}$ = "NG - key req""
Sliding Factor of Safety: (Inclined Plane)	$FS_{InclinedlSlidingE1} = 1.79$	$FS_{Sliding.check2.E1}$ = "OKAY "
Eccentricity: (Inclined Plane)	$ex_{E1} = 0.56\ m$	$e_{check.E1}$ = "Okay"
Bearing Pressure At Heel: (Inclined Plane)	$\sigma_{HeelE1} = 118\cdot kPa$	$Bearing_{CheckheelE1}$ = "OKAY "

SS-5C Retaining Wall Stability Calculations

Project Number: 110773396

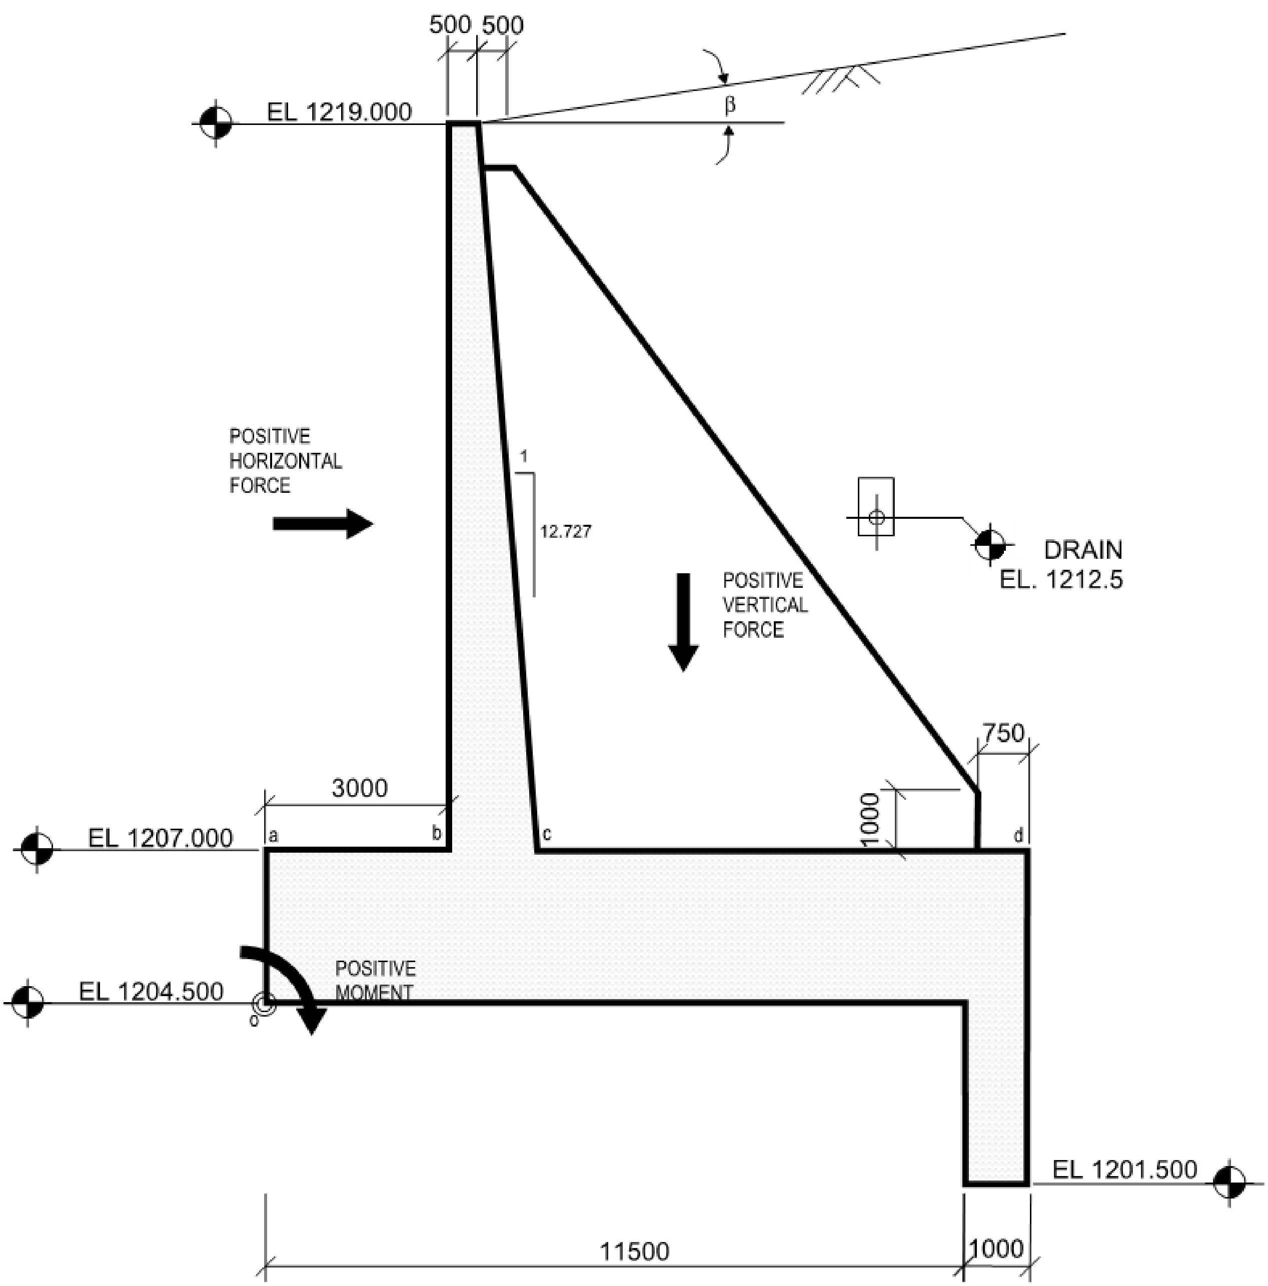
Project Title: SR1 - Diversion Structure

Client: Alberta Transportation

Engineer: Lawrence Choi Date: 12/11/2018

Checker: Sean Xiao Date: 12/18/2018

Calculation for: Retaining Wall - Service Spillway Left - Block 5C



REGION COLOR CONVENTION

User Input

Calulation Highlights

Results

WALL GEOMETRY:

Top of Wall Elevation: $T_w := 1219.0 \cdot m$

Top of Footing Elevation: $Top_{ftg} := 1207.0 \cdot m$

Thickness of Footing: $t_{ftg} := 2.5m$

Bottom of Footing Elevation: $Bot_{ftg} := Top_{ftg} - t_{ftg} = 1204.5\ m$

Overall Height of wall: $h_w := T_w - Bot_{ftg} = 14.50\ m$

Thickness of Wall: Base: $t_{wb} := 1.443 \cdot m$ Top: $t_{wt} := 0.50m$

Length of toe: $L_{ab} := 3.0m$

Total Length of Footing: $b := 12.5m$

Length of heel: $L_{cd} := b - L_{ab} - t_{wb} = 8.057\ m$

Unit Width of Wall for analysis: $B := 1.00m$

SHEAR KEY GEOMETRY:

	Toe	Heel	
Key depth:	$Key_{t.d} := 0m$	$Key_{h.d} := 3.0m$	(Assumption: $Key_{h.d}$ >= $Key_{t.d}$)
Key width:	$Key_{t.w} := 0m$	$Key_{h.w} := 1m$	
Face of Key from Point O:	$Key_{t.loc} := 0 \cdot m$	$Key_{h.loc} := b - Key_{h.w} = 11.5\ m$	

Horizontal Distance between Keys: $Key_{hdist} := Key_{h.loc} - Key_{t.loc} - Key_{t.w} = 11.5\ m$

Key Depth Diff. (from point O): $Key_{vdist} := -Key_{h.d} + Key_{t.d} = -3\ m$

BASE PROPERTIES:

Base Area: $A_b := b \cdot B = 12.5\ m^2$

Centroidal Distance for Footing (from Toe): $Y_f := \frac{b}{2} = 6.25\ m$

RETAINED SOIL GEOMETRY:

Slope of retained ground surface: $\beta := 0 \cdot \frac{\pi}{180} = 0.00$

Height of retained earth at heel: $H_w := T_w - Bot_{ftg} + \left(t_{wb} + L_{cd} - t_{wt}\right) \cdot \tan(\beta) = 14.50\ m$

RETAINING WALL GEOMETRY CHECKS:

(Foundation Analysis & Design Bowles)

$$t_{bcheck} := \begin{cases} \text{"OKAY"} & \text{if } t_{ftg} \geq \frac{H_w}{12} \\ \text{"Warning"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

$$t_{wcheck} := \begin{cases} \text{"OKAY"} & \text{if } t_{wb} \geq \frac{H_w}{12} \\ \text{"Warning"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

$$b_{check} := \begin{cases} \text{"OKAY"} & \text{if } \frac{b}{H_w} \geq .4 \wedge \frac{b}{H_w} \leq 80 \\ \text{"Warning"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

$$L_{abcheck} := \begin{cases} \text{"OKAY"} & \text{if } \frac{L_{ab}}{b} \geq .25 \wedge \frac{L_{ab}}{b} \leq .4 \\ \text{"Warning"} & \text{otherwise} \end{cases} = \text{"Warning"}$$

Material Properties:

Unit Weight of Water:	$\gamma_w := 9.8 \frac{kN}{m^3}$	(Section 7.2, Design Criteria)
Unit Weight of Concrete:	$\gamma_c := 23.5 \frac{kN}{m^3}$	
Unit Weight of Soil (Moist):	$\gamma_m := 20.0 \frac{kN}{m^3}$	(Section 5.3, Design Criteria) assumed moisture content (w) = 5%
Unit Weight Soil (Saturated):	$\gamma_{sat} := 22.0 \frac{kN}{m^3}$	(Assuming Specific Gravity = 2.7
Unit Weight Soil (buoyant):	$\gamma_b := \gamma_{sat} - \gamma_w = 12.2 \cdot \frac{kN}{m^3}$	
Weight of Soil/Concrete above toe:	$\gamma_{toe} := 22.0 \frac{kN}{m^3}$	
Unit Weight of Rock:	$\gamma_r := 25.6 \frac{kN}{m^3}$	(Section 7.2, Design Criteria)

Foundation Parameters:

Glacial Till Internal Friction:	$\phi := 27 \cdot \frac{\pi}{180} = 0.471$	
Bedrock Internal Friction Angle:	$\phi_r := 24 \cdot \frac{\pi}{180} = 0.419$	
Friction Angle at Base Concrete / Rock Interface:	$\phi_{rock} := 26$	
Base Friction Coefficient:	$tan_{\phi rock} := \tan\left(\phi_{rock} \frac{\pi}{180}\right) = 0.488$	radians
Rip Rap Backfill, Refer Dwg. C-214	$\phi_{backfill} := \left(20 \frac{\pi}{180}\right) = 0.349$	radians
Shear strength along rock Failure plane	$s_r := \frac{13100 \frac{kN}{m^2}}{2} = 6550 \cdot \frac{kN}{m^2}$	(Stantec Design Memo 8/8/16)

CONCRETE DEAD LOAD:

Area of Footing: $A_{ftg} := t_{ftg} \cdot b = 31.25\,m^2$

Weight of Footing: $D_{ftg} := A_{ftg} \cdot B \cdot \gamma_c = 734.4 \cdot kN$

Area of Stem (without batter): $A_{w1} := t_{wt} \cdot (h_w - t_{ftg}) = 6\,m^2$

Weight of Stem: $D_{w1} := A_{w1} \cdot B \cdot \gamma_c = 141 \cdot kN$

Area of stem Batter: $A_{w2} := \frac{(t_{wb} - t_{wt})}{2} (h_w - t_{ftg}) = 5.66\,m^2$

Weight of Batter: $D_{w2} := A_{w2} \cdot B \cdot \gamma_c = 133 \cdot kN$

Slope of batter: $S_{batter} := \frac{t_{wb} - t_{wt}}{h_w - t_{ftg}} = 0.079$

Area of Key $A_{t.key} := Key_{t.d} \cdot Key_{t.w} = 0$ $A_{h.key} := Key_{h.d} \cdot Key_{h.w} = 3\,m^2$

Weight of Key $D_{t.key} := A_{t.key} \cdot B \cdot \gamma_c = 0 \cdot kN$ $D_{h.key} := A_{h.key} \cdot B \cdot \gamma_c = 70.5 \cdot kN$

Centroidal Horizontal Distance of Wall (From Toe):

$$H_{cent} := \frac{A_{w1} \cdot \left(L_{ab} + \frac{t_{wt}}{2}\right) + A_{w2} \cdot \left(L_{ab} + t_{wt} + \frac{t_{wb} - t_{wt}}{3}\right) + A_{ftg} \cdot \frac{b}{2} + A_{t.key} \cdot \left(Key_{t.loc} + \frac{Key_{t.w}}{2}\right) + A_{h.key} \cdot \left(Key_{h.loc} + \frac{Key_{h.w}}{2}\right)}{A_{w1} + A_{w2} + A_{ftg} + A_{t.key} + A_{h.key}} = 5.93\,m$$

Centroidal Vertical Distance of Wall (Above Base of Footing):

$$V_{Cent} := \frac{A_{ftg} \cdot \frac{t_{ftg}}{2} + A_{w1} \cdot \left[t_{ftg} + \frac{(h_w - t_{ftg})}{2}\right] + A_{w2} \cdot \left[t_{ftg} + \frac{(h_w - t_{ftg})}{3}\right] + A_{t.key} \cdot \left(\frac{-Key_{t.d}}{2}\right) + A_{h.key} \cdot \left(\frac{-Key_{h.d}}{2}\right)}{A_{ftg} + A_{w1} + A_{w2} + A_{t.key} + A_{h.key}} = 2.66\,m$$

$\Sigma V_{conc} := D_{ftg} + D_{w1} + D_{w2} + D_{t.key} + D_{h.key} = 1078.8 \cdot kN$

$\Sigma M_{conc} := \Sigma V_{conc} \cdot H_{cent} = 6401.3\,m \cdot kN$

ROCK SECTION MOBILIZED FOR INCLINDED SLIDING FAILURE

Area of Rock Section Mobilized: $A_{rocksection} := (Key_{t.d} + Key_{h.d}) \cdot \frac{Key_{hdist}}{2} = 17.25\,m^2$

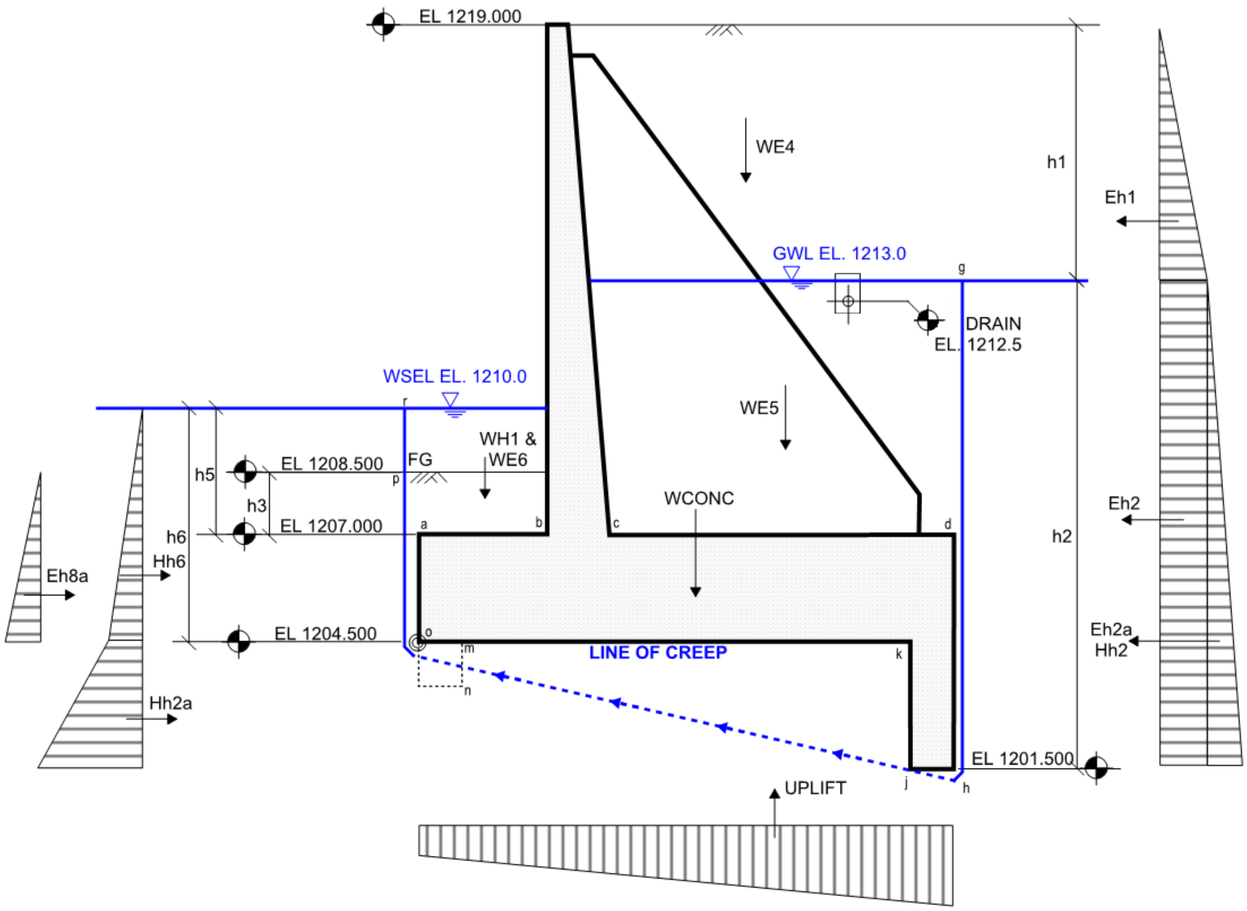
Rock Mass Mobilized: $V_{rocksection} := A_{rocksection} \cdot \gamma_r \cdot B = 441.6 \cdot kN$

(Pore pressure taken along assumed inclined sliding plane)

Distance from Toe to COG of Rock Section: $L_{rocksection} := \frac{Key_{hdist} \cdot (2 \cdot Key_{h.d} + Key_{t.d})}{3(Key_{h.d} + Key_{t.d})} + Key_{t.w} = 7.667\,m$

$\Sigma M_{rocksection} := V_{rocksection} \cdot L_{rocksection} = 3385.6\,m \cdot kN$

LOAD CASE U1 - NORMAL OPERATION



U1 DESIGN CASE

LOAD CASE U1 ACCEPTANCE PARAMETERS

FS sliding:

Usual (U) 1.5 (without cohesion) (Table 3-3, USACE EM 1110-2-2100)

Resultant Location:

Usual (U) Inside middle third ~100% base in compression

Required Factor of Safety for Sliding: $FS_{sliding.reqU1} := 1.5$ (Without Cohesion)

Allowable rock bearing pressure: $\sigma_{allowU1} := 1270kPa$ (Section 5.2, Design Criteria EM 1110-2-2100 Section 3-10)

Overturning Required Resultant Ratio: $X_{R.reqU1} := 0.333$ (EM 1110-2-2502, Figure 4-4)

Required Factor of Safety for Floatation $FS_{req.U1.flt} := 1.5$

SOIL HEIGHTS and Water Levels:

LOAD CASE U1

Heel Conditions:

Groundwater Elevation at Heel: $GWL_{U1} := 1213.0m$

Distance from Finish Grade to Groundwater at Heel: $h_{1U1} := \left[T_w - GWL_{U1} + \left(L_{cd} + t_{wb} - t_{wt}\right)\cdot\tan(\beta)\right] = 6.00\ m$

Distance from Water Surface to Bottom of Footing at Heel: $h_{2U1} := GWL_{U1} - Bot_{ftg} + Key_{h.d} = 11.50\ m$

Toe Conditions:

Water Surface Elevation at Toe: $WSEL_{U1} := 1210.0m$

Water Surface Elevation at Toe for Uplift: $UWSEL_{U1} := 1210.0\cdot m$

Finish Grade at Toe providing lateral resistance: $FG_{toeU1} := 1208.5\cdot m$

Soil Depth Above top of footing: $h_{3aU1} := FG_{toeU1} - Top_{ftg} = 1.5\ m$

$$h_{3U1} := \begin{vmatrix} h_{3aU1} & \text{if } FG_{toeU1} - Top_{ftg} \ge 0 \\ 0 & \text{otherwise} \end{vmatrix} = 1.5$$

Resisting Fill at Toe: $h_{4U1} := FG_{toeU1} - Bot_{ftg} + Key_{t.d} = 4.00\ m$

Distance from Water Level to Top of Footing: $h_{5U1} := WSEL_{U1} - Top_{ftg} = 3.00\ m$

Distance from Water Surface to Bottom of Footing: $h_{6U1} := WSEL_{U1} - Bot_{ftg} + Key_{t.d} = 5.50\cdot m$

Soil Depth Above WSEL: $h_{7aU1} := FG_{toeU1} - WSEL_{U1} = -1.5\ m$

$$h_{7U1} := \begin{vmatrix} h_{7aU1} & \text{if } FG_{toeU1} - WSEL_{U1} \ge 0 \\ 0 & \text{otherwise} \end{vmatrix} = 0$$

Soil Depth Below WSEL:

$$h_{8U1} := \begin{vmatrix} WSEL_{U1} - Bot_{ftg} + Key_{t.d} & \text{if } FG_{toeU1} - WSEL_{U1} \ge 0 \\ h_{4U1} & \text{otherwise} \end{vmatrix} = 4$$

For Line of Creep Method: $L_{ho.U1} := \sqrt{b^2 + \left(Key_{h.d} - Key_{t.d}\right)^2} = 12.855\ m$

Head Loss from Point g:

$\Delta h_{g.hj.U1} := h_{2U1} = 11.5\ m$ (to point h & j)

$\Delta h_{g.km.U1} := GWL_{U1} - Bot_{ftg} = 8.5\ m$ (to point k & m)

$\Delta h_{g.no.U1} := GWL_{U1} - Bot_{ftg} + Key_{t.d} = 8.5\ m$ (to point n & o)

$\Delta h_{g.p.U1} := GWL_{U1} - FG_{toeU1} = 4.5\ m$ (to point p)

$\Delta h_{g.r.U1} := GWL_{U1} - UWSEL_{U1} = 3\ m$ (to point r)

Surcharge

Surcharge on Heel: $S1_{U1} := 0.0\ \frac{kN}{m^2}$

Calculate Soil Lateral Pressure Coefficients:

For all load cases except seismic, soil loading to be based on At-Rest Condition.
Calculate at-rest pressure coefficient Ko based on Jaky's (1944) equation.

Soil At Rest Static Coefficient: $K_o := \dfrac{1 - \sin(\phi)}{1 + \sin(\beta)} = 0.546$ (Eq. 3-6, USACE EM 1110-2-2502)

Lateral - Driving Force (Headwater Side)

Lateral Soil Load:

Surcharge Load: $E_{s1U1} := S1_{U1} \cdot K_o \cdot \left(H_w + Key_{h.d}\right) \cdot B \cdot -1 = 0 \cdot kN$

Moment Arm (from bottom of footing): $E_{s1locU1} := \dfrac{H_w + Key_{h.d}}{2} + Key_{vdist} = 5.75\ m$

Moist Soil Load above GWL: $E_{h1U1} := \dfrac{\gamma_m \cdot K_o \cdot h_{1U1}^{\ 2}}{2} B \cdot -1 = -196.6 \cdot kN$

Moment Arm (from bottom of footing): $E_{h1locU1} := \dfrac{h_{1U1}}{3} + h_{2U1} + Key_{vdist} = 10.50\ m$

Saturated Soil Load below GWL:
(rectangular component) $E_{h2U1} := \left(\gamma_m \cdot K_o \cdot h_{1U1}\right) \cdot \left(h_{2U1}\right) \cdot B \cdot -1 = -753.5 \cdot kN$

Moment Arm (from bottom of footing): $E_{h2locU1} := \dfrac{h_{2U1}}{2} + Key_{vdist} = 2.75\ m$

Saturated Soil Load below GWL:
(triangular component) $E_{h2aU1} := \dfrac{\left(\gamma_{sat} - \gamma_w\right) \cdot K_o \cdot h_{2U1}^{\ 2}}{2} \cdot B \cdot -1 = -440.5 \cdot kN$

Moment Arm (from bottom of footing): $E_{h2alocU1} := \dfrac{h_{2U1}}{3} + Key_{vdist} = 0.83\ m$

Lateral Water Load:

Water Load GWL to Bottom of Key $H_{h2U1} := \dfrac{\gamma_w \cdot h_{2U1}^{\ 2}}{2} \cdot B \cdot -1 = -648.0 \cdot kN$

Moment Arm (from bottom of footing): $H_{h2locU1} := \dfrac{h_{2U1}}{3} + Key_{vdist} = 0.83\ m$

$\Sigma H_{SoildriveU1} := E_{s1U1} + E_{h1U1} + E_{h2U1} + E_{h2aU1} + H_{h2U1} = -2038.6 \cdot kN$

$\Sigma M_{LateralSoildriveU1} := E_{s1U1} \cdot E_{s1locU1} + E_{h1U1} \cdot E_{h1locU1} + E_{h2U1} \cdot E_{h2locU1} \ldots + E_{h2aU1} \cdot E_{h2alocU1} + H_{h2U1} \cdot H_{h2locU1} = -5043.1\ m \cdot kN$

Lateral - Resisting Force (Tailwater Side)

LOAD CASE U1

Lateral Water Load:

Water Load WSEL to Bot. of Footing:

$$H_{h6U1} := \frac{\gamma_w \cdot h_{6U1}^2}{2} \cdot B = 148.2 \cdot kN$$

Moment Arm (from bot. of toe key):

$$H_{h6locU1} := \frac{h_{6U1}}{3} = 1.83\ m$$

Water Load Bot. of Footing to Bot. of H. Key:

$$H_{h2aU1} := \left[\left(UWSEL_{U1} - Bot_{ftg} + Key_{t.d}\right) + h_{2U1}\right] \cdot \frac{Key_{h.d}}{2} \cdot \gamma_w \cdot B = 249.9 \cdot kN$$

CHECK OVERTURNING

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stablity of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1

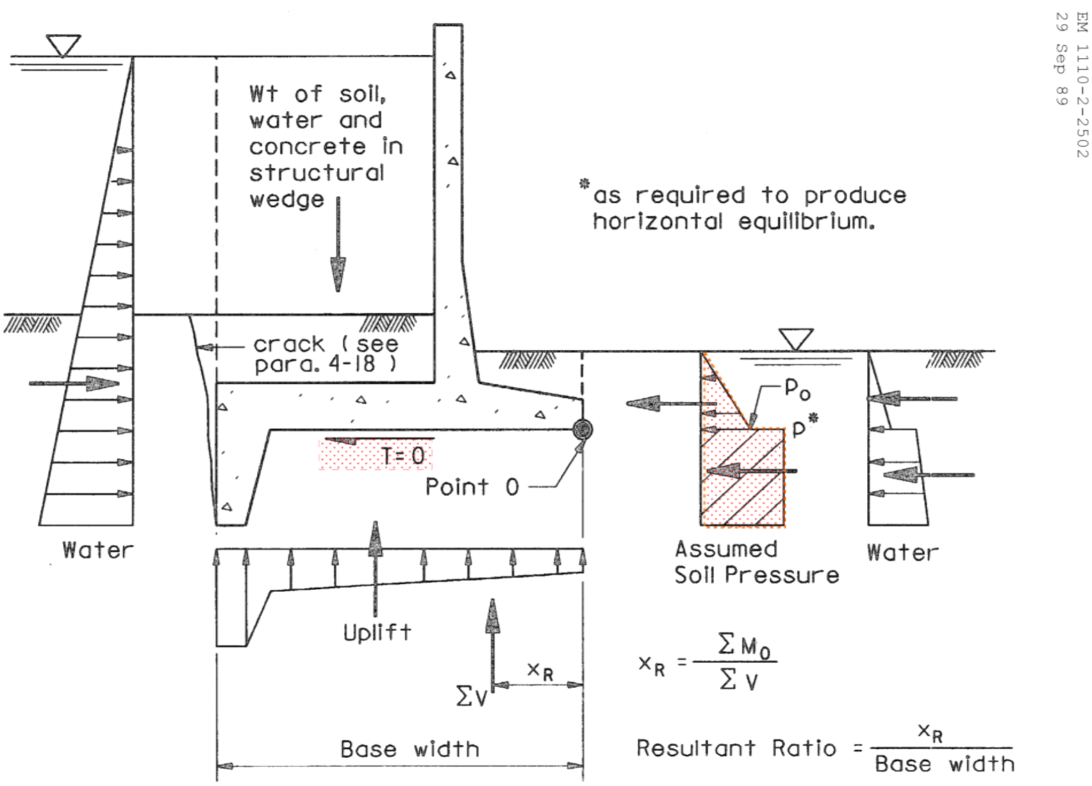

Figure 4-5. Forces for overturning analysis for wall with horizontal base and key

Modify Uplift for Overturning Analysis: **LOAD CASE U1**

(Uplift is calculated along the concrete/rock contact using the Line of Creep method)

Water Pressure at h: $u_{h.U1} := \Delta h_{g.hj.U1} \cdot \gamma_w = 112.70 \cdot kPa$

Water Pressure at o: $u_{o.U1} := \left(\Delta h_{g.no.U1} - \frac{\Delta h_{g.r.U1} \cdot L_{ho.U1}}{L_{ho.U1}}\right) \cdot \gamma_w = 53.9 \cdot kPa$

Head loss between point h and o: $\Delta h_{ho.U1} := \Delta h_{g.r.U1} \cdot \frac{L_{ho.U1}}{L_{ho.U1}} = 3\,m$

Length of concrete base (h -> o): $L_{baseho.U1} := Key_{h.w} + Key_{h.d} + Key_{hdist} + Key_{t.d} + Key_{t.w} = 15.5\,m$

Head loss along h -> j: $\Delta h_{hj.U1} := \Delta h_{ho.U1} \cdot \frac{Key_{h.w}}{L_{baseho.U1}} = 0.194\,m$

Water Pressure at j: $u_{j.U1} := \left(\Delta h_{g.hj.U1} - \Delta h_{hj.U1}\right) \cdot \gamma_w = 110.80 \cdot kPa$

Head loss along h -> k: $\Delta h_{hjk.U1} := \Delta h_{ho.U1} \cdot \left(\frac{Key_{h.w} + Key_{h.d}}{L_{baseho.U1}}\right) = 0.774\,m$

Water Pressure at k: $u_{k.U1} := \left(\Delta h_{g.km.U1} - \Delta h_{hjk.U1}\right) \cdot \gamma_w = 75.71 \cdot kPa$

Head loss along h -> m: $\Delta h_{hjkm.U1} := \Delta h_{ho.U1} \cdot \left(\frac{Key_{h.w} + Key_{h.d} + Key_{hdist}}{L_{baseho.U1}}\right) = 3\,m$

Water Pressure at m: $u_{m.U1} := \left(\Delta h_{g.km.U1} - \Delta h_{hjkm.U1}\right) \cdot \gamma_w = 53.90 \cdot kPa$

Head loss along h -> n: $\Delta h_{hjkmn.U1} := \Delta h_{ho.U1} \cdot \left(\frac{Key_{h.w} + Key_{h.d} + Key_{hdist} + Key_{t.d}}{L_{baseho.U1}}\right) = 3\,m$

Water Pressure at n: $u_{n.U1} := \left(\Delta h_{g.no.U1} - \Delta h_{hjkmn.U1}\right) \cdot \gamma_w = 53.90 \cdot kPa$

Uplift under key at heel: $V_{ulkeyhU1.OT} := \frac{\left(u_{h.U1} + u_{j.U1}\right) \cdot Key_{h.w}}{2} \cdot B \cdot -1 = -111.752 \cdot kN$

Moment Arm (from Point O): $V_{ulkeyhU1loc.OT} := b - \frac{Key_{h.w} \cdot \left(2 \cdot u_{j.U1} + u_{h.U1}\right)}{3 \cdot \left(u_{j.U1} + u_{h.U1}\right)} = 12.001\,m$

Uplift under base: $V_{ulbaseU1.OT} := \frac{\left(u_{k.U1} + u_{m.U1}\right) \cdot Key_{hdist}}{2} \cdot B \cdot -1 = -745.274 \cdot kN$

Moment Arm (from Point O): $V_{ulbaseU1loc.OT} := b - Key_{h.w} - \frac{Key_{hdist} \cdot \left(2 \cdot u_{m.U1} + u_{k.U1}\right)}{3 \cdot \left(u_{m.U1} + u_{k.U1}\right)} = 6.073\,m$

Uplift under key at toe: $V_{ulkeytU1.OT} := \frac{\left(u_{n.U1} + u_{o.U1}\right) \cdot Key_{t.w}}{2} \cdot B \cdot -1 = 0 \cdot kN$

Moment Arm (from Point O): $V_{ulkeytU1loc.OT} := \frac{Key_{t.w} \cdot \left(2 \cdot u_{n.U1} + u_{o.U1}\right)}{3 \cdot \left(u_{n.U1} + u_{o.U1}\right)} = 0$

$$\Sigma V_{UpliftU1.OT} := V_{ulkeyhU1.OT} + V_{ulbaseU1.OT} + V_{ulkeytU1.OT} = -857 \cdot kN$$

$$U_{U1.loc.OT} := \frac{V_{ulkeyhU1.OT} \cdot V_{ulkeyhU1loc.OT} + V_{ulbaseU1.OT} \cdot V_{ulbaseU1loc.OT} + V_{ulkeytU1.OT} \cdot V_{ulkeytU1loc.OT}}{\Sigma V_{UpliftU1.OT}} = 6.85\,m$$

$$\Sigma M_{UpliftU1.OT} := \Sigma V_{UpliftU1.OT} \cdot U_{U1.loc.OT} = -5866.9 \cdot kN \cdot m$$

Modify Lateral Water Pressure (Resisting) for Overturning Analysis:

(Resisting water pressure is calculated using the Line of Creep method)

Water Load at Key (heel): $H_{h2U1.OT} := \frac{u_{k.U1} + u_{j.U1}}{2} \cdot Key_{h.d} B = 279.8 \cdot kN$

Moment Arm (from Point O): $H_{h2locU1.OT} := \frac{Key_{h.d} \cdot (2 \cdot u_{k.U1} + u_{j.U1})}{3(u_{k.U1} + u_{j.U1})} + Key_{vdist} = -1.59\ m$

Water Load at Key (toe): $H_{h6U1.OT} := \frac{u_{o.U1} \cdot (UWSEL_{U1} - Bot_{ftg} + Key_{t.d})}{2} \cdot B = 148 \cdot kN$

Moment Arm (from Point O): $H_{h6locU1.OT} := \frac{UWSEL_{U1} - Bot_{ftg} + Key_{t.d}}{3} = 1.83\ m$

$$\Sigma H_{waterresistU1.OT} := H_{h2U1.OT} + H_{h6U1.OT} = 428 \cdot kN$$

$$H_{waterresistlocU1.OT} := \frac{H_{h2U1.OT} \cdot H_{h2locU1.OT} + H_{h6U1.OT} \cdot H_{h6locU1.OT}}{\Sigma H_{waterresistU1.OT}} = -0.407\ m$$

$$\Sigma M_{waterresistU1.OT} := \Sigma H_{waterresistU1.OT} \cdot H_{waterresistlocU1.OT} = -174.23 \cdot kN \cdot m$$

Modify Lateral Soil Loads for Overturning Analysis:

(Lateral soil loads are calculated down to Point O instead of bottom of shear key)

Driving Soil Load (Headwater Side):

Surcharge Load: $E_{s1U1.OT} := S1_{U1} \cdot K_o \cdot (H_w + Key_{h.d} + Key_{vdist}) \cdot B \cdot -1 = 0 \cdot kN$

Moment Arm (from Point O): $E_{s1locU1.OT} := \frac{H_w + Key_{h.d} + Key_{vdist}}{2} = 7.25\ m$

Moist Soil Load above GWL: $E_{h1U1.OT} := \frac{\gamma_m \cdot K_o \cdot h_{1U1}^2}{2} B \cdot -1 = -196.6 \cdot kN$

Moment Arm (from Point O): $E_{h1locU1.OT} := \frac{h_{1U1}}{3} + h_{2U1} + Key_{vdist} = 10.50\ m$

Saturated Soil Load below GWL: (rectangular component) $E_{h2U1.OT} := (\gamma_m \cdot K_o \cdot h_{1U1}) \cdot (h_{2U1} + Key_{vdist}) \cdot B \cdot -1 = -556.9 \cdot kN$

Moment Arm (from Point O): $E_{h2locU1.OT} := \frac{h_{2U1} + Key_{vdist}}{2} = 4.25\ m$

Saturated Soil Load below GWL: (triangular component) $E_{h2aU1.OT} := \frac{(\gamma_{sat} - \gamma_w) \cdot K_o \cdot (h_{2U1} + Key_{vdist})^2}{2} \cdot B \cdot -1 = -240.6 \cdot kN$

Moment Arm (from Point O): $E_{h2alocU1.OT} := \frac{h_{2U1} + Key_{vdist}}{3} = 2.83\ m$

Resisting Soil Load (Tailwater Side):

(Determine resisting soil load based on depth variation between the keys (ie. Key_{vdist}). In case where key at heel is deeper than key at toe (ie. $Key_{vdist} < 0$), resisting soil load (p*) is assumed to produce horizontal equilibrium as per Figure 4-5 above. Resisting soil load (p_o) is neglected.)

Total Driving Force: $\Sigma H_{SoildriveU1.OT} := E_{s1U1.OT} + E_{h1U1.OT} + E_{h2U1.OT} + E_{h2aU1.OT} + H_{h2U1} = -1642.2 \cdot kN$

Total Resisting Force: $\Sigma H_{waterresistU1.OT} = 428.0 \cdot kN$

Assumed Soil Load p*: $E_{h8U1a.OT} := \left(\Sigma H_{SoildriveU1.OT} + \Sigma H_{waterresistU1.OT}\right) \cdot -1 = 1214.159 \cdot kN$

Moment Arm (from Point O): $E_{h8U1a.loc.OT} := \frac{Key_{vdist}}{2} = -1.5\,m$

$$E_{h8U1.OT} := \begin{cases} E_{h8U1a.OT} & \text{if } Key_{vdist} < 0 \\ \Sigma H_{SoilresistU1} - H_{h6U1} - H_{h2aU1} & \text{otherwise} \end{cases} = 1214.159 \cdot kN$$

$$\Sigma M_{SoilresistU1} := \begin{cases} E_{h8U1a.OT} \cdot E_{h8U1a.loc.OT} & \text{if } Key_{vdist} < 0 \\ \Sigma M_{HorizSoilResistU1} - H_{h6U1} \cdot H_{h6locU1} - H_{h2aU1} \cdot H_{h2alocU1} & \text{otherwise} \end{cases} = -1821.238 \cdot kN \cdot m$$

Sum of Moment about Point O:

$$\Sigma M_{LateraldriveU1.OT} := E_{s1U1.OT} \cdot E_{s1locU1.OT} + E_{h1U1.OT} \cdot E_{h1locU1.OT} + E_{h2U1.OT} \cdot E_{h2locU1.OT} \ldots + E_{h2aU1.OT} \cdot E_{h2alocU1.OT} + H_{h2U1} \cdot H_{h2locU1} = -5652.7 \cdot kN \cdot m$$

$$\Sigma M_{LateralresistU1.OT} := \Sigma M_{waterresistU1.OT} + \Sigma M_{SoilresistU1} = -1995.5 \cdot kN \cdot m$$

Total moment:

$$\Sigma M_{U1.OT} := \Sigma M_{conc} + \Sigma M_{VertSoilWaterResistU1} + \Sigma M_{UpliftU1.OT} + \Sigma M_{LateraldriveU1.OT} + \Sigma M_{LateralresistU1.OT} = 10780.4 \cdot kN \cdot m$$

Total Vertical Force: $\Sigma V_{U1.OT} := \Sigma V_{conc} + \Sigma V_{SoilWaterU1} + \Sigma V_{UpliftU1.OT} = 2511.3 \cdot kN$

Distance X_R: EM 1110-2-2502 Eq.4-1 $X_{R.U1} := \frac{\Sigma M_{U1.OT}}{\Sigma V_{U1.OT}} = 4.293\,m$

Overturning Resultant Ratio $Ratio_{U1.OT} := \frac{X_{R.U1}}{b} = 0.34$

$$Ratio_{U1.OT.check} := \begin{cases} \text{"OKAY "} & \text{if } Ratio_{U1.OT} > X_{R.reqU1} \\ \text{"Revise Structure""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

CHECK FOUNDATION ECCENTRICITY (HORIZONTAL PLANE):

Eccentricity (horizontal plan): $ex_{U1.OT} := \frac{b}{2} - \frac{\Sigma M_{U1.OT}}{\Sigma V_{U1.OT}} = 1.96\,m$ $Kern_{OT} := \frac{b}{6} = 2.083\,m$

Eccentricity Check:

$$e_{check.U1.OT} := \begin{cases} \text{"Okay"} & \text{if } ex_{U1} \le Kern_{OT} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"Okay"}$$

CHECK FOUNDATION BEARING CAPACITY (HORIZONTAL PLANE):

Base Section Modulus: $S_{b.OT} := \frac{1}{6}\left(B \cdot b^2\right) = 26.04\,m^3$

Bearing Pressure Under Toe:

$$\sigma_{ToeU1.OT} := \begin{cases} \left(\dfrac{\Sigma V_{U1.OT}}{b \cdot B} + \dfrac{\Sigma V_{U1.OT} \cdot ex_{U1.OT}}{S_{b.OT}}\right) & \text{if } \dfrac{\Sigma V_{U1.OT}}{b \cdot B} \ge \dfrac{\Sigma V_{U1.OT} \cdot ex_{U1.OT}}{S_{b.OT}} \\ \dfrac{2 \cdot \Sigma V_{U1.OT}}{B \cdot 3\left(\dfrac{b}{2} - ex_{U1.OT}\right)} & \text{otherwise} \end{cases} = 389.6 \cdot kPa$$

$$Bearing_{CheckToeU1.OT} := \begin{cases} \text{"OKAY "} & \text{if } \sigma_{ToeU1.OT} < \sigma_{allowU1} \\ \text{"NG - for reference only""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

Bearing Pressure Under Heel:

$$\sigma_{HeelU1.OT} := \begin{cases} \left(\dfrac{\Sigma V_{U1.OT}}{b \cdot B} - \dfrac{\Sigma V_{U1.OT} \cdot ex_{U1.OT}}{S_{b.OT}}\right) & \text{if } \dfrac{\Sigma V_{U1.OT}}{b \cdot B} \ge \dfrac{\Sigma V_{U1.OT} \cdot ex_{U1.OT}}{S_{b.OT}} \\ 0 & \text{otherwise} \end{cases} = 12.2 \cdot kPa$$

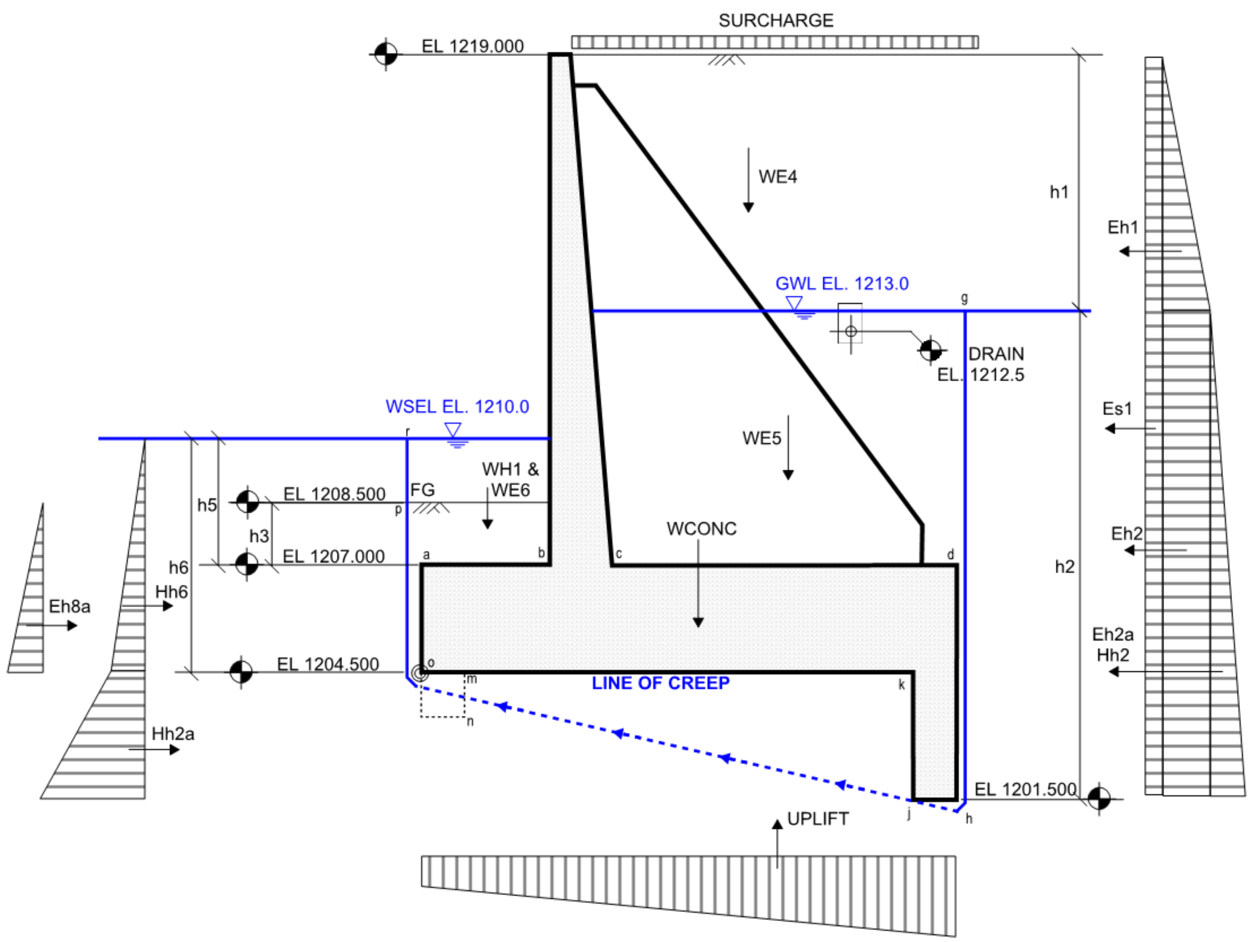
LOAD CASE UN1 - NORMAL OPERATION + SURCHARGE



UN1 DESIGN CASE

LOAD CASE UN1 ACCEPTANCE PARAMETERS

FS sliding:

Unusual (UN) 1.3 (without cohesion) (Table 3-3, USACE EM 1110-2-2100)

Resultant Location:

Unsual (UN) Inside middle third ~100% base in compression

Required Factor of Safety for Sliding: $FS_{sliding.reqUN1} := 1.3$ (Without Cohesion)

Allowable rock bearing pressure: $\sigma_{allowUN1} := 1470kPa$ (Section 5.2, Design Criteria EM 1110-2-2100 Section 3-10)

Overturning Required Resultant Ratio: $X_{R.reqUN1} := 0.333$ (EM 1110-2-2502, Figure 4-4)

Required Factor of Safety for Floatation $FS_{req.UN1.flt} := 1.3$

SOIL HEIGHTS and Water Levels:

LOAD CASE UN1

Heel Conditions:

Groundwater Elevation at Heel: $GWL_{UN1} := 1213.0m$

Distance from Finish Grade to Groundwater at Heel: $h_{1UN1} := \left[T_w - GWL_{UN1} + \left(L_{cd} + t_{wb} - t_{wt}\right) \cdot \tan(\beta)\right] = 6.00\ m$

Distance from Water Surface to Bottom of Footing at Heel: $h_{2UN1} := GWL_{UN1} - Bot_{ftg} + Key_{h.d} = 11.50\ m$

Toe Conditions:

Water Surface Elevation at Toe: $WSEL_{UN1} := 1210.0m$

Water Surface Elevation at Toe for Uplift: $UWSEL_{UN1} := 1210.0 \cdot m$

Finish Grade at Toe providing lateral resistance: $FG_{toeUN1} := 1208.5 \cdot m$

Soil Depth Above top of footing: $h_{3aUN1} := FG_{toeUN1} - Top_{ftg} = 1.5\ m$

$$h_{3UN1} := \begin{cases} h_{3aUN1} & \text{if } FG_{toeUN1} - Top_{ftg} \geq 0 \\ 0 & \text{otherwise} \end{cases} = 1.5$$

Resisting Fill at Toe: $h_{4UN1} := FG_{toeUN1} - Bot_{ftg} + Key_{t.d} = 4.00\ m$

Distance from Water Level to Top of Footing at Toe: $h_{5UN1} := WSEL_{UN1} - Top_{ftg} = 3.00\ m$

Distance from Water Surface to Bottom of Footing at Toe: $h_{6UN1} := WSEL_{UN1} - Bot_{ftg} + Key_{t.d} = 5.50\ m$

Soil Depth Above WSEL: $h_{7aUN1} := FG_{toeUN1} - WSEL_{UN1} = -1.5\ m$

$$h_{7UN1} := \begin{cases} h_{7aUN1} & \text{if } FG_{toeUN1} - WSEL_{UN1} \geq 0 \\ 0 & \text{otherwise} \end{cases} = 0$$

Soil Depth Below WSEL:

$$h_{8UN1} := \begin{cases} WSEL_{UN1} - Bot_{ftg} + Key_{t.d} & \text{if } FG_{toeUN1} - WSEL_{UN1} \geq 0 \\ h_{4UN1} & \text{otherwise} \end{cases} = 4$$

For Line of Creep Method: $L_{ho.UN1} := \sqrt{b^2 + \left(Key_{h.d} - Key_{t.d}\right)^2} = 12.855\ m$

Head Loss from Point g:

$\Delta h_{g.hj.UN1} := h_{2UN1} = 11.5\ m$ (to point h & j)

$\Delta h_{g.km.UN1} := GWL_{UN1} - Bot_{ftg} = 8.5\ m$ (to point k & m)

$\Delta h_{g.no.UN1} := GWL_{UN1} - Bot_{ftg} + Key_{t.d} = 8.5\ m$ (to point n & o)

$\Delta h_{g.p.UN1} := GWL_{UN1} - FG_{toeUN1} = 4.5\ m$ (to point p)

$\Delta h_{g.r.UN1} := GWL_{UN1} - UWSEL_{UN1} = 3\ m$ (to point r)

Surcharge

Surcharge on Heel: $S1_{UN1} := 15.0 \dfrac{kN}{m^2}$

Calculate Soil Lateral Pressure Coefficients:

LOAD CASE UN1

For all load cases except seismic, soil loading to be based on At-Rest Condition.
Calculate at-rest pressure coefficient Ko based on Jaky's (1944) equation.

Soil At Rest Static Coefficient: $K_o := \dfrac{1 - \sin(\phi)}{1 + \sin(\beta)} = 0.546$ (Eq. 3-6, USACE EM 1110-2-2502)

Lateral - Driving Force

Static At-Rest:

Surcharge Load: $E_{s1UN1} := S1_{UN1} \cdot K_o \cdot \left(H_w + Key_{h.d}\right) \cdot B \cdot -1 = -143.327 \cdot kN$

Moment Arm (from bottom of footing): $E_{s1locUN1} := \dfrac{H_w + Key_{h.d}}{2} + Key_{vdist} = 5.75\ m$

Moist Soil Load above GWL: $E_{h1UN1} := \dfrac{\gamma_m \cdot K_o \cdot h_{1UN1}^{\ 2}}{2} B \cdot -1 = -196.6 \cdot kN$

Moment Arm (from bottom of footing): $E_{h1locUN1} := \dfrac{h_{1UN1}}{3} + h_{2UN1} + Key_{vdist} = 10.50\ m$

Saturated Soil Load below GWL:
(rectangular component) $E_{h2UN1} := \left(\gamma_m \cdot K_o \cdot h_{1UN1}\right) \cdot \left(h_{2UN1}\right) \cdot B \cdot -1 = -753.5 \cdot kN$

Moment Arm (from bottom of footing): $E_{h2locUN1} := \dfrac{h_{2UN1}}{2} + Key_{vdist} = 2.75\ m$

Saturated Soil Load below GWT:
(triangular L $E_{h2aUN1} := \dfrac{\left(\gamma_{sat} - \gamma_w\right) \cdot K_o \cdot h_{2UN1}^{\ 2}}{2} \cdot B \cdot -1 = -440.5 \cdot kN$

Moment Arm (from bottom of footing): $E_{h2alocUN1} := \dfrac{h_{2UN1}}{3} + Key_{vdist} = 0.83\ m$

Lateral Water Load:

Water Load GWL to Bottom of Key $H_{h2UN1} := \dfrac{\gamma_w \cdot h_{2UN1}^{\ 2}}{2} \cdot B \cdot -1 = -648.0 \cdot kN$

Moment Arm (from bottom of footing): $H_{h2locUN1} := \dfrac{h_{2UN1}}{3} + Key_{vdist} = 0.83\ m$

$\Sigma H_{SoildriveUN1} := E_{s1UN1} + E_{h1UN1} + E_{h2UN1} + E_{h2aUN1} + H_{h2UN1} = -2181.9 \cdot kN$

$$\Sigma M_{LateralSoildriveUN1} := E_{s1UN1} \cdot E_{s1locUN1} + E_{h1UN1} \cdot E_{h1locUN1} + E_{h2UN1} \cdot E_{h2locUN1} \ldots = -5867.2\ m \cdot kN$$
$$+ E_{h2aUN1} \cdot E_{h2alocUN1} + H_{h2UN1} \cdot H_{h2locUN1}$$

Lateral - Resisting Force

LOAD CASE UN1

Lateral Water Load:

Water Load WSEL to Bottom of Footing:

$$H_{h6UN1} := \frac{\gamma_w \cdot h_{6UN1}^{\ 2}}{2} \cdot B = 148.2 \cdot kN$$

Moment Arm (from bottom of footing):

$$H_{h6locUN1} := \frac{h_{6UN1}}{3} = 1.83\ m$$

Water Load Bot. of Footing to Bot. of H. Key:

$$H_{h2aUN1} := \left[\left(UWSEL_{UN1} - Bot_{ftg} + Key_{t.d}\right) + h_{2UN1}\right] \cdot \frac{Key_{h.d}}{2} \cdot \gamma_w \cdot B = 249.9 \cdot kN$$

Moment Arm (from bot. of toe key):

CHECK OVERTURNING

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stablity of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1

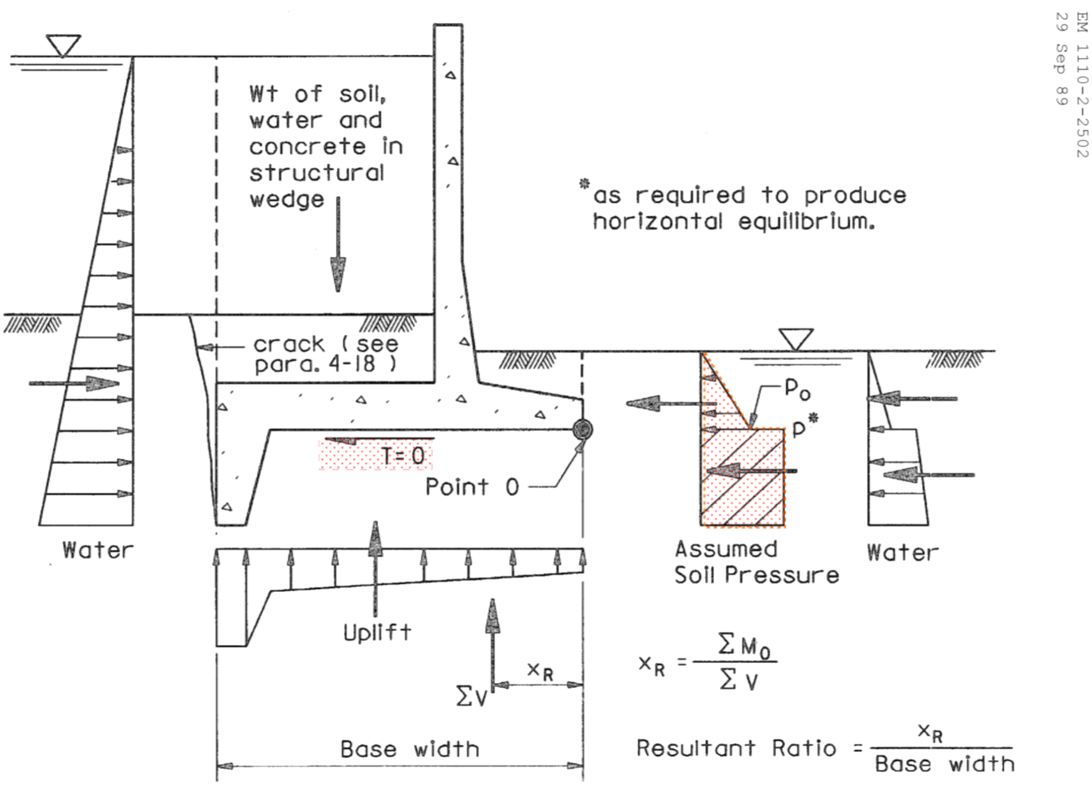

Figure 4-5. Forces for overturning analysis for wall with horizontal base and key

Modify Uplift for Overturning Analysis: **LOAD CASE UN1**

(Uplift is calculated along the concrete/rock contact using the Line of Creep method)

Water Pressure at h: $u_{h.UN1} := \Delta h_{g.hj.UN1} \cdot \gamma_w = 112.70 \cdot kPa$

Water Pressure at o: $u_{o.UN1} := \left(\Delta h_{g.no.UN1} - \frac{\Delta h_{g.r.UN1} \cdot L_{ho.UN1}}{L_{ho.UN1}}\right) \cdot \gamma_w = 53.9 \cdot kPa$

Head loss between point h and o: $\Delta h_{ho.UN1} := \Delta h_{g.r.UN1} \cdot \frac{L_{ho.UN1}}{L_{ho.UN1}} = 3\,m$

Length of concrete base (h -> o): $L_{baseho.UN1} := Key_{h.w} + Key_{h.d} + Key_{hdist} + Key_{t.d} + Key_{t.w} = 15.5\,m$

Head loss along h -> j: $\Delta h_{hj.UN1} := \Delta h_{ho.UN1} \cdot \frac{Key_{h.w}}{L_{baseho.UN1}} = 0.194\,m$

Water Pressure at j: $u_{j.UN1} := \left(\Delta h_{g.hj.UN1} - \Delta h_{hj.UN1}\right) \cdot \gamma_w = 110.80 \cdot kPa$

Head loss along h -> k: $\Delta h_{hjk.UN1} := \Delta h_{ho.UN1} \cdot \left(\frac{Key_{h.w} + Key_{h.d}}{L_{baseho.UN1}}\right) = 0.774\,m$

Water Pressure at k: $u_{k.UN1} := \left(\Delta h_{g.km.UN1} - \Delta h_{hjk.UN1}\right) \cdot \gamma_w = 75.71 \cdot kPa$

Head loss along h -> m: $\Delta h_{hjkm.UN1} := \Delta h_{ho.UN1} \cdot \left(\frac{Key_{h.w} + Key_{h.d} + Key_{hdist}}{L_{baseho.UN1}}\right) = 3\,m$

Water Pressure at m: $u_{m.UN1} := \left(\Delta h_{g.km.UN1} - \Delta h_{hjkm.UN1}\right) \cdot \gamma_w = 53.90 \cdot kPa$

Head loss along h -> n: $\Delta h_{hjkmn.UN1} := \Delta h_{ho.UN1} \cdot \left(\frac{Key_{h.w} + Key_{h.d} + Key_{hdist} + Key_{t.d}}{L_{baseho.UN1}}\right) = 3\,m$

Water Pressure at n: $u_{n.UN1} := \left(\Delta h_{g.no.UN1} - \Delta h_{hjkmn.UN1}\right) \cdot \gamma_w = 53.90 \cdot kPa$

Uplift under key at heel: $V_{ulkeyhUN1.OT} := \frac{\left(u_{h.UN1} + u_{j.UN1}\right) \cdot Key_{h.w}}{2} \cdot B \cdot -1 = -111.752 \cdot kN$

Moment Arm (from Point O): $V_{ulkeyhUN1loc.OT} := b - \frac{Key_{h.w} \cdot \left(2 \cdot u_{j.UN1} + u_{h.UN1}\right)}{3 \cdot \left(u_{j.UN1} + u_{h.UN1}\right)} = 12.001\,m$

Uplift under base: $V_{ulbaseUN1.OT} := \frac{\left(u_{k.UN1} + u_{m.UN1}\right) \cdot Key_{hdist}}{2} \cdot B \cdot -1 = -745.274 \cdot kN$

Moment Arm (from Point O): $V_{ulbaseUN1loc.OT} := b - Key_{h.w} - \frac{Key_{hdist} \cdot \left(2 \cdot u_{m.UN1} + u_{k.UN1}\right)}{3 \cdot \left(u_{m.UN1} + u_{k.UN1}\right)} = 6.073\,m$

Uplift under key at toe: $V_{ulkeytUN1.OT} := \frac{\left(u_{n.UN1} + u_{o.UN1}\right) \cdot Key_{t.w}}{2} \cdot B \cdot -1 = 0 \cdot kN$

Moment Arm (from Point O): $V_{ulkeytUN1loc.OT} := \frac{Key_{t.w} \cdot \left(2 \cdot u_{n.UN1} + u_{o.UN1}\right)}{3 \cdot \left(u_{n.UN1} + u_{o.UN1}\right)} = 0$

$$\Sigma V_{UpliftUN1.OT} := V_{ulkeyhUN1.OT} + V_{ulbaseUN1.OT} + V_{ulkeytUN1.OT} = -857 \cdot kN$$

$$U_{UN1.loc.OT} := \frac{V_{ulkeyhUN1.OT} \cdot V_{ulkeyhUN1loc.OT} + V_{ulbaseUN1.OT} \cdot V_{ulbaseUN1loc.OT} + V_{ulkeytUN1.OT} \cdot V_{ulkeytUN1loc.OT}}{\Sigma V_{UpliftUN1.OT}} = 6.85\,m$$

$$\Sigma M_{UpliftUN1.OT} := \Sigma V_{UpliftUN1.OT} \cdot U_{UN1.loc.OT} = -5866.9 \cdot kN \cdot m$$

Modify Lateral Water Pressure (Resisting) for Overturning Analysis:

(Resisting water pressure is calculated using the Line of Creep method)

Water Load at Key (heel):
$$H_{h2UN1.OT} := \frac{u_{k.UN1} + u_{j.UN1}}{2} \cdot Key_{h.d} B = 279.8 \cdot kN$$

Moment Arm (from Point O):
$$H_{h2locUN1.OT} := \frac{Key_{h.d} \cdot (2 \cdot u_{k.UN1} + u_{j.UN1})}{3(u_{k.UN1} + u_{j.UN1})} + Key_{vdist} = -1.59\ m$$

Water Load at Key (toe):
$$H_{h6UN1.OT} := \frac{u_{o.UN1} \cdot (UWSEL_{UN1} - Bot_{ftg} + Key_{t.d})}{2} \cdot B = 148 \cdot kN$$

Moment Arm (from Point O):
$$H_{h6locUN1.OT} := \frac{UWSEL_{UN1} - Bot_{ftg} + Key_{t.d}}{3} = 1.83\ m$$

$$\Sigma H_{waterresistUN1.OT} := H_{h2UN1.OT} + H_{h6UN1.OT} = 428 \cdot kN$$

$$H_{waterresistlocUN1.OT} := \frac{H_{h2UN1.OT} \cdot H_{h2locUN1.OT} + H_{h6UN1.OT} \cdot H_{h6locUN1.OT}}{\Sigma H_{waterresistUN1.OT}} = -0.407\ m$$

$$\Sigma M_{waterresistUN1.OT} := \Sigma H_{waterresistUN1.OT} \cdot H_{waterresistlocUN1.OT} = -174.23 \cdot kN \cdot m$$

Modify Lateral Soil Loads for Overturning Analysis:

(Lateral soil loads are calculated down to Point O instead of bottom of shear key)

Driving Soil Load (Headwater Side):

Surcharge Load:
$$E_{s1UN1.OT} := S1_{UN1} \cdot K_o \cdot (H_w + Key_{h.d} + Key_{vdist}) \cdot B \cdot -1 = -118.757 \cdot kN$$

Moment Arm (from Point O):
$$E_{s1locUN1.OT} := \frac{H_w + Key_{h.d} + Key_{vdist}}{2} = 7.25\ m$$

Moist Soil Load above GWL:
$$E_{h1UN1.OT} := \frac{\gamma_m \cdot K_o \cdot h_{1UN1}^{\ 2}}{2} B \cdot -1 = -196.6 \cdot kN$$

Moment Arm (from Point O):
$$E_{h1locUN1.OT} := \frac{h_{1UN1}}{3} + h_{2UN1} + Key_{vdist} = 10.50\ m$$

Saturated Soil Load below GWL:
(rectangular component)
$$E_{h2UN1.OT} := (\gamma_m \cdot K_o \cdot h_{1UN1}) \cdot (h_{2UN1} + Key_{vdist}) \cdot B \cdot -1 = -556.9 \cdot kN$$

Moment Arm (from Point O):
$$E_{h2locUN1.OT} := \frac{h_{2UN1} + Key_{vdist}}{2} = 4.25\ m$$

Saturated Soil Load below GWL:
(triangular component)
$$E_{h2aUN1.OT} := \frac{(\gamma_{sat} - \gamma_w) \cdot K_o \cdot (h_{2UN1} + Key_{vdist})^2}{2} \cdot B \cdot -1 = -240.6 \cdot kN$$

Moment Arm (from Point O):
$$E_{h2alocUN1.OT} := \frac{h_{2UN1} + Key_{vdist}}{3} = 2.83\ m$$

Resisting Soil Load (Tailwater Side):

(Determine resisting soil load based on depth variation between the keys (ie. Key_{vdist}). In case where key at heel is deeper than key at toe (ie. $Key_{vdist} < 0$), resisting soil load (p*) is assumed to produce horizontal equilibrium as per Figure 4-5 above. Resisting soil load (p_o) is neglected.)

Total Driving Force: $\Sigma H_{SoildriveUN1.OT} := E_{s1UN1.OT} + E_{h1UN1.OT} + E_{h2UN1.OT} + E_{h2aUN1.OT} + H_{h2UN1} = -1760.9 \cdot kN$

Total Resisting Force: $\Sigma H_{waterresistUN1.OT} = 428.0 \cdot kN$

Assumed Soil Load p*: $E_{h8UN1a.OT} := \left(\Sigma H_{SoildriveUN1.OT} + \Sigma H_{waterresistU1.OT}\right) \cdot -1 = 1332.916 \cdot kN$

Moment Arm (from Point O): $E_{h8UN1a.loc.OT} := \dfrac{Key_{vdist}}{2} = -1.5\,m$

$$E_{h8UN1.OT} := \begin{cases} E_{h8UN1a.OT} & \text{if } Key_{vdist} < 0 \\ \Sigma H_{SoilresistUN1} - H_{h6UN1} - H_{h2aUN1} & \text{otherwise} \end{cases} = 1332.916 \cdot kN$$

$$\Sigma M_{SoilresistUN1} := \begin{cases} E_{h8UN1a.OT} \cdot E_{h8UN1a.loc.OT} & \text{if } Key_{vdist} < 0 \\ \Sigma M_{HorizSoilResistUN1} - H_{h6UN1} \cdot H_{h6locUN1} - H_{h2aUN1} \cdot H_{h2alocUN1} & \text{otherwise} \end{cases} = -1999.374 \cdot kN \cdot m$$

Sum of Moment about Point O:

$$\Sigma M_{LateraldriveUN1.OT} := E_{s1UN1.OT} \cdot E_{s1locUN1.OT} + E_{h1UN1.OT} \cdot E_{h1locUN1.OT} + E_{h2UN1.OT} \cdot E_{h2locUN1.OT} \ldots + E_{h2aUN1.OT} \cdot E_{h2alocUN1.OT} + H_{h2UN1} \cdot H_{h2locUN1} = -6513.7 \cdot kN \cdot m$$

$$\Sigma M_{LateralresistUN1.OT} := \Sigma M_{waterresistUN1.OT} + \Sigma M_{SoilresistUN1} = -2173.6 \cdot kN \cdot m$$

Total moment:

$$\Sigma M_{UN1.OT} := \Sigma M_{conc} + \Sigma M_{VertSoilWaterResistUN1} + \Sigma M_{UpliftUN1.OT} + \Sigma M_{LateraldriveUN1.OT} + \Sigma M_{LateralresistUN1.OT} = 10765.1 \cdot kN \cdot m$$

Total Vertical Force: $\Sigma V_{UN1.OT} := \Sigma V_{conc} + \Sigma V_{SoilWaterUN1} + \Sigma V_{UplliftUN1.OT} = 2632.1 \cdot kN$

Distance X_R: EM 1110-2-2502 Eq.4-1 $X_{R.UN1} := \dfrac{\Sigma M_{UN1.OT}}{\Sigma V_{UN1.OT}} = 4.09\,m$

Overturning Resultant Ratio $Ratio_{UN1.OT} := \dfrac{X_{R.UN1}}{b} = 0.33$

$$Ratio_{UN1.OT.check} := \begin{cases} \text{"OKAY "} & \text{if } Ratio_{UN1.OT} > X_{R.reqUN1} \\ \text{"Revise Structure""} & \text{otherwise} \end{cases} = \text{"Revise Structure""}$$

CHECK FOUNDATION ECCENTRICITY (HORIZONTAL PLANE):

Eccentricity (horizontal plan): $ex_{UN1.OT} := \dfrac{b}{2} - \dfrac{\Sigma M_{UN1.OT}}{\Sigma V_{UN1.OT}} = 2.16\,m$ $Kern_{OT} = 2.083\,m$

Eccentricity Check:

$$e_{check.UN1.OT} := \begin{cases} \text{"Okay"} & \text{if } ex_{UN1} \le Kern_{OT} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"Okay"}$$

LOAD CASE UN1

CHECK FOUNDATION BEARING CAPACITY (HORIZONTAL PLANE):

Base Section Modulus: $S_{b.OT} = 26.04\,m^3$

Bearing Pressure Under Toe:

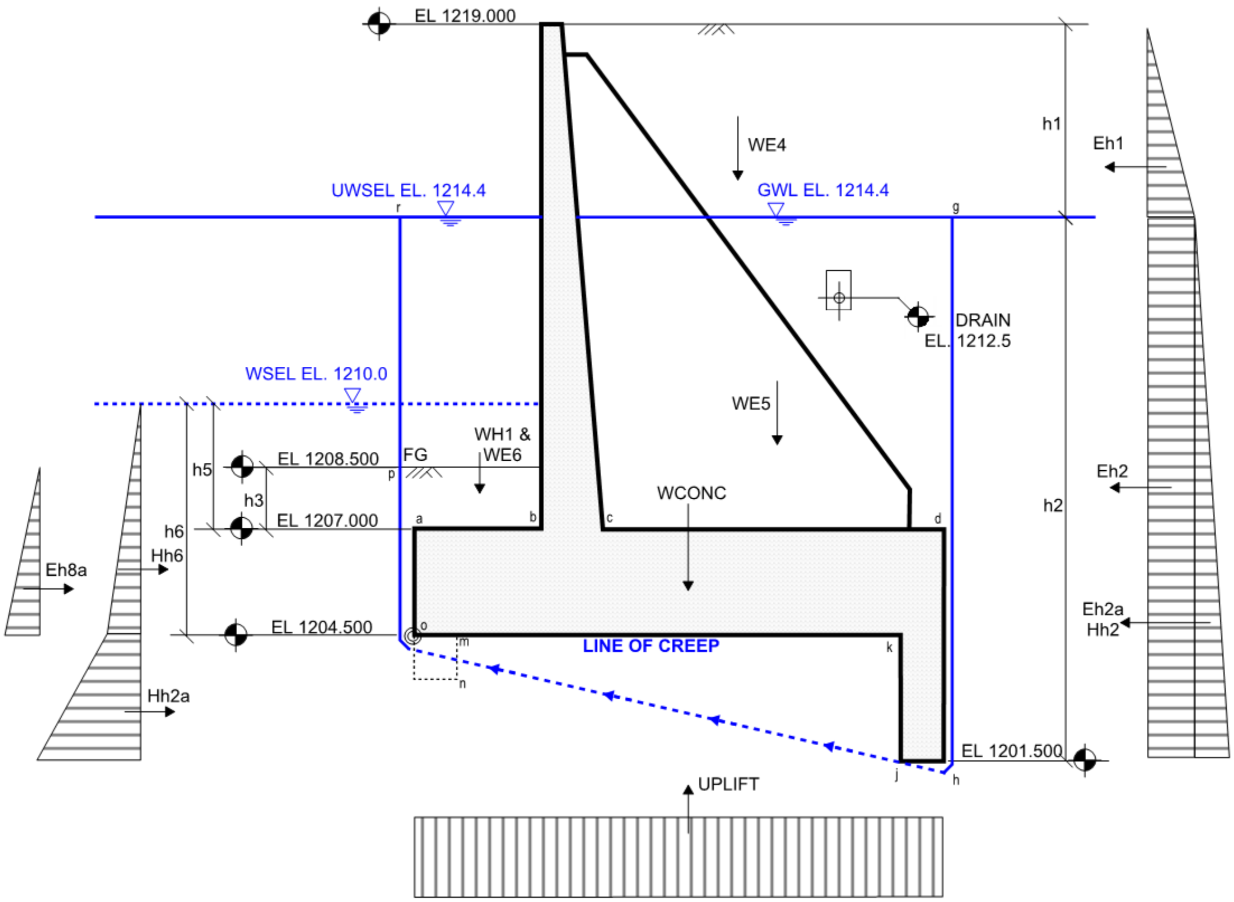
LOAD CASE UN2 - INEFFECTIVE DRAIN



UN2 DESIGN CASE

LOAD CASE UN2 ACCEPTANCE PARAMETERS

FS sliding:

Unusual (UN) 1.3 (without cohesion) (Table 3-3, USACE EM 1110-2-2100)

Resultant Location:

Unsual (UN) Inside middle third ~100% base in compression

Required Factor of Safety for Sliding: $FS_{sliding.reqUN2} := 1.3$ (Without Cohesion)

Allowable rock bearing pressure: $\sigma_{allowUN2} := 1470kPa$ (Section 5.2, Design Criteria EM 1110-2-2100 Section 3-10)

Overturning Required Resultant Ratio: $X_{R.reqUN2} := 0.333$ (EM 1110-2-2502, Figure 4-4)

Required Factor of Safety for Floatation $FS_{req.UN2.flt} := 1.3$

SOIL HEIGHTS and Water Levels:

LOAD CASE UN2

Heel Conditions:

Groundwater Elevation at Heel: $GWL_{UN2} := 1214.4m$

Distance from Finish Grade to Groundwater at Heel: $h_{1UN2} := \left[T_w - GWL_{UN2} + \left(L_{cd} + t_{wb} - t_{wt}\right) \cdot \tan(\beta)\right] = 4.60\ m$

Distance from Water Surface to Bottom of Footing at Heel: $h_{2UN2} := GWL_{UN2} - Bot_{ftg} + Key_{h.d} = 12.90\ m$

Toe Conditions:

Water Surface Elevation at Toe: $WSEL_{UN2} := 1210.0m$

Water Surface Elevation at Toe for Uplift: $UWSEL_{UN2} := 1214.4 \cdot m$

Finish Grade at Toe providing lateral resistance: $FG_{toeUN2} := 1208.5 \cdot m$

Soil Depth Above top of footing: $h_{3aUN2} := FG_{toeUN2} - Top_{ftg} = 1.5\ m$

$$h_{3UN2} := \begin{cases} h_{3aUN2} & \text{if } FG_{toeUN2} - Top_{ftg} \ge 0 \\ 0 & \text{otherwise} \end{cases} = 1.5$$

Resisting Fill at Toe: $h_{4UN2} := FG_{toeUN2} - Bot_{ftg} + Key_{t.d} = 4.00\ m$

Distance from Water Level to Top of Footing at Toe: $h_{5UN2} := WSEL_{UN2} - Top_{ftg} = 3.00\ m$

Distance from Water Surface to Bottom of Footing at Toe: $h_{6UN2} := WSEL_{UN2} - Bot_{ftg} + Key_{t.d} = 5.50\ m$

Soil Depth Above WSEL: $h_{7aUN2} := FG_{toeUN2} - WSEL_{UN2} = -1.5\ m$

$$h_{7UN2} := \begin{cases} h_{7aUN2} & \text{if } FG_{toeUN2} - WSEL_{UN2} \ge 0 \\ 0 & \text{otherwise} \end{cases} = 0$$

Soil Depth Below WSEL:

$$h_{8UN2} := \begin{cases} WSEL_{UN2} - Bot_{ftg} + Key_{t.d} & \text{if } FG_{toeUN2} - WSEL_{UN2} \ge 0 \\ h_{4UN2} & \text{otherwise} \end{cases} = 4$$

For Line of Creep Method: $L_{ho.UN2} := \sqrt{b^2 + \left(Key_{h.d} - Key_{t.d}\right)^2} = 12.855\ m$

Head Loss from Point g:

$\Delta h_{g.hj.UN2} := h_{2UN2} = 12.9\ m$ (to point h & j)

$\Delta h_{g.km.UN2} := GWL_{UN2} - Bot_{ftg} = 9.9\ m$ (to point k & m)

$\Delta h_{g.no.UN2} := GWL_{UN2} - Bot_{ftg} + Key_{t.d} = 9.9\ m$ (to point n & o)

$\Delta h_{g.p.UN2} := GWL_{UN2} - FG_{toeUN2} = 5.9\ m$ (to point p)

$\Delta h_{g.r.UN2} := GWL_{UN2} - UWSEL_{UN2} = 0\ m$ (to point r)

Surcharge

Surcharge on Heel: $S1_{UN2} := 0.0 \dfrac{kN}{m^2}$

Calculate Soil Lateral Pressure Coefficients:

LOAD CASE UN2

For all load cases except seismic, soil loading to be based on At-Rest Condition.
Calculate at-rest pressure coefficient Ko based on Jaky's (1944) equation.

Soil At Rest Static Coefficient: $K_o := \dfrac{1 - \sin(\phi)}{1 + \sin(\beta)} = 0.546$ (Eq. 3-6, USACE EM 1110-2-2502)

Lateral - Driving Force

Static At-Rest:

Surcharge Load: $E_{s1UN2} := S1_{UN2} \cdot K_o \cdot \left(H_w + Key_{h.d}\right) \cdot B \cdot -1 = 0 \cdot kN$

Moment Arm (from bottom of footing): $E_{s1locUN2} := \dfrac{H_w + Key_{h.d}}{2} + Key_{vdist} = 5.75\ m$

Moist Soil Load above GWL: $E_{h1UN2} := \dfrac{\gamma_m \cdot K_o \cdot h_{1UN2}^{\ 2}}{2} \cdot B \cdot -1 = -115.5 \cdot kN$

Moment Arm (from bottom of footing): $E_{h1locUN2} := \dfrac{h_{1UN2}}{3} + h_{2UN2} + Key_{vdist} = 11.43\ m$

Saturated Soil Load below GWL:
(rectangular component) $E_{h2UN2} := \left(\gamma_m \cdot K_o \cdot h_{1UN2}\right) \cdot h_{2UN2} \cdot B \cdot -1 = -648.0 \cdot kN$

Moment Arm (from bottom of footing): $E_{h2locUN2} := \dfrac{h_{2UN2}}{2} + Key_{vdist} = 3.45\ m$

Saturated Soil Load below GWL:
(triangular component) $E_{h2aUN2} := \dfrac{\left(\gamma_{sat} - \gamma_w\right) \cdot K_o \cdot h_{2UN2}^{\ 2}}{2} \cdot B \cdot -1 = -554.3 \cdot kN$

Moment Arm (from bottom of footing): $E_{h2alocUN2} := \dfrac{h_{2UN2}}{3} + Key_{vdist} = 1.30\ m$

Lateral Water Load:

Water Load GWL to Bottom of Key $H_{h2UN2} := \dfrac{\gamma_w \cdot h_{2UN2}^{\ 2}}{2} \cdot B \cdot -1 = -815.4 \cdot kN$

Moment Arm (from bottom of footing): $H_{h2locUN2} := \dfrac{h_{2UN2}}{3} + Key_{vdist} = 1.30\ m$

$$\Sigma H_{SoildriveUN2} := E_{s1UN2} + E_{h1UN2} + E_{h2UN2} + E_{h2aUN2} + H_{h2UN2} = -2133.2 \cdot kN$$

$$\Sigma M_{LateralSoildriveUN2} := E_{s1UN2} \cdot E_{s1locUN2} + E_{h1UN2} \cdot E_{h1locUN2} + E_{h2UN2} \cdot E_{h2locUN2} \dots + E_{h2aUN2} \cdot E_{h2alocUN2} + H_{h2UN2} \cdot H_{h2locUN2} = -5337.1\ m \cdot kN$$

Lateral - Resisting Force

LOAD CASE UN2

Lateral Water Load:

Water Load WSEL to Bottom of Footing:

$$H_{h6UN2} := \frac{\gamma_w \cdot h_{6UN2}^{\,2}}{2} \cdot B = 148.2 \cdot kN$$

Moment Arm (from bottom of footing):

$$H_{h6locUN2} := \frac{h_{6UN2}}{3} = 1.83\ m$$

Water Load Bot. of Footing to Bot. of H. Key:

$$H_{h2aUN2} := \left[\left(UWSEL_{UN2} - Bot_{ftg} + Key_{t.d}\right) + h_{2UN2}\right] \cdot \frac{Key_{h.d}}{2} \cdot \gamma_w \cdot B = 335.2 \cdot kN$$

Moment Arm (from bot. of toe key):

$$H_{h2alocUN2} := \frac{Key_{h.d} \cdot \left[2 \cdot \left(UWSEL_{UN2} - Bot_{ftg} + Key_{t.d}\right) + h_{2UN2}\right]}{3\left[h_{2UN2} + \left(UWSEL_{UN2} - Bot_{ftg} + Key_{t.d}\right)\right]} \ldots = -1.57\ m$$
$$+ Key_{vdist}$$

Lateral Soil Load:

Moist Soil Load above WSEL:

$$E_{h7UN2} := \frac{\gamma_m \cdot K_o \cdot h_{7UN2}^{\,2}}{2} B = 0.0 \cdot kN$$

Moment Arm (from bot. of toe key):

$$E_{h7locUN2} := h_{6UN2} + \frac{h_{7UN2}}{3} + Key_{vdist} = 2.50\ m$$

Saturated Soil Load below WSEL: (rectangular component)

$$E_{h8UN2} := \left(\gamma_m \cdot K_o \cdot h_{7UN2}\right) \cdot h_{8UN2} \cdot B = 0.0 \cdot kN$$

Moment Arm (from bot. of toe key):

$$E_{h8locUN2} := \frac{h_{8UN2}}{2} = 2.00\ m$$

Saturated Soil Load below WSEL: (triangular component)

$$E_{h8aUN2} := \frac{\left[\left(\gamma_{sat} - \gamma_w\right) \cdot K_o\right] \cdot h_{8UN2}^{\,2}}{2} \cdot B = 53.3 \cdot kN$$

Moment Arm (from bot. of footing):

$$E_{h8alocUN2} := \frac{h_{8UN2}}{3} = 1.33\ m$$

$$\Sigma H_{SoilresistUN2} := H_{h6UN2} + H_{h2aUN2} + E_{h7UN2} + E_{h8UN2} + E_{h8aUN2} = 536.7 \cdot kN$$

$$\Sigma M_{HorizSoilResistUN2} := H_{h6UN2} \cdot H_{h6locUN2} + H_{h2aUN2} \cdot H_{h2alocUN2} + E_{h7UN2} \cdot E_{h7locUN2} \ldots = -182.0\ m \cdot kN$$
$$+ E_{h8UN2} \cdot E_{h8locUN2} + E_{h8aUN2} \cdot E_{h8alocUN2}$$

Vertical Force:

UPLIFT: Linear distribution from water at heel to water at toe:

$$\Sigma V_{UpliftUN2} := \left[\left(UWSEL_{UN2} - Bot_{ftg} + Key_{t.d}\right) + h_{2UN2}\right] \cdot \frac{b}{2} \cdot \gamma_w \cdot B \cdot -1 = -1396.5 \cdot kN$$

Moment Arm (from Point O):

$$V_{UpliftUN2aloc} := \frac{b \cdot \left[2 \cdot h_{2UN2} + \left(UWSEL_{UN2} - Bot_{ftg} + Key_{t.d}\right)\right]}{3\left[h_{2UN2} + \left(UWSEL_{UN2} - Bot_{ftg} + Key_{t.d}\right)\right]} = 6.524\ m$$

$$\Sigma M_{UpliftUN2} := \Sigma V_{UpliftUN2} \cdot V_{UpliftUN2aloc} = -9110.938 \cdot kN \cdot m$$

Weight of soil and water over toe:

Water Above the Top of Footing: $W_{H1UN2} := \gamma_w \cdot h_{5UN2} \cdot L_{ab} \cdot B = 88.2 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E1locUN2} := \frac{L_{ab}}{2} = 1.5\,m$

Soil above top of footing: $W_{E6UN2} := \gamma_b \cdot h_{3UN2} \cdot L_{ab} \cdot B = 54.9 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E6locUN2} := \frac{L_{ab}}{2} = 1.5\,m$

Vertical Load Due to Surcharge: $S_{UN2} := S1_{UN2} \cdot L_{cd} \cdot B = 0 \cdot kN \qquad S_{UN2loc} := b - \frac{L_{cd}}{2} = 8.47\,m$

Weight of soil and water over heel:

Moist Soil for sloped grade above top of wall:

Length of sloped portion of soil above top of wall: $L_{E3UN2} := \left(L_{cd} + t_{wb} - t_{wt}\right) = 9.00\,m$

Height of sloped soil above top of wall over heel: $h_{E3locUN2} := \left(L_{E3UN2}\right) \cdot \tan(\beta) = 0.00\,m$

Weight of sloped soil above top of wall: $W_{E3UN2} := \frac{\gamma_m}{2} \cdot h_{E3locUN2} \cdot L_{E3UN2} \cdot B = 0.0 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E3locUN2} := L_{ab} + t_{wt} + \frac{2}{3} \cdot L_{E3UN2} = 9.50\,m$

Moist soil from top of wall to groundwater level:

Height of soil from top of wall and top of GWL: $h_{1UN2} = 4.60\,m$

Length from edge of wall at GWL to edge of heel: $L_{E4UN2} := L_{E3UN2} - \left(h_{1UN2} \cdot S_{batter}\right) = 8.64\,m$

Weight of soil over heel from top of wall to GWL: $W_{E4UN2} := \gamma_m \cdot h_{1UN2} \cdot \frac{\left(L_{E3UN2} + L_{E4UN2}\right)}{2} \cdot B = 811.4 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E4locUN2} := b - \frac{L_{E3UN2}^2 + L_{E3UN2} \cdot L_{E4UN2} + L_{E4UN2}^2}{3\left(L_{E3UN2} + L_{E4UN2}\right)} = 8.09\,m$

Saturated soil from groundwater to top of footing:

Height of soil from GWL to top of heel: $h_{E4UN2} := h_{2UN2} - t_{ftg} - Key_{h.d} = 7.40\,m$

Weight of soil over heel from GWL to top of heel: $W_{E5UN2} := \left(\gamma_{sat}\right) \cdot h_{E4UN2} \cdot \frac{\left(L_{E4UN2} + L_{cd}\right)}{2} \cdot B = 1359.0 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E5locUN2} := b - \frac{L_{E4UN2}^2 + L_{E4UN2} \cdot L_{cd} + L_{cd}^2}{3\left(L_{E4UN2} + L_{cd}\right)} = 8.32\,m$

$$\Sigma V_{SoilWaterUN2} := W_{H1UN2} + W_{E6UN2} + W_{E3UN2} + W_{E4UN2} + W_{E5UN2} + S_{UN2} = 2313.5 \cdot kN$$

$$\Sigma M_{VertSoilWaterResistUN2} := W_{H1UN2} \cdot W_{E1locUN2} + W_{E6UN2} \cdot W_{E6locUN2} \cdots + W_{E3UN2} \cdot W_{E3locUN2} + W_{E4UN2} \cdot W_{E4locUN2} + W_{E5UN2} \cdot W_{E5locUN2} + S_{UN2} \cdot S_{UN2loc} = 18091.5\,m \cdot kN$$

CHECK OVERTURNING

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stablity of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1

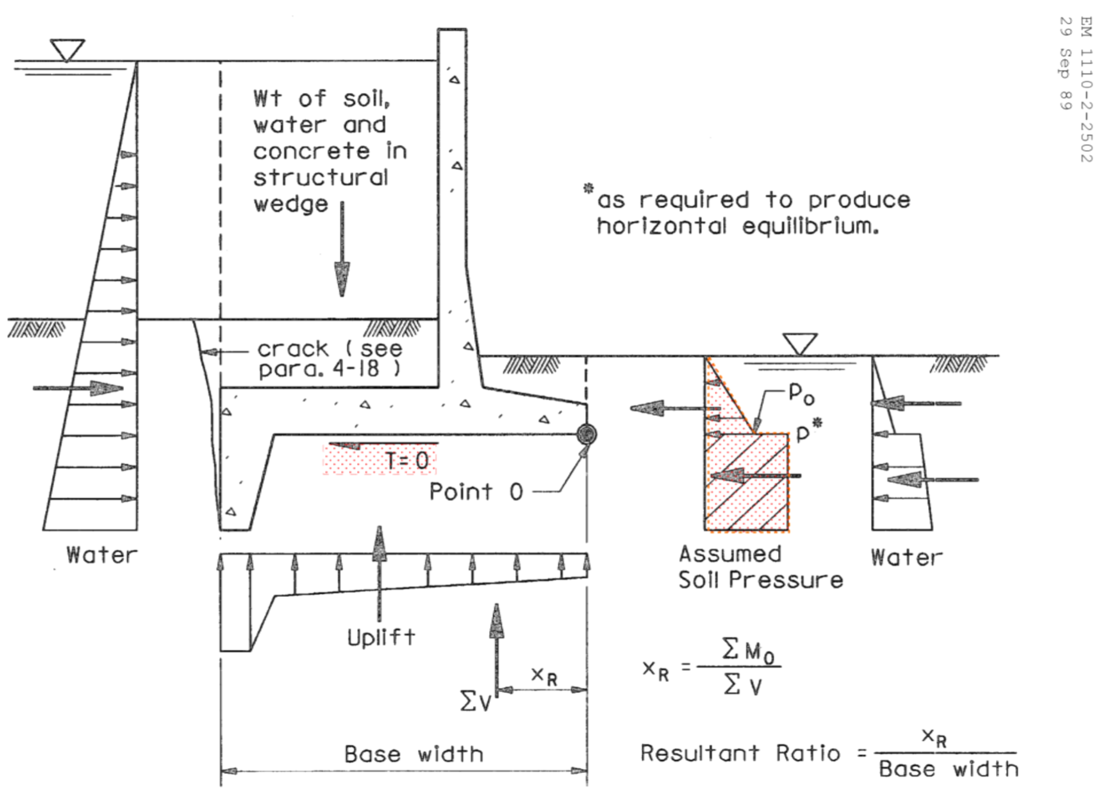

Figure 4-5. Forces for overturning analysis for wall with horizontal base and key

Modify Uplift for Overturning Analysis: **LOAD CASE UN2**

(Uplift is calculated along the concrete/rock contact using the Line of Creep method)

Water Pressure at h: $u_{h.UN2} := \Delta h_{g.hj.UN2} \cdot \gamma_w = 126.42 \cdot kPa$

Water Pressure at o: $u_{o.UN2} := \left(\Delta h_{g.no.UN2} - \frac{\Delta h_{g.r.UN2} \cdot L_{ho.UN2}}{L_{ho.UN2}}\right) \cdot \gamma_w = 97.02 \cdot kPa$

Head loss between point h and o: $\Delta h_{ho.UN2} := \Delta h_{g.r.UN2} \cdot \frac{L_{ho.UN2}}{L_{ho.UN2}} = 0\,m$

Length of concrete base (h -> o): $L_{baseho.UN2} := Key_{h.w} + Key_{h.d} + Key_{hdist} + Key_{t.d} + Key_{t.w} = 15.5\,m$

Head loss along h -> j: $\Delta h_{hj.UN2} := \Delta h_{ho.UN2} \cdot \frac{Key_{h.w}}{L_{baseho.UN2}} = 0\,m$

Water Pressure at j: $u_{j.UN2} := \left(\Delta h_{g.hj.UN2} - \Delta h_{hj.UN2}\right) \cdot \gamma_w = 126.42 \cdot kPa$

Head loss along h -> k: $\Delta h_{hjk.UN2} := \Delta h_{ho.UN2} \cdot \left(\frac{Key_{h.w} + Key_{h.d}}{L_{baseho.UN2}}\right) = 0\,m$

Water Pressure at k: $u_{k.UN2} := \left(\Delta h_{g.km.UN2} - \Delta h_{hjk.UN2}\right) \cdot \gamma_w = 97.02 \cdot kPa$

Head loss along h -> m: $\Delta h_{hjkm.UN2} := \Delta h_{ho.UN2} \cdot \left(\frac{Key_{h.w} + Key_{h.d} + Key_{hdist}}{L_{baseho.UN2}}\right) = 0\,m$

Water Pressure at m: $u_{m.UN2} := \left(\Delta h_{g.km.UN2} - \Delta h_{hjkm.UN2}\right) \cdot \gamma_w = 97.02 \cdot kPa$

Head loss along h -> n: $\Delta h_{hjkmn.UN2} := \Delta h_{ho.UN2} \cdot \left(\frac{Key_{h.w} + Key_{h.d} + Key_{hdist} + Key_{t.d}}{L_{baseho.UN2}}\right) = 0\,m$

Water Pressure at n: $u_{n.UN2} := \left(\Delta h_{g.no.UN2} - \Delta h_{hjkmn.UN2}\right) \cdot \gamma_w = 97.02 \cdot kPa$

Uplift under key at heel: $V_{ulkeyhUN2.OT} := \frac{\left(u_{h.UN2} + u_{j.UN2}\right) \cdot Key_{h.w}}{2} \cdot B \cdot -1 = -126.42 \cdot kN$

Moment Arm (from Point O): $V_{ulkeyhUN2loc.OT} := b - \frac{Key_{h.w} \cdot \left(2 \cdot u_{j.UN2} + u_{h.UN2}\right)}{3 \cdot \left(u_{j.UN2} + u_{h.UN2}\right)} = 12\,m$

Uplift under base: $V_{ulbaseUN2.OT} := \frac{\left(u_{k.UN2} + u_{m.UN2}\right) \cdot Key_{hdist}}{2} \cdot B \cdot -1 = -1115.73 \cdot kN$

Moment Arm (from Point O): $V_{ulbaseUN2loc.OT} := b - Key_{h.w} - \frac{Key_{hdist} \cdot \left(2 \cdot u_{m.UN2} + u_{k.UN2}\right)}{3 \cdot \left(u_{m.UN2} + u_{k.UN2}\right)} = 5.75\,m$

Uplift under key at toe: $V_{ulkeytUN2.OT} := \frac{\left(u_{n.UN2} + u_{o.UN2}\right) \cdot Key_{t.w}}{2} \cdot B \cdot -1 = 0 \cdot kN$

Moment Arm (from Point O): $V_{ulkeytUN2loc.OT} := \frac{Key_{t.w} \cdot \left(2 \cdot u_{n.UN2} + u_{o.UN2}\right)}{3 \cdot \left(u_{n.UN2} + u_{o.UN2}\right)} = 0$

$$\Sigma V_{UpliftUN2.OT} := V_{ulkeyhUN2.OT} + V_{ulbaseUN2.OT} + V_{ulkeytUN2.OT} = -1242 \cdot kN$$

$$U_{UN2.loc.OT} := \frac{V_{ulkeyhUN2.OT} \cdot V_{ulkeyhUN2loc.OT} + V_{ulbaseUN2.OT} \cdot V_{ulbaseUN2loc.OT} + V_{ulkeytUN2.OT} \cdot V_{ulkeytUN2loc.OT}}{\Sigma V_{UpliftUN2.OT}} = 6.39\,m$$

$$\Sigma M_{UpliftUN2.OT} := \Sigma V_{UpliftUN2.OT} \cdot U_{UN2.loc.OT} = -7932.5 \cdot kN \cdot m$$

Modify Lateral Water Pressure (Resisting) for Overturning Analysis:

(Resisting water pressure is calculated using the Line of Creep method)

Water Load at Key (heel):

$$H_{h2UN2.OT} := \frac{u_{k.UN2} + u_{j.UN2}}{2} \cdot Key_{h.d}\, B = 335.2 \cdot kN$$

Moment Arm (from Point O):

$$H_{h2locUN2.OT} := \frac{Key_{h.d} \cdot \left(2 \cdot u_{k.UN2} + u_{j.UN2}\right)}{3\left(u_{k.UN2} + u_{j.UN2}\right)} + Key_{vdist} = -1.57\ m$$

Water Load at Key (toe):

$$H_{h6UN2.OT} := \frac{u_{o.UN2} \cdot \left(UWSEL_{UN2} - Bot_{ftg} + Key_{t.d}\right)}{2} \cdot B = 480 \cdot kN$$

Moment Arm (from Point O):

$$H_{h6locUN2.OT} := \frac{UWSEL_{UN2} - Bot_{ftg} + Key_{t.d}}{3} = 3.30\ m$$

$$\Sigma H_{waterresistUN2.OT} := H_{h2UN2.OT} + H_{h6UN2.OT} = 815.41 \cdot kN$$

$$H_{waterresistlocUN2.OT} := \frac{H_{h2UN2.OT} \cdot H_{h2locUN2.OT} + H_{h6UN2.OT} \cdot H_{h6locUN2.OT}}{\Sigma H_{waterresistUN2.OT}} = 1.3\ m$$

$$\Sigma M_{waterresistUN2.OT} := \Sigma H_{waterresistUN2.OT} \cdot H_{waterresistlocUN2.OT} = 1060.03 \cdot kN \cdot m$$

Modify Lateral Soil Loads for Overturning Analysis:

(Lateral soil loads are calculated down to Point O instead of bottom of shear key)

<u>Driving Soil Load (Headwater Side):</u>

Surcharge Load:

$$E_{s1UN2.OT} := S1_{UN2} \cdot K_o \cdot \left(H_w + Key_{h.d} + Key_{vdist}\right) \cdot B \cdot -1 = 0 \cdot kN$$

Moment Arm (from Point O):

$$E_{s1locUN2.OT} := \frac{H_w + Key_{h.d} + Key_{vdist}}{2} = 7.25\ m$$

Moist Soil Load above GWL:

$$E_{h1UN2.OT} := \frac{\gamma_m \cdot K_o \cdot h_{1UN2}^{\,2}}{2} B \cdot -1 = -115.5 \cdot kN$$

Moment Arm (from Point O):

$$E_{h1locUN2.OT} := \frac{h_{1UN2}}{3} + h_{2UN2} + Key_{vdist} = 11.43\ m$$

Saturated Soil Load below GWL:
(rectangular component)

$$E_{h2UN2.OT} := \left(\gamma_m \cdot K_o \cdot h_{1UN2}\right) \cdot \left(h_{2UN2} + Key_{vdist}\right) \cdot B \cdot -1 = -497.3 \cdot kN$$

Moment Arm (from Point O):

$$E_{h2locUN2.OT} := \frac{h_{2UN2} + Key_{vdist}}{2} = 4.95\ m$$

Saturated Soil Load below GWL:
(triangular component)

$$E_{h2aUN2.OT} := \frac{\left(\gamma_{sat} - \gamma_w\right) \cdot K_o \cdot \left(h_{2UN2} + Key_{vdist}\right)^2}{2} \cdot B \cdot -1 = -326.4 \cdot kN$$

Moment Arm (from Point O):

$$E_{h2alocUN2.OT} := \frac{h_{2UN2} + Key_{vdist}}{3} = 3.30\ m$$

Resisting Soil Load (Tailwater Side):

(Determine resisting soil load based on depth variation between the keys (ie. Key_{vdist}). In case where key at heel is deeper than key at toe (ie. Key_{vdist}< 0), resisting soil load (p*) is assumed to produce horizontal equilibrium as per Figure 4-5 above. Resisting soil load (p_o) is neglected.)

Total Driving Force: $\Sigma H_{SoildriveUN2.OT} := E_{s1UN2.OT} + E_{h1UN2.OT} + E_{h2UN2.OT} + E_{h2aUN2.OT} + H_{h2UN2} = -1754.7 \cdot kN$

Total Resisting Force: $\Sigma H_{waterresistUN2.OT} = 815.4 \cdot kN$

Assumed Soil Load p*: $E_{h8UN2a.OT} := \left(\Sigma H_{SoildriveUN2.OT} + \Sigma H_{waterresistUN2.OT}\right) \cdot -1 = 939.279 \cdot kN$

Moment Arm (from Point O): $E_{h8UN2a.loc.OT} := \dfrac{Key_{vdist}}{2} = -1.5\, m$

$$E_{h8UN2.OT} := \begin{cases} E_{h8UN2a.OT} & \text{if } Key_{vdist} < 0 \\ \Sigma H_{SoilresistUN2} - H_{h6UN2} - H_{h2aUN2} & \text{otherwise} \end{cases} = 939.279 \cdot kN$$

$$\Sigma M_{SoilresistUN2} := \begin{cases} E_{h8UN2a.OT} \cdot E_{h8UN2a.loc.OT} & \text{if } Key_{vdist} < 0 \\ \Sigma M_{HorizSoilResistUN2} - H_{h6UN2} \cdot H_{h6locUN2} - H_{h2aUN2} \cdot H_{h2alocUN2} & \text{otherwise} \end{cases} = -1408.918 \cdot kN \cdot m$$

Sum of Moment about Point O:

$$\Sigma M_{LateraldriveUN2.OT} := E_{s1UN2.OT} \cdot E_{s1locUN2.OT} + E_{h1UN2.OT} \cdot E_{h1locUN2.OT} + E_{h2UN2.OT} \cdot E_{h2locUN2.OT} \cdots + E_{h2aUN2.OT} \cdot E_{h2alocUN2.OT} + H_{h2UN2} \cdot H_{h2locUN2} = -5919.9 \cdot kN \cdot m$$

$$\Sigma M_{LateralresistUN2.OT} := \Sigma M_{waterresistUN2.OT} + \Sigma M_{SoilresistUN2} = -348.9 \cdot kN \cdot m$$

Total moment:

$$\Sigma M_{UN2.OT} := \Sigma M_{conc} + \Sigma M_{VertSoilWaterResistUN2} + \Sigma M_{UpliftUN2.OT} + \Sigma M_{LateraldriveUN2.OT} + \Sigma M_{LateralresistUN2.OT} = 10291.5 \cdot kN \cdot m$$

Total Vertical Force: $\Sigma V_{UN2.OT} := \Sigma V_{conc} + \Sigma V_{SoilWaterUN2} + \Sigma V_{UpliftUN2.OT} = 2150.2 \cdot kN$

Distance X_R: EM 1110-2-2502 Eq.4-1 $X_{R.UN2} := \dfrac{\Sigma M_{UN2.OT}}{\Sigma V_{UN2.OT}} = 4.786\, m$

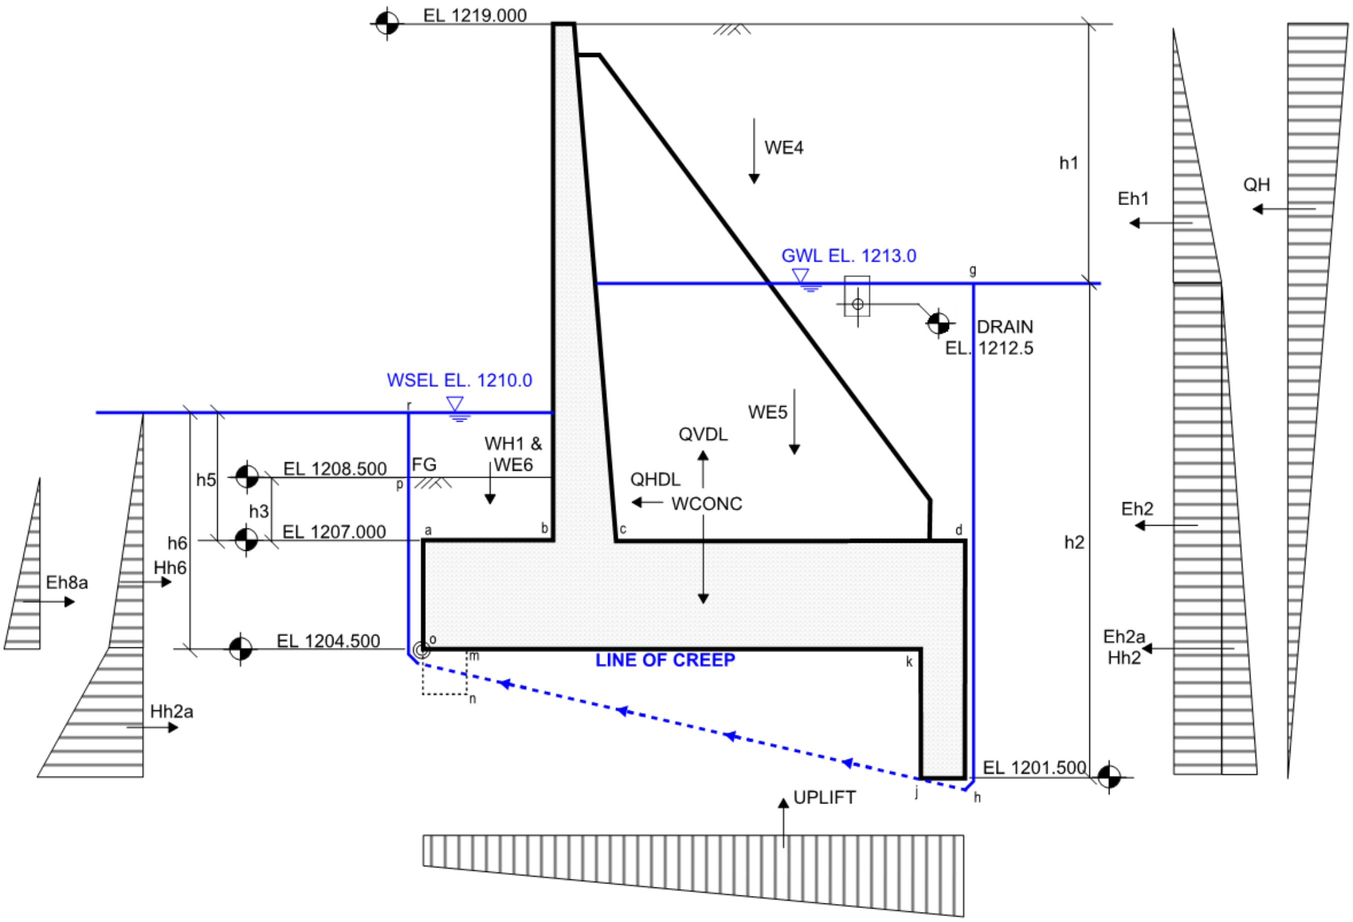
LOAD CASE E1 - SEISMIC LOADING



E1 DESIGN CASE

LOAD CASE E1 ACCEPTANCE PARAMETERS

FS sliding:

Extreme (E) loading)	1.0 (without cohesion, seismic	(Table 3-3, USACE EM 1110-2-2100)

Resultant Location:

Extremem (E) Inside middle half ~75% base in compression

Required Factor of Safety for Sliding:	$FS_{sliding.reqE1} := 1.0$	(Without Cohesion)
Allowable rock bearing pressure:	$\sigma_{allowE1} := 1740kPa$	(Section 5.2, Design Criteria EM 1110-2-2100 Section 3-10)
Overturning Required Resultant Ratio:	$X_{R.reqE1} := 0.25$	(EM 1110-2-2502, Figure 4-4)
Required Factor of Safety for Floatation	$FS_{req.E1.flt} := 1.1$	

SOIL HEIGHTS and Water Levels:

LOAD CASE E1

Heel Conditions:

Groundwater Elevation at Heel: $GWL_{E1} := 1213.0m$

Distance from Finish Grade to Groundwater at Heel: $h_{1E1} := \left[T_w - GWL_{E1} + \left(L_{cd} + t_{wb} - t_{wt}\right)\cdot\tan(\beta)\right] = 6.00\ m$

Distance from Water Surface to Bottom of Footing at Heel: $h_{2E1} := GWL_{E1} - Bot_{ftg} + Key_{h.d} = 11.50\ m$

Toe Conditions:

Water Surface Elevation at Toe: $WSEL_{E1} := 1210.0m$

Water Surface Elevation at Toe for Uplift: $UWSEL_{E1} := 1210.0\cdot m$

Finish Grade at Toe providing lateral resistance: $FG_{toeE1} := 1208.5\cdot m$

Soil Depth Above top of footing: $h_{3aE1} := FG_{toeE1} - Top_{ftg} = 1.5\ m$

$$h_{3E1} := \begin{cases} h_{3aE1} & \text{if } FG_{toeE1} - Top_{ftg} \geq 0 \\ 0 & \text{otherwise} \end{cases} = 1.5$$

Resisting Fill at Toe: $h_{4E1} := FG_{toeE1} - Bot_{ftg} + Key_{t.d} = 4.00\ m$

Distance from Water Level to Top of Footing at Toe: $h_{5E1} := WSEL_{E1} - Top_{ftg} = 3.00\ m$

Distance from Water Surface to Bottom of Footing at Toe: $h_{6E1} := WSEL_{E1} - Bot_{ftg} + Key_{t.d} = 5.50\ m$

Soil Depth Above WSEL: $h_{7aE1} := FG_{toeE1} - WSEL_{E1} = -1.5\ m$

$$h_{7E1} := \begin{cases} h_{7aE1} & \text{if } FG_{toeE1} - WSEL_{E1} \geq 0 \\ 0 & \text{otherwise} \end{cases} = 0$$

Soil Depth Below WSEL:

$$h_{8E1} := \begin{cases} WSEL_{E1} - Bot_{ftg} + Key_{t.d} & \text{if } FG_{toeE1} - WSEL_{E1} \geq 0 \\ h_{4E1} & \text{otherwise} \end{cases} = 4$$

For Line of Creep Method: $L_{ho.E1} := \sqrt{b^2 + \left(Key_{h.d} - Key_{t.d}\right)^2} = 12.855\ m$

Head Loss from Point g:

$\Delta h_{g.hj.E1} := h_{2E1} = 11.5\ m$ (to point h & j)

$\Delta h_{g.km.E1} := GWL_{E1} - Bot_{ftg} = 8.5\ m$ (to point k & m)

$\Delta h_{g.no.E1} := GWL_{E1} - Bot_{ftg} + Key_{t.d} = 8.5\ m$ (to point n & o)

$\Delta h_{g.p.E1} := GWL_{E1} - FG_{toeE1} = 4.5\ m$ (to point p)

$\Delta h_{g.r.E1} := GWL_{E1} - UWSEL_{E1} = 3\ m$ (to point r)

Surcharge

Surcharge on Heel: $S1_{E1} := 0.0\ \frac{kN}{m^2}$

Calculate Soil Lateral Pressure Coefficients:

LOAD CASE E1

Calculate at-rest pressure coefficient K_o based on Jaky's (1944) equation.

Soil At Rest Static Coefficient: (apply to resisting soil loads)

$$K_o := \frac{1 - \sin(\phi)}{1 + \sin(\beta)} = 0.546$$

(Eq. 3-6, USACE EM 1110-2-2502)

Calculate active pressure coefficient K_A based on Coulumb equations.

Determine Slope of Active Wedge: (cohesionless backfill with water table)

$$c_1 := 2 \cdot \tan(\phi) = 1.019 \qquad c_2 := 1 - \tan(\phi) \cdot \tan(\beta) - \frac{\tan(\beta)}{\tan(\phi)} = 1$$

(Eq. G-14 / G-15, USACE EM 1110-2-2100)

$$\alpha := \operatorname{atan}\left(\frac{c_1 + \sqrt{{c_1}^2 + 4 \cdot c_2}}{2}\right) = 1.021 \qquad \alpha_{deg} := \alpha \cdot \frac{180}{\pi} = 58.5$$

degrees (Eq. G-13, USACE EM 1110-2-2100)

Soil Active Coefficient above GWL:

$$K_{Aagwt} := \left(\frac{1 - \tan(\phi) \cdot \cot(\alpha)}{1 + \tan(\phi) \cdot \tan(\alpha)}\right) \cdot \left(\frac{\tan(\alpha)}{\tan(\alpha) - \tan(\beta)}\right) = 0.376$$

Soil Active Coefficient below GWL:

$$K_{Abgwt} := \frac{1 - \tan(\phi) \cdot \cot(\alpha)}{1 + \tan(\phi) \cdot \tan(\alpha)} \cdot \left[1 + \left(\frac{\tan(\alpha)}{\tan(\alpha) - \tan(\beta)} - 1\right) \cdot \left(\frac{\gamma_m}{\gamma_{sat} - \gamma_w}\right)\right] = 0.376$$

(Eq. G-29, USACE EM 1110-2-2100)

Lateral - Driving Force

Static Copmonent : Active Pressure:

Surcharge Load:

$$E_{s1E1} := S1_{E1} \cdot K_{Aagwt} \cdot \left(H_w + Key_{h.d}\right) \cdot B \cdot -1 = 0 \cdot kN$$

Moment Arm (from bottom of footing):

$$E_{s1locE1} := \frac{H_w + Key_{h.d}}{2} + Key_{vdist} = 5.75\ m$$

Moist Soil Load above GWL:

$$E_{h1E1} := \frac{\gamma_m \cdot K_{Aagwt} \cdot {h_{1E1}}^2}{2} \cdot B \cdot -1 = -135.2 \cdot kN$$

Moment Arm (from bottom of footing):

$$E_{h1locE1} := \frac{h_{1E1}}{3} + h_{2E1} + Key_{vdist} = 10.50\ m$$

Saturated Soil Load below GWL: (rectangular component)

$$E_{h2E1} := \left(\gamma_m \cdot K_{Abgwt} \cdot h_{1E1}\right) \cdot h_{2E1} \cdot B \cdot -1 = -518.2 \cdot kN$$

Moment Arm (from bottom of footing):

$$E_{h2locE1} := \frac{h_{2E1}}{2} + Key_{vdist} = 2.75\ m$$

Saturated Soil Load below GWL: (triangular component)

$$E_{h2aE1} := \frac{\left(\gamma_{sat} - \gamma_w\right) \cdot K_{Abgwt} \cdot {h_{2E1}}^2}{2} \cdot B \cdot -1 = -302.9 \cdot kN$$

Moment Arm (from bottom of footing):

$$E_{h2alocE1} := \frac{h_{2E1}}{3} + Key_{vdist} = 0.83\ m$$

Lateral Water Load:

Water Load GWL to Bottom of Key

$$H_{h2E1} := \frac{\gamma_w \cdot {h_{2E1}}^2}{2} \cdot B \cdot -1 = -648.0 \cdot kN$$

Moment Arm (from bottom of footing):

$$H_{h2locE1} := \frac{h_{2E1}}{3} + Key_{vdist} = 0.83\ m$$

$$\Sigma H_{SoildriveE1} := E_{s1E1} + E_{h1E1} + E_{h2E1} + E_{h2aE1} + H_{h2E1} = -1604.4 \cdot kN$$

$$\Sigma M_{LateralSoildriveE1} := E_{s1E1} \cdot E_{s1locE1} + E_{h1E1} \cdot E_{h1locE1} + E_{h2E1} \cdot E_{h2locE1} \ldots + E_{h2aE1} \cdot E_{h2alocE1} + H_{h2E1} \cdot H_{h2locE1} = -3637.1\ m \cdot kN$$

Lateral - Resisting Force

LOAD CASE E1

Note: **Due to the relatively shallow depth of resisting soil/rock, a conservative apporach using at-rest coefficient in lieu of a passive wedge is used to calculate resisting forces.**

Lateral Water Load:

Water Load WSEL to Bottom of Footing: $H_{h6E1} := H_{h6U1} = 148.2 \cdot kN$

Moment Arm (from bottom of footing): $H_{h6locE1} := H_{h6locU1} = 1.83\ m$

Water Load Bot. of Footing to Bot. of H. Key: $H_{h2aE1} := \left[\left(UWSEL_{E1} - Bot_{ftg} + Key_{t.d}\right) + h_{2E1}\right] \cdot \frac{Key_{h.d}}{2} \cdot \gamma_w \cdot B = 249.9 \cdot kN$

Moment Arm (from bot. of toe key): $H_{h2alocE1} := \frac{Key_{h.d} \cdot \left[2 \cdot \left(UWSEL_{E1} - Bot_{ftg} + Key_{t.d}\right) + h_{2E1}\right]}{3\left[h_{2E1} + \left(UWSEL_{E1} - Bot_{ftg} + Key_{t.d}\right)\right]} \ldots = -1.68\ m$
$+ Key_{vdist}$

Lateral Soil Load:

Moist Soil Load above WSEL: $E_{h7E1} := \frac{\gamma_m \cdot K_o \cdot h_{7E1}^{\ 2}}{2} B = 0.0 \cdot kN$

Moment Arm (from bot. of toe key): $E_{h7locE1} := h_{6E1} + \frac{h_{7E1}}{3} + Key_{vdist} = 2.50\ m$

Saturated Soil Load below WSEL: (rectangular component) $E_{h8E1} := \left(\gamma_m \cdot K_o \cdot h_{7E1}\right) \cdot h_{8E1} \cdot B = 0.0 \cdot kN$

Moment Arm (from bot. of toe key): $E_{h8locE1} := \frac{h_{8E1}}{2} = 2.00\ m$

Saturated Soil Load below WSEL: (triangular component) $E_{h8aE1} := \frac{\left[\left(\gamma_{sat} - \gamma_w\right) \cdot K_o\right] \cdot h_{8E1}^{\ 2}}{2} \cdot B = 53.3 \cdot kN$

Moment Arm (from bot. of footing): $E_{h8alocE1} := \frac{h_{8E1}}{3} = 1.33\ m$

$\Sigma H_{SoilresistE1} := H_{h6E1} + H_{h2aE1} + E_{h7E1} + E_{h8E1} + E_{h8aE1} = 451.4 \cdot kN$

$\Sigma M_{HorizSoilResistE1} := H_{h6E1} \cdot H_{h6locE1} + H_{h2aE1} \cdot H_{h2alocE1} + E_{h7E1} \cdot E_{h7locE1} \ldots = -76.2\ m \cdot kN$
$+ E_{h8E1} \cdot E_{h8locE1} + E_{h8aE1} \cdot E_{h8alocE1}$

Vertical Force:

UPLIFT: Linear distribution from water at heel to water at toe:

$\Sigma V_{UpliftE1} := \left[\left(UWSEL_{E1} - Bot_{ftg} + Key_{t.d}\right) + h_{2E1}\right] \cdot \frac{b}{2} \cdot \gamma_w \cdot B \cdot -1 = -1041.25 \cdot kN$

Moment Arm (from Point O): $V_{UpliftE1aloc} := \frac{b \cdot \left[2 \cdot h_{2E1} + \left(UWSEL_{E1} - Bot_{ftg} + Key_{t.d}\right)\right]}{3\left[h_{2E1} + \left(UWSEL_{E1} - Bot_{ftg} + Key_{t.d}\right)\right]} = 6.985\ m$

$\Sigma M_{UpliftE1} := \Sigma V_{UpliftE1} \cdot V_{UpliftE1aloc} = -7273.438 \cdot kN \cdot m$

Weight of soil and water over toe:

Water Above the Top of Footing: $W_{H1E1} := \gamma_w \cdot h_{5E1} \cdot L_{ab} \cdot B = 88.2 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E1locE1} := \frac{L_{ab}}{2} = 1.5\,m$

Soil above top of footing: $W_{E6E1} := \gamma_b \cdot h_{3E1} \cdot L_{ab} \cdot B = 54.9 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E6locE1} := \frac{L_{ab}}{2} = 1.5\,m$

Vertical Load Due to Surcharge: $S_{E1} := S1_{E1} \cdot L_{cd} \cdot B = 0 \cdot kN$ $\quad S_{E1loc} := b - \frac{L_{cd}}{2} = 8.47\,m$

Weight of soil and water over heel:

Moist Soil for sloped grade above top of wall:

Length of sloped portion of soil above top of wall: $L_{E3E1} := \left(L_{cd} + t_{wb} - t_{wt}\right) = 9.00\,m$

Height of sloped soil above top of wall over heel: $h_{E3locE1} := \left(L_{E3E1}\right) \cdot \tan(\beta) = 0.00\,m$

Weight of sloped soil above top of wall: $W_{E3E1} := \frac{\gamma_m}{2} \cdot h_{E3locE1} \cdot L_{E3E1} \cdot B = 0.0 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E3locE1} := L_{ab} + t_{wt} + \frac{2}{3} \cdot L_{E3E1} = 9.50\,m$

Moist soil from top of wall to groundwater level:

Height of soil from top of wall and top of GWL: $h_{1E1} = 6.00\,m$

Length from edge of wall at GWL to edge of heel: $L_{E4E1} := L_{E3E1} - \left(h_{1E1} \cdot S_{batter}\right) = 8.53\,m$

Weight of soil over heel from top of wall to GWL: $W_{E4E1} := \gamma_m \cdot h_{1E1} \cdot \frac{\left(L_{E3E1} + L_{E4E1}\right)}{2} \cdot B = 1051.7 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E4locE1} := b - \frac{L_{E3E1}^{\ 2} + L_{E3E1} \cdot L_{E4U1} + L_{E4E1}^{\ 2}}{3\left(L_{E3E1} + L_{E4E1}\right)} = 8.12\,m$

Saturated soil from groundwater to top of footing:

Height of soil from GWL to top of heel: $h_{E4E1} := h_{2E1} - t_{ftg} - Key_{h.d} = 6.00\,m$

Weight of soil over heel from GWL to top of heel: $W_{E5E1} := \left(\gamma_{sat}\right) \cdot h_{E4E1} \cdot \frac{\left(L_{E4E1} + L_{cd}\right)}{2} \cdot B = 1094.6 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E5locE1} := b - \frac{L_{E4E1}^{\ 2} + L_{E4E1} \cdot L_{cd} + L_{cd}^{\ 2}}{3\left(L_{E4E1} + L_{cd}\right)} = 8.35\,m$

SESIMIC ANALYSIS:

LOAD CASE E1

Seismic coefficient will be applied to dead loads to calculate seismic force and force is applied at center of gravity of the mass. Vertical and Horizontal loads are applied in the "destabilizing direction"

SEISMIC PARAMETERS:

Peak Ground Acceleration for Seismic Load $PGA_{Horiz} := 0.26$ $PGA_{Vert} := 0.56 \cdot PGA_{Horiz} = 0.146$ (Section 7.9, Design Criteria)

In accordance with USACE EM 1110-2-2100 Section 4-7.b, consider 2/3 PGA as seismic coefficient for stabilitiy.

Horizontal Seismic coefficient for stabilty: $K_{hE1} := \frac{2}{3} PGA_{Horiz} = 0.173$

Vertical Seismic coefficient for stabilty: $K_{vE1} := \frac{2}{3} PGA_{Vert} = 0.097$

SEISMIC ACCELERATION OF RIGID MASSES (Q_D):

Vertical Load Application:

$\Sigma V_{conc} = 1078.8 \cdot kN$

$Q_{v.conc} := \Sigma V_{conc} \cdot K_{vE1} \cdot -1 = -104.7 \cdot kN$ (assume acting upwards for adverse sliding effect)

Moment arm for siesmic load application (From Toe): $H_{cent} = 5.933\,m$

$M_{Qv.conc} := Q_{v.conc} \cdot H_{cent} = -621.3 \cdot kN \cdot m$

Lateral Load Application:

$Q_{h.conc} := \Sigma V_{conc} \cdot K_{hE1} \cdot -1 = -187 \cdot kN$

Moment arm for siesmic load application (Above Base of Footing): $V_{Cent} = 2.665\,m$

$M_{Q.conc} := Q_{h.conc} \cdot V_{Cent} = -498.3 \cdot kN \cdot m$

SEISMIC ACCELERATION OF SOIL WEDGE + WATER (Q_{EH}):

Vertical Load Application:

$\Sigma V_{SoilWaterE1} = 2289.5 \cdot kN$

$Q_{v.SoilWaterE1} := \Sigma V_{SoilWaterE1} \cdot K_{vE1} \cdot -1 = -222.2 \cdot kN$ (assume acting upwards for adverse sliding effect)

Moment arm for siesmic load application (From Toe): $e_{QE1} := \frac{\Sigma M_{VertSoilWaterResistE1}}{\Sigma V_{SoilWaterE1}} = 7.816\,m$

$M_{Qv.SoilWaterE1} := Q_{v.SoilWaterE1} \cdot e_{QE1} = -1736.9 \cdot kN \cdot m$

Lateral Load Application:

Seismic soil load is calculated based on Mononobe-Okabe method to determine combined static and dynamic coefficient (K_{AE}). Coulomb's active component (K_A) is subtracted from K_{AE} to obtain the seismic coefficient (ΔK_{AE}) for dynamic component of soil force.

Glacial Till Internal Friction (radians): $\phi = 0.471$

Seismic Inertia Angle (radians): $\psi := atan\left(\frac{K_{hE1}}{1 - K_{vE1}}\right) = 0.190$

Inclination of batter (radians): $\theta := 0.00$ assuming zero is conservative

Slope of retained ground surface: $\beta = 0.00$

$$K_{AE} := \frac{\cos(\phi - \psi - \theta) \cdot \cos(\phi - \psi - \theta)}{\cos(\psi) \cdot \cos(\theta) \cdot \cos(\theta)\ \cos(\psi + \theta) \cdot \left(1 + \sqrt{\frac{\sin(\phi)\ \sin(\phi - \psi - \beta)}{\cos(\beta - \theta) \cdot \cos(\psi + \theta)}}\right)^2} = 0.519$$

$\Delta K_{AE} := K_{AE} - K_{Abgwt} = 0.143$

Dynamic component of active seismic wedge:

$$Q_{h.SoilWaterE1} := \Delta K_{AE} \cdot \left[\frac{\gamma_m \cdot \left(H_w + Key_{h.d}\right)^2}{2 \cdot (\tan(\alpha) - \tan(\beta))} + \frac{\left(\gamma_{sat} - \gamma_m\right) \cdot h_{2E1}^{\ 2}}{2 \cdot \tan(\alpha)}\right] \cdot B \cdot -1 = -279.9 \cdot kN$$

(Eq. G-64, USACE EM 1110-2-2100)

Moment arm for siesmic load application (About Point O): $Q_{h.SoilWaterlocE1} := \frac{2}{3} \cdot \left(H_w + Key_{h.d}\right) + Key_{vdist} = 8.67\,m$

$M_{Q.h.SoilWaterE1} := Q_{h.SoilWaterE1} \cdot Q_{h.SoilWaterlocE1} = -2426.1 \cdot kN \cdot m$

STABILITY ASSESSMENT:

LOAD CASE E1

CHECK SLIDING ALONG HORIZONTAL SLIDING PLANE:

Summation of the vertical forces: $\Sigma V_{E1} := \Sigma V_{conc} + \Sigma V_{SoilWaterE1} + \Sigma V_{UpliftE1} + Q_{v.conc} + Q_{v.SoilWaterE1} = 2000.1 \cdot kN$

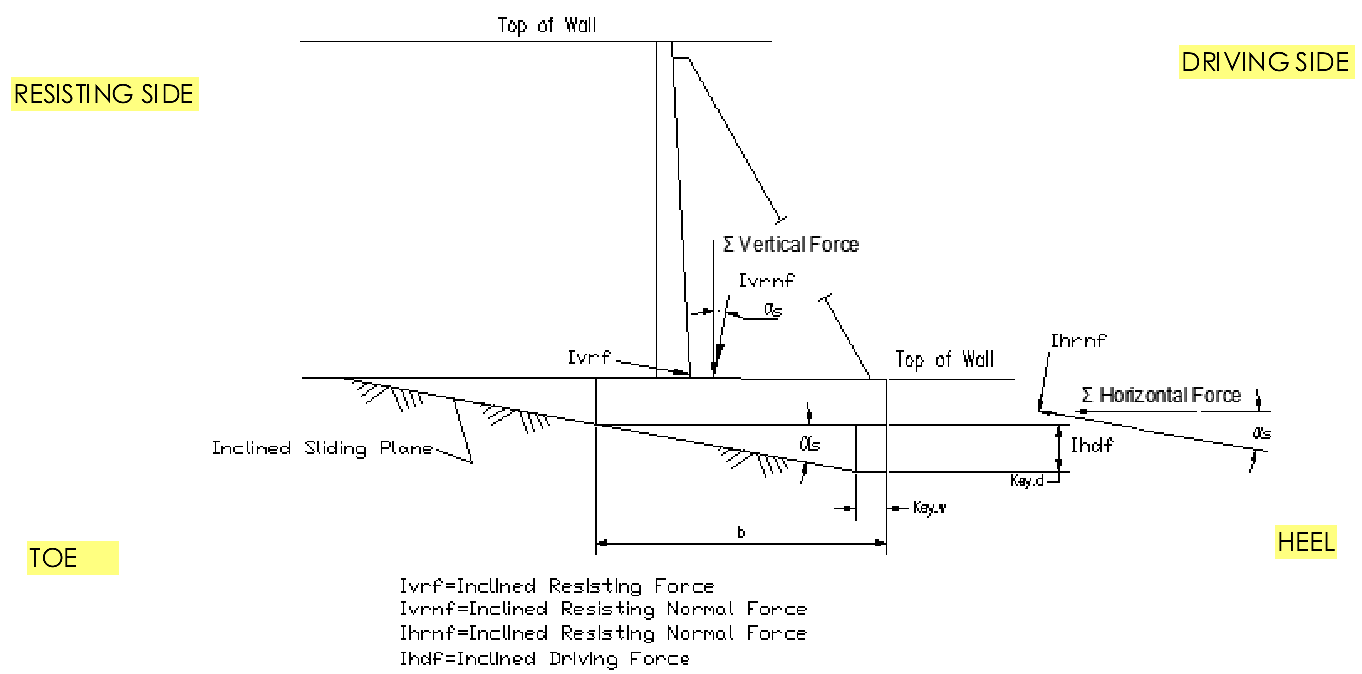
Summation of the horizontal forces: $\Sigma H_{E1} := \Sigma H_{SoildriveE1} + Q_{h.conc} + Q_{h.SoilWaterE1} + \Sigma H_{SoilresistE1} = -1619.9 \cdot kN$

Safety Factor for Sliding Horizontal Failure Plane

$$FS_{Horiz.SlidingE1} := \frac{\left|\Sigma V_{E1}\right| \cdot \tan\left(\phi_{rock} \cdot \frac{\pi}{180}\right)}{\left|\Sigma H_{E1}\right|} = 0.60$$

$$FS_{Sliding.check1.E1} := \begin{cases} \text{"OKAY"} & \text{if } FS_{Horiz.SlidingE1} > FS_{sliding.reqE1} \\ \text{"NG - key req'"} & \text{otherwise} \end{cases} = \text{"NG - key req'"}$$

CHECK FACTOR OF SAFETY SLIDING WITH KEY (INCLINED SLIDING PLANE):



(With properly engineered reinforced concrete Key, horizontal sliding plane thru Toe is protected, critical sliding plane is relocated to the INCLINED SLIDING PLANE FROM HEEL KEY To TOE, Bedrock Mass above this examing plane is mobilized by reinforced concrete key and combined into Structural Wedge.)

Resolve ΣV_{E1} & ΣH_{E1}

$$\Sigma V_{InclinedE1} := \cos(\alpha s) \cdot \left(\left|\Sigma V_{E1} + V_{rocksection}\right|\right) + \sin(\alpha s) \cdot \left|\Sigma H_{E1}\right| = 2771.5 \cdot kN$$

$$\Sigma H_{InclinedE1} := \cos(\alpha s) \cdot \left|\Sigma H_{E1}\right| - \sin(\alpha s) \cdot \left(\left|\Sigma V_{E1} + V_{rocksection}\right|\right) = 951.1 \cdot kN$$

Safety Factor for Sliding Inclined Failure Plane

$$FS_{InclinedISlidingE1} := \frac{\Sigma V_{InclinedE1} \cdot \tan\left(\phi_r\right)}{\Sigma H_{InclinedE1}} = 1.30$$

$$FS_{Sliding.check2.E1} := \begin{cases} \text{"OKAY"} & \text{if } FS_{InclinedISlidingE1} > FS_{sliding.reqE1} \\ \text{"NG'"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

CHECK FOUNDATION ECCENTRICITY:

LOAD CASE E1

(Vertical seismic loads from concrete, soil and water are assumed acting downwards for adverse bearing effect)

Summation of the vertical forces: $\Sigma V_{seisE1} := \Sigma V_{conc} + \Sigma V_{SoilWaterE1} + \Sigma V_{UpliftE1} - Q_{v.conc} - Q_{v.SoilWaterE1} = 2654.0 \cdot kN$

Summation of the horizontal forces: $\Sigma H_{seisE1} := \Sigma H_{E1} = -1619.9 \cdot kN$

Resolve ΣV_{seisE1} & ΣH_{seisE1}

$$\Sigma V_{InclinedseisE1} := \cos(\alpha s) \cdot \left(\left| \Sigma V_{seisE1} + V_{rocksection} \right| \right) + \sin(\alpha s) \cdot \left| \Sigma H_{seisE1} \right| = 3404.2 \cdot kN$$

$$\Sigma H_{InclinedseisE1} := \cos(\alpha s) \cdot \left| \Sigma H_{seisE1} \right| - \sin(\alpha s) \cdot \left(\left| \Sigma V_{seisE1} + V_{rocksection} \right| \right) = 786.0 \cdot kN$$

Summation of the resisting moments about the toe:

$$\Sigma M_{resE1} := \Sigma M_{conc} + \Sigma M_{VertSoilWaterResistE1} + \Sigma M_{HorizSoilResistE1} + \Sigma M_{rocksection} = 27605 \cdot kN \cdot m$$

Summation of seismic moments about the toe:

$$\Sigma M_{seisE1} := -M_{Qv.conc} + M_{Q.conc} - M_{Qv.SoilWaterE1} + M_{Q.h.SoilWaterE1} = -566 \cdot kN \cdot m$$

Summation of the overturning moments about the toe:

$$\Sigma M_{oE1} := \Sigma M_{LateralSoildriveE1} + \Sigma M_{UpliftE1} = -10911 \cdot kN \cdot m$$

Total moment: $\Sigma M_{E1} := \Sigma M_{resE1} + \Sigma M_{seisE1} + \Sigma M_{oE1} = 16128.3 \cdot kN \cdot m$

Normal force to base: $\Sigma V_{InclinedseisE1} = 3404.2 \cdot kN$

Inclined Sliding Plane Length: $L_{incline} = 12.9 \cdot m$

Eccentricity (inclined plane): $ex_{E1} := \frac{L_{incline}}{2} - \frac{\Sigma M_{E1}}{\Sigma V_{InclinedseisE1}} = 1.72\ m$ $\quad Kern_{E1} := \frac{L_{incline}}{4} = 3.23\ m$

Eccentricity Check:

$$e_{check.E1} := \begin{cases} \text{"Okay"} & \text{if } ex_{E1} \le Kern_{E1} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"Okay"}$$

CHECK FOUNDATION BEARING CAPACITY:

Base Section Modulus: $S_b = 27.81\ m^3$

Bearing Pressure Under Toe:

$$\sigma_{ToeE1} := \begin{cases} \left(\frac{\Sigma V_{InclinedE1}}{L_{incline} \cdot B} + \frac{\Sigma V_{InclinedE1} \cdot ex_{E1}}{S_b} \right) & \text{if } \frac{\Sigma V_{InclinedE1} \cdot ex_{E1}}{S_b} \le \frac{\Sigma V_{InclinedE1}}{L_{incline} \cdot B} \\ \frac{2 \cdot \Sigma V_{InclinedE1}}{B \cdot 3 \left(\frac{b}{2} - ex_{E1} \right)} & \text{otherwise} \end{cases} = 386.1 \cdot kPa$$

$$Bearing_{ChecktoeE1} := \begin{cases} \text{"OKAY "} & \text{if } \sigma_{ToeE1} < \sigma_{allowE1} \\ \text{"NG""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

Bearing Pressure Under Heel:

$$\sigma_{HeelE1} := \begin{cases} \left(\frac{\Sigma V_{InclinedE1}}{L_{incline} \cdot B} - \frac{\Sigma V_{InclinedE1} \cdot ex_{E1}}{S_b} \right) & \text{if } \frac{\Sigma V_{InclinedE1} \cdot ex_{E1}}{S_b} \le \frac{\Sigma V_{InclinedE1}}{L_{incline} \cdot B} \\ 0 & \text{otherwise} \end{cases} = 43.0 \cdot kPa$$

$$Bearing_{CheckheelE1} := \left(\begin{cases} \text{"OKAY "} & \text{if } \sigma_{HeelE1} < \sigma_{allowE1} \land \sigma_{HeelE1} > 0 \\ \text{"NG - perform cracked base analysis""} & \text{otherwise} \end{cases} \right) = \text{"OKAY "}$$

CHECK FLOATATION:

Safety Factor for Floatation:

$$FS_{FloatationE1} := \frac{\Sigma V_{conc} + \Sigma V_{SoilWaterE1} + Q_{v.conc} + Q_{v.SoilWaterE1}}{\left|\Sigma V_{UpliftE1}\right|} = 2.92$$

$$FS_{Floatation.E1.check} := \begin{array}{|l} \text{"OKAY" if } FS_{FloatationE1} > FS_{req.E1.flt} \\ \text{"Revise Structure"" otherwise} \end{array} = \text{"OKAY"}$$

CHECK OVERTURNING

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stablity of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1

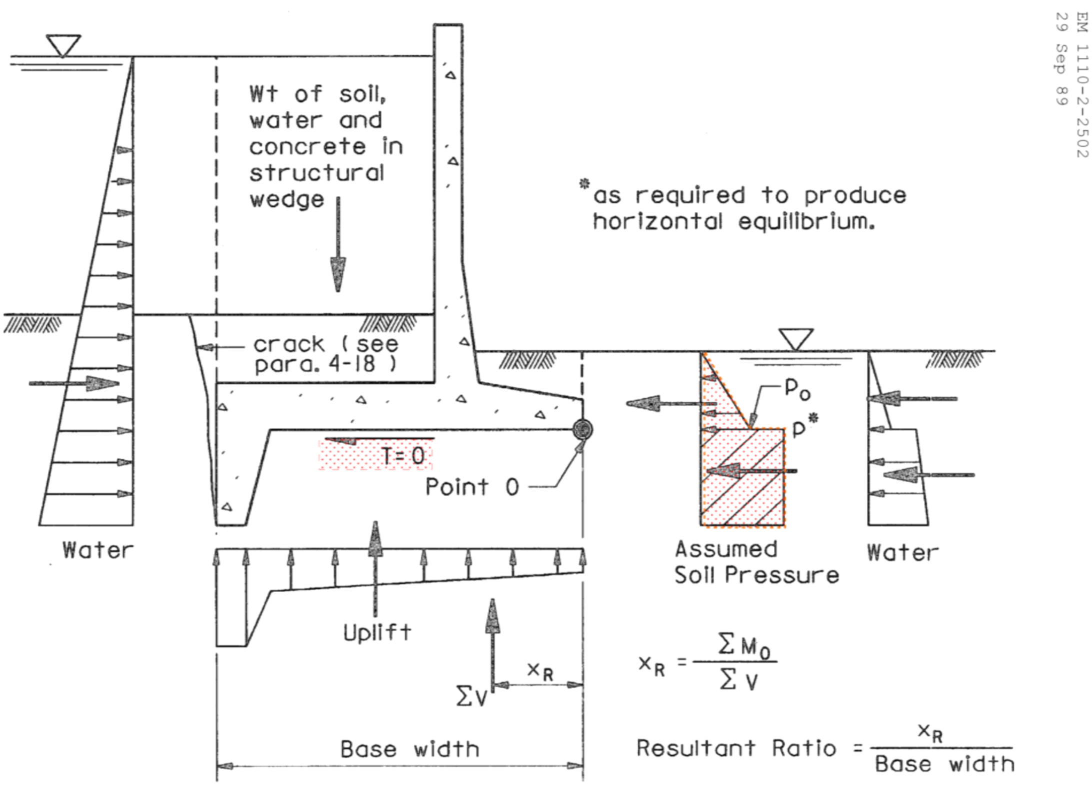


Figure 4-5. Forces for overturning analysis for wall with horizontal base and key

Modify Uplift for Overturning Analysis: **LOAD CASE E1**

(Uplift is calculated along the concrete/rock contact using the Line of Creep method)

Water Pressure at h: $u_{h.E1} := \Delta h_{g.hj.E1} \cdot \gamma_w = 112.70 \cdot kPa$

Water Pressure at o: $u_{o.E1} := \left(\Delta h_{g.no.E1} - \frac{\Delta h_{g.r.E1} \cdot L_{ho.E1}}{L_{ho.E1}} \right) \cdot \gamma_w = 53.9 \cdot kPa$

Head loss between point h and o: $\Delta h_{ho.E1} := \Delta h_{g.r.E1} \cdot \frac{L_{ho.E1}}{L_{ho.E1}} = 3\,m$

Length of concrete base (h -> o): $L_{baseho.E1} := Key_{h.w} + Key_{h.d} + Key_{hdist} + Key_{t.d} + Key_{t.w} = 15.5\,m$

Head loss along h -> j: $\Delta h_{hj.E1} := \Delta h_{ho.E1} \cdot \frac{Key_{h.w}}{L_{baseho.E1}} = 0.194\,m$

Water Pressure at j: $u_{j.E1} := \left(\Delta h_{g.hj.E1} - \Delta h_{hj.E1} \right) \cdot \gamma_w = 110.80 \cdot kPa$

Head loss along h -> k: $\Delta h_{hjk.E1} := \Delta h_{ho.E1} \cdot \left(\frac{Key_{h.w} + Key_{h.d}}{L_{baseho.E1}} \right) = 0.774\,m$

Water Pressure at k: $u_{k.E1} := \left(\Delta h_{g.km.E1} - \Delta h_{hjk.E1} \right) \cdot \gamma_w = 75.71 \cdot kPa$

Head loss along h -> m: $\Delta h_{hjkm.E1} := \Delta h_{ho.E1} \cdot \left(\frac{Key_{h.w} + Key_{h.d} + Key_{hdist}}{L_{baseho.E1}} \right) = 3\,m$

Water Pressure at m: $u_{m.E1} := \left(\Delta h_{g.km.E1} - \Delta h_{hjkm.E1} \right) \cdot \gamma_w = 53.90 \cdot kPa$

Head loss along h -> n: $\Delta h_{hjkmn.E1} := \Delta h_{ho.E1} \cdot \left(\frac{Key_{h.w} + Key_{h.d} + Key_{hdist} + Key_{t.d}}{L_{baseho.E1}} \right) = 3\,m$

Water Pressure at n: $u_{n.E1} := \left(\Delta h_{g.no.E1} - \Delta h_{hjkmn.E1} \right) \cdot \gamma_w = 53.90 \cdot kPa$

Uplift under key at heel: $V_{ulkeyhE1.OT} := \frac{\left(u_{h.E1} + u_{j.E1} \right) \cdot Key_{h.w}}{2} \cdot B \cdot -1 = -111.752 \cdot kN$

Moment Arm (from Point O): $V_{ulkeyhE1loc.OT} := b - \frac{Key_{h.w} \cdot \left(2 \cdot u_{j.E1} + u_{h.E1} \right)}{3 \cdot \left(u_{j.E1} + u_{h.E1} \right)} = 12.001\,m$

Uplift under base: $V_{ulbaseE1.OT} := \frac{\left(u_{k.E1} + u_{m.E1} \right) \cdot Key_{hdist}}{2} \cdot B \cdot -1 = -745.274 \cdot kN$

Moment Arm (from Point O): $V_{ulbaseE1loc.OT} := b - Key_{h.w} - \frac{Key_{hdist} \cdot \left(2 \cdot u_{m.E1} + u_{k.E1} \right)}{3 \cdot \left(u_{m.E1} + u_{k.E1} \right)} = 6.073\,m$

Uplift under key at toe $V_{ulkeytE1.OT} := \frac{\left(u_{n.E1} + u_{o.E1} \right) \cdot Key_{t.w}}{2} \cdot B \cdot -1 = 0 \cdot kN$

Moment Arm (from Point O): $V_{ulkeytE1loc.OT} := \frac{Key_{t.w} \cdot \left(2 \cdot u_{n.E1} + u_{o.E1} \right)}{3 \cdot \left(u_{n.E1} + u_{o.E1} \right)} = 0$

$$\Sigma V_{UpliftE1.OT} := V_{ulkeyhE1.OT} + V_{ulbaseE1.OT} + V_{ulkeytE1.OT} = -857 \cdot kN$$

$$U_{E1.loc.OT} := \frac{V_{ulkeyhE1.OT} \cdot V_{ulkeyhE1loc.OT} + V_{ulbaseE1.OT} \cdot V_{ulbaseE1loc.OT} + V_{ulkeytE1.OT} \cdot V_{ulkeytE1loc.OT}}{\Sigma V_{UpliftE1.OT}} = 6.85\,m$$

$$\Sigma M_{UpliftE1.OT} := \Sigma V_{UpliftE1.OT} \cdot U_{E1.loc.OT} = -5866.9 \cdot kN \cdot m$$

LOAD CASE E1

Modify Lateral Water Pressure (Resisting) for Overturning Analysis:

(Resisting water pressure is calculated using the Line of Creep method)

Water Load at Key (heel): $H_{h2E1.OT} := \frac{u_{k.E1} + u_{j.E1}}{2} \cdot Key_{h.d} B = 279.8 \cdot kN$

Moment Arm (from Point O): $H_{h2locE1.OT} := \frac{Key_{h.d} \cdot (2 \cdot u_{k.E1} + u_{j.E1})}{3(u_{k.E1} + u_{j.E1})} + Key_{vdist} = -1.59\ m$

Water Load at Key (toe): $H_{h6E1.OT} := \frac{u_{o.E1} \cdot (UWSEL_{E1} - Bot_{ftg} + Key_{t.d})}{2} \cdot B = 148 \cdot kN$

Moment Arm (from Point O): $H_{h6locE1.OT} := \frac{UWSEL_{E1} - Bot_{ftg} + Key_{t.d}}{3} = 1.83\ m$

$$\Sigma H_{waterresistE1.OT} := H_{h2E1.OT} + H_{h6E1.OT} = 428 \cdot kN$$

$$H_{waterresistlocE1.OT} := \frac{H_{h2E1.OT} \cdot H_{h2locE1.OT} + H_{h6E1.OT} \cdot H_{h6locE1.OT}}{\Sigma H_{waterresistE1.OT}} = -0.407\ m$$

$$\Sigma M_{waterresistE1.OT} := \Sigma H_{waterresistE1.OT} \cdot H_{waterresistlocE1.OT} = -174.23 \cdot kN \cdot m$$

Modify Lateral Soil Loads for Overturning Analysis:

(Lateral soil loads are calculated down to Point O instead of bottom of shear key)

Driving Soil Load (Headwater Side):

Surcharge Load: $E_{s1E1.OT} := S1_{E1} \cdot K_{Aagwt} \cdot (H_w + Key_{h.d} + Key_{vdist}) \cdot B \cdot -1 = 0 \cdot kN$

Moment Arm (from Point O): $E_{s1locE1.OT} := \frac{H_w + Key_{h.d} + Key_{vdist}}{2} = 7.25\ m$

Moist Soil Load above GWL: $E_{h1E1.OT} := \frac{\gamma_m \cdot K_{Aagwt} \cdot h_{1E1}^{\ 2}}{2} B \cdot -1 = -135.2 \cdot kN$

Moment Arm (from Point O): $E_{h1locE1.OT} := \frac{h_{1E1}}{3} + h_{2E1} + Key_{vdist} = 10.50\ m$

Saturated Soil Load below GWL:
(rectangular component) $E_{h2E1.OT} := (\gamma_m \cdot K_{Aagwt} \cdot h_{1E1}) \cdot (h_{2E1} + Key_{vdist}) \cdot B \cdot -1 = -383.0 \cdot kN$

Moment Arm (from Point O): $E_{h2locE1.OT} := \frac{h_{2E1} + Key_{vdist}}{2} = 4.25\ m$

Saturated Soil Load below GWL:
(triangular component) $E_{h2aE1.OT} := \frac{(\gamma_{sat} - \gamma_w) \cdot K_{Aagwt} \cdot (h_{2E1} + Key_{vdist})^2}{2} \cdot B \cdot -1 = -165.5 \cdot kN$

Moment Arm (from Point O): $E_{h2alocE1.OT} := \frac{h_{2E1} + Key_{vdist}}{3} = 2.83\ m$

Resisting Soil Load (Tailwater Side):

LOAD CASE E1

(Determine resisting soil load based on depth variation between the keys (ie. Key_{vdist}). In case where key at heel is deeper than key at toe (ie. Key_{vdist}< 0), resisting soil load (p*) is assumed to produce horizontal equilibrium as per Figure 4-5 above. Resisting soil load (p_o) is neglected.)

Total Driving Force:

$$\Sigma H_{SoildriveE1.OT} := E_{s1E1.OT} + E_{h1E1.OT} + E_{h2E1.OT} + E_{h2aE1.OT} + H_{h2E1} \cdots + Q_{h.conc} + Q_{h.SoilWaterE1} = -1798.7 \cdot kN$$

Total Resisting Force:

$$\Sigma H_{waterresistE1.OT} = 427.999 \cdot kN$$

Assumed Soil Load p*:

$$E_{h8E1a.OT} := \left(\Sigma H_{SoildriveE1.OT} + \Sigma H_{waterresistE1.OT}\right) \cdot -1 = 1370.683 \cdot kN$$

Moment Arm (from Point O):

$$E_{h8E1a.loc.OT} := \frac{Key_{vdist}}{2} = -1.5\,m$$

$$E_{h8E1.OT} := \begin{cases} E_{h8E1a.OT} & \text{if } Key_{vdist} < 0 \\ \Sigma H_{SoilresistE1} - H_{h6E1} - H_{h2aE1} & \text{otherwise} \end{cases} = 1370.683 \cdot kN$$

$$\Sigma M_{SoilresistE1} := \begin{cases} E_{h8E1a.OT} \cdot E_{h8E1a.loc.OT} & \text{if } Key_{vdist} < 0 \\ \Sigma M_{HorizSoilResistE1} - H_{h6E1} \cdot H_{h6locE1} - H_{h2aE1} \cdot H_{h2alocE1} & \text{otherwise} \end{cases} = -2056.025 \cdot kN \cdot m$$

Sum of Moment about Point O:

$$\Sigma M_{LateraldriveE1.OT} := E_{s1E1.OT} \cdot E_{s1locE1.OT} + E_{h1E1.OT} \cdot E_{h1locE1.OT} + E_{h2E1.OT} \cdot E_{h2locE1.OT} \cdots + E_{h2aE1.OT} \cdot E_{h2alocE1.OT} + H_{h2E1} \cdot H_{h2locE1} = -4056.3 \cdot kN \cdot m$$

$$\Sigma M_{LateralresistE1.OT} := \Sigma M_{waterresistE1.OT} + \Sigma M_{SoilresistE1} = -2230.3 \cdot kN \cdot m$$

$$\Sigma M_{seisE1.OT} := M_{Qv.conc} + M_{Q.conc} + M_{Qv.SoilWaterE1} + M_{Q.h.SoilWaterE1} = -5283 \cdot kN \cdot m$$

(seismic moment modified for the most adverse overturning effect)

Total moment:

$$\Sigma M_{E1.OT} := \Sigma M_{conc} + \Sigma M_{VertSoilWaterResistE1} + \Sigma M_{UpliftE1.OT} + \Sigma M_{LateraldriveE1.OT} + \Sigma M_{LateralresistE1.OT} + \Sigma M_{seisE1.OT} = 6859.3 \cdot kN \cdot m$$

Total Vertical Force:

$$\Sigma V_{E1.OT} := \Sigma V_{conc} + \Sigma V_{SoilWaterE1} + \Sigma V_{UpliftE1.OT} + Q_{v.conc} + Q_{v.SoilWaterE1} = 2184.3 \cdot kN$$

Distance X_R: EM 1110-2-2502 Eq.4-1

$$X_{R.E1} := \frac{\Sigma M_{E1.OT}}{\Sigma V_{E1.OT}} = 3.14\,m$$

Overturning Resultant Ratio

$$Ratio_{E1.OT} := \frac{X_{R.E1}}{b} = 0.25$$

$$Ratio_{E1.OT.check} := \begin{cases} \text{"OKAY "} & \text{if } Ratio_{E1.OT} > X_{R.reqE1} \\ \text{"Revise Structure""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

CHECK FOUNDATION ECCENTRICITY (HORIZONTAL PLANE):

Eccentricity (horizontal plan):

$$ex_{E1.OT} := \frac{b}{2} - \frac{\Sigma M_{E1.OT}}{\Sigma V_{E1.OT}} = 3.11\,m \qquad Kern_{E1.OT} := \frac{b}{4} = 3.125\,m$$

Eccentricity Check:

$$e_{check.E1.OT} := \begin{cases} \text{"Okay"} & \text{if } ex_{E1.OT} \le Kern_{E1.OT} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"Okay"}$$

CHECK FOUNDATION BEARING CAPACITY (HORIZONTAL PLANE):

Base Section Modulus: $S_{b.OT} = 26.04\,m^3$

Bearing Pressure Under Toe:

$$\sigma_{ToeE1.OT} := \begin{cases} \left(\dfrac{\Sigma V_{E1.OT}}{b \cdot B} + \dfrac{\Sigma V_{E1.OT} \cdot ex_{E1.OT}}{S_{b.OT}}\right) & \text{if } \dfrac{\Sigma V_{E1.OT}}{b \cdot B} \geq \dfrac{\Sigma V_{E1.OT} \cdot ex_{E1.OT}}{S_{b.OT}} \\ \dfrac{2 \cdot \Sigma V_{E1.OT}}{B \cdot 3\left(\dfrac{b}{2} - ex_{E1.OT}\right)} & \text{otherwise} \end{cases} = 463.7 \cdot kPa$$

$$Bearing_{ChecktoeE1.OT} := \begin{cases} \text{"OKAY "} & \text{if } \sigma_{ToeE1.OT} < \sigma_{allowE1} \\ \text{"NG - for reference only""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

Bearing Pressure Under Heel:

$$\sigma_{HeelE1.OT} := \begin{cases} \left(\dfrac{\Sigma V_{E1.OT}}{b \cdot B} - \dfrac{\Sigma V_{E1.OT} \cdot ex_{E1.OT}}{S_{b.OT}}\right) & \text{if } \dfrac{\Sigma V_{E1.OT}}{b \cdot B} \geq \dfrac{\Sigma V_{E1.OT} \cdot ex_{E1.OT}}{S_{b.OT}} \\ 0 & \text{otherwise} \end{cases} = 0.0 \cdot kPa$$

$$Bearing_{CheckheelE1.OT} := \left(\begin{cases} \text{"OKAY "} & \text{if } \sigma_{HeelE1.OT} < \sigma_{allowE1} \wedge \sigma_{HeelE1.OT} > 0 \\ \text{"NG - for reference only""} & \text{otherwise} \end{cases}\right) = \text{"NG - for reference only""}$$

SUMMARY OF STABILITY ASSESSMENT:

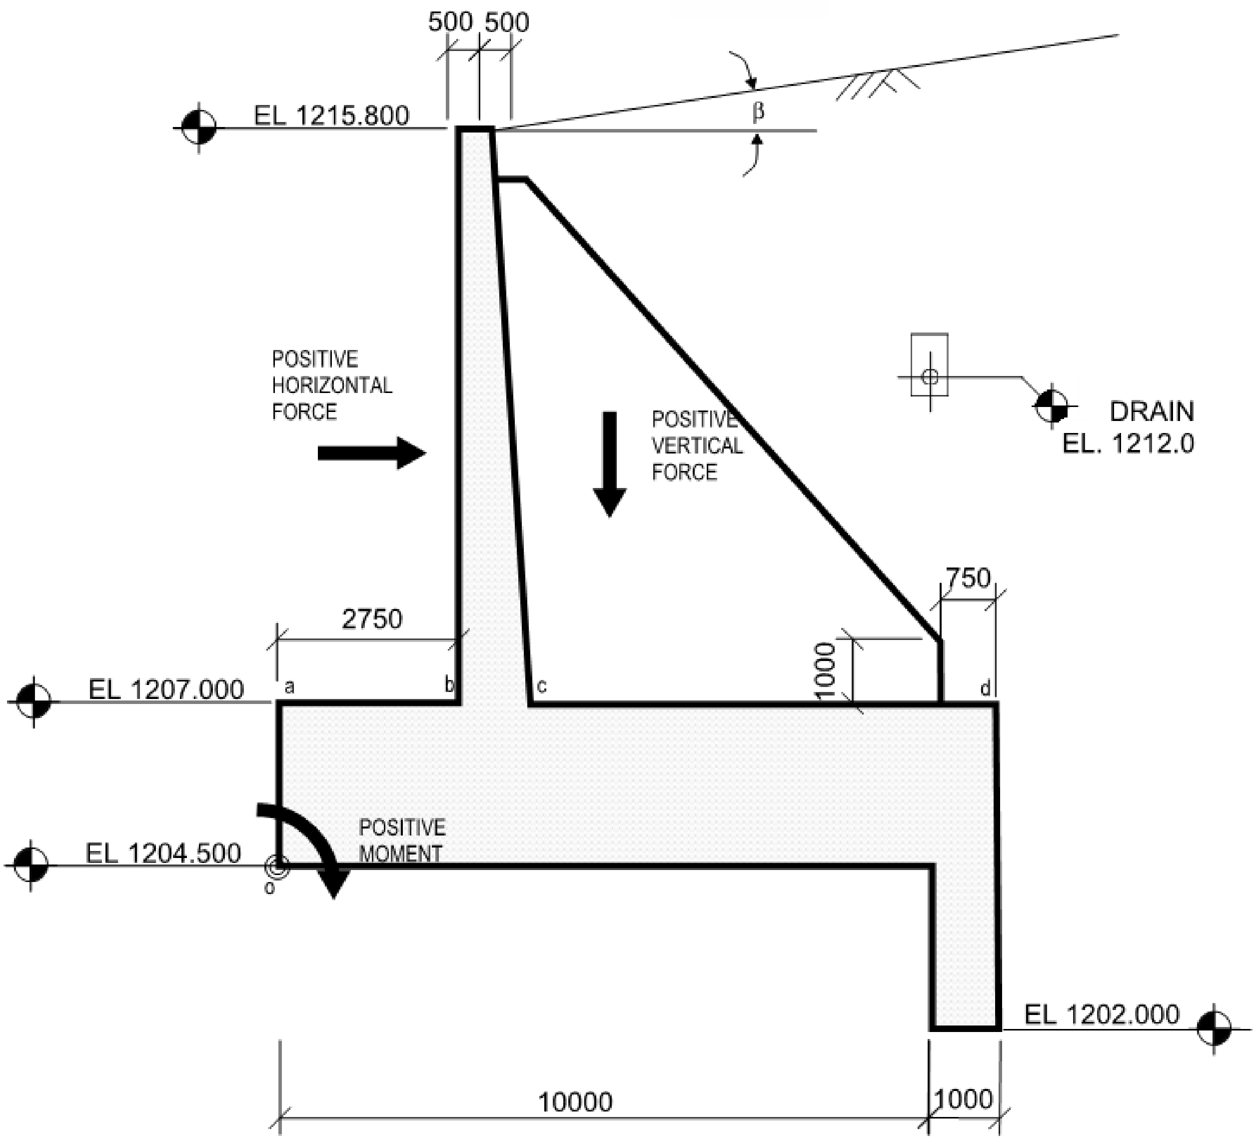
SS-5D (Midsection) Retaining Wall Stability Calculations

Project Number:	110773396
Project Title:	SR1 - Diversion Structure
Client:	Alberta Transportation
Engineer:	Lawrence Choi — Date: 12/11/2018
Checker:	Sean Xiao — Date: 12/18/2018

Calculation for: Retaining Wall - Service Spillway Left - Block 5D (Mid-section)



(DIMENSIONS BASED ON MID SECTION)

REGION COLOR CONVENTION

User Input

Calulation Highlights

Results

WALL GEOMETRY:

Top of Wall Elevation: $T_w := 1215.8 \cdot m$

Top of Footing Elevation: $Top_{ftg} := 1207.0 \cdot m$

Thickness of Footing: $t_{ftg} := 2.5m$

Bottom of Footing Elevation: $Bot_{ftg} := Top_{ftg} - t_{ftg} = 1204.5\ m$

Overall Height of wall: $h_w := T_w - Bot_{ftg} = 11.30\ m$

Thickness of Wall: Base: $t_{wb} := 1.191 \cdot m$ Top: $t_{wt} := 0.50m$

Length of toe: $L_{ab} := 2.75m$

Total Length of Footing: $b := 11.0m$

Length of heel: $L_{cd} := b - L_{ab} - t_{wb} = 7.059\ m$

Unit Width of Wall for analysis: $B := 1.00m$

SHEAR KEY GEOMETRY:

	Toe	Heel	
Key depth:	$Key_{t.d} := 0m$	$Key_{h.d} := 2.5m$	(Assumption: $Key_{h.d}$ >= $Key_{t.d}$)
Key width:	$Key_{t.w} := 0m$	$Key_{h.w} := 1m$	
Face of Key from Point O:	$Key_{t.loc} := 0 \cdot m$	$Key_{h.loc} := b - Key_{h.w} = 10\ m$	

Horizontal Distance between Keys: $Key_{hdist} := Key_{h.loc} - Key_{t.loc} - Key_{t.w} = 10\ m$

Key Depth Diff. (from point O): $Key_{vdist} := -Key_{h.d} + Key_{t.d} = -2.5\ m$

BASE PROPERTIES:

Base Area: $A_b := b \cdot B = 11\ m^2$

Centroidal Distance for Footing (from Toe): $Y_f := \frac{b}{2} = 5.50\ m$

RETAINED SOIL GEOMETRY:

Slope of retained ground surface: $\beta := 0 \cdot \frac{\pi}{180} = 0.00$

Height of retained earth at heel: $H_w := T_w - Bot_{ftg} + \left(t_{wb} + L_{cd} - t_{wt}\right) \cdot \tan(\beta) = 11.30\ m$

RETAINING WALL GEOMETRY CHECKS:

(Foundation Analysis & Design Bowles)

$$t_{bcheck} := \begin{cases} \text{"OKAY"} & \text{if } t_{ftg} \ge \frac{H_w}{12} \\ \text{"Warning"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

$$t_{wcheck} := \begin{cases} \text{"OKAY"} & \text{if } t_{wb} \ge \frac{H_w}{12} \\ \text{"Warning"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

$$b_{check} := \begin{cases} \text{"OKAY"} & \text{if } \frac{b}{H_w} \ge .4 \wedge \frac{b}{H_w} \le 80 \\ \text{"Warning"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

$$L_{abcheck} := \begin{cases} \text{"OKAY"} & \text{if } \frac{L_{ab}}{b} \ge .25 \wedge \frac{L_{ab}}{b} \le .4 \\ \text{"Warning"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

Material Properties:

Unit Weight of Water: $\gamma_w := 9.8 \frac{kN}{m^3}$ (Section 7.2, Design Criteria)

Unit Weight of Concrete: $\gamma_c := 23.5 \frac{kN}{m^3}$

Unit Weight of Soil (Moist): $\gamma_m := 20.0 \frac{kN}{m^3}$ (Section 5.3, Design Criteria)
assumed moisture content (w) = 5%

Unit Weight Soil (Saturated): $\gamma_{sat} := 22.0 \frac{kN}{m^3}$ (Assuming Specific Gravity = 2.7

Unit Weight Soil (buoyant): $\gamma_b := \gamma_{sat} - \gamma_w = 12.2 \cdot \frac{kN}{m^3}$

Weight of Soil/Concrete above toe: $\gamma_{toe} := 22.0 \frac{kN}{m^3}$

Unit Weight of Rock: $\gamma_r := 25.6 \frac{kN}{m^3}$ (Section 7.2, Design Criteria)

Foundation Parameters:

Glacial Till Internal Friction: $\phi := 27 \cdot \frac{\pi}{180} = 0.471$

Bedrock Internal Friction Angle: $\phi_r := 24 \cdot \frac{\pi}{180} = 0.419$

Friction Angle at Base
Concrete / Rock Interface: $\phi_{rock} := 26$

Base Friction Coefficient: $\tan_{\phi rock} := \tan\left(\phi_{rock} \frac{\pi}{180}\right) = 0.488$ radians

Rip Rap Backfill, Refer Dwg. C-214 $\phi_{backfill} := \left(20 \frac{\pi}{180}\right) = 0.349$ radians

Shear strength along rock
Failure plane $s_r := \frac{13100 \frac{kN}{m^2}}{2} = 6550 \cdot \frac{kN}{m^2}$ (Stantec Design Memo 8/8/16)

CONCRETE DEAD LOAD:

Area of Footing: $A_{ftg} := t_{ftg} \cdot b = 27.5\,m^2$

Weight of Footing: $D_{ftg} := A_{ftg} \cdot B \cdot \gamma_c = 646.3 \cdot kN$

Area of Stem (without batter): $A_{w1} := t_{wt} \cdot (h_w - t_{ftg}) = 4.4\,m^2$

Weight of Stem: $D_{w1} := A_{w1} \cdot B \cdot \gamma_c = 103.4 \cdot kN$

Area of stem Batter: $A_{w2} := \frac{(t_{wb} - t_{wt})}{2} (h_w - t_{ftg}) = 3.04\,m^2$

Weight of Batter: $D_{w2} := A_{w2} \cdot B \cdot \gamma_c = 71.4 \cdot kN$

Slope of batter: $S_{batter} := \frac{t_{wb} - t_{wt}}{h_w - t_{ftg}} = 0.079$

Area of Key $A_{t.key} := Key_{t.d} \cdot Key_{t.w} = 0$ $A_{h.key} := Key_{h.d} \cdot Key_{h.w} = 2.5\,m^2$

Weight of Key $D_{t.key} := A_{t.key} \cdot B \cdot \gamma_c = 0 \cdot kN$ $D_{h.key} := A_{h.key} \cdot B \cdot \gamma_c = 58.8 \cdot kN$

Centroidal Horizontal Distance of Wall (From Toe):

$$H_{cent} := \frac{A_{w1} \cdot \left(L_{ab} + \frac{t_{wt}}{2}\right) + A_{w2} \cdot \left(L_{ab} + t_{wt} + \frac{t_{wb} - t_{wt}}{3}\right) + A_{ftg} \cdot \frac{b}{2} + A_{t.key} \cdot \left(Key_{t.loc} + \frac{Key_{t.w}}{2}\right) + A_{h.key} \cdot \left(Key_{h.loc} + \frac{Key_{h.w}}{2}\right)}{A_{w1} + A_{w2} + A_{ftg} + A_{t.key} + A_{h.key}} = 5.38\,m$$

Centroidal Vertical Distance of Wall (Above Base of Footing):

$$V_{Cent} := \frac{A_{ftg} \cdot \frac{t_{ftg}}{2} + A_{w1} \cdot \left[t_{ftg} + \frac{(h_w - t_{ftg})}{2}\right] + A_{w2} \cdot \left[t_{ftg} + \frac{(h_w - t_{ftg})}{3}\right] + A_{t.key} \cdot \left(\frac{-Key_{t.d}}{2}\right) + A_{h.key} \cdot \left(\frac{-Key_{h.d}}{2}\right)}{A_{ftg} + A_{w1} + A_{w2} + A_{t.key} + A_{h.key}} = 2.09\,m$$

$\Sigma V_{conc} := D_{ftg} + D_{w1} + D_{w2} + D_{t.key} + D_{h.key} = 879.8 \cdot kN$

$\Sigma M_{conc} := \Sigma V_{conc} \cdot H_{cent} = 4730.1\,m \cdot kN$

ROCK SECTION MOBILIZED FOR INCLINDED SLIDING FAILURE

Area of Rock Section Mobilized: $A_{rocksection} := (Key_{t.d} + Key_{h.d}) \cdot \frac{Key_{hdist}}{2} = 12.5\,m^2$

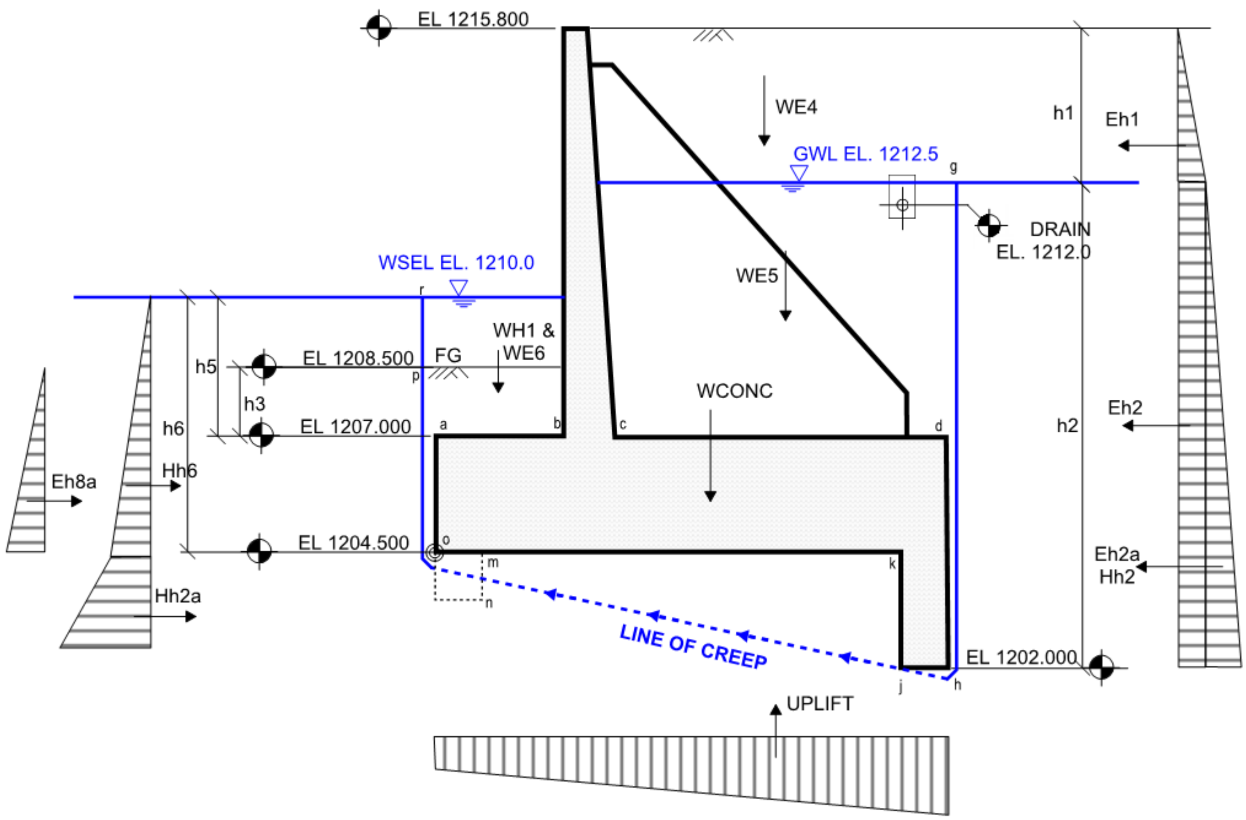
Rock Mass Mobilized: $V_{rocksection} := A_{rocksection} \cdot \gamma_r \cdot B = 320 \cdot kN$

(Pore pressure taken along assumed inclined sliding plane)

Distance from Toe to COG of Rock Section: $L_{rocksection} := \frac{Key_{hdist} \cdot (2 \cdot Key_{h.d} + Key_{t.d})}{3(Key_{h.d} + Key_{t.d})} + Key_{t.w} = 6.667\,m$

$\Sigma M_{rocksection} := V_{rocksection} \cdot L_{rocksection} = 2133.3\,m \cdot kN$

LOAD CASE U1 - NORMAL OPERATION



U1 DESIGN CASE

LOAD CASE U1 ACCEPTANCE PARAMETERS

FS sliding:

Usual (U) 1.5 (without cohesion) (Table 3-3, USACE EM 1110-2-2100)

Resultant Location:

Usual (U) Inside middle third ~100% base in compression

Required Factor of Safety for Sliding: $FS_{sliding.reqU1} := 1.5$ (Without Cohesion)

Allowable rock bearing pressure: $\sigma_{allowU1} := 1270kPa$ (Section 5.2, Design Criteria EM 1110-2-2100 Section 3-10)

Overturning Required Resultant Ratio: $X_{R.reqU1} := 0.333$ (EM 1110-2-2502, Figure 4-4)

Required Factor of Safety for Floatation $FS_{req.U1.flt} := 1.5$

SOIL HEIGHTS and Water Levels:

LOAD CASE U1

Heel Conditions:

Groundwater Elevation at Heel: $GWL_{U1} := 1212.5m$

Distance from Finish Grade to Groundwater at Heel: $h_{1U1} := \left[T_w - GWL_{U1} + \left(L_{cd} + t_{wb} - t_{wt}\right)\cdot \tan(\beta)\right] = 3.30\ m$

Distance from Water Surface to Bottom of Footing at Heel: $h_{2U1} := GWL_{U1} - Bot_{ftg} + Key_{h.d} = 10.50\ m$

Toe Conditions:

Water Surface Elevation at Toe: $WSEL_{U1} := 1210.0m$

Water Surface Elevation at Toe for Uplift: $UWSEL_{U1} := 1210.0\cdot m$

Finish Grade at Toe providing lateral resistance: $FG_{toeU1} := 1208.5\cdot m$

Soil Depth Above top of footing: $h_{3aU1} := FG_{toeU1} - Top_{ftg} = 1.5\ m$

$$h_{3U1} := \begin{cases} h_{3aU1} & \text{if } FG_{toeU1} - Top_{ftg} \ge 0 \\ 0 & \text{otherwise} \end{cases} = 1.5$$

Resisting Fill at Toe: $h_{4U1} := FG_{toeU1} - Bot_{ftg} + Key_{t.d} = 4.00\ m$

Distance from Water Level to Top of Footing: $h_{5U1} := WSEL_{U1} - Top_{ftg} = 3.00\ m$

Distance from Water Surface to Bottom of Footing: $h_{6U1} := WSEL_{U1} - Bot_{ftg} + Key_{t.d} = 5.50\cdot m$

Soil Depth Above WSEL: $h_{7aU1} := FG_{toeU1} - WSEL_{U1} = -1.5\ m$

$$h_{7U1} := \begin{cases} h_{7aU1} & \text{if } FG_{toeU1} - WSEL_{U1} \ge 0 \\ 0 & \text{otherwise} \end{cases} = 0$$

Soil Depth Below WSEL:

$$h_{8U1} := \begin{cases} WSEL_{U1} - Bot_{ftg} + Key_{t.d} & \text{if } FG_{toeU1} - WSEL_{U1} \ge 0 \\ h_{4U1} & \text{otherwise} \end{cases} = 4$$

For Line of Creep Method: $L_{ho.U1} := \sqrt{b^2 + \left(Key_{h.d} - Key_{t.d}\right)^2} = 11.281\ m$

Head Loss from Point g:

$\Delta h_{g.hj.U1} := h_{2U1} = 10.5\ m$ (to point h & j)

$\Delta h_{g.km.U1} := GWL_{U1} - Bot_{ftg} = 8\ m$ (to point k & m)

$\Delta h_{g.no.U1} := GWL_{U1} - Bot_{ftg} + Key_{t.d} = 8\ m$ (to point n & o)

$\Delta h_{g.p.U1} := GWL_{U1} - FG_{toeU1} = 4\ m$ (to point p)

$\Delta h_{g.r.U1} := GWL_{U1} - UWSEL_{U1} = 2.5\ m$ (to point r)

Surcharge

Surcharge on Heel: $S1_{U1} := 0.0\ \frac{kN}{m^2}$

LOAD CASE U1

Calculate Soil Lateral Pressure Coefficients:

For all load cases except seismic, soil loading to be based on At-Rest Condition.
Calculate at-rest pressure coefficient Ko based on Jaky's (1944) equation.

Soil At Rest Static Coefficient: $K_o := \dfrac{1 - \sin(\phi)}{1 + \sin(\beta)} = 0.546$ (Eq. 3-6, USACE EM 1110-2-2502)

Lateral - Driving Force (Headwater Side)

Lateral Soil Load:

Surcharge Load: $E_{s1U1} := S1_{U1} \cdot K_o \cdot \left(H_w + Key_{h.d}\right) \cdot B \cdot -1 = 0 \cdot kN$

Moment Arm (from bottom of footing): $E_{s1locU1} := \dfrac{H_w + Key_{h.d}}{2} + Key_{vdist} = 4.40\ m$

Moist Soil Load above GWL: $E_{h1U1} := \dfrac{\gamma_m \cdot K_o \cdot h_{1U1}^2}{2} B \cdot -1 = -59.5 \cdot kN$

Moment Arm (from bottom of footing): $E_{h1locU1} := \dfrac{h_{1U1}}{3} + h_{2U1} + Key_{vdist} = 9.10\ m$

Saturated Soil Load below GWL:
(rectangular component) $E_{h2U1} := \left(\gamma_m \cdot K_o \cdot h_{1U1}\right) \cdot \left(h_{2U1}\right) \cdot B \cdot -1 = -378.4 \cdot kN$

Moment Arm (from bottom of footing): $E_{h2locU1} := \dfrac{h_{2U1}}{2} + Key_{vdist} = 2.75\ m$

Saturated Soil Load below GWL:
(triangular component) $E_{h2aU1} := \dfrac{\left(\gamma_{sat} - \gamma_w\right) \cdot K_o \cdot h_{2U1}^2}{2} \cdot B \cdot -1 = -367.2 \cdot kN$

Moment Arm (from bottom of footing): $E_{h2alocU1} := \dfrac{h_{2U1}}{3} + Key_{vdist} = 1.00\ m$

Lateral Water Load:

Water Load GWL to Bottom of Key $H_{h2U1} := \dfrac{\gamma_w \cdot h_{2U1}^2}{2} \cdot B \cdot -1 = -540.2 \cdot kN$

Moment Arm (from bottom of footing): $H_{h2locU1} := \dfrac{h_{2U1}}{3} + Key_{vdist} = 1.00\ m$

$\Sigma H_{SoildriveU1} := E_{s1U1} + E_{h1U1} + E_{h2U1} + E_{h2aU1} + H_{h2U1} = -1345.3 \cdot kN$

$$\Sigma M_{LateralSoildriveU1} := E_{s1U1} \cdot E_{s1locU1} + E_{h1U1} \cdot E_{h1locU1} + E_{h2U1} \cdot E_{h2locU1} \ldots = -2489.1\ m \cdot kN$$
$$+ E_{h2aU1} \cdot E_{h2alocU1} + H_{h2U1} \cdot H_{h2locU1}$$

Lateral - Resisting Force (Tailwater Side)

LOAD CASE U1

Lateral Water Load:

Water Load WSEL to Bot. of Footing: $H_{h6U1} := \frac{\gamma_w \cdot h_{6U1}^2}{2} \cdot B = 148.2 \cdot kN$

Moment Arm (from bot. of toe key): $H_{h6locU1} := \frac{h_{6U1}}{3} = 1.83\ m$

Water Load Bot. of Footing to Bot. of H. Key: $H_{h2aU1} := \left[\left(UWSEL_{U1} - Bot_{ftg} + Key_{t.d}\right) + h_{2U1}\right] \cdot \frac{Key_{h.d}}{2} \cdot \gamma_w \cdot B = 196.0 \cdot kN$

Moment Arm (from bot. of toe key): $H_{h2alocU1} := \frac{Key_{h.d} \cdot \left[2 \cdot \left(UWSEL_{U1} - Bot_{ftg} + Key_{t.d}\right) + h_{2U1}\right]}{3\left[h_{2U1} + \left(UWSEL_{U1} - Bot_{ftg} + Key_{t.d}\right)\right]} \ldots = -1.38\ m$
$+ Key_{vdist}$

Lateral Soil Load:

Moist Soil Load above WSEL: $E_{h7U1} := \frac{\gamma_m \cdot K_o \cdot h_{7U1}^2}{2} \cdot B = 0.0 \cdot kN$

Moment Arm (from bot. of toe key): $E_{h7locU1} := h_{6U1} + \frac{h_{7U1}}{3} + Key_{vdist} = 3.00\ m$

Saturated Soil Load below WSEL:
(rectangular component) $E_{h8U1} := \left(\gamma_m \cdot K_o \cdot h_{7U1}\right) \cdot h_{8U1} \cdot B = 0.0 \cdot kN$

Moment Arm (from bot. of toe key): $E_{h8locU1} := \frac{h_{8U1}}{2} = 2.00\ m$

Saturated Soil Load below WSEL:
(triangular component) $E_{h8aU1} := \frac{\left[\left(\gamma_{sat} - \gamma_w\right) \cdot K_o\right] \cdot h_{8U1}^2}{2} \cdot B = 53.3 \cdot kN$

Moment Arm (from bot. of footing): $E_{h8alocU1} := \frac{h_{8U1}}{3} = 1.33\ m$

$\Sigma H_{SoilresistU1} := H_{h6U1} + H_{h2aU1} + E_{h7U1} + E_{h8U1} + E_{h8aU1} = 397.5 \cdot kN$

$\Sigma M_{HorizSoilResistU1} := H_{h6U1} \cdot H_{h6locU1} + H_{h2aU1} \cdot H_{h2alocU1} + E_{h7U1} \cdot E_{h7locU1} \ldots = 72.3\ m \cdot kN$
$+ E_{h8U1} \cdot E_{h8locU1} + E_{h8aU1} \cdot E_{h8alocU1}$

Vertical Force:

UPLIFT: Linear distribution from water at heel to water at toe:

$\Sigma V_{UpliftU1} := \left[\left(UWSEL_{U1} - Bot_{ftg} + Key_{t.d}\right) + h_{2U1}\right] \cdot \frac{b}{2} \cdot \gamma_w \cdot B \cdot -1 = -862.4 \cdot kN$

Moment Arm (from Point O): $V_{UpliftU1aloc} := \frac{b \cdot \left[2 \cdot h_{2U1} + \left(UWSEL_{U1} - Bot_{ftg} + Key_{t.d}\right)\right]}{3\left[h_{2U1} + \left(UWSEL_{U1} - Bot_{ftg} + Key_{t.d}\right)\right]} = 6.073\ m$

$\Sigma M_{UpliftU1} := \Sigma V_{UpliftU1} \cdot V_{UpliftU1aloc} = -5237.283 \cdot kN \cdot m$

Vertical Force (con't):

Weight of soil and water over toe:

Water Above the Top of Footing: $W_{H1U1} := \gamma_w \cdot h_{5U1} \cdot L_{ab} \cdot B = 80.85 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E1locU1} := \frac{L_{ab}}{2} = 1.375\,m$

Soil above top of footing: $W_{E6U1} := \gamma_b \cdot h_{3U1} \cdot L_{ab} \cdot B = 50.3 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E6locU1} := \frac{L_{ab}}{2} = 1.375\,m$

Vertical Load Due to Surcharge: $S_{U1} := S1_{U1} \cdot L_{cd} \cdot B = 0$ $\quad S_{U1loc} := b - \frac{L_{cd}}{2} = 7.47\,m$

Weight of soil and water over heel:

Moist Soil for sloped grade above top of wall:

Length of sloped portion of soil above top of wall: $L_{E3U1} := \left(L_{cd} + t_{wb} - t_{wt}\right) = 7.75\,m$

Height of sloped soil above top of wall over heel: $h_{E3locU1} := \left(L_{E3U1}\right) \cdot \tan(\beta) = 0.00\,m$

Weight of sloped soil above top of wall: $W_{E3U1} := \frac{\gamma_m}{2} \cdot h_{E3locU1} \cdot L_{E3U1} \cdot B = 0.0 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E3locU1} := L_{ab} + t_{wt} + \frac{2}{3} \cdot L_{E3U1} = 8.42\,m$

Moist soil from top of wall to groundwater level:

Height of soil from top of wall and top of GWL: $h_{1U1} = 3.30\,m$

Length from edge of wall at GWL to edge of heel: $L_{E4U1} := L_{E3U1} - \left(h_{1U1} \cdot S_{batter}\right) = 7.49\,m$

Weight of soil over heel from top of wall to GWL: $W_{E4U1} := \gamma_m \cdot h_{1U1} \cdot \frac{\left(L_{E3U1} + L_{E4U1}\right)}{2} \cdot B = 502.9 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E4locU1} := b - \frac{L_{E3U1}^2 + L_{E3U1} \cdot L_{E4U1} + L_{E4U1}^2}{3\left(L_{E3U1} + L_{E4U1}\right)} = 7.19\,m$

Saturated soil from groundwater to top of footing:

Height of soil from GWL to top of heel: $h_{E4U1} := h_{2U1} - t_{ftg} - Key_{h.d} = 5.50\,m$

Weight of soil over heel from GWL to top of heel: $W_{E5U1} := \left(\gamma_{sat}\right) \cdot h_{E4U1} \cdot \frac{\left(L_{E4U1} + L_{cd}\right)}{2} \cdot B = 880.3 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E5locU1} := b - \frac{L_{E4U1}^2 + L_{E4U1} \cdot L_{cd} + L_{cd}^2}{3\left(L_{E4U1} + L_{cd}\right)} = 7.36\,m$

$$\Sigma V_{SoilWaterU1} := W_{H1U1} + W_{E6U1} + W_{E3U1} + W_{E4U1} + W_{E5U1} + S_{U1} = 1514.4 \cdot kN$$

$$\Sigma M_{VertSoilWaterResistU1} := W_{H1U1} \cdot W_{E1locU1} + W_{E6U1} \cdot W_{E6locU1} \cdots + W_{E3U1} \cdot W_{E3locU1} + W_{E4U1} \cdot W_{E4locU1} + W_{E5U1} \cdot W_{E5locU1} + S_{U1} \cdot S_{U1loc} = 10276.3\,m \cdot kN$$

$$Bearing_{ChecktoeU1} := \begin{cases} \text{"OKAY "} & \text{if } \sigma_{ToeU1} < \sigma_{allowU1} \\ \text{"NG""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

Bearing Pressure Under Heel:

$$\sigma_{HeelU1} := \begin{cases} \left(\frac{\Sigma V_{InclinedU1}}{L_{incline} \cdot B} - \frac{\Sigma V_{InclinedU1} \cdot ex_{U1}}{S_b}\right) & \text{if } \frac{\Sigma V_{InclinedU1} \cdot ex_{U1}}{S_b} \le \frac{\Sigma V_{InclinedU1}}{L_{incline} \cdot B} \\ 0 & \text{otherwise} \end{cases} = 85.3 \cdot kPa$$

$$Bearing_{CheckheelU1} := \left(\begin{cases} \text{"OKAY "} & \text{if } \sigma_{HeelU1} < \sigma_{allowU1} \wedge \sigma_{HeelU1} > 0 \\ \text{"NG - perform cracked base analysis""} & \text{otherwise} \end{cases}\right) = \text{"OKAY "}$$

CHECK FLOATATION:

Safety Factor for Floatation:

$$FS_{FloatationU1} := \frac{\Sigma V_{conc} + \Sigma V_{SoilWaterU1}}{\left|\Sigma V_{UpliftU1}\right|} = 2.78$$

$$FS_{Floatation.U1.check} := \begin{cases} \text{"OKAY "} & \text{if } FS_{FloatationU1} > FS_{req.U1.flt} \\ \text{"Revise Structure""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

CHECK OVERTURNING

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stablity of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1

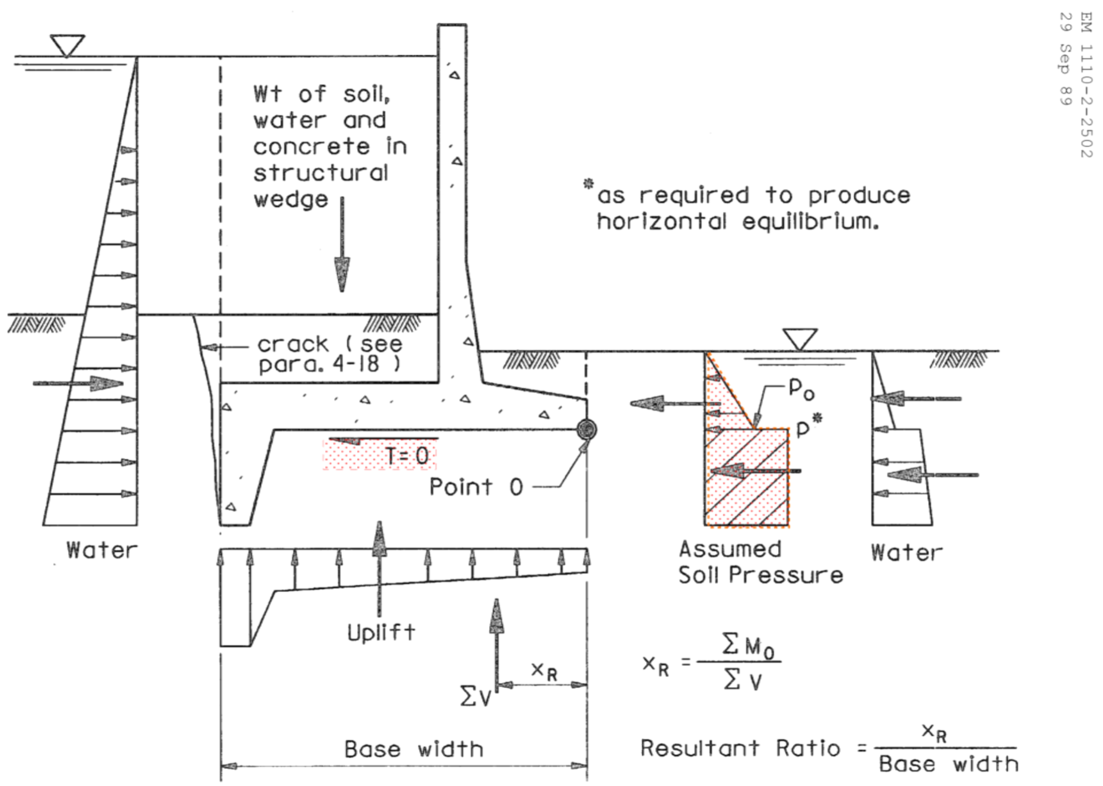

Figure 4-5. Forces for overturning analysis for wall with horizontal base and key

Modify Uplift for Overturning Analysis: **LOAD CASE U1**

(Uplift is calculated along the concrete/rock contact using the Line of Creep method)

Water Pressure at h: $u_{h.U1} := \Delta h_{g.hj.U1} \cdot \gamma_w = 102.90 \cdot kPa$

Water Pressure at o: $u_{o.U1} := \left(\Delta h_{g.no.U1} - \frac{\Delta h_{g.r.U1} \cdot L_{ho.U1}}{L_{ho.U1}}\right) \cdot \gamma_w = 53.9 \cdot kPa$

Head loss between point h and o: $\Delta h_{ho.U1} := \Delta h_{g.r.U1} \cdot \frac{L_{ho.U1}}{L_{ho.U1}} = 2.5\,m$

Length of concrete base (h -> o): $L_{baseho.U1} := Key_{h.w} + Key_{h.d} + Key_{hdist} + Key_{t.d} + Key_{t.w} = 13.5\,m$

Head loss along h -> j: $\Delta h_{hj.U1} := \Delta h_{ho.U1} \cdot \frac{Key_{h.w}}{L_{baseho.U1}} = 0.185\,m$

Water Pressure at j: $u_{j.U1} := \left(\Delta h_{g.hj.U1} - \Delta h_{hj.U1}\right) \cdot \gamma_w = 101.09 \cdot kPa$

Head loss along h -> k: $\Delta h_{hjk.U1} := \Delta h_{ho.U1} \cdot \left(\frac{Key_{h.w} + Key_{h.d}}{L_{baseho.U1}}\right) = 0.648\,m$

Water Pressure at k: $u_{k.U1} := \left(\Delta h_{g.km.U1} - \Delta h_{hjk.U1}\right) \cdot \gamma_w = 72.05 \cdot kPa$

Head loss along h -> m: $\Delta h_{hjkm.U1} := \Delta h_{ho.U1} \cdot \left(\frac{Key_{h.w} + Key_{h.d} + Key_{hdist}}{L_{baseho.U1}}\right) = 2.5\,m$

Water Pressure at m: $u_{m.U1} := \left(\Delta h_{g.km.U1} - \Delta h_{hjkm.U1}\right) \cdot \gamma_w = 53.90 \cdot kPa$

Head loss along h -> n: $\Delta h_{hjkmn.U1} := \Delta h_{ho.U1} \cdot \left(\frac{Key_{h.w} + Key_{h.d} + Key_{hdist} + Key_{t.d}}{L_{baseho.U1}}\right) = 2.5\,m$

Water Pressure at n: $u_{n.U1} := \left(\Delta h_{g.no.U1} - \Delta h_{hjkmn.U1}\right) \cdot \gamma_w = 53.90 \cdot kPa$

Uplift under key at heel: $V_{ulkeyhU1.OT} := \frac{\left(u_{h.U1} + u_{j.U1}\right) \cdot Key_{h.w}}{2} \cdot B \cdot -1 = -101.993 \cdot kN$

Moment Arm (from Point O): $V_{ulkeyhU1loc.OT} := b - \frac{Key_{h.w} \cdot \left(2 \cdot u_{j.U1} + u_{h.U1}\right)}{3 \cdot \left(u_{j.U1} + u_{h.U1}\right)} = 10.501\,m$

Uplift under base: $V_{ulbaseU1.OT} := \frac{\left(u_{k.U1} + u_{m.U1}\right) \cdot Key_{hdist}}{2} \cdot B \cdot -1 = -629.741 \cdot kN$

Moment Arm (from Point O): $V_{ulbaseU1loc.OT} := b - Key_{h.w} - \frac{Key_{hdist} \cdot \left(2 \cdot u_{m.U1} + u_{k.U1}\right)}{3 \cdot \left(u_{m.U1} + u_{k.U1}\right)} = 5.24\,m$

Uplift under key at toe $V_{ulkeytU1.OT} := \frac{\left(u_{n.U1} + u_{o.U1}\right) \cdot Key_{t.w}}{2} \cdot B \cdot -1 = 0 \cdot kN$

Moment Arm (from Point O): $V_{ulkeytU1loc.OT} := \frac{Key_{t.w} \cdot \left(2 \cdot u_{n.U1} + u_{o.U1}\right)}{3 \cdot \left(u_{n.U1} + u_{o.U1}\right)} = 0$

$$\Sigma V_{UpliftU1.OT} := V_{ulkeyhU1.OT} + V_{ulbaseU1.OT} + V_{ulkeytU1.OT} = -732 \cdot kN$$

$$U_{U1.loc.OT} := \frac{V_{ulkeyhU1.OT} \cdot V_{ulkeyhU1loc.OT} + V_{ulbaseU1.OT} \cdot V_{ulbaseU1loc.OT} + V_{ulkeytU1.OT} \cdot V_{ulkeytU1loc.OT}}{\Sigma V_{UpliftU1.OT}} = 5.97\,m$$

$$\Sigma M_{UpliftU1.OT} := \Sigma V_{UpliftU1.OT} \cdot U_{U1.loc.OT} = -4371.0 \cdot kN \cdot m$$

Modify Lateral Water Pressure (Resisting) for Overturning Analysis:

(Resisting water pressure is calculated using the Line of Creep method)

Water Load at Key (heel):
$$H_{h2U1.OT} := \frac{u_{k.U1} + u_{j.U1}}{2} \cdot Key_{h.d} B = 216.4 \cdot kN$$

Moment Arm (from Point O):
$$H_{h2locU1.OT} := \frac{Key_{h.d} \cdot \left(2 \cdot u_{k.U1} + u_{j.U1}\right)}{3\left(u_{k.U1} + u_{j.U1}\right)} + Key_{vdist} = -1.32\ m$$

Water Load at Key (toe):
$$H_{h6U1.OT} := \frac{u_{o.U1} \cdot \left(UWSEL_{U1} - Bot_{ftg} + Key_{t.d}\right)}{2} \cdot B = 148 \cdot kN$$

Moment Arm (from Point O):
$$H_{h6locU1.OT} := \frac{UWSEL_{U1} - Bot_{ftg} + Key_{t.d}}{3} = 1.83\ m$$

$$\Sigma H_{waterresistU1.OT} := H_{h2U1.OT} + H_{h6U1.OT} = 364.64 \cdot kN$$

$$H_{waterresistlocU1.OT} := \frac{H_{h2U1.OT} \cdot H_{h2locU1.OT} + H_{h6U1.OT} \cdot H_{h6locU1.OT}}{\Sigma H_{waterresistU1.OT}} = -0.038\ m$$

$$\Sigma M_{waterresistU1.OT} := \Sigma H_{waterresistU1.OT} \cdot H_{waterresistlocU1.OT} = -13.9 \cdot kN \cdot m$$

Modify Lateral Soil Loads for Overturning Analysis:

(Lateral soil loads are calculated down to Point O instead of bottom of shear key)

Driving Soil Load (Headwater Side):

Surcharge Load:
$$E_{s1U1.OT} := S1_{U1} \cdot K_o \cdot \left(H_w + Key_{h.d} + Key_{vdist}\right) \cdot B \cdot -1 = 0 \cdot kN$$

Moment Arm (from Point O):
$$E_{s1locU1.OT} := \frac{H_w + Key_{h.d} + Key_{vdist}}{2} = 5.65\ m$$

Moist Soil Load above GWL:
$$E_{h1U1.OT} := \frac{\gamma_m \cdot K_o \cdot h_{1U1}^{\ 2}}{2} \cdot B \cdot -1 = -59.5 \cdot kN$$

Moment Arm (from Point O):
$$E_{h1locU1.OT} := \frac{h_{1U1}}{3} + h_{2U1} + Key_{vdist} = 9.10\ m$$

Saturated Soil Load below GWL:
(rectangular component)
$$E_{h2U1.OT} := \left(\gamma_m \cdot K_o \cdot h_{1U1}\right) \cdot \left(h_{2U1} + Key_{vdist}\right) \cdot B \cdot -1 = -288.3 \cdot kN$$

Moment Arm (from Point O):
$$E_{h2locU1.OT} := \frac{h_{2U1} + Key_{vdist}}{2} = 4.00\ m$$

Saturated Soil Load below GWL:
(triangular component)
$$E_{h2aU1.OT} := \frac{\left(\gamma_{sat} - \gamma_w\right) \cdot K_o \cdot \left(h_{2U1} + Key_{vdist}\right)^2}{2} \cdot B \cdot -1 = -213.2 \cdot kN$$

Moment Arm (from Point O):
$$E_{h2alocU1.OT} := \frac{h_{2U1} + Key_{vdist}}{3} = 2.67\ m$$

Resisting Soil Load (Tailwater Side):

(Determine resisting soil load based on depth variation between the keys (ie. Key_{vdist}). In case where key at heel is deeper than key at toe (ie. $Key_{vdist}< 0$), resisting soil load (p*) is assumed to produce horizontal equilibrium as per Figure 4-5 above. Resisting soil load (p_o) is neglected.)

Total Driving Force: $\Sigma H_{SoildriveU1.OT} := E_{s1U1.OT} + E_{h1U1.OT} + E_{h2U1.OT} + E_{h2aU1.OT} + H_{h2U1} = -1101.1 \cdot kN$

Total Resisting Force: $\Sigma H_{waterresistU1.OT} = 364.6 \cdot kN$

Assumed Soil Load p*: $E_{h8U1a.OT} := \left(\Sigma H_{SoildriveU1.OT} + \Sigma H_{waterresistU1.OT}\right) \cdot -1 = 736.499 \cdot kN$

Moment Arm (from Point O): $E_{h8U1a.loc.OT} := \dfrac{Key_{vdist}}{2} = -1.25\, m$

$$E_{h8U1.OT} := \begin{cases} E_{h8U1a.OT} & \text{if } Key_{vdist} < 0 \\ \Sigma H_{SoilresistU1} - H_{h6U1} - H_{h2aU1} & \text{otherwise} \end{cases} = 736.499 \cdot kN$$

$$\Sigma M_{SoilresistU1} := \begin{cases} E_{h8U1a.OT} \cdot E_{h8U1a.loc.OT} & \text{if } Key_{vdist} < 0 \\ \Sigma M_{HorizSoilResistU1} - H_{h6U1} \cdot H_{h6locU1} - H_{h2aU1} \cdot H_{h2alocU1} & \text{otherwise} \end{cases} = -920.624 \cdot kN \cdot m$$

Sum of Moment about Point O:

$$\Sigma M_{LateraldriveU1.OT} := E_{s1U1.OT} \cdot E_{s1locU1.OT} + E_{h1U1.OT} \cdot E_{h1locU1.OT} + E_{h2U1.OT} \cdot E_{h2locU1.OT} \dots + E_{h2aU1.OT} \cdot E_{h2alocU1.OT} + H_{h2U1} \cdot H_{h2locU1} = -2802.9 \cdot kN \cdot m$$

$$\Sigma M_{LateralresistU1.OT} := \Sigma M_{waterresistU1.OT} + \Sigma M_{SoilresistU1} = -934.5 \cdot kN \cdot m$$

Total moment:

$$\Sigma M_{U1.OT} := \Sigma M_{conc} + \Sigma M_{VertSoilWaterResistU1} + \Sigma M_{UpliftU1.OT} + \Sigma M_{LateraldriveU1.OT} + \Sigma M_{LateralresistU1.OT} = 6898.0 \cdot kN \cdot m$$

Total Vertical Force: $\Sigma V_{U1.OT} := \Sigma V_{conc} + \Sigma V_{SoilWaterU1} + \Sigma V_{UpliftU1.OT} = 1662.5 \cdot kN$

Distance X_R: EM 1110-2-2502 Eq.4-1 $X_{R.U1} := \dfrac{\Sigma M_{U1.OT}}{\Sigma V_{U1.OT}} = 4.149\, m$

Overturning Resultant Ratio $Ratio_{U1.OT} := \dfrac{X_{R.U1}}{b} = 0.38$

$$Ratio_{U1.OT.check} := \begin{cases} \text{"OKAY "} & \text{if } Ratio_{U1.OT} > X_{R.reqU1} \\ \text{"Revise Structure""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

CHECK FOUNDATION ECCENTRICITY (HORIZONTAL PLANE):

Eccentricity (horizontal plan): $ex_{U1.OT} := \dfrac{b}{2} - \dfrac{\Sigma M_{U1.OT}}{\Sigma V_{U1.OT}} = 1.35\, m$ $Kern_{OT} := \dfrac{b}{6} = 1.833\, m$

Eccentricity Check: $$e_{check.U1.OT} := \begin{cases} \text{"Okay"} & \text{if } ex_{U1} \le Kern_{OT} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"Okay"}$$

CHECK FOUNDATION BEARING CAPACITY (HORIZONTAL PLANE):

Base Section Modulus: $S_{b.OT} := \frac{1}{6}\left(B\cdot b^2\right) = 20.17\,m^3$

Bearing Pressure Under Toe:

$$\sigma_{ToeU1.OT} := \begin{cases} \left(\frac{\Sigma V_{U1.OT}}{b\cdot B} + \frac{\Sigma V_{U1.OT}\cdot ex_{U1.OT}}{S_{b.OT}}\right) & \text{if } \frac{\Sigma V_{U1.OT}}{b\cdot B} \ge \frac{\Sigma V_{U1.OT}\cdot ex_{U1.OT}}{S_{b.OT}} \\ \frac{2\cdot \Sigma V_{U1.OT}}{B\cdot 3\left(\frac{b}{2} - ex_{U1.OT}\right)} & \text{otherwise} \end{cases} = 262.5\cdot kPa$$

$$Bearing_{ChecktoeU1.OT} := \begin{cases} \text{"OKAY "} & \text{if } \sigma_{ToeU1.OT} < \sigma_{allowU1} \\ \text{"NG - for reference only""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

Bearing Pressure Under Heel:

$$\sigma_{HeelU1.OT} := \begin{cases} \left(\frac{\Sigma V_{U1.OT}}{b\cdot B} - \frac{\Sigma V_{U1.OT}\cdot ex_{U1.OT}}{S_{b.OT}}\right) & \text{if } \frac{\Sigma V_{U1.OT}}{b\cdot B} \ge \frac{\Sigma V_{U1.OT}\cdot ex_{U1.OT}}{S_{b.OT}} \\ 0 & \text{otherwise} \end{cases} = 39.8\cdot kPa$$

$$Bearing_{CheckheelU1.OT} := \left(\begin{cases} \text{"OKAY "} & \text{if } \sigma_{HeelU1.OT} < \sigma_{allowU1} \wedge \sigma_{HeelU1.OT} > 0 \\ \text{"NG - for reference only""} & \text{otherwise} \end{cases}\right) = \text{"OKAY "}$$

SUMMARY OF STABILITY ASSESSMENT:

UN1 DESIGN CASE

LOAD CASE UN1 ACCEPTANCE PARAMETERS

FS sliding:

Unusual (UN) 1.3 (without cohesion) (Table 3-3, USACE EM 1110-2-2100)

Resultant Location:

Unsual (UN) Inside middle third ~100% base in compression

Required Factor of Safety for Sliding: $FS_{sliding.reqUN1} := 1.3$ (Without Cohesion)

Allowable rock bearing pressure: $\sigma_{allowUN1} := 1470kPa$ (Section 5.2, Design Criteria EM 1110-2-2100 Section 3-10)

Overturning Required Resultant Ratio: $X_{R.reqUN1} := 0.333$ (EM 1110-2-2502, Figure 4-4)

Required Factor of Safety for Floatation $FS_{req.UN1.flt} := 1.3$

SOIL HEIGHTS and Water Levels:

LOAD CASE UN1

Heel Conditions:

Groundwater Elevation at Heel: $GWL_{UN1} := 1212.5m$

Distance from Finish Grade to Groundwater at Heel: $h_{1UN1} := \left[T_w - GWL_{UN1} + \left(L_{cd} + t_{wb} - t_{wt}\right)\cdot\tan(\beta)\right] = 3.30\ m$

Distance from Water Surface to Bottom of Footing at Heel: $h_{2UN1} := GWL_{UN1} - Bot_{ftg} + Key_{h.d} = 10.50\ m$

Toe Conditions:

Water Surface Elevation at Toe: $WSEL_{UN1} := 1210.0m$

Water Surface Elevation at Toe for Uplift: $UWSEL_{UN1} := 1210.0\cdot m$

Finish Grade at Toe providing lateral resistance: $FG_{toeUN1} := 1208.5\cdot m$

Soil Depth Above top of footing: $h_{3aUN1} := FG_{toeUN1} - Top_{ftg} = 1.5\ m$

$$h_{3UN1} := \begin{cases} h_{3aUN1} & \text{if } FG_{toeUN1} - Top_{ftg} \geq 0 \\ 0 & \text{otherwise} \end{cases} = 1.5$$

Resisting Fill at Toe: $h_{4UN1} := FG_{toeUN1} - Bot_{ftg} + Key_{t.d} = 4.00\ m$

Distance from Water Level to Top of Footing at Toe: $h_{5UN1} := WSEL_{UN1} - Top_{ftg} = 3.00\ m$

Distance from Water Surface to Bottom of Footing at Toe: $h_{6UN1} := WSEL_{UN1} - Bot_{ftg} + Key_{t.d} = 5.50\ m$

Soil Depth Above WSEL: $h_{7aUN1} := FG_{toeUN1} - WSEL_{UN1} = -1.5\ m$

$$h_{7UN1} := \begin{cases} h_{7aUN1} & \text{if } FG_{toeUN1} - WSEL_{UN1} \geq 0 \\ 0 & \text{otherwise} \end{cases} = 0$$

Soil Depth Below WSEL:

$$h_{8UN1} := \begin{cases} WSEL_{UN1} - Bot_{ftg} + Key_{t.d} & \text{if } FG_{toeUN1} - WSEL_{UN1} \geq 0 \\ h_{4UN1} & \text{otherwise} \end{cases} = 4$$

For Line of Creep Method: $L_{ho.UN1} := \sqrt{b^2 + \left(Key_{h.d} - Key_{t.d}\right)^2} = 11.281\ m$

Head Loss from Point g:

$\Delta h_{g.hj.UN1} := h_{2UN1} = 10.5\ m$ (to point h & j)

$\Delta h_{g.km.UN1} := GWL_{UN1} - Bot_{ftg} = 8\ m$ (to point k & m)

$\Delta h_{g.no.UN1} := GWL_{UN1} - Bot_{ftg} + Key_{t.d} = 8\ m$ (to point n & o)

$\Delta h_{g.p.UN1} := GWL_{UN1} - FG_{toeUN1} = 4\ m$ (to point p)

$\Delta h_{g.r.UN1} := GWL_{UN1} - UWSEL_{UN1} = 2.5\ m$ (to point r)

Surcharge

Surcharge on Heel: $S1_{UN1} := 15.0\ \frac{kN}{m^2}$

LOAD CASE UN1

Calculate Soil Lateral Pressure Coefficients:

For all load cases except seismic, soil loading to be based on At-Rest Condition.
Calculate at-rest pressure coefficient Ko based on Jaky's (1944) equation.

Soil At Rest Static Coefficient: $K_o := \frac{1 - \sin(\phi)}{1 + \sin(\beta)} = 0.546$ (Eq. 3-6, USACE EM 1110-2-2502)

Lateral - Driving Force

Static At-Rest:

Surcharge Load: $E_{s1UN1} := S1_{UN1} \cdot K_o \cdot \left(H_w + Key_{h.d}\right) \cdot B \cdot -1 = -113.024 \cdot kN$

Moment Arm (from bottom of footing): $E_{s1locUN1} := \frac{H_w + Key_{h.d}}{2} + Key_{vdist} = 4.40\ m$

Moist Soil Load above GWL: $E_{h1UN1} := \frac{\gamma_m \cdot K_o \cdot h_{1UN1}^{\ 2}}{2} B \cdot -1 = -59.5 \cdot kN$

Moment Arm (from bottom of footing): $E_{h1locUN1} := \frac{h_{1UN1}}{3} + h_{2UN1} + Key_{vdist} = 9.10\ m$

Saturated Soil Load below GWL:
(rectangular component) $E_{h2UN1} := \left(\gamma_m \cdot K_o \cdot h_{1UN1}\right) \cdot \left(h_{2UN1}\right) \cdot B \cdot -1 = -378.4 \cdot kN$

Moment Arm (from bottom of footing): $E_{h2locUN1} := \frac{h_{2UN1}}{2} + Key_{vdist} = 2.75\ m$

Saturated Soil Load below GWT:
(triangular L $E_{h2aUN1} := \frac{\left(\gamma_{sat} - \gamma_w\right) \cdot K_o \cdot h_{2UN1}^{\ 2}}{2} \cdot B \cdot -1 = -367.2 \cdot kN$

Moment Arm (from bottom of footing): $E_{h2alocUN1} := \frac{h_{2UN1}}{3} + Key_{vdist} = 1.00\ m$

Lateral Water Load:

Water Load GWL to Bottom of Key $H_{h2UN1} := \frac{\gamma_w \cdot h_{2UN1}^{\ 2}}{2} \cdot B \cdot -1 = -540.2 \cdot kN$

Moment Arm (from bottom of footing): $H_{h2locUN1} := \frac{h_{2UN1}}{3} + Key_{vdist} = 1.00\ m$

$$\Sigma H_{SoildriveUN1} := E_{s1UN1} + E_{h1UN1} + E_{h2UN1} + E_{h2aUN1} + H_{h2UN1} = -1458.3 \cdot kN$$

$$\Sigma M_{LateralSoildriveUN1} := E_{s1UN1} \cdot E_{s1locUN1} + E_{h1UN1} \cdot E_{h1locUN1} + E_{h2UN1} \cdot E_{h2locUN1} \ldots = -2986.4\ m \cdot kN$$
$$+ E_{h2aUN1} \cdot E_{h2alocUN1} + H_{h2UN1} \cdot H_{h2locUN1}$$

Lateral - Resisting Force

LOAD CASE UN1

Lateral Water Load:

Water Load WSEL to Bottom of Footing:

$$H_{h6UN1} := \frac{\gamma_w \cdot h_{6UN1}^{\ 2}}{2} \cdot B = 148.2 \cdot kN$$

Moment Arm (from bot. of toe key):

$$H_{h6locUN1} := \frac{h_{6UN1}}{3} = 1.83\ m$$

Water Load Bot. of Footing to Bot. of H. Key:

$$H_{h2aUN1} := \left[\left(UWSEL_{UN1} - Bot_{ftg} + Key_{t.d}\right) + h_{2UN1}\right] \cdot \frac{Key_{h.d}}{2} \cdot \gamma_w \cdot B = 196.0 \cdot kN$$

Moment Arm (from bot. of toe key):

$$H_{h2alocUN1} := \frac{Key_{h.d} \cdot \left[2 \cdot \left(UWSEL_{UN1} - Bot_{ftg} + Key_{t.d}\right) + h_{2UN1}\right]}{3\left[h_{2UN1} + \left(UWSEL_{UN1} - Bot_{ftg} + Key_{t.d}\right)\right]} \ ... \ + Key_{vdist} = -1.38\ m$$

Lateral Soil Load:

Moist Soil Load above WSEL:

$$E_{h7UN1} := \frac{\gamma_m \cdot K_o \cdot h_{7UN1}^{\ 2}}{2} B = 0.0 \cdot kN$$

Moment Arm (from bot. of toe key):

$$E_{h7locUN1} := h_{6UN1} + \frac{h_{7UN1}}{3} + Key_{vdist} = 3.00\ m$$

Saturated Soil Load below WSEL:
(rectangular component)

$$E_{h8UN1} := \left(\gamma_m \cdot K_o \cdot h_{7UN1}\right) \cdot h_{8UN1} \cdot B = 0.0 \cdot kN$$

Moment Arm (from bot. of toe key):

$$E_{h8locUN1} := \frac{h_{8UN1}}{2} = 2.00\ m$$

Saturated Soil Load below WSEL:
(triangular component)

$$E_{h8aUN1} := \frac{\left[\left(\gamma_{sat} - \gamma_w\right) \cdot K_o\right] \cdot h_{8UN1}^{\ 2}}{2} \cdot B = 53.3 \cdot kN$$

Moment Arm (from bot. of footing):

$$E_{h8alocUN1} := \frac{h_{8UN1}}{3} = 1.33\ m$$

$$\Sigma H_{SoilresistUN1} := H_{h6UN1} + H_{h2aUN1} + E_{h7UN1} + E_{h8UN1} + E_{h8aUN1} = 397.5 \cdot kN$$

$$\Sigma M_{HorizSoilResistUN1} := H_{h6UN1} \cdot H_{h6locUN1} + H_{h2aUN1} \cdot H_{h2alocUN1} + E_{h7UN1} \cdot E_{h7locUN1} \ ... \ + E_{h8UN1} \cdot E_{h8locUN1} + E_{h8aUN1} \cdot E_{h8alocUN1} = 72.3\ m \cdot kN$$

Vertical Force:

UPLIFT: Linear distribution from water at heel to water at toe:

$$\Sigma V_{UpliftUN1} := \left[\left(UWSEL_{UN1} - Bot_{ftg} + Key_{t.d}\right) + h_{2UN1}\right] \cdot \frac{b}{2} \cdot \gamma_w \cdot B \cdot -1 = -862.4 \cdot kN$$

Moment Arm (from Point O):

$$V_{UpliftUN1aloc} := \frac{b \cdot \left[2 \cdot h_{2UN1} + \left(UWSEL_{UN1} - Bot_{ftg} + Key_{t.d}\right)\right]}{3\left[h_{2UN1} + \left(UWSEL_{UN1} - Bot_{ftg} + Key_{t.d}\right)\right]} = 6.073\ m$$

$$\Sigma M_{UpliftUN1} := \Sigma V_{UpliftUN1} \cdot V_{UpliftUN1aloc} = -5237.283 \cdot kN \cdot m$$

Weight of soil and water over toe:

Water Above the Top of Footing: $W_{H1UN1} := \gamma_w \cdot h_{5UN1} \cdot L_{ab} \cdot B = 80.85 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E1locUN1} := \frac{L_{ab}}{2} = 1.375\,m$

Soil above top of footing: $W_{E6UN1} := \gamma_b \cdot h_{3UN1} \cdot L_{ab} \cdot B = 50.3 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E6locUN1} := \frac{L_{ab}}{2} = 1.375\,m$

Vertical Load Due to Surcharge: $S_{UN1} := S1_{UN1} \cdot L_{cd} \cdot B = 105.885 \cdot kN$ $\quad S_{UN1loc} := b - \frac{L_{cd}}{2} = 7.47\,m$

Weight of soil and water over heel:

Moist Soil for sloped grade above top of wall:

Length of sloped portion of soil above top of wall: $L_{E3UN1} := \left(L_{cd} + t_{wb} - t_{wt}\right) = 7.75\,m$

Height of sloped soil above top of wall over heel: $h_{E3locUN1} := \left(L_{E3UN1}\right) \cdot \tan(\beta) = 0.00\,m$

Weight of sloped soil above top of wall: $W_{E3UN1} := \frac{\gamma_m}{2} \cdot h_{E3locUN1} \cdot L_{E3UN1} \cdot B = 0.0 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E3locUN1} := L_{ab} + t_{wt} + \frac{2}{3} \cdot L_{E3UN1} = 8.42\,m$

Moist soil from top of wall to groundwater level:

Height of soil from top of wall and top of GWL: $h_{1UN1} = 3.30\,m$

Length from edge of wall at GWL to edge of heel: $L_{E4UN1} := L_{E3UN1} - \left(h_{1UN1} \cdot S_{batter}\right) = 7.49\,m$

Weight of soil over heel from top of wall to GWL: $W_{E4UN1} := \gamma_m \cdot h_{1UN1} \cdot \frac{\left(L_{E3UN1} + L_{E4UN1}\right)}{2} \cdot B = 502.9 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E4locUN1} := b - \frac{L_{E3UN1}^2 + L_{E3UN1} \cdot L_{E4UN1} + L_{E4UN1}^2}{3\left(L_{E3UN1} + L_{E4UN1}\right)} = 7.19\,m$

Saturated soil from groundwater to top of footing:

Height of soil from GWL to top of heel: $h_{E4UN1} := h_{2UN1} - t_{ftg} - Key_{h.d} = 5.50\,m$

Weight of soil over heel from GWL to top of heel: $W_{E5UN1} := \left(\gamma_{sat}\right) \cdot h_{E4UN1} \cdot \frac{\left(L_{E4UN1} + L_{cd}\right)}{2} \cdot B = 880.3 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E5locUN1} := b - \frac{L_{E4UN1}^2 + L_{E4UN1} \cdot L_{cd} + L_{cd}^2}{3\left(L_{E4UN1} + L_{cd}\right)} = 7.36\,m$

$$\Sigma V_{SoilWaterUN1} := W_{H1UN1} + W_{E6UN1} + W_{E3UN1} + W_{E4UN1} + W_{E5UN1} + S_{UN1} = 1620.3 \cdot kN$$

$$\Sigma M_{VertSoilWaterResistUN1} := W_{H1UN1} \cdot W_{E1locUN1} + W_{E6UN1} \cdot W_{E6locUN1} \cdots + W_{E3UN1} \cdot W_{E3locUN1} + W_{E4UN1} \cdot W_{E4locUN1} + W_{E5UN1} \cdot W_{E5locUN1} + S_{UN1} \cdot S_{UN1loc} = 11067.3\,m \cdot kN$$

CHECK OVERTURNING

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stablity of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1

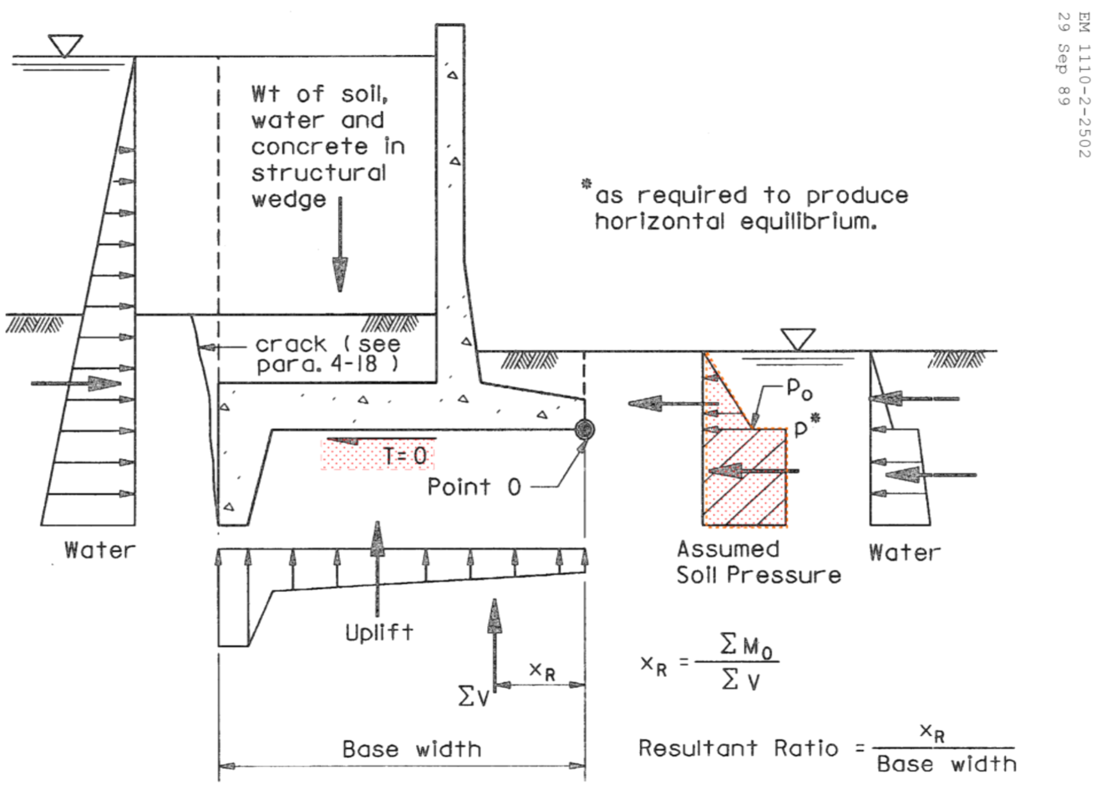

Figure 4-5. Forces for overturning analysis for wall with horizontal base and key

Modify Uplift for Overturning Analysis: **LOAD CASE UN1**

(Uplift is calculated along the concrete/rock contact using the Line of Creep method)

Water Pressure at h: $u_{h.UN1} := \Delta h_{g.hj.UN1} \cdot \gamma_w = 102.90 \cdot kPa$

Water Pressure at o: $u_{o.UN1} := \left(\Delta h_{g.no.UN1} - \dfrac{\Delta h_{g.r.UN1} \cdot L_{ho.UN1}}{L_{ho.UN1}} \right) \cdot \gamma_w = 53.9 \cdot kPa$

Head loss between point h and o: $\Delta h_{ho.UN1} := \Delta h_{g.r.UN1} \cdot \dfrac{L_{ho.UN1}}{L_{ho.UN1}} = 2.5\,m$

Length of concrete base (h -> o): $L_{baseho.UN1} := Key_{h.w} + Key_{h.d} + Key_{hdist} + Key_{t.d} + Key_{t.w} = 13.5\,m$

Head loss along h -> j: $\Delta h_{hj.UN1} := \Delta h_{ho.UN1} \cdot \dfrac{Key_{h.w}}{L_{baseho.UN1}} = 0.185\,m$

Water Pressure at j: $u_{j.UN1} := \left(\Delta h_{g.hj.UN1} - \Delta h_{hj.UN1} \right) \cdot \gamma_w = 101.09 \cdot kPa$

Head loss along h -> k: $\Delta h_{hjk.UN1} := \Delta h_{ho.UN1} \cdot \left(\dfrac{Key_{h.w} + Key_{h.d}}{L_{baseho.UN1}} \right) = 0.648\,m$

Water Pressure at k: $u_{k.UN1} := \left(\Delta h_{g.km.UN1} - \Delta h_{hjk.UN1} \right) \cdot \gamma_w = 72.05 \cdot kPa$

Head loss along h -> m: $\Delta h_{hjkm.UN1} := \Delta h_{ho.UN1} \cdot \left(\dfrac{Key_{h.w} + Key_{h.d} + Key_{hdist}}{L_{baseho.UN1}} \right) = 2.5\,m$

Water Pressure at m: $u_{m.UN1} := \left(\Delta h_{g.km.UN1} - \Delta h_{hjkm.UN1} \right) \cdot \gamma_w = 53.90 \cdot kPa$

Head loss along h -> n: $\Delta h_{hjkmn.UN1} := \Delta h_{ho.UN1} \cdot \left(\dfrac{Key_{h.w} + Key_{h.d} + Key_{hdist} + Key_{t.d}}{L_{baseho.UN1}} \right) = 2.5\,m$

Water Pressure at n: $u_{n.UN1} := \left(\Delta h_{g.no.UN1} - \Delta h_{hjkmn.UN1} \right) \cdot \gamma_w = 53.90 \cdot kPa$

Uplift under key at heel: $V_{ulkeyhUN1.OT} := \dfrac{\left(u_{h.UN1} + u_{j.UN1} \right) \cdot Key_{h.w}}{2} \cdot B \cdot -1 = -101.993 \cdot kN$

Moment Arm (from Point O): $V_{ulkeyhUN1loc.OT} := b - \dfrac{Key_{h.w} \cdot \left(2 \cdot u_{j.UN1} + u_{h.UN1} \right)}{3 \cdot \left(u_{j.UN1} + u_{h.UN1} \right)} = 10.501\,m$

Uplift under base: $V_{ulbaseUN1.OT} := \dfrac{\left(u_{k.UN1} + u_{m.UN1} \right) \cdot Key_{hdist}}{2} \cdot B \cdot -1 = -629.741 \cdot kN$

Moment Arm (from Point O): $V_{ulbaseUN1loc.OT} := b - Key_{h.w} - \dfrac{Key_{hdist} \cdot \left(2 \cdot u_{m.UN1} + u_{k.UN1} \right)}{3 \cdot \left(u_{m.UN1} + u_{k.UN1} \right)} = 5.24\,m$

Uplift under key at toe: $V_{ulkeytUN1.OT} := \dfrac{\left(u_{n.UN1} + u_{o.UN1} \right) \cdot Key_{t.w}}{2} \cdot B \cdot -1 = 0 \cdot kN$

Moment Arm (from Point O): $V_{ulkeytUN1loc.OT} := \dfrac{Key_{t.w} \cdot \left(2 \cdot u_{n.UN1} + u_{o.UN1} \right)}{3 \cdot \left(u_{n.UN1} + u_{o.UN1} \right)} = 0$

$$\Sigma V_{UpliftUN1.OT} := V_{ulkeyhUN1.OT} + V_{ulbaseUN1.OT} + V_{ulkeytUN1.OT} = -732 \cdot kN$$

$$U_{UN1.loc.OT} := \frac{V_{ulkeyhUN1.OT} \cdot V_{ulkeyhUN1loc.OT} + V_{ulbaseUN1.OT} \cdot V_{ulbaseUN1loc.OT} + V_{ulkeytUN1.OT} \cdot V_{ulkeytUN1loc.OT}}{\Sigma V_{UpliftUN1.OT}} = 5.97\,m$$

$$\Sigma M_{UpliftUN1.OT} := \Sigma V_{UpliftUN1.OT} \cdot U_{UN1.loc.OT} = -4371.0 \cdot kN \cdot m$$

Modify Lateral Water Pressure (Resisting) for Overturning Analysis:

(Resisting water pressure is calculated using the Line of Creep method)

Water Load at Key (heel):
$$H_{h2UN1.OT} := \frac{u_{k.UN1} + u_{j.UN1}}{2} \cdot Key_{h.d} \cdot B = 216.4 \cdot kN$$

Moment Arm (from Point O):
$$H_{h2locUN1.OT} := \frac{Key_{h.d} \cdot (2 \cdot u_{k.UN1} + u_{j.UN1})}{3(u_{k.UN1} + u_{j.UN1})} + Key_{vdist} = -1.32\ m$$

Water Load at Key (toe):
$$H_{h6UN1.OT} := \frac{u_{o.UN1} \cdot (UWSEL_{UN1} - Bot_{ftg} + Key_{t.d})}{2} \cdot B = 148 \cdot kN$$

Moment Arm (from Point O):
$$H_{h6locUN1.OT} := \frac{UWSEL_{UN1} - Bot_{ftg} + Key_{t.d}}{3} = 1.83\ m$$

$$\Sigma H_{waterresistUN1.OT} := H_{h2UN1.OT} + H_{h6UN1.OT} = 364.64 \cdot kN$$

$$H_{waterresistlocUN1.OT} := \frac{H_{h2UN1.OT} \cdot H_{h2locUN1.OT} + H_{h6UN1.OT} \cdot H_{h6locUN1.OT}}{\Sigma H_{waterresistUN1.OT}} = -0.038\ m$$

$$\Sigma M_{waterresistUN1.OT} := \Sigma H_{waterresistUN1.OT} \cdot H_{waterresistlocUN1.OT} = -13.9 \cdot kN \cdot m$$

Modify Lateral Soil Loads for Overturning Analysis:

(Lateral soil loads are calculated down to Point O instead of bottom of shear key)

Driving Soil Load (Headwater Side):

Surcharge Load:
$$E_{s1UN1.OT} := S1_{UN1} \cdot K_o \cdot (H_w + Key_{h.d} + Key_{vdist}) \cdot B \cdot -1 = -92.549 \cdot kN$$

Moment Arm (from Point O):
$$E_{s1locUN1.OT} := \frac{H_w + Key_{h.d} + Key_{vdist}}{2} = 5.65\ m$$

Moist Soil Load above GWL:
$$E_{h1UN1.OT} := \frac{\gamma_m \cdot K_o \cdot h_{1UN1}^{\ 2}}{2} B \cdot -1 = -59.5 \cdot kN$$

Moment Arm (from Point O):
$$E_{h1locUN1.OT} := \frac{h_{1UN1}}{3} + h_{2UN1} + Key_{vdist} = 9.10\ m$$

Saturated Soil Load below GWL:
(rectangular component)
$$E_{h2UN1.OT} := (\gamma_m \cdot K_o \cdot h_{1UN1}) \cdot (h_{2UN1} + Key_{vdist}) \cdot B \cdot -1 = -288.3 \cdot kN$$

Moment Arm (from Point O):
$$E_{h2locUN1.OT} := \frac{h_{2UN1} + Key_{vdist}}{2} = 4.00\ m$$

Saturated Soil Load below GWL:
(triangular component)
$$E_{h2aUN1.OT} := \frac{(\gamma_{sat} - \gamma_w) \cdot K_o \cdot (h_{2UN1} + Key_{vdist})^2}{2} \cdot B \cdot -1 = -213.2 \cdot kN$$

Moment Arm (from Point O):
$$E_{h2alocUN1.OT} := \frac{h_{2UN1} + Key_{vdist}}{3} = 2.67\ m$$

Resisting Soil Load (Tailwater Side):

(Determine resisting soil load based on depth variation between the keys (ie. Key_{vdist}). In case where key at heel is deeper than key at toe (ie. $Key_{vdist} < 0$), resisting soil load (p*) is assumed to produce horizontal equilibrium as per Figure 4-5 above. Resisting soil load (p_o) is neglected.)

Total Driving Force: $\Sigma H_{SoildriveUN1.OT} := E_{s1UN1.OT} + E_{h1UN1.OT} + E_{h2UN1.OT} + E_{h2aUN1.OT} + H_{h2UN1} = -1193.7 \cdot kN$

Total Resisting Force: $\Sigma H_{waterresistUN1.OT} = 364.6 \cdot kN$

Assumed Soil Load p*: $E_{h8UN1a.OT} := \left(\Sigma H_{SoildriveUN1.OT} + \Sigma H_{waterresistU1.OT}\right) \cdot -1 = 829.048 \cdot kN$

Moment Arm (from Point O): $E_{h8UN1a.loc.OT} := \dfrac{Key_{vdist}}{2} = -1.25\, m$

$$E_{h8UN1.OT} := \begin{cases} E_{h8UN1a.OT} & \text{if } Key_{vdist} < 0 \\ \Sigma H_{SoilresistUN1} - H_{h6UN1} - H_{h2aUN1} & \text{otherwise} \end{cases} = 829.048 \cdot kN$$

$$\Sigma M_{SoilresistUN1} := \begin{cases} E_{h8UN1a.OT} \cdot E_{h8UN1a.loc.OT} & \text{if } Key_{vdist} < 0 \\ \Sigma M_{HorizSoilResistUN1} - H_{h6UN1} \cdot H_{h6locUN1} - H_{h2aUN1} \cdot H_{h2alocUN1} & \text{otherwise} \end{cases} = -1036.309 \cdot kN \cdot m$$

Sum of Moment about Point O:

$$\Sigma M_{LateraldriveUN1.OT} := E_{s1UN1.OT} \cdot E_{s1locUN1.OT} + E_{h1UN1.OT} \cdot E_{h1locUN1.OT} + E_{h2UN1.OT} \cdot E_{h2locUN1.OT} \cdots + E_{h2aUN1.OT} \cdot E_{h2alocUN1.OT} + H_{h2UN1} \cdot H_{h2locUN1} = -3325.8 \cdot kN \cdot m$$

$$\Sigma M_{LateralresistUN1.OT} := \Sigma M_{waterresistUN1.OT} + \Sigma M_{SoilresistUN1} = -1050.2 \cdot kN \cdot m$$

Total moment:

$$\Sigma M_{UN1.OT} := \Sigma M_{conc} + \Sigma M_{VertSoilWaterResistUN1} + \Sigma M_{UpliftUN1.OT} + \Sigma M_{LateraldriveUN1.OT} + \Sigma M_{LateralresistUN1.OT} = 7050.4 \cdot kN \cdot m$$

Total Vertical Force: $\Sigma V_{UN1.OT} := \Sigma V_{conc} + \Sigma V_{SoilWaterUN1} + \Sigma V_{UplliftUN1.OT} = 1768.4 \cdot kN$

Distance X_R: EM 1110-2-2502 Eq.4-1 $X_{R.UN1} := \dfrac{\Sigma M_{UN1.OT}}{\Sigma V_{UN1.OT}} = 3.987\, m$

Overturning Resultant Ratio $Ratio_{UN1.OT} := \dfrac{X_{R.UN1}}{b} = 0.36$

$$Ratio_{UN1.OT.check} := \begin{cases} \text{"OKAY "} & \text{if } Ratio_{UN1.OT} > X_{R.reqUN1} \\ \text{"Revise Structure""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

CHECK FOUNDATION ECCENTRICITY (HORIZONTAL PLANE):

Eccentricity (horizontal plan): $ex_{UN1.OT} := \dfrac{b}{2} - \dfrac{\Sigma M_{UN1.OT}}{\Sigma V_{UN1.OT}} = 1.51\, m$ $\quad Kern_{OT} = 1.833\, m$

Eccentricity Check:

$$e_{check.UN1.OT} := \begin{cases} \text{"Okay"} & \text{if } ex_{UN1} \le Kern_{OT} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"Okay"}$$

CHECK FOUNDATION BEARING CAPACITY (HORIZONTAL PLANE):

Base Section Modulus: $S_{b.OT} = 20.17\,m^3$

Bearing Pressure Under Toe:

$$\sigma_{ToeUN1.OT} := \begin{cases} \left(\dfrac{\Sigma V_{UN1.OT}}{b \cdot B} + \dfrac{\Sigma V_{UN1.OT} \cdot ex_{UN1.OT}}{S_{b.OT}}\right) & \text{if } \dfrac{\Sigma V_{UN1.OT}}{b \cdot B} \ge \dfrac{\Sigma V_{UN1.OT} \cdot ex_{UN1.OT}}{S_{b.OT}} \\ \dfrac{2 \cdot \Sigma V_{UN1.OT}}{B \cdot 3\left(\dfrac{b}{2} - ex_{UN1.OT}\right)} & \text{otherwise} \end{cases} = 293.4 \cdot kPa$$

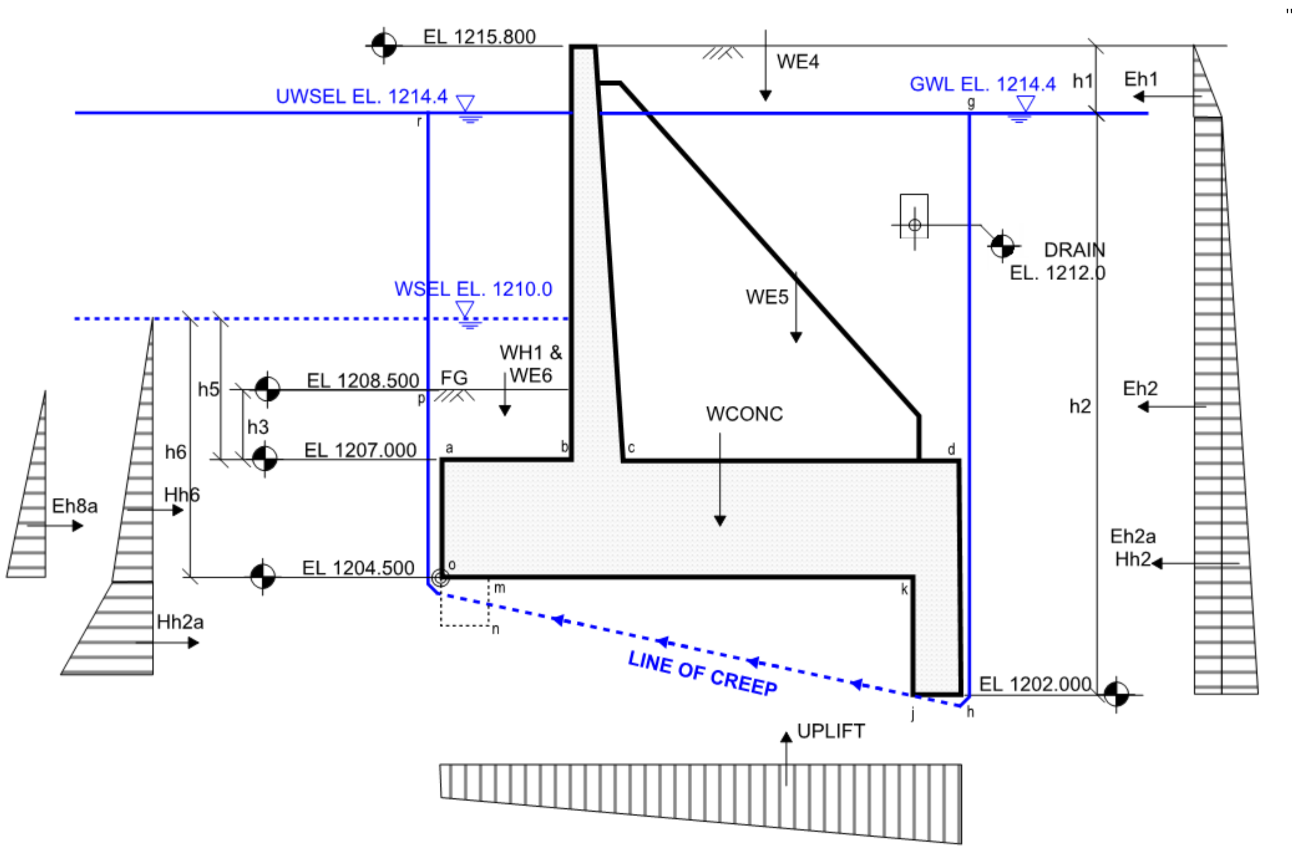
LOAD CASE UN2 - INEFFECTIVE DRAIN



UN2 DESIGN CASE

LOAD CASE UN2 ACCEPTANCE PARAMETERS

FS sliding:

Unusual (UN) 1.3 (without cohesion) (Table 3-3, USACE EM 1110-2-2100)

Resultant Location:

Unsual (UN) Inside middle third ~100% base in compression

Required Factor of Safety for Sliding: $FS_{sliding.reqUN2} := 1.3$ (Without Cohesion)

Allowable rock bearing pressure: $\sigma_{allowUN2} := 1470kPa$ (Section 5.2, Design Criteria EM 1110-2-2100 Section 3-10)

Overturning Required Resultant Ratio: $X_{R.reqUN2} := 0.333$ (EM 1110-2-2502, Figure 4-4)

Required Factor of Safety for Floatation $FS_{req.UN2.flt} := 1.3$

SOIL HEIGHTS and Water Levels:

LOAD CASE UN2

Heel Conditions:

Groundwater Elevation at Heel: $GWL_{UN2} := 1214.4m$

Distance from Finish Grade to Groundwater at Heel: $h_{1UN2} := \left[T_w - GWL_{UN2} + \left(L_{cd} + t_{wb} - t_{wt}\right)\cdot\tan(\beta)\right] = 1.40\ m$

Distance from Water Surface to Bottom of Footing at Heel: $h_{2UN2} := GWL_{UN2} - Bot_{ftg} + Key_{h.d} = 12.40\ m$

Toe Conditions:

Water Surface Elevation at Toe: $WSEL_{UN2} := 1210.0m$

Water Surface Elevation at Toe for Uplift: $UWSEL_{UN2} := 1214.4\cdot m$

Finish Grade at Toe providing lateral resistance: $FG_{toeUN2} := 1208.5\cdot m$

Soil Depth Above top of footing: $h_{3aUN2} := FG_{toeUN2} - Top_{ftg} = 1.5\ m$

$$h_{3UN2} := \begin{cases} h_{3aUN2} & \text{if } FG_{toeUN2} - Top_{ftg} \ge 0 \\ 0 & \text{otherwise} \end{cases} = 1.5$$

Resisting Fill at Toe: $h_{4UN2} := FG_{toeUN2} - Bot_{ftg} + Key_{t.d} = 4.00\ m$

Distance from Water Level to Top of Footing at Toe: $h_{5UN2} := WSEL_{UN2} - Top_{ftg} = 3.00\ m$

Distance from Water Surface to Bottom of Footing at Toe: $h_{6UN2} := WSEL_{UN2} - Bot_{ftg} + Key_{t.d} = 5.50\ m$

Soil Depth Above WSEL: $h_{7aUN2} := FG_{toeUN2} - WSEL_{UN2} = -1.5\ m$

$$h_{7UN2} := \begin{cases} h_{7aUN2} & \text{if } FG_{toeUN2} - WSEL_{UN2} \ge 0 \\ 0 & \text{otherwise} \end{cases} = 0$$

Soil Depth Below WSEL:

$$h_{8UN2} := \begin{cases} WSEL_{UN2} - Bot_{ftg} + Key_{t.d} & \text{if } FG_{toeUN2} - WSEL_{UN2} \ge 0 \\ h_{4UN2} & \text{otherwise} \end{cases} = 4$$

For Line of Creep Method: $L_{ho.UN2} := \sqrt{b^2 + \left(Key_{h.d} - Key_{t.d}\right)^2} = 11.281\ m$

Head Loss from Point g:

$\Delta h_{g.hj.UN2} := h_{2UN2} = 12.4\ m$ (to point h & j)

$\Delta h_{g.km.UN2} := GWL_{UN2} - Bot_{ftg} = 9.9\ m$ (to point k & m)

$\Delta h_{g.no.UN2} := GWL_{UN2} - Bot_{ftg} + Key_{t.d} = 9.9\ m$ (to point n & o)

$\Delta h_{g.p.UN2} := GWL_{UN2} - FG_{toeUN2} = 5.9\ m$ (to point p)

$\Delta h_{g.r.UN2} := GWL_{UN2} - UWSEL_{UN2} = 0\ m$ (to point r)

Surcharge

Surcharge on Heel: $S1_{UN2} := 0.0\ \frac{kN}{m^2}$

LOAD CASE UN2

Calculate Soil Lateral Pressure Coefficients:

For all load cases except seismic, soil loading to be based on At-Rest Condition.
Calculate at-rest pressure coefficient Ko based on Jaky's (1944) equation.

Soil At Rest Static Coefficient: $K_o := \frac{1 - \sin(\phi)}{1 + \sin(\beta)} = 0.546$ (Eq. 3-6, USACE EM 1110-2-2502)

Lateral - Driving Force

Static At-Rest:

Surcharge Load: $E_{s1UN2} := S1_{UN2} \cdot K_o \cdot \left(H_w + Key_{h.d}\right) \cdot B \cdot -1 = 0 \cdot kN$

Moment Arm (from bottom of footing): $E_{s1locUN2} := \frac{H_w + Key_{h.d}}{2} + Key_{vdist} = 4.40\ m$

Moist Soil Load above GWL: $E_{h1UN2} := \frac{\gamma_m \cdot K_o \cdot h_{1UN2}^{\ 2}}{2} \cdot B \cdot -1 = -10.7 \cdot kN$

Moment Arm (from bottom of footing): $E_{h1locUN2} := \frac{h_{1UN2}}{3} + h_{2UN2} + Key_{vdist} = 10.37\ m$

Saturated Soil Load below GWL:
(rectangular component) $E_{h2UN2} := \left(\gamma_m \cdot K_o \cdot h_{1UN2}\right) \cdot h_{2UN2} \cdot B \cdot -1 = -189.6 \cdot kN$

Moment Arm (from bottom of footing): $E_{h2locUN2} := \frac{h_{2UN2}}{2} + Key_{vdist} = 3.70\ m$

Saturated Soil Load below GWL:
(triangular component) $E_{h2aUN2} := \frac{\left(\gamma_{sat} - \gamma_w\right) \cdot K_o \cdot h_{2UN2}^{\ 2}}{2} \cdot B \cdot -1 = -512.1 \cdot kN$

Moment Arm (from bottom of footing): $E_{h2alocUN2} := \frac{h_{2UN2}}{3} + Key_{vdist} = 1.63\ m$

Lateral Water Load:

Water Load GWL to Bottom of Key $H_{h2UN2} := \frac{\gamma_w \cdot h_{2UN2}^{\ 2}}{2} \cdot B \cdot -1 = -753.4 \cdot kN$

Moment Arm (from bottom of footing): $H_{h2locUN2} := \frac{h_{2UN2}}{3} + Key_{vdist} = 1.63\ m$

$$\Sigma H_{SoildriveUN2} := E_{s1UN2} + E_{h1UN2} + E_{h2UN2} + E_{h2aUN2} + H_{h2UN2} = -1465.8 \cdot kN$$

$$\Sigma M_{LateralSoildriveUN2} := E_{s1UN2} \cdot E_{s1locUN2} + E_{h1UN2} \cdot E_{h1locUN2} + E_{h2UN2} \cdot E_{h2locUN2} \cdots + E_{h2aUN2} \cdot E_{h2alocUN2} + H_{h2UN2} \cdot H_{h2locUN2} = -2879.4\ m \cdot kN$$

Lateral - Resisting Force

LOAD CASE UN2

Lateral Water Load:

Water Load WSEL to Bottom of Footing:
$$H_{h6UN2} := \frac{\gamma_w \cdot h_{6UN2}^2}{2} \cdot B = 148.2 \cdot kN$$

Moment Arm (from bot. of toe key):
$$H_{h6locUN2} := \frac{h_{6UN2}}{3} = 1.83\ m$$

Water Load Bot. of Footing to Bot. of H. Key:
$$H_{h2aUN2} := \left[\left(UWSEL_{UN2} - Bot_{ftg} + Key_{t.d}\right) + h_{2UN2}\right] \cdot \frac{Key_{h.d}}{2} \cdot \gamma_w \cdot B = 273.2 \cdot kN$$

Moment Arm (from bot. of toe key):
$$H_{h2alocUN2} := \frac{Key_{h.d} \cdot \left[2 \cdot \left(UWSEL_{UN2} - Bot_{ftg} + Key_{t.d}\right) + h_{2UN2}\right]}{3\left[h_{2UN2} + \left(UWSEL_{UN2} - Bot_{ftg} + Key_{t.d}\right)\right]} \ldots = -1.30\ m$$
$$+ Key_{vdist}$$

Lateral Soil Load:

Moist Soil Load above WSEL:
$$E_{h7UN2} := \frac{\gamma_m \cdot K_o \cdot h_{7UN2}^2}{2} B = 0.0 \cdot kN$$

Moment Arm (from bot. of toe key):
$$E_{h7locUN2} := h_{6UN2} + \frac{h_{7UN2}}{3} + Key_{vdist} = 3.00\ m$$

Saturated Soil Load below WSEL:
(rectangular component)
$$E_{h8UN2} := \left(\gamma_m \cdot K_o \cdot h_{7UN2}\right) \cdot h_{8UN2} \cdot B = 0.0 \cdot kN$$

Moment Arm (from bot. of toe key):
$$E_{h8locUN2} := \frac{h_{8UN2}}{2} = 2.00\ m$$

Saturated Soil Load below WSEL:
(triangular component)
$$E_{h8aUN2} := \frac{\left[\left(\gamma_{sat} - \gamma_w\right) \cdot K_o\right] \cdot h_{8UN2}^2}{2} \cdot B = 53.3 \cdot kN$$

Moment Arm (from bot. of footing):
$$E_{h8alocUN2} := \frac{h_{8UN2}}{3} = 1.33\ m$$

$$\Sigma H_{SoilresistUN2} := H_{h6UN2} + H_{h2aUN2} + E_{h7UN2} + E_{h8UN2} + E_{h8aUN2} = 474.7 \cdot kN$$

$$\Sigma M_{HorizSoilResistUN2} := H_{h6UN2} \cdot H_{h6locUN2} + H_{h2aUN2} \cdot H_{h2alocUN2} + E_{h7UN2} \cdot E_{h7locUN2} \ldots = -11.4\ m \cdot kN$$
$$+ E_{h8UN2} \cdot E_{h8locUN2} + E_{h8aUN2} \cdot E_{h8alocUN2}$$

Vertical Force:

UPLIFT: Linear distribution from water at heel to water at toe:

$$\Sigma V_{UpliftUN2} := \left[\left(UWSEL_{UN2} - Bot_{ftg} + Key_{t.d}\right) + h_{2UN2}\right] \cdot \frac{b}{2} \cdot \gamma_w \cdot B \cdot -1 = -1201.97 \cdot kN$$

Moment Arm (from Point O):
$$V_{UpliftUN2aloc} := \frac{b \cdot \left[2 \cdot h_{2UN2} + \left(UWSEL_{UN2} - Bot_{ftg} + Key_{t.d}\right)\right]}{3\left[h_{2UN2} + \left(UWSEL_{UN2} - Bot_{ftg} + Key_{t.d}\right)\right]} = 5.706\ m$$

$$\Sigma M_{UpliftUN2} := \Sigma V_{UpliftUN2} \cdot V_{UpliftUN2aloc} = -6857.877 \cdot kN \cdot m$$

Weight of soil and water over toe:

Water Above the Top of Footing: $W_{H1UN2} := \gamma_w \cdot h_{5UN2} \cdot L_{ab} \cdot B = 80.85 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E1locUN2} := \frac{L_{ab}}{2} = 1.375\,m$

Soil above top of footing: $W_{E6UN2} := \gamma_b \cdot h_{3UN2} \cdot L_{ab} \cdot B = 50.3 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E6locUN2} := \frac{L_{ab}}{2} = 1.375\,m$

Vertical Load Due to Surcharge: $S_{UN2} := S1_{UN2} \cdot L_{cd} \cdot B = 0 \cdot kN$ $\quad S_{UN2loc} := b - \frac{L_{cd}}{2} = 7.47\,m$

Weight of soil and water over heel:

Moist Soil for sloped grade above top of wall:

Length of sloped portion of soil above top of wall: $L_{E3UN2} := \left(L_{cd} + t_{wb} - t_{wt}\right) = 7.75\,m$

Height of sloped soil above top of wall over heel: $h_{E3locUN2} := \left(L_{E3UN2}\right) \cdot \tan(\beta) = 0.00\,m$

Weight of sloped soil above top of wall: $W_{E3UN2} := \frac{\gamma_m}{2} \cdot h_{E3locUN2} \cdot L_{E3UN2} \cdot B = 0.0 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E3locUN2} := L_{ab} + t_{wt} + \frac{2}{3} \cdot L_{E3UN2} = 8.42\,m$

Moist soil from top of wall to groundwater level:

Height of soil from top of wall and top of GWL: $h_{1UN2} = 1.40\,m$

Length from edge of wall at GWL to edge of heel: $L_{E4UN2} := L_{E3UN2} - \left(h_{1UN2} \cdot S_{batter}\right) = 7.64\,m$

Weight of soil over heel from top of wall to GWL: $W_{E4UN2} := \gamma_m \cdot h_{1UN2} \cdot \frac{\left(L_{E3UN2} + L_{E4UN2}\right)}{2} \cdot B = 215.5 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E4locUN2} := b - \frac{L_{E3UN2}^2 + L_{E3UN2} \cdot L_{E4UN2} + L_{E4UN2}^2}{3\left(L_{E3UN2} + L_{E4UN2}\right)} = 7.15\,m$

Saturated soil from groundwater to top of footing:

Height of soil from GWL to top of heel: $h_{E4UN2} := h_{2UN2} - t_{ftg} - Key_{h.d} = 7.40\,m$

Weight of soil over heel from GWL to top of heel: $W_{E5UN2} := \left(\gamma_{sat}\right) \cdot h_{E4UN2} \cdot \frac{\left(L_{E4UN2} + L_{cd}\right)}{2} \cdot B = 1196.5 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E5locUN2} := b - \frac{L_{E4UN2}^2 + L_{E4UN2} \cdot L_{cd} + L_{cd}^2}{3\left(L_{E4UN2} + L_{cd}\right)} = 7.32\,m$

$$\Sigma V_{SoilWaterUN2} := W_{H1UN2} + W_{E6UN2} + W_{E3UN2} + W_{E4UN2} + W_{E5UN2} + S_{UN2} = 1543.1 \cdot kN$$

Safety Factor for Floatation:

$$FS_{FloatationUN2} := \frac{\Sigma V_{conc} + \Sigma V_{SoilWaterUN2}}{\left|\Sigma V_{UpliftUN2}\right|} = 2.02$$

$$FS_{Floatation.UN2.check} := \begin{cases} \text{"OKAY "} & \text{if } FS_{FloatationUN2} > FS_{req.UN2.flt} \\ \text{"Revise Structure""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

CHECK OVERTURNING

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stablity of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1

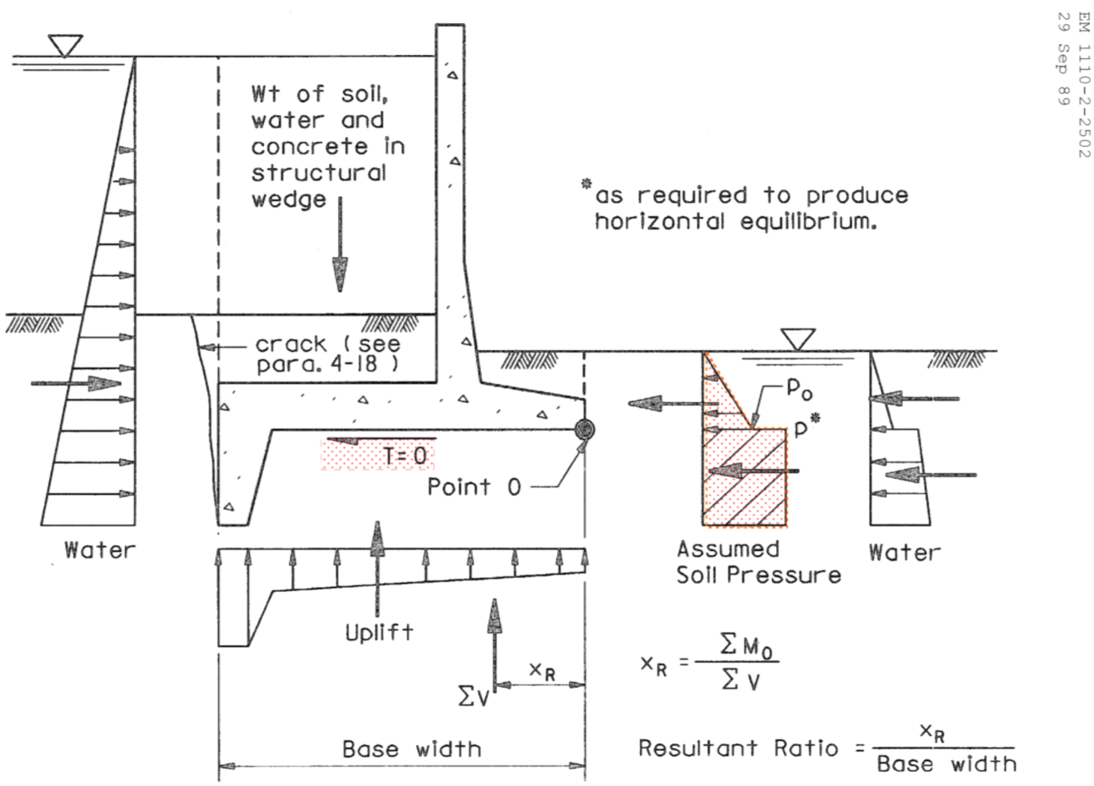

Figure 4-5. Forces for overturning analysis for wall with horizontal base and key

Modify Uplift for Overturning Analysis: **LOAD CASE UN2**

(Uplift is calculated along the concrete/rock contact using the Line of Creep method)

Water Pressure at h: $u_{h.UN2} := \Delta h_{g.hj.UN2} \cdot \gamma_w = 121.52 \cdot kPa$

Water Pressure at o: $u_{o.UN2} := \left(\Delta h_{g.no.UN2} - \frac{\Delta h_{g.r.UN2} \cdot L_{ho.UN2}}{L_{ho.UN2}}\right) \cdot \gamma_w = 97.02 \cdot kPa$

Head loss between point h and o: $\Delta h_{ho.UN2} := \Delta h_{g.r.UN2} \cdot \frac{L_{ho.UN2}}{L_{ho.UN2}} = 0\,m$

Length of concrete base (h -> o): $L_{baseho.UN2} := Key_{h.w} + Key_{h.d} + Key_{hdist} + Key_{t.d} + Key_{t.w} = 13.5\,m$

Head loss along h -> j: $\Delta h_{hj.UN2} := \Delta h_{ho.UN2} \cdot \frac{Key_{h.w}}{L_{baseho.UN2}} = 0\,m$

Water Pressure at j: $u_{j.UN2} := \left(\Delta h_{g.hj.UN2} - \Delta h_{hj.UN2}\right) \cdot \gamma_w = 121.52 \cdot kPa$

Head loss along h -> k: $\Delta h_{hjk.UN2} := \Delta h_{ho.UN2} \cdot \left(\frac{Key_{h.w} + Key_{h.d}}{L_{baseho.UN2}}\right) = 0\,m$

Moment Arm (from Point O): $V_{ulkeytUN2loc.OT} := \frac{Key_{t.w} \cdot \left(2 \cdot u_{n.UN2} + u_{o.UN2}\right)}{3 \cdot \left(u_{n.UN2} + u_{o.UN2}\right)} = 0$

$$\Sigma V_{UpliftUN2.OT} := V_{ulkeyhUN2.OT} + V_{ulbaseUN2.OT} + V_{ulkeytUN2.OT} = -1092 \cdot kN$$

$$U_{UN2.loc.OT} := \frac{V_{ulkeyhUN2.OT} \cdot V_{ulkeyhUN2loc.OT} + V_{ulbaseUN2.OT} \cdot V_{ulbaseUN2loc.OT} + V_{ulkeytUN2.OT} \cdot V_{ulkeytUN2loc.OT}}{\Sigma V_{UpliftUN2.OT}} = 5.61\,m$$

$$\Sigma M_{UpliftUN2.OT} := \Sigma V_{UpliftUN2.OT} \cdot U_{UN2.loc.OT} = -6127.0 \cdot kN \cdot m$$

Modify Lateral Water Pressure (Resisting) for Overturning Analysis:

(Resisting water pressure is calculated using the Line of Creep method)

Water Load at Key (heel): $H_{h2UN2.OT} := \frac{u_{k.UN2} + u_{j.UN2}}{2} \cdot Key_{h.d} \cdot B = 273.2 \cdot kN$

Moment Arm (from Point O): $H_{h2locUN2.OT} := \frac{Key_{h.d} \cdot (2 \cdot u_{k.UN2} + u_{j.UN2})}{3(u_{k.UN2} + u_{j.UN2})} + Key_{vdist} = -1.30\ m$

Water Load at Key (toe): $H_{h6UN2.OT} := \frac{u_{o.UN2} \cdot (UWSEL_{UN2} - Bot_{ftg} + Key_{t.d})}{2} \cdot B = 480 \cdot kN$

Moment Arm (from Point O): $H_{h6locUN2.OT} := \frac{UWSEL_{UN2} - Bot_{ftg} + Key_{t.d}}{3} = 3.30\ m$

$$\Sigma H_{waterresistUN2.OT} := H_{h2UN2.OT} + H_{h6UN2.OT} = 753.42 \cdot kN$$

$$H_{waterresistlocUN2.OT} := \frac{H_{h2UN2.OT} \cdot H_{h2locUN2.OT} + H_{h6UN2.OT} \cdot H_{h6locUN2.OT}}{\Sigma H_{waterresistUN2.OT}} = 1.633\ m$$

$$\Sigma M_{waterresistUN2.OT} := \Sigma H_{waterresistUN2.OT} \cdot H_{waterresistlocUN2.OT} = 1230.59 \cdot kN \cdot m$$

Modify Lateral Soil Loads for Overturning Analysis:

(Lateral soil loads are calculated down to Point O instead of bottom of shear key)

Driving Soil Load (Headwater Side):

Surcharge Load: $E_{s1UN2.OT} := S1_{UN2} \cdot K_o \cdot (H_w + Key_{h.d} + Key_{vdist}) \cdot B \cdot -1 = 0 \cdot kN$

Moment Arm (from Point O): $E_{s1locUN2.OT} := \frac{H_w + Key_{h.d} + Key_{vdist}}{2} = 5.65\ m$

Moist Soil Load above GWL: $E_{h1UN2.OT} := \frac{\gamma_m \cdot K_o \cdot h_{1UN2}^2}{2} B \cdot -1 = -10.7 \cdot kN$

Moment Arm (from Point O): $E_{h1locUN2.OT} := \frac{h_{1UN2}}{3} + h_{2UN2} + Key_{vdist} = 10.37\ m$

Saturated Soil Load below GWL: (rectangular component) $E_{h2UN2.OT} := (\gamma_m \cdot K_o \cdot h_{1UN2}) \cdot (h_{2UN2} + Key_{vdist}) \cdot B \cdot -1 = -151.4 \cdot kN$

Moment Arm (from Point O): $E_{h2locUN2.OT} := \frac{h_{2UN2} + Key_{vdist}}{2} = 4.95\ m$

Saturated Soil Load below GWL: (triangular component) $E_{h2aUN2.OT} := \frac{(\gamma_{sat} - \gamma_w) \cdot K_o \cdot (h_{2UN2} + Key_{vdist})^2}{2} \cdot B \cdot -1 = -326.4 \cdot kN$

Moment Arm (from Point O): $E_{h2alocUN2.OT} := \frac{h_{2UN2} + Key_{vdist}}{3} = 3.30\ m$

Resisting Soil Load (Tailwater Side):

(Determine resisting soil load based on depth variation between the keys (ie. Key_{vdist}). In case where key at heel is deeper than key at toe (ie. $Key_{vdist} < 0$), resisting soil load (p*) is assumed to produce horizontal equilibrium as per Figure 4-5 above. Resisting soil load (p_o) is neglected.)

Total Driving Force: $\Sigma H_{SoildriveUN2.OT} := E_{s1UN2.OT} + E_{h1UN2.OT} + E_{h2UN2.OT} + E_{h2aUN2.OT} + H_{h2UN2} = -1241.9 \cdot kN$

Total Resisting Force: $\Sigma H_{waterresistUN2.OT} = 753.4 \cdot kN$

Assumed Soil Load p*: $E_{h8UN2a.OT} := \left(\Sigma H_{SoildriveUN2.OT} + \Sigma H_{waterresistUN2.OT}\right) \cdot -1 = 488.493 \cdot kN$

Moment Arm (from Point O): $E_{h8UN2a.loc.OT} := \frac{Key_{vdist}}{2} = -1.25\ m$

$$E_{h8UN2.OT} := \begin{cases} E_{h8UN2a.OT} & \text{if } Key_{vdist} < 0 \\ \Sigma H_{SoilresistUN2} - H_{h6UN2} - H_{h2aUN2} & \text{otherwise} \end{cases} = 488.493 \cdot kN$$

$$\Sigma M_{SoilresistUN2} := \begin{cases} E_{h8UN2a.OT} \cdot E_{h8UN2a.loc.OT} & \text{if } Key_{vdist} < 0 \\ \Sigma M_{HorizSoilResistUN2} - H_{h6UN2} \cdot H_{h6locUN2} - H_{h2aUN2} \cdot H_{h2alocUN2} & \text{otherwise} \end{cases} = -610.617 \cdot kN \cdot m$$

Sum of Moment about Point O:

$$\Sigma M_{LateraldriveUN2.OT} := E_{s1UN2.OT} \cdot E_{s1locUN2.OT} + E_{h1UN2.OT} \cdot E_{h1locUN2.OT} + E_{h2UN2.OT} \cdot E_{h2locUN2.OT} \dots + E_{h2aUN2.OT} \cdot E_{h2alocUN2.OT} + H_{h2UN2} \cdot H_{h2locUN2} = -3168.0 \cdot kN \cdot m$$

$$\Sigma M_{LateralresistUN2.OT} := \Sigma M_{waterresistUN2.OT} + \Sigma M_{SoilresistUN2} = 620.0 \cdot kN \cdot m$$

Total moment:

$$\Sigma M_{UN2.OT} := \Sigma M_{conc} + \Sigma M_{VertSoilWaterResistUN2} + \Sigma M_{UpliftUN2.OT} + \Sigma M_{LateraldriveUN2.OT} + \Sigma M_{LateralresistUN2.OT} = 6539.0 \cdot kN \cdot m$$

Total Vertical Force: $\Sigma V_{UN2.OT} := \Sigma V_{conc} + \Sigma V_{SoilWaterUN2} + \Sigma V_{UplliftUN2.OT} = 1331.3 \cdot kN$

Distance X_R: EM 1110-2-2502 Eq.4-1 $X_{R.UN2} := \frac{\Sigma M_{UN2.OT}}{\Sigma V_{UN2.OT}} = 4.912\ m$

Overturning Resultant Ratio $Ratio_{UN2.OT} := \frac{X_{R.UN2}}{b} = 0.45$

$$Ratio_{UN2.OT.check} := \begin{cases} \text{"OKAY "} & \text{if } Ratio_{UN2.OT} > X_{R.reqUN2} \\ \text{"Revise Structure""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

CHECK FOUNDATION ECCENTRICITY (HORIZONTAL PLANE):

Eccentricity (horizontal plan): $ex_{UN2.OT} := \frac{b}{2} - \frac{\Sigma M_{UN2.OT}}{\Sigma V_{UN2.OT}} = 0.59\ m$ $Kern_{OT} = 1.833\ m$

Eccentricity Check:

$$e_{check.UN2.OT} := \begin{cases} \text{"Okay"} & \text{if } ex_{UN2} \le Kern_{OT} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"Okay"}$$

LOAD CASE UN2

CHECK FOUNDATION BEARING CAPACITY (HORIZONTAL PLANE):

Base Section Modulus: $S_{b.OT} = 20.17\,m^3$

Bearing Pressure Under Toe:

$$\sigma_{ToeUN2.OT} := \begin{cases} \left(\dfrac{\Sigma V_{UN2.OT}}{b \cdot B} + \dfrac{\Sigma V_{UN2.OT} \cdot ex_{UN2.OT}}{S_{b.OT}}\right) & \text{if } \dfrac{\Sigma V_{UN2.OT}}{b \cdot B} \geq \dfrac{\Sigma V_{UN2.OT} \cdot ex_{UN2.OT}}{S_{b.OT}} \\ \dfrac{2 \cdot \Sigma V_{UN2.OT}}{B \cdot 3\left(\dfrac{b}{2} - ex_{UN2.OT}\right)} & \text{otherwise} \end{cases} = 159.9 \cdot kPa$$

$$Bearing_{ChecktoeUN2.OT} := \begin{cases} \text{"OKAY "} & \text{if } \sigma_{ToeUN2.OT} < \sigma_{allowUN2} \\ \text{"NG - for reference only""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

Bearing Pressure Under Heel:

$$\sigma_{HeelUN2.OT} := \begin{cases} \left(\dfrac{\Sigma V_{UN2.OT}}{b \cdot B} - \dfrac{\Sigma V_{UN2.OT} \cdot ex_{UN2.OT}}{S_{b.OT}}\right) & \text{if } \dfrac{\Sigma V_{UN2.OT}}{b \cdot B} \geq \dfrac{\Sigma V_{UN2.OT} \cdot ex_{UN2.OT}}{S_{b.OT}} \\ 0 & \text{otherwise} \end{cases} = 82.2 \cdot kPa$$

$$Bearing_{CheckheelUN2.OT} := \left(\begin{cases} \text{"OKAY "} & \text{if } \sigma_{ToeUN2.OT} < \sigma_{allowUN2} \wedge \sigma_{ToeUN2.OT} > 0 \\ \text{"NG - for reference only""} & \text{otherwise} \end{cases} \right) = \text{"OKAY "}$$

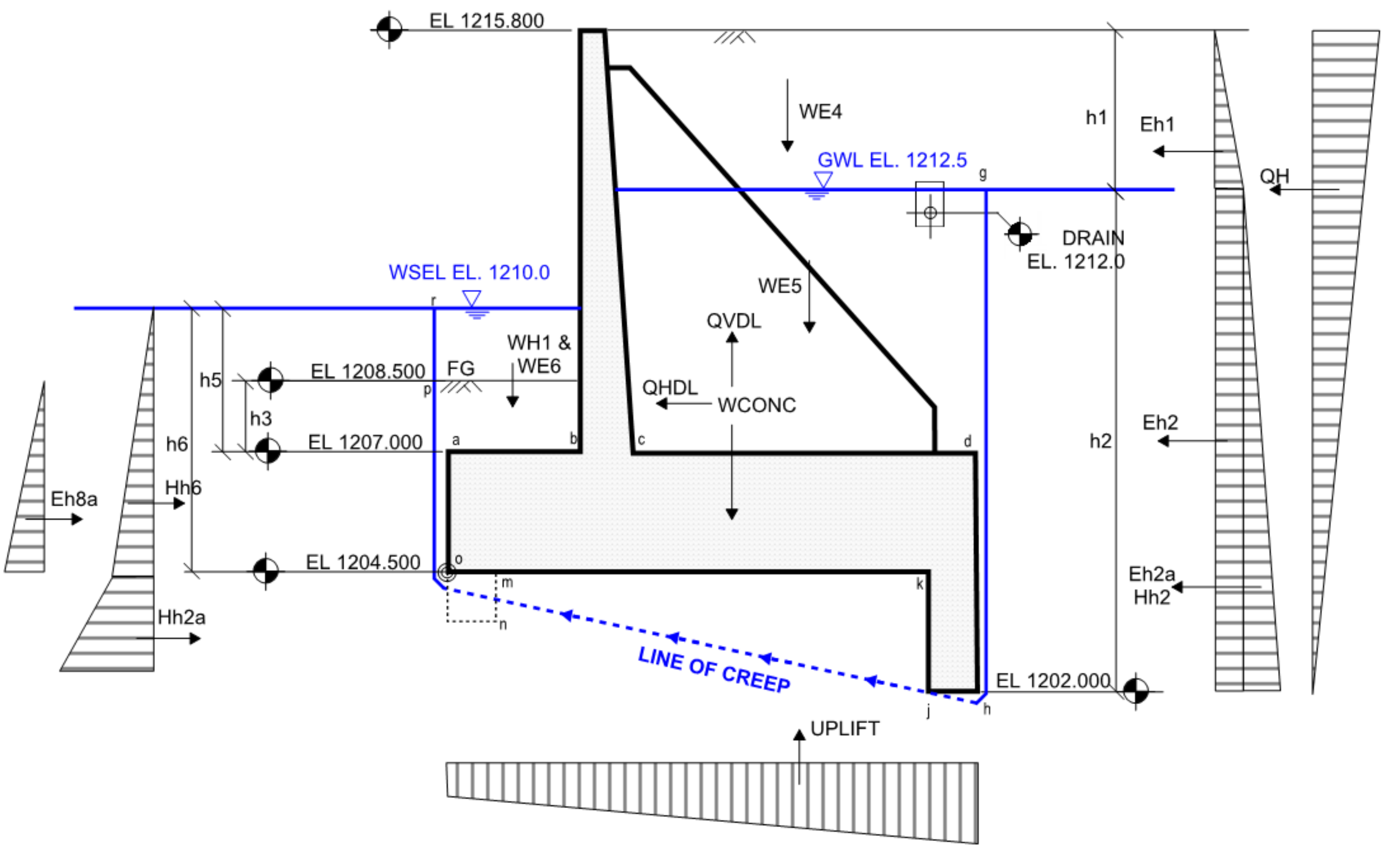
LOAD CASE E1 - SEISMIC LOADING



E1 DESIGN CASE

LOAD CASE E1 ACCEPTANCE PARAMETERS

FS sliding:

Extreme (E) loading) 1.0 (without cohesion, seismic (Table 3-3, USACE EM 1110-2-2100)

Resultant Location:

Extremem (E) Inside middle half ~75% base in compression

Required Factor of Safety for Sliding: $FS_{sliding.reqE1} := 1.0$ (Without Cohesion)

Allowable rock bearing pressure: $\sigma_{allowE1} := 1740kPa$ (Section 5.2, Design Criteria EM 1110-2-2100 Section 3-10)

Overturning Required Resultant Ratio: $X_{R.reqE1} := 0.25$ (EM 1110-2-2502, Figure 4-4)

Required Factor of Safety for Floatation $FS_{req.E1.flt} := 1.1$

SOIL HEIGHTS and Water Levels:

LOAD CASE E1

Heel Conditions:

Groundwater Elevation at Heel: $GWL_{E1} := 1212.5m$

Distance from Finish Grade to Groundwater at Heel: $h_{1E1} := \left[T_w - GWL_{E1} + \left(L_{cd} + t_{wb} - t_{wt}\right) \cdot \tan(\beta)\right] = 3.30\ m$

Distance from Water Surface to Bottom of Footing at Heel: $h_{2E1} := GWL_{E1} - Bot_{ftg} + Key_{h.d} = 10.50\ m$

Toe Conditions:

Water Surface Elevation at Toe: $WSEL_{E1} := 1210.0m$

Water Surface Elevation at Toe for Uplift: $UWSEL_{E1} := 1210.0 \cdot m$

Finish Grade at Toe providing lateral resistance: $FG_{toeE1} := 1208.5 \cdot m$

Soil Depth Above top of footing: $h_{3aE1} := FG_{toeE1} - Top_{ftg} = 1.5\ m$

$$h_{3E1} := \begin{array}{|l} h_{3aE1} \quad \text{if} \quad FG_{toeE1} - Top_{ftg} \geq 0 \\ 0 \quad \text{otherwise} \end{array} = 1.5$$

Resisting Fill at Toe: $h_{4E1} := FG_{toeE1} - Bot_{ftg} + Key_{t.d} = 4.00\ m$

Distance from Water Level to Top of Footing at Toe: $h_{5E1} := WSEL_{E1} - Top_{ftg} = 3.00\ m$

Distance from Water Surface to Bottom of Footing at Toe: $h_{6E1} := WSEL_{E1} - Bot_{ftg} + Key_{t.d} = 5.50\ m$

Soil Depth Above WSEL: $h_{7aE1} := FG_{toeE1} - WSEL_{E1} = -1.5\ m$

$$h_{7E1} := \begin{array}{|l} h_{7aE1} \quad \text{if} \quad FG_{toeE1} - WSEL_{E1} \geq 0 \\ 0 \quad \text{otherwise} \end{array} = 0$$

Soil Depth Below WSEL:

$$h_{8E1} := \begin{array}{|l} WSEL_{E1} - Bot_{ftg} + Key_{t.d} \quad \text{if} \quad FG_{toeE1} - WSEL_{E1} \geq 0 \\ h_{4E1} \quad \text{otherwise} \end{array} = 4$$

For Line of Creep Method: $L_{ho.E1} := \sqrt{b^2 + \left(Key_{h.d} - Key_{t.d}\right)^2} = 11.281\ m$

Head Loss from Point g:

$\Delta h_{g.hj.E1} := h_{2E1} = 10.5\ m$ (to point h & j)

$\Delta h_{g.km.E1} := GWL_{E1} - Bot_{ftg} = 8\ m$ (to point k & m)

$\Delta h_{g.no.E1} := GWL_{E1} - Bot_{ftg} + Key_{t.d} = 8\ m$ (to point n & o)

$\Delta h_{g.p.E1} := GWL_{E1} - FG_{toeE1} = 4\ m$ (to point p)

$\Delta h_{g.r.E1} := GWL_{E1} - UWSEL_{E1} = 2.5\ m$ (to point r)

Surcharge

Surcharge on Heel: $S1_{E1} := 0.0 \dfrac{kN}{m^2}$

Calculate Soil Lateral Pressure Coefficients:

LOAD CASE E1

Calculate at-rest pressure coefficient K_o based on Jaky's (1944) equation.

Soil At Rest Static Coefficient:
(apply to resisting soil loads)

$$K_o := \frac{1 - \sin(\phi)}{1 + \sin(\beta)} = 0.546$$

(Eq. 3-6, USACE EM 1110-2-2502)

Calculate active pressure coefficient K_A based on Coulumb equations.

Determine Slope of Active Wedge: (cohesionless backfill with water table)

$$c_1 := 2 \cdot \tan(\phi) = 1.019 \qquad c_2 := 1 - \tan(\phi) \cdot \tan(\beta) - \frac{\tan(\beta)}{\tan(\phi)} = 1$$

(Eq. G-14 / G-15, USACE EM 1110-2-2100)

$$\alpha := \operatorname{atan}\left(\frac{c_1 + \sqrt{c_1^{\,2} + 4 \cdot c_2}}{2}\right) = 1.021 \qquad \alpha_{deg} := \alpha \cdot \frac{180}{\pi} = 58.5 \text{ degrees}$$

(Eq. G-13, USACE EM 1110-2-2100)

Soil Active Coefficient above GWL:

$$K_{Aagwt} := \left(\frac{1 - \tan(\phi) \cdot \cot(\alpha)}{1 + \tan(\phi) \cdot \tan(\alpha)}\right) \cdot \left(\frac{\tan(\alpha)}{\tan(\alpha) - \tan(\beta)}\right) = 0.376$$

Soil Active Coefficient below GWL:

$$K_{Abgwt} := \frac{1 - \tan(\phi) \cdot \cot(\alpha)}{1 + \tan(\phi) \cdot \tan(\alpha)} \cdot \left[1 + \left(\frac{\tan(\alpha)}{\tan(\alpha) - \tan(\beta)} - 1\right) \cdot \left(\frac{\gamma_m}{\gamma_{sat} - \gamma_w}\right)\right] = 0.376$$

(Eq. G-29, USACE EM 1110-2-2100)

Lateral - Driving Force

Static Copmonent : Active Pressure:

Surcharge Load:

$$E_{s1E1} := S1_{E1} \cdot K_{Aagwt} \cdot \left(H_w + Key_{h.d}\right) \cdot B \cdot -1 = 0 \cdot kN$$

Moment Arm (from bottom of footing):

$$E_{s1locE1} := \frac{H_w + Key_{h.d}}{2} + Key_{vdist} = 4.40\ m$$

Moist Soil Load above GWL:

$$E_{h1E1} := \frac{\gamma_m \cdot K_{Aagwt} \cdot h_{1E1}^{\,2}}{2} \cdot B \cdot -1 = -40.9 \cdot kN$$

Moment Arm (from bottom of footing):

$$E_{h1locE1} := \frac{h_{1E1}}{3} + h_{2E1} + Key_{vdist} = 9.10\ m$$

Saturated Soil Load below GWL:
(rectangular component)

$$E_{h2E1} := \left(\gamma_m \cdot K_{Abgwt} \cdot h_{1E1}\right) \cdot h_{2E1} \cdot B \cdot -1 = -260.2 \cdot kN$$

Moment Arm (from bottom of footing):

$$E_{h2locE1} := \frac{h_{2E1}}{2} + Key_{vdist} = 2.75\ m$$

Saturated Soil Load below GWL:
(triangular component)

$$E_{h2aE1} := \frac{\left(\gamma_{sat} - \gamma_w\right) \cdot K_{Abgwt} \cdot h_{2E1}^{\,2}}{2} \cdot B \cdot -1 = -252.5 \cdot kN$$

Moment Arm (from bottom of footing):

$$E_{h2alocE1} := \frac{h_{2E1}}{3} + Key_{vdist} = 1.00\ m$$

Lateral Water Load:

Water Load GWL to Bottom of Key

$$H_{h2E1} := \frac{\gamma_w \cdot h_{2E1}^{\,2}}{2} \cdot B \cdot -1 = -540.2 \cdot kN$$

Moment Arm (from bottom of footing):

$$H_{h2locE1} := \frac{h_{2E1}}{3} + Key_{vdist} = 1.00\ m$$

$$\Sigma H_{SoildriveE1} := E_{s1E1} + E_{h1E1} + E_{h2E1} + E_{h2aE1} + H_{h2E1} = -1093.9 \cdot kN$$

$$\Sigma M_{LateralSoildriveE1} := E_{s1E1} \cdot E_{s1locE1} + E_{h1E1} \cdot E_{h1locE1} + E_{h2E1} \cdot E_{h2locE1} \cdots + E_{h2aE1} \cdot E_{h2alocE1} + H_{h2E1} \cdot H_{h2locE1} = -1880.6\ m \cdot kN$$

Lateral - Resisting Force

LOAD CASE E1

Note: **Due to the relatively shallow depth of resisting soil/rock, a conservative apporach using at-rest coefficient in lieu of a passive wedge is used to calculate resisting forces.**

Lateral Water Load:

Water Load WSEL to Bottom of Footing: $H_{h6E1} := H_{h6U1} = 148.2 \cdot kN$

Moment Arm (from bot. of toe key): $H_{h6locE1} := H_{h6locU1} = 1.83\ m$

Water Load Bot. of Footing to Bot. of H. Key: $H_{h2aE1} := \left[\left(UWSEL_{E1} - Bot_{ftg} + Key_{t.d}\right) + h_{2E1}\right] \cdot \frac{Key_{h.d}}{2} \cdot \gamma_w \cdot B = 196.0 \cdot kN$

Moment Arm (from bot. of toe key): $H_{h2alocE1} := \frac{Key_{h.d} \cdot \left[2 \cdot \left(UWSEL_{E1} - Bot_{ftg} + Key_{t.d}\right) + h_{2E1}\right]}{3\left[h_{2E1} + \left(UWSEL_{E1} - Bot_{ftg} + Key_{t.d}\right)\right]} \ldots = -1.38\ m$
$+ Key_{vdist}$

Lateral Soil Load:

Moist Soil Load above WSEL: $E_{h7E1} := \frac{\gamma_m \cdot K_o \cdot h_{7E1}^{\ 2}}{2} \cdot B = 0.0 \cdot kN$

Moment Arm (from bot. of toe key): $E_{h7locE1} := h_{6E1} + \frac{h_{7E1}}{3} + Key_{vdist} = 3.00\ m$

Saturated Soil Load below WSEL:
(rectangular component) $E_{h8E1} := \left(\gamma_m \cdot K_o \cdot h_{7E1}\right) \cdot h_{8E1} \cdot B = 0.0 \cdot kN$

Moment Arm (from bot. of toe key): $E_{h8locE1} := \frac{h_{8E1}}{2} = 2.00\ m$

Saturated Soil Load below WSEL:
(triangular component) $E_{h8aE1} := \frac{\left[\left(\gamma_{sat} - \gamma_w\right) \cdot K_o\right] \cdot h_{8E1}^{\ 2}}{2} \cdot B = 53.3 \cdot kN$

Moment Arm (from bot. of footing): $E_{h8alocE1} := \frac{h_{8E1}}{3} = 1.33\ m$

$\Sigma H_{SoilresistE1} := H_{h6E1} + H_{h2aE1} + E_{h7E1} + E_{h8E1} + E_{h8aE1} = 397.5 \cdot kN$

$\Sigma M_{HorizSoilResistE1} := H_{h6E1} \cdot H_{h6locE1} + H_{h2aE1} \cdot H_{h2alocE1} + E_{h7E1} \cdot E_{h7locE1} \ldots = 72.3\ m \cdot kN$
$+ E_{h8E1} \cdot E_{h8locE1} + E_{h8aE1} \cdot E_{h8alocE1}$

Vertical Force:

UPLIFT: Linear distribution from water at heel to water at toe:

$\Sigma V_{UpliftE1} := \left[\left(UWSEL_{E1} - Bot_{ftg} + Key_{t.d}\right) + h_{2E1}\right] \cdot \frac{b}{2} \cdot \gamma_w \cdot B \cdot -1 = -862.4 \cdot kN$

Moment Arm (from Point O): $V_{UpliftE1aloc} := \frac{b \cdot \left[2 \cdot h_{2E1} + \left(UWSEL_{E1} - Bot_{ftg} + Key_{t.d}\right)\right]}{3\left[h_{2E1} + \left(UWSEL_{E1} - Bot_{ftg} + Key_{t.d}\right)\right]} = 6.073\ m$

$\Sigma M_{UpliftE1} := \Sigma V_{UpliftE1} \cdot V_{UpliftE1aloc} = -5237.283 \cdot kN \cdot m$

Weight of soil and water over toe:

Water Above the Top of Footing: $W_{H1E1} := \gamma_w \cdot h_{5E1} \cdot L_{ab} \cdot B = 80.85 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E1locE1} := \dfrac{L_{ab}}{2} = 1.375\,m$

Soil above top of footing: $W_{E6E1} := \gamma_b \cdot h_{3E1} \cdot L_{ab} \cdot B = 50.3 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E6locE1} := \dfrac{L_{ab}}{2} = 1.375\,m$

Vertical Load Due to Surcharge: $S_{E1} := S1_{E1} \cdot L_{cd} \cdot B = 0 \cdot kN$ $\quad S_{E1loc} := b - \dfrac{L_{cd}}{2} = 7.47\,m$

Weight of soil and water over heel:

Moist Soil for sloped grade above top of wall:

Length of sloped portion of soil above top of wall: $L_{E3E1} := \left(L_{cd} + t_{wb} - t_{wt}\right) = 7.75\,m$

Height of sloped soil above top of wall over heel: $h_{E3locE1} := \left(L_{E3E1}\right) \cdot \tan(\beta) = 0.00\,m$

Weight of sloped soil above top of wall: $W_{E3E1} := \dfrac{\gamma_m}{2} \cdot h_{E3locE1} \cdot L_{E3E1} \cdot B = 0.0 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E3locE1} := L_{ab} + t_{wt} + \dfrac{2}{3} \cdot L_{E3E1} = 8.42\,m$

Moist soil from top of wall to groundwater level:

Height of soil from top of wall and top of GWL: $h_{1E1} = 3.30\,m$

Length from edge of wall at GWL to edge of heel: $L_{E4E1} := L_{E3E1} - \left(h_{1E1} \cdot S_{batter}\right) = 7.49\,m$

Weight of soil over heel from top of wall to GWL: $W_{E4E1} := \gamma_m \cdot h_{1E1} \cdot \dfrac{\left(L_{E3E1} + L_{E4E1}\right)}{2} \cdot B = 502.9 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E4locE1} := b - \dfrac{L_{E3E1}^{\;2} + L_{E3E1} \cdot L_{E4U1} + L_{E4E1}^{\;2}}{3\left(L_{E3E1} + L_{E4E1}\right)} = 7.19\,m$

Saturated soil from groundwater to top of footing:

Height of soil from GWL to top of heel: $h_{E4E1} := h_{2E1} - t_{ftg} - Key_{h.d} = 5.50\,m$

Weight of soil over heel from GWL to top of heel: $W_{E5E1} := \left(\gamma_{sat}\right) \cdot h_{E4E1} \cdot \dfrac{\left(L_{E4E1} + L_{cd}\right)}{2} \cdot B = 880.3 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E5locE1} := b - \dfrac{L_{E4E1}^{\;2} + L_{E4E1} \cdot L_{cd} + L_{cd}^{\;2}}{3\left(L_{E4E1} + L_{cd}\right)} = 7.36\,m$

$$\Sigma V_{SoilWaterE1} := W_{H1E1} + W_{E6E1} + W_{E3E1} + W_{E4E1} + W_{E5E1} + S_{E1} = 1514.4 \cdot kN$$

$$\Sigma M_{VertSoilWaterResistE1} := W_{H1E1} \cdot W_{E1locE1} + W_{E6E1} \cdot W_{E6locE1} \cdots + W_{E3E1} \cdot W_{E3locE1} + W_{E4E1} \cdot W_{E4locE1} + W_{E5E1} \cdot W_{E5locE1} + S_{E1} \cdot S_{E1loc} = 10276.3\,m \cdot kN$$

SESIMIC ANALYSIS:

LOAD CASE E1

Seismic coefficient will be applied to dead loads to calculate seismic force and force is applied at center of gravity of the mass. Vertical and Horizontal loads are applied in the "destabilizing direction"

SEISMIC PARAMETERS:

(Section 7.9, Design Criteria)

Peak Ground Acceleration for Seismic Load $PGA_{Horiz} := 0.26$ $PGA_{Vert} := 0.56 \cdot PGA_{Horiz} = 0.146$

In accordance with USACE EM 1110-2-2100 Section 4-7.b, consider 2/3 PGA as seismic coefficient for stabilitiy.

Horizontal Seismic coefficient for stabilty: $K_{hE1} := \frac{2}{3} PGA_{Horiz} = 0.173$

Vertical Seismic coefficient for stabilty: $K_{vE1} := \frac{2}{3} PGA_{Vert} = 0.097$

SEISMIC ACCELERATION OF RIGID MASSES (Q_D):

Vertical Load Application:

$\Sigma V_{conc} = 879.8 \cdot kN$

$Q_{v.conc} := \Sigma V_{conc} \cdot K_{vE1} \cdot -1 = -85.4 \cdot kN$ (assume acting upwards for adverse sliding effect)

Moment arm for siesmic load application (From Toe): $H_{cent} = 5.376\,m$

$M_{Qv.conc} := Q_{v.conc} \cdot H_{cent} = -459.1 \cdot kN \cdot m$

Lateral Load Application:

$Q_{h.conc} := \Sigma V_{conc} \cdot K_{hE1} \cdot -1 = -152.5 \cdot kN$

Moment arm for siesmic load application (Above Base of Footing): $V_{Cent} = 2.087\,m$

$M_{Q.conc} := Q_{h.conc} \cdot V_{Cent} = -318.2 \cdot kN \cdot m$

SEISMIC ACCELERATION OF SOIL WEDGE + WATER (Q_{EH}):

Vertical Load Application:

$\Sigma V_{SoilWaterE1} = 1514.4 \cdot kN$

$Q_{v.SoilWaterE1} := \Sigma V_{SoilWaterE1} \cdot K_{vE1} \cdot -1 = -147 \cdot kN$ (assume acting upwards for adverse sliding effect)

Moment arm for siesmic load application (From Toe): $e_{QE1} := \frac{\Sigma M_{VertSoilWaterResistE1}}{\Sigma V_{SoilWaterE1}} = 6.786\,m$

$M_{Qv.SoilWaterE1} := Q_{v.SoilWaterE1} \cdot e_{QE1} = -997.5 \cdot kN \cdot m$

Lateral Load Application:

Seismic soil load is calculated based on Mononobe-Okabe method to determine combined static and dynamic coefficient (K_{AE}). Coulomb's active component (K_A) is subtracted from K_{AE} to obtain the seismic coefficient (ΔK_{AE}) for dynamic component of soil force.

Glacial Till Internal Friction (radians): $\phi = 0.471$

Seismic Inertia Angle (radians): $\psi := \operatorname{atan}\left(\frac{K_{hE1}}{1 - K_{vE1}}\right) = 0.190$

Inclination of batter (radians): $\theta := 0.00$ assuming zero is conservative

Slope of retained ground surface: $\beta = 0.00$

$$K_{AE} := \frac{\cos(\phi - \psi - \theta) \cdot \cos(\phi - \psi - \theta)}{\cos(\psi) \cdot \cos(\theta) \cdot \cos(\theta)\ \cos(\psi + \theta) \cdot \left(1 + \sqrt{\frac{\sin(\phi)\ \sin(\phi - \psi - \beta)}{\cos(\beta - \theta) \cdot \cos(\psi + \theta)}}\right)^2} = 0.519$$

$\Delta K_{AE} := K_{AE} - K_{Abgwt} = 0.143$

Dynamic component of active seismic wedge:

(Eq. G-64, USACE EM 1110-2-2100)

$$Q_{h.SoilWaterE1} := \Delta K_{AE} \cdot \left[\frac{\gamma_m \cdot (H_w + Key_{h.d})^2}{2 \cdot (\tan(\alpha) - \tan(\beta))} + \frac{(\gamma_{sat} - \gamma_m) \cdot h_{2E1}^{\ 2}}{2 \cdot \tan(\alpha)}\right] \cdot B \cdot -1 = -176.5 \cdot kN$$

Moment arm for siesmic load application (About Point O): $Q_{h.SoilWaterlocE1} := \frac{2}{3} \cdot (H_w + Key_{h.d}) + Key_{vdist} = 6.70\,m$

$M_{Q.h.SoilWaterE1} := Q_{h.SoilWaterE1} \cdot Q_{h.SoilWaterlocE1} = -1182.7 \cdot kN \cdot m$

STABILITY ASSESSMENT:

LOAD CASE E1

CHECK SLIDING ALONG HORIZONTAL SLIDING PLANE:

Summation of the vertical forces: $\Sigma V_{E1} := \Sigma V_{conc} + \Sigma V_{SoilWaterE1} + \Sigma V_{UpliftE1} + Q_{v.conc} + Q_{v.SoilWaterE1} = 1299.4 \cdot kN$

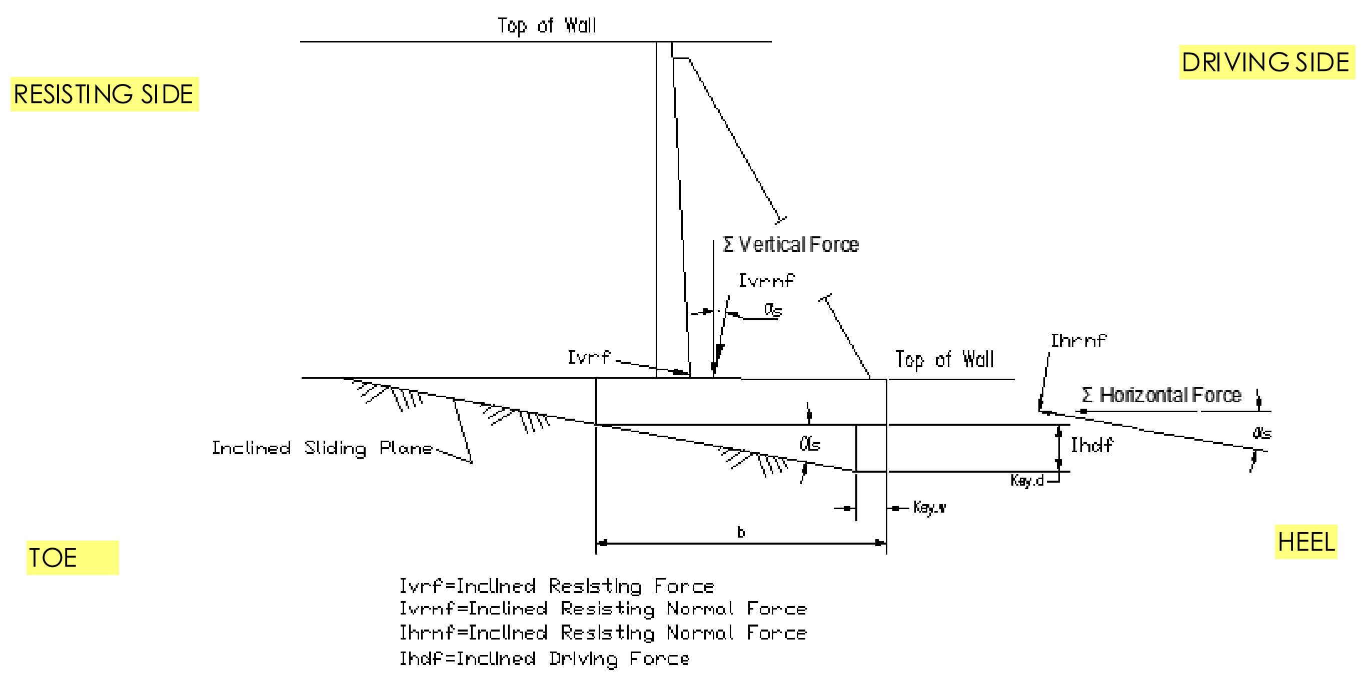
Summation of the horizontal forces: $\Sigma H_{E1} := \Sigma H_{SoildriveE1} + Q_{h.conc} + Q_{h.SoilWaterE1} + \Sigma H_{SoilresistE1} = -1025.4 \cdot kN$

Safety Factor for Sliding Horizontal Failure Plane

$$FS_{Horiz.SlidingE1} := \frac{\left|\Sigma V_{E1}\right| \cdot \tan\left(\phi_{rock} \cdot \frac{\pi}{180}\right)}{\left|\Sigma H_{E1}\right|} = 0.62$$

$$FS_{Sliding.check1.E1} := \begin{array}{|l} \text{"OKAY "} \quad \text{if} \quad FS_{Horiz.SlidingE1} > FS_{sliding.reqE1} \\ \text{"NG - key req""} \quad \text{otherwise} \end{array} = \text{"NG - key req""}$$

CHECK FACTOR OF SAFETY SLIDING WITH KEY (INCLINED SLIDING PLANE):



(With properly engineered reinforced concrete Key, horizontal sliding plane thru Toe is protected, critical sliding plane is relocated to the INCLINED SLIDING PLANE FROM HEEL KEY To TOE, Bedrock Mass above this examing plane is mobilized by reinforced concrete key and combined into Structural Wedge.)

Resolve ΣV_{E1} & ΣH_{E1}

$$\Sigma V_{InclinedE1} := \cos(\alpha s) \cdot \left(\left|\Sigma V_{E1} + V_{rocksection}\right|\right) + \sin(\alpha s) \cdot \left|\Sigma H_{E1}\right| = 1819.8 \cdot kN$$

$$\Sigma H_{InclinedE1} := \cos(\alpha s) \cdot \left|\Sigma H_{E1}\right| - \sin(\alpha s) \cdot \left(\left|\Sigma V_{E1} + V_{rocksection}\right|\right) = 602.0 \cdot kN$$

Safety Factor for Sliding Inclined Failure Plane

$$FS_{InclinedISlidingE1} := \frac{\Sigma V_{InclinedE1} \cdot \tan\left(\phi_r\right)}{\Sigma H_{InclinedE1}} = 1.35$$

$$FS_{Sliding.check2.E1} := \begin{array}{|l} \text{"OKAY "} \quad \text{if} \quad FS_{InclinedISlidingE1} > FS_{sliding.reqE1} \\ \text{"NG""} \quad \text{otherwise} \end{array} = \text{"OKAY "}$$

CHECK FOUNDATION ECCENTRICITY:

LOAD CASE E1

(Vertical seismic loads from concrete, soil and water are assumed acting downwards for adverse bearing effect)

Summation of the vertical forces: $\Sigma V_{seisE1} := \Sigma V_{conc} + \Sigma V_{SoilWaterE1} + \Sigma V_{UpliftE1} - Q_{v.conc} - Q_{v.SoilWaterE1} = 1764.2 \cdot kN$

Summation of the horizontal forces: $\Sigma H_{seisE1} := \Sigma H_{E1} = -1025.4 \cdot kN$

Resolve ΣV_{seisE1} & ΣH_{seisE1}

$$\Sigma V_{InclinedseisE1} := \cos(\alpha s) \cdot \left(\left| \Sigma V_{seisE1} + V_{rocksection} \right| \right) + \sin(\alpha s) \cdot \left| \Sigma H_{seisE1} \right| = 2270.7 \cdot kN$$

$$\Sigma H_{InclinedseisE1} := \cos(\alpha s) \cdot \left| \Sigma H_{seisE1} \right| - \sin(\alpha s) \cdot \left(\left| \Sigma V_{seisE1} + V_{rocksection} \right| \right) = 489.3 \cdot kN$$

Summation of the resisting moments about the toe:

$$\Sigma M_{resE1} := \Sigma M_{conc} + \Sigma M_{VertSoilWaterResistE1} + \Sigma M_{HorizSoilResistE1} + \Sigma M_{rocksection} = 17212 \cdot kN \cdot m$$

Summation of seismic moments about the toe:

$$\Sigma M_{seisE1} := -M_{Qv.conc} + M_{Q.conc} - M_{Qv.SoilWaterE1} + M_{Q.h.SoilWaterE1} = -44 \cdot kN \cdot m$$

Summation of the overturning moments about the toe:

$$\Sigma M_{oE1} := \Sigma M_{LateralSoildriveE1} + \Sigma M_{UpliftE1} = -7118 \cdot kN \cdot m$$

Total moment: $\Sigma M_{E1} := \Sigma M_{resE1} + \Sigma M_{seisE1} + \Sigma M_{oE1} = 10049.8 \cdot kN \cdot m$

Normal force to base: $\Sigma V_{InclinedseisE1} = 2270.7 \cdot kN$

Inclined Sliding Plane Length: $L_{incline} = 11.3 \cdot m$

Eccentricity (inclined plane): $ex_{E1} := \dfrac{L_{incline}}{2} - \dfrac{\Sigma M_{E1}}{\Sigma V_{InclinedseisE1}} = 1.24\,m$ $\quad Kern_{E1} := \dfrac{L_{incline}}{4} = 2.835\,m$

Eccentricity Check:

$$e_{check.E1} := \begin{cases} \text{"Okay"} & \text{if } ex_{E1} \le Kern_{E1} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"Okay"}$$

CHECK FOUNDATION BEARING CAPACITY:

Base Section Modulus: $S_b = 21.43\,m^3$

Bearing Pressure Under Toe:

$$\sigma_{ToeE1} := \begin{cases} \left(\dfrac{\Sigma V_{InclinedE1}}{L_{incline} \cdot B} + \dfrac{\Sigma V_{InclinedE1} \cdot ex_{E1}}{S_b} \right) & \text{if } \dfrac{\Sigma V_{InclinedE1} \cdot ex_{E1}}{S_b} \le \dfrac{\Sigma V_{InclinedE1}}{L_{incline} \cdot B} \\ \dfrac{2 \cdot \Sigma V_{InclinedE1}}{B \cdot 3 \left(\dfrac{b}{2} - ex_{E1} \right)} & \text{otherwise} \end{cases} = 266.1 \cdot kPa$$

$$Bearing_{CheckoeE1} := \begin{cases} \text{"OKAY "} & \text{if } \sigma_{ToeE1} < \sigma_{allowE1} \\ \text{"NG""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

Bearing Pressure Under Heel:

$$\sigma_{HeelE1} := \begin{cases} \left(\dfrac{\Sigma V_{InclinedE1}}{L_{incline} \cdot B} - \dfrac{\Sigma V_{InclinedE1} \cdot ex_{E1}}{S_b} \right) & \text{if } \dfrac{\Sigma V_{InclinedE1} \cdot ex_{E1}}{S_b} \le \dfrac{\Sigma V_{InclinedE1}}{L_{incline} \cdot B} \\ 0 & \text{otherwise} \end{cases} = 54.9 \cdot kPa$$

$$Bearing_{CheckheelE1} := \left(\begin{cases} \text{"OKAY "} & \text{if } \sigma_{HeelE1} < \sigma_{allowE1} \wedge \sigma_{HeelE1} > 0 \\ \text{"NG - perform cracked base analysis""} & \text{otherwise} \end{cases} \right) = \text{"OKAY "}$$

CHECK FLOATATION:

Safety Factor for Floatation:

$$FS_{FloatationE1} := \frac{\Sigma V_{conc} + \Sigma V_{SoilWaterE1} + Q_{v.conc} + Q_{v.SoilWaterE1}}{\left|\Sigma V_{UpliftE1}\right|} = 2.51$$

$$FS_{Floatation.E1.check} := \begin{cases} \text{"OKAY"} & \text{if } FS_{FloatationE1} > FS_{req.E1.flt} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

CHECK OVERTURNING

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stablity of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1

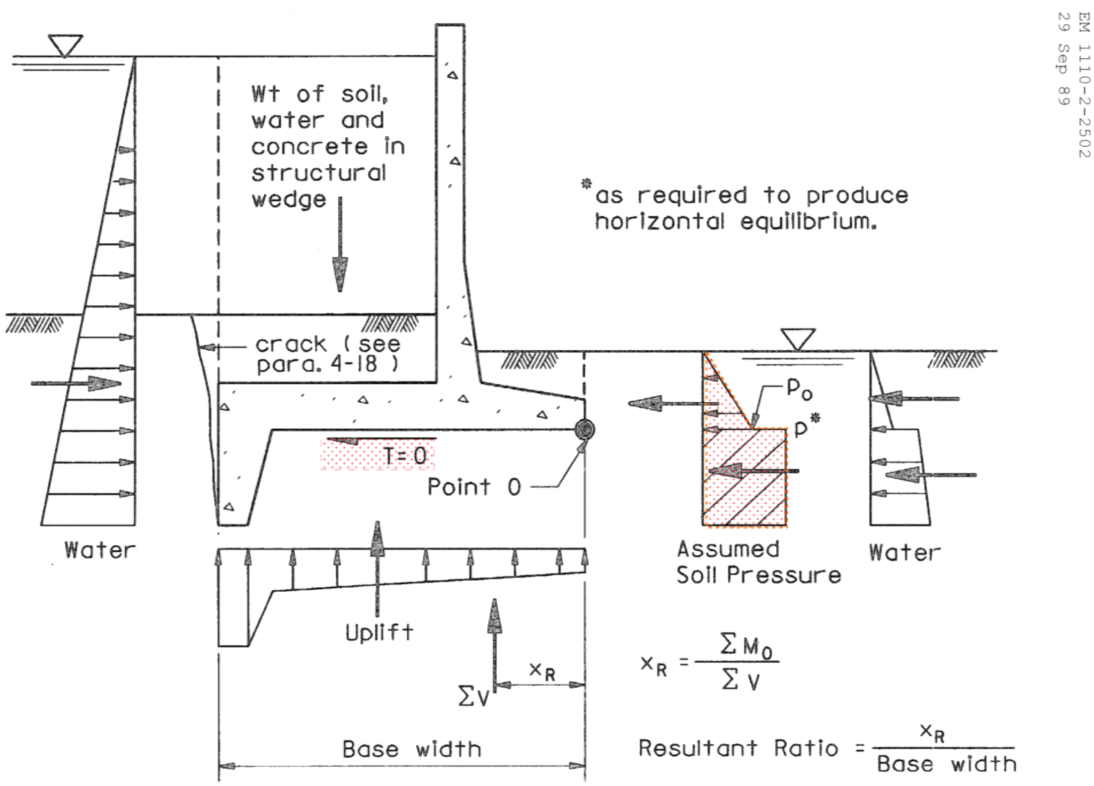


Figure 4-5. Forces for overturning analysis for wall with horizontal base and key

Modify Uplift for Overturning Analysis: **LOAD CASE E1**

(Uplift is calculated along the concrete/rock contact using the Line of Creep method)

Water Pressure at h: $u_{h.E1} := \Delta h_{g.hj.E1} \cdot \gamma_w = 102.90 \cdot kPa$

Water Pressure at o: $u_{o.E1} := \left(\Delta h_{g.no.E1} - \frac{\Delta h_{g.r.E1} \cdot L_{ho.E1}}{L_{ho.E1}}\right) \cdot \gamma_w = 53.9 \cdot kPa$

Head loss between point h and o: $\Delta h_{ho.E1} := \Delta h_{g.r.E1} \cdot \frac{L_{ho.E1}}{L_{ho.E1}} = 2.5\,m$

Length of concrete base (h -> o): $L_{baseho.E1} := Key_{h.w} + Key_{h.d} + Key_{hdist} + Key_{t.d} + Key_{t.w} = 13.5\,m$

Head loss along h -> j: $\Delta h_{hj.E1} := \Delta h_{ho.E1} \cdot \frac{Key_{h.w}}{L_{baseho.E1}} = 0.185\,m$

Water Pressure at j: $u_{j.E1} := \left(\Delta h_{g.hj.E1} - \Delta h_{hj.E1}\right) \cdot \gamma_w = 101.09 \cdot kPa$

Head loss along h -> k: $\Delta h_{hjk.E1} := \Delta h_{ho.E1} \cdot \left(\frac{Key_{h.w} + Key_{h.d}}{L_{baseho.E1}}\right) = 0.648\,m$

Water Pressure at k: $u_{k.E1} := \left(\Delta h_{g.km.E1} - \Delta h_{hjk.E1}\right) \cdot \gamma_w = 72.05 \cdot kPa$

Head loss along h -> m: $\Delta h_{hjkm.E1} := \Delta h_{ho.E1} \cdot \left(\frac{Key_{h.w} + Key_{h.d} + Key_{hdist}}{L_{baseho.E1}}\right) = 2.5\,m$

Water Pressure at m: $u_{m.E1} := \left(\Delta h_{g.km.E1} - \Delta h_{hjkm.E1}\right) \cdot \gamma_w = 53.90 \cdot kPa$

Head loss along h -> n: $\Delta h_{hjkmn.E1} := \Delta h_{ho.E1} \cdot \left(\frac{Key_{h.w} + Key_{h.d} + Key_{hdist} + Key_{t.d}}{L_{baseho.E1}}\right) = 2.5\,m$

Water Pressure at n: $u_{n.E1} := \left(\Delta h_{g.no.E1} - \Delta h_{hjkmn.E1}\right) \cdot \gamma_w = 53.90 \cdot kPa$

Uplift under key at heel: $V_{ulkeyhE1.OT} := \frac{\left(u_{h.E1} + u_{j.E1}\right) \cdot Key_{h.w}}{2} \cdot B \cdot -1 = -101.993 \cdot kN$

Moment Arm (from Point O): $V_{ulkeyhE1loc.OT} := b - \frac{Key_{h.w} \cdot \left(2 \cdot u_{j.E1} + u_{h.E1}\right)}{3 \cdot \left(u_{j.E1} + u_{h.E1}\right)} = 10.501\,m$

Uplift under base: $V_{ulbaseE1.OT} := \frac{\left(u_{k.E1} + u_{m.E1}\right) \cdot Key_{hdist}}{2} \cdot B \cdot -1 = -629.741 \cdot kN$

Moment Arm (from Point O): $V_{ulbaseE1loc.OT} := b - Key_{h.w} - \frac{Key_{hdist} \cdot \left(2 \cdot u_{m.E1} + u_{k.E1}\right)}{3 \cdot \left(u_{m.E1} + u_{k.E1}\right)} = 5.24\,m$

Uplift under key at toe: $V_{ulkeytE1.OT} := \frac{\left(u_{n.E1} + u_{o.E1}\right) \cdot Key_{t.w}}{2} \cdot B \cdot -1 = 0 \cdot kN$

Moment Arm (from Point O): $V_{ulkeytE1loc.OT} := \frac{Key_{t.w} \cdot \left(2 \cdot u_{n.E1} + u_{o.E1}\right)}{3 \cdot \left(u_{n.E1} + u_{o.E1}\right)} = 0$

$$\Sigma V_{UpliftE1.OT} := V_{ulkeyhE1.OT} + V_{ulbaseE1.OT} + V_{ulkeytE1.OT} = -732 \cdot kN$$

$$U_{E1.loc.OT} := \frac{V_{ulkeyhE1.OT} \cdot V_{ulkeyhE1loc.OT} + V_{ulbaseE1.OT} \cdot V_{ulbaseE1loc.OT} + V_{ulkeytE1.OT} \cdot V_{ulkeytE1loc.OT}}{\Sigma V_{UpliftE1.OT}} = 5.97\,m$$

$$\Sigma M_{UpliftE1.OT} := \Sigma V_{UpliftE1.OT} \cdot U_{E1.loc.OT} = -4371.0 \cdot kN \cdot m$$

Modify Lateral Water Pressure (Resisting) for Overturning Analysis:

(Resisting water pressure is calculated using the Line of Creep method)

Water Load at Key (heel):

$$H_{h2E1.OT} := \frac{u_{k.E1} + u_{j.E1}}{2} \cdot Key_{h.d} B = 216.4 \cdot kN$$

Moment Arm (from Point O):

$$H_{h2locE1.OT} := \frac{Key_{h.d} \cdot (2 \cdot u_{k.E1} + u_{j.E1})}{3(u_{k.E1} + u_{j.E1})} + Key_{vdist} = -1.32\ m$$

Water Load at Key (toe):

$$H_{h6E1.OT} := \frac{u_{o.E1} \cdot (UWSEL_{E1} - Bot_{ftg} + Key_{t.d})}{2} \cdot B = 148 \cdot kN$$

Moment Arm (from Point O):

$$H_{h6locE1.OT} := \frac{UWSEL_{E1} - Bot_{ftg} + Key_{t.d}}{3} = 1.83\ m$$

$$\Sigma H_{waterresistE1.OT} := H_{h2E1.OT} + H_{h6E1.OT} = 364.64 \cdot kN$$

$$H_{waterresistlocE1.OT} := \frac{H_{h2E1.OT} \cdot H_{h2locE1.OT} + H_{h6E1.OT} \cdot H_{h6locE1.OT}}{\Sigma H_{waterresistE1.OT}} = -0.038\ m$$

$$\Sigma M_{waterresistE1.OT} := \Sigma H_{waterresistE1.OT} \cdot H_{waterresistlocE1.OT} = -13.9 \cdot kN \cdot m$$

Modify Lateral Soil Loads for Overturning Analysis:

(Lateral soil loads are calculated down to Point O instead of bottom of shear key)

Driving Soil Load (Headwater Side):

Surcharge Load:

$$E_{s1E1.OT} := S1_{E1} \cdot K_{Aagwt} \cdot (H_w + Key_{h.d} + Key_{vdist}) \cdot B \cdot -1 = 0 \cdot kN$$

Moment Arm (from Point O):

$$E_{s1locE1.OT} := \frac{H_w + Key_{h.d} + Key_{vdist}}{2} = 5.65\ m$$

Moist Soil Load above GWL:

$$E_{h1E1.OT} := \frac{\gamma_m \cdot K_{Aagwt} \cdot h_{1E1}^{\ 2}}{2} \cdot B \cdot -1 = -40.9 \cdot kN$$

Moment Arm (from Point O):

$$E_{h1locE1.OT} := \frac{h_{1E1}}{3} + h_{2E1} + Key_{vdist} = 9.10\ m$$

Saturated Soil Load below GWL:
(rectangular component)

$$E_{h2E1.OT} := (\gamma_m \cdot K_{Aagwt} \cdot h_{1E1}) \cdot (h_{2E1} + Key_{vdist}) \cdot B \cdot -1 = -198.3 \cdot kN$$

Moment Arm (from Point O):

$$E_{h2locE1.OT} := \frac{h_{2E1} + Key_{vdist}}{2} = 4.00\ m$$

Saturated Soil Load below GWL:
(triangular component)

$$E_{h2aE1.OT} := \frac{(\gamma_{sat} - \gamma_w) \cdot K_{Aagwt} \cdot (h_{2E1} + Key_{vdist})^2}{2} \cdot B \cdot -1 = -146.6 \cdot kN$$

Moment Arm (from Point O):

$$E_{h2alocE1.OT} := \frac{h_{2E1} + Key_{vdist}}{3} = 2.67\ m$$

Resisting Soil Load (Tailwater Side):

LOAD CASE E1

(Determine resisting soil load based on depth variation between the keys (ie. Key_{vdist}). In case where key at heel is deeper than key at toe (ie. $Key_{vdist} < 0$), resisting soil load (p*) is assumed to produce horizontal equilibrium as per Figure 4-5 above. Resisting soil load (p_o) is neglected.)

Total Driving Force: $\Sigma H_{SoildriveE1.OT} := E_{s1E1.OT} + E_{h1E1.OT} + E_{h2E1.OT} + E_{h2aE1.OT} + H_{h2E1} \cdots + Q_{h.conc} + Q_{h.SoilWaterE1} = -1255.0 \cdot kN$

Total Resisting Force: $\Sigma H_{waterresistE1.OT} = 364.642 \cdot kN$

Assumed Soil Load p*: $E_{h8E1a.OT} := (\Sigma H_{SoildriveE1.OT} + \Sigma H_{waterresistE1.OT}) \cdot -1 = 890.395 \cdot kN$

Moment Arm (from Point O): $E_{h8E1a.loc.OT} := \frac{Key_{vdist}}{2} = -1.25\, m$

$$E_{h8E1.OT} := \begin{cases} E_{h8E1a.OT} & \text{if } Key_{vdist} < 0 \\ \Sigma H_{SoilresistE1} - H_{h6E1} - H_{h2aE1} & \text{otherwise} \end{cases} = 890.395 \cdot kN$$

$$\Sigma M_{SoilresistE1} := \begin{cases} E_{h8E1a.OT} \cdot E_{h8E1a.loc.OT} & \text{if } Key_{vdist} < 0 \\ \Sigma M_{HorizSoilResistE1} - H_{h6E1} \cdot H_{h6locE1} - H_{h2aE1} \cdot H_{h2alocE1} & \text{otherwise} \end{cases} = -1112.994 \cdot kN \cdot m$$

Sum of Moment about Point O:

$$\Sigma M_{LateraldriveE1.OT} := E_{s1E1.OT} \cdot E_{s1locE1.OT} + E_{h1E1.OT} \cdot E_{h1locE1.OT} + E_{h2E1.OT} \cdot E_{h2locE1.OT} \cdots + E_{h2aE1.OT} \cdot E_{h2alocE1.OT} + H_{h2E1} \cdot H_{h2locE1} = -2096.4 \cdot kN \cdot m$$

$$\Sigma M_{LateralresistE1.OT} := \Sigma M_{waterresistE1.OT} + \Sigma M_{SoilresistE1} = -1126.9 \cdot kN \cdot m$$

$$\Sigma M_{seisE1.OT} := M_{Qv.conc} + M_{Q.conc} + M_{Qv.SoilWaterE1} + M_{Q.h.SoilWaterE1} = -2958 \cdot kN \cdot m$$

(seismic moment modified for the most adverse overturning effect)

Total moment:

$$\Sigma M_{E1.OT} := \Sigma M_{conc} + \Sigma M_{VertSoilWaterResistE1} + \Sigma M_{UpliftE1.OT} + \Sigma M_{LateraldriveE1.OT} + \Sigma M_{LateralresistE1.OT} + \Sigma M_{seisE1.OT} = 4454.5 \cdot kN \cdot m$$

Total Vertical Force: $\Sigma V_{E1.OT} := \Sigma V_{conc} + \Sigma V_{SoilWaterE1} + \Sigma V_{UplliftE1.OT} + Q_{v.conc} + Q_{v.SoilWaterE1} = 1430.1 \cdot kN$

Distance X_R: EM 1110-2-2502 Eq.4-1 $X_{R.E1} := \frac{\Sigma M_{E1.OT}}{\Sigma V_{E1.OT}} = 3.115\, m$

Overturning Resultant Ratio $Ratio_{E1.OT} := \frac{X_{R.E1}}{b} = 0.28$

$$Ratio_{E1.OT.check} := \begin{cases} \text{"OKAY "} & \text{if } Ratio_{E1.OT} > X_{R.reqE1} \\ \text{"Revise Structure""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

CHECK FOUNDATION ECCENTRICITY (HORIZONTAL PLANE):

Eccentricity (horizontal plan): $ex_{E1.OT} := \frac{b}{2} - \frac{\Sigma M_{E1.OT}}{\Sigma V_{E1.OT}} = 2.39\, m$ $Kern_{E1.OT} := \frac{b}{4} = 2.75\, m$

Eccentricity Check:

$$e_{check.E1.OT} := \begin{cases} \text{"Okay"} & \text{if } ex_{E1.OT} \le Kern_{E1.OT} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"Okay"}$$

LOAD CASE E1

CHECK FOUNDATION BEARING CAPACITY (HORIZONTAL PLANE):

Base Section Modulus: $S_{b.OT} = 20.17\,m^3$

Bearing Pressure Under Toe:

$$\sigma_{ToeE1.OT} := \begin{cases} \left(\dfrac{\Sigma V_{E1.OT}}{b \cdot B} + \dfrac{\Sigma V_{E1.OT} \cdot ex_{E1.OT}}{S_{b.OT}}\right) & \text{if } \dfrac{\Sigma V_{E1.OT}}{b \cdot B} \geq \dfrac{\Sigma V_{E1.OT} \cdot ex_{E1.OT}}{S_{b.OT}} \\ \dfrac{2 \cdot \Sigma V_{E1.OT}}{B \cdot 3\left(\dfrac{b}{2} - ex_{E1.OT}\right)} & \text{otherwise} \end{cases} = 306.1 \cdot kPa$$

Calulation Highlights

Results

WALL GEOMETRY:

Top of Wall Elevation: $T_w := 1212.6 \cdot m$

Top of Footing Elevation: $Top_{ftg} := 1207.0 \cdot m$

Thickness of Footing: $t_{ftg} := 2.5m$

Bottom of Footing Elevation: $Bot_{ftg} := Top_{ftg} - t_{ftg} = 1204.5\ m$

Overall Height of wall: $h_w := T_w - Bot_{ftg} = 8.10\ m$

Thickness of Wall: Base: $t_{wb} := 0.94 \cdot m$ Top: $t_{wt} := 0.50m$

Length of toe: $L_{ab} := 2.50m$

Total Length of Footing: $b := 9.5m$

Length of heel: $L_{cd} := b - L_{ab} - t_{wb} = 6.06\ m$

Unit Width of Wall for analysis: $B := 1.00m$

SHEAR KEY GEOMETRY:

	Toe	Heel
Key depth:	$Key_{t.d} := 0m$	$Key_{h.d} := 2.0m$ (Assumption: $Key_{h.d}$ >= $Key_{t.d}$)
Key width:	$Key_{t.w} := 0m$	$Key_{h.w} := 1m$
Face of Key from Point O:	$Key_{t.loc} := 0 \cdot m$	$Key_{h.loc} := b - Key_{h.w} = 8.5\ m$

Horizontal Distance between Keys: $Key_{hdist} := Key_{h.loc} - Key_{t.loc} - Key_{t.w} = 8.5\ m$

Key Depth Diff. (from point O): $Key_{vdist} := -Key_{h.d} + Key_{t.d} = -2\ m$

BASE PROPERTIES:

Base Area: $A_b := b \cdot B = 9.5\ m^2$

Centroidal Distance for Footing (from Toe): $Y_t := \frac{b}{2} = 4.75\ m$

RETAINED SOIL GEOMETRY:

Slope of retained ground surface: $\beta := 0 \cdot \frac{\pi}{180} = 0.00$

Height of retained earth at heel: $H_w := T_w - Bot_{ftg} + \left(t_{wb} + L_{cd} - t_{wt}\right) \cdot \tan(\beta) = 8.10\ m$

RETAINING WALL GEOMETRY CHECKS:

(Foundation Analysis & Design Bowles)

$$t_{bcheck} := \begin{cases} \text{"OKAY"} & \text{if } t_{ftg} \geq \frac{H_w}{12} \\ \text{"Warning"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

$$t_{wcheck} := \begin{cases} \text{"OKAY"} & \text{if } t_{wb} \geq \frac{H_w}{12} \\ \text{"Warning"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

$$b_{check} := \begin{cases} \text{"OKAY"} & \text{if } \frac{b}{H_w} \geq .4 \wedge \frac{b}{H_w} \leq 80 \\ \text{"Warning"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

$$L_{abcheck} := \begin{cases} \text{"OKAY"} & \text{if } \frac{L_{ab}}{b} \geq .25 \wedge \frac{L_{ab}}{b} \leq .4 \\ \text{"Warning"} & \text{otherwise} \end{cases} = \text{"OKAY"}$$

Material Properties:

Unit Weight of Water:	$\gamma_w := 9.8 \frac{kN}{m^3}$	(Section 7.2, Design Criteria)
Unit Weight of Concrete:	$\gamma_c := 23.5 \frac{kN}{m^3}$	
Unit Weight of Soil (Moist):	$\gamma_m := 20.0 \frac{kN}{m^3}$	(Section 5.3, Design Criteria) assumed moisture content (w) = 5%
Unit Weight Soil (Saturated):	$\gamma_{sat} := 22.0 \frac{kN}{m^3}$	(Assuming Specific Gravity = 2.7
Unit Weight Soil (buoyant):	$\gamma_b := \gamma_{sat} - \gamma_w = 12.2 \cdot \frac{kN}{m^3}$	
Weight of Soil/Concrete above toe:	$\gamma_{toe} := 22.0 \frac{kN}{m^3}$	
Unit Weight of Rock:	$\gamma_r := 25.6 \frac{kN}{m^3}$	(Section 7.2, Design Criteria)

Foundation Parameters:

Glacial Till Internal Friction:	$\phi := 27 \cdot \frac{\pi}{180} = 0.471$	
Bedrock Internal Friction Angle:	$\phi_r := 24 \cdot \frac{\pi}{180} = 0.419$	
Friction Angle at Base Concrete / Rock Interface:	$\phi_{rock} := 26$	
Base Friction Coefficient:	$tan_{\phi rock} := \tan\left(\phi_{rock} \frac{\pi}{180}\right) = 0.488$	radians
Rip Rap Backfill, Refer Dwg. C-214	$\phi_{backfill} := \left(20 \frac{\pi}{180}\right) = 0.349$	radians
Shear strength along rock Failure plane	$s_r := \frac{13100 \frac{kN}{m^2}}{2} = 6550 \cdot \frac{kN}{m^2}$	(Stantec Design Memo 8/8/16)

CONCRETE DEAD LOAD:

Area of Footing: $A_{ftg} := t_{ftg} \cdot b = 23.75\, m^2$

Weight of Footing: $D_{ftg} := A_{ftg} \cdot B \cdot \gamma_c = 558.1 \cdot kN$

Area of Stem (without batter): $A_{w1} := t_{wt} \cdot \left(h_w - t_{ftg}\right) = 2.8\, m^2$

Weight of Stem: $D_{w1} := A_{w1} \cdot B \cdot \gamma_c = 65.8 \cdot kN$

Area of stem Batter: $A_{w2} := \frac{\left(t_{wb} - t_{wt}\right)}{2} \left(h_w - t_{ftg}\right) = 1.23\, m^2$

Weight of Batter: $D_{w2} := A_{w2} \cdot B \cdot \gamma_c = 29 \cdot kN$

Slope of batter: $S_{batter} := \frac{t_{wb} - t_{wt}}{h_w - t_{ftg}} = 0.079$

Area of Key: $A_{t.key} := Key_{t.d} \cdot Key_{t.w} = 0$ $A_{h.key} := Key_{h.d} \cdot Key_{h.w} = 2\, m^2$

Weight of Key: $D_{t.key} := A_{t.key} \cdot B \cdot \gamma_c = 0 \cdot kN$ $D_{h.key} := A_{h.key} \cdot B \cdot \gamma_c = 47 \cdot kN$

Centroidal Horizontal Distance of Wall (From Toe):

$$H_{cent} := \frac{A_{w1} \cdot \left(L_{ab} + \frac{t_{wt}}{2}\right) + A_{w2} \cdot \left(L_{ab} + t_{wt} + \frac{t_{wb} - t_{wt}}{3}\right) + A_{ftg} \cdot \frac{b}{2} + A_{t.key} \cdot \left(Key_{t.loc} + \frac{Key_{t.w}}{2}\right) + A_{h.key} \cdot \left(Key_{h.loc} + \frac{Key_{h.w}}{2}\right)}{A_{w1} + A_{w2} + A_{ftg} + A_{t.key} + A_{h.key}} = 4.78\, m$$

Centroidal Vertical Distance of Wall (Above Base of Footing):

$$V_{Cent} := \frac{A_{ftg} \cdot \frac{t_{ftg}}{2} + A_{w1} \cdot \left[t_{ftg} + \frac{\left(h_w - t_{ftg}\right)}{2}\right] + A_{w2} \cdot \left[t_{ftg} + \frac{\left(h_w - t_{ftg}\right)}{3}\right] + A_{t.key} \cdot \left(\frac{-Key_{t.d}}{2}\right) + A_{h.key} \cdot \left(\frac{-Key_{h.d}}{2}\right)}{A_{ftg} + A_{w1} + A_{w2} + A_{t.key} + A_{h.key}} = 1.61\, m$$

$\Sigma V_{conc} := D_{ftg} + D_{w1} + D_{w2} + D_{t.key} + D_{h.key} = 699.9 \cdot kN$

$\Sigma M_{conc} := \Sigma V_{conc} \cdot H_{cent} = 3346.1\, m \cdot kN$

ROCK SECTION MOBILIZED FOR INCLINDED SLIDING FAILURE

Area of Rock Section Mobilized: $A_{rocksection} := \left(Key_{t.d} + Key_{h.d}\right) \cdot \frac{Key_{hdist}}{2} = 8.5\, m^2$

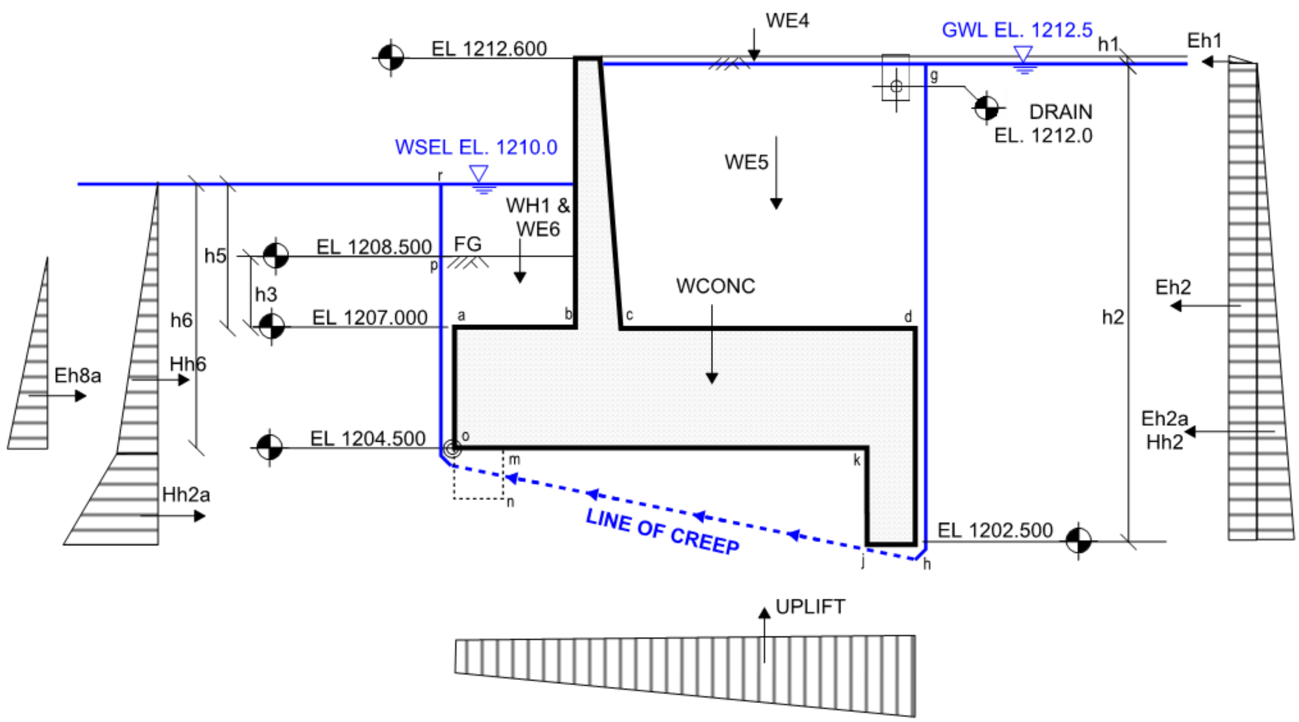
Rock Mass Mobilized: $V_{rocksection} := A_{rocksection} \cdot \gamma_r \cdot B = 217.6 \cdot kN$

(Pore pressure taken along assumed inclined sliding plane)

Distance from Toe to COG of Rock Section: $L_{rocksection} := \frac{Key_{hdist} \cdot \left(2 \cdot Key_{h.d} + Key_{t.d}\right)}{3\left(Key_{h.d} + Key_{t.d}\right)} + Key_{t.w} = 5.667\, m$

$\Sigma M_{rocksection} := V_{rocksection} \cdot L_{rocksection} = 1233.1\, m \cdot kN$

LOAD CASE U1 - NORMAL OPERATION



U1 DESIGN CASE

LOAD CASE U1 ACCEPTANCE PARAMETERS

FS sliding:

Usual (U) 1.5 (without cohesion) (Table 3-3, USACE EM 1110-2-2100)

Resultant Location:

Usual (U) Inside middle third ~100% base in compression

Required Factor of Safety for Sliding: $FS_{sliding.reqU1} := 1.5$ (Without Cohesion)

Allowable rock bearing pressure: $\sigma_{allowU1} := 1270kPa$ (Section 5.2, Design Criteria EM 1110-2-2100 Section 3-10)

Overturning Required Resultant Ratio: $X_{R.reqU1} := 0.333$ (EM 1110-2-2502, Figure 4-4)

Required Factor of Safety for Floatation $FS_{req.U1.flt} := 1.5$

SOIL HEIGHTS and Water Levels:

LOAD CASE U1

Heel Conditions:

Groundwater Elevation at Heel: $GWL_{U1} := 1212.5m$

Distance from Finish Grade to Groundwater at Heel: $h_{1U1} := \left[T_w - GWL_{U1} + \left(L_{cd} + t_{wb} - t_{wt}\right) \cdot \tan(\beta)\right] = 0.10\,m$

Distance from Water Surface to Bottom of Footing at Heel: $h_{2U1} := GWL_{U1} - Bot_{ftg} + Key_{h.d} = 10.00\,m$

Toe Conditions:

Water Surface Elevation at Toe: $WSEL_{U1} := 1210.0m$

Water Surface Elevation at Toe for Uplift: $UWSEL_{U1} := 1210.0 \cdot m$

Finish Grade at Toe providing lateral resistance: $FG_{toeU1} := 1208.5 \cdot m$

Soil Depth Above top of footing: $h_{3aU1} := FG_{toeU1} - Top_{ftg} = 1.5\,m$

$$h_{3U1} := \begin{cases} h_{3aU1} & \text{if } FG_{toeU1} - Top_{ftg} \geq 0 \\ 0 & \text{otherwise} \end{cases} = 1.5$$

Resisting Fill at Toe: $h_{4U1} := FG_{toeU1} - Bot_{ftg} + Key_{t.d} = 4.00\,m$

Distance from Water Level to Top of Footing: $h_{5U1} := WSEL_{U1} - Top_{ftg} = 3.00\,m$

Distance from Water Surface to Bottom of Footing: $h_{6U1} := WSEL_{U1} - Bot_{ftg} + Key_{t.d} = 5.50 \cdot m$

Soil Depth Above WSEL: $h_{7aU1} := FG_{toeU1} - WSEL_{U1} = -1.5\,m$

$$h_{7U1} := \begin{cases} h_{7aU1} & \text{if } FG_{toeU1} - WSEL_{U1} \geq 0 \\ 0 & \text{otherwise} \end{cases} = 0$$

Soil Depth Below WSEL:

$$h_{8U1} := \begin{cases} WSEL_{U1} - Bot_{ftg} + Key_{t.d} & \text{if } FG_{toeU1} - WSEL_{U1} \geq 0 \\ h_{4U1} & \text{otherwise} \end{cases} = 4$$

For Line of Creep Method: $L_{ho.U1} := \sqrt{b^2 + \left(Key_{h.d} - Key_{t.d}\right)^2} = 9.708\,m$

Head Loss from Point g:

$\Delta h_{g.hj.U1} := h_{2U1} = 10\,m$ (to point h & j)

$\Delta h_{g.km.U1} := GWL_{U1} - Bot_{ftg} = 8\,m$ (to point k & m)

$\Delta h_{g.no.U1} := GWL_{U1} - Bot_{ftg} + Key_{t.d} = 8\,m$ (to point n & o)

$\Delta h_{g.p.U1} := GWL_{U1} - FG_{toeU1} = 4\,m$ (to point p)

$\Delta h_{g.r.U1} := GWL_{U1} - UWSEL_{U1} = 2.5\,m$ (to point r)

Surcharge

Surcharge on Heel: $S1_{U1} := 0.0 \frac{kN}{m^2}$

LOAD CASE U1

Calculate Soil Lateral Pressure Coefficients:

For all load cases except seismic, soil loading to be based on At-Rest Condition.
Calculate at-rest pressure coefficient Ko based on Jaky's (1944) equation.

Soil At Rest Static Coefficient: $K_o := \frac{1 - \sin(\phi)}{1 + \sin(\beta)} = 0.546$ (Eq. 3-6, USACE EM 1110-2-2502)

Lateral - Driving Force (Headwater Side)

Lateral Soil Load:

Surcharge Load: $E_{s1U1} := S1_{U1} \cdot K_o \cdot \left(H_w + Key_{h.d}\right) \cdot B \cdot -1 = 0 \cdot kN$

Moment Arm (from bottom of footing): $E_{s1locU1} := \frac{H_w + Key_{h.d}}{2} + Key_{vdist} = 3.05\ m$

Moist Soil Load above GWL: $E_{h1U1} := \frac{\gamma_m \cdot K_o \cdot h_{1U1}^{\ 2}}{2} B \cdot -1 = -0.1 \cdot kN$

Moment Arm (from bottom of footing): $E_{h1locU1} := \frac{h_{1U1}}{3} + h_{2U1} + Key_{vdist} = 8.03\ m$

Saturated Soil Load below GWL:
(rectangular component)

$E_{h2U1} := \left(\gamma_m \cdot K_o \cdot h_{1U1}\right) \cdot \left(h_{2U1}\right) \cdot B \cdot -1 = -10.9 \cdot kN$

Moment Arm (from bottom of footing): $E_{h2locU1} := \frac{h_{2U1}}{2} + Key_{vdist} = 3.00\ m$

Saturated Soil Load below GWL:
(triangular component)

$E_{h2aU1} := \frac{\left(\gamma_{sat} - \gamma_w\right) \cdot K_o \cdot h_{2U1}^{\ 2}}{2} \cdot B \cdot -1 = -333.1 \cdot kN$

Moment Arm (from bottom of footing): $E_{h2alocU1} := \frac{h_{2U1}}{3} + Key_{vdist} = 1.33\ m$

Lateral Water Load:

Water Load GWL to Bottom of Key: $H_{h2U1} := \frac{\gamma_w \cdot h_{2U1}^{\ 2}}{2} \cdot B \cdot -1 = -490.0 \cdot kN$

Moment Arm (from bottom of footing): $H_{h2locU1} := \frac{h_{2U1}}{3} + Key_{vdist} = 1.33\ m$

$\Sigma H_{SoildriveU1} := E_{s1U1} + E_{h1U1} + E_{h2U1} + E_{h2aU1} + H_{h2U1} = -834.0 \cdot kN$

$$\Sigma M_{LateralSoildriveU1} := E_{s1U1} \cdot E_{s1locU1} + E_{h1U1} \cdot E_{h1locU1} + E_{h2U1} \cdot E_{h2locU1} \ \ldots = -1130.6\ m \cdot kN$$
$$+ E_{h2aU1} \cdot E_{h2alocU1} + H_{h2U1} \cdot H_{h2locU1}$$

Lateral - Resisting Force (Tailwater Side)

LOAD CASE U1

Lateral Water Load:

Water Load WSEL to Bot. of Footing:

$$H_{h6U1} := \frac{\gamma_w \cdot h_{6U1}^{\,2}}{2} \cdot B = 148.2 \cdot kN$$

Moment Arm (from bot. of toe key):

$$H_{h6locU1} := \frac{h_{6U1}}{3} = 1.83\ m$$

Water Load Bot. of Footing to Bot. of H. Key:

$$H_{h2aU1} := \left[\left(UWSEL_{U1} - Bot_{ftg} + Key_{t.d}\right) + h_{2U1}\right] \cdot \frac{Key_{h.d}}{2} \cdot \gamma_w \cdot B = 151.9 \cdot kN$$

Moment Arm (from bot. of toe key):

$$H_{h2alocU1} := \frac{Key_{h.d} \cdot \left[2 \cdot \left(UWSEL_{U1} - Bot_{ftg} + Key_{t.d}\right) + h_{2U1}\right]}{3\left[h_{2U1} + \left(UWSEL_{U1} - Bot_{ftg} + Key_{t.d}\right)\right]} \ldots = -1.10\ m$$
$$+ Key_{vdist}$$

Lateral Soil Load:

Moist Soil Load above WSEL:

$$E_{h7U1} := \frac{\gamma_m \cdot K_o \cdot h_{7U1}^{\,2}}{2} \cdot B = 0.0 \cdot kN$$

Moment Arm (from bot. of toe key):

$$E_{h7locU1} := h_{6U1} + \frac{h_{7U1}}{3} + Key_{vdist} = 3.50\ m$$

Saturated Soil Load below WSEL:
(rectangular component)

$$E_{h8U1} := \left(\gamma_m \cdot K_o \cdot h_{7U1}\right) \cdot h_{8U1} \cdot B = 0.0 \cdot kN$$

Moment Arm (from bot. of toe key):

$$E_{h8locU1} := \frac{h_{8U1}}{2} = 2.00\ m$$

Saturated Soil Load below WSEL:
(triangular component)

$$E_{h8aU1} := \frac{\left[\left(\gamma_{sat} - \gamma_w\right) \cdot K_o\right] \cdot h_{8U1}^{\,2}}{2} \cdot B = 53.3 \cdot kN$$

Moment Arm (from bot. of footing):

$$E_{h8alocU1} := \frac{h_{8U1}}{3} = 1.33\ m$$

$$\Sigma H_{SoilresistU1} := H_{h6U1} + H_{h2aU1} + E_{h7U1} + E_{h8U1} + E_{h8aU1} = 353.4 \cdot kN$$

$$\Sigma M_{HorizSoilResistU1} := H_{h6U1} \cdot H_{h6locU1} + H_{h2aU1} \cdot H_{h2alocU1} + E_{h7U1} \cdot E_{h7locU1} \ldots = 176.2\ m \cdot kN$$
$$+ E_{h8U1} \cdot E_{h8locU1} + E_{h8aU1} \cdot E_{h8alocU1}$$

Vertical Force:

UPLIFT: Linear distribution from water at heel to water at toe:

$$\Sigma V_{UpliftU1} := \left[\left(UWSEL_{U1} - Bot_{ftg} + Key_{t.d}\right) + h_{2U1}\right] \cdot \frac{b}{2} \cdot \gamma_w \cdot B \cdot -1 = -721.525 \cdot kN$$

Moment Arm (from Point O):

$$V_{UpliftU1aloc} := \frac{b \cdot \left[2 \cdot h_{2U1} + \left(UWSEL_{U1} - Bot_{ftg} + Key_{t.d}\right)\right]}{3\left[h_{2U1} + \left(UWSEL_{U1} - Bot_{ftg} + Key_{t.d}\right)\right]} = 5.21\ m$$

$$\Sigma M_{UpliftU1} := \Sigma V_{UpliftU1} \cdot V_{UpliftU1aloc} = -3758.912 \cdot kN \cdot m$$

Vertical Force (con't):

Weight of soil and water over toe:

Water Above the Top of Footing: $W_{H1U1} := \gamma_w \cdot h_{5U1} \cdot L_{ab} \cdot B = 73.5 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E1locU1} := \frac{L_{ab}}{2} = 1.25\,m$

Soil above top of footing: $W_{E6U1} := \gamma_b \cdot h_{3U1} \cdot L_{ab} \cdot B = 45.8 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E6locU1} := \frac{L_{ab}}{2} = 1.25\,m$

Vertical Load Due to Surcharge: $S_{U1} := S1_{U1} \cdot L_{cd} \cdot B = 0$ $\quad S_{U1loc} := b - \frac{L_{cd}}{2} = 6.47\,m$

Weight of soil and water over heel:

Moist Soil for sloped grade above top of wall:

Length of sloped portion of soil above top of wall: $L_{E3U1} := \left(L_{cd} + t_{wb} - t_{wt}\right) = 6.50\,m$

Height of sloped soil above top of wall over heel: $h_{E3locU1} := \left(L_{E3U1}\right) \cdot \tan(\beta) = 0.00\,m$

Weight of sloped soil above top of wall: $W_{E3U1} := \frac{\gamma_m}{2} \cdot h_{E3locU1} \cdot L_{E3U1} \cdot B = 0.0 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E3locU1} := L_{ab} + t_{wt} + \frac{2}{3} \cdot L_{E3U1} = 7.33\,m$

Moist soil from top of wall to groundwater level:

Height of soil from top of wall and top of GWL: $h_{1U1} = 0.10\,m$

Length from edge of wall at GWL to edge of heel: $L_{E4U1} := L_{E3U1} - \left(h_{1U1} \cdot S_{batter}\right) = 6.49\,m$

Weight of soil over heel from top of wall to GWL: $W_{E4U1} := \gamma_m \cdot h_{1U1} \cdot \frac{\left(L_{E3U1} + L_{E4U1}\right)}{2} \cdot B = 13.0 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E4locU1} := b - \frac{L_{E3U1}^2 + L_{E3U1} \cdot L_{E4U1} + L_{E4U1}^2}{3\left(L_{E3U1} + L_{E4U1}\right)} = 6.25\,m$

Saturated soil from groundwater to top of footing:

Height of soil from GWL to top of heel: $h_{E4U1} := h_{2U1} - t_{ftg} - Key_{h.d} = 5.50\,m$

Weight of soil over heel from GWL to top of heel: $W_{E5U1} := \left(\gamma_{sat}\right) \cdot h_{E4U1} \cdot \frac{\left(L_{E4U1} + L_{cd}\right)}{2} \cdot B = 759.4 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E5locU1} := b - \frac{L_{E4U1}^2 + L_{E4U1} \cdot L_{cd} + L_{cd}^2}{3\left(L_{E4U1} + L_{cd}\right)} = 6.36\,m$

$$\Sigma V_{SoilWaterU1} := W_{H1U1} + W_{E6U1} + W_{E3U1} + W_{E4U1} + W_{E5U1} + S_{U1} = 891.6 \cdot kN$$

$$\Sigma M_{VertSoilWaterResistU1} := W_{H1U1} \cdot W_{E1locU1} + W_{E6U1} \cdot W_{E6locU1} \cdots + W_{E3U1} \cdot W_{E3locU1} + W_{E4U1} \cdot W_{E4locU1} + W_{E5U1} \cdot W_{E5locU1} + S_{U1} \cdot S_{U1loc} = 5060.7\,m \cdot kN$$

$FS_{Floatation.U1.check} :=$ "OKAY" if $FS_{FloatationU1} > FS_{req.U1.flt}$ = "OKAY"
"Revise Structure"" otherwise

CHECK OVERTURNING

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stablity of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1

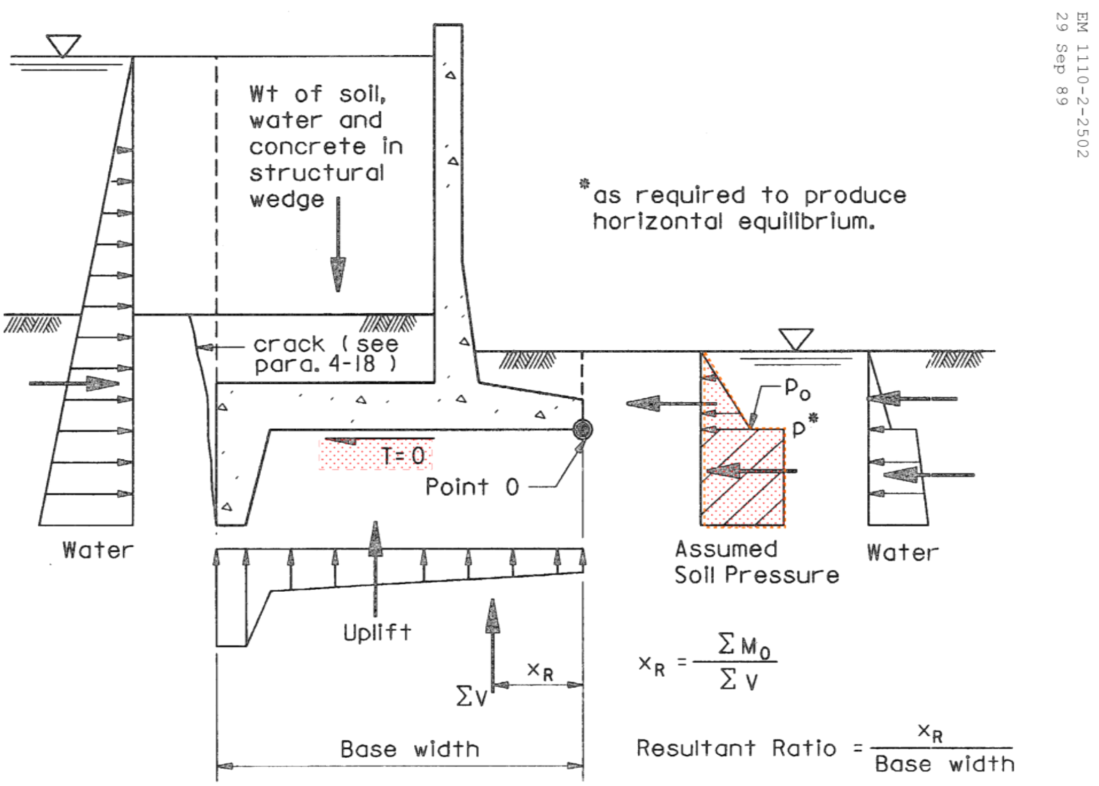

Figure 4-5. Forces for overturning analysis for wall with horizontal base and key

Modify Uplift for Overturning Analysis: **LOAD CASE U1**

(Uplift is calculated along the concrete/rock contact using the Line of Creep method)

Water Pressure at h: $u_{h.U1} := \Delta h_{g.hj.U1} \cdot \gamma_w = 98.00 \cdot kPa$

Water Pressure at o: $u_{o.U1} := \left(\Delta h_{g.no.U1} - \frac{\Delta h_{g.r.U1} \cdot L_{ho.U1}}{L_{ho.U1}}\right) \cdot \gamma_w = 53.9 \cdot kPa$

Head loss between point h and o: $\Delta h_{ho.U1} := \Delta h_{g.r.U1} \cdot \frac{L_{ho.U1}}{L_{ho.U1}} = 2.5\,m$

Length of concrete base (h -> o): $L_{baseho.U1} := Key_{h.w} + Key_{h.d} + Key_{hdist} + Key_{t.d} + Key_{t.w} = 11.5\,m$

Head loss along h -> j: $\Delta h_{hj.U1} := \Delta h_{ho.U1} \cdot \frac{Key_{h.w}}{L_{baseho.U1}} = 0.217\,m$

Water Pressure at j: $u_{j.U1} := \left(\Delta h_{g.hj.U1} - \Delta h_{hj.U1}\right) \cdot \gamma_w = 95.87 \cdot kPa$

Head loss along h -> k: $\Delta h_{hjk.U1} := \Delta h_{ho.U1} \cdot \left(\frac{Key_{h.w} + Key_{h.d}}{L_{baseho.U1}}\right) = 0.652\,m$

Water Pressure at k: $u_{k.U1} := \left(\Delta h_{g.km.U1} - \Delta h_{hjk.U1}\right) \cdot \gamma_w = 72.01 \cdot kPa$

Head loss along h -> m: $\Delta h_{hjkm.U1} := \Delta h_{ho.U1} \cdot \left(\frac{Key_{h.w} + Key_{h.d} + Key_{hdist}}{L_{baseho.U1}}\right) = 2.5\,m$

Water Pressure at m: $u_{m.U1} := \left(\Delta h_{g.km.U1} - \Delta h_{hjkm.U1}\right) \cdot \gamma_w = 53.90 \cdot kPa$

Head loss along h -> n: $\Delta h_{hjkmn.U1} := \Delta h_{ho.U1} \cdot \left(\frac{Key_{h.w} + Key_{h.d} + Key_{hdist} + Key_{t.d}}{L_{baseho.U1}}\right) = 2.5\,m$

Water Pressure at n: $u_{n.U1} := \left(\Delta h_{g.no.U1} - \Delta h_{hjkmn.U1}\right) \cdot \gamma_w = 53.90 \cdot kPa$

Uplift under key at heel: $V_{ulkeyhU1.OT} := \frac{\left(u_{h.U1} + u_{j.U1}\right) \cdot Key_{h.w}}{2} \cdot B \cdot -1 = -96.935 \cdot kN$

Moment Arm (from Point O): $V_{ulkeyhU1loc.OT} := b - \frac{Key_{h.w} \cdot \left(2 \cdot u_{j.U1} + u_{h.U1}\right)}{3 \cdot \left(u_{j.U1} + u_{h.U1}\right)} = 9.002\,m$

Uplift under base: $V_{ulbaseU1.OT} := \frac{\left(u_{k.U1} + u_{m.U1}\right) \cdot Key_{hdist}}{2} \cdot B \cdot -1 = -535.112 \cdot kN$

Moment Arm (from Point O): $V_{ulbaseU1loc.OT} := b - Key_{h.w} - \frac{Key_{hdist} \cdot \left(2 \cdot u_{m.U1} + u_{k.U1}\right)}{3 \cdot \left(u_{m.U1} + u_{k.U1}\right)} = 4.454\,m$

Uplift under key at toe: $V_{ulkeytU1.OT} := \frac{\left(u_{n.U1} + u_{o.U1}\right) \cdot Key_{t.w}}{2} \cdot B \cdot -1 = 0 \cdot kN$

Moment Arm (from Point O): $V_{ulkeytU1loc.OT} := \frac{Key_{t.w} \cdot \left(2 \cdot u_{n.U1} + u_{o.U1}\right)}{3 \cdot \left(u_{n.U1} + u_{o.U1}\right)} = 0$

$$\Sigma V_{UpliftU1.OT} := V_{ulkeyhU1.OT} + V_{ulbaseU1.OT} + V_{ulkeytU1.OT} = -632 \cdot kN$$

$$U_{U1.loc.OT} := \frac{V_{ulkeyhU1.OT} \cdot V_{ulkeyhU1loc.OT} + V_{ulbaseU1.OT} \cdot V_{ulbaseU1loc.OT} + V_{ulkeytU1.OT} \cdot V_{ulkeytU1loc.OT}}{\Sigma V_{UpliftU1.OT}} = 5.15\,m$$

$$\Sigma M_{UpliftU1.OT} := \Sigma V_{UpliftU1.OT} \cdot U_{U1.loc.OT} = -3255.8 \cdot kN \cdot m$$

Modify Lateral Water Pressure (Resisting) for Overturning Analysis:

(Resisting water pressure is calculated using the Line of Creep method)

Water Load at Key (heel): $H_{h2U1.OT} := \frac{u_{k.U1} + u_{j.U1}}{2} \cdot Key_{h.d} B = 167.9 \cdot kN$

Moment Arm (from Point O): $H_{h2locU1.OT} := \frac{Key_{h.d} \cdot (2 \cdot u_{k.U1} + u_{j.U1})}{3(u_{k.U1} + u_{j.U1})} + Key_{vdist} = -1.05 \, m$

Water Load at Key (toe): $H_{h6U1.OT} := \frac{u_{o.U1} \cdot (UWSEL_{U1} - Bot_{ftg} + Key_{t.d})}{2} \cdot B = 148 \cdot kN$

Moment Arm (from Point O): $H_{h6locU1.OT} := \frac{UWSEL_{U1} - Bot_{ftg} + Key_{t.d}}{3} = 1.83 \, m$

$$\Sigma H_{waterresistU1.OT} := H_{h2U1.OT} + H_{h6U1.OT} = 316.1 \cdot kN$$

$$H_{waterresistlocU1.OT} := \frac{H_{h2U1.OT} \cdot H_{h2locU1.OT} + H_{h6U1.OT} \cdot H_{h6locU1.OT}}{\Sigma H_{waterresistU1.OT}} = 0.303 \, m$$

$$\Sigma M_{waterresistU1.OT} := \Sigma H_{waterresistU1.OT} \cdot H_{waterresistlocU1.OT} = 95.91 \cdot kN \cdot m$$

Modify Lateral Soil Loads for Overturning Analysis:

(Lateral soil loads are calculated down to Point O instead of bottom of shear key)

<u>Driving Soil Load (Headwater Side):</u>

Surcharge Load: $E_{s1U1.OT} := S1_{U1} \cdot K_o \cdot (H_w + Key_{h.d} + Key_{vdist}) \cdot B \cdot -1 = 0 \cdot kN$

Moment Arm (from Point O): $E_{s1locU1.OT} := \frac{H_w + Key_{h.d} + Key_{vdist}}{2} = 4.05 \, m$

Moist Soil Load above GWL: $E_{h1U1.OT} := \frac{\gamma_m \cdot K_o \cdot h_{1U1}^{\,2}}{2} B \cdot -1 = -0.1 \cdot kN$

Moment Arm (from Point O): $E_{h1locU1.OT} := \frac{h_{1U1}}{3} + h_{2U1} + Key_{vdist} = 8.03 \, m$

Saturated Soil Load below GWL:
(rectangular component)
$E_{h2U1.OT} := (\gamma_m \cdot K_o \cdot h_{1U1}) \cdot (h_{2U1} + Key_{vdist}) \cdot B \cdot -1 = -8.7 \cdot kN$

Moment Arm (from Point O): $E_{h2locU1.OT} := \frac{h_{2U1} + Key_{vdist}}{2} = 4.00 \, m$

Saturated Soil Load below GWL:
(triangular component)
$E_{h2aU1.OT} := \frac{(\gamma_{sat} - \gamma_w) \cdot K_o \cdot (h_{2U1} + Key_{vdist})^2}{2} \cdot B \cdot -1 = -213.2 \cdot kN$

Moment Arm (from Point O): $E_{h2alocU1.OT} := \frac{h_{2U1} + Key_{vdist}}{3} = 2.67 \, m$

Resisting Soil Load (Tailwater Side):

(Determine resisting soil load based on depth variation between the keys (ie. Key_{vdist}). In case where key at heel is deeper than key at toe (ie. $Key_{vdist} < 0$), resisting soil load (p*) is assumed to produce horizontal equilibrium as per Figure 4-5 above. Resisting soil load (p_o) is neglected.)

Total Driving Force: $\Sigma H_{SoildriveU1.OT} := E_{s1U1.OT} + E_{h1U1.OT} + E_{h2U1.OT} + E_{h2aU1.OT} + H_{h2U1} = -712.0 \cdot kN$

Total Resisting Force: $\Sigma H_{waterresistU1.OT} = 316.1 \cdot kN$

Assumed Soil Load p*: $E_{h8U1a.OT} := \left(\Sigma H_{SoildriveU1.OT} + \Sigma H_{waterresistU1.OT}\right) \cdot -1 = 395.85 \cdot kN$

Moment Arm (from Point O): $E_{h8U1a.loc.OT} := \dfrac{Key_{vdist}}{2} = -1\,m$

$$E_{h8U1.OT} := \begin{cases} E_{h8U1a.OT} & \text{if } Key_{vdist} < 0 \\ \Sigma H_{SoilresistU1} - H_{h6U1} - H_{h2aU1} & \text{otherwise} \end{cases} = 395.85 \cdot kN$$

$$\Sigma M_{SoilresistU1} := \begin{cases} E_{h8U1a.OT} \cdot E_{h8U1a.loc.OT} & \text{if } Key_{vdist} < 0 \\ \Sigma M_{HorizSoilResistU1} - H_{h6U1} \cdot H_{h6locU1} - H_{h2aU1} \cdot H_{h2alocU1} & \text{otherwise} \end{cases} = -395.85 \cdot kN \cdot m$$

Sum of Moment about Point O:

$$\Sigma M_{LateraldriveU1.OT} := E_{s1U1.OT} \cdot E_{s1locU1.OT} + E_{h1U1.OT} \cdot E_{h1locU1.OT} + E_{h2U1.OT} \cdot E_{h2locU1.OT} \ldots + E_{h2aU1.OT} \cdot E_{h2alocU1.OT} + H_{h2U1} \cdot H_{h2locU1} = -1257.1 \cdot kN \cdot m$$

$$\Sigma M_{LateralresistU1.OT} := \Sigma M_{waterresistU1.OT} + \Sigma M_{SoilresistU1} = -299.9 \cdot kN \cdot m$$

Total moment:

$$\Sigma M_{U1.OT} := \Sigma M_{conc} + \Sigma M_{VertSoilWaterResistU1} + \Sigma M_{UpliftU1.OT} + \Sigma M_{LateraldriveU1.OT} + \Sigma M_{LateralresistU1.OT} = 3593.9 \cdot kN \cdot m$$

Total Vertical Force: $\Sigma V_{U1.OT} := \Sigma V_{conc} + \Sigma V_{SoilWaterU1} + \Sigma V_{UpliftU1.OT} = 959.5 \cdot kN$

Distance X_R: EM 1110-2-2502 Eq.4-1 $X_{R.U1} := \dfrac{\Sigma M_{U1.OT}}{\Sigma V_{U1.OT}} = 3.746\,m$

Overturning Resultant Ratio $Ratio_{U1.OT} := \dfrac{X_{R.U1}}{b} = 0.39$

$$Ratio_{U1.OT.check} := \begin{cases} \text{"OKAY "} & \text{if } Ratio_{U1.OT} > X_{R.reqU1} \\ \text{"Revise Structure""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

CHECK FOUNDATION ECCENTRICITY (HORIZONTAL PLANE):

Eccentricity (horizontal plan): $ex_{U1.OT} := \dfrac{b}{2} - \dfrac{\Sigma M_{U1.OT}}{\Sigma V_{U1.OT}} = 1.00\,m$ $\quad Kern_{OT} := \dfrac{b}{6} = 1.583\,m$

Eccentricity Check:

$$e_{check.U1.OT} := \begin{cases} \text{"Okay"} & \text{if } ex_{U1} \le Kern_{OT} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"Okay"}$$

CHECK FOUNDATION BEARING CAPACITY (HORIZONTAL PLANE):

Base Section Modulus: $S_{b.OT} := \frac{1}{6}\left(B \cdot b^2\right) = 15.04\,m^3$

Bearing Pressure Under Toe:

$$\sigma_{ToeU1.OT} := \begin{cases} \left(\frac{\Sigma V_{U1.OT}}{b \cdot B} + \frac{\Sigma V_{U1.OT} \cdot ex_{U1.OT}}{S_{b.OT}}\right) & \text{if } \frac{\Sigma V_{U1.OT}}{b \cdot B} \geq \frac{\Sigma V_{U1.OT} \cdot ex_{U1.OT}}{S_{b.OT}} \\ \frac{2 \cdot \Sigma V_{U1.OT}}{B \cdot 3\left(\frac{b}{2} - ex_{U1.OT}\right)} & \text{otherwise} \end{cases} = 165.1 \cdot kPa$$

$$Bearing_{ChecktoeU1.OT} := \begin{cases} \text{"OKAY "} & \text{if } \sigma_{ToeU1.OT} < \sigma_{allowU1} \\ \text{"NG - for reference only""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

Bearing Pressure Under Heel:

$$\sigma_{HeelU1.OT} := \begin{cases} \left(\frac{\Sigma V_{U1.OT}}{b \cdot B} - \frac{\Sigma V_{U1.OT} \cdot ex_{U1.OT}}{S_{b.OT}}\right) & \text{if } \frac{\Sigma V_{U1.OT}}{b \cdot B} \geq \frac{\Sigma V_{U1.OT} \cdot ex_{U1.OT}}{S_{b.OT}} \\ 0 & \text{otherwise} \end{cases} = 36.9 \cdot kPa$$

$$Bearing_{CheckheelU1.OT} := \left(\begin{cases} \text{"OKAY "} & \text{if } \sigma_{HeelU1.OT} < \sigma_{allowU1} \wedge \sigma_{HeelU1.OT} > 0 \\ \text{"NG - for reference only""} & \text{otherwise} \end{cases}\right) = \text{"OKAY "}$$

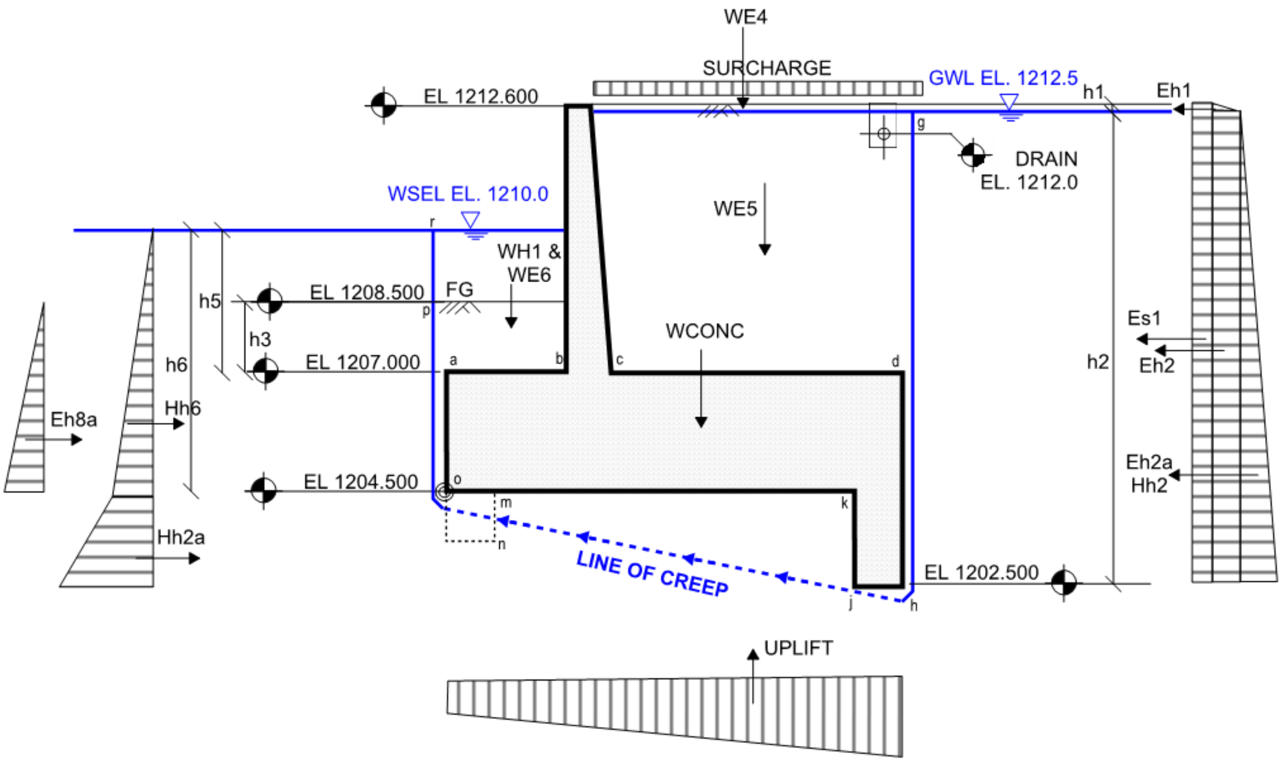
LOAD CASE UN1 - NORMAL OPERATION + SURCHARGE



UN1 DESIGN CASE

LOAD CASE UN1 ACCEPTANCE PARAMETERS

FS sliding:

Unusual (UN) 1.3 (without cohesion) (Table 3-3, USACE EM 1110-2-2100)

Resultant Location:

Unsual (UN) Inside middle third ~100% base in compression

Required Factor of Safety for Sliding: $FS_{sliding.reqUN1} := 1.3$ (Without Cohesion)

Allowable rock bearing pressure: $\sigma_{allowUN1} := 1470kPa$ (Section 5.2, Design Criteria EM 1110-2-2100 Section 3-10)

Overturning Required Resultant Ratio: $X_{R.reqUN1} := 0.333$ (EM 1110-2-2502, Figure 4-4)

Required Factor of Safety for Floatation $FS_{req.UN1.flt} := 1.3$

SOIL HEIGHTS and Water Levels:

LOAD CASE UN1

Heel Conditions:

Groundwater Elevation at Heel: $GWL_{UN1} := 1212.5m$

Distance from Finish Grade to Groundwater at Heel: $h_{1UN1} := \left[T_w - GWL_{UN1} + \left(L_{cd} + t_{wb} - t_{wt}\right)\cdot \tan(\beta)\right] = 0.10\,m$

Distance from Water Surface to Bottom of Footing at Heel: $h_{2UN1} := GWL_{UN1} - Bot_{ftg} + Key_{h.d} = 10.00\,m$

Toe Conditions:

Water Surface Elevation at Toe: $WSEL_{UN1} := 1210.0m$

Water Surface Elevation at Toe for Uplift: $UWSEL_{UN1} := 1210.0\cdot m$

Finish Grade at Toe providing lateral resistance: $FG_{toeUN1} := 1208.5\cdot m$

Soil Depth Above top of footing: $h_{3aUN1} := FG_{toeUN1} - Top_{ftg} = 1.5\,m$

$$h_{3UN1} := \begin{cases} h_{3aUN1} & \text{if } FG_{toeUN1} - Top_{ftg} \geq 0 \\ 0 & \text{otherwise} \end{cases} = 1.5$$

Resisting Fill at Toe: $h_{4UN1} := FG_{toeUN1} - Bot_{ftg} + Key_{t.d} = 4.00\,m$

Distance from Water Level to Top of Footing at Toe: $h_{5UN1} := WSEL_{UN1} - Top_{ftg} = 3.00\,m$

Distance from Water Surface to Bottom of Footing at Toe: $h_{6UN1} := WSEL_{UN1} - Bot_{ftg} + Key_{t.d} = 5.50\,m$

Soil Depth Above WSEL: $h_{7aUN1} := FG_{toeUN1} - WSEL_{UN1} = -1.5\,m$

$$h_{7UN1} := \begin{cases} h_{7aUN1} & \text{if } FG_{toeUN1} - WSEL_{UN1} \geq 0 \\ 0 & \text{otherwise} \end{cases} = 0$$

Soil Depth Below WSEL:

$$h_{8UN1} := \begin{cases} WSEL_{UN1} - Bot_{ftg} + Key_{t.d} & \text{if } FG_{toeUN1} - WSEL_{UN1} \geq 0 \\ h_{4UN1} & \text{otherwise} \end{cases} = 4$$

For Line of Creep Method: $L_{ho.UN1} := \sqrt{b^2 + \left(Key_{h.d} - Key_{t.d}\right)^2} = 9.708\,m$

Head Loss from Point g:

$\Delta h_{g.hj.UN1} := h_{2UN1} = 10\,m$ (to point h & j)

$\Delta h_{g.km.UN1} := GWL_{UN1} - Bot_{ftg} = 8\,m$ (to point k & m)

$\Delta h_{g.no.UN1} := GWL_{UN1} - Bot_{ftg} + Key_{t.d} = 8\,m$ (to point n & o)

$\Delta h_{g.p.UN1} := GWL_{UN1} - FG_{toeUN1} = 4\,m$ (to point p)

$\Delta h_{g.r.UN1} := GWL_{UN1} - UWSEL_{UN1} = 2.5\,m$ (to point r)

Surcharge

Surcharge on Heel: $S1_{UN1} := 15.0\,\frac{kN}{m^2}$

Calculate Soil Lateral Pressure Coefficients:

LOAD CASE UN1

For all load cases except seismic, soil loading to be based on At-Rest Condition.
Calculate at-rest pressure coefficient Ko based on Jaky's (1944) equation.

Soil At Rest Static Coefficient: $K_o := \frac{1 - \sin(\phi)}{1 + \sin(\beta)} = 0.546$ (Eq. 3-6, USACE EM 1110-2-2502)

Lateral - Driving Force

Static At-Rest:

Surcharge Load: $E_{s1UN1} := S1_{UN1} \cdot K_o \cdot \left(H_w + Key_{h.d}\right) \cdot B \cdot -1 = -82.72 \cdot kN$

Moment Arm (from bottom of footing): $E_{s1locUN1} := \frac{H_w + Key_{h.d}}{2} + Key_{vdist} = 3.05\ m$

Moist Soil Load above GWL: $E_{h1UN1} := \frac{\gamma_m \cdot K_o \cdot {h_{1UN1}}^2}{2} B \cdot -1 = -0.1 \cdot kN$

Moment Arm (from bottom of footing): $E_{h1locUN1} := \frac{h_{1UN1}}{3} + h_{2UN1} + Key_{vdist} = 8.03\ m$

Saturated Soil Load below GWL:
(rectangular component) $E_{h2UN1} := \left(\gamma_m \cdot K_o \cdot h_{1UN1}\right) \cdot \left(h_{2UN1}\right) \cdot B \cdot -1 = -10.9 \cdot kN$

Moment Arm (from bottom of footing): $E_{h2locUN1} := \frac{h_{2UN1}}{2} + Key_{vdist} = 3.00\ m$

Saturated Soil Load below GWT:
(triangular L $E_{h2aUN1} := \frac{\left(\gamma_{sat} - \gamma_w\right) \cdot K_o \cdot {h_{2UN1}}^2}{2} \cdot B \cdot -1 = -333.1 \cdot kN$

Moment Arm (from bottom of footing): $E_{h2alocUN1} := \frac{h_{2UN1}}{3} + Key_{vdist} = 1.33\ m$

Lateral Water Load:

Water Load GWL to Bottom of Key $H_{h2UN1} := \frac{\gamma_w \cdot {h_{2UN1}}^2}{2} \cdot B \cdot -1 = -490.0 \cdot kN$

Moment Arm (from bottom of footing): $H_{h2locUN1} := \frac{h_{2UN1}}{3} + Key_{vdist} = 1.33\ m$

$$\Sigma H_{SoildriveUN1} := E_{s1UN1} + E_{h1UN1} + E_{h2UN1} + E_{h2aUN1} + H_{h2UN1} = -916.8 \cdot kN$$

$$\Sigma M_{LateralSoildriveUN1} := E_{s1UN1} \cdot E_{s1locUN1} + E_{h1UN1} \cdot E_{h1locUN1} + E_{h2UN1} \cdot E_{h2locUN1} \ldots = -1382.9\ m \cdot kN$$
$$+ E_{h2aUN1} \cdot E_{h2alocUN1} + H_{h2UN1} \cdot H_{h2locUN1}$$

Lateral - Resisting Force

LOAD CASE UN1

Lateral Water Load:

Water Load WSEL to Bottom of Footing:

$$H_{h6UN1} := \frac{\gamma_w \cdot h_{6UN1}^{\;2}}{2} \cdot B = 148.2 \cdot kN$$

Moment Arm (from bot. of toe key):

$$H_{h6locUN1} := \frac{h_{6UN1}}{3} = 1.83\ m$$

Water Load Bot. of Footing to Bot. of H. Key:

$$H_{h2aUN1} := \left[\left(UWSEL_{UN1} - Bot_{ftg} + Key_{t.d}\right) + h_{2UN1}\right] \cdot \frac{Key_{h.d}}{2} \cdot \gamma_w \cdot B = 151.9 \cdot kN$$

Moment Arm (from bot. of toe key):

$$H_{h2alocUN1} := \frac{Key_{h.d} \cdot \left[2 \cdot \left(UWSEL_{UN1} - Bot_{ftg} + Key_{t.d}\right) + h_{2UN1}\right]}{3\left[h_{2UN1} + \left(UWSEL_{UN1} - Bot_{ftg} + Key_{t.d}\right)\right]} \ldots = -1.10\ m$$
$$+ Key_{vdist}$$

Lateral Soil Load:

Moist Soil Load above WSEL:

$$E_{h7UN1} := \frac{\gamma_m \cdot K_o \cdot h_{7UN1}^{\;2}}{2} B = 0.0 \cdot kN$$

Moment Arm (from bot. of toe key):

$$E_{h7locUN1} := h_{6UN1} + \frac{h_{7UN1}}{3} + Key_{vdist} = 3.50\ m$$

Saturated Soil Load below WSEL:
(rectangular component)

$$E_{h8UN1} := \left(\gamma_m \cdot K_o \cdot h_{7UN1}\right) \cdot h_{8UN1} \cdot B = 0.0 \cdot kN$$

Moment Arm (from bot. of toe key):

$$E_{h8locUN1} := \frac{h_{8UN1}}{2} = 2.00\ m$$

Saturated Soil Load below WSEL:
(triangular component)

$$E_{h8aUN1} := \frac{\left[\left(\gamma_{sat} - \gamma_w\right) \cdot K_o\right] \cdot h_{8UN1}^{\;2}}{2} \cdot B = 53.3 \cdot kN$$

Moment Arm (from bot. of footing):

$$E_{h8alocUN1} := \frac{h_{8UN1}}{3} = 1.33\ m$$

$$\Sigma H_{SoilresistUN1} := H_{h6UN1} + H_{h2aUN1} + E_{h7UN1} + E_{h8UN1} + E_{h8aUN1} = 353.4 \cdot kN$$

$$\Sigma M_{HorizSoilResistUN1} := H_{h6UN1} \cdot H_{h6locUN1} + H_{h2aUN1} \cdot H_{h2alocUN1} + E_{h7UN1} \cdot E_{h7locUN1} \ldots = 176.2\ m \cdot kN$$
$$+ E_{h8UN1} \cdot E_{h8locUN1} + E_{h8aUN1} \cdot E_{h8alocUN1}$$

Vertical Force:

UPLIFT: Linear distribution from water at heel to water at toe:

$$\Sigma V_{UpliftUN1} := \left[\left(UWSEL_{UN1} - Bot_{ftg} + Key_{t.d}\right) + h_{2UN1}\right] \cdot \frac{b}{2} \cdot \gamma_w \cdot B \cdot -1 = -721.525 \cdot kN$$

Moment Arm (from Point O):

$$V_{UpliftUN1aloc} := \frac{b \cdot \left[2 \cdot h_{2UN1} + \left(UWSEL_{UN1} - Bot_{ftg} + Key_{t.d}\right)\right]}{3\left[h_{2UN1} + \left(UWSEL_{UN1} - Bot_{ftg} + Key_{t.d}\right)\right]} = 5.21\ m$$

$$\Sigma M_{UpliftUN1} := \Sigma V_{UpliftUN1} \cdot V_{UpliftUN1aloc} = -3758.912 \cdot kN \cdot m$$

Weight of soil and water over toe:

Water Above the Top of Footing: $W_{H1UN1} := \gamma_w \cdot h_{5UN1} \cdot L_{ab} \cdot B = 73.5 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E1locUN1} := \frac{L_{ab}}{2} = 1.25\ m$

Soil above top of footing: $W_{E6UN1} := \gamma_b \cdot h_{3UN1} \cdot L_{ab} \cdot B = 45.8 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E6locUN1} := \frac{L_{ab}}{2} = 1.25\ m$

Vertical Load Due to Surcharge: $S_{UN1} := S1_{UN1} \cdot L_{cd} \cdot B = 90.9 \cdot kN$ $\quad S_{UN1loc} := b - \frac{L_{cd}}{2} = 6.47\ m$

Weight of soil and water over heel:

Moist Soil for sloped grade above top of wall:

Length of sloped portion of soil above top of wall: $L_{E3UN1} := \left(L_{cd} + t_{wb} - t_{wt}\right) = 6.50\ m$

Height of sloped soil above top of wall over heel: $h_{E3locUN1} := \left(L_{E3UN1}\right) \cdot \tan(\beta) = 0.00\ m$

Weight of sloped soil above top of wall: $W_{E3UN1} := \frac{\gamma_m}{2} \cdot h_{E3locUN1} \cdot L_{E3UN1} \cdot B = 0.0 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E3locUN1} := L_{ab} + t_{wt} + \frac{2}{3} \cdot L_{E3UN1} = 7.33\ m$

Moist soil from top of wall to groundwater level:

Height of soil from top of wall and top of GWL: $h_{1UN1} = 0.10\ m$

Length from edge of wall at GWL to edge of heel: $L_{E4UN1} := L_{E3UN1} - \left(h_{1UN1} \cdot S_{batter}\right) = 6.49\ m$

Weight of soil over heel from top of wall to GWL: $W_{E4UN1} := \gamma_m \cdot h_{1UN1} \cdot \frac{\left(L_{E3UN1} + L_{E4UN1}\right)}{2} \cdot B = 13.0 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E4locUN1} := b - \frac{L_{E3UN1}^2 + L_{E3UN1} \cdot L_{E4UN1} + L_{E4UN1}^2}{3\left(L_{E3UN1} + L_{E4UN1}\right)} = 6.25\ m$

Saturated soil from groundwater to top of footing:

Height of soil from GWL to top of heel: $h_{E4UN1} := h_{2UN1} - t_{ftg} - Key_{h.d} = 5.50\ m$

Weight of soil over heel from GWL to top of heel: $W_{E5UN1} := \left(\gamma_{sat}\right) \cdot h_{E4UN1} \cdot \frac{\left(L_{E4UN1} + L_{cd}\right)}{2} \cdot B = 759.4 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E5locUN1} := b - \frac{L_{E4UN1}^2 + L_{E4UN1} \cdot L_{cd} + L_{cd}^2}{3\left(L_{E4UN1} + L_{cd}\right)} = 6.36\ m$

$$\Sigma V_{SoilWaterUN1} := W_{H1UN1} + W_{E6UN1} + W_{E3UN1} + W_{E4UN1} + W_{E5UN1} + S_{UN1} = 982.5 \cdot kN$$

$$\Sigma M_{VertSoilWaterResistUN1} := W_{H1UN1} \cdot W_{E1locUN1} + W_{E6UN1} \cdot W_{E6locUN1} \cdots + W_{E3UN1} \cdot W_{E3locUN1} + W_{E4UN1} \cdot W_{E4locUN1} + W_{E5UN1} \cdot W_{E5locUN1} + S_{UN1} \cdot S_{UN1loc} = 5648.8\ m \cdot kN$$

CHECK OVERTURNING

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stablity of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1

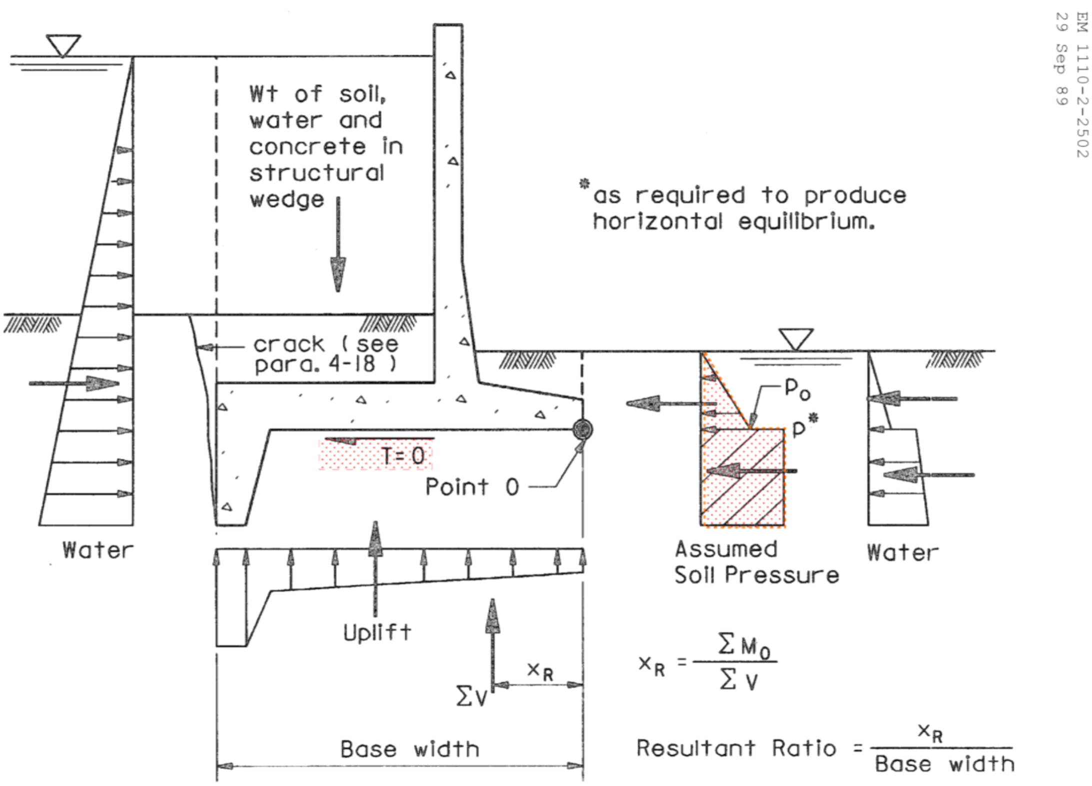

Figure 4-5. Forces for overturning analysis for wall with horizontal base and key

Modify Uplift for Overturning Analysis: **LOAD CASE UN1**

(Uplift is calculated along the concrete/rock contact using the Line of Creep method)

Water Pressure at h: $u_{h.UN1} := \Delta h_{g.hj.UN1} \cdot \gamma_w = 98.00 \cdot kPa$

Water Pressure at o: $u_{o.UN1} := \left(\Delta h_{g.no.UN1} - \frac{\Delta h_{g.r.UN1} \cdot L_{ho.UN1}}{L_{ho.UN1}}\right) \cdot \gamma_w = 53.9 \cdot kPa$

Head loss between point h and o: $\Delta h_{ho.UN1} := \Delta h_{g.r.UN1} \cdot \frac{L_{ho.UN1}}{L_{ho.UN1}} = 2.5\,m$

Length of concrete base (h -> o): $L_{baseho.UN1} := Key_{h.w} + Key_{h.d} + Key_{hdist} + Key_{t.d} + Key_{t.w} = 11.5\,m$

Head loss along h -> j: $\Delta h_{hj.UN1} := \Delta h_{ho.UN1} \cdot \frac{Key_{h.w}}{L_{baseho.UN1}} = 0.217\,m$

Water Pressure at j: $u_{j.UN1} := (\Delta h_{g.hj.UN1} - \Delta h_{hj.UN1}) \cdot \gamma_w = 95.87 \cdot kPa$

Head loss along h -> k: $\Delta h_{hjk.UN1} := \Delta h_{ho.UN1} \cdot \left(\frac{Key_{h.w} + Key_{h.d}}{L_{baseho.UN1}}\right) = 0.652\,m$

Water Pressure at k: $u_{k.UN1} := (\Delta h_{g.km.UN1} - \Delta h_{hjk.UN1}) \cdot \gamma_w = 72.01 \cdot kPa$

Head loss along h -> m: $\Delta h_{hjkm.UN1} := \Delta h_{ho.UN1} \cdot \left(\frac{Key_{h.w} + Key_{h.d} + Key_{hdist}}{L_{baseho.UN1}}\right) = 2.5\,m$

Water Pressure at m: $u_{m.UN1} := (\Delta h_{g.km.UN1} - \Delta h_{hjkm.UN1}) \cdot \gamma_w = 53.90 \cdot kPa$

Head loss along h -> n: $\Delta h_{hjkmn.UN1} := \Delta h_{ho.UN1} \cdot \left(\frac{Key_{h.w} + Key_{h.d} + Key_{hdist} + Key_{t.d}}{L_{baseho.UN1}}\right) = 2.5\,m$

Water Pressure at n: $u_{n.UN1} := (\Delta h_{g.no.UN1} - \Delta h_{hjkmn.UN1}) \cdot \gamma_w = 53.90 \cdot kPa$

Uplift under key at heel: $V_{ulkeyhUN1.OT} := \frac{(u_{h.UN1} + u_{j.UN1}) \cdot Key_{h.w}}{2} \cdot B \cdot -1 = -96.935 \cdot kN$

Moment Arm (from Point O): $V_{ulkeyhUN1loc.OT} := b - \frac{Key_{h.w} \cdot (2 \cdot u_{j.UN1} + u_{h.UN1})}{3 \cdot (u_{j.UN1} + u_{h.UN1})} = 9.002\,m$

Uplift under base: $V_{ulbaseUN1.OT} := \frac{(u_{k.UN1} + u_{m.UN1}) \cdot Key_{hdist}}{2} \cdot B \cdot -1 = -535.112 \cdot kN$

Moment Arm (from Point O): $V_{ulbaseUN1loc.OT} := b - Key_{h.w} - \frac{Key_{hdist} \cdot (2 \cdot u_{m.UN1} + u_{k.UN1})}{3 \cdot (u_{m.UN1} + u_{k.UN1})} = 4.454\,m$

Uplift under key at toe: $V_{ulkeytUN1.OT} := \frac{(u_{n.UN1} + u_{o.UN1}) \cdot Key_{t.w}}{2} \cdot B \cdot -1 = 0 \cdot kN$

Moment Arm (from Point O): $V_{ulkeytUN1loc.OT} := \frac{Key_{t.w} \cdot (2 \cdot u_{n.UN1} + u_{o.UN1})}{3 \cdot (u_{n.UN1} + u_{o.UN1})} = 0$

$$\Sigma V_{UpliftUN1.OT} := V_{ulkeyhUN1.OT} + V_{ulbaseUN1.OT} + V_{ulkeytUN1.OT} = -632 \cdot kN$$

$$U_{UN1.loc.OT} := \frac{V_{ulkeyhUN1.OT} \cdot V_{ulkeyhUN1loc.OT} + V_{ulbaseUN1.OT} \cdot V_{ulbaseUN1loc.OT} + V_{ulkeytUN1.OT} \cdot V_{ulkeytUN1loc.OT}}{\Sigma V_{UpliftUN1.OT}} = 5.15\,m$$

$$\Sigma M_{UpliftUN1.OT} := \Sigma V_{UpliftUN1.OT} \cdot U_{UN1.loc.OT} = -3255.8 \cdot kN \cdot m$$

Modify Lateral Water Pressure (Resisting) for Overturning Analysis:

(Resisting water pressure is calculated using the Line of Creep method)

Water Load at Key (heel): $H_{h2UN1.OT} := \frac{u_{k.UN1} + u_{j.UN1}}{2} \cdot Key_{h.d} B = 167.9 \cdot kN$

Moment Arm (from Point O): $H_{h2locUN1.OT} := \frac{Key_{h.d} \cdot (2 \cdot u_{k.UN1} + u_{j.UN1})}{3(u_{k.UN1} + u_{j.UN1})} + Key_{vdist} = -1.05\ m$

Water Load at Key (toe): $H_{h6UN1.OT} := \frac{u_{o.UN1} \cdot (UWSEL_{UN1} - Bot_{ftg} + Key_{t.d})}{2} \cdot B = 148 \cdot kN$

Moment Arm (from Point O): $H_{h6locUN1.OT} := \frac{UWSEL_{UN1} - Bot_{ftg} + Key_{t.d}}{3} = 1.83\ m$

$$\Sigma H_{waterresistUN1.OT} := H_{h2UN1.OT} + H_{h6UN1.OT} = 316.1 \cdot kN$$

$$H_{waterresistlocUN1.OT} := \frac{H_{h2UN1.OT} \cdot H_{h2locUN1.OT} + H_{h6UN1.OT} \cdot H_{h6locUN1.OT}}{\Sigma H_{waterresistUN1.OT}} = 0.303\ m$$

$$\Sigma M_{waterresistUN1.OT} := \Sigma H_{waterresistUN1.OT} \cdot H_{waterresistlocUN1.OT} = 95.91 \cdot kN \cdot m$$

Modify Lateral Soil Loads for Overturning Analysis:

(Lateral soil loads are calculated down to Point O instead of bottom of shear key)

Driving Soil Load (Headwater Side):

Surcharge Load: $E_{s1UN1.OT} := S1_{UN1} \cdot K_o \cdot (H_w + Key_{h.d} + Key_{vdist}) \cdot B \cdot -1 = -66.34 \cdot kN$

Moment Arm (from Point O): $E_{s1locUN1.OT} := \frac{H_w + Key_{h.d} + Key_{vdist}}{2} = 4.05\ m$

Moist Soil Load above GWL: $E_{h1UN1.OT} := \frac{\gamma_m \cdot K_o \cdot h_{1UN1}^{\ 2}}{2} B \cdot -1 = -0.1 \cdot kN$

Moment Arm (from Point O): $E_{h1locUN1.OT} := \frac{h_{1UN1}}{3} + h_{2UN1} + Key_{vdist} = 8.03\ m$

Saturated Soil Load below GWL: (rectangular component) $E_{h2UN1.OT} := (\gamma_m \cdot K_o \cdot h_{1UN1}) \cdot (h_{2UN1} + Key_{vdist}) \cdot B \cdot -1 = -8.7 \cdot kN$

Moment Arm (from Point O): $E_{h2locUN1.OT} := \frac{h_{2UN1} + Key_{vdist}}{2} = 4.00\ m$

Saturated Soil Load below GWL: (triangular component) $E_{h2aUN1.OT} := \frac{(\gamma_{sat} - \gamma_w) \cdot K_o \cdot (h_{2UN1} + Key_{vdist})^2}{2} \cdot B \cdot -1 = -213.2 \cdot kN$

Moment Arm (from Point O): $E_{h2alocUN1.OT} := \frac{h_{2UN1} + Key_{vdist}}{3} = 2.67\ m$

Resisting Soil Load (Tailwater Side):

(Determine resisting soil load based on depth variation between the keys (ie. Key_{vdist}). In case where key at heel is deeper than key at toe (ie. $Key_{vdist} < 0$), resisting soil load (p*) is assumed to produce horizontal equilibrium as per Figure 4-5 above. Resisting soil load (p_o) is neglected.)

Total Driving Force: $\Sigma H_{SoildriveUN1.OT} := E_{s1UN1.OT} + E_{h1UN1.OT} + E_{h2UN1.OT} + E_{h2aUN1.OT} + H_{h2UN1} = -778.3 \cdot kN$

Total Resisting Force: $\Sigma H_{waterresistUN1.OT} = 316.1 \cdot kN$

Assumed Soil Load p*: $E_{h8UN1a.OT} := (\Sigma H_{SoildriveUN1.OT} + \Sigma H_{waterresistU1.OT}) \cdot -1 = 462.19 \cdot kN$

Moment Arm (from Point O): $E_{h8UN1a.loc.OT} := \dfrac{Key_{vdist}}{2} = -1\ m$

$$E_{h8UN1.OT} := \begin{cases} E_{h8UN1a.OT} & \text{if } Key_{vdist} < 0 \\ \Sigma H_{SoilresistUN1} - H_{h6UN1} - H_{h2aUN1} & \text{otherwise} \end{cases} = 462.19 \cdot kN$$

UN2 DESIGN CASE

LOAD CASE UN2 ACCEPTANCE PARAMETERS

FS sliding:

Unusual (UN) 1.3 (without cohesion) (Table 3-3, USACE EM 1110-2-2100)

Resultant Location:

Unsual (UN) Inside middle third ~100% base in compression

Required Factor of Safety for Sliding: $FS_{sliding.reqUN2} := 1.3$ (Without Cohesion)

Allowable rock bearing pressure: $\sigma_{allowUN2} := 1470kPa$ (Section 5.2, Design Criteria EM 1110-2-2100 Section 3-10)

Overturning Required Resultant Ratio: $X_{R.reqUN2} := 0.333$ (EM 1110-2-2502, Figure 4-4)

Required Factor of Safety for Floatation $FS_{req.UN2.flt} := 1.3$

SOIL HEIGHTS and Water Levels:

LOAD CASE UN2

Heel Conditions:

Groundwater Elevation at Heel: $GWL_{UN2} := 1212.6m$

Distance from Finish Grade to Groundwater at Heel: $h_{1UN2} := \left[T_w - GWL_{UN2} + \left(L_{cd} + t_{wb} - t_{wt}\right)\cdot \tan(\beta)\right] = 0.00\ m$

Distance from Water Surface to Bottom of Footing at Heel: $h_{2UN2} := GWL_{UN2} - Bot_{ftg} + Key_{h.d} = 10.10\ m$

Toe Conditions:

Water Surface Elevation at Toe: $WSEL_{UN2} := 1210.0m$

Water Surface Elevation at Toe for Uplift: $UWSEL_{UN2} := 1212.6\cdot m$

Finish Grade at Toe providing lateral resistance: $FG_{toeUN2} := 1208.5\cdot m$

Soil Depth Above top of footing: $h_{3aUN2} := FG_{toeUN2} - Top_{ftg} = 1.5\ m$

$$h_{3UN2} := \begin{cases} h_{3aUN2} & \text{if } FG_{toeUN2} - Top_{ftg} \geq 0 \\ 0 & \text{otherwise} \end{cases} = 1.5$$

Resisting Fill at Toe: $h_{4UN2} := FG_{toeUN2} - Bot_{ftg} + Key_{t.d} = 4.00\ m$

Distance from Water Level to Top of Footing at Toe: $h_{5UN2} := WSEL_{UN2} - Top_{ftg} = 3.00\ m$

Distance from Water Surface to Bottom of Footing at Toe: $h_{6UN2} := WSEL_{UN2} - Bot_{ftg} + Key_{t.d} = 5.50\ m$

Soil Depth Above WSEL: $h_{7aUN2} := FG_{toeUN2} - WSEL_{UN2} = -1.5\ m$

$$h_{7UN2} := \begin{cases} h_{7aUN2} & \text{if } FG_{toeUN2} - WSEL_{UN2} \geq 0 \\ 0 & \text{otherwise} \end{cases} = 0$$

Soil Depth Below WSEL:

$$h_{8UN2} := \begin{cases} WSEL_{UN2} - Bot_{ftg} + Key_{t.d} & \text{if } FG_{toeUN2} - WSEL_{UN2} \geq 0 \\ h_{4UN2} & \text{otherwise} \end{cases} = 4$$

For Line of Creep Method: $L_{ho.UN2} := \sqrt{b^2 + \left(Key_{h.d} - Key_{t.d}\right)^2} = 9.708\ m$

Head Loss from Point g:

$\Delta h_{g.hj.UN2} := h_{2UN2} = 10.1\ m$ (to point h & j)

$\Delta h_{g.km.UN2} := GWL_{UN2} - Bot_{ftg} = 8.1\ m$ (to point k & m)

$\Delta h_{g.no.UN2} := GWL_{UN2} - Bot_{ftg} + Key_{t.d} = 8.1\ m$ (to point n & o)

$\Delta h_{g.p.UN2} := GWL_{UN2} - FG_{toeUN2} = 4.1\ m$ (to point p)

$\Delta h_{g.r.UN2} := GWL_{UN2} - UWSEL_{UN2} = 0\ m$ (to point r)

Surcharge

Surcharge on Heel: $S1_{UN2} := 0.0\ \frac{kN}{m^2}$

Calculate Soil Lateral Pressure Coefficients:

LOAD CASE UN2

For all load cases except seismic, soil loading to be based on At-Rest Condition.
Calculate at-rest pressure coefficient Ko based on Jaky's (1944) equation.

Soil At Rest Static Coefficient: $K_o := \frac{1 - \sin(\phi)}{1 + \sin(\beta)} = 0.546$ (Eq. 3-6, USACE EM 1110-2-2502)

Lateral - Driving Force

Static At-Rest:

Surcharge Load: $E_{s1UN2} := S1_{UN2} \cdot K_o \cdot \left(H_w + Key_{h.d}\right) \cdot B \cdot -1 = 0 \cdot kN$

Moment Arm (from bottom of footing): $E_{s1locUN2} := \frac{H_w + Key_{h.d}}{2} + Key_{vdist} = 3.05\ m$

Moist Soil Load above GWL: $E_{h1UN2} := \frac{\gamma_m \cdot K_o \cdot h_{1UN2}^{\ 2}}{2} \cdot B \cdot -1 = 0.0 \cdot kN$

Moment Arm (from bottom of footing): $E_{h1locUN2} := \frac{h_{1UN2}}{3} + h_{2UN2} + Key_{vdist} = 8.10\ m$

Saturated Soil Load below GWL:
(rectangular component) $E_{h2UN2} := \left(\gamma_m \cdot K_o \cdot h_{1UN2}\right) \cdot h_{2UN2} \cdot B \cdot -1 = 0.0 \cdot kN$

Moment Arm (from bottom of footing): $E_{h2locUN2} := \frac{h_{2UN2}}{2} + Key_{vdist} = 3.05\ m$

Saturated Soil Load below GWL:
(triangular component) $E_{h2aUN2} := \frac{\left(\gamma_{sat} - \gamma_w\right) \cdot K_o \cdot h_{2UN2}^{\ 2}}{2} \cdot B \cdot -1 = -339.8 \cdot kN$

Moment Arm (from bottom of footing): $E_{h2alocUN2} := \frac{h_{2UN2}}{3} + Key_{vdist} = 1.37\ m$

Lateral Water Load:

Water Load GWL to Bottom of Key $H_{h2UN2} := \frac{\gamma_w \cdot h_{2UN2}^{\ 2}}{2} \cdot B \cdot -1 = -499.8 \cdot kN$

Moment Arm (from bottom of footing): $H_{h2locUN2} := \frac{h_{2UN2}}{3} + Key_{vdist} = 1.37\ m$

$\Sigma H_{SoildriveUN2} := E_{s1UN2} + E_{h1UN2} + E_{h2UN2} + E_{h2aUN2} + H_{h2UN2} = -839.6 \cdot kN$

$$\Sigma M_{LateralSoildriveUN2} := E_{s1UN2} \cdot E_{s1locUN2} + E_{h1UN2} \cdot E_{h1locUN2} + E_{h2UN2} \cdot E_{h2locUN2} \ldots + E_{h2aUN2} \cdot E_{h2alocUN2} + H_{h2UN2} \cdot H_{h2locUN2} = -1147.5\ m \cdot kN$$

Lateral - Resisting Force

LOAD CASE UN2

Lateral Water Load:

Water Load WSEL to Bottom of Footing: $H_{h6UN2} := \dfrac{\gamma_w \cdot h_{6UN2}^{2}}{2} \cdot B = 148.2 \cdot kN$

Moment Arm (from bot. of toe key): $H_{h6locUN2} := \dfrac{h_{6UN2}}{3} = 1.83\ m$

Water Load Bot. of Footing to Bot. of H. Key: $H_{h2aUN2} := \left[\left(UWSEL_{UN2} - Bot_{ftg} + Key_{t.d}\right) + h_{2UN2}\right] \cdot \dfrac{Key_{h.d}}{2} \cdot \gamma_w \cdot B = 178.4 \cdot kN$

Moment Arm (from bot. of toe key):

$$H_{h2alocUN2} := \frac{Key_{h.d} \cdot \left[2 \cdot \left(UWSEL_{UN2} - Bot_{ftg} + Key_{t.d}\right) + h_{2UN2}\right]}{3\left[h_{2UN2} + \left(UWSEL_{UN2} - Bot_{ftg} + Key_{t.d}\right)\right]} \ldots = -1.04\ m$$
$$+ Key_{vdist}$$

Lateral Soil Load:

Moist Soil Load above WSEL: $E_{h7UN2} := \dfrac{\gamma_m \cdot K_o \cdot h_{7UN2}^{2}}{2} B = 0.0 \cdot kN$

Moment Arm (from bot. of toe key): $E_{h7locUN2} := h_{6UN2} + \dfrac{h_{7UN2}}{3} + Key_{vdist} = 3.50\ m$

Saturated Soil Load below WSEL: (rectangular component) $E_{h8UN2} := \left(\gamma_m \cdot K_o \cdot h_{7UN2}\right) \cdot h_{8UN2} \cdot B = 0.0 \cdot kN$

Moment Arm (from bot. of toe key): $E_{h8locUN2} := \dfrac{h_{8UN2}}{2} = 2.00\ m$

Saturated Soil Load below WSEL: (triangular component) $E_{h8aUN2} := \dfrac{\left[\left(\gamma_{sat} - \gamma_w\right) \cdot K_o\right] \cdot h_{8UN2}^{2}}{2} \cdot B = 53.3 \cdot kN$

Moment Arm (from bot. of footing): $E_{h8alocUN2} := \dfrac{h_{8UN2}}{3} = 1.33\ m$

$$\Sigma H_{SoilresistUN2} := H_{h6UN2} + H_{h2aUN2} + E_{h7UN2} + E_{h8UN2} + E_{h8aUN2} = 379.9 \cdot kN$$

$$\Sigma M_{HorizSoilResistUN2} := H_{h6UN2} \cdot H_{h6locUN2} + H_{h2aUN2} \cdot H_{h2alocUN2} + E_{h7UN2} \cdot E_{h7locUN2} \ldots = 157.9\ m \cdot kN$$
$$+ E_{h8UN2} \cdot E_{h8locUN2} + E_{h8aUN2} \cdot E_{h8alocUN2}$$

Vertical Force:

UPLIFT: Linear distribution from water at heel to water at toe:

$$\Sigma V_{UplliftUN2} := \left[\left(UWSEL_{UN2} - Bot_{ftg} + Key_{t.d}\right) + h_{2UN2}\right] \cdot \frac{b}{2} \cdot \gamma_w \cdot B \cdot -1 = -847.21 \cdot kN$$

Moment Arm (from Point O): $V_{UpliftUN2aloc} := \dfrac{b \cdot \left[2 \cdot h_{2UN2} + \left(UWSEL_{UN2} - Bot_{ftg} + Key_{t.d}\right)\right]}{3\left[h_{2UN2} + \left(UWSEL_{UN2} - Bot_{ftg} + Key_{t.d}\right)\right]} = 4.924\ m$

$$\Sigma M_{UpliftUN2} := \Sigma V_{UplliftUN2} \cdot V_{UpliftUN2aloc} = -4171.656 \cdot kN \cdot m$$

Weight of soil and water over toe:

Water Above the Top of Footing: $W_{H1UN2} := \gamma_w \cdot h_{5UN2} \cdot L_{ab} \cdot B = 73.5 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E1locUN2} := \dfrac{L_{ab}}{2} = 1.25\ m$

Soil above top of footing: $W_{E6UN2} := \gamma_b \cdot h_{3UN2} \cdot L_{ab} \cdot B = 45.8 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E6locUN2} := \dfrac{L_{ab}}{2} = 1.25\ m$

Vertical Load Due to Surcharge: $S_{UN2} := S1_{UN2} \cdot L_{cd} \cdot B = 0 \cdot kN$ $\quad S_{UN2loc} := b - \dfrac{L_{cd}}{2} = 6.47\ m$

Weight of soil and water over heel:

Moist Soil for sloped grade above top of wall:

Length of sloped portion of soil above top of wall: $L_{E3UN2} := \left(L_{cd} + t_{wb} - t_{wt}\right) = 6.50\ m$

Height of sloped soil above top of wall over heel: $h_{E3locUN2} := \left(L_{E3UN2}\right) \cdot \tan(\beta) = 0.00\ m$

Weight of sloped soil above top of wall: $W_{E3UN2} := \dfrac{\gamma_m}{2} \cdot h_{E3locUN2} \cdot L_{E3UN2} \cdot B = 0.0 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E3locUN2} := L_{ab} + t_{wt} + \dfrac{2}{3} \cdot L_{E3UN2} = 7.33\ m$

Moist soil from top of wall to groundwater level:

Height of soil from top of wall and top of GWL: $h_{1UN2} = 0.00\ m$

Length from edge of wall at GWL to edge of heel: $L_{E4UN2} := L_{E3UN2} - \left(h_{1UN2} \cdot S_{batter}\right) = 6.50\ m$

Weight of soil over heel from top of wall to GWL: $W_{E4UN2} := \gamma_m \cdot h_{1UN2} \cdot \dfrac{\left(L_{E3UN2} + L_{E4UN2}\right)}{2} \cdot B = 0.0 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E4locUN2} := b - \dfrac{L_{E3UN2}^2 + L_{E3UN2} \cdot L_{E4UN2} + L_{E4UN2}^2}{3\left(L_{E3UN2} + L_{E4UN2}\right)} = 6.25\ m$

Saturated soil from groundwater to top of footing:

Height of soil from GWL to top of heel: $h_{E4UN2} := h_{2UN2} - t_{ftg} - Key_{h.d} = 5.60\ m$

Weight of soil over heel from GWL to top of heel: $W_{E5UN2} := \left(\gamma_{sat}\right) \cdot h_{E4UN2} \cdot \dfrac{\left(L_{E4UN2} + L_{cd}\right)}{2} \cdot B = 773.7 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E5locUN2} := b - \dfrac{L_{E4UN2}^2 + L_{E4UN2} \cdot L_{cd} + L_{cd}^2}{3\left(L_{E4UN2} + L_{cd}\right)} = 6.36\ m$

$$\Sigma V_{SoilWaterUN2} := W_{H1UN2} + W_{E6UN2} + W_{E3UN2} + W_{E4UN2} + W_{E5UN2} + S_{UN2} = 892.9 \cdot kN$$

CHECK OVERTURNING

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stablity of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1

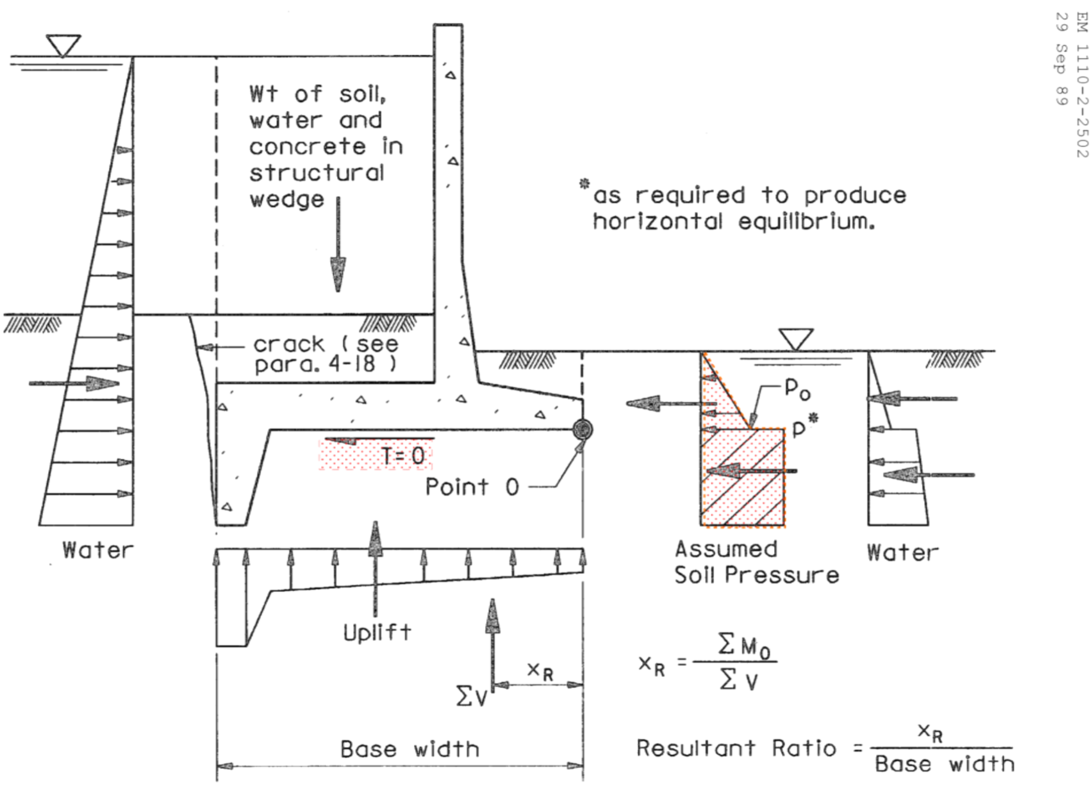

Figure 4-5. Forces for overturning analysis for wall with horizontal base and key

Modify Uplift for Overturning Analysis: **LOAD CASE UN2**

(Uplift is calculated along the concrete/rock contact using the Line of Creep method)

Water Pressure at h: $u_{h.UN2} := \Delta h_{g.hj.UN2} \cdot \gamma_w = 98.98 \cdot kPa$

Water Pressure at o: $u_{o.UN2} := \left(\Delta h_{g.no.UN2} - \frac{\Delta h_{g.r.UN2} \cdot L_{ho.UN2}}{L_{ho.UN2}}\right) \cdot \gamma_w = 79.38 \cdot kPa$

Head loss between point h and o: $\Delta h_{ho.UN2} := \Delta h_{g.r.UN2} \cdot \frac{L_{ho.UN2}}{L_{ho.UN2}} = 0\,m$

Length of concrete base (h -> o): $L_{baseho.UN2} := Key_{h.w} + Key_{h.d} + Key_{hdist} + Key_{t.d} + Key_{t.w} = 11.5\,m$

Head loss along h -> j: $\Delta h_{hj.UN2} := \Delta h_{ho.UN2} \cdot \frac{Key_{h.w}}{L_{baseho.UN2}} = 0\,m$

Water Pressure at j: $u_{j.UN2} := \left(\Delta h_{g.hj.UN2} - \Delta h_{hj.UN2}\right) \cdot \gamma_w = 98.98 \cdot kPa$

Head loss along h -> k: $\Delta h_{hjk.UN2} := \Delta h_{ho.UN2} \cdot \left(\frac{Key_{h.w} + Key_{h.d}}{L_{baseho.UN2}}\right) = 0\,m$

Water Pressure at k: $u_{k.UN2} := \left(\Delta h_{g.km.UN2} - \Delta h_{hjk.UN2}\right) \cdot \gamma_w = 79.38 \cdot kPa$

Head loss along h -> m: $\Delta h_{hjkm.UN2} := \Delta h_{ho.UN2} \cdot \left(\frac{Key_{h.w} + Key_{h.d} + Key_{hdist}}{L_{baseho.UN2}}\right) = 0\,m$

Water Pressure at m: $u_{m.UN2} := \left(\Delta h_{g.km.UN2} - \Delta h_{hjkm.UN2}\right) \cdot \gamma_w = 79.38 \cdot kPa$

Head loss along h -> n: $\Delta h_{hjkmn.UN2} := \Delta h_{ho.UN2} \cdot \left(\frac{Key_{h.w} + Key_{h.d} + Key_{hdist} + Key_{t.d}}{L_{baseho.UN2}}\right) = 0\,m$

Water Pressure at n: $u_{n.UN2} := \left(\Delta h_{g.no.UN2} - \Delta h_{hjkmn.UN2}\right) \cdot \gamma_w = 79.38 \cdot kPa$

Uplift under key at heel: $V_{ulkeyhUN2.OT} := \frac{\left(u_{h.UN2} + u_{j.UN2}\right) \cdot Key_{h.w}}{2} \cdot B \cdot -1 = -98.98 \cdot kN$

Moment Arm (from Point O): $V_{ulkeyhUN2loc.OT} := b - \frac{Key_{h.w} \cdot \left(2 \cdot u_{j.UN2} + u_{h.UN2}\right)}{3 \cdot \left(u_{j.UN2} + u_{h.UN2}\right)} = 9\,m$

Uplift under base: $V_{ulbaseUN2.OT} := \frac{\left(u_{k.UN2} + u_{m.UN2}\right) \cdot Key_{hdist}}{2} \cdot B \cdot -1 = -674.73 \cdot kN$

Moment Arm (from Point O): $V_{ulbaseUN2loc.OT} := b - Key_{h.w} - \frac{Key_{hdist} \cdot \left(2 \cdot u_{m.UN2} + u_{k.UN2}\right)}{3 \cdot \left(u_{m.UN2} + u_{k.UN2}\right)} = 4.25\,m$

Uplift under key at toe: $V_{ulkeytUN2.OT} := \frac{\left(u_{n.UN2} + u_{o.UN2}\right) \cdot Key_{t.w}}{2} \cdot B \cdot -1 = 0 \cdot kN$

Moment Arm (from Point O): $V_{ulkeytUN2loc.OT} := \frac{Key_{t.w} \cdot \left(2 \cdot u_{n.UN2} + u_{o.UN2}\right)}{3 \cdot \left(u_{n.UN2} + u_{o.UN2}\right)} = 0$

$$\Sigma V_{UpliftUN2.OT} := V_{ulkeyhUN2.OT} + V_{ulbaseUN2.OT} + V_{ulkeytUN2.OT} = -774 \cdot kN$$

$$U_{UN2.loc.OT} := \frac{V_{ulkeyhUN2.OT} \cdot V_{ulkeyhUN2loc.OT} + V_{ulbaseUN2.OT} \cdot V_{ulbaseUN2loc.OT} + V_{ulkeytUN2.OT} \cdot V_{ulkeytUN2loc.OT}}{\Sigma V_{UpliftUN2.OT}} = 4.86\,m$$

$$\Sigma M_{UpliftUN2.OT} := \Sigma V_{UpliftUN2.OT} \cdot U_{UN2.loc.OT} = -3758.4 \cdot kN \cdot m$$

Modify Lateral Water Pressure (Resisting) for Overturning Analysis:

(Resisting water pressure is calculated using the Line of Creep method)

Water Load at Key (heel):
$$H_{h2UN2.OT} := \frac{u_{k.UN2} + u_{j.UN2}}{2} \cdot Key_{h.d} B = 178.4 \cdot kN$$

Moment Arm (from Point O):
$$H_{h2locUN2.OT} := \frac{Key_{h.d} \cdot (2 \cdot u_{k.UN2} + u_{j.UN2})}{3(u_{k.UN2} + u_{j.UN2})} + Key_{vdist} = -1.04\ m$$

Water Load at Key (toe):
$$H_{h6UN2.OT} := \frac{u_{o.UN2} \cdot (UWSEL_{UN2} - Bot_{ftg} + Key_{t.d})}{2} \cdot B = 321 \cdot kN$$

Moment Arm (from Point O):
$$H_{h6locUN2.OT} := \frac{UWSEL_{UN2} - Bot_{ftg} + Key_{t.d}}{3} = 2.70\ m$$

$$\Sigma H_{waterresistUN2.OT} := H_{h2UN2.OT} + H_{h6UN2.OT} = 499.85 \cdot kN$$

$$H_{waterresistlocUN2.OT} := \frac{H_{h2UN2.OT} \cdot H_{h2locUN2.OT} + H_{h6UN2.OT} \cdot H_{h6locUN2.OT}}{\Sigma H_{waterresistUN2.OT}} = 1.367\ m$$

$$\Sigma M_{waterresistUN2.OT} := \Sigma H_{waterresistUN2.OT} \cdot H_{waterresistlocUN2.OT} = 683.13 \cdot kN \cdot m$$

Modify Lateral Soil Loads for Overturning Analysis:

(Lateral soil loads are calculated down to Point O instead of bottom of shear key)

<u>Driving Soil Load (Headwater Side):</u>

Surcharge Load:
$$E_{s1UN2.OT} := S1_{UN2} \cdot K_o \cdot (H_w + Key_{h.d} + Key_{vdist}) \cdot B \cdot -1 = 0 \cdot kN$$

Moment Arm (from Point O):
$$E_{s1locUN2.OT} := \frac{H_w + Key_{h.d} + Key_{vdist}}{2} = 4.05\ m$$

Moist Soil Load above GWL:
$$E_{h1UN2.OT} := \frac{\gamma_m \cdot K_o \cdot h_{1UN2}^{\ 2}}{2} B \cdot -1 = 0.0 \cdot kN$$

Moment Arm (from Point O):
$$E_{h1locUN2.OT} := \frac{h_{1UN2}}{3} + h_{2UN2} + Key_{vdist} = 8.10\ m$$

Saturated Soil Load below GWL:
(rectangular component)
$$E_{h2UN2.OT} := (\gamma_m \cdot K_o \cdot h_{1UN2}) \cdot (h_{2UN2} + Key_{vdist}) \cdot B \cdot -1 = 0.0 \cdot kN$$

Moment Arm (from Point O):
$$E_{h2locUN2.OT} := \frac{h_{2UN2} + Key_{vdist}}{2} = 4.05\ m$$

Saturated Soil Load below GWL:
(triangular component)
$$E_{h2aUN2.OT} := \frac{(\gamma_{sat} - \gamma_w) \cdot K_o \cdot (h_{2UN2} + Key_{vdist})^2}{2} \cdot B \cdot -1 = -218.5 \cdot kN$$

Moment Arm (from Point O):
$$E_{h2alocUN2.OT} := \frac{h_{2UN2} + Key_{vdist}}{3} = 2.70\ m$$

Resisting Soil Load (Tailwater Side):

(Determine resisting soil load based on depth variation between the keys (ie. Key_{vdist}). In case where key at heel is deeper than key at toe (ie. $Key_{vdist} < 0$), resisting soil load (p*) is assumed to produce horizontal equilibrium as per Figure 4-5 above. Resisting soil load (p_o) is neglected.)

Total Driving Force: $\Sigma H_{SoildriveUN2.OT} := E_{s1UN2.OT} + E_{h1UN2.OT} + E_{h2UN2.OT} + E_{h2aUN2.OT} + H_{h2UN2} = -718.4\cdot kN$

Total Resisting Force: $\Sigma H_{waterresistUN2.OT} = 499.8\cdot kN$

Assumed Soil Load p*: $E_{h8UN2a.OT} := \left(\Sigma H_{SoildriveUN2.OT} + \Sigma H_{waterresistUN2.OT}\right)\cdot -1 = 218.524\cdot kN$

Moment Arm (from Point O): $E_{h8UN2a.loc.OT} := \dfrac{Key_{vdist}}{2} = -1\ m$

$$E_{h8UN2.OT} := \begin{cases} E_{h8UN2a.OT} & \text{if } Key_{vdist} < 0 \\ \Sigma H_{SoilresistUN2} - H_{h6UN2} - H_{h2aUN2} & \text{otherwise} \end{cases} = 218.524\cdot kN$$

$$\Sigma M_{SoilresistUN2} := \begin{cases} E_{h8UN2a.OT}\cdot E_{h8UN2a.loc.OT} & \text{if } Key_{vdist} < 0 \\ \Sigma M_{HorizSoilResistUN2} - H_{h6UN2}\cdot H_{h6locUN2} - H_{h2aUN2}\cdot H_{h2alocUN2} & \text{otherwise} \end{cases} = -218.524\cdot kN\cdot m$$

Sum of Moment about Point O:

$$\Sigma M_{LateraldriveUN2.OT} := E_{s1UN2.OT}\cdot E_{s1locUN2.OT} + E_{h1UN2.OT}\cdot E_{h1locUN2.OT} + E_{h2UN2.OT}\cdot E_{h2locUN2.OT} \ldots + E_{h2aUN2.OT}\cdot E_{h2alocUN2.OT} + H_{h2UN2}\cdot H_{h2locUN2} = -1273.1\cdot kN\cdot m$$

$$\Sigma M_{LateralresistUN2.OT} := \Sigma M_{waterresistUN2.OT} + \Sigma M_{SoilresistUN2} = 464.6\cdot kN\cdot m$$

Total moment:

$$\Sigma M_{UN2.OT} := \Sigma M_{conc} + \Sigma M_{VertSoilWaterResistUN2} + \Sigma M_{UpliftUN2.OT} + \Sigma M_{LateraldriveUN2.OT} + \Sigma M_{LateralresistUN2.OT} = 3848.0\cdot kN\cdot m$$

Total Vertical Force: $\Sigma V_{UN2.OT} := \Sigma V_{conc} + \Sigma V_{SoilWaterUN2} + \Sigma V_{UplliftUN2.OT} = 819.1\cdot kN$

Distance X_R: EM 1110-2-2502 Eq.4-1 $X_{R.UN2} := \dfrac{\Sigma M_{UN2.OT}}{\Sigma V_{UN2.OT}} = 4.698\ m$

Overturning Resultant Ratio $Ratio_{UN2.OT} := \dfrac{X_{R.UN2}}{b} = 0.49$

$$Ratio_{UN2.OT.check} := \begin{cases} \text{"OKAY "} & \text{if } Ratio_{UN2.OT} > X_{R.reqUN2} \\ \text{"Revise Structure""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

CHECK FOUNDATION ECCENTRICITY (HORIZONTAL PLANE):

Eccentricity (horizontal plan): $ex_{UN2.OT} := \dfrac{b}{2} - \dfrac{\Sigma M_{UN2.OT}}{\Sigma V_{UN2.OT}} = 0.05\ m$ $Kern_{OT} = 1.583\ m$

Eccentricity Check:

$$e_{check.UN2.OT} := \begin{cases} \text{"Okay"} & \text{if } ex_{UN2} \le Kern_{OT} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"Okay"}$$

LOAD CASE UN2

CHECK FOUNDATION BEARING CAPACITY (HORIZONTAL PLANE):

Base Section Modulus: $S_{b.OT} = 15.04\,m^3$

Bearing Pressure Under Toe:

$$\sigma_{ToeUN2.OT} := \begin{cases} \left(\dfrac{\Sigma V_{UN2.OT}}{b \cdot B} + \dfrac{\Sigma V_{UN2.OT} \cdot ex_{UN2.OT}}{S_{b.OT}}\right) & \text{if } \dfrac{\Sigma V_{UN2.OT}}{b \cdot B} \geq \dfrac{\Sigma V_{UN2.OT} \cdot ex_{UN2.OT}}{S_{b.OT}} \\ \dfrac{2 \cdot \Sigma V_{UN2.OT}}{B \cdot 3\left(\dfrac{b}{2} - ex_{UN2.OT}\right)} & \text{otherwise} \end{cases} = 89.1 \cdot kPa$$

$$Bearing_{ChecktoeUN2.OT} := \begin{cases} \text{"OKAY "} & \text{if } \sigma_{ToeUN2.OT} < \sigma_{allowUN2} \\ \text{"NG - for reference only""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

Bearing Pressure Under Heel:

$$\sigma_{HeelUN2.OT} := \begin{cases} \left(\dfrac{\Sigma V_{UN2.OT}}{b \cdot B} - \dfrac{\Sigma V_{UN2.OT} \cdot ex_{UN2.OT}}{S_{b.OT}}\right) & \text{if } \dfrac{\Sigma V_{UN2.OT}}{b \cdot B} \geq \dfrac{\Sigma V_{UN2.OT} \cdot ex_{UN2.OT}}{S_{b.OT}} \\ 0 & \text{otherwise} \end{cases} = 83.4 \cdot kPa$$

$$Bearing_{CheckheelUN2.OT} := \left(\begin{cases} \text{"OKAY "} & \text{if } \sigma_{ToeUN2.OT} < \sigma_{allowUN2} \wedge \sigma_{ToeUN2.OT} > 0 \\ \text{"NG - for reference only""} & \text{otherwise} \end{cases}\right) = \text{"OKAY "}$$

SUMMARY OF STABILITY ASSESSMENT:

LOAD CASE UN2

Sliding Factor of Safety: (Horizontal Plane - Ref only)	$FS_{Horiz.SlidingUN2} = 0.79$	$FS_{Sliding.check1.UN2}$ = "NG - key req""

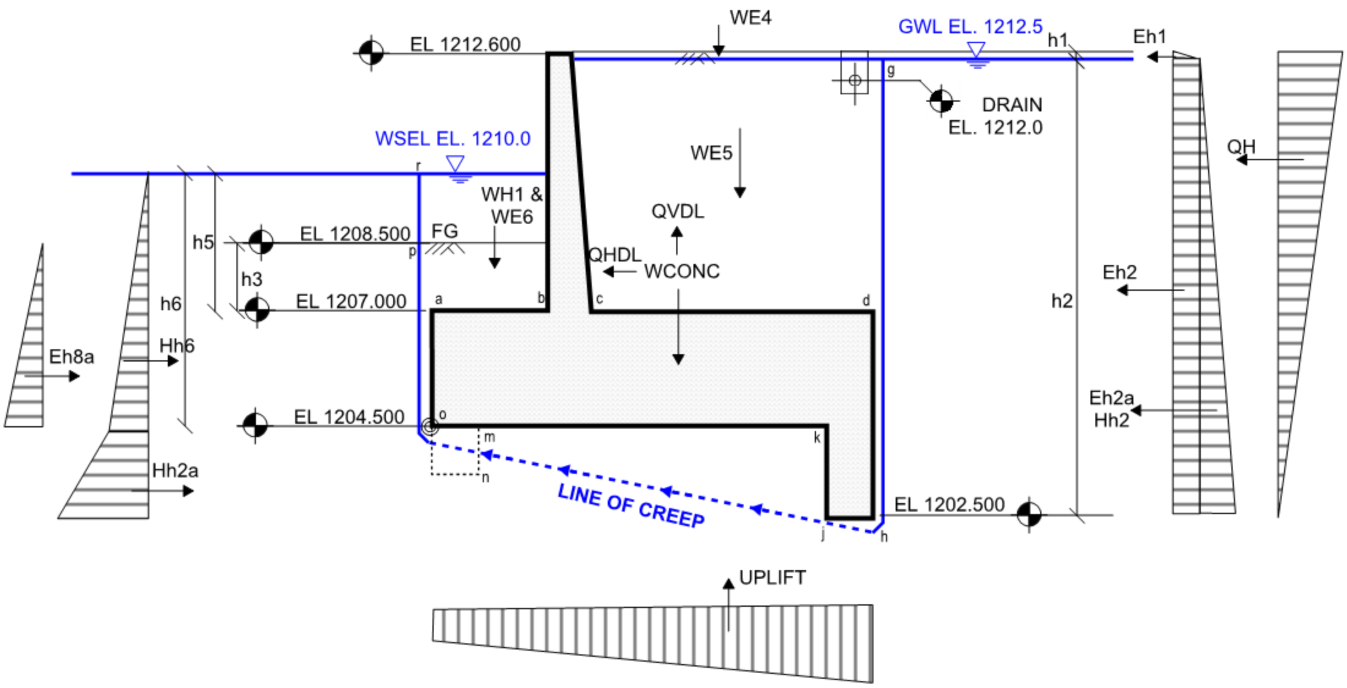
LOAD CASE E1 - SEISMIC LOADING



E1 DESIGN CASE

LOAD CASE E1 ACCEPTANCE PARAMETERS

FS sliding:

Extreme (E) loading) 1.0 (without cohesion, seismic (Table 3-3, USACE EM 1110-2-2100)

Resultant Location:

Extremem (E) Inside middle half ~75% base in compression

Required Factor of Safety for Sliding: $FS_{sliding.reqE1} := 1.0$ (Without Cohesion)

Allowable rock bearing pressure: $\sigma_{allowE1} := 1740kPa$ (Section 5.2, Design Criteria EM 1110-2-2100 Section 3-10)

Overturning Required Resultant Ratio: $X_{R.reqE1} := 0.25$ (EM 1110-2-2502, Figure 4-4)

Required Factor of Safety for Floatation $FS_{req.E1.flt} := 1.1$

SOIL HEIGHTS and Water Levels:

LOAD CASE E1

Heel Conditions:

Groundwater Elevation at Heel: $GWL_{E1} := 1212.5m$

Distance from Finish Grade to Groundwater at Heel: $h_{1E1} := \left[T_w - GWL_{E1} + \left(L_{cd} + t_{wb} - t_{wt}\right)\cdot\tan(\beta)\right] = 0.10\,m$

Distance from Water Surface to Bottom of Footing at Heel: $h_{2E1} := GWL_{E1} - Bot_{ftg} + Key_{h.d} = 10.00\,m$

Toe Conditions:

Water Surface Elevation at Toe: $WSEL_{E1} := 1210.0m$

Water Surface Elevation at Toe for Uplift: $UWSEL_{E1} := 1210.0\cdot m$

Finish Grade at Toe providing lateral resistance: $FG_{toeE1} := 1208.5\cdot m$

Soil Depth Above top of footing: $h_{3aE1} := FG_{toeE1} - Top_{ftg} = 1.5\,m$

$$h_{3E1} := \begin{cases} h_{3aE1} & \text{if } FG_{toeE1} - Top_{ftg} \ge 0 \\ 0 & \text{otherwise} \end{cases} = 1.5$$

Resisting Fill at Toe: $h_{4E1} := FG_{toeE1} - Bot_{ftg} + Key_{t.d} = 4.00\,m$

Distance from Water Level to Top of Footing at Toe: $h_{5E1} := WSEL_{E1} - Top_{ftg} = 3.00\,m$

Distance from Water Surface to Bottom of Footing at Toe: $h_{6E1} := WSEL_{E1} - Bot_{ftg} + Key_{t.d} = 5.50\,m$

Soil Depth Above WSEL: $h_{7aE1} := FG_{toeE1} - WSEL_{E1} = -1.5\,m$

$$h_{7E1} := \begin{cases} h_{7aE1} & \text{if } FG_{toeE1} - WSEL_{E1} \ge 0 \\ 0 & \text{otherwise} \end{cases} = 0$$

Soil Depth Below WSEL:

$$h_{8E1} := \begin{cases} WSEL_{E1} - Bot_{ftg} + Key_{t.d} & \text{if } FG_{toeE1} - WSEL_{E1} \ge 0 \\ h_{4E1} & \text{otherwise} \end{cases} = 4$$

For Line of Creep Method: $L_{ho.E1} := \sqrt{b^2 + \left(Key_{h.d} - Key_{t.d}\right)^2} = 9.708\,m$

Head Loss from Point g:

$\Delta h_{g.hj.E1} := h_{2E1} = 10\,m$ (to point h & j)

$\Delta h_{g.km.E1} := GWL_{E1} - Bot_{ftg} = 8\,m$ (to point k & m)

$\Delta h_{g.no.E1} := GWL_{E1} - Bot_{ftg} + Key_{t.d} = 8\,m$ (to point n & o)

$\Delta h_{g.p.E1} := GWL_{E1} - FG_{toeE1} = 4\,m$ (to point p)

$\Delta h_{g.r.E1} := GWL_{E1} - UWSEL_{E1} = 2.5\,m$ (to point r)

Surcharge

Surcharge on Heel: $S1_{E1} := 0.0\,\frac{kN}{m^2}$

Calculate Soil Lateral Pressure Coefficients:

LOAD CASE E1

Calculate at-rest pressure coefficient K_o based on Jaky's (1944) equation.

Soil At Rest Static Coefficient:
(apply to resisting soil loads)

$$K_o := \frac{1 - \sin(\phi)}{1 + \sin(\beta)} = 0.546$$

(Eq. 3-6, USACE EM 1110-2-2502)

Calculate active pressure coefficient K_A based on Coulumb equations.

Determine Slope of Active Wedge: (cohesionless backfill with water table)

$$c_1 := 2 \cdot \tan(\phi) = 1.019 \qquad c_2 := 1 - \tan(\phi) \cdot \tan(\beta) - \frac{\tan(\beta)}{\tan(\phi)} = 1$$

(Eq. G-14 / G-15, USACE EM 1110-2-2100)

$$\alpha := \operatorname{atan}\left(\frac{c_1 + \sqrt{c_1^2 + 4 \cdot c_2}}{2}\right) = 1.021 \qquad \alpha_{deg} := \alpha \cdot \frac{180}{\pi} = 58.5 \text{ degrees}$$

(Eq. G-13, USACE EM 1110-2-2100)

Soil Active Coefficient above GWL:

$$K_{Aagwt} := \left(\frac{1 - \tan(\phi) \cdot \cot(\alpha)}{1 + \tan(\phi) \cdot \tan(\alpha)}\right) \cdot \left(\frac{\tan(\alpha)}{\tan(\alpha) - \tan(\beta)}\right) = 0.376$$

Soil Active Coefficient below GWL:

$$K_{Abgwt} := \frac{1 - \tan(\phi) \cdot \cot(\alpha)}{1 + \tan(\phi) \cdot \tan(\alpha)} \cdot \left[1 + \left(\frac{\tan(\alpha)}{\tan(\alpha) - \tan(\beta)} - 1\right) \cdot \left(\frac{\gamma_m}{\gamma_{sat} - \gamma_w}\right)\right] = 0.376$$

(Eq. G-29, USACE EM 1110-2-2100)

Lateral - Driving Force

Static Copmonent : Active Pressure:

Surcharge Load:

$$E_{s1E1} := S1_{E1} \cdot K_{Aagwt} \cdot \left(H_w + Key_{h.d}\right) \cdot B \cdot -1 = 0 \cdot kN$$

Moment Arm (from bottom of footing):

$$E_{s1locE1} := \frac{H_w + Key_{h.d}}{2} + Key_{vdist} = 3.05\ m$$

Moist Soil Load above GWL:

$$E_{h1E1} := \frac{\gamma_m \cdot K_{Aagwt} \cdot h_{1E1}^2}{2} \cdot B \cdot -1 = -0.0 \cdot kN$$

Moment Arm (from bottom of footing):

$$E_{h1locE1} := \frac{h_{1E1}}{3} + h_{2E1} + Key_{vdist} = 8.03\ m$$

Saturated Soil Load below GWL:
(rectangular component)

$$E_{h2E1} := \left(\gamma_m \cdot K_{Abgwt} \cdot h_{1E1}\right) \cdot h_{2E1} \cdot B \cdot -1 = -7.5 \cdot kN$$

Moment Arm (from bottom of footing):

$$E_{h2locE1} := \frac{h_{2E1}}{2} + Key_{vdist} = 3.00\ m$$

Saturated Soil Load below GWL:
(triangular component)

$$E_{h2aE1} := \frac{\left(\gamma_{sat} - \gamma_w\right) \cdot K_{Abgwt} \cdot h_{2E1}^2}{2} \cdot B \cdot -1 = -229.1 \cdot kN$$

Moment Arm (from bottom of footing):

$$E_{h2alocE1} := \frac{h_{2E1}}{3} + Key_{vdist} = 1.33\ m$$

Lateral Water Load:

Water Load GWL to Bottom of Key

$$H_{h2E1} := \frac{\gamma_w \cdot h_{2E1}^2}{2} \cdot B \cdot -1 = -490.0 \cdot kN$$

Moment Arm (from bottom of footing):

$$H_{h2locE1} := \frac{h_{2E1}}{3} + Key_{vdist} = 1.33\ m$$

$$\Sigma H_{SoildriveE1} := E_{s1E1} + E_{h1E1} + E_{h2E1} + E_{h2aE1} + H_{h2E1} = -726.6 \cdot kN$$

$$\Sigma M_{LateralSoildriveE1} := E_{s1E1} \cdot E_{s1locE1} + E_{h1E1} \cdot E_{h1locE1} + E_{h2E1} \cdot E_{h2locE1} \cdots + E_{h2aE1} \cdot E_{h2alocE1} + H_{h2E1} \cdot H_{h2locE1} = -981.6\ m \cdot kN$$

Lateral - Resisting Force

LOAD CASE E1

Note: **Due to the relatively shallow depth of resisting soil/rock, a conservative apporach using at-rest coefficient in lieu of a passive wedge is used to calculate resisting forces.**

Lateral Water Load:

Water Load WSEL to Bottom of Footing: $H_{h6E1} := H_{h6U1} = 148.2 \cdot kN$

Moment Arm (from bot. of toe key): $H_{h6locE1} := H_{h6locU1} = 1.83\ m$

Water Load Bot. of Footing to Bot. of H. Key: $H_{h2aE1} := \left[\left(UWSEL_{E1} - Bot_{ftg} + Key_{t.d}\right) + h_{2E1}\right] \cdot \frac{Key_{h.d}}{2} \cdot \gamma_w \cdot B = 151.9 \cdot kN$

Moment Arm (from bot. of toe key):

$$H_{h2alocE1} := \frac{Key_{h.d} \cdot \left[2 \cdot \left(UWSEL_{E1} - Bot_{ftg} + Key_{t.d}\right) + h_{2E1}\right]}{3\left[h_{2E1} + \left(UWSEL_{E1} - Bot_{ftg} + Key_{t.d}\right)\right]} \ldots = -1.10\ m$$
$$+ Key_{vdist}$$

Lateral Soil Load:

Moist Soil Load above WSEL: $E_{h7E1} := \frac{\gamma_m \cdot K_o \cdot h_{7E1}^{\ 2}}{2} \cdot B = 0.0 \cdot kN$

Moment Arm (from bot. of toe key): $E_{h7locE1} := h_{6E1} + \frac{h_{7E1}}{3} + Key_{vdist} = 3.50\ m$

Saturated Soil Load below WSEL: (rectangular component) $E_{h8E1} := \left(\gamma_m \cdot K_o \cdot h_{7E1}\right) \cdot h_{8E1} \cdot B = 0.0 \cdot kN$

Moment Arm (from bot. of toe key): $E_{h8locE1} := \frac{h_{8E1}}{2} = 2.00\ m$

Saturated Soil Load below WSEL: (triangular component) $E_{h8aE1} := \frac{\left[\left(\gamma_{sat} - \gamma_w\right) \cdot K_o\right] \cdot h_{8E1}^{\ 2}}{2} \cdot B = 53.3 \cdot kN$

Moment Arm (from bot. of footing): $E_{h8alocE1} := \frac{h_{8E1}}{3} = 1.33\ m$

$$\Sigma H_{SoilresistE1} := H_{h6E1} + H_{h2aE1} + E_{h7E1} + E_{h8E1} + E_{h8aE1} = 353.4 \cdot kN$$

$$\Sigma M_{HorizSoilResistE1} := H_{h6E1} \cdot H_{h6locE1} + H_{h2aE1} \cdot H_{h2alocE1} + E_{h7E1} \cdot E_{h7locE1} \ldots = 176.2\ m \cdot kN$$
$$+ E_{h8E1} \cdot E_{h8locE1} + E_{h8aE1} \cdot E_{h8alocE1}$$

Vertical Force:

UPLIFT: Linear distribution from water at heel to water at toe:

$$\Sigma V_{UpliftE1} := \left[\left(UWSEL_{E1} - Bot_{ftg} + Key_{t.d}\right) + h_{2E1}\right] \cdot \frac{b}{2} \cdot \gamma_w \cdot B \cdot -1 = -721.525 \cdot kN$$

Moment Arm (from Point O):

$$V_{UpliftE1aloc} := \frac{b \cdot \left[2 \cdot h_{2E1} + \left(UWSEL_{E1} - Bot_{ftg} + Key_{t.d}\right)\right]}{3\left[h_{2E1} + \left(UWSEL_{E1} - Bot_{ftg} + Key_{t.d}\right)\right]} = 5.21\ m$$

$$\Sigma M_{UpliftE1} := \Sigma V_{UpliftE1} \cdot V_{UpliftE1aloc} = -3758.912 \cdot kN \cdot m$$

Weight of soil and water over toe:

Water Above the Top of Footing: $W_{H1E1} := \gamma_w \cdot h_{5E1} \cdot L_{ab} \cdot B = 73.5 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E1locE1} := \frac{L_{ab}}{2} = 1.25\ m$

Soil above top of footing: $W_{E6E1} := \gamma_b \cdot h_{3E1} \cdot L_{ab} \cdot B = 45.8 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E6locE1} := \frac{L_{ab}}{2} = 1.25\ m$

Vertical Load Due to Surcharge: $S_{E1} := S1_{E1} \cdot L_{cd} \cdot B = 0 \cdot kN$ $\quad S_{E1loc} := b - \frac{L_{cd}}{2} = 6.47\ m$

Weight of soil and water over heel:

Moist Soil for sloped grade above top of wall:

Length of sloped portion of soil above top of wall: $L_{E3E1} := \left(L_{cd} + t_{wb} - t_{wt}\right) = 6.50\ m$

Height of sloped soil above top of wall over heel: $h_{E3locE1} := \left(L_{E3E1}\right) \cdot \tan(\beta) = 0.00\ m$

Weight of sloped soil above top of wall: $W_{E3E1} := \frac{\gamma_m}{2} \cdot h_{E3locE1} \cdot L_{E3E1} \cdot B = 0.0 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E3locE1} := L_{ab} + t_{wt} + \frac{2}{3} \cdot L_{E3E1} = 7.33\ m$

Moist soil from top of wall to groundwater level:

Height of soil from top of wall and top of GWL: $h_{1E1} = 0.10\ m$

Length from edge of wall at GWL to edge of heel: $L_{E4E1} := L_{E3E1} - \left(h_{1E1} \cdot S_{batter}\right) = 6.49\ m$

Weight of soil over heel from top of wall to GWL: $W_{E4E1} := \gamma_m \cdot h_{1E1} \cdot \frac{\left(L_{E3E1} + L_{E4E1}\right)}{2} \cdot B = 13.0 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E4locE1} := b - \frac{L_{E3E1}^2 + L_{E3E1} \cdot L_{E4U1} + L_{E4E1}^2}{3\left(L_{E3E1} + L_{E4E1}\right)} = 6.25\ m$

Saturated soil from groundwater to top of footing:

Height of soil from GWL to top of heel: $h_{E4E1} := h_{2E1} - t_{ftg} - Key_{h.d} = 5.50\ m$

Weight of soil over heel from GWL to top of heel: $W_{E5E1} := \left(\gamma_{sat}\right) \cdot h_{E4E1} \cdot \frac{\left(L_{E4E1} + L_{cd}\right)}{2} \cdot B = 759.4 \cdot kN$

Horiz. Moment Arm (from toe): $W_{E5locE1} := b - \frac{L_{E4E1}^2 + L_{E4E1} \cdot L_{cd} + L_{cd}^2}{3\left(L_{E4E1} + L_{cd}\right)} = 6.36\ m$

$$\Sigma V_{SoilWaterE1} := W_{H1E1} + W_{E6E1} + W_{E3E1} + W_{E4E1} + W_{E5E1} + S_{E1} = 891.6 \cdot kN$$

$$\Sigma M_{VertSoilWaterResistE1} := W_{H1E1} \cdot W_{E1locE1} + W_{E6E1} \cdot W_{E6locE1} \cdots + W_{E3E1} \cdot W_{E3locE1} + W_{E4E1} \cdot W_{E4locE1} + W_{E5E1} \cdot W_{E5locE1} + S_{E1} \cdot S_{E1loc} = 5060.7\ m \cdot kN$$

SESIMIC ANALYSIS:

LOAD CASE E1

Seismic coefficient will be applied to dead loads to calculate seismic force and force is applied at center of gravity of the mass. Vertical and Horizontal loads are applied in the "destabilizing direction"

SEISMIC PARAMETERS:

(Section 7.9, Design Criteria)

Peak Ground Acceleration for Seismic Load $PGA_{Horiz} := 0.26$ $PGA_{Vert} := 0.56 \cdot PGA_{Horiz} = 0.146$

In accordance with USACE EM 1110-2-2100 Section 4-7.b, consider 2/3 PGA as seismic coefficient for stabilitiy.

Horizontal Seismic coefficient for stabilty: $K_{hE1} := \frac{2}{3} PGA_{Horiz} = 0.173$

Vertical Seismic coefficient for stabilty: $K_{vE1} := \frac{2}{3} PGA_{Vert} = 0.097$

SEISMIC ACCELERATION OF RIGID MASSES (Q_D):

Vertical Load Application:

$\Sigma V_{conc} = 699.9 \cdot kN$

$Q_{v.conc} := \Sigma V_{conc} \cdot K_{vE1} \cdot -1 = -67.9 \cdot kN$ (assume acting upwards for adverse sliding effect)

Moment arm for siesmic load application (From Toe): $H_{cent} = 4.781\ m$

$M_{Qv.conc} := Q_{v.conc} \cdot H_{cent} = -324.8 \cdot kN \cdot m$

Lateral Load Application:

$Q_{h.conc} := \Sigma V_{conc} \cdot K_{hE1} \cdot -1 = -121.3 \cdot kN$

Moment arm for siesmic load application (Above Base of Footing): $V_{Cent} = 1.609\ m$

$M_{Q.conc} := Q_{h.conc} \cdot V_{Cent} = -195.1 \cdot kN \cdot m$

SEISMIC ACCELERATION OF SOIL WEDGE + WATER (Q_{EH}):

Vertical Load Application:

$\Sigma V_{SoilWaterE1} = 891.6 \cdot kN$

$Q_{v.SoilWaterE1} := \Sigma V_{SoilWaterE1} \cdot K_{vE1} \cdot -1 = -86.5 \cdot kN$ (assume acting upwards for adverse sliding effect)

Moment arm for siesmic load application (From Toe): $e_{QE1} := \frac{\Sigma M_{VertSoilWaterResistE1}}{\Sigma V_{SoilWaterE1}} = 5.676\ m$

$M_{Qv.SoilWaterE1} := Q_{v.SoilWaterE1} \cdot e_{QE1} = -491.2 \cdot kN \cdot m$

Lateral Load Application:

Seismic soil load is calculated based on Mononobe-Okabe method to determine combined static and dynamic coefficient (K_{AE}). Coulomb's active component (K_A) is subtracted from K_{AE} to obtain the seismic coefficient (ΔK_{AE}) for dynamic component of soil force.

Glacial Till Internal Friction (radians): $\phi = 0.471$

Seismic Inertia Angle (radians): $\psi := \operatorname{atan}\left(\frac{K_{hE1}}{1 - K_{vE1}}\right) = 0.190$

Inclination of batter (radians): $\theta := 0.00$ assuming zero is conservative

Slope of retained ground surface: $\beta = 0.00$

$$K_{AE} := \frac{\cos(\phi - \psi - \theta) \cdot \cos(\phi - \psi - \theta)}{\cos(\psi) \cdot \cos(\theta) \cdot \cos(\theta)\ \cos(\psi + \theta) \cdot \left(1 + \sqrt{\frac{\sin(\phi)\ \sin(\phi - \psi - \beta)}{\cos(\beta - \theta) \cdot \cos(\psi + \theta)}}\right)^2} = 0.519$$

$\Delta K_{AE} := K_{AE} - K_{Abgwt} = 0.143$

Dynamic component of active seismic wedge:

$$Q_{h.SoilWaterE1} := \Delta K_{AE} \cdot \left[\frac{\gamma_m \cdot \left(H_w + Key_{h.d}\right)^2}{2 \cdot (\tan(\alpha) - \tan(\beta))} + \frac{\left(\gamma_{sat} - \gamma_m\right) \cdot h_{2E1}{}^2}{2 \cdot \tan(\alpha)}\right] \cdot B \cdot -1 = -98.1 \cdot kN$$

(Eq. G-64, USACE EM 1110-2-2100)

Moment arm for siesmic load application (About Point O): $Q_{h.SoilWaterlocE1} := \frac{2}{3} \cdot \left(H_w + Key_{h.d}\right) + Key_{vdist} = 4.73\ m$

$M_{Q.h.SoilWaterE1} := Q_{h.SoilWaterE1} \cdot Q_{h.SoilWaterlocE1} = -464.6 \cdot kN \cdot m$

STABILITY ASSESSMENT:

LOAD CASE E1

CHECK SLIDING ALONG HORIZONTAL SLIDING PLANE:

Summation of the vertical forces: $\Sigma V_{E1} := \Sigma V_{conc} + \Sigma V_{SoilWaterE1} + \Sigma V_{UpliftE1} + Q_{v.conc} + Q_{v.SoilWaterE1} = 715.5 \cdot kN$

Summation of the horizontal forces: $\Sigma H_{E1} := \Sigma H_{SoildriveE1} + Q_{h.conc} + Q_{h.SoilWaterE1} + \Sigma H_{SoilresistE1} = -592.7 \cdot kN$

Safety Factor for Sliding Horizontal Failure Plane

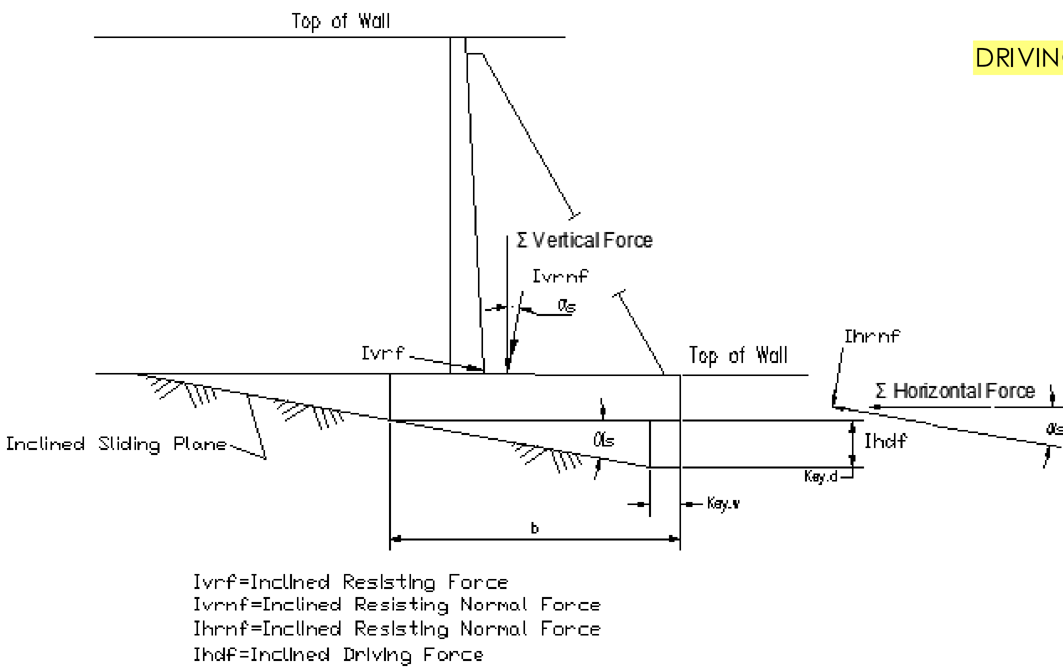
$$FS_{Horiz.SlidingE1} := \frac{\left|\Sigma V_{E1}\right| \cdot \tan\left(\phi_{rock} \cdot \frac{\pi}{180}\right)}{\left|\Sigma H_{E1}\right|} = 0.59$$

$$FS_{Sliding.check1.E1} := \begin{vmatrix} \text{"OKAY "} & \text{if } FS_{Horiz.SlidingE1} > FS_{sliding.reqE1} \\ \text{"NG - key req""} & \text{otherwise} \end{vmatrix} = \text{"NG - key req""}$$

CHECK FACTOR OF SAFETY SLIDING WITH KEY (INCLINED SLIDING PLANE):

RESISTING SIDE

DRIVING SIDE



TOE

HEEL

(With properly engineered reinforced concrete Key, horizontal sliding plane thru Toe is protected, critical sliding plane is relocated to the INCLINED SLIDING PLANE FROM HEEL KEY To TOE, Bedrock Mass above this examing plane is mobilized by reinforced concrete key and combined into Structural Wedge.)

Resolve ΣV_{E1} & ΣH_{E1}

$$\Sigma V_{InclinedE1} := \cos(\alpha s) \cdot \left(\left|\Sigma V_{E1} + V_{rocksection}\right|\right) + \sin(\alpha s) \cdot \left|\Sigma H_{E1}\right| = 1044.1 \cdot kN$$

$$\Sigma H_{InclinedE1} := \cos(\alpha s) \cdot \left|\Sigma H_{E1}\right| - \sin(\alpha s) \cdot \left(\left|\Sigma V_{E1} + V_{rocksection}\right|\right) = 363.2 \cdot kN$$

Safety Factor for Sliding Inclined Failure Plane

$$FS_{InclinedISlidingE1} := \frac{\Sigma V_{InclinedE1} \cdot \tan(\phi_r)}{\Sigma H_{InclinedE1}} = 1.28$$

$$FS_{Sliding.check2.E1} := \begin{vmatrix} \text{"OKAY "} & \text{if } FS_{InclinedISlidingE1} > FS_{sliding.reqE1} \\ \text{"NG""} & \text{otherwise} \end{vmatrix} = \text{"OKAY "}$$

CHECK FOUNDATION ECCENTRICITY:

LOAD CASE E1

(Vertical seismic loads from concrete, soil and water are assumed acting downwards for adverse bearing effect)

Summation of the vertical forces: $\Sigma V_{seisE1} := \Sigma V_{conc} + \Sigma V_{SoilWaterE1} + \Sigma V_{UpliftE1} - Q_{v.conc} - Q_{v.SoilWaterE1} = 1024.5 \cdot kN$

Summation of the horizontal forces: $\Sigma H_{seisE1} := \Sigma H_{E1} = -592.7 \cdot kN$

Resolve ΣV_{seisE1} & ΣH_{seisE1}

$$\Sigma V_{InclinedseisE1} := \cos(\alpha s) \cdot \left(\left| \Sigma V_{seisE1} + V_{rocksection} \right| \right) + \sin(\alpha s) \cdot \left| \Sigma H_{seisE1} \right| = 1344.8 \cdot kN$$

$$\Sigma H_{InclinedseisE1} := \cos(\alpha s) \cdot \left| \Sigma H_{seisE1} \right| - \sin(\alpha s) \cdot \left(\left| \Sigma V_{seisE1} + V_{rocksection} \right| \right) = 292.4 \cdot kN$$

Summation of the resisting moments about the toe:

$$\Sigma M_{resE1} := \Sigma M_{conc} + \Sigma M_{VertSoilWaterResistE1} + \Sigma M_{HorizSoilResistE1} + \Sigma M_{rocksection} = 9816 \cdot kN \cdot m$$

Summation of seismic moments about the toe:

$$\Sigma M_{seisE1} := -M_{Qv.conc} + M_{Q.conc} - M_{Qv.SoilWaterE1} + M_{Q.h.SoilWaterE1} = 156 \cdot kN \cdot m$$

Summation of the overturning moments about the toe:

$$\Sigma M_{oE1} := \Sigma M_{LateralSoildriveE1} + \Sigma M_{UpliftE1} = -4741 \cdot kN \cdot m$$

Total moment: $\Sigma M_{E1} := \Sigma M_{resE1} + \Sigma M_{seisE1} + \Sigma M_{oE1} = 5231.9 \cdot kN \cdot m$

Normal force to base: $\Sigma V_{InclinedseisE1} = 1344.8 \cdot kN$

Inclined Sliding Plane Length: $L_{incline} = 9.8 \cdot m$

Eccentricity (inclined plane): $ex_{E1} := \dfrac{L_{incline}}{2} - \dfrac{\Sigma M_{E1}}{\Sigma V_{InclinedseisE1}} = 0.99\ m$ $\qquad Kern_{E1} := \dfrac{L_{incline}}{4} = 2.44\ m$

Eccentricity Check: $e_{check.E1} := \begin{cases} \text{"Okay"} & \text{if } ex_{E1} \le Kern_{E1} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"Okay"}$

CHECK FOUNDATION BEARING CAPACITY:

Base Section Modulus: $S_b = 15.87\ m^3$

Bearing Pressure Under Toe:

$$\sigma_{ToeE1} := \begin{cases} \left(\dfrac{\Sigma V_{InclinedE1}}{L_{incline} \cdot B} + \dfrac{\Sigma V_{InclinedE1} \cdot ex_{E1}}{S_b} \right) & \text{if } \dfrac{\Sigma V_{InclinedE1} \cdot ex_{E1}}{S_b} \le \dfrac{\Sigma V_{InclinedE1}}{L_{incline} \cdot B} \\ \dfrac{2 \cdot \Sigma V_{InclinedE1}}{B \cdot 3 \left(\dfrac{b}{2} - ex_{E1} \right)} & \text{otherwise} \end{cases} = 172.0 \cdot kPa$$

$$Bearing_{ChecktoeE1} := \begin{cases} \text{"OKAY "} & \text{if } \sigma_{ToeE1} < \sigma_{allowE1} \\ \text{"NG""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

Bearing Pressure Under Heel:

$$\sigma_{HeelE1} := \begin{cases} \left(\dfrac{\Sigma V_{InclinedE1}}{L_{incline} \cdot B} - \dfrac{\Sigma V_{InclinedE1} \cdot ex_{E1}}{S_b} \right) & \text{if } \dfrac{\Sigma V_{InclinedE1} \cdot ex_{E1}}{S_b} \le \dfrac{\Sigma V_{InclinedE1}}{L_{incline} \cdot B} \\ 0 & \text{otherwise} \end{cases} = 41.9 \cdot kPa$$

$$Bearing_{CheckheelE1} := \left(\begin{cases} \text{"OKAY "} & \text{if } \sigma_{HeelE1} < \sigma_{allowE1} \wedge \sigma_{HeelE1} > 0 \\ \text{"NG - perform cracked base analysis""} & \text{otherwise} \end{cases} \right) = \text{"OKAY "}$$

CHECK FLOATATION:

Safety Factor for Floatation:

$$FS_{FloatationE1} := \frac{\Sigma V_{conc} + \Sigma V_{SoilWaterE1} + Q_{v.conc} + Q_{v.SoilWaterE1}}{\left|\Sigma V_{UpliftE1}\right|} = 1.99$$

$$FS_{Floatation.E1.check} := \begin{vmatrix} \text{"OKAY"} & \text{if } FS_{FloatationE1} > FS_{req.E1.flt} \\ \text{"Revise Structure"} & \text{otherwise} \end{vmatrix} = \text{"OKAY"}$$

CHECK OVERTURNING

Analysis of Overturning Stability is based on EM 1110-2-2502 Chapter 4 Section III. See figure below.
Assumptions are made in order to compute overturning stablity of indetermine forces on monolith with key;
(a) Shearing resistance of the monolith base is assumed to be zero, T = 0.
(b) The horizontal resisting force acting on the key, P.key, is that required for static equilibrium
(c) Effective soil pressure below Pont O (Toe) is conservatively assumed to be zero for non-reliable resistance.

Overturning Criteria per EM 1110-2-2502 Table 4-1

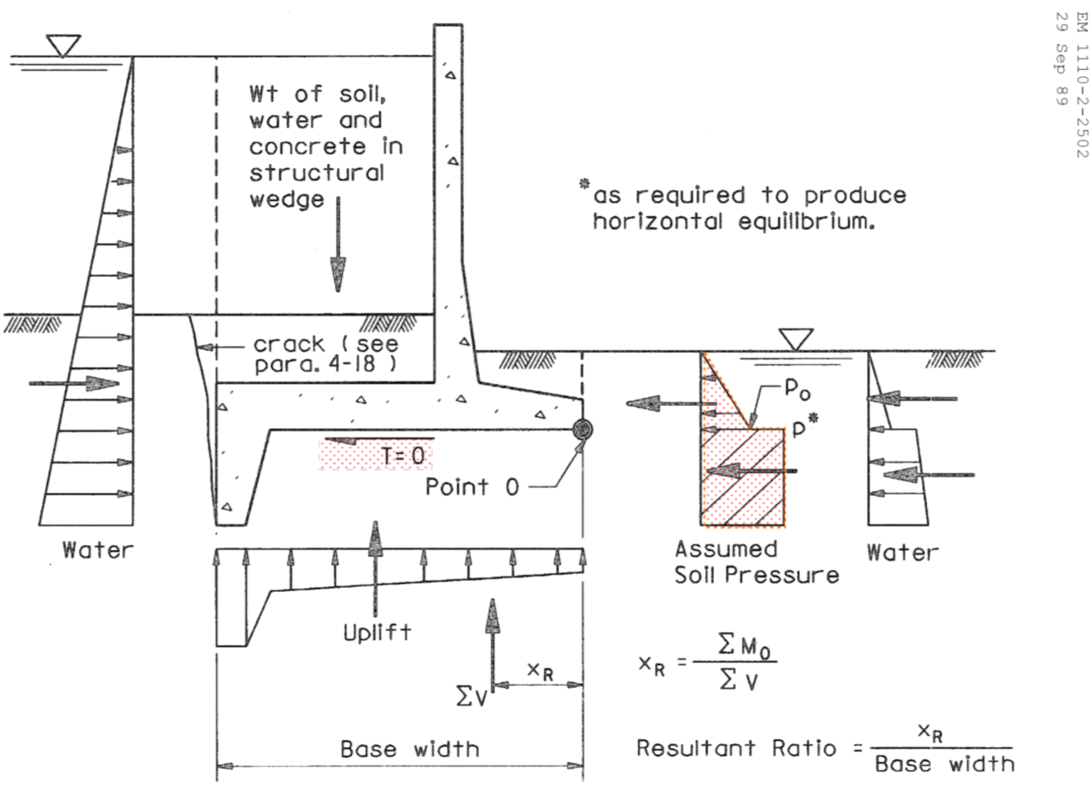


Figure 4-5. Forces for overturning analysis for wall with horizontal base and key

Modify Uplift for Overturning Analysis: **LOAD CASE E1**

(Uplift is calculated along the concrete/rock contact using the Line of Creep method)

Water Pressure at h: $u_{h.E1} := \Delta h_{g.hj.E1} \cdot \gamma_w = 98.00 \cdot kPa$

Water Pressure at o: $u_{o.E1} := \left(\Delta h_{g.no.E1} - \frac{\Delta h_{g.r.E1} \cdot L_{ho.E1}}{L_{ho.E1}} \right) \cdot \gamma_w = 53.9 \cdot kPa$

Head loss between point h and o: $\Delta h_{ho.E1} := \Delta h_{g.r.E1} \cdot \frac{L_{ho.E1}}{L_{ho.E1}} = 2.5\,m$

Length of concrete base (h -> o): $L_{baseho.E1} := Key_{h.w} + Key_{h.d} + Key_{hdist} + Key_{t.d} + Key_{t.w} = 11.5\,m$

Head loss along h -> j: $\Delta h_{hj.E1} := \Delta h_{ho.E1} \cdot \frac{Key_{h.w}}{L_{baseho.E1}} = 0.217\,m$

Water Pressure at j: $u_{j.E1} := \left(\Delta h_{g.hj.E1} - \Delta h_{hj.E1} \right) \cdot \gamma_w = 95.87 \cdot kPa$

Head loss along h -> k: $\Delta h_{hjk.E1} := \Delta h_{ho.E1} \cdot \left(\frac{Key_{h.w} + Key_{h.d}}{L_{baseho.E1}} \right) = 0.652\,m$

Water Pressure at k: $u_{k.E1} := \left(\Delta h_{g.km.E1} - \Delta h_{hjk.E1} \right) \cdot \gamma_w = 72.01 \cdot kPa$

Head loss along h -> m: $\Delta h_{hjkm.E1} := \Delta h_{ho.E1} \cdot \left(\frac{Key_{h.w} + Key_{h.d} + Key_{hdist}}{L_{baseho.E1}} \right) = 2.5\,m$

Water Pressure at m: $u_{m.E1} := \left(\Delta h_{g.km.E1} - \Delta h_{hjkm.E1} \right) \cdot \gamma_w = 53.90 \cdot kPa$

Head loss along h -> n: $\Delta h_{hjkmn.E1} := \Delta h_{ho.E1} \cdot \left(\frac{Key_{h.w} + Key_{h.d} + Key_{hdist} + Key_{t.d}}{L_{baseho.E1}} \right) = 2.5\,m$

Water Pressure at n: $u_{n.E1} := \left(\Delta h_{g.no.E1} - \Delta h_{hjkmn.E1} \right) \cdot \gamma_w = 53.90 \cdot kPa$

Uplift under key at heel: $V_{ulkeyhE1.OT} := \frac{\left(u_{h.E1} + u_{j.E1} \right) \cdot Key_{h.w}}{2} \cdot B \cdot -1 = -96.935 \cdot kN$

Moment Arm (from Point O): $V_{ulkeyhE1loc.OT} := b - \frac{Key_{h.w} \cdot \left(2 \cdot u_{j.E1} + u_{h.E1} \right)}{3 \cdot \left(u_{j.E1} + u_{h.E1} \right)} = 9.002\,m$

Uplift under base: $V_{ulbaseE1.OT} := \frac{\left(u_{k.E1} + u_{m.E1} \right) \cdot Key_{hdist}}{2} \cdot B \cdot -1 = -535.112 \cdot kN$

Moment Arm (from Point O): $V_{ulbaseE1loc.OT} := b - Key_{h.w} - \frac{Key_{hdist} \cdot \left(2 \cdot u_{m.E1} + u_{k.E1} \right)}{3 \cdot \left(u_{m.E1} + u_{k.E1} \right)} = 4.454\,m$

Uplift under key at toe: $V_{ulkeytE1.OT} := \frac{\left(u_{n.E1} + u_{o.E1} \right) \cdot Key_{t.w}}{2} \cdot B \cdot -1 = 0 \cdot kN$

Moment Arm (from Point O): $V_{ulkeytE1loc.OT} := \frac{Key_{t.w} \cdot \left(2 \cdot u_{n.E1} + u_{o.E1} \right)}{3 \cdot \left(u_{n.E1} + u_{o.E1} \right)} = 0$

$$\Sigma V_{UpliftE1.OT} := V_{ulkeyhE1.OT} + V_{ulbaseE1.OT} + V_{ulkeytE1.OT} = -632 \cdot kN$$

$$U_{E1.loc.OT} := \frac{V_{ulkeyhE1.OT} \cdot V_{ulkeyhE1loc.OT} + V_{ulbaseE1.OT} \cdot V_{ulbaseE1loc.OT} + V_{ulkeytE1.OT} \cdot V_{ulkeytE1loc.OT}}{\Sigma V_{UpliftE1.OT}} = 5.15\,m$$

$$\Sigma M_{UpliftE1.OT} := \Sigma V_{UpliftE1.OT} \cdot U_{E1.loc.OT} = -3255.8 \cdot kN \cdot m$$

LOAD CASE E1

Modify Lateral Water Pressure (Resisting) for Overturning Analysis:

(Resisting water pressure is calculated using the Line of Creep method)

Water Load at Key (heel):

$$H_{h2E1.OT} := \frac{u_{k.E1} + u_{j.E1}}{2} \cdot Key_{h.d} B = 167.9 \cdot kN$$

Moment Arm (from Point O):

$$H_{h2locE1.OT} := \frac{Key_{h.d} \cdot (2 \cdot u_{k.E1} + u_{j.E1})}{3(u_{k.E1} + u_{j.E1})} + Key_{vdist} = -1.05\ m$$

Water Load at Key (toe):

$$H_{h6E1.OT} := \frac{u_{o.E1} \cdot (UWSEL_{E1} - Bot_{ftg} + Key_{t.d})}{2} \cdot B = 148 \cdot kN$$

Moment Arm (from Point O):

$$H_{h6locE1.OT} := \frac{UWSEL_{E1} - Bot_{ftg} + Key_{t.d}}{3} = 1.83\ m$$

$$\Sigma H_{waterresistE1.OT} := H_{h2E1.OT} + H_{h6E1.OT} = 316.1 \cdot kN$$

$$H_{waterresistlocE1.OT} := \frac{H_{h2E1.OT} \cdot H_{h2locE1.OT} + H_{h6E1.OT} \cdot H_{h6locE1.OT}}{\Sigma H_{waterresistE1.OT}} = 0.303\ m$$

$$\Sigma M_{waterresistE1.OT} := \Sigma H_{waterresistE1.OT} \cdot H_{waterresistlocE1.OT} = 95.91 \cdot kN \cdot m$$

Modify Lateral Soil Loads for Overturning Analysis:

(Lateral soil loads are calculated down to Point O instead of bottom of shear key)

Driving Soil Load (Headwater Side):

Surcharge Load:

$$E_{s1E1.OT} := S1_{E1} \cdot K_{Aagwt} \cdot (H_w + Key_{h.d} + Key_{vdist}) \cdot B \cdot -1 = 0 \cdot kN$$

Moment Arm (from Point O):

$$E_{s1locE1.OT} := \frac{H_w + Key_{h.d} + Key_{vdist}}{2} = 4.05\ m$$

Moist Soil Load above GWL:

$$E_{h1E1.OT} := \frac{\gamma_m \cdot K_{Aagwt} \cdot h_{1E1}^{\ 2}}{2} \cdot B \cdot -1 = -0.0 \cdot kN$$

Moment Arm (from Point O):

$$E_{h1locE1.OT} := \frac{h_{1E1}}{3} + h_{2E1} + Key_{vdist} = 8.03\ m$$

Saturated Soil Load below GWL:
(rectangular component)

$$E_{h2E1.OT} := (\gamma_m \cdot K_{Aagwt} \cdot h_{1E1}) \cdot (h_{2E1} + Key_{vdist}) \cdot B \cdot -1 = -6.0 \cdot kN$$

Moment Arm (from Point O):

$$E_{h2locE1.OT} := \frac{h_{2E1} + Key_{vdist}}{2} = 4.00\ m$$

Saturated Soil Load below GWL:
(triangular component)

$$E_{h2aE1.OT} := \frac{(\gamma_{sat} - \gamma_w) \cdot K_{Aagwt} \cdot (h_{2E1} + Key_{vdist})^2}{2} \cdot B \cdot -1 = -146.6 \cdot kN$$

Moment Arm (from Point O):

$$E_{h2alocE1.OT} := \frac{h_{2E1} + Key_{vdist}}{3} = 2.67\ m$$

Resisting Soil Load (Tailwater Side):

LOAD CASE E1

(Determine resisting soil load based on depth variation between the keys (ie. Key_{vdist}). In case where key at heel is deeper than key at toe (ie. Key_{vdist}< 0), resisting soil load (p*) is assumed to produce horizontal equilibrium as per Figure 4-5 above. Resisting soil load (p_o) is neglected.)

Total Driving Force:
$$\Sigma H_{SoildriveE1.OT} := E_{s1E1.OT} + E_{h1E1.OT} + E_{h2E1.OT} + E_{h2aE1.OT} + H_{h2E1} \cdots + Q_{h.conc} + Q_{h.SoilWaterE1} = -862.1 \cdot kN$$

Total Resisting Force:
$$\Sigma H_{waterresistE1.OT} = 316.103 \cdot kN$$

Assumed Soil Load p*:
$$E_{h8E1a.OT} := \left(\Sigma H_{SoildriveE1.OT} + \Sigma H_{waterresistE1.OT}\right) \cdot -1 = 546.005 \cdot kN$$

Moment Arm (from Point O):
$$E_{h8E1a.loc.OT} := \frac{Key_{vdist}}{2} = -1\ m$$

$$E_{h8E1.OT} := \begin{cases} E_{h8E1a.OT} & \text{if } Key_{vdist} < 0 \\ \Sigma H_{SoilresistE1} - H_{h6E1} - H_{h2aE1} & \text{otherwise} \end{cases} = 546.005 \cdot kN$$

$$\Sigma M_{SoilresistE1} := \begin{cases} E_{h8E1a.OT} \cdot E_{h8E1a.loc.OT} & \text{if } Key_{vdist} < 0 \\ \Sigma M_{HorizSoilResistE1} - H_{h6E1} \cdot H_{h6locE1} - H_{h2aE1} \cdot H_{h2alocE1} & \text{otherwise} \end{cases} = -546.005 \cdot kN \cdot m$$

Sum of Moment about Point O:

$$\Sigma M_{LateraldriveE1.OT} := E_{s1E1.OT} \cdot E_{s1locE1.OT} + E_{h1E1.OT} \cdot E_{h1locE1.OT} + E_{h2E1.OT} \cdot E_{h2locE1.OT} \cdots + E_{h2aE1.OT} \cdot E_{h2alocE1.OT} + H_{h2E1} \cdot H_{h2locE1} = -1068.6 \cdot kN \cdot m$$

$$\Sigma M_{LateralresistE1.OT} := \Sigma M_{waterresistE1.OT} + \Sigma M_{SoilresistE1} = -450.1 \cdot kN \cdot m$$

$$\Sigma M_{seisE1.OT} := M_{Qv.conc} + M_{Q.conc} + M_{Qv.SoilWaterE1} + M_{Q.h.SoilWaterE1} = -1476 \cdot kN \cdot m$$

(seismic moment modified for the most adverse overturning effect)

Total moment:

$$\Sigma M_{E1.OT} := \Sigma M_{conc} + \Sigma M_{VertSoilWaterResistE1} + \Sigma M_{UpliftE1.OT} + \Sigma M_{LateraldriveE1.OT} + \Sigma M_{LateralresistE1.OT} + \Sigma M_{seisE1.OT} = 2156.5 \cdot kN \cdot m$$

Total Vertical Force:
$$\Sigma V_{E1.OT} := \Sigma V_{conc} + \Sigma V_{SoilWaterE1} + \Sigma V_{UpliftE1.OT} + Q_{v.conc} + Q_{v.SoilWaterE1} = 805.0 \cdot kN$$

Distance X_R: EM 1110-2-2502 Eq.4-1
$$X_{R.E1} := \frac{\Sigma M_{E1.OT}}{\Sigma V_{E1.OT}} = 2.679\ m$$

Overturning Resultant Ratio
$$Ratio_{E1.OT} := \frac{X_{R.E1}}{b} = 0.28$$

$$Ratio_{E1.OT.check} := \begin{cases} \text{"OKAY "} & \text{if } Ratio_{E1.OT} > X_{R.reqE1} \\ \text{"Revise Structure""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

CHECK FOUNDATION ECCENTRICITY (HORIZONTAL PLANE):

Eccentricity (horizontal plan):
$$ex_{E1.OT} := \frac{b}{2} - \frac{\Sigma M_{E1.OT}}{\Sigma V_{E1.OT}} = 2.07\ m \qquad Kern_{E1.OT} := \frac{b}{4} = 2.375\ m$$

Eccentricity Check:
$$e_{check.E1.OT} := \begin{cases} \text{"Okay"} & \text{if } ex_{E1.OT} \le Kern_{E1.OT} \\ \text{"Revise Structure"} & \text{otherwise} \end{cases} = \text{"Okay"}$$

LOAD CASE E1

CHECK FOUNDATION BEARING CAPACITY (HORIZONTAL PLANE):

Base Section Modulus: $S_{b.OT} = 15.04\,m^3$

Bearing Pressure Under Toe:

$$\sigma_{ToeE1.OT} := \begin{cases} \left(\dfrac{\Sigma V_{E1.OT}}{b \cdot B} + \dfrac{\Sigma V_{E1.OT} \cdot ex_{E1.OT}}{S_{b.OT}}\right) & \text{if } \dfrac{\Sigma V_{E1.OT}}{b \cdot B} \geq \dfrac{\Sigma V_{E1.OT} \cdot ex_{E1.OT}}{S_{b.OT}} \\ \dfrac{2 \cdot \Sigma V_{E1.OT}}{B \cdot 3\left(\dfrac{b}{2} - ex_{E1.OT}\right)} & \text{otherwise} \end{cases} = 200.3 \cdot kPa$$

$$Bearing_{ChecktoeE1.OT} := \begin{cases} \text{"OKAY "} & \text{if } \sigma_{ToeE1.OT} < \sigma_{allowE1} \\ \text{"NG - for reference only""} & \text{otherwise} \end{cases} = \text{"OKAY "}$$

Bearing Pressure Under Heel:

$$\sigma_{HeelE1.OT} := \begin{cases} \left(\dfrac{\Sigma V_{E1.OT}}{b \cdot B} - \dfrac{\Sigma V_{E1.OT} \cdot ex_{E1.OT}}{S_{b.OT}}\right) & \text{if } \dfrac{\Sigma V_{E1.OT}}{b \cdot B} \geq \dfrac{\Sigma V_{E1.OT} \cdot ex_{E1.OT}}{S_{b.OT}} \\ 0 & \text{otherwise} \end{cases} = 0.0 \cdot kPa$$

$$Bearing_{CheckheelE1.OT} := \left(\begin{cases} \text{"OKAY "} & \text{if } \sigma_{HeelE1.OT} < \sigma_{allowE1} \wedge \sigma_{HeelE1.OT} > 0 \\ \text{"NG - for reference only""} & \text{otherwise} \end{cases} \right) = \text{"NG - for reference only""}$$

1.0 INTRODUCTION

1.1 PURPOSE

This Structural Design Report (SDR) describes stability assessment, structural analyses and design of the Auxiliary Spillway, which is part of the Springbank Off-stream Storage Project (SR1) The SDR consolidates and documents the design philosophy, relevant criteria, primary design parameters, and reference source of data used for design. The Auxiliary Spillway was sized to meet stability requirements and major structural members were designed for conformance with structural criteria.

1.2 PROJECT OVERVIEW

SR1 is a flood diversion system comprised of a diversion structure, a diversion channel and off-stream dry storage reservoir (no permanent pool). When in operation, SR1 will divert and temporarily store excess flood water from the Elbow River and release it back into the river system in a controlled manner. SR1 will work in tandem with the downstream Glenmore Reservoir to limit flood flows downstream of Glenmore to less than 170 m^3/s, up to SR1's design event of the 2013 flood or its equivalent.

Elements of the project are:

- Diversion Structure on the Elbow River consisting of, from left to right when looking downstream, gated Diversion Inlet structure leading to a Diversion Channel, gated Service Spillway located on the Elbow River, adjacent Auxiliary Spillway and a Floodplain Berm. A Debris Deflection Barrier is in the headwater of the Diversion Structure to protect the Diversion Inlet from flood debris.

- Diversion Channel leading from the Elbow River at the Diversion Inlet to the Off-stream Storage Reservoir with an Emergency Spillway along the channel and Channel Outlet at end of the channel.

- Off-stream Storage Dam with Low Level Outlet Works.

1.3 DESIGN OBJECTIVES

The Service Spillway and Auxiliary Spillway function as the water level control structures for the Floodplain Berm. Per CDA Guidelines, the Inflow Design Flood (IDF) for a High Hazard structure, such as the Diversion Structure, is 1/3 between the 1:1000-year flood and the PMF. The PMF is the IDF for Extreme Hazard dams such as the Diversion Channel and Off-stream Storage Dam. Consequently, the Auxiliary Spillway and Service Spillway were designed to provide the capacity needed 1) to pass the IDF for the Diversion Structure (2210 m^3/s) with sufficient freeboard to the crest of the Floodplain Berm and 2) to pass the IDF for the Off-stream Storage Dam (2770 m^3/s) with sufficient freeboard to the top of the Diversion Inlet walls. Table 1 provides a summary of the inflow flood peak values.

Table 1. Inflow Flood Peak Values

Flood Event	Elbow River Discharge (m^3/s)
Design Flood Event (2013 Storm)	1240
1:1000 Year Event	1930
Diversion Structure IDF	2210
DC and OSSD IDF = PMF	2770

1.4 GENERAL ARRANGEMENT

The Auxiliary Spillway is located along the right bank of the Elbow River between the Service Spillway and Floodplain Berm. The Auxiliary Spillway consists of:

- Mass concrete "hardfill" overflow weir, 208 m long, approximately 8.8 m high, and with a crest set at Elevation 1215.8 m, which is the maximum headpond elevation for the 2013 Design Flood;
- Reinforced concrete transition wall separating the overflow weir and Floodplain Berm;
- An earthen fuse plug placed on top of the overflow weir with an overflow elevation of 1216.5 m., and;
- Upstream and downstream embankments overlaying the overflow weir to blend in with the Floodplain Berm and natural surroundings.

The typical section of the Auxiliary Spillway is presented in Figure 1. The general arrangement of the Auxiliary Spillway is depicted on Drawing C-213 with section presented on Drawing C-271. Structural arrangement and details of the overflow weir and transition wall are shown on Drawings S-260 to S-279.

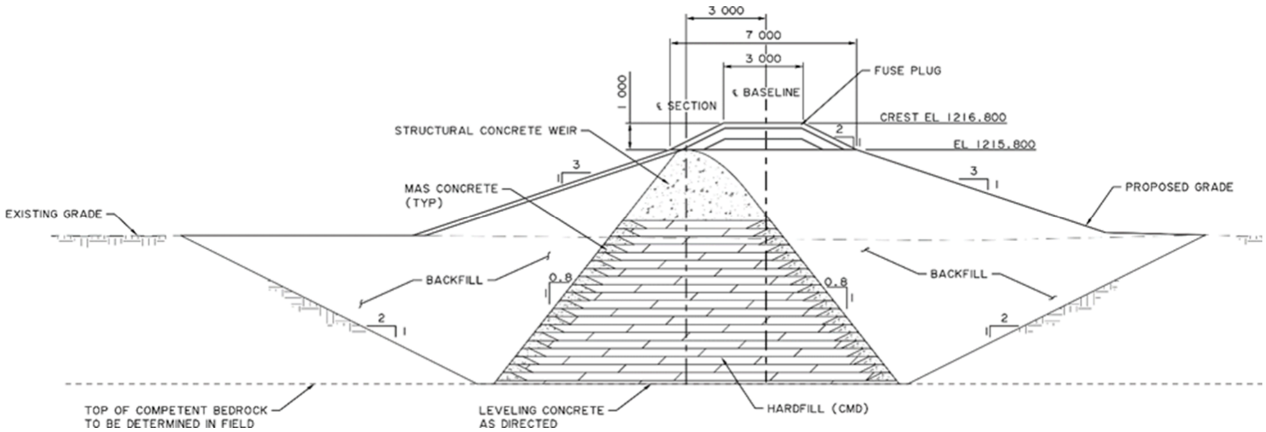

Figure 1. Overflow Weir Showing Concrete Hardfill, Fuse Plug and Backfill.

1.5 BASIS FOR STRUCTURE LAYOUT

The Auxiliary Spillway layout and sizing were based on hydrotechnical evaluation to establish overall geometry, crest elevation and length for the overflow weir in combination with a fuse plug that would meet the hydrotechnical design criteria. Other auxiliary spillways considered, such as articulated concrete blocks (ACB) and roller compacted concrete (RCC), were deemed too expensive or not sufficiently robust for use. The auxiliary spillway crest was set at EL 1215.8 m, which is the lowest without infringing upon the 2013 design flood maximum headwater. The use of a one metre high fuse plug provides additional freeboard during flood diversion regulation up to the 2013 design flood with no diversion.

The foundation elevation for the Auxiliary Spillway overflow weir and transition wall was selected based on existing bedrock profile, stability requirements, and constructability considerations. Along the Auxiliary Spillway alignment, geotechnical evaluations identified approximate top of rock below the hydraulic profile and established an upper bound for the concrete/rock interface at or below Elevation 1207.0 m. The concrete/rock interface was identified as a uniform bench to define the limit of excavation and simplify foundation preparation.

Lateral limits of individual blocks and possible contraction joint locations were selected to maintain plan area aspect ratios between 1:1 and 1.75:1, provide adequate toe for transition wall blocks, minimize thermal effects such as cracking from heat of hydration, and satisfy stability requirements.

The overflow weir is a mass concrete gravity structure using “hardfill” (cemented local sands and gravels, CSG). The trapezoidal gravity section was selected for the overflow weir to maximize sliding area in contact with the foundation, and use the upstream water and backfill load acting on the hardfill face to provide additional sliding resistance. Satisfying sliding was the controlling factor for design of the weir section. Hardfill was selected over RCC since compressive strength was not a primary consideration for this low head structure and the local river bed or aggregate sources can supply aggregate of sufficient quality and quantity for use as mass concrete. The transition wall is a concrete gravity structure using cantilever retaining walls for simplicity in forming and speed of construction. A significantly larger hardfill abutment would be needed and more difficult to construct.

2.0 CODES AND STANDARDS

In accordance with "terms of reference" for this project, the design complies with current Alberta Transportation (AT) Design Standards and current AT Design and Construction Bulletins. By reference in AT Standards, Canadian Dam Association (CDA) Dam Safety Guidelines and Technical Bulletin Nos. 1 through 9 provided primary guidance for design of the project including the hydraulic structures. Other recognized industry standards referenced in the AT/CDA Guidelines were used to supplement aspects of the design that the AT/CDA Guidelines do not address. Such references include the US Army Corps of Engineers (USACE) Engineering Manuals and US Bureau of Reclamation (USBR) Design Standards. In case of conflicting criteria, AT provisions were used unless a "more stringent" requirement was deemed appropriate based on engineering judgement.

Where referenced by AT and CDA, the National Building Code of Canada (NBCC) and Alberta Building Code (ABC) were used to obtain certain design loads (wind, snow, live, vehicle), and develop load combinations associated with strength and serviceability. NBCC and ABC provisions were used primarily for evaluation of individual elements such as railings, ladders, and other ancillary structures.

The following codes, guidelines, and standards were identified for use on this project:

2.1 PROJECT STANDARDS

- Alberta Government, Terms of Reference (TOR0015997) for "Flood Mitigation Works, Springbank Off-Stream Storage Project (SR1) (WAC0078983), Addendum No. 2," August 1, 2014.

- AT's "Engineering Consultant Guidelines for Highway Bridge and Water Projects, Volume 1- Design & Tender" - 2011.

- AT's "Engineering Consultant Guidelines for Highway Bridge and Water Projects, Volume 2- Design & Tender" - 2011.

- AT's Civil Works Master Specifications for Construction of Provincial Water Management Projects.

2.2 DAM DESIGN AND SAFETY

- Province of Alberta Water Act – Water (Ministerial) Regulation - Regulation 205/98 (consolidated up to 185/2015).

- AT's "Water Control Structures Selected Design Guidelines" – Nov. 2004

- Canadian Dam Association Dam Safety Guidelines (CDA) 2007 with 2013 Revisions.
- CDA – Technical Bulletins:
    1. Inundation, Consequences, and Classification for Dam Safety, 2007
    2. Surveillance of Dam Facilities, 2007
    3. Flow Control Equipment for Dam Safety, 2007
    4. Retracted & Replaced by "Guidelines for Public Safety Around Dams," 2011
    5. Dam Safety Analysis and Assessment, 2007
    6. Hydrotechnical Considerations for Dam Safety, 2007

3.0 PROJECT DATA

3.1 LOCATION

The project is located in the Springbank area of Rocky View County, Alberta, CA, southwest of the City of Calgary in Township 24 (Range 04/03, W5M).

Latitude	51.050504 N
Longitude	114.401436 W
Elevation	1180 to 1220 m

3.2 FOUNDATION PARAMETERS

Site characterization is based on geologic assessment of the project site, exploratory borings, laboratory testing of project samples, and geotechnical engineering judgement. The following foundation parameters, derived from Brazeau formation data, are described in Preliminary Design Report (PDR), Appendix D - Geotechnical Assessment Report, Chapter 10.

Rock Classification sandstone/mudstone/shale/claystone

Recommended Concrete/Bedrock Interface	EL. 1207 or lower	
Bedrock Unit Weight	25.6 kN/m^3	
Bedrock Friction Angle (Rock/Rock Interface) (φ)	26 Deg.	
Concrete/Rock Interface Friction Angle (φ)	26 Deg.	
Cross Bed Friction Angle (φ) – Passive Wedge	24 Deg.	
Ultimate Bearing Capacity (σ_{ult})	1915 kPa	
Allowable Bearing Capacity – Usual	1270 kPa	(σ_{ult}/1.5 $_{SF}$)
Allowable Bearing Capacity – Unusual	1470 kPa	(σ_{ult}/1.3 $_{SF}$)
Allowable Bearing Capacity – Extreme	1740 kPa	(σ_{ult}/1.1 $_{SF}$)

Cohesion: In accordance with CDA Guidelines Technical Bulletin No. 7 (Geotechnical) and Technical Bulletin No. 8 (Structural), cohesion was not included in the sliding stability analysis, and acceptance criteria is based on sliding factors for friction only resistance.

3.3 HYDROTECHNICAL PARAMETERS

Performance of the Diversion Structure and Diversion Channel was assessed using numerical and physical modeling. Hydraulic calculations and detailed modeling used in the design of individual hydraulic structures and other components are presented in the Preliminary Design Report, Appendices C and F. The various operating scenarios to be assessed for the Auxiliary Spillway were based on a High Hazard Dam Classification with the separation between the Usual and Unusual Conditions being the 50-year frequency flood and the 1000-year frequency flood dividing the Unusual and Extreme conditions.

Table 2 provides a summary of the hydrotechnical parameters for selected operating scenarios used in the design and stability analyses of the Auxiliary Spillway.

Table 2. Auxiliary Spillway Hydrotechnical Parameters

Operating Scenario	Auxiliary Spillway Discharge (m^3/s)	Headwater Elevation (m)	Tailwater Elevation (m)
Normal Operation (No Diversion) *160 m^3/s inflow*	0	1214.0	1211.9
Fuse Plug In-Place (No Diversion) 2013 Flood - 1240 m^3/s	0	1216.4	1213.1
Fuse Plug Erosion Beginning Diversion Inlet Gates Open *1850 m^3/s inflow*	0	1216.5	1213.1
1000-Year Event Fuse Plug Eroded (No Diversion) *1930 m^3/s inflow*	444	1217.0	1213.1
IDF - Fuse Plug Eroded (No Diversion) *2210 m^3/s inflow*	618	1217.3	1213.8

3.4 CLIMATE DATA

3.4.1 Snow

Snow Load data for this project was obtained from Ontario Climate Centre – Environment Canada.

- Ground snow load, snow component (S_s) = 1.7 kPa
- Ground snow load, rain component (S_r) = 0.1 kPa
- Snow load, Importance factor (I_s)=1.25

3.4.2 Frost Considerations

Frost depth was determined in accordance with ABC and is shown in PDR, Appendix D - Geotechnical Assessment Report.

- Minimum design frost depth of 2.0 m
- Non-frost susceptible backfill - Gravel and clean sands

3.4.3 Temperature Variations

Monthly temperature data for use in the evaluation was obtained from Calgary International Airport records, which is considered representative of typical temperature ranges at project site.

3.4.4 Wind

A wind load of 0.48 kPa was determined for use at the site based on the Alberta Building Code.

4.0 CONSTRUCTION MATERIALS

4.1 CONCRETE AND CONCRETE ACCESSORIES

- **Structural Concrete – Class A1**
  30 MPa @ 28 days, (AT Civil Works Specifications)
  General use reinforced concrete where thermal control and volume change are not a concern.

- **Structural Concrete – Class B1**
  30 MPa @ 90 days, (AT Civil Works Specifications)
  General use reinforced concrete where thermal control and volume change need to be considered (typically thickness > 600 mm)

- **Mass Concrete – Class M**
  20 MPa @ 90 days, 30 MPa @ 180 days (New mixture to be specified)
  Unreinforced concrete for monoliths, slabs, piers and retaining walls where thermal control and volume change need to be considered (typically thickness >1500 mm).

- **Foundation Concrete - Class F**
  15 MPa @ 28 days, (AT Civil Works Specifications)
  For use in foundation preparation such as mud mats and low strength fill.

- **Hardfill (Cemented Sands and Gravels) – Class CSG**
  7.5 MPa @ 90 days. (New mixture to be specified)
  For use in the interior of mass concrete structures, such as the AS interior concrete, where low compressive strength materials can be used but where thermal control, volume change, and permeability are the primary considerations.

- **Grout**
  Premixed structural non-shrink grout for equipment bases.

- **Preformed Expansion Joint Filler**
  ASTM D1752, Type I, Closed-cell sponge rubber.

- **Bond Breaker**
  Bituminous paint conforming to CGSB 37.2-88.

- **Waterstops**
  PVC ribbed profile with minimum rated hydrostatic head of 373 KPa based on joint type.

4.2 METALS

- **Reinforcement** - CAN/CSA-G30.18, Grade 400W deformed bars
- **Miscellaneous Metals** (gratings, stairs, ladders, handrails) - Galvanized steel

4.3 EARTHWORK MATERIALS

The Auxiliary Spillway will be constructed on a rock foundation. Soil backfill materials will be various embankment materials as listed below and included in the PDR, Appendix D - Geotechnical Assessment Report.

Design values for specified material include:

Impervious Fill

Unit Weight (-)	21 kN/m^3
Internal Friction Angle (-)	18 deg

Granular Fill

Unit Weight (-)	21 kN/m^3
Internal Friction Angle (-)	34 deg

Random Fill

Unit Weight (-)	20 kN/m^3
Internal Friction Angle (-)	27 deg

Rock Fill

Unit Weight (-)	22 kN/m^3
Internal Friction Angle (-)	20 deg

Siltation (Equivalent Fluid)

Unit Weight Vertical (-)	19 kN/m^3
Unit Weight Horizontal (-)	13 kN/m^3

Selected Fill

Unit Weight (-)	20 kN/m^3
Internal Friction Angle (-)	38 deg

5.0 STRUCTURAL ANALYSIS APPROACH

For the purposes of stability assessment, analysis and structural design, the Auxiliary Spillway was divided into individual monoliths based on structure geometry, size, joint location, and load considerations. The monoliths were analyzed as either concrete gravity sections or retaining walls. Each monolith was evaluated for global stability, strength, and serviceability.

Global stability was assessed using the rigid body analysis method and application of unfactored loads. This method uses the summation of forces applied to the monolith to determine resultant location, foundation bearing pressures, and sliding resistance along identified potential failure plane(s). Analysis methodology and acceptance criteria are described in further detail in later sections of this report.

Reinforced concrete design of members was performed according to Design of Concrete Structures, CSA A23.3-14 with the additional requirements of the CSA's SEED Document – *Structural Design of Wastewater Treatment Plants-2018* for revisions addressing service load conditions, water tightness, shrinkage and temperature reinforcement, and crack control. The Seed Document contains references to ACI 350M-06 for modifying CSA A23.3-14.

Finite Element Models (FEMs) were used to validate manual calculations, identify potential stress concentrations, and assess additional serviceability concerns such as localized deflection, need for thermal stress relief, and stress redistribution not captured in manual calculations. Mitigation of alkali-aggregate reaction (AAR) potential and thermal crack control for mass concrete placements were addressed through design detailing and material specifications.

5.1 DESIGN TOOLS AND SOFTWARE

- Microsoft Excel - 2010 - version: 14.0.7166.5000
- Mathcad 15.0 - 2013 - version: MC15_M030_20131216
- Autodesk Robot Structural Analysis Professional 2019 – version 32.0.2.6571 (x64)
- Autodesk AutoCAD 2017 – version 2017

6.0 LOADS

6.1 DEAD LOADS (D)

Permanent loads on the structure include concrete structure weight, backfill and water. Unit weights for principal materials are included in Table 3.

Table 3. Dead Load and Unit Weights

Material	Unit Weight	Source
Water	9.81 kN/m^3	CSA S6-14, Table 3.4
Reinforced Concrete	23.5 kN/m^3	AT WCS Design Guide 4.2
Mass Concrete, RCC and Hardfill	22.8 kN/m^3	USBR, Design of Gravity Dams, Section III.B
Steel	77.0 kN/m^3	AT WCS Design Guide 4.2

6.2 HYDROSTATIC LOADS (H)

Both horizontal and vertical components of water load were used based on water surface elevation for the load condition considered. Upstream and downstream water surface elevations are described in Hydrotechnical Parameters, Section 3.3. The water surface elevations were considered to be hydrostatic pressures without kinematic effects. Headwater was considered the water surface elevation at the upstream face of the structure. Tailwater elevation was either maximum tailwater indicated on tailwater rating curves, or a reduced tailwater elevation to account for hydraulic jump depending on load condition considered and which condition produced a more adverse effect on the structure.

6.3 UPLIFT PRESSURE (U)

For the Auxiliary Spillway, uplift was assumed to vary from 100 percent of the hydrostatic headwater pressure at the upstream edge of structure to 100 percent of hydrostatic tailwater pressure at the downstream edge of the structure with application over 100 percent of base. For retaining walls, the uplift is assumed to vary on a straight line from 100 percent of the water pressure at the face of the foundation heel to 100% of water pressure at the face of the foundation toe applied over 100% of the base in compression.

The foundation interface was assumed to have zero tensile capacity. For bases where stability calculations indicate bearing pressures less than zero, the foundation interface was assumed to crack, and 100 percent of the hydrostatic pressure was applied over the area of the cracked foundation, then vary linearly to 100 percent of tailwater pressure. For seismic evaluations, uplift loading remained unchanged from the pre-earthquake condition to the post-earthquake evaluation unless seismic loading resulted in a cracked foundation, in which case full hydrostatic pressure was applied to the entire area of the cracked foundation during the post-earthquake evaluation.

6.3.1 Seepage Reduction Measures

The underlying rock was identified as highly weathered and fractured. To minimize uplift potential, seepage reduction measures included using an upstream key. For stability analyses, the seepage reduction measures were conservatively neglected.

6.4 EARTH PRESSURE (E)

Soil loads include both vertical and horizontal forces due to backfill.

Vertical forces associated with soil mass above the structure were based on a vertical projection of footing or structure below the soil. Soil mass was based on moist unit weight for material above the waterline and buoyant unit weight for material below the waterline. Vertical force associated with water above the structure was calculated separate from the soil mass.

Horizontal forces associated with soil are based on the at-rest condition in accordance with EM 1110-2-2100 and EM 1110-2-2502 to use the at-rest Coefficient (K_o).

6.5 LIVE LOADS (V)

The principal live loads on the Auxiliary Spillway include Vehicle or Heavy Equipment Loads adjacent to retaining walls. Live loads are considered transitory loads.

Transitory loads were used for strength design of individual structure elements but were not included in stability analyses. Vehicle Loads were obtained from CSA-S6-14, Section 3.8.3

Vehicle (Vertical Application) CL-625

Vehicle (Horizontal Application) CL-625

Heavy Equipment Surcharge was applied to retaining wall design as a separate load condition to account for future modifications such as building additions, long-term material storage, or top-of-wall modifications. This load is not applied simultaneously with Vehicle Loads.

Equivalent Load Surcharge 15.0 kPa Equivalent 0.75 m soil

6.6 HYDRODYNAMIC LOADS (HD)

Hydrodynamic loads include wave action, sub-atmospheric pressure at the fixed crest, and hydraulic dissipater forces. For the Auxiliary Spillway, these forces have been excluded from stability analysis since they are considered insignificant or of a localized nature.

- Wave action is not included due to the short-term duration and relatively short fetch.
- Sub-atmospheric pressure is not included since there is insufficient head to develop sub-atmospheric pressure on the fixed crest.
- Hydraulic dissipater forces are localized forces addressed in the hydraulic design of stilling basin and chute blocks.

6.7 DEBRIS AND IMPACT LOADS

Impact loads associated with debris flows have been excluded from the analysis since they are considered insignificant or of a localized nature.

6.8 ICE LOAD (I)

No ice loads were used in the stability analyses for the Auxiliary Spillway since it is encased in fill and the Elbow River has little flow during the winter .

Vertical ice loading associated with "frost heave" is a realistic consideration. The Auxiliary Spillway is normally in a dewatered or low-water state with freeze/thaw action tending to open rock joints or concrete/rock interface and subject the structure to increased uplift potential. To reduce frost heave loading potential and remove this condition from the analysis, foundation interfaces were located below the identified frost depth (2 m) for the site.

6.9 SEISMIC - EARTHQUAKE LOADS (Q)

The seismic classification for the Auxiliary Spillway is based on Stantec's *Seismic Hazard Assessment - Springbank Off-Stream Dam and Reservoir Report* dated November 28, 2016. Since the hazard classification for this structure is Extreme (Off-stream Storage Dam), the seismic parameters are based on an Earthquake Design Ground Motion (EDGM) with an Annual Exceedance Probability (AEP) of 1/10,000 resulting in Peak Ground Acceleration (PGA) of 0.26 g for horizontal application and PGA of 0.15 for vertical application.

This project site is situated in an area of low to moderate seismic activity. Consequently, CDA Guidelines, Section 6.5 allow for the seismic stability analysis of concrete gravity structures to be completed using a pseudo-static approach (coefficient method). This method applies a seismic force to a rigid body with the objective of determining sliding and overturning response of the structure. Since the pseudo-static method does not recognize the oscillatory nature of seismic loads, accepted practice is to perform the stability calculations using sustained acceleration values equivalent to 2/3 of the peak acceleration values.

When performing concrete stress analyses, the objective is to determine the tensile crack length induced by the inertia forces applied to the structure, so peak acceleration is used to calculate seismic coefficients. This approach assumes an instantaneous acceleration spike can induce cracking but is not sustained long enough to develop significant displacement along the crack plane. If no significant displacement occurs, the dynamic stability is maintained.

6.9.1 Seismic Effects on Concrete Mass

The horizontal force required to accelerate the concrete mass is calculated as:

$Q_h = k_h \times W$ where:

Q_h = Horizontal seismic load (kN)
k_h = Horizontal seismic coefficient
W = Structure mass (kg)
PGA = Peak ground acceleration= 0.26g

For Stability Analysis (Table 4): k_h = 2/3 x 0.26 = 0.17
For Member Analysis (Table 5): k_h = 1.0 x 0.26 = 0.26

The vertical force required to accelerate the concrete mass is calculated as:

$Q_v = k_v \times W$ where:

Q_v = Vertical seismic load (kN)
k_v = Horizontal seismic coefficient = 0.56*k_h
W = Structure mass (kg)

For Stability Analysis (Table 4): k_v = 2/3 x (0.56*k_h) = 0.10
For Member Analysis (Table 5): k_v = 1.0 x (0.56*k_h) = 0.15

Since an earthquake produces oscillating forces, the horizontal PGA and vertical PGA cannot occur at the same time. To account for this in the stability calculations, three separate combinations of vertical and horizontal seismic combinations were considered, but only the maximum value was reported. The three combinations of vertical and horizontal seismic load are as follows:

Table 4. Stability Analysis – Seismic Coefficients

Seismic Combination	Horizontal	Vertical
100% Horiz., No Vert.	1.0*k_h = 0.17	-
100% Horiz., 30% Vert.	1.0*k_h = 0.17	0.3*k_v = 0.03
30% Horiz., 100% Vert.	0.3*k_h = 0.05	1.0*k_v = 0.10

Table 5. Stress Analysis – Seismic Coefficients

Seismic Combination	Horizontal	Vertical
100% Horiz., No Vert.	$1.0*k_h = 0.26$	-
100% Horiz., 30% Vert Horiz.	$1.0*k_h = 0.26$	$0.3*k_v = 0.05$
30% Horiz., 100% Vert.	$0.3*k_h = 0.08$	$1.0*k_v = 0.15$

6.9.2 Seismic Effects on Water (H_E)

No water loads are associated with seismic load cases for the Auxiliary Spillway.

6.9.3 Seismic Effect on Soils

Dynamic soil pressures and associated forces were analyzed assuming yielding backfills and an elastic response using the Mononobe-Okabe method. This method uses active soil pressure during seismic conditions to assess stability.

Mononobe-Okabe Method for Yielding Backfill: This method assumes a wedge of soil bounded by the structure and an assumed soil failure plane moves as a rigid body with the same horizontal acceleration. The driving (active) wedge force is calculated based on a combined static and dynamic pressure coefficient (K_{AE}), but must then be divided into static and dynamic components for cases where the water table is above the backfill. Detailed explanation of this method can be found in Appendix G, EM 1110-2-2100.

$$P_{PE} = \frac{1}{2} K_{PE} \gamma (1 - k_v) h^2 \qquad \text{(G-3)}$$

$$K_{PE} = \frac{\cos^2(\phi - \psi - \theta)}{\cos\psi \cos^2\theta \cos(\psi - \theta + \delta)\left[1 - \sqrt{\dfrac{\sin(\phi + \delta)\sin(\phi - \psi + \beta)}{\cos(\beta - \theta)\cos(\psi - \theta + \delta)}}\right]^2} \qquad \text{(G-4)}$$

γ = unit weight of soil
k_v = vertical acceleration in g's
h = height of structure
ϕ = internal friction angle of soil

$\psi = \tan\left(\dfrac{k_h}{1-k_v}\right)$ = seismic inertia angle

k_h = horizontal acceleration in g's
θ = inclination of interface with respect to vertical (this definition of θ is different from θ in Coulomb's equations)
δ = soil-structure friction angle
β = inclination of soil surface (upward slopes away from the structure are positive)

(c) Simplifying Conditions. For the usual case where k_v, δ, and θ are taken to be zero, the equations reduce to:

$$K_{AE} = \frac{\cos^2(\phi - \psi)}{\cos^2\psi\left[1 + \sqrt{\dfrac{\sin\phi\,\sin(\phi-\psi-\beta)}{\cos\beta\,\cos\psi}}\right]^2} \qquad \text{(G-5)}$$

6.10 CLIMATIC CONDITIONS

6.10.1 Snow Loads (S)

Snow loads were considered insignificant compared to hydrostatic loads and were not considered for the Auxiliary Spillway.

6.10.2 Thermal Loads (T)

Temperature changes will influence the overflow weir monoliths and retaining walls. Thermal effects and measures, such as placement of expansion/contraction joints in concrete structures, to relieve thermal loads will be addressed during Final Design.

6.10.3 Wind (W)

Wind loads were considered insignificant compared to hydrostatic loads and were not considered for the spillway structure.

7.0 STABILITY ANALYSIS

The overflow weir and transition wall were analyzed for load conditions applicable to the Auxiliary Spillway as identified in Section 7.3. Analysis methodology is as follows:

7.1 METHODOLOGY

7.1.1 Overturning and Bearing Stress

The Rigid Body Method (conventional gravity method) was used for the analysis of overturning and bearing stresses criteria. Overturning was evaluated as a percentage of base that remains in compression and not a safety factor. This method is outlined in Section 7.2 of CDA Technical Bulletin No. 9. It uses the vector summation of all forces, including uplift, acting on the monolith to determine the vector resultant force (V), resultant force eccentricity (e) within the base, and moment (Ve/S) based on an elastic and homogeneous rectangular beam analogy. Stresses were calculated as indicated below and stability was assured by maintaining the resultant force eccentricity within acceptance criteria limits for various loading conditions.

$$\sigma = \frac{V}{A} \pm \frac{Ve}{S}$$

Where: σ = Applied bearing pressure at each end of base (kN/m^2)
V = Summation of forces normal to base (kN)
A = Base area in compression (m^2)
e = Eccentricity of normal load about centroid of base in compression (m)
S = Section modulus of base area in compression (m^3)

7.1.2 Sliding

The sliding factor of safety was calculated for each load case using the limit equilibrium method as outlined in Section 7.2 of CDA Technical Bulletin No. 9. This method reduces to the equation shown below for a single wedge system with a horizontal sliding plane, along the concrete/rock interface or through rock/rock failure plane as identified for each hydraulic structure. For inclined sliding planes projecting from the base of shear key to bottom base slab at the toe, vertical and horizontal forces are resolved into components normal and parallel to the sliding plane. Rock mass between the inclined plane and structure base is included in the dead load summation (EM 1110-2-2100).

$$SSF = \frac{(V tan\varphi + c\ A)}{H}$$

Where: SSF = Sliding Safety Factor
V = Summation of vertical loads including uplift (kN)
$tan\ \varphi$ = Coefficient along sliding plane being considered
c = Cohesion at concrete/rock or rock/rock interface (assumed as 0) (kN/m^3)
A = Base area in compression (m^2)
H = Summation of horizontal forces (kN)

7.1.3 Floatation

The floatation factor of safety was determined for components of the project such as stilling basins and apron slabs as outlined in Section 8.5, AT WCS. The factor of safety against floatation is defined as ratio of resisting gravity force to driving uplift force. The possible resistance due to friction between adjacent structures or between structure and backfill was neglected unless shear provisions were provided.

$$FSF = \frac{\Sigma N}{\Sigma U}$$

Where: FSF = Factor of Safety against Floatation
ΣN = Summation of normal forces
ΣU = Summation of uplift forces

7.2 ACCEPTANCE CRITERIA

The following acceptance criteria are based on AT WCS Chapter 8, CDA Table 6-4, and CDA Technical Bulletin No. 8, Section 6.0. The load cases to be evaluated are divided into five categories as listed in Table 6:

Usual Condition: Those conditions under which the structure is intended to serve during normal operations and further defined as a condition that has a high likelihood of occurring within the design life of the structure. Usual load conditions include normal pool and winter conditions. For the hydraulic structures, this includes flood events up to the 50-year frequency flood for High Hazard classified structures and flood events up to the 100-year frequency flood for Extreme Hazard classified structures.

Unusual Condition: Those conditions that occur infrequently and may stress the structure more, under certain aspects, than normal conditions and may occur within the design life of the structure. Unusual load conditions include construction conditions, maintenance conditions, flood events between the 50-year (High) and 1000-year frequency, infrequent earthquake events other than the MDE, and plugged drain conditions for Usual Load Cases.

Extreme – Flood: Extreme Load Conditions have a very remote likelihood of occurring with the design life of the structure. For the SR1 project, it is defined as those floods that occur from the 1000-year frequency event up to the structure's IDF. For the Auxiliary Spillway structure, it would occur when the off-stream storage reservoir is at maximum pool, Elevation 1212.0 m, as a result of rare flood events or misoperation during flood diversion.

Extreme – Earthquake: For the SR1 project, the Extreme - Earthquake load condition to be assessed is the MDE as it has a very remote likelihood of occurring with the design life of the structure. The MDE is applied to the Usual Condition load cases. The Extreme – Earthquake condition is used to establish Post-Earthquake condition of the hydraulic structure. Thus, there are no stability acceptance criteria for this condition.

Post-Earthquake: The Post-Earthquake condition assesses the stability of the hydraulic structure following the applied seismic event based on earthquake induced cracking at the foundation structural interface and within the structure so that it is still capable of resisting the Usual Loading.

Table 6. Acceptance Criteria for Hydraulic Structures

Loading Combination	Position of Resultant Force (Percent of Base in Compression)[1]	Normal Compression Stress[2]	Sliding Safety Factor (Friction Only)	Floatation Safety Factor
Usual	Middle third of the base: 100% compression	<0.3 x f_c	≥1.5	≥1.5
Unusual	Middle third of the base: 100% compression	<0.5 x f_c	≥1.3	≥1.3
Extreme Flood	Within middle half of the base, and all other acceptance criteria must be met	<0.5 x f_c	≥1.1	≥1.1
Extreme Earthquake	Within the base, except where an instantaneous occurrence of resultant outside the base may be acceptable	<0.9 x f_c	Note [3]	
Post-Earthquake	Within middle half of the base	<0.5 x f_c	≥1.0	≥1.1

[1] Foundation bearing stress is compared to allowable stress determined from Geotechnical Investigation

[2] Where f_c = compressive strength of concrete

[3] The earthquake load case is used to establish post-earthquake condition of the structure

7.3 LOAD CONDITIONS

Load conditions varied for the Auxiliary Spillway structures based on configuration and location of applied load. The following sections summarize load conditions for various structures.

7.3.1 Auxiliary Spillway - Overflow Weir

Table 7. Overflow Weir – Load Conditions

Usual Load Cases:		
U1	Usual Condition 1 – River Flow with No Diversion Inflow 160 m³/s. Diversion Inlet gates closed and Service Spillway gates open. Headwater: EL 1214.0 Tailwater: EL 1211.9	D+H+E+U
Unusual Load Cases:		
UN1	Unusual Condition 1 – Auxiliary Spillway at Point of Overtopping Fuse Plug. Total Inflow 1850 m³/s. Diversion Inlet and Service Spillway gates open. Headwater: EL 1216.5 Tailwater: EL 1213.1	D+H+E+U
UN2	Unusual Condition 2 – 1000-Year Event with No Diversion (Dam Safety Condition) Fuse plug removed and toe scour occurring Total Inflow 1930 m³/s. No Diversion and Service Spillway gates fully open. Headwater: EL 1217.0 Tailwater: 1213.1	D+H+E+U
Extreme Load Cases:		
E1-F	Extreme Condition 1 – IDF with No Diversion (Dam Safety Condition) Total Inflow 2210 m³/s. No Diversion and Service Spillway gates fully open. Fuse plug removed and toe scour occurring Headwater: EL 1217.3 Tailwater: EL 1213.8	D+H+E+U
E2-Q	Extreme Condition 2 – Post-Seismic Load Normal Inflow. No Diversion and Service Spillway gates fully open. Headwater: EL 1213.5 Tailwater: EL 1211.9	D+H+E+U+Q
Notes:		
D	Dead Load: Weight of concrete	
H	Hydrostatic Load: Headwater and tailwater conditions specific for each load case. Includes horizontal and vertical loads	
E	Earth/Sediment/Silt Loads: Includes horizontal and vertical loads	
U	Uplift: Varies linearly from Headwater to Tailwater pressure across plane of analysis	
Q	Seismic Loads: Design Earthquake load – Includes evaluation for three combinations to consider simultaneous horizontal and vertical components.	

7.3.2 Auxiliary Spillway - Transition Wall

Table 8. Transition Wall – Load Conditions

Usual Load Case:		
U1	Usual Condition 1 – River Flow with No Diversion Residual Groundwater Levels Headwater: EL 1214.0 Tailwater: EL 1211.9	D+H+E+U
Unusual Load Cases:		
UN1	Unusual Condition 1 – Normal River Flow + Equipment Surcharge Residual Groundwater Levels Headwater: EL 1214.0 Tailwater: EL 1211.9	D+H+E+U+L
UN2	Unusual Condition 2 – Auxiliary Spillway at Point of Overtopping Fuse Plug. Total Inflow 1850 m^3/s. Diversion Inlet and Service Spillway gates open. Upstream Wall - Groundwater equal to HW Downstream Wall – Groundwater at TW (Weir side), Groundwater linearly varying from HW to TW (FB side). Headwater: EL 1216.5 Tailwater: EL 1213.1	D+H+E+U
UN3	Unusual Condition 3 – 1000-Year Event with No Diversion (Dam Safety Condition) Fuse plug removed and toe scour occurring Upstream Wall - Groundwater equal to HW Downstream Wall – Groundwater at TW (Weir side), Groundwater linearly varying from HW to TW (FB side). Headwater: EL 1217.0 Tailwater: 1213.1	D+H+E+U
Extreme Load Cases:		
E1-F	Extreme Condition 1 – IDF with No Diversion (Dam Safety Condition) Fuse plug removed and toe scour occurring Upstream Wall - Groundwater equal to HW Downstream Wall – Groundwater at TW (Weir side), Groundwater linearly varying from HW to TW (FB side). Headwater: EL 1217.3 Tailwater: EL 1213.7	D+H+E+U
E2-Q	Extreme Condition 2 – Normal River Flow + Seismic Load Residual Groundwater Levels Headwater: EL 1213.5 Tailwater: EL 1211.9	D+H+E+U+Q
Notes:		
D	Dead Load: Weight of concrete	
H	Hydrostatic Load: See each load case for headwater and tailwater conditions	
E	Earth/Sediment/Silt Loads: Includes horizontal and vertical loads	
U	Uplift: Varies linearly from Headwater to Tailwater pressure across plane of analysis	
L	Live Loads: Vehicle / equipment surcharge	
Q	Seismic Loads: Design Earthquake load – evaluation to consider simultaneous horizontal and vertical components for three combinations	

7.4 SUMMARY OF STABILITY ANALYSES

Stability analyses for the overflow weir and the transition wall were performed in accordance with criteria and procedures outlined in the CDA Technical Bulletin No. 9, "Structural Considerations for Dam Safety", and the USACE EM 1110-2-2100 "Stability Analysis of Concrete Structures". Each section was evaluated for Usual, Unusual, Extreme, and Post-Seismic loading conditions representing potential conditions the structure will experience during its design life. Summaries of the stability calculation results are presented in the sections that follow. Refer to the Appendices for stability calculations and results.

7.4.1 Overflow Weir

The overflow weir comprises segments A1 through A13 consisting of hardfill (CSG) mass concrete encased in conventional concrete facing for durability. The hardfill and facing concrete are placed in lifts of approximately 300 mm in thickness. The upstream and downstream faces of the overflow weir slope 0.8H:1V topping out with an ogee crest at Elevation 1215.8 m for a total height of 8.8 m. A concrete facing of approximately 600 mm thick is formed against the hardfill to form a seepage barrier and to provide freeze-thaw durability. The structure is to be placed on suitable bedrock encountered at approximately Elevation 1207.0 m.

The stability analyses for the overflow weir were performed according to the rigid body method using manual calculations. Results of the analyses are summarized in Table 9**Error! Reference source not found.** and calculations are included in Appendix E.3-1.

Stability analyses indicate a relatively light structure sensitive to sliding. Stability calculations indicate results within the limits of acceptance criteria using a horizontal plane. For all loading conditions considered, floatation factors of safety were above required, 100 percent of the base was in compression, and sliding factors of safety were above required. Stability results indicate that sliding stability was the primary concern due to the low friction angle at concrete/rock interface. The controlling load condition is Load Case E1-F (Inflow Design Flood).

Table 9. Overflow Weir – Stability Summary

Load Case	Headwater (Heel) Elevation (m)	Tailwater (Toe) Elevation For Uplift (m)	Uplift Force (MN)	Floatation Safety Factor (FSF)		Sliding Safety Factor (SSF)		Foundation Bearing Stress		% Base in Compression
				Req	Calc	Req	Calc	Upstream (Heel) (kPa)	Downstream (Toe) (kPa)	
U1 Normal Operation	1214.0	1211.9	0.9	1.5	3.11	1.5	9.62	159	87	100
UN1 Point of Fuse Plug Activation	1216.5	1213.1	1.2	1.3	2.38	1.3	1.67	124	86	100
UN2 1000-Year Flood	1217.0	1213.1	1.2	1.3	1.94	1.3	1.52	65	77	100
E1-F IDF 2210 m^3/s	1217.3	1213.8	1.3	1.1	1.77	1.1	1.12	72	57	100
E2-Q Normal Operation	1213.5	1211.9	0.7	1.1	4.12	1.1	1.56	226	48	100

7.4.2 Transition Wall

The transition wall provides a separation between the Floodplain Berm and overflow weir. It consists of Sections 1 through 3 (Figure 2). The elevation of the transition wall varies from Elevation 1212.723 m to Elevation 1218.440 m, following the surface contour of the Floodplain Berm. The cantilever walls thickness varies from 500 mm to 1700 mm, while the foundation slab ranges from 1200 mm to 1800 mm in thickness. A Load Case that represents equipment operating on top of the Floodplain Berm (UN1) was considered for the stability analysis of Section 2. Equipment loads were not considered for Sections 1 and 3 since the final grade is sloped.

The stability analyses for the structure were performed using an Excel spreadsheet. Results of the analyses are summarized in Table 10, and calculations are included in Appendix E.3-2.

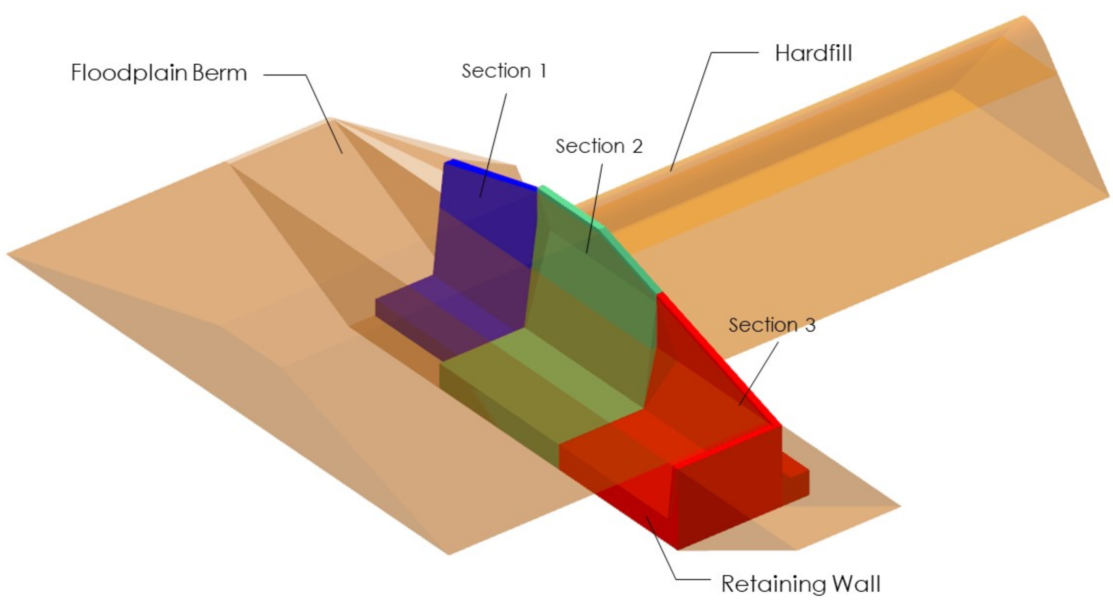

Figure 2. Transition Wall - Section Locations

Table 10. Transition Wall – Stability Summary

8.0 STRENGTH EVALUATION AND DESIGN

Strength evaluation of individual elements or members of structures and monoliths was used to verify member sizes based on application of factored loads as described in ABC with some adjustments for more severe conditions or loads not included in the ABC.

Reinforced concrete design was performed according to Design of Concrete Structures, CSA A23.3-14 with the additional requirements of the CSA's SEED Document – *Structural Design of Wastewater Treatment Plants-2018* for revisions addressing service load conditions, water tightness, shrinkage and temperature reinforcement, and crack control. The Seed Document contains references to ACI 350M-06 for modifying CSA A23.3-14.

In general, structural analysis and design was performed manually using MathCAD or Excel spreadsheets, For complex structures such as the transition wall blocks, a commercial Finite Element Model (FEM), such as Autodesk Robot, was used to evaluate multiple load combinations, identify stress concentrations, and generate shear and moment values for design of individual elements. The FEM was supplemented with manual calculations to verify/validate model results and, where necessary, refine the analysis of individual elements. Based on model output, a combination of manual calculation and commercial software were used for strength design. Additional elements evaluated as part of strength design included joint detailing and embedded parts.

For mass concrete structures, such as the hardfill overflow weir, thermal analyses for the construction condition and for seasonal temperature variations following construction will be performed during Final Design. These analyses are used to locate monolith joints, determine the type of joint treatment between lifts, and determine the lateral extent of mass concrete expansion and contraction due to seasonal influences.

9.0 SERVICEABILITY

Serviceability concerns with the Auxiliary Spillway overflow weir relate primarily to concrete durability including reducing crack potential, providing thermal stress relief, and incorporating measures to mitigate alkali-aggregate reaction (AAR) and other chemical attack. Because hardfill lacks long-term durability, particularly against freeze-thaw conditions, it must be protected. Various protection means include using cast-in-place concrete or precast blocks for facing, providing extra thickness beyond that needed as a sacrificial layer, and mixing grout with the hardfill mixture at the surface to increase its paste content. Currently, the overflow weir design uses cast-in-place facing concrete on both faces to protect the hardfill core. During final design, the use of concrete facing protection will be evaluated further, particularly if facing concrete is needed, since the overflow weir will be covered with soil.

Shrinkage control and volume changes are addressed primarily with placement sequence, mix design, surface reinforcement, and material specifications. The monolith layout and design include joint locations that define monoliths with balanced aspect ratios and placements less than 12 to 18 m in any one planar direction for mass concrete. Expanded guidance related to placement sequence and joint locations will be addressed as part of Final Design.

Serviceability concerns for the reinforced concrete transition wall relate to concrete durability, shrinkage, crack control, volume changes, and wall deflections. Durability, shrinkage, and crack control are achieved primarily through reinforcement placement, high reinforcement ratios, and use of high load factors that account for both strength and serviceability in accordance with the CSA SEED document. Volume changes are addressed primarily with placement sequence, mix design, surface reinforcement, and material specifications. The preliminary design includes vertical joints at locations of footing geometry change, and at locations needed to maintain horizontal wall lengths less than 12 m to 15 m. Expanded guidance related to placement sequence and horizontal joint locations will be addressed as part of constructability review during final design.

10.0 CONSTRUCTION CONSIDERATIONS

Construction specifications and details for the Auxiliary Spillway will be furthered during Final Design. The following construction considerations are noted:

- Dewatering of excavated areas will be required to sufficiently enable construction of the Auxiliary Spillway. The services of a specialist dewatering contractor may be needed.

- Excavation will be to competent bedrock. All soil, including alluvium, talus and other unconsolidated deposits should be removed to expose unweathered or slightly weathered bedrock. Excavation should be performed by mechanical means only; blasting will not be permitted.

- Foundation preparation will require special care in cleaning and preparation of concrete/rock interface. Care must be taken during excavation of the foundation to identify unsuitable rock conditions or weak bedding planes that could impact stability. Loose material and rock overhangs will need to be removed. Small voids will be filled with dental concrete.

- If extensive jointing/fracturing is observed after excavation of the foundation, consolidation grouting may be required.

- Use of a continuous hardfill batching-mixing plant or pugmill is likely. The area for Hardfill production requires approximately three to four acres to provide space for the Hardfill plant, aggregate stockpiles, cement and fly ash silos, feeding systems and material delivery and loading areas. In addition, a level area of approximately one acre should be planned for the equipment staging and maintenance area next to the production plant.

- Hardfill may be placed using either a conveyor system or an all truck transporting system. If an all truck system is used, provisions should be made to prevent truck tires from tracking dirt and other debris on the fresh Hardfill.

- It is envisioned that Hardfill will be spread using a dozer and compacted with a double drum or single drum, self-propelled vibratory steel drum roller. Small compaction equipment will likely be required in tight spaces such as next to forms.

- Adequate bonding between Hardfill lifts requires that the overlying lift of Hardfill be placed while the underlying lift is still "live" or has not become a cold joint. Where cold joints form between lifts- placement of a bonding mortar or grout will likely be required before succeeding lifts of Hardfill are placed.

- For the construction of the Auxiliary Spillway, the following construction sequence shall be observed.

  1. Construction of the transition wall shall be performed first so the wall can act as a vertical form for the construction of the overflow weir and facilitate the construction of the joint between these two structures.

  2. The overflow weir shall be constructed before the construction of the Floodplain Berm embankment closure.

  3. The Floodplain Bearn closure is constructed last in the construction sequence since the transition wall relies on the overflow weir for stability.

Appendix E.3-1 OVERFLOW WEIR STABILITY CALCULATIONS

Section Considered

Hard Fill section @ STA. 1+630 (Largest HW/TW Differential)

Ref. Drawing 73396S-260

Load Conditions

Water

	Elevation (m)		H (m)	T(m)
	Headwater	Tailwater	Headwater	Tailwater
1. Usual Condition (U1)	1214.0	1211.9	7	4.9
2. Unusual Condition (UN1)	1216.5	1213.1	9.5	6.1
3. Unusual Condition (UN2)	1217.0	1213.1	10	6.1
4. Extreme Condition 1 (E1)	1217.3	1213.8	10.3	6.8
5. Extreme Condition 2 (E2)	1213.5	1211.9	6.5	4.9
6. Extreme Condition (PMF)	1217.8	1214.0	10.8	7

Tailwater pressure was assumed to be 60% of static head due to retrogression

Fill

Fluvial fill placed on the upstream and earth fill on downstream of the slope of spillway. For the Unusual Condition face (UN2) and Extreme Condition 1 (E1), the downstream fill over the spillway toe will be eroded. Earthfill and foundation materials assumed to be homogeneous isotropic.

Uplift

A linear interpolation is used between the upstream and downstream water heads.

Earthquake

A acceleration equal of a=0.26g is considered for Hard Fill inertial load calculations.

Material Properties

	Fluvial Fill	Fluvial Soil
Water, γ_w = 9.81 kN/m3	Soil Fill, γ_s = 20 kN/m3	Soil Fill, γ_s = 20 kN/m3
HF, γ_{RHF} = 23.5 kN/m3	Soil Fill, ϕ = 38°	Soil Fill, ϕ = 38°
	Soil Coefficient, Ka = 0.21	Soil Coefficient, Ka = 0.21

Foundation:

Weathered Sandstone and Mudstone Bedrock

Allowable bedrock bearing capacity qa = 622 kPa

Friction Angle ϕ = 26°

Cohesion c = 0 kPa

Design Notes:

1.- For the earth resistance pressure acting behind the hardfill structure during the seismic load condition an active earth pressure was assumed as lower bound for the soil resistance. Under seismic loading a reduction in the seismic passive pressure occurs. Seismic passive earth pressures should be determined considering the amount of deformation required to mobilize this pressure.

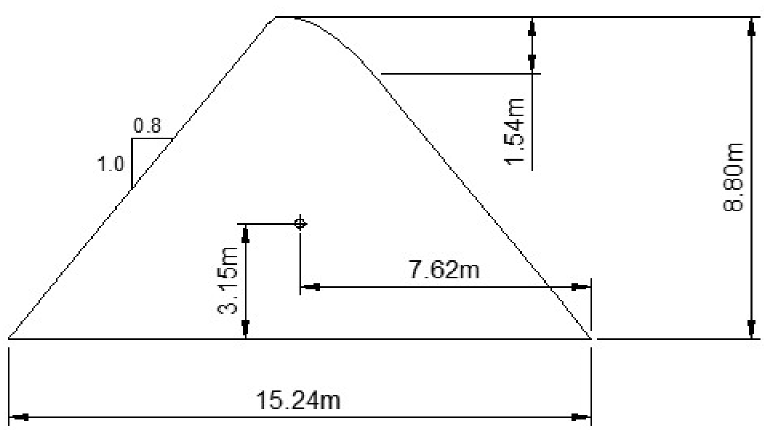
CALCULATIONS

Scope:
Evaluate the stablity of the RHF Spillway Structure, considering the following load cases:

	Elevation (m)		H (m)	
	Headwater	Tailwater	Headwater	Tailwater
1. Usual Condition (U1)	1214.0	1211.9	7	4.9
2. Unusual Condition (UN1)	1216.5	1213.0	9.5	6
3. Unusual Condition (UN2)	1216.3	1213.2	9.3	6.2
4. Extreme Condition 1 (E1)	1217.4	1213.7	10.4	6.7
5. Extreme Condition 2 (E2)	1213.5	1211.9	6.5	4.9
6. Extreme Condition (PMF)	1217.9	1214.0	10.9	7

Calculations:

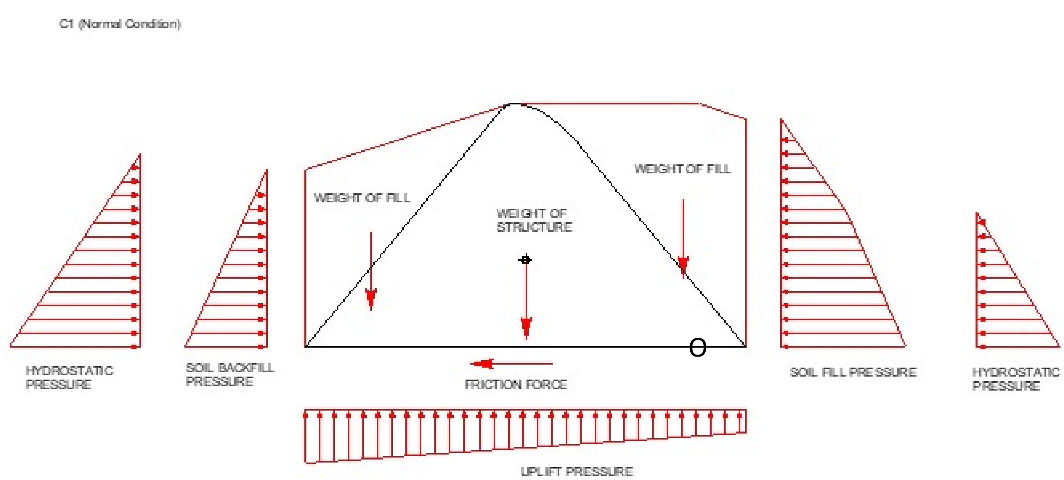
Dimensions



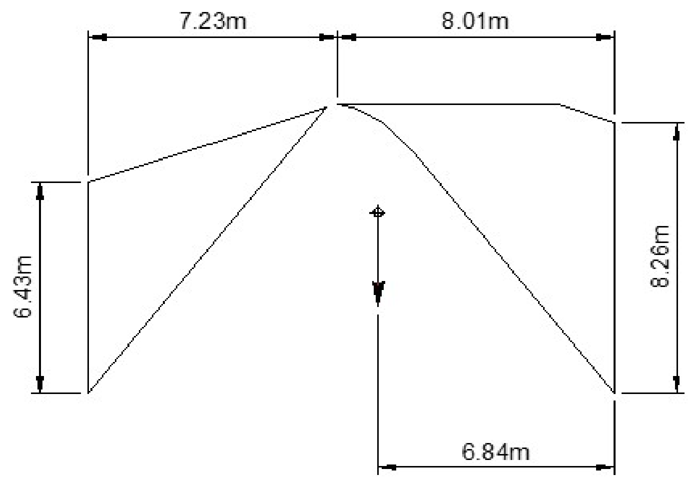
A = 72.7 m^3/m
L = 15.24 m
μ = 0.49
x = 7.62 m
y = 3.15 m

Retrogression factor for Tailwater
r = 0.6

1. Usual Condition (U1)

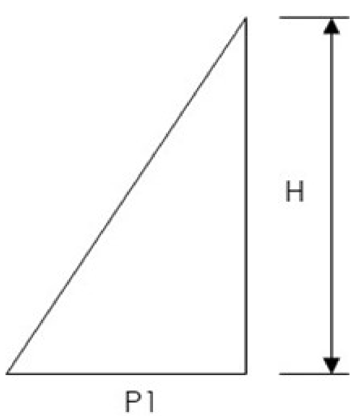


Cover Fill



A1 = 22.2 m^3/m
A2 = 30.5 m^3/m
A = 52.7 m^3/m
x = 6.84 m

Soil fill upstream



ϒ = 20 kN/m^3
ϒw = 9.81 kN/m^3
Ka = 0.21

H = 6.43 m

P1 = 13.8 kN/m^2

User Input

Material Properties:

Unit Weight of Water: $\gamma_w := 9.81 \frac{kN}{m^3}$ (Section 7.2, Design Criteria)

Unit Weight of Concrete: $\gamma_c := \mathbf{23.5} \frac{kN}{m^3}$

Unit Weight of Soil (Moist): $\gamma_m := 20.0 \frac{kN}{m^3}$ (Section 5.3, Design Criteria) assumed moisture content (w) = 5%

Unit Weight Soil (Saturated): $\gamma_{sat} := 22.0 \frac{kN}{m^3}$ (Assuming Specific Gravity = 2.7)

Unit Weight Soil (buoyant): $\gamma_b := \gamma_{sat} - \gamma_w = 12.19 \cdot \frac{kN}{m^3}$

Weight of Soil/Concrete above toe: $\gamma_{toe} := 22.0 \frac{kN}{m^3}$

Unit Weight of Rock: $\gamma_r := 25.6 \frac{kN}{m^3}$ (Section 7.2, Design Criteria)

Usual Condition (U1)

Acceptance Parameters

Resultant Location (Overturning and Bearing Pressure):

Unusual (UN) Resultant located inside middle third (kern) equals 100% base in compression (AT/WCS Guidelines, Section 8.4)

$$\mathbf{B}_{\mathbf{\%basecomp.req}} := 100\%$$

Allowable rock bearing pressure: $\mathbf{qall} := 622 \frac{\mathbf{kN}}{\mathbf{m}^2}$ (Internal Geotechnical Design Recommendations Rev. Sept 12, 2018, Section 5.3)

FS Sliding:

Usual (U1) 1.5 (without cohesion) (CDA Guidelines, Table 6-4, AT/WCS Guidelines, Section 8.3)

Req'd Factor of Safety for Sliding: $\mathbf{FS}_{\mathbf{sliding.req}} := 1.5$ (Without Cohesion)

FS Floatation:

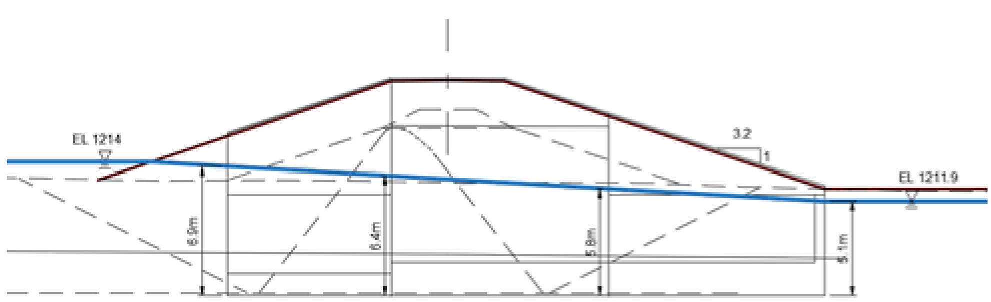
Usual (U1) 1.5 (AT/WCS Guidelines, Section 8.5)

Req'd Factor of Safety for Floatation: $\mathbf{FS}_{\mathbf{float.req}} := 1.5$

Water Surface Elevations

Headwater $\mathbf{H}_{\mathbf{H}} := 1214\mathbf{m}$

Tailwater $\mathbf{H}_{\mathbf{T}} := 1211.9\mathbf{m}$



$\mathbf{h}_{\mathbf{1}} := 6.9\mathbf{m}$ $\mathbf{h}_{\mathbf{2}} := 6.4\mathbf{m}$ $\mathbf{h}_{\mathbf{3}} := 5.8\mathbf{m}$ $\mathbf{h}_{\mathbf{4}} := 5.1\mathbf{m}$

Interpolated water table heights from retaining wall base.

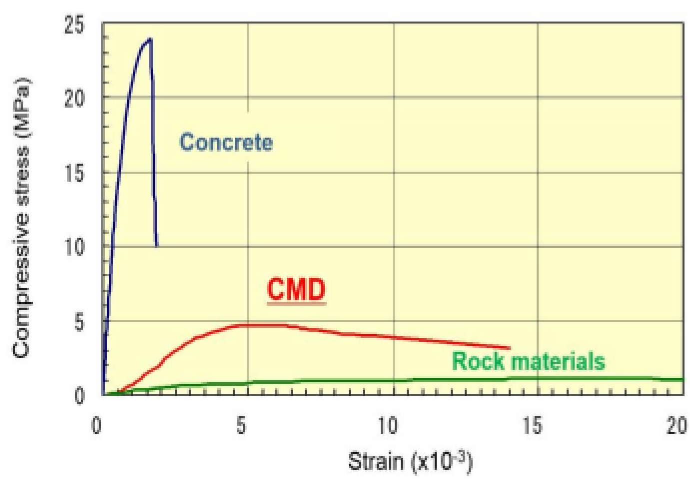
Hard Fill Stiffness



Source: Noorzad et al. (2017). An Innovative Approach toward Dam Design and Construction. 2nd Workshop on Cement Materials Dams (CMD). July 3, 2017.

$$E_{HF} := \frac{5\,MPa}{5 \times 10^{-3}} = 1 \cdot GPa$$ Approximate Hardfill Modulus of Elasticity

$L_{HF} := 17m$ Hardfill section length (between construction joints)

Approximate hardfill stiffness $$k_{HF} := \frac{E_{HF}}{L_{HF}} = 58823.53 \cdot \frac{kN}{m^3}$$

$$\delta_{max} := L_{HF} \cdot 5 \cdot 10^{-3} = 85\,mm$$

Considering a deformation of the hardfill of : $\delta_{HF} := 1.3mm$ < $\delta_{max} = 85\,mm$

The total reaction of the hardfill is: $F_{HF} := k_{HF} \cdot Ac \cdot \delta_{HF} = 2.46 \cdot MN$

User Input

Material Properties:

Unit Weight of Water: $\gamma_w := 9.81 \frac{kN}{m^3}$ (Section 7.2, Design Criteria)

Unit Weight of Concrete: $\gamma_c := 23.5 \frac{kN}{m^3}$

Unit Weight of Soil (Moist): $\gamma_m := 20.0 \frac{kN}{m^3}$ (Section 5.3, Design Criteria) assumed moisture content (w) = 5%

Unit Weight Soil (Saturated): $\gamma_{sat} := 22.0 \frac{kN}{m^3}$ (Assuming Specific Gravity = 2.7)

Unit Weight Soil (buoyant): $\gamma_b := \gamma_{sat} - \gamma_w = 12.19 \cdot \frac{kN}{m^3}$

Weight of Soil/Concrete above toe: $\gamma_{toe} := 22.0 \frac{kN}{m^3}$

Unit Weight of Rock: $\gamma_r := 25.6 \frac{kN}{m^3}$ (Section 7.2, Design Criteria)

Extreme Condition 1 (E1)

Acceptance Parameters

Resultant Location (Overturning and Bearing Pressure):

Extreme (E1) Resultant located inside middle half (AT/WCS Guidelines, Section 8.4)

Allowable rock bearing pressure: $qall := 622 \frac{kN}{m^2}$ (Internal Geotechnical Design Recommendations Rev. Sept 12, 2018, Section 5.3)

FS Sliding:

Extreme (E1) 1.1 (without cohesion) (CDA Guidelines, Table 6-4, AT/WCS Guidelines, Section 8.3)

Req'd Factor of Safety for Sliding: $FS_{sliding.req} := 1.1$ (Without Cohesion)

FS Floatation:

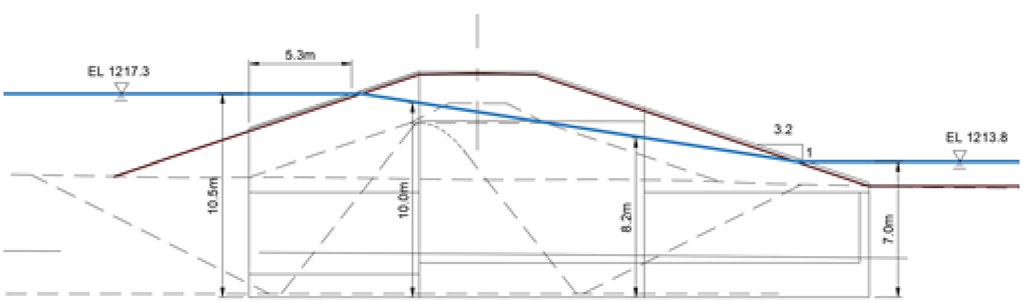
Extreme (E1) 1.1 (AT/WCS Guidelines, Section 8.5)

Req'd Factor of Safety for Floatation: $FS_{float.req} := 1.1$

Water Surface Elevations

Headwater $H_H := 1217.3m$

Tailwater $H_T := 1213.8m$



$h_1 := 10.5m$ $h_2 := 10.m$ $h_3 := 8.2m$ $h_4 := 7.0m$

Interpolated water table heights from retaining wall base.

User Input

Material Properties:

Unit Weight of Water: $\gamma_w := 9.81 \dfrac{kN}{m^3}$ (Section 7.2, Design Criteria)

Unit Weight of Concrete: $\gamma_c := \mathbf{23.5} \dfrac{kN}{m^3}$

Unit Weight of Soil (Moist): $\gamma_m := 20.0 \dfrac{kN}{m^3}$ (Section 5.3, Design Criteria) assumed moisture content (w) = 5%

Unit Weight Soil (Saturated): $\gamma_{sat} := 22.0 \dfrac{kN}{m^3}$ (Assuming Specific Gravity = 2.7)

Unit Weight Soil (buoyant): $\gamma_b := \gamma_{sat} - \gamma_w = 12.19 \cdot \dfrac{kN}{m^3}$

Weight of Soil/Concrete above toe: $\gamma_{toe} := 22.0 \dfrac{kN}{m^3}$

Unit Weight of Rock: $\gamma_r := 25.6 \dfrac{kN}{m^3}$ (Section 7.2, Design Criteria)

Extreme Condition 2 (E2)

Acceptance Parameters

Resultant Location (Overturning and Bearing Pressure):

Extreme (E1) Resultant located inside middle half (AT/WCS Guidelines, Section 8.4)

Allowable rock bearing pressure: $qall := 622 \frac{kN}{m^2}$ (Internal Geotechnical Design Recommendations Rev. Sept 12, 2018, Section 5.3)

FS Sliding:

Extreme (E1) 1.1 (without cohesion) (CDA Guidelines, Table 6-4, AT/WCS Guidelines, Section 8.3)

Req'd Factor of Safety for Sliding: $FS_{sliding.req} := 1.1$ (Without Cohesion)

FS Floatation:

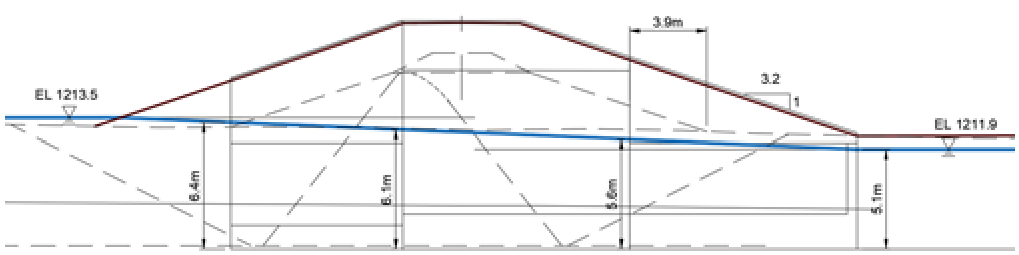
Extreme (E1) 1.1 (AT/WCS Guidelines, Section 8.5)

Req'd Factor of Safety for Floatation: $FS_{float.req} := 1.1$

Water Surface Elevations

Headwater $H_H := 1213.5m$

Tailwater $H_T := 1211.9m$



$h_1 := 6.4m$ $h_2 := 6.1m$ $h_3 := 5.6m$ $h_4 := 5.1m$

Interpolated water table heights from retaining wall base.

User Input

Material Properties:

Unit Weight of Water: $\gamma_w := 9.81 \frac{kN}{m^3}$ (Section 7.2, Design Criteria)

Unit Weight of Concrete: $\gamma_c := 23.5 \frac{kN}{m^3}$

Unit Weight of Soil (Moist): $\gamma_m := 20.0 \frac{kN}{m^3}$ (Section 5.3, Design Criteria) assumed moisture content (w) = 5%

Unit Weight Soil (Saturated): $\gamma_{sat} := 22.0 \frac{kN}{m^3}$ (Assuming Specific Gravity = 2.7)

Unit Weight Soil (buoyant): $\gamma_b := \gamma_{sat} - \gamma_w = 12.19 \cdot \frac{kN}{m^3}$

Weight of Soil/Concrete above toe: $\gamma_{toe} := 22.0 \frac{kN}{m^3}$

Unit Weight of Rock: $\gamma_r := 25.6 \frac{kN}{m^3}$ (Section 7.2, Design Criteria)

Unusual Condition 3 (UN3)

Acceptance Parameters

Resultant Location (Overturning and Bearing Pressure):

Unusual (UN) Resultant located inside middle third (kern) equals 100% base in compression (AT/WCS Guidelines, Section 8.4)

$$B_{\%basecomp.req} := 100\%$$

Allowable rock bearing pressure: $qall := 622 \frac{kN}{m^2}$ (Internal Geotechnical Design Recommendations Rev. Sept 12, 2018, Section 5.3)

FS Sliding:

Usual (U1) 1.3 (without cohesion) (CDA Guidelines, Table 6-4, AT/WCS Guidelines, Section 8.3)

Req'd Factor of Safety for Sliding: $FS_{sliding.req} := 1.3$ (Without Cohesion)

FS Floatation:

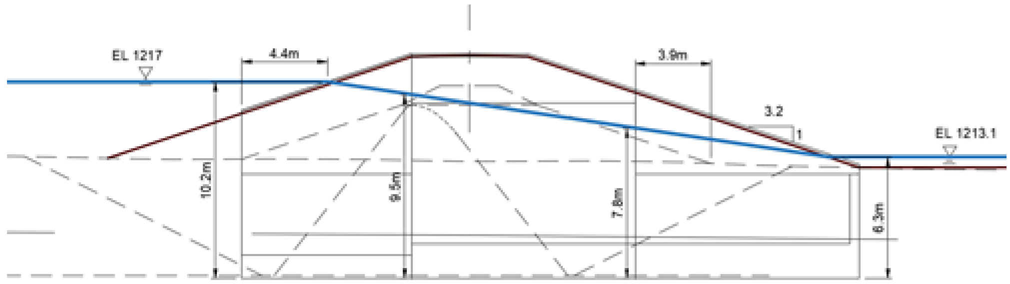
Usual (U1) 1.3 (AT/WCS Guidelines, Section 8.5)

Req'd Factor of Safety for Floatation: $FS_{float.req} := 1.3$

Water Surface Elevations

Headwater $H_H := 1217m$

Tailwater $H_T := 1213.1m$



$h_1 := 10.2m$ $h_2 := 9.5m$ $h_3 := 7.8m$ $h_4 := 6.3m$

Interpolated water table heights from retaining wall base.

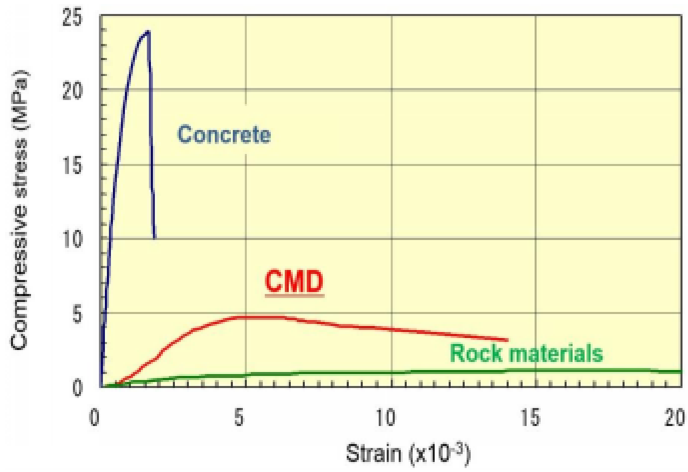
Hard Fill Stiffness



Source: Noorzad et al. (2017). An Innovative Approach toward Dam Design and Construction. 2nd Workshop on Cement Materials Dams (CMD). July 3, 2017.

$$E_{HF} := \frac{5\,MPa}{5 \times 10^{-3}} = 1 \cdot GPa$$ Approximate Hardfill Modulus of Elasticity

$L_{HF} := 16m$ Hardfill section length (between construction joints)

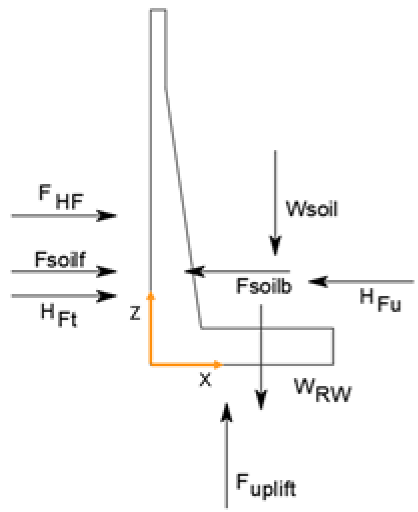
Approximate hardfill stiffness $$k_{HF} := \frac{E_{HF}}{L_{HF}} = 62500 \cdot \frac{kN}{m^3}$$

$$\delta_{max} := L_{HF} \cdot 5 \cdot 10^{-3} = 80 \cdot mm$$

Considering a deformation of the hardfill of : $\delta_{HF} := 2.5mm$ < $\delta_{max} = 80 \cdot mm$

The total reaction of the hardfill is: $F_{HF} := k_{HF} \cdot Ac \cdot \delta_{HF} = 6.33 \cdot MN$

Vector Forces Summary



Body diagram, side view

Weight Retaining Wall $\mathbf{W_{RW}} := \left(-F_{RW} \quad 0 \quad -\mathbf{W_{RW}} \right) = \left(-1.05 \quad 0 \quad -6.19 \right) \cdot \mathbf{MN}$

Weight Soil (Back of Wall) $\mathbf{W_{soilb}} := \left(-Fsoilb_{AE} \quad 0 \quad -\mathbf{W_{soilb}} \right) = \left(-2.67 \quad 0 \quad -15.7 \right) \cdot \mathbf{MN}$

Soil Pressure (Back of Wall) $\mathbf{F_{soilb}} := \left(-\mathbf{F_{soilb}} \quad 0 \quad 0 \right) = \left(-2.41 \quad 0 \quad 0 \right) \cdot \mathbf{MN}$

Soil Pressure (Front of Wall) $\mathbf{F_{soilf}} := \left(\mathbf{F_{soilf}} \quad 0 \quad 0 \right) = \left(0.56 \quad 0 \quad 0 \right) \cdot \mathbf{MN}$

Hydrostatic Force (Back of Wall) $\mathbf{H_{Fu}} := \left(-\mathbf{H_{Fu}} \quad \mathbf{0} \quad 0 \right) = \left(-1.95 \quad 0 \quad 0 \right) \cdot \mathbf{MN}$

Uplift Force $\mathbf{F_{uplift}} := \left(0 \quad 0 \quad \mathbf{F_{uplift}} \right) = \left(0 \quad 0 \quad 4.98 \right) \cdot \mathbf{MN}$

Resistance force by Hardfill $\mathbf{F_{HF}} := \left(\mathbf{F_{HF}} \quad 0 \quad 0 \right) = \left(6.33 \quad 0 \quad 0 \right) \cdot \mathbf{MN}$

Soil Dynamic Pressure $\mathbf{F_{AE}} := \left(-\mathbf{F_{AE}} \quad 0 \quad 0 \right) = \left(-2.63 \quad 0 \quad 0 \right) \cdot \mathbf{MN}$

Resultant Total Force

$$\mathbf{F} := \mathbf{W_{RW}} + \mathbf{W_{soilb}} + \mathbf{F_{soilb}} + \mathbf{F_{soilf}} + \mathbf{H_{Fu}} + \mathbf{H_{Ft}} + \mathbf{F_{uplift}} + \mathbf{F_{HF}} + \mathbf{F_{AE}}$$

$$\mathbf{F} = (-3.13 \quad 0 \quad -16.9)\cdot\mathbf{MN}$$

Structure Stability

1. Sliding

$$236.6\mathbf{m}^3\cdot\gamma_{\mathbf{w}} = 2.32\cdot\mathbf{MN}$$

Coefficient of sliding friction $\mu := 0.45$

$$\mathbf{FoS} := \frac{\mathbf{F}_{0,2}\cdot\mu}{\mathbf{F}_{0,0}} = 2.43 \qquad > \qquad \mathbf{FS_{sliding.req}} = 1.1 \qquad \mathbf{OK}$$

2. Uplift

Summatory of Axial Resistant Forces

$$\mathbf{F_R} := \mathbf{W_{RW}} + \mathbf{W_{soilb}} = (-3.72 \quad 0 \quad -21.89)\cdot\mathbf{MN}$$

Uplift Force

$$\mathbf{F_{uplift}} = (0 \quad 0 \quad 4.98)\cdot\mathbf{MN}$$

$$\mathbf{FoS_{uplift}} := \frac{\left|\mathbf{F_R}_{0,2}\right|}{\left|\mathbf{F_{uplift}}_{0,2}\right|} = 4.39 \qquad > \qquad \mathbf{FS_{float.req}} = 1.1 \qquad \mathbf{OK}$$

3. Overturning

$$\mathbf{r_{RW}} := \left(\mathbf{X_{RW}} \quad Y_{RW} \quad Z_{RW}\right) = (2.72 \quad 5.76 \quad 2.59)\ \mathbf{m}$$

$$\mathbf{r_{soilb}} := \left(X_{soil} \quad Y_{soil} \quad Z_{soil}\right) = (4.44 \quad 5.61 \quad 6.41)\ \mathbf{m}$$

$$\mathbf{r_{Fsoilb}} := \left(X_{Fsoilb} \quad Y_{Fsoilb} \quad Z_{Fsoilb}\right) = (0 \quad 5.44 \quad 3.77)\ \mathbf{m}$$

$$\mathbf{r_{Fsoilf}} := \left(X_{Fsoilf} \quad Y_{Fsoilf} \quad Z_{Fsoilf}\right) = (0 \quad 8.23 \quad 3.28)\ \mathbf{m}$$

$$\mathbf{r_{Fu}} := \left(X_{Fu} \quad Y_{Fu} \quad Z_{Fu}\right) = (0 \quad 5.63 \quad 1.95)\ \mathbf{m}$$

$$\mathbf{r_{Ft}} := \left(X_{Ft} \quad Y_{Ft} \quad Z_{Ft}\right) = (0 \quad 8.8 \quad 1.91)\ \mathbf{m}$$

$$\mathbf{r_{uplift}} := \left(X_{uplift} \quad Y_{uplift} \quad Z_{uplift}\right) = (4.09 \quad 5.76 \quad 0)\ \mathbf{m}$$

$$\mathbf{r_{HF}} := \left(\mathbf{X_{HF}} \quad \mathbf{Y_{HF}} \quad \mathbf{Z_{HF}}\right) = (0 \quad 2.76 \quad 3.43)\ \mathbf{m}$$

$$\mathbf{r_{AE}} := \left(\mathbf{X_{AE}} \quad \mathbf{Y_{AE}} \quad \mathbf{Z_{AE}}\right) = (0 \quad 6.11 \quad 6.69)\ \mathbf{m}$$

$$\mathbf{M} := \mathbf{W_{RW}}^{\mathbf{T}} \times \mathbf{r_{RW}}^{\mathbf{T}} + \mathbf{W_{soilb}}^{\mathbf{T}} \times \mathbf{r_{soilb}}^{\mathbf{T}} + \mathbf{F_{soilb}}^{\mathbf{T}} \times \mathbf{r_{Fsoilb}}^{\mathbf{T}} + \mathbf{F_{HF}}^{\mathbf{T}} \times \mathbf{r_{HF}}^{\mathbf{T}} \cdots$$
$$+ \mathbf{F_{soilf}}^{\mathbf{T}} \times \mathbf{r_{Fsoilf}}^{\mathbf{T}} + \mathbf{H_{Fu}}^{\mathbf{T}} \times \mathbf{r_{Fu}}^{\mathbf{T}} + \mathbf{H_{Ft}}^{\mathbf{T}} \times \mathbf{r_{Ft}}^{\mathbf{T}} + \mathbf{F_{uplift}}^{\mathbf{T}} \times \mathbf{r_{uplift}}^{\mathbf{T}} + \mathbf{F_{AE}}^{\mathbf{T}} \times \mathbf{r_{AE}}^{\mathbf{T}}$$

$$\mathbf{M} = \begin{pmatrix} 94.98 \\ -40.73 \\ -32.98 \end{pmatrix} \cdot \mathbf{MN} \cdot \mathbf{m}$$

$$\mathbf{F} = (-3.13 \quad 0 \quad -16.9) \cdot \mathbf{MN}$$

Location of resultant force:

$$\mathbf{X_R} := \left| \frac{\mathbf{M}_{1,0}}{\mathbf{F}_{0,2}} \right| = 2.41 \cdot \mathbf{m}$$

$$\mathbf{x} := \left| \mathbf{X_R} - \frac{\mathbf{b}}{2} \right| = 1.59\ \mathbf{m} \quad < \quad \frac{\mathbf{b}}{4} = 2\ \mathbf{m} \qquad \mathbf{OK}$$

4. **Bearing Capacity**

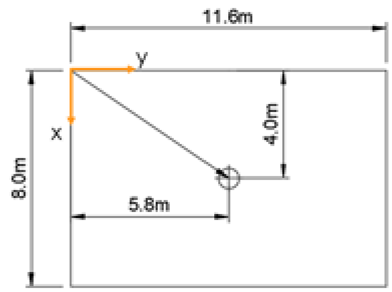
$$q_{all} := 622\,\mathbf{kPa}$$

Force and Moment at origin:

$$\mathbf{F} = \begin{pmatrix} -3.13 & 0 & -16.9 \end{pmatrix} \cdot \mathbf{MN} \qquad \mathbf{M} = \begin{pmatrix} 94.98 \\ -40.73 \\ -32.98 \end{pmatrix} \mathbf{m} \cdot \mathbf{MN}$$

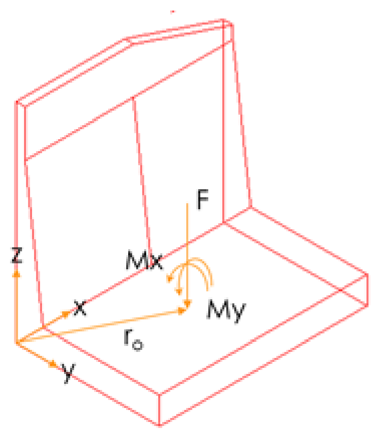
Vector to center of foundation:

$$\mathbf{r_o} := \begin{pmatrix} 4 & 5.8 & 0 \end{pmatrix} \mathbf{m}$$



Moment at center of Foundation

$$\mathbf{M_o} := \mathbf{M} - \mathbf{F}^{\mathbf{T}} \times \mathbf{r_o}^{\mathbf{T}} = \begin{pmatrix} -3.06 \\ 26.88 \\ -14.84 \end{pmatrix} \mathbf{m} \cdot \mathbf{MN}$$



$$\mathbf{Ix_o} := \frac{1}{12} \cdot \mathbf{b}^3 \cdot \mathbf{B} = 494.93\,\mathbf{m}^4$$

$$\mathbf{Iy_o} := \frac{1}{12} \cdot \mathbf{b} \cdot \mathbf{B}^3 = 1040.597\,\mathbf{m}^4$$

$$\mathbf{A} := \mathbf{b} \cdot \mathbf{B} = 92.8\,\mathbf{m}^2$$

$$\sigma_{\mathbf{max}} := \left|\frac{\mathbf{F}_{0,2}}{\mathbf{A}}\right| + \left|\frac{\mathbf{M_o}_{0,0} \cdot \mathbf{b}}{2 \cdot \mathbf{Ix_o}}\right| + \left|\frac{\mathbf{M_o}_{1,0} \cdot \mathbf{B}}{2 \cdot \mathbf{Iy_o}}\right| = 356.696 \cdot \mathbf{kPa} < \quad \mathbf{q_{all}} = 622 \cdot \mathbf{kPa} \qquad \mathbf{OK}$$

$$\sigma_{\mathbf{min}} := \left|\frac{\mathbf{F}_{0,2}}{\mathbf{A}}\right| - \left|\frac{\mathbf{M_o}_{0,0} \cdot \mathbf{b}}{2 \cdot \mathbf{Ix_o}}\right| - \left|\frac{\mathbf{M_o}_{1,0} \cdot \mathbf{B}}{2 \cdot \mathbf{Iy_o}}\right| = 7.594 \cdot \mathbf{kPa} \quad < \quad \mathbf{q_{all}} = 622 \cdot \mathbf{kPa} \qquad \mathbf{OK}$$

User Input

Material Properties:

Unit Weight of Water: $\gamma_w := 9.81 \frac{kN}{m^3}$ (Section 7.2, Design Criteria)

Unit Weight of Concrete: $\gamma_c := 23.5 \frac{kN}{m^3}$

Unit Weight of Soil (Moist): $\gamma_m := 20.0 \frac{kN}{m^3}$ (Section 5.3, Design Criteria) assumed moisture content (w) = 5%

Unit Weight Soil (Saturated): $\gamma_{sat} := 22.0 \frac{kN}{m^3}$ (Assuming Specific Gravity = 2.7)

Unit Weight Soil (buoyant): $\gamma_b := \gamma_{sat} - \gamma_w = 12.19 \cdot \frac{kN}{m^3}$

Weight of Soil/Concrete above toe: $\gamma_{toe} := 22.0 \frac{kN}{m^3}$

Unit Weight of Rock: $\gamma_r := 25.6 \frac{kN}{m^3}$ (Section 7.2, Design Criteria)

Usual Condition 1 (U1)

Acceptance Parameters

Resultant Location (Overturning and Bearing Pressure):

Unusual (UN) Resultant located inside middle third (kern) equals 100% base in compression (AT/WCS Guidelines, Section 8.4)

$$B_{\%basecomp.req} := 100\%$$

Allowable rock bearing pressure: $qall := 622 \frac{kN}{m^2}$ (Internal Geotechnical Design Recommendations Rev. Sept 12, 2018, Section 5.3)

FS Sliding:

Usual (U1) 1.5 (without cohesion) (CDA Guidelines, Table 6-4, AT/WCS Guidelines, Section 8.3)

Req'd Factor of Safety for Sliding: $FS_{sliding.req} := 1.5$ (Without Cohesion)

FS Floatation:

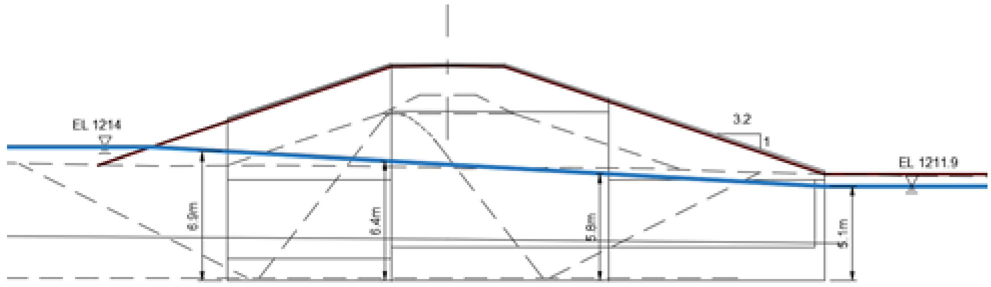
Usual (U1) 1.5 (AT/WCS Guidelines, Section 8.5)

Req'd Factor of Safety for Floatation: $FS_{float.req} := 1.5$

Water Surface Elevations

Headwater $H_H := 1214m$

Tailwater $H_T := 1211.9m$



$h_1 := 6.9m$ $h_2 := 6.4m$ $h_3 := 5.8m$ $h_4 := 5.1m$

User Input

Material Properties:

Unit Weight of Water: $\gamma_w := 9.81 \frac{kN}{m^3}$ (Section 7.2, Design Criteria)

Unit Weight of Concrete: $\gamma_c := \mathbf{23.5} \frac{kN}{m^3}$

Unit Weight of Soil (Moist): $\gamma_m := 20.0 \frac{kN}{m^3}$ (Section 5.3, Design Criteria) assumed moisture content (w) = 5%

Unit Weight Soil (Saturated): $\gamma_{sat} := 22.0 \frac{kN}{m^3}$ (Assuming Specific Gravity = 2.7)

Unit Weight Soil (buoyant): $\gamma_b := \gamma_{sat} - \gamma_w = 12.19 \cdot \frac{kN}{m^3}$

Weight of Soil/Concrete above toe: $\gamma_{toe} := 22.0 \frac{kN}{m^3}$

Unit Weight of Rock: $\gamma_r := 25.6 \frac{kN}{m^3}$ (Section 7.2, Design Criteria)

Unusual Condition 2 (UN2)

Acceptance Parameters

Resultant Location (Overturning and Bearing Pressure):

Unusual (UN1) Resultant located inside middle third (kern) equals 100% base in compression (AT/WCS Guidelines, Section 8.4)

$$B_{\%basecomp.req} := 100\%$$

Allowable rock bearing pressure: $qall := 622 \frac{kN}{m^2}$ (Internal Geotechnical Design Recommendations Rev. Sept 12, 2018, Section 5.3)

FS Sliding:

Unusual (UN1) 1.3 (without cohesion) (CDA Guidelines, Table 6-4, AT/WCS Guidelines, Section 8.3)

Req'd Factor of Safety for Sliding: $FS_{sliding.req} := 1.3$ (Without Cohesion)

FS Floatation:

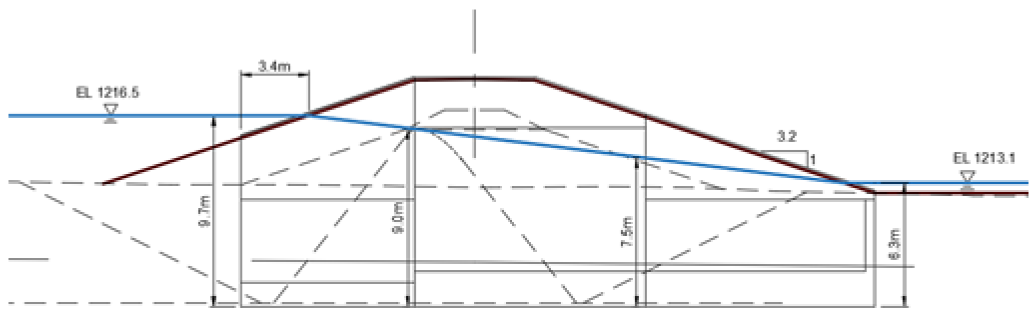
Unusual (UN1) 1.3 (AT/WCS Guidelines, Section 8.5)

Req'd Factor of Safety for Floatation: $FS_{float.req} := 1.3$

Water Surface Elevations

Headwater $H_H := 1216.5m$

Tailwater $H_T := 1213.1m$



$h_1 := 9.7m$ $h_2 := 9.0m$ $h_3 := 7.5m$ $h_4 := 6.3m$

Interpolated water table heights from retaining wall base.

Structure Stability

1. Sliding

$$236.6\mathbf{m}^3\cdot\gamma_\mathbf{w} = 2.32\cdot\mathbf{MN}$$

Coefficient of sliding friction $\mu := 0.45$

$$\mathbf{FoS} := \frac{\mathbf{F}_{0,2}\cdot\mu}{\mathbf{F}_{0,0}} = 1.21 \qquad > \qquad \mathbf{FS_{sliding.req}} = 1.1 \qquad \mathbf{OK}$$

2. Uplift

Summatory of Axial Resistant Forces

$$\mathbf{F_R} := \mathbf{W_{RW}} + \mathbf{W_{soilf}} + \mathbf{W_{soilb}} = (-2.96 \quad 0 \quad -17.41)\cdot\mathbf{MN}$$

Uplift Force

$$\mathbf{F_{uplift}} = (0 \quad 0 \quad 5.69)\cdot\mathbf{MN}$$

$$\mathbf{FoS_{uplift}} := \frac{\left|\mathbf{F_R}_{0,2}\right|}{\left|\mathbf{F_{uplift}}_{0,2}\right|} = 3.06 \qquad > \qquad \mathbf{FS_{float.req}} = 1.1 \qquad \mathbf{OK}$$

3. Overturning

$$\mathbf{r_{RW}} := \left(\mathbf{X_{RW}} \quad Y_{RW} \quad Z_{RW} \right) = (4.72 \quad 5.91 \quad 1.72)\ \mathbf{m}$$

$$\mathbf{r_{soilb}} := \left(X_{soilb} \quad Y_{soilb} \quad Z_{soilb} \right) = (6.4 \quad 4.96 \quad 5)\ \mathbf{m}$$

$$\mathbf{r_{soilf}} := \left(X_{soilf} \quad Y_{soilf} \quad Z_{soilf} \right) = (1.21 \quad 4.85 \quad 3.94)\ \mathbf{m}$$

$$\mathbf{r_{Fsoilb}} := \left(X_{Fsoilb} \quad Y_{Fsoilb} \quad Z_{Fsoilb} \right) = (0 \quad 4.58 \quad 2.82)\ \mathbf{m}$$

$$\mathbf{r_{Fsoilf}} := \left(X_{Fsoilf} \quad Y_{Fsoilf} \quad Z_{Fsoilf} \right) = (0 \quad 4.91 \quad 2.05)\ \mathbf{m}$$

$$\mathbf{r_{Fu}} := \left(X_{Fu} \quad Y_{Fu} \quad Z_{Fu} \right) = (0 \quad 5.55 \quad 1.82)\ \mathbf{m}$$

$$\mathbf{r_{Ft}} := \left(X_{Ft} \quad Y_{Ft} \quad Z_{Ft} \right) = (0 \quad 5.8 \quad 1.7)\ \mathbf{m}$$

$$\mathbf{r_{uplift}} := \left(X_{uplift} \quad Y_{uplift} \quad Z_{uplift} \right) = (5.3 \quad 5.63 \quad 0)\ \mathbf{m}$$

$$\mathbf{r_{AE}} := \left(\mathbf{X_{AE}} \quad \mathbf{Y_{AE}} \quad \mathbf{Z_{AE}} \right) = (0 \quad 5.64 \quad 5.21)\ \mathbf{m}$$

$$\begin{aligned}\mathbf{M} := \ & \mathbf{W_{RW}}^{\mathbf{T}} \times \mathbf{r_{RW}}^{\mathbf{T}} + \mathbf{W_{soilb}}^{\mathbf{T}} \times \mathbf{r_{soilb}}^{\mathbf{T}} + \mathbf{W_{soilf}}^{\mathbf{T}} \times \mathbf{r_{soilf}}^{\mathbf{T}} + \mathbf{F_{soilb}}^{\mathbf{T}} \times \mathbf{r_{Fsoilb}}^{\mathbf{T}} \ldots \\ & + \mathbf{F_{soilf}}^{\mathbf{T}} \times \mathbf{r_{Fsoilf}}^{\mathbf{T}} + \mathbf{H_{Fu}}^{\mathbf{T}} \times \mathbf{r_{Fu}}^{\mathbf{T}} + \mathbf{H_{Ft}}^{\mathbf{T}} \times \mathbf{r_{Ft}}^{\mathbf{T}} + \mathbf{F_{uplift}}^{\mathbf{T}} \times \mathbf{r_{uplift}}^{\mathbf{T}} + \mathbf{F_{AE}}^{\mathbf{T}} \times \mathbf{r_{AE}}^{\mathbf{T}}\end{aligned}$$

$$\mathbf{M} = \begin{pmatrix} 60.03 \\ -47.54 \\ -22.26 \end{pmatrix} \cdot \mathbf{MN} \cdot \mathbf{m}$$

$$\mathbf{F} = (-4.36 \quad 0 \quad -11.72) \cdot \mathbf{MN}$$

Location of resultant force:

$$\mathbf{X_R} := \left| \frac{\mathbf{M}_{1,0}}{\mathbf{F}_{0,2}} \right| = 4.06 \cdot \mathbf{m}$$

$$\mathbf{x} := \left| \mathbf{X_R} - \frac{\mathbf{b}}{2} \right| = 0.94\ \mathbf{m} \quad < \quad \frac{\mathbf{b}}{4} = 2.5\ \mathbf{m} \qquad \mathbf{OK}$$

4. **Bearing Capacity**

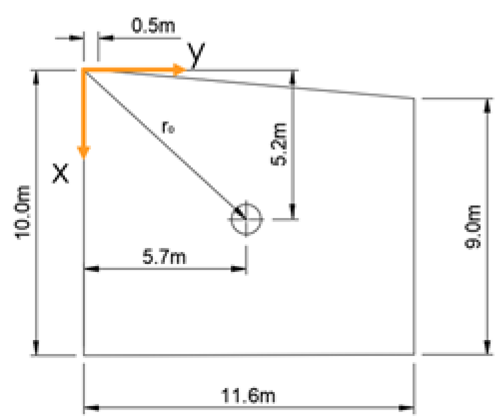
$$\mathbf{q_{all}} := 622\,\mathbf{kPa}$$

Force and Moment at origin:

$$\mathbf{F} = \begin{pmatrix} -4.36 & 0 & -11.72 \end{pmatrix} \cdot \mathbf{MN} \qquad \mathbf{M} = \begin{pmatrix} 60.03 \\ -47.54 \\ -22.26 \end{pmatrix} \mathbf{m} \cdot \mathbf{MN}$$

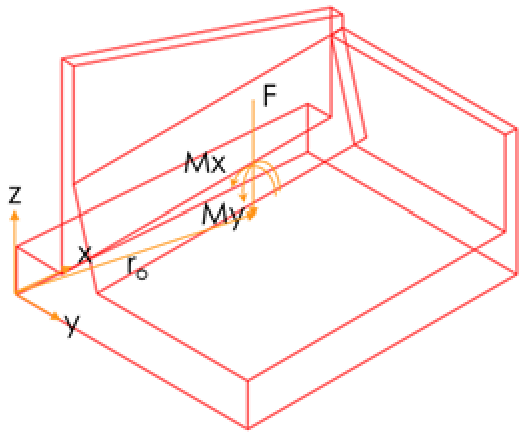
Vector to center of foundation:

$$\mathbf{r_o} := \begin{pmatrix} \mathbf{5.7} & \mathbf{5.2} & 0 \end{pmatrix} \mathbf{m}$$



Moment at center of Foundation

$$\mathbf{M_o} := \mathbf{M} - \mathbf{F}^{\mathbf{T}} \times \mathbf{r_o}^{\mathbf{T}} = \begin{pmatrix} -0.91 \\ 19.26 \\ 0.42 \end{pmatrix} \mathbf{m} \cdot \mathbf{MN}$$



$$\mathbf{Ix_o} := \mathbf{839.8m}^4$$

$$\mathbf{Iy_o} := \mathbf{1235.5m}^4$$

$$\mathbf{A} := \mathbf{110.43m}^2$$

$$\sigma_{\mathbf{max}} := \left|\frac{\mathbf{F}_{0,2}}{\mathbf{A}}\right| + \left|\frac{\mathbf{M_o}_{0,0} \cdot \mathbf{b}}{2 \cdot \mathbf{Ix_o}}\right| + \left|\frac{\mathbf{M_o}_{1,0} \cdot \mathbf{B}}{2 \cdot \mathbf{Iy_o}}\right| = 201.979 \cdot \mathbf{kPa} < \quad \mathbf{q_{all}} = 622 \cdot \mathbf{kPa} \quad \mathbf{OK}$$

$$\sigma_{\mathbf{min}} := \left|\frac{\mathbf{F}_{0,2}}{\mathbf{A}}\right| - \left|\frac{\mathbf{M_o}_{0,0} \cdot \mathbf{b}}{2 \cdot \mathbf{Ix_o}}\right| - \left|\frac{\mathbf{M_o}_{1,0} \cdot \mathbf{B}}{2 \cdot \mathbf{Iy_o}}\right| = 10.274 \cdot \mathbf{kPa} < \quad \mathbf{q_{all}} = 622 \cdot \mathbf{kPa} \quad \mathbf{OK}$$

1.0 INTRODUCTION

1.1 PURPOSE

This Structural Design Report (SDR) describes stability assessment, structural analyses and design of the Low-Level Outlet Works (LLOW), which is part of the Springbank Off-stream Storage Project (SR1). The SDR consolidates and documents the design philosophy, relevant criteria, primary design parameters, and reference source of data used for design. The LLOW structures were sized to meet stability requirements and structural members were designed for conformance with structural criteria.

1.2 PROJECT OVERVIEW

SR1 is a flood diversion system comprised of a diversion structure, a diversion channel and off-stream dry storage reservoir (no permanent pool). When in operation, SR1 will divert and temporarily store excess flood water from the Elbow River and release it back into the river system in a controlled manner. SR1 will work in tandem with the downstream Glenmore Reservoir to limit flood flows downstream of Glenmore to less than 170 m^3/s for up to SR1's design event - the 2013 flood or its equivalent.

Elements of the project are:

- Diversion Structure on the Elbow River consisting of, from left to right when looking downstream, gated Diversion Inlet structure leading to a Diversion Channel, gated Service Spillway located on the Elbow River, adjacent Auxiliary Spillway and a Floodplain Berm. A Debris Deflection Barrier is in the headwater of the Diversion Structure to protect the Diversion Inlet from flood debris.

- Diversion Channel leading from the Elbow River at the Diversion Inlet to the Off-stream Storage Reservoir with an Emergency Spillway along the channel and Channel Outlet at end of the channel.

- Off-stream Storage Dam with Low-Level Outlet Works.

1.3 DESIGN OBJECTIVES

Design requirements for the LLOW are described in the Discharge Capacity – Low-Level Outlet Memorandum (June 7, 2016), which is summarized below:

- Provide a LLOW with a maximum capacity of 27 m^3/s to satisfy reservoir evacuation criteria from maximum diversion storage pool, EL 1210.75 m in 40 days.
- Design the LLOW to pass the stream flow from the Off-Stream Storage Dam local watershed without creating a permanent pool, i.e., a dry storage reservoir with minimal dead storage space.

1.4 GENERAL ARRANGEMENT

The selected LLOW arrangement that satisfies the design objectives and criteria is a pressurized drainage structure transitioning to a gated gravity drainage structure located within the existing unnamed stream floodplain and constructed through the embankment dam at Dam station 23+022. Primary elements of the LLOW include:

- Intake structure consisting of a reinforced concrete frame incorporating eight trash rack panels.
- Transition conduit of reinforced concrete that provides the conduit transition from the intake structure gate opening to the pressure conduit.
- Pressure conduit providing drainage with a circular shape reinforced concrete conduit running from the intake structure to the gate structure. The conduit becomes pressurized when diverted flood water is stored in the reservoir.
- Gate structure of reinforced concrete that houses the stainless-steel fabricated slide gates in two wet wells and transitions from pressurized conduit to gravity conduit.
- Gravity conduit providing drainage with a modified basket handle shaped, reinforced concrete conduit running from the gate structure to the CSU rigid basin.
- CSU rigid basin of cast-in-place reinforced concrete located at the downstream end of the gravity conduit. The basin provides an energy dissipating transition from the conduit to the outlet channel.

The general arrangement of the LLOW is depicted on Drawing S-400. Details of each component are shown on the S-400 series Drawings.

Typically, the LLOW acts as an open channel drainage structure through the dam with the regulating gate open. This arrangement provides flow passage for runoff from the off-stream storage dam watershed so as not to create a permanent pool. When diversion is to be initiated, the regulating gate in the LLOW intake is closed to provide detention storage for diverted flows from the Elbow River. Once the flood has passed, the gate is operated to release reservoir storage in a controlled manner downstream into the Elbow River.

1.5 BASIS FOR STRUCTURE LAYOUT

The LLOW layout and sizing is based on hydrotechnical evaluation to establish overall geometry, top of dam elevation, and hydraulic profiles to set crest elevation, stilling basin floor and blocks, and sizing of the gates.

The LLOW location was selected so that the foundation would be on glacial till to provide a uniform foundation, the conduit will be excavated through the existing subgrade materials and not through the embankment, and it would allow separate construction of the LLOW in a dry location until ready for diversion of the unnamed creek.

2.0 CODES AND STANDARDS

In accordance with "terms of reference" for this project, the design complies with current Alberta Transportation (AT) Design Standards and current AT Design and Construction Bulletins. By reference in AT Standards, Canadian Dam Association (CDA) Dam Safety Guidelines and Technical Bulletin Nos. 1 through 9 provided primary guidance for design of the project including the hydraulic structures. Other recognized industry standards referenced in the AT/CDA Guidelines were used to supplement aspects of the design that the AT/CDA Guidelines do not address. Such references include the US Army Corps of Engineers (USACE) Engineering Manuals and US Bureau of Reclamation (USBR) Design Standards. In case of conflicting criteria, AT provisions were used unless a "more stringent" requirement was deemed appropriate based on engineering judgement.

Where referenced by AT and CDA, the National Building Code of Canada (NBCC) and Alberta Building Code (ABC) were used to obtain certain design loads (wind, snow, live, vehicle), and develop load combinations associated with strength and serviceability. NBCC and ABC provisions were used primarily for evaluation of individual elements such as gratings, ladders, and other ancillary structures.

The following codes, guidelines, and standards were identified for use on this project:

2.1 PROJECT STANDARDS

- Alberta Government, Terms of Reference (TOR0015997) for "Flood Mitigation Works, Springbank Off-Stream Storage Project (SR1) (WAC0078983), Addendum No. 2," August 1, 2014.
- AT's "Engineering Consultant Guidelines for Highway Bridge and Water Projects, Volume 1- Design & Tender" - 2011.
- AT's "Engineering Consultant Guidelines for Highway Bridge and Water Projects, Volume 2- Design & Tender" - 2011.
- AT's Civil Works Master Specifications for Construction of Provincial Water Management Projects.

2.2 DAM DESIGN AND SAFETY

- Province of Alberta Water Act – Water (Ministerial) Regulation - Regulation 205/98 (consolidated up to 185/2015).
- AT's "Water Control Structures Selected Design Guidelines" – Nov. 2004

- Canadian Dam Association Dam Safety Guidelines (CDA) 2007 with 2013 Revisions.
- CDA – Technical Bulletins:
    1. Inundation, Consequences, and Classification for Dam Safety, 2007
    2. Surveillance of Dam Facilities, 2007
    3. Flow Control Equipment for Dam Safety, 2007
    4. Retracted & Replaced by "Guidelines for Public Safety Around Dams," 2011
    5. Dam Safety Analysis and Assessment, 2007
    6. Hydrotechnical Considerations for Dam Safety, 2007
    7. Seismic Hazard Considerations for Dam Safety, 2007
    8. Geotechnical Considerations for Dam Safety, 2007
    9. Structural Considerations for Dam Safety, 2007

- Canadian Highway Bridge Design Code
- Alberta Transportation Bridge Design Criteria
- Reinforcing Steel Institute of Canada, Standards Practice Manual

3.0 PROJECT DATA

3.1 LOCATION

The project is located in the Springbank area of Rocky View County, Alberta, CA, southwest of the City of Calgary in Township 24 (Range 04/03, W5M).

Latitude	51.050504 N
Longitude	114.401436 W
Elevation	1180 to 1220 m

3.2 FOUNDATION PARAMETERS

Site characterization is based on geologic assessment of the project site, exploratory borings, laboratory testing of project samples, and geotechnical engineering judgement. The following soil foundation parameters were obtained from the Preliminary Design Report (PDR), Appendix D - Geotechnical Assessment Report .

- Soil Classifications
  - Soil Layer 1 – Glacial Lacustrine Clay (CH/CL)
    Layer thickness ranges approximately from 3 m to 5 m
  - Soil Layer 2 – Lean Clay Glacial Till with Sand and Gravel (CL)
    Layer thickness ranges approximately from 8 m to 10 m
  - Depths to bedrock range from 11 m to 15 m
- Effective soil angle of repose (Effective Friction Angle, φ)
  - Lean Clay Glacial Till with Sand: $\varphi = 27$ degrees
  - Lean/Fat Lacustrine Clay: $\varphi = 35$ degrees
- Coefficient of Sliding Friction (μ)
  - Lean Clay Glacial Till with Sand: $\mu = 0.51$
  - Lean/Fat Lacustrine Clay: $\mu = 0.42$
- Subgrade Modulus
  - Lean Clay Glacial Till with Sand: 860 kPa
  - Lean/Fat Lacustrine Clay: 690 kPa

- Allowable Bearing Capacity – Continuous Footings (q)
  - $q_{allowable}$ = 150 kPa Long Term (SF = 3.0)
  - $q_{allowable}$ = 200 kPa Short Term (Seismic and Wind Loading)

In accordance with CDA guidelines Technical Bulletin No. 7 (Geotechnical) and Technical Bulletin No. 8 (Structural), cohesion was not included in the sliding stability analysis, and acceptance criteria for sliding will be based on friction only for resistance.

3.3 HYDROTECHNICAL PARAMETERS

Three hydraulic conditions were considered during the preliminary design and stability analysis of the LLOW components. Table 1 provides a summary of the hydrotechnical parameters used in the design and stability analyses of the LLOW structure.

Table 1. Hydrotechnical Parameters

Reservoir Condition	Headwater EL (m)	Conduit Exit EL (m)	Tailwater EL (m)
Maximum Pool	1213.50*	1184.55	1184.22
10-Year Flood	1191.43	1183.85	1183.75
Empty Reservoir	1187.00	1183.12	1182.81

*Top of Dam Elevation

3.4 CLIMATE DATA

3.4.1 Snow

Snow Load data for this project was obtained from Ontario Climate Centre – Environment Canada.

- Ground snow load, snow component (S_s) =1.7 kPa
- Ground snow load, rain component (S_r) =0.1 kPa
- Snow load, Importance factor (I_s) =1.25

3.4.2 Frost Considerations

Frost depth was determined in accordance with ABC and is shown in PDR, Appendix D - Geotechnical Assessment Report.

- Minimum design frost depth of 2.0 m
- Non-frost susceptible backfill - Gravel and clean sands

3.4.3 Temperature Variations

Monthly temperature data for use in the evaluation was obtained from the Calgary International Airport records, which is considered representative of typical temperature ranges at the project site.

3.4.4 Wind

A wind load of 0.48 kPa was determined for use at the site based on the Alberta Building Code.

4.0 CONSTRUCTION MATERIALS

4.1 CONCRETE AND CONCRETE ACCESSORIES

- **Structural Concrete – Class A1**
  30 MPa @ 28 days, (AT Civil Works Specifications)
  General use reinforced concrete where thermal control and volume change are not a concern.

- **Structural Concrete – Class B1**
  30 MPa @ 90 days, (AT Civil Works Specifications)
  General use reinforced concrete where thermal control and volume change need to be considered (typically thickness > 600 mm)

- **Foundation Concrete - Class F**
  15 MPa @ 28 days, (AT Civil Works Specifications)
  For use in foundation preparation such as mud mats and low strength fill.

- **Grout**
  Premixed structural non-shrink grout for equipment bases.

- **Preformed Expansion Joint Filler**
  ASTM D1752, Type I, Closed-cell sponge rubber.

- **Bond Breaker**
  Bituminous paint conforming to CGSB 37.2-88.

- **Waterstops**
  PVC ribbed profile with minimum rated hydrostatic head of 373 KPa based on joint type.

4.2 METALS

- **Reinforcement** - CAN/CSA-G30.18-92 Grade 400 or 400W deformed bars

- **Structural Steel** - CSA-G40.21, Grade 300W or 350W

- **Stainless Steel** - ASTM A276-04

- **Miscellaneous Metals** (gratings, stairs, ladders, handrails) - Galvanized steel

4.3 EARTHWORK MATERIALS

The LLOW will be constructed on a soil foundation as described in Section 3.2 or placed on compacted embankment materials when the subgrade is poor or too low. Soil backfill materials will be various embankment materials as listed below. Refer to PDR, Appendix D - Geotechnical Assessment Report for design values for soil backfill and riprap parameters.

Design values for the bedding, backfill and embankment fill parameters that will surround the LLOW:

- **Saturated Unit Weight (γ_{sat}) -**
  Embankment Soils: 2040 kg/m^3 or 20.0 kN/m^3

- **Moist Unit Weight (γ_{moist}) -**
  Embankment Soils: 2040 kg/m^3 or 20.0 kN/m^3

- **Effective soil angle of repose (Effective Friction Angle, φ_{eff})**
  Embankment Shell: φ = 24 degrees
  Embankment Core: φ = 28 degrees

- **At-Rest Lateral Pressure Coefficient (K_o)**
  Embankment Shell: K_o = 0.59
  Embankment Core: K_o = 0.53

- **Active Lateral Pressure Coefficient (K_a)**
  Embankment Shell: K_a = 0.42
  Embankment Core: K_a = 0.36

- **Passive Lateral Pressure Coefficient (K_p)**
  Embankment Shell: K_p = 2.37
  Embankment Core: K_p = 2.77

5.0 STRUCTURAL ANALYSIS APPROACH

For the purposes of stability assessment, analysis and structural design, the LLOW was divided into individual structures; intake, pressure conduit segments, gate structure, gravity conduit segments, and CSU rigid basin. Each structure was evaluated, as applicable, for global stability, strength, and serviceability. Each component of the LLOW structures was assessed for applicable imposed loads to which they may be subject per the governing Code criteria. Secondary structures such as gate hoists, gate operating mechanisms, ladders, etc., will be designed to work with the supporting structure and to function as required by the applicable Code.

In general, global stability of a structure was assessed using the rigid body analysis method with the application of unfactored loads. This method uses the summation of forces applied to the rigid body to determine resultant location, foundation bearing pressures, sliding resistance along the concrete/soil interface, and structure floatation. MathCAD, Excel spreadsheets, and commercial software using the rigid body method were used to assess stability of the LLOW structures with the exception of the intake and gate structure. Because of the structural complexity of the intake and gate structure, 3-dimensional finite element method (FEM) models consisting of plate and frame elements and spring boundary conditions were created to validate stability calculations. The FEM was supplemented with manual calculations to verify/validate model results.

Strength evaluation of individual concrete elements and members was performed to verify member sizes and reinforcement requirements in accordance with CSA A23.3-14. In general, structural analyses were performed using MathCAD, Excel spreadsheets, or commercial software. For more complex structures, such as the LLOW intake, the FEM previously developed for stability was used to evaluate multiple load combinations, identify stress concentrations, and generate shear and moment values for design of individual elements. Additional elements evaluated as part of strength design will include joint detailing, equipment anchorage, and evaluation of embedded parts.

Serviceability includes limiting deflections, reducing crack potential, providing thermal stress relief, and incorporating measures to mitigate alkali-aggregate reaction (AAR). A combination of MathCAD, Excel spreadsheets, commercial software, or the FEM used for strength evaluation were used to evaluate deflection and thermal effects. Design detailing and material specification will be used to mitigate concrete cracking and AAR potential.

5.2 MODELING APPROACH

Several modeling and analysis approaches were used for the various LLOW structures based on the methodology that is most appropriate for each structure. Sections 5.2.1 through 5.2.5 summarize the different approaches used for each LLOW structure.

5.2.1 Intake Structure

For the Intake Structure, a finite element model (FEM) was developed using SAP2000. This consists of generating a 3D model that includes geometry, material properties, applied loads, and support conditions of the structure to determine its response to various loading conditions. Frame elements were used to model the columns and beams, while the walls were modeled as thick shell elements. Support conditions for this structure are approximated using linear springs that represent the stiffness of the foundation soil. Due to its complex geometry, the seismic response of the intake structure was evaluated using a Response Spectrum Analysis (RSA) in lieu of a pseudo-static approach. The effects of soil-structure interactions such as kinematic and radiation dampening were considered in the response spectrum analysis. Stability and design loads were determined from SAP2000 analysis output.

5.2.2 Intake Structure Wing Walls

The wing walls for the Intake Structure were modeled as rigid bodies. A one-meter strip of wall cross section was analyzed as a two-dimensional rigid body. This is achieved by performing manual calculations accounting for the geometry and the applicable loading conditions. Seismic analysis of this structure was performed using a pseudo-static/coefficient approach outlined in Section 6.9. Mathcad was used to perform and document the stability analyses and structural design calculations. Resultant and reactant forces are compared against stability criteria and design forces are determined for each element.

5.2.3 Gate Structure

The Gate Structure was modeled using a finite element model (FEM) in SAP2000. Support conditions for this structure include both linear and non-linear springs to represent the stiffness of the soil. Linear springs were used at the base of the footing while non-linear springs were used along the embedded length of the tower to capture soil-structure interaction when lateral loads were present. Non-linear springs are composed of p-y curves output from LPile, with different p-y curves used for the saturated and dry soil conditions. Since the Gate Structure is prismatic in geometry, a pseudo-static approach with lumped masses were used for earthquake analysis. Static equivalent seismic forces were applied at the nodes along the height of the tower in the FEM model. Output from SAP2000 was used for the design and stability analysis of the Gate Structure.

5.2.4 CSU Rigid Basin

The CSU rigid basin was analyzed as a three-dimensional rigid body using hand calculations in Mathcad. This included all the geometric features, boundary conditions, and applied loads. The Mathcad calculations were used for the stability analysis of the structure. Seismic analysis consisted of a pseudo-static/coefficient approach as outlined in Section 6.9. A SAP2000 model will be developed later for the structural design.

5.2.5 Concrete Conduits

The LLOW conduit was divided into two sections separated by the Gate Structure The section located upstream of the Gate Structure operates under pressure and the surcharge from the embankment shell, while the section located downstream of the Gate Structure operates under gravity flow and under the highest surcharge from the embankment core. To determine the resultant forces acting on the two concrete conduit structures, finite element models (FEM) were developed to assess the earth's pressure. The FEMs were developed using the module Sigma/W from the computer program GeoStudio (2018). The results from the FE analysis were verified using the Direct Design method.

The Direct Design method is recommended by the City of Calgary for the design of rigid gravity sewer pipes ("Standard Practice for Design and Installation of Rigid Gravity Sewer Pipe in the City of Calgary", Letter: UMA/AECOM to City of Calgary, January 21, 2008). This method was developed as a Standard Practice under ASCE Standard Practice 15, which requires a series of assumptions relative to initial conditions and conduit section properties. The pressure distribution calculations are based on the Heger pressure distribution model.

6.0 LOADS

6.1 DEAD LOADS (D)

Permanent loads on the structure include concrete structure weight and water. Unit weights for principal materials are included in Table 2.

Table 2. Dead Load and Unit Weights

Material	Unit Weight	Source
Water	9.81 kN/m^3	CSA S6-14, Table 3.4
Reinforced Concrete	23.5 kN/m^3	AT WCS Design Guide 4.2
Steel	77.0 kN/m^3	AT WCS Design Guide 4.2

6.2 HYDROSTATIC LOADS (H)

Hydrostatic loads include both horizontal and vertical component of water load based on water surface elevations for the load conditions considered. Upstream and downstream water surface elevations are described in Hydrotechnical Parameters, Section 3.3. The water surface elevations were considered to be hydrostatic pressures without kinematic effects.

6.3 UPLIFT PRESSURE (U)

Uplift pressure and countermeasures for the intake and gate structures were determined per EM 1110-2-2100, Stability Analysis of Concrete Structures. Since the intake and gate structures were within the reservoir, a uniform uplift equivalent to the reservoir hydrostatic head was applied along the base of the structure. Uplift pressures for the upstream pressure conduit were determined per EM 1110-2-2902, Conduits, Culverts, and Pipes. The uplift applied along the base of the upstream pressure conduit was a constant hydrostatic head equivalent to the reservoir pool elevation. Uplift pressures for the CSU rigid basin were determined per EM 1110-2-2100. The basin uplift pressures varied linearly from the conduit exit water elevation to the downstream channel water surface elevation. Refer to Table 1 for a summary of the pool conditions considered during the stability analyses of the LLOW components.

6.4 EARTH PRESSURE (E)

Soil loads include both vertical and horizontal forces due to backfill, sediment and siltation. Vertical forces associated with soil mass above the structure were based on a vertical projection of footing or structure below the soil. Soil mass was based on moist unit weight for material above the waterline and buoyant unit weight for material below the waterline. Vertical force associated with water above the structure was calculated separate from the soil mass.

Horizontal force associated with soil was based on at-rest condition represented by the empirical relationship:

$K_o = 1 - \sin\theta$ where: K_o = At-rest lateral pressure coefficient(*)
θ = Soil friction angle

**In accordance with EM 1110-2-2100 and EM 1110-2-2502 to use At-Rest Coefficient (K_o)*

6.5 LIVE LOADS (L)

The principal live loads on the LLOW include Occupancy Loads (O), such as on the top of the intake structure and within the gate structure, and construction and maintenance Vehicle Loads (V) on the access bridge and over and adjacent to the back face of the intake structure and wing walls, conduit, gate structure, and stilling basin walls. In addition, Hoist/Equipment Loads are associated with gate removal/installation and operation. Live Loads described in this section were considered transitory loads. Transitory loads are used for strength design of individual structure elements, but normally not included in stability analyses. They will be included in strength design for individual components.

Vehicle (vertical and horizontal)	CL-625	
Vehicle (on access bridge)	H5	
Hoist & Equipment	TBD	
Occupancy & Access	3.6 KPa	(2014 Alberta Building Code Table 4.1.5.3)
Heavy Equipment Surcharge	20 kPa	(AT WCS, Section 4.9)

A heavy equipment surcharge of 20 KPa, equivalent to one meter of backfill, was applied to the intake structure, gate structure, and stilling basin retaining wall fills to account for future modifications, long term storage materials and top of wall modifications. This load was not applied simultaneously with vehicle loads.

6.6 HYDRODYNAMIC LOADS (HD)

Hydrodynamic loads include wave action, sub-atmospheric pressure (cavitation), and hydraulic dissipater forces. For the LLOW, these forces were excluded from the analysis since they were considered insignificant or of a localized nature.

- Wave action was not included due to the short-term duration of water storage and relatively short fetch.

- Sub-atmospheric pressure (cavitation) is associated with flow offsets and gates in outlet works. Cavitation is a primary concern at the stainless-steel gates and passages in the gate chamber. Detailing of these areas will minimize effects of sub-atmospheric pressures.

- Hydraulic dissipater forces are localized forces addressed in the hydraulic design of the CSU rigid basin baffles.

6.7 DEBRIS AND IMPACT LOADS

Impact loads associated with debris flows will be developed during final design. For the Preliminary Design, the critical impact load location for stability was identified as the downstream face of the structure at the 10-Year Flood pool elevation.

Impact loading associated with debris flow for structural capacity of the various members of the structure will be determined per FEMA P-55, "Coastal Construction Manual," Volume II, August 2011, Section 8.5.10 - Debris Impact loading.

6.8 ICE LOAD(I)

Three types of ice load to consider for the LLOW hydraulic structures design include Static Ice Load (I_s), Dynamic Ice Loading (I_d), Ice Accretion Load (I_v)

- **Static Ice Load (I_s)** is a result of water surface freezing with application of horizontal load as ice sheet expands and confinement increases. Static ice loading has the potential to occur since the unnamed creek flows through the conduit continuously. Static Ice Load was applied in Usual Load Cases which address winter operating conditions.

- **Dynamic Ice Loading (I_d)** is a result of moving ice floe impacting the structure. Dynamic Ice Load was not be considered as a design load case since there is no permanent pool.

- **Ice Accretion Load (I_v)** occurs when ice bonds to the structure and must be broken as water level rises. Ice Accretion Load associated with water level rise was not considered for the LLOW structures due to small order of magnitude relative to hydrostatic loading and low probability of occurring simultaneously with spring and summer flooding.

Frost Heave. Vertical ice loading associated with "frost heave" is a realistic consideration since the structures are normally in a dewatered or low-water state with freeze/thaw action tending to open concrete/foundation interface and subject the structure to increased uplift potential. To reduce frost heave loading potential and remove this condition from the analysis, foundation interfaces were located below the identified frost depth of 2 m for this site, drainage provided to reduce the formation of ice in the foundation, or insulation placed to form a thermal break between concrete and foundation..

Table 3. Ice Loads

Ice Condition	Load	Source
Static Ice (applied to concrete structures)	150 kN/m @ 0.3 m below WSE	AT WCS Design Guide 4.5.1.1
Static Ice (applied to steel structures)	75 kN/m @ 0.3 m below WSE	AT WCS Design Guide 4.5.1.1
Vertical Ice	N/A – Since foundation interface located below frost depth	N/A

6.9 SEISMIC – EARTHQUAKE LOADS (Q)

The seismic classification for the LLOW is based on Stantec's Seismic Hazard Assessment - Springbank Off-Stream Dam and Reservoir Report dated November 28, 2016. Since the hazard classification is Extreme for the Off-stream Storage Dam, the seismic parameters are based on an Earthquake Design Ground Motion (EDGM) with an Annual Exceedance Probability (AEP) of 1/10,000 resulting in Peak Ground Acceleration (PGA) of 0.28 g for horizontal application and PGA of 0.16 for vertical application.

The seismic loading for the intake structure was performed using a response spectrum analysis. The horizontal and vertical ground motions used in this analysis are presented in Table 4 and the response spectra presented in Figure 1.

Table 4. Horizontal and Vertical Ground Motions

Horizontal Ground Motions (Vs30 = 265 m/s)		Vertical Ground Motions (Vs30 = 265 m/s)	
Period (s)	Horizontal Ground Motions	Ratio of Vertical to Horizontal Ground Motions	Vertical Ground Motions
0.05	0.3300	0.94	0.3102
0.1	0.4700	0.81	0.3807
0.2	0.6400	0.5	0.3200
0.3	0.6900	0.4	0.2760
0.5	0.5200	0.36	0.1872
1	0.2600	0.37	0.0962
2	0.1100	0.43	0.0473
5	0.0340	0.48	0.0163
10	0.0087	0.76	0.0066

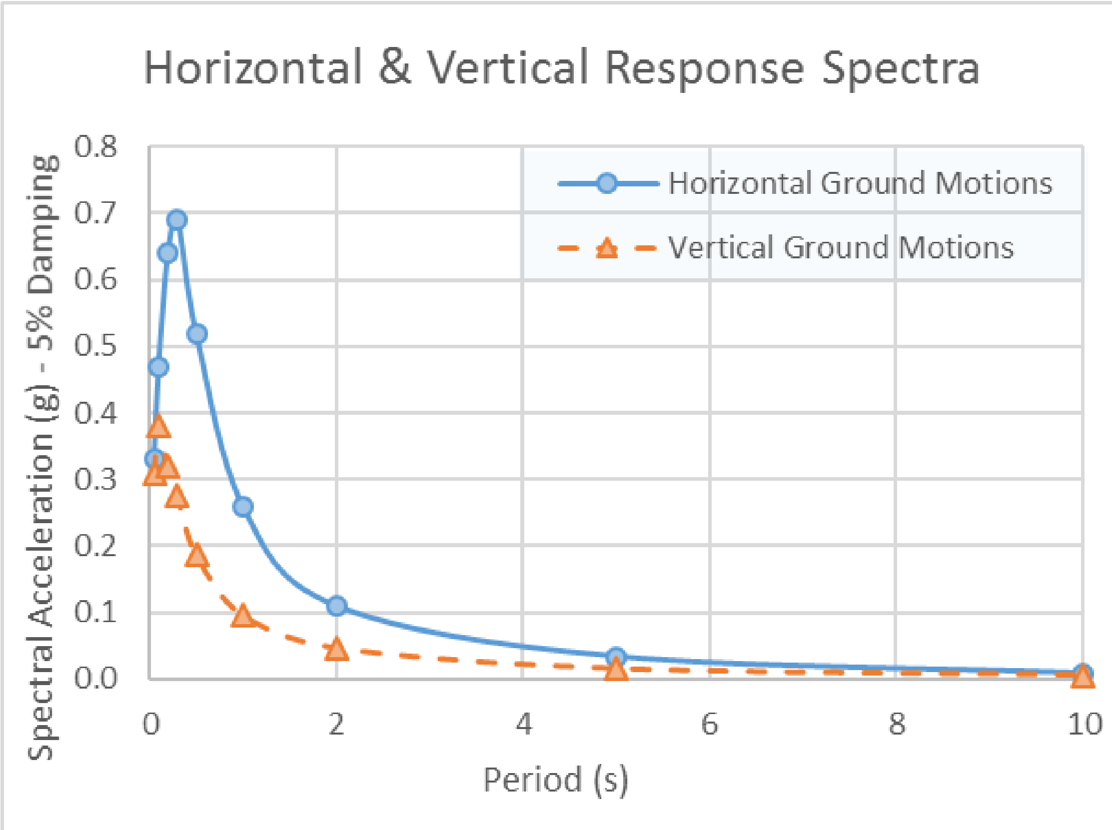

Figure 1. Horizontal and Vertical Ground Motions

This project site is situated in an area of low to moderate seismic activity. Consequently, CDA Guidelines, Section 6.5, allow for the seismic stability analysis of concrete gravity structures to be completed using a pseudo-static approach (coefficient method). This method applies a seismic force to a rigid body with the objective of determining sliding and overturning response of the structure. Since the pseudo-static method does not recognize the oscillatory nature of seismic loads, accepted practice is to perform the stability calculations using sustained acceleration values equivalent to 2/3 of the peak acceleration values.

When performing concrete stress analyses, the objective is to determine the tensile crack length induced by the inertia forces applied to the structure, so peak acceleration is used to calculate seismic coefficients. This approach assumes an instantaneous acceleration spike can induce cracking but is not sustained long enough to develop significant displacement along the crack plane. If no significant displacement occurs, the dynamic stability is maintained.

6.9.1 Seismic Effects on Concrete Mass

The horizontal force required to accelerate the concrete mass is calculated as:

$Q_h = k_h \times W$ where: Q_h = Horizontal seismic load (kN)
k_h = Horizontal seismic coefficient
W = Structure mass (kg)
PGA = Peak ground acceleration= 0.28g

For Stability Analysis (Table 5): k_h = 2/3 x 0.28 = 0.19
For Stress Analysis (Table 6): k_h = 1.0 x 0.28 = 0.28

The vertical force required to accelerate the concrete mass is calculated as:

$Q_v = k_v \times W$ where: Q_v = Vertical seismic load (kN)
k_v = Horizontal seismic coefficient = 0.56*k_h
W = Structure mass (kg)

For Stability Analysis (Table 5): k_v = 2/3 x (0.56*k_h) = 0.10
For Stress Analysis (Table 6): k_v = 1.0 x (0.56*k_h) = 0.15

Since an earthquake produces oscillating forces, the horizontal PGA and vertical PGA cannot occur at the same time. To account for this in the stability calculations, three separate combinations of vertical and horizontal seismic combinations will be considered, but only the maximum value will be reported. The three combinations of vertical and horizontal seismic load are as follows:

Table 5. Stability Analysis – Seismic Coefficients

Seismic Combination	Horizontal	Vertical
100% Horiz., No Vert.	1.0*k_h = 0.19	-
100% Horiz., 30% Vert.	1.0*k_h = 0.19	0.3*k_v = 0.03
30% Horiz., 100% Vert.	0.3*k_h = 0.06	1.0*k_v = 0.10

Table 6. Stress Analysis – Seismic Coefficients

Seismic Combination	Horizontal	Vertical
100% Horiz., No Vert.	1.0*k_h = 0.28	-
100% Horiz., 30% Vert Horiz.	1.0*k_h = 0.28	0.3*k_v = 0.05
30% Horiz., 100% Vert.	0.3*k_h = 0.08	1.0*k_v = 0.16

6.9.2 Seismic Effects on Water (H_E)

No water loads are associated with seismic load cases for the LLOW.

6.9.3 Seismic Effect on Soils

Dynamic soil pressures and associated forces were analyzed assuming non-yielding backfills and an elastic response using Wood's method. As referenced in Section 5-5.a.1, EM 1110-2-2100, this method can be expected to have dynamic soil pressures greater than those predicted by the Mononobe-Okabe method for yielding backfills.

The use of Wood's method is considered reasonable and was used for analysis of the LLOW wing walls and CSU rigid basin that have relatively short backfills (<4 m). The use of Wood's method may be overly conservative for taller retaining walls with height ranging from 4 m to 13 m with backfill consisting of granular fills and/or glacial till materials.

Wood's Method for Non-yielding Backfill: This method applies the effective peak ground acceleration coefficient (k_h) to the soil mass to calculate a lateral seismic force representing dynamic soil pressure effects. The lateral seismic force is assumed to act at a distance of 0.63h above the base of the wall and must be added to the lateral inertial forces, and if water is present, hydrodynamic seismic forces. Calculation of lateral seismic force of soil is as follows:

$$Q_E = y * h^2 * k_h$$

Where: Q_E = Lateral seismic force of soil
Y = unit weight of soil (weighted average of Y_{sat} and y_b)
h^2 = height of backfill
k_h = horizontal seismic coefficient

6.10 CLIMATIC CONDITIONS

6.10.1 Snow Loads (S)

Snow loads were considered insignificant compared to hydrostatic loads and not considered for stability of the LLOW structures. However, Snow Load will be included in load combinations for certain component designs such as the top of the intake and gate structures. Snow load data is listed in Section 3.4.1 above.

6.10.2 .Thermal Loads (T)

Thermal loads for the conduit segments will be evaluated during Final Design.

6.10.3 Wind (W)

Wind loads will be estimated for the Intake and Gate structures in accordance with the Alberta Building Code 2014. The specified wind load and the pertinent parameters to be utilized in the load derivation are summarized below:

Specified Wind Load (p_w) = 0.48 kPa

Importance Factor (I_w) = 1.25

Exposure Factor (C_e) = 0.7

Gust Effect Factor (C_g) = 2.0

7.0 STABILITY ANALYSIS

The intake structure and wing walls, conduit, gate structure, and stilling basin were analyzed for stability for the loading conditions described below, in accordance with AT/CDA Guidelines. Analysis methodology is as follows:

7.1 METHODOLOGY

7.1.1 Overturning and Bearing Stress

The Rigid Body Method (conventional gravity method) was used for the analysis of overturning and bearing stress criteria. Overturning was evaluated as a percentage of base that remains in compression and not a safety factor. This method is outlined in Section 7.2 of CDA Technical Bulletin No. 9 and further described in USACE EM 1110-2-2100. It uses a vector summation of all forces, including uplift, acting on the monolith to determine the vector resultant force (V), resultant force eccentricity (e) within the base, and moment (Ve/S) based on an elastic and homogeneous rectangular beam analogy. Stresses were calculated as indicated below and stability was assured by maintaining the resultant force eccentricity within acceptance criteria limits for various loading conditions.

$$\sigma = \frac{V}{A} \pm \frac{Ve}{S}$$

Where: σ = Applied bearing pressure at each end of base (kN/m^2)
V = Summation of forces normal to base (kN)
A = Base area in compression (m^2)
e = Eccentricity of normal load about centroid of base in compression (m)
S = Section modulus of base area in compression (m^3)

7.1.2 Sliding

The sliding factor of safety was calculated for each load case using the limit equilibrium method as outlined in Section 7.2 of CDA Technical Bulletin No. 9. This method reduces to the equation shown below for a single wedge system with a horizontal sliding plane, along the concrete/rock interface (CRI) or through rock/rock failure plane as identified for each hydraulic structure. For inclined sliding planes projecting from the base of shear key to bottom base slab at the toe, vertical and horizontal forces are resolved into components normal and parallel to the sliding plane. Rock mass between the inclined plane and structure base is included in the dead load summation (EM 1110-2-2100). For this project, cohesion was conservatively assumed to be zero and sliding acceptance criteria for sliding were based only friction angle.

$$SSF = \frac{(Vtan\varphi + c\ A)}{H}$$

Where: SSF = Sliding Safety Factor
V = Summation of vertical loads including uplift (kN)
$tan\ \varphi$ = Coefficient along sliding plane being considered
c = Cohesion at concrete/rock or rock/rock interface (assumed as 0) (kN/m^3)
A = Base area in compression (m^2)
H = Summation of horizontal forces (kN)

7.1.3 Floatation

The floatation factor of safety was determined for components of the project such as stilling basins and apron slabs as outlined in Section 8.5, AT WCS. The factor of safety against floatation is defined as ratio of resisting gravity force to driving uplift force. The possible resistance due to friction between adjacent structures or between structure and backfill were neglected unless shear provisions were provided.

$$FSF = \frac{\Sigma N}{\Sigma U}$$

Where: FSF = Factor of Safety against Floatation
ΣN = Summation of normal forces
ΣU = Summation of uplift forces

7.2 ACCEPTANCE CRITERIA

The following acceptance criteria is based on AT WCS Chapter 8, CDA Table 6-4, and CDA Technical Bulletin No. 8, Section 6.0. The load cases to be evaluated are divided into five categories as listed in Table 7.

Usual Condition: Those conditions under which the structure is intended to serve during normal operations and further defined as a condition that has a high likelihood of occurring within the design life of the structure. Usual load conditions include normal pool and winter conditions. For the LLOW structures, this includes flood events up to the 100-year frequency flood for the Extreme hazard category.

Unusual Condition: Those conditions that occur infrequently and may stress the structure more, under certain aspects, than normal conditions and may occur within the design life of the structure. Unusual load conditions include construction conditions, maintenance conditions, flood events between the 100-year and 1000-year frequency, infrequent earthquake events other than the MDE, and plugged drain conditions for Usual Load Cases.

Extreme – Flood: Extreme Load Conditions have a very remote likelihood of occurring with the design life of the structure. For the SR1 project, it is defined as those floods that occur from the 1000-year frequency event up to the structure's IDF. For the LLOW, the PMF is considered the IDF as it is part of the Storage Dam.

Extreme – Earthquake: For the SR1 project, the Extreme - Earthquake load condition to be assessed is the MDE as it has a very remote likelihood of occurring with the design life of the structure. The MDE is applied to the Usual Condition load cases. The Extreme – Earthquake condition is used to establish Post-Earthquake condition of the hydraulic structure. Thus, there are no stability acceptance criteria for this condition.

Post-Earthquake: The Post-Earthquake condition assesses the stability of the hydraulic structure following the applied seismic event based on earthquake induced cracking at the foundation structural interface and within the structure so that it is still capable of resisting the Usual Loading.

Table 7. Acceptance Criteria for Hydraulic Structures

Loading Combination	Position of Resultant Force (Percent of Base in Compression)[1]	Normal Compression Stress[2]	Sliding Safety Factor (Friction Only)	Floatation Safety Factor
Usual	Middle third of the base: 100% compression	<0.3 x f_c	≥1.5	≥1.5
Unusual	Middle third of the base: 100% compression	<0.5 x f_c	≥1.3	≥1.3
Extreme Flood	Within middle half of the base, and all other acceptance criteria must be met	<0.5 x f_c	≥1.1	≥1.1
Extreme Earthquake	Within the base, except where an instantaneous occurrence of resultant outside the base may be acceptable	<0.9 x f_c	Note [3]	
Post-Earthquake	Within middle half of the base	<0.5 x f_c	≥1.0	≥1.1

[1] Foundation bearing stress is compared to allowable stress determined from Geotechnical Investigation

[2] Where f_c = compressive strength of concrete

[3] The earthquake load case is used to establish post-earthquake condition of the structure

7.3 LOAD CONDITIONS

Load conditions varied for the various structures based on configuration and location of each applied load. The following sections summarize the load conditions for various LLOW structures.

7.3.1 Intake Structure

The loading conditions that were considered in the analysis of the Intake structure are summarized in Table 8.

Table 8. Intake Structure - Load Cases and Stability Acceptance Criteria

Load Case	Description	Loading	Sliding Safety Factor*	Resultant Location*	Bearing Stress**	Flotation Safety Factor***
LC01	Usual: Empty Reservoir	Dead + Earth + Uplift + Wind + Snow	1.5	Middle 1/3	< Allowable	1.5
LC02	Unusual: Construction	Dead + Earth + Uplift + Wind + Surcharge	1.3	Middle 1/3	< Allowable	1.3
LC03	Unusual: 10-Y Flood	Dead + Earth + Hydro + Uplift	1.3	Middle 1/3	< Allowable	1.3
LC04	Extreme: 10-Y Flood + Impact	Dead + Earth + Hydro + Uplift + Impact	1.1	Middle 1/2	< Allowable	1.1
LC05	Unusual: 10-Y Flood (Plugged Trashracks)	Dead + Earth + Hydro + Uplift	1.3	Middle 1/3	< Allowable	1.3
LC06	Extreme: Maximum Pool	Dead + Earth + Hydro + Uplift	1.1	Middle 1/2	< Allowable	1.1

LC08	Post Earthquake	Dead + Earth + Uplift	1.1	Within Base	< Allowable	1.1
1	Response Spectrum Analysis; EQ=max [24 combinations of EQx, EQy, EQz]					
*	CDA: Dam Safety Guidelines 2007 (Revised 2013), Section 6.7 & Alberta Transportation: Water Control Structures 2004, Section 8.4					
**	Alberta Transportation: Water Control Structures 2004, Section 8.4					
***	Alberta Transportation: Water Control Structures 2004, Section 8.5					

The load cases and acceptance criteria for the intake structure were derived from a combination of several guideline documentations and are described as follows:

Empty Reservoir: The empty reservoir loading condition consists of an empty reservoir with the structure subjected to its self-weight, and other external forces such as wind, snow, and soil loads. The ground water elevation is assumed to be at the top of base elevation. Therefore, a uniform uplift equivalent to the hydrostatic head at the base of the structure is applied against its base.

Construction: After the intake tower is fully constructed, embankment soil will be placed and compacted around it. Construction equipment and soil compaction activities tend to impose additional loads on the structure. This loading condition consists of the structure's self-weight, empty reservoir uplift, fully constructed embankment soil pressures, and an additional one meter of soil surcharge against the downstream face of the intake structure.

10-Year Flood: This condition consists of a reservoir pool elevation of 1191.43 m with the structure subjected to its self-weight, soil loads, hydrostatic loads, and full uniform uplift at the base of the structure.

10-Year Flood with Debris Impact: For this loading, the reservoir pool elevation is at 1191.43 m due to the 10-year flood. The structure is subjected to its self-weight, debris impact, soil loads, hydrostatic loads, and full uniform uplift at the base of the structure. The critical location for the impact load was identified on the downstream face of the structure at the pool elevation. Since the water velocity near that location is unknown and likely very low, a nominal debris impact of 5.0 kN, applied on the downstream face of the structure at the pool elevation, was used in the analysis.

Earthquake: The earthquake loading condition consists of performing response spectrum analyses for the intake structure. The analyses included self-weight, embankment soil loads, empty reservoir uplift loads, and embankment soil added mass. As described in Section 6.9, three major cases of combined vertical and horizontal response spectrum analyses were conducted. Those three cases were then combined in 24 different ways in SAP2000 and the enveloping results of the worse combinations were used for the stability analysis of the intake structure.

7.3.2 Intake Structure Wing Walls

The loading conditions that were considered in the analysis of the Wing Walls are summarized in Table 9. Empty reservoir, construction, and post-earthquake loading conditions are as described for the intake tower. Rapid drawdown consists of fully saturated backfill with no standing water on either side of the wall. The earthquake loading involves the empty reservoir loading conditions combined with additional inertial load due to the design earthquake using a pseudo-static coefficient method of analysis and design. Refer to Table 5 for the seismic coefficients used in the wing wall design.

Table 9. Wing Walls - Load Cases and Stability Acceptance Criteria

Load Case	Description	Loading	Sliding Safety Factor*	Resultant Location*	Bearing Stress**	Flotation Safety Factor***
LC01	Usual: Empty Reservoir	Dead + Earth + Hydrostatic + Uplift	1.5	Middle 1/3	< Allowable	1.5
LC02	Unusual 1: Construction	Dead + Earth + Hydrostatic + Uplift + Surcharge	1.3	Middle 1/3	< Allowable	1.3

7.3.3 Gate Structure

The loading conditions that were considered in the analysis of the Gate Structure are summarized in Table 10.

Table 10. Gate Structure - Load Cases and Stability Acceptance Criteria

Load Case	Description	Loading	Sliding Safety Factor*	Resultant Location*	Bearing Stress**	Flotation Safety Factor***
LC01	Usual: Empty Reservoir	Dead + Live + Earth + Uplift + Wind + Snow	1.5	Middle 1/3	< ALLOWABLE	1.5

1 Seismic Analysis; EQ=max [24 combinations of EQx, EQy, EQz]
* CDA: Dam Safety Guidelines 2007 (Revised 2013), Section 6.7 & Alberta Transportation: Water Control Structures 2004, Section 8.4
** Alberta Transportation: Water Control Structures 2004, Section 8.4
*** Alberta Transportation: Water Control Structures 2004, Section 8.5

The load cases and acceptance criteria for the gate structure were derived from a combination of several guideline documentations and as described below:

Empty Reservoir: The empty reservoir loading condition consists of an empty reservoir with the structure subjected to its self-weight, bridge reaction loads, building occupancy loads, and other external forces such as wind, snow, and soil loads. The ground water elevation is assumed to be at the top of the footing, resulting in uniform uplift at the base.

Construction: This load case assumes the tower is partially constructed before the embankment is placed (50%), which results in the lowest bearing capacity (minimum embedment). This is a conservative estimate for the portion of the tower that may be constructed before any embankment is in place. This loading condition consists only of the structure's self-weight.

10-Year Flood: This condition consists of a reservoir pool elevation of 1191.43 m with the structure subjected to its self-weight, soil loads, hydrostatic loads, and full uniform uplift at the base of the structure. There are two cases considered for this scenario: one in which both gates are open, and one that only the front gate is closed. These cases bound any scenarios that exist between the two.

Maximum Pool: This condition is identical to the 10-year flood except for the elevation of the pool. For this case, the pool is taken to be its maximum possible elevation which coincides with the top of the gate structure, Elevation 1213.5 m.

Earthquake: Since the gate structure is prismatic in geometry, a pseudo static approach was appropriate for the assessing the earthquake loading condition. Using an equivalent static procedure allows for the use of non-linear soil springs to be used along the height of the tower embedment to capture the tower's interaction with the soil. The horizontal acceleration used to accelerate the mass is conservatively taken as the PGA (0.28g). The analyses include self-weight, embankment soil added mass, and other miscellaneous dead loads that contribute to the seismic mass of the structure. As described in Section 6.9, three major cases of combined vertical and horizontal seismic loads were conducted. Those three cases are analyzed with 24 different combinations of varying directions in SAP2000 with a stability analysis being performed for each direction.

7.3.4 CSU Rigid Basin

The CSU rigid basin was analyzed for sliding, resultant location, bearing, and floatation. Refer to Figure 2 for the basin load diagram.

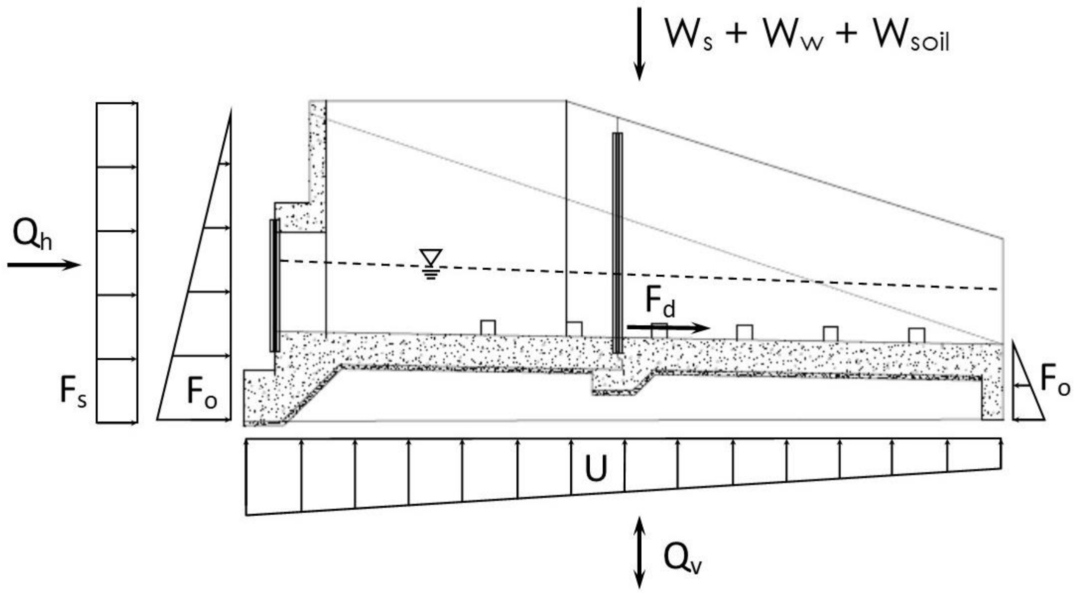

Figure 2. CSU Rigid Basin Load Diagram

Where:

W_s = weight of the structure
W_w = weight of the water in the structure
W_{soil} = weight of soil on the structure
F_o = at-rest soil force
F_s = surcharge force
F_d = dynamic water force on the structure
U = uplift
Q_h = horizontal earthquake load (soil & structure inertia forces)
Q_v = vertical earthquake load

As shown in Table 11, seven loading conditions were considered for the stability analysis of the CSU rigid basin.

Table 11. CSU Rigid Basin - Load Cases and Stability Acceptance Criteria

Load Case	Description	Loading	Sliding Safety Factor*	Resultant Location*	Bearing Stress**	Floatation Safety Factor***
LC01	Usual: Dry Condition	Dead + Earth	1.5	Middle 1/3	< ALLOWABLE	1.5
LC02	Unusual: 10-Year Flood	Dead + Earth + Hydro + Uplift	1.3	Middle 1/3	< ALLOWABLE	1.3

*** Alberta Transportation: Water Control Structures 2004, Section 8.5
[1] Seismic coefficient analysis for three load combination as follows:
Case6a = 1kh +/- 0kv
Case6b = 1kh +/- 0.3kv
Case6c = 0.3kh +/- 1kv

Description of the load conditions in Table 11 for the CSU rigid basin were:

Dry Condition: Dry soil and empty basin

10 Year Flood: Soil saturated and water in basin from tail water depth (= 0.63 m) to headwater depth (= 0.73 m).

Rapid Gate Closure: Soil saturated from tail water depth (= 1.10 m) to headwater depth (= 1.43 m) and empty basin

Construction/Maintenance: Dry soil, empty basin, and surcharge load equivalent to one meter of soil

Maximum Flow: Soil saturated and water in basin from tail water depth (= 1.10 m) to headwater depth (= 1.43 m)

Earthquake : Dry soil, empty basin, and earthquake loads applied. Three earthquake cases were analyzed as indicated in Table 11.

Post-Earthquake: Dry soil and empty basin with base area in contact taken as the position of the structure following the earthquake analysis. If the resultant location for the Earthquake load case is within the middle third, the Post-Earthquake load case passes by inspection.

7.3.5 Concrete Conduits

The Concrete Conduits were designed in accordance with Alberta Transportation: "*Water Control Structures*" in conjunction with guidelines from the US Army Corps of Engineers' EM 1110-2-2902 "*Conduits, Culverts, and Pipes*" and FEMA's "*Technical Manual: Conduits through Embankment Dams*". The pressure conduit was analyzed for floatation considering the load cases as shown in Table 12. Flood water retained in the reservoir was assumed to be of such short duration that development of a phreatic water surface through the embankment would not occur. Therefore, the downstream gravity conduit was not included in the floatation safety factor evaluation.

Table 12. Pressure Conduit - Load Cases and Stability Acceptance Criteria

Load Case	Scenario	Loading	Floatation Safety Factor*
U1	Usual Load Condition 1: Empty Reservoir	Dead	-**
UN1	Unusual Load Condition 1: Construction	Dead + Equipment Surcharge	-**
UN2***	Unusual Load Condition 2: Conduit submerged with water inside of conduit	Dead + Hydro + Uplift	1.3
UN3***	Unusual Load Condition 3: Conduit submerged with no water inside of conduit	Dead + Hydro + Uplift	1.3
E1	Extreme Load Condition 1: Empty Reservoir and earthquake load	Dead + Seismic	-**

**Groundwater elevation is assumed at bottom of conduit base.
***Only applicable to the pressure conduit section.

7.4 SUMMARY OF STABILITY ANALYSES

Stability analyses for the LLOW structures were performed in accordance with criteria and procedures outlined in the CDA Technical Bulletin No. 9, "Structural Considerations for Dam Safety", and the USACE EM 1110-2-2100 "Stability Analysis of Concrete Structures." Each section or structure was evaluated for Usual, Unusual, Extreme, and Post-Seismic loading conditions representing potential conditions the structure will experience during its design life. Summaries of the stability calculation results are presented in the sections that follow. Refer to Appendices E.5-1 to E.5-4 for stability calculations and results.

7.4.1 Intake Structure

Stability analysis results for the intake structure are summarized in Table 13. As shown in Table 13, the intake structure meets the criteria for sliding, resultant location, floatation, and bearing capacity for the analysis load cases. Refer to Appendix E.5-1 for detailed stability analysis calculations for the Intake Structure.

Table 13. Intake Structure - Stability Analysis Results Summary

Load Case	Reservoir Elevation (m)	Floatation Safety Factor (FSF)		Sliding Safety Factor (SSF)		Foundation Bearing Stress (kPa)		Resultant Location	
		Req.	Calc.	Req.	Calc.	Req.	Calc. (Max)	Req.	Calc.
Usual Load Cases									
LC01- Empty Reservoir (Winter)	1187.00	1.5	8.8	1.5	>10	200	133	100%	100%
LC02 – Empty Reservoir (Summer)	1187.00	1.5	8.7	1.5	>10	200	132	100%	100%
Unusual Load Cases									
LC03 – Construction	1192.00	1.3	9.2	1.3	8.0	200	142	100%	100%
LC04 – 10-Year Flood	1192.00	1.3	2.2	1.3	>10	200	120	100%	100%
Extreme – Flood									
LC05 – 10-Year Flood + Impact	1192.00	1.1	2.2	1.1	7.0	200	131	75%	100%
LC06 – 10-Year Flood + Clogged Trashracks	1192.00	1.1	2.0	1.1	>10	200	102	75%	100%
LC07 – Maximum Pool	1213.50	1.1	1.3	1.1	9.0	200	103	75%	100%
Extreme – Earthquake									
LC08[1] - Earthquake	1187.00	*n/a*	*10.8 – 9.3*	*n/a*	*3.4 – 1.0*	*n/a*	*199-450*	*>0%*	*100% - 51%*
LC09 – Post-Earthquake	1187.00	1.1	8.7	1.1	>10	600[2]	326	100%	100%

1- *No criteria for Earthquake cases. Results are for post-earthquake estimate. A range of results is provided for 24 seismic acceleration configurations.*
2- *Ultimate bearing pressure is used.*

7.4.2 Intake Structure Wing Walls

Stability analysis results for the Wing Walls are summarized in Table 14. The proposed Wing Walls meet the stability criteria described in section for sliding, resultant location, floatation, and bearing capacity for the analysis load cases. Detailed stability calculations for the wing walls are provided in Appendix E.5-1.

Table 14. Intake Structure Wing Walls - Stability Analysis Results Summary

Load Case	Reservoir Elevation (m)	Floatation Safety Factor (FSF)		Sliding Safety Factor (SSF)		Foundation Bearing Stress (kPa)		Resultant Location	
		Req.	Calc.	Req.	Calc.	Req.	Calc. (Max)	Req.	Calc.
Usual Load Cases									
LC01- Empty Reservoir	1187.00	1.5	4.7	1.5	10.9	150	88	100%	100%
Unusual Load Cases									
LC02 – Construction	1187.00	1.3	4.7	1.3	1.7	150	136	100%	100%
LC03 – Rapid Drawdown	1189.75[3]	1.3	2.1	1.3	1.3	150	107	100%	100%
Extreme – Earthquake									
LC04[1] - Earthquake	1187.00	*n/a*	4.6	*n/a*	*2.1*	*n/a*	*196*	*>0%*	*65.7%*
LC05 – Post-Earthquake	1187.00	1.1	4.4	1.1	2.3	450[2]	450	100%	100%

1- No criteria for Earthquake cases. Results are for post-earthquake estimate. Worse case result is provided for 4 seismic acceleration configurations.
2- Ultimate bearing pressure is used.
3- Top of wing wall elevation

7.4.3 Gate Structure

Stability analysis results for the Gate Structure are summarized in Table 15. The intake structure meets the criteria for sliding, resultant location, floatation, and bearing capacity for the analysis load cases considered. Detailed stability calculations for the Gate Structure is provided in Appendix E.5-2.

Table 15. Gate Structure - Stability Analysis Results Summary

Load Case	Reservoir Elevation (m)	Floatation Safety Factor (FSF)		Sliding Safety Factor (SSF)		Foundation Bearing Stress (kPa)			Resultant Location	
							Calc. (Max)			
		Req.	Calc.	Req.	Calc.	Req.	Long Term	Short Term	Req.	Calc.
Usual Load Cases										
LC01- Empty Reservoir	1186.36	1.5	>10	1.5	>10	427	412	424	100%	100%
Unusual Load Cases										
LC02 – 10-Year Flood, Gates Open	1191.43	1.3	6.1	1.3	>10	427	368	384	100%	100%

1- No criteria for Earthquake cases. Results are for post-earthquake estimate.

7.4.5 Concrete Conduit

The stability analysis results for the Pressure Conduit are summarized in Table 17. Detailed stability calculations for the Concrete Conduit is provided in Appendix E.5-4.

Table 17. Pressure Conduit - Stability Analysis Results Summary

Load Case	Loading Type	Floatation Safety Factor
U1	Usual Load Condition 1: Empty Reservoir	-**
UN1	Unusual Load Condition 1: Construction	-**
UN2	Unusual Load Condition 2: Conduit submerged with water inside of conduit	1.9
UN3	Unusual Load Condition 3: Conduit submerged with no water inside of conduit	1.7
E1	Extreme Load Condition 1: Empty Reservoir and earthquake load	-**

**Groundwater elevation is assumed at bottom of conduit base.

8.0 STRENGTH EVALUATION AND DESIGN

Strength evaluation of individual elements or members of structures and monoliths was used to verify member sizes and steel reinforcement based on application of factored loads as described in the ABC with some adjustment for more severe conditions or loads not included in the ABC.

Reinforced concrete design was performed according to Design of Concrete Structures, CSA A23.3-14 with the additional requirements of the CSA's SEED Document – *Structural Design of Wastewater Treatment Plants-2018* for revisions addressing service load conditions, water tightness, shrinkage and temperature reinforcement, and crack control. The Seed Document contains references to ACI 350M-06 for modifying CSA A23.3-14.

Structural steel design was performed according to Design of Steel Structures, CSA S16-14, and codes for welding, materials, and other pertinent references.

In general, structural analysis and design was performed manually using MathCAD or Excel spreadsheets. For more complex structures, such as the LLOW intake and the Gate Structure, a commercial Three-Dimensional Finite Element Model (FEM) was used to evaluate multiple load combinations, identify stress concentrations, and generate shear and moment values for the design of individual elements. The FEM was supplemented with manual calculations to verify/validate model results and where necessary, refine the analysis of individual elements. Based on model output, a combination of manual calculations and commercial software were used for strength design. Additional elements evaluated as part of strength design included joint detailing, equipment anchorage, and embedded parts.

9.0 SERVICEABILITY

Structural serviceability concerns with the Low-Level Outlet Works relate primarily to concrete durability including limiting deflections, reducing crack potential, providing thermal stress relief, and incorporating measures to mitigate alkali-aggregate reaction (AAR) and other chemical attack. The same manual calculations, commercial software, or 3-D FEM used for strength evaluation were used to evaluate deflection and thermal growth, while design detailing and material specification were used to mitigate cracking and AAR potential.

Shrinkage control and volume changes are addressed primarily with placement sequence, mix design, surface reinforcement, and material specifications. The structure layout and design define concrete placements with balanced aspect ratios. Joint placements allow for proper dissipation of heat of hydration and initial shrinkage before placement of adjacent concrete. Expanded guidance related to placement sequence and joint locations will be addressed as part of constructability review during Final Design.

Tight installation tolerances for gates, hoists and other embedded components are critical for their operation or installation. These tolerances are addressed primarily through second stage concrete placements occurring after initial concrete shrinkage has occurred. Using a second stage concrete placement also allows gate assemblies to be installed, checked and adjusted for operation before components are permanently being embedded in concrete.

10.0 CONSTRUCTION CONSIDERATIONS

Construction specifications and details for the Low-Level Outlet Works will be furthered during Final Design. The following construction considerations are noted:

- The foundation subgrade was located in glacial till to maximize subgrade uniformity and minimize differential settlement and total settlement. Foundation preparation will require special care in preparation of the structure subgrade to meet bearing capacity for the tall structures and conduits. Foundation preparation details will be developed during Final Design.

- Construction sequencing of conduit placements will be required to minimize thermal expansion and contraction due to the concrete's heat of hydration.

- Settlement and conduit elongation are expected to occur. Conduit joint spacing, treatment and type will be developed to address estimated settlement and elongation along the conduits. Total settlement and camber will be used to design appropriate joint spacing in the conduits and to select the types of joint collars to use.

- Joint preparation will require special attention to ensure proper installation of water stops, shear keys, dowels, and reinforcement for joint alignment and water-tight integrity of the conduits.

- Procurement lead-time for the fabricated slide gate components will likely be driven by steel availability and fabrication schedules. An allowance of 3 to 6 months is recommended to account for design, shop drawing review/approval, fabrication, testing, and delivery.; particularly since the LLOW will be the first structure to be constructed since it is needed for diversion of the unnamed creek.

- Fill placement and compaction methods must be reviewed and monitored to ensure conduit monolith and wing wall movement does not occur during construction.

- Gate slots, access bridge, and the control house at the LLOW will require combinations of concrete block outs, anchor bolts, and embedded parts in first and second stage concrete placements. Placement tolerance for some of these items are tighter than typical heavy construction tolerance due to fit and operating clearance requirements.

APPENDIX E.5-1 INTAKE STRUCTURE AND WINGWALLS

Appendix E.5-1 – Intake Structure & Wing Wall Stability Analyses

Springbank Off-Stream Storage/Alberta Transportation

Table of Contents

Intake Structure - Model Input and Calculations

LOAD CALCULATIONS - Snow and Wind Loads
SR1- Low Level Outlet Intake Tower

Source: 1. Alberta Building Code 2014, Volume 1

Objective: Estimate design wind and snow loads for the Intake Structure at SR1.

1.0 Calculated Snow Load

- Importance category:	Post-Disaster	Table 4.1.2.1
- Importance factor for snow load:	$I_s := 1.25$	Table 4.1.6.2
- Basic roof snow load factor:	$C_b := 0.8$	4.1.6.2 (2)
- Wind exposure factor:	$C_w := 1.0$	4.1.6.2 (3)
- Slope factor:	$C_s := 1.0$	4.1.6.2 (5)
- Shape factor:	$C_a := 1.0$	4.1.6.2 (8)
- 1 in 50-year ground snow load factor:	$S_s := 1.1\text{kPa}$	Appendix C, Table C-2
- 1 in 50-year associated rain load:	$S_r := \min\left[0.1\text{kPa}, S_s\cdot\left(C_b\cdot C_w\cdot C_s\cdot C_a\right)\right]$	Appendix C, Table C-2
	$S_r = 0.1\cdot\text{kPa}$	
Specified Snow Load:	$S := I_s\cdot\left[S_s\cdot\left(C_b\cdot C_w\cdot C_s\cdot C_a\right) + S_r\right]$	4.1.6.2
	$\boxed{S = 1.23\cdot\text{kPa}}$	

2.0 Calculated Wind Load

- Height of structure:	$h := 8.7\text{m}$	
- Importance factor:	$I_W := 1.25$ (High)	Table 4.1.7.1
- Exposure factor:	$C_e := \max\left[0.9, \left(\frac{h}{10\text{m}}\right)^{0.2}\right] = 0.97$	4.1.7.1 (5a)
- Gust effect factor:	$C_g := 2.0$	4.1.7.1 (6)
- External Pressure Coefficient:	$C_p := 1.0$	4.1.7.1 (Conservative)
-Reference Velocity Pressure:	$q := 0.48\text{kPa}$	Table C-2 1/50 return
Specified Wind Load:	$\boxed{p := I_W\cdot q\cdot\left(C_e\cdot C_g\cdot C_p\right) = 1.17\cdot\text{kPa}}$	4.1.7.1 (All directions)

INTAKE TRASHRACK WEIGHT

Objective : Approximate the weight of the different Intake tower trashracks. Use Design drawings as reference.

Unit Weight of Steel: $\gamma_s := 77.0 \frac{kN}{m^3}$

Length of Vertical Bars: $l_{v.a} := 2500mm$ $l_{v.b} := 2500mm$ $l_c := 2500mm$

Thickness of Vertical Bars: $t_v := 16mm$

Height of Vertical Bars: $h_v := 50mm$

Number of Vertical Bars: $n_v := 17$

Vertical L Bar Area: $A_L := 19mm(150mm + 131mm) = 5339.00 \cdot mm^2$

Length of Horizontal Bars, Type A & B: $l_h := 2800mm$

Length of Horizontal Bars, Type C: $l_{h.c} := 2800mm$

Thickness of Horizontal Bars: $t_h := 16mm$

Height of Horizontal Bars: $h_h := 200mm$

Number of Horizontal Bars: $n_h := 6$

Corner Trapezoidal Bar Volume: $V_{cb.1} := 10mm \cdot (150mm \cdot 50mm + 0.5 \cdot 100mm \cdot 150mm) = 150000.00 \cdot mm^3$

Corner Bar Volume - top A: $V_{cb.2a} := 50mm \cdot 200mm \cdot 100mm = 1000000.00 \cdot mm^3$

Corner Bar Volume - top B: $V_{cb.2b} := 19mm \cdot 200mm \cdot 100mm = 380000.00 \cdot mm^3$

Corner Bar Volume - bottom: $V_{cb.3} := 19mm \cdot 200mm \cdot 100mm = 380000.00 \cdot mm^3$

Lift Bar Volume: $V_{cb.4} := 25mm \cdot 25mm \cdot 500mm = 312500.00 \cdot mm^3$

BAR VOLUME

Type A Vertical Bars: $V_a := l_{v.a} \cdot \left(n_v \cdot t_v \cdot h_v + 2 \cdot A_L\right) = 60695000.00 \cdot mm^3$

Type B Vertical Bars: $V_b := l_{v.b} \cdot \left(n_v \cdot t_v \cdot h_v + 2 \cdot A_L\right) = 60695000.00 \cdot mm^3$

Type C Vertical Bars: $V_c := l_c \cdot \left(n_v \cdot t_v \cdot h_v + 2 \cdot A_L\right) = 60695000.00 \cdot mm^3$

Horizontal Bars - Type A & B: $V_h := l_h \cdot n_h \cdot t_h \cdot h_h - n_h \cdot t_h \cdot (50mm \cdot 181mm) \cdot 2 = 52022400.00 \cdot mm^3$

Horizontal Bars - Type C: $V_{h.c} := l_{h.c} \cdot n_h \cdot t_h \cdot h_h - n_h \cdot \left(t_h \cdot 50mm \cdot 181mm\right) \cdot 2 = 52022400.00 \cdot mm^3$

TRASHRACK MASS

Type A: $W_a := \frac{\gamma_s}{g} \cdot \left(V_a + V_h + 4 \cdot V_{cb.1} + 2 \cdot V_{cb.2a} + 2 \cdot V_{cb.3}\right) = 911.4 \cdot kg$

Type B: $W_b := \frac{\gamma_s}{g} \cdot \left(V_b + V_h + 4 \cdot V_{cb.1} + 2 \cdot V_{cb.2b} + 2 \cdot V_{cb.3} + 4 \cdot V_{cb.4}\right) = 911.5 \cdot kg$

Type C: $W_c := \frac{\gamma_s}{g} \cdot \left(V_c + V_{h.c} + 4 \cdot V_{cb.1} + 4 \cdot V_{cb.3}\right) = 901.7 \cdot kg$

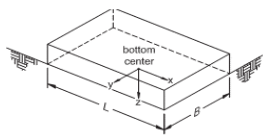
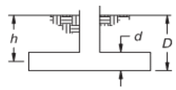
Chapter 4: Foundations and Geologic Site Hazards

Degree of Freedom	Stiffness of Foundation at Surface	Note
Translation along x-axis	$K_{x,\,sur} = \frac{GB}{2-v}\left[3.4\left(\frac{L}{B}\right)^{0.65} + 1.2\right]$	
Translation along y-axis	$K_{y,\,sur} = \frac{GB}{2-v}\left[3.4\left(\frac{L}{B}\right)^{0.65} + 0.4\frac{L}{B} + 0.8\right]$	
Translation along z-axis	$K_{z,\,sur} = \frac{GB}{1-v}\left[1.55\left(\frac{L}{B}\right)^{0.75} + 0.8\right]$	
Rocking about x-axis	$K_{xx,\,sur} = \frac{GB^3}{1-v}\left[0.4\left(\frac{L}{B}\right) + 0.1\right]$	
Rocking about y-axis	$K_{yy,\,sur} = \frac{GB^3}{1-v}\left[0.47\left(\frac{L}{B}\right)^{2.4} + 0.034\right]$	Orient axes such that $L \geq B$
Torsion about z-axis	$K_{zz,\,sur} = GB^3\left[0.53\left(\frac{L}{B}\right)^{2.45} + 0.51\right]$	



Degree of Freedom	Correction Factor for Embedment	Note
Translation along x-axis	$\beta_x = \left(1 + 0.21\sqrt{\frac{D}{B}}\right)\cdot\left[1 + 1.6\left(\frac{hd(B+L)}{BL^2}\right)^{0.4}\right]$	
Translation along y-axis	$\beta_y = \beta_x$	
Translation along z-axis	$\beta_z = \left[1 + \frac{1}{21}\frac{D}{B}\left(2 + 2.6\frac{B}{L}\right)\right]\cdot\left[1 + 0.32\left(\frac{d(B+L)}{BL}\right)^{2/3}\right]$	d = height of effective sidewall contact (may be less than total foundation height)
Rocking about x-axis	$\beta_{xx} = 1 + 2.5\frac{d}{B}\left[1 + \frac{2d}{B}\left(\frac{d}{D}\right)^{-0.2}\sqrt{\frac{B}{L}}\right]$	h = depth to centroid of effective sidewall contact
Rocking about y-axis	$\beta_{yy} = 1 + 1.4\left(\frac{d}{L}\right)^{0.6}\left[1.5 + 3.7\left(\frac{d}{L}\right)^{1.9}\left(\frac{d}{D}\right)^{-0.6}\right]$	For each degree of freedom, calculate $K_{emb} = \beta K_{sur}$
Torsion about z-axis	$\beta_{zz} = 1 + 2.6\left(1 + \frac{B}{L}\right)\left(\frac{d}{B}\right)^{0.9}$	



FEMA 356, Figure 4-4

Note: When L = B, use x-axis rocking stiffness and embedment correction factor for Y-axis rocking

* Axis Orientation is based on FEMA 356.

	Correction Factors for Embedment*					
	Translational			Rocking		Torsion

S_a : Horizontal Spectra Acceleration @ Structure Period

RRS_{bsa} : Ratio of response spectra for base slab averaging (EQ 8-1)

RRS_e : Ratio of response spectra for embedment (EQ 8-2)

RRS : Ratio of Response Spectra = RRS_{bsa} * RRS_e

$\hat{S}_a$: Horizontal Spectra Acceleration reduced for Kinematic Effects

$(\hat{S}_a)_{\beta\_x}$: X-Direction Horizontal Spectra Acceleration reduced for Kinematic Effects & Foundation Damping (EQ. 6-16)

$(\hat{S}_a)_{\beta\_z}$: Z-Direction Horizontal Spectra Acceleration reduced for Kinematic Effects & Foundation Damping (EQ. 6-16)

T : Fixed Base Model Structural Natural Period

$\check{T}$: Spring Base Model Structural Natural Period

M : Effective Mass for the first mode

K_{fixed} : Effective Structural Stiffness for the Fixed base condition (EQ 8-3)

K_θ : Effective Rotational Stiffness of the Foundation (EQ. 8-6)

r_θ : Equivalent Foundation Radius for Rotation (EQ. 8-7)

$\check{T}_{eff}/T_{eff}$: Effective Period-Lengthening Ratio (EQ. 8-8)

a_1 : Modificaton Factor (EQ. 8-9a)

a_2 : Modificaton Factor (EQ. 8-9b)

β_f : Foundation Damping due to Radiation Damping (EQ. 8-9)

β_0 : Flexible Base Damping Ratio (EQ. 8-10)

B : Spectral Acceleration Reduction Factor for Foundation Damping (EQ. 6-17)
